

It's **HOT** today!

Today's high temperatures mean increased demand on the City's energy infrastructure.

To conserve electricity and help avoid blackouts, our building staff may be:

- turning off unnecessary overhead lighting
- reducing elevator service
- increasing space temperatures
- switching to on-site electric generators

To keep the building comfortable for everybody, you should:

- shut off unnecessary lights
- lower shades to block the heat of the sun
- turn off computer monitors and other office equipment when not in use
- unplug personal electronics, such as coffee makers or cell phone chargers

If you have questions about energy conservation please contact DCAS Energy Management at (212) 669-2568.
