CERTIFICATION

I, Douglas Harm, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Crotona Terrace site (NYCVCP Site No. , 14CVCP187X and OER Project Number 14RHAN150X). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Douglas Harm

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The site is located at 1825 Boston Road in the Crotona Park East section of the Bronx, New York, and is identified as the northern portion of Block 2984, Lot 46 on the New York City Tax Map. Figure 1 shows the site location. Figure 2 shows the lot and block and the boundary of the remedial investigation (“the site”). The site lot is approximately 48,359 square feet. The site itself is approximately 26,000 square feet (sf) and is bounded by the Crotona Parkway to the west, East 176th Street to the north, Boston Road to the east, and vacant land and East 175th Street to the south. A map of the site boundary is shown in Figure 3. Currently, the site is vacant and undeveloped.

Summary of Proposed Redevelopment Plan

The proposed future use of the site will consist of an eight (8)-story mixed commercial and residential building. The building will occupy the northern portion of the site, and above grade parking is proposed at the western portion of the site. The proposed redevelopment plan has been changed since the Remedial Investigation Workplan (RIWP) dated September 2010, and no cellar or below grade parking is proposed. Average excavation depths for commercial space and the footing will be four (4) feet below surface grade (bsg), and excavation depths for the elevator pit will range from six (6) to eight (8) feet bsg. The current zoning designation is R7-1 with a C2-4 commercial overlay. The proposed use is consistent with existing zoning for the property.

The ground floor of the building will consist of commercial space, a recreational area, and utility rooms. The 2nd to 8th floors will include a total of 80 residential units, ranging from zero (0) bedrooms to two (2) bedrooms. When completed, the site will have approximately:

- 76,477 sf of residential development
- 15,292 sf of commercial/retail floor area on the ground floor
- 20 at-grade parking spaces (approximately 5,510 square feet)

Layouts of the proposed site development are presented in Appendix I. The current zoning designation is R7-1. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern (AOCs)

A Phase I Environmental Site Assessment (ESA) performed by AKRF, Inc. (AKRF) in 2005 indicates that the project site was developed sometime between 1886 and 1901 and operated as a transit rail car and bus maintenance and repair facility until approximately 1989.

The AOCs identified for this site include:

- A 10,000-gallon fuel oil underground storage tank (UST) and two 5,000-gallon diesel USTs were identified at the site in the early 1990s. Free product was discovered at the site and was reduced to non-detectable levels according to remedial investigations conducted from 1996 to 1998. Later, a geophysical investigation and a test pit program suggested that tanks were removed. However, no documentation related to the geophysical investigation is available for review.
- Petroleum products and solvents were historically used at the site, which have the potential to have affected the site.
- There is the possible existence of historic fill.
- Debris and trash were observed throughout the site.
- Historic usage of adjacent properties has the potential to adversely affect the groundwater quality at the site. However, a Phase II investigation by AKRF in 2003 at the south adjacent property which included the collection of groundwater samples along East 175th Street, upgradient of the site, revealed that petroleum product in groundwater was below the most stringent regulatory standards. The related documentation was not available for review.

Summary of the Work Performed under the Remedial Investigation

The following scope of work was performed as part of the RI:

1. Conducted a site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.).
2. As part of Ecosystems Strategies, Inc. (ESI)'s investigation in 2011, six (6) soil borings, one (1) groundwater monitoring well, two (2) temporary well points, and three (3) soil vapor probes were installed at the site. Twelve (12) soil samples, three (3) groundwater

samples, and three (3) soil vapor samples were collected for laboratory analysis.

3. As part of Brinkerhoff Environmental, Inc. (Brinkerhoff)'s investigation, four (4) soil borings were installed and eight (8) soil samples collected for chemical analysis from the soil borings to evaluate soil quality.
4. Installed two (2) temporary well points and groundwater samples were collected for chemical analysis to evaluate groundwater quality. A groundwater sample was also collected from an existing monitoring well.
5. Installed three (3) soil vapor probes around site perimeter and collected three (3) samples for chemical analysis.
6. Excavated test tips throughout the parcel in search for possible USTs.

Summary of Environmental Findings

The findings of the RI identified urban fill on the property. This urban fill is contaminated with SVOCs and metals. Additional geologic and hydrogeologic data collected at the site as part of the RI are as follows:

1. Elevation of the property is approximately 61 feet above sea level.
2. Average depth to groundwater is 20 feet below grade.
3. Groundwater flow is generally to the north beneath the Site.
4. Depth to bedrock is approximately 10 feet at the Site.
5. The site is comprised of urban fill from surface to eight (8) feet below grade surface (bgs). The fill includes yellowish brown to dark brown silt and fine sand mixed with concrete, red brick, and rock.
6. Soil samples collected during May 2011 investigations indicated no VOCs, pesticides, or PCBs detected above the Track 1 Unrestricted Use SCOs. Several SVOCs were detected above their Track 2 Restricted Residential SCO, including benzo(a)anthracene (max. of 22.5 ppm), benzo(a)pyrene (max. of 12.4 ppm), benzo(b)fluoranthene (max. of 13.2 ppm), benzo-(k)fluoranthene (max. of 13 ppm), chrysene (max. of 21.8 ppm), dibenzo(a,h)anthracene (max. of 1.95 ppm), and indeno(1,2,3-cd)pyrene (max. of 3.8 ppm). These SCOs were all detected in the shallow soil samples with the exception of one deep soil sample (boring B9). Nine (9) metals, including arsenic (14.8 ppm), barium (1270 ppm), chromium (46.8 ppm), copper (990 ppm), lead (701 ppm), mercury (0.68

ppm), nickel (39.5 ppm), selenium (5.18 ppm), and zinc (2010 ppm) were detected above their Track 1 Unrestricted Use SCOs. Barium, copper and lead were the only metals that were also detected above their Track 2 Restricted Residential Use SCOs. Data collected during October 2013 Remedial Investigation indicated that acetone and three (3) pesticides were detected slightly above Track 1 Unrestricted Use SCOs. Seven (7) SVOCs were detected above Track 1 Unrestricted and Track 2 Restricted Residential Use SCO in all but three soil samples. Pesticides included 4,4'-DDD (max. of 43.8 ppb); 4,4'-DDE (max. of 45.6 ppb); and 4,4'-DDT (max. of 151 ppb). Metals and SVOC concentrations were very similar to 2011 investigation results as above with the exception of silver (2.15 ppm) being detected above Unrestricted Use SCOs in one sample. Overall, the findings were consistent with observations for shallow historical fill sites in areas throughout NYC.

7. Groundwater samples collected during ESI's RI, dated May 2011, showed no VOCs, SVOCs, pesticides or PCBs above the New York State Part 703.5 Class GA groundwater quality standards GQS. Six (6) metals including aluminum, cobalt, iron, magnesium, manganese and sodium, were identified above the GQS. Data collected during October 2013 investigation indicated that metals including magnesium, manganese, and sodium above the GQS.
8. Soil vapor samples collected during ESI's RI, dated May 2011, showed low concentrations of various VOCs including the petroleum-related compounds benzene, ethylbenzene, xylenes, and toluene. The chlorinated solvents 1,1,1-trichloroethane, carbon tetrachloride, methyl tert-butyl ether (MTBE), tetrachloroethylene (PCE) and trichloroethylene (TCE) were not detected in soil vapor samples. Compounds detected with relatively high concentrations included acetone (a common laboratory contaminant), n-hexane, and propylene. Data collected during October 2013 investigation indicated petroleum-related compounds and chlorinated solvents detected at low concentrations in all soil vapor samples. The chlorinated solvents 1,1,1-trichloroethane and TCE were not detected in any of the soil vapor samples. The chlorinated solvent carbon tetrachloride (maximum of 0.38 ug/m³) was detected in two samples, and PCE (maximum 3.2 ug/m³) was detected in all three samples. Various compounds were detected with relatively high concentrations in SV-3, including n-heptane (87 ug/m³), n-hexane (90 ug/m³), toluene (72

ug/m³), and total xylenes (101 ug/m³). In addition, chloroform was detected at 110 ug/m³ in SV-1.

9. Test pits excavated throughout the site did not uncover evidence of the presence of USTs.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Joy Construction Corporation will enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.60-acre site located at 1825 Boston Road in the Crotona Park East section of the Bronx, New York. First floor commercial and upper floor residential mixed-use is proposed for the property. Ecosystems Strategies, Inc. (ESI) performed RI work in February 2011 for the South Bronx Overall Economic Development Corporation (SoBRO). In October 2013, Brinkerhoff Environmental Services, Inc. (Brinkerhoff) performed additional RI work at the site. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The site is located at 1825 Boston Road in the Crotona Park East section of the Bronx, New York, and is identified as the northern portion of Block 2984, Lot 46 on the New York City Tax Map. Figure 1 shows the site location. Figure 2 shows the lot and block and the boundary of the remedial investigation (“the site”). The site lot is approximately 48,359 square feet. The site itself is approximately 26,000 square feet and is bounded by the Crotona Parkway to the west, East 176th Street to the north, Boston Road to the east, and vacant land and East 175th Street to the south. A map of the site boundary is shown in Figure 3. Currently, the site is vacant and undeveloped.

1.2 Proposed Redevelopment Plan

The proposed future use of the site will consist of an eight (8)-story mixed commercial and residential building. The building will occupy the northern portion of the site and above grade parking is proposed at the western portion of the site. The proposed redevelopment plan has been changed since the Remedial Investigation Workplan (RIWP) dated September 2010, and no cellar or below grade parking is proposed. Average excavation depths for commercial space and the footing will be four (4) feet below surface grade (bsg), and excavation depths for the elevator

pit will range from six (6) to eight (8) feet bsg. The current zoning designation is R7-1 with a C2-4 commercial overlay. The proposed use is consistent with existing zoning for the property.

The ground floor of the building will consist of commercial space, a recreational area, and utility rooms. The 2nd to 8th floors will include a total of 80 residential units, ranging from zero (0) bedrooms to two (2) bedrooms. When completed, the site will have approximately:

- 76,477 sf of residential development
- 15,292 sf of commercial/retail floor area on the ground floor
- 20 at-grade parking spaces (approximately 5,510 square feet)

Layouts of the proposed site development are presented in Appendix I. The current zoning designation is R7-1. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

Current uses, zonings, and general character of adjoining properties are as follows:

North: East 176th Street and Cross Bronx Expressway are located to the north of the site. Further north are residential buildings and parking facilities with zoning designation R7-1.

South: The remainder of the site lot exists immediately south of the site, followed by East 175th Street. Industrial and manufacturing structures with zoning designation C8-3 are located across East 175th Street.

East: Multi-family walk-up buildings with zoning designation C4-2 and vacant land with zoning designation C8-3 and C4-2 are located to the east of the site, across Boston Road.

West: A park is located to the west of the site across Crotona Parkway. Further west are commercial and office buildings with zoning designation R7-1.

Sensitive environmental receptors within an approximate 500-foot radius of the site include residential buildings and mixed commercial and residential buildings in all directions, a church to the north, and industrial structures to the south of the site. According to OER's online *SPEED* application, there are no schools, hospitals, or day care facilities within a 500-foot radius of the site. Figure 3 shows the area land usage and adjacent properties.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

According to a Phase I Environmental Site Assessment (ESA) performed by AKRF, Inc. (AKRF) in May 2005, Block 2984, Lot 46 was developed sometime between 1886 and 1901 and operated as a transit rail car and bus maintenance and repair facility until approximately 1989.

2.2 Previous Investigations

Previous investigations were conducted targeting Block 2984, Lot 46. The environmental work plans and reports are summarized below. The previous environmental investigation reports are presented in Appendix II.

Phase I ESA, dated May 2005, prepared by AKRF

The Phase I ESA revealed the following environmental conditions in connection with the property:

- Based on state records and a review of previous investigations performed by URS Consultants, Inc., a 10,000-gallon fuel oil underground storage tank (UST) and two 5,000-gallon diesel USTs were identified at the site in the early 1990s. The Phase I ESA also indicates that free product was encountered in an on-site monitoring well during the investigation performed by URS Consultants, Inc., and that a product recovery system, installed at the site from 1996 to 1998, reduced the amount of free product present to non-detectable levels. . Later, a geophysical investigation and a test pit program suggested that tanks were removed. However, the geophysical investigation and test pit reports were not available for review.
- Petroleum products and solvents were historically used at the site, which have the potential to have affected the site.
- There is the possible existence of historic fill.
- Debris and trash were observed throughout the site.
- Historic usage of adjacent properties has the potential to adversely affect the groundwater quality at the site. However, a Phase II investigation by AKRF at the south adjacent property which included the collection of groundwater samples along

East 175th Street, upgradient of the site, revealed that petroleum product in groundwater was below the most stringent regulatory standards. The related documentation was not available for review.

“Revised” Proposed Remedial Investigation Work Plan (RIWP), dated September 2010, prepared by Equity Environmental Engineering, LLC (Equity)

The RIWP summarized the proposed development at the site, which is different from the present-day development plan. The RIWP also summarized the previous remedial work conducted at the site and proposed investigative services at the site, including:

- Geophysical Survey to determine if there are any USTs and/or buried utilities remaining on site.
- Installation of 12 soil borings across Block 2984, Lot 46. Two (2) soil samples will be collected from each soil boring location.
- Five (5) of the soil borings will be converted to temporary well points (TWPs). Three (3) of the TWPs will be converted to permanent groundwater monitoring wells. Groundwater samples will be collected from the three (3) monitoring wells.
- Determination of groundwater flow and direction.
- Soil vapor collection points installation and soil vapor samples collection.
- Waste disposal.
- Preparation of RIR for review and approval by the NYC Office of Environmental Remediation (OER).

Remedial Investigation Report (RIR), dated June 2011, prepared by ESI

The following remedial investigation activities were undertaken on Block 2984, Lot 46:

1. Conducted a site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Installed 12 soil borings across the entire project site and collected 22 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed five (5) groundwater monitoring wells throughout the site to establish groundwater flow and collected three (3) groundwater samples for chemical analysis

- to evaluate groundwater quality; and,
4. Installed (six) 6 soil vapor probes around the site perimeter and collected (six) 6 samples for chemical analysis.

The remedial investigation results will be discussed in detail in Section 5.0.

2.3 Site Inspection

A site inspection was completed by Isabel Su, a Qualified Environmental Professional (QEP) from Brinkerhoff, on August 28, 2013. On the day of the inspection, dense vegetation was present at the site. There were no AOCs noted other than those identified by AKRF in the Phase I ESA.

2.4 Areas of Concern

The AOCs identified for this site include:

- One (1) 10,000-gallon fuel oil UST and two (2) 5,000-gallon diesel USTs were identified at the site in the early 1990s. Free product was discovered at the site and was reduced to non-detectable levels, due to remedial activities conducted from 1996 to 1998. Later, a geophysical investigation and a test pit program suggested that tanks were removed. However, no documentation related to the geophysical investigation is available for review.
- Petroleum products and solvents were historically used at the site, which have the potential to have affected the site.
- There is the possible existence of historic fill.
- Debris and trash were observed throughout the site.
- Historic usage of adjacent properties has the potential to adversely affect the groundwater quality at the site. However, a Phase II investigation by AKRF in 2003 at the south adjacent property which included the collection of groundwater samples along East 175th Street, upgradient of the site, revealed that petroleum product in groundwater was below the most stringent regulatory standards. The related documentation was not available for review.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The QEP responsible for preparation of this RIR is Douglas Harm.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including site and Occupational Safety and Health Administration (OSHA) worker safety requirements and Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The following scope of work was performed as part of the RI by ESI and Brinkerhoff at the site, the northern portion of Block 2984, Lot 46:

1. Conducted a site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.).
2. As part of ESI's investigation in 2011, six (6) soil borings, one (1) groundwater monitoring well, two (2) temporary well points and three (3) soil vapor probes were installed at the site. Twelve (12) soil samples, three (3) groundwater samples, and three (3) soil vapor samples were collected for laboratory analysis.
3. As part of Brinkerhoff's investigation, installed four (4) soil borings and collected eight (8) soil samples for chemical analysis from the soil borings to evaluate soil quality.
4. Installed two (2) temporary well points and groundwater samples were collected for chemical analysis to evaluate groundwater quality. A groundwater sample was also collected from an existing monitoring well.
5. Installed three (3) soil vapor probes around site perimeter and collected three (3) samples for chemical analysis.
6. Excavated test pits throughout the parcel in search for possible USTs.

4.1 Subsurface Investigation

Due to the dense vegetation present at the site, a geophysical survey was not completed as part of this remedial investigation. On October 16th, Brinkerhoff oversaw a subsurface exploration at the site. The subsurface exploration performed consisted of excavating nine (9) test pits within the footprint of the proposed building. The test pits were excavated to confirm that there were no USTs present at the site. The excavation was performed by a backhoe. The test pits were advanced to approximately five (5) feet below grade. Debris from former building and fill material were observed in the test pits. No evidence of a tank was observed during the geophysical exploration. The test pit locations are shown on Figure 5.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

In February 2011, ESI installed six (6) soil borings (B-1, B-2, B-3, B-6, B-7 and B-9) at the site. Soil boring logs of this RI are included in Appendix III. The soil boring logs included in the ESI RIR are not complete, and only logs for B-1, B-2 and B-3 are provided. A map showing the locations of these soil borings is presented on Figure 4.

On October 15, 2013, Brinkerhoff installed four (4) soil borings (SB-1 through SB-4) at the site. The borings were installed using a Geoprobe[®] drill rig collecting continuous soil cores using acrylic liners. Soil from each boring was screened for volatile organic vapors using a properly calibrated photoionization detector (PID).

Boring logs were prepared by a geologist for all soil samples to document subsurface conditions. Boring logs include a description of the following: soil types and non-soil materials; soil screening results from field instrument measurements (i.e., PID, flame ionization detector); depth to groundwater; presence of soil mottling; presence of odor, vapors, soil discoloration; and, presence of free and/or residual product. Boring logs with this information are attached in Appendix III. A map showing the locations of soil borings and monitor wells is presented on Figure 5.

Groundwater Monitoring Well Construction

In February 2011, ESI installed a monitoring well (MW-1) in the location of soil boring B-1 and advanced soil borings B-2 and B-3 to temporary well points TW-1 and TW-2. Well logs are provided in Appendix IV. Well locations are shown on Figure 4.

On October 13, 2013, two (2) temporary well points (GW-2 and GW-3) were installed on the site. A Geoprobe[®] drill rig was utilized to install the temporary well points. Groundwater was encountered at approximately 20 feet below surface grade in the soil boring. Temporary well point locations are shown in Figure 5. Well logs are provided in Appendix IV.

Survey

A land survey was used to identify the arbitrary vertical location of all monitoring wells in order to develop a groundwater contour map as part of the 2011 ESI RI.

Water Level Measurement

The depth to static groundwater was measured using an electronic depth meter accurate to the nearest 0.01-foot. Water level data from the 2013 Brinkerhoff RI is included in Table 8.

4.3 Sample Collection and Chemical Analysis

Sampling was performed as part of the field investigation conducted for the AOC; other means for bias of sampling were also considered based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media (including soil, groundwater, and soil vapor) have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

In February 2011, ESI conducted a soil boring and sampling program at the site. A total of six (6) soil borings were installed, with two (2) soil samples retained for laboratory analysis. One (1) soil sample was collected from the 0-2 foot interval below grade surface (bgs) and a second sample was collected from the soil to groundwater interface or area exhibiting the highest degree of staining, odors, or PID reading. A summary of the data on soil sample collection for chemical analyses is reported in Table 1 (exceedences only) A full summary of the data on soil sample collection for chemical analyses is reported in Table 4 of the RI in Appendix 2. Figure 4 shows the location of samples collected in this investigation. Laboratory analytical methods are outlined later in this section.

On October 15, 2013, Brinkerhoff performed a soil investigation at the site. All field personnel wore dedicated, disposable gloves, and all samples were placed into laboratory supplied glassware. Samples were collected directly from dedicated acetate sleeves obtained from a Geoprobe drill rig. Samples were placed in a cooler on ice accompanied by a chain of custody.

Soil samples collected during all invasive investigation were screened by visual and olfactory

means and using a calibrated PID. No visual or olfactory evidence of petroleum contamination was identified in any of the soil samples. Results of soil screening are recorded on the soil boring logs provided in Appendix III.

At each boring, soil samples were collected at 0 to 2 feet bgs within the historic fill and at 6 to 8 feet bgs which corresponds to the maximum depth of planned excavation at the site. The samples were submitted to a New York State Department of Health (NYS DOH) certified laboratory for analyses.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, are reported in Table 2. Figure 5 shows the location of samples collected in this investigation. Laboratory analytical methods are outlined later in this section.

Groundwater Sampling

In February 2011, ESI installed a monitoring well, MW-1, and two (2) temporary well points, TW-1 and TW-2. One (1) groundwater sample was obtained from each of the well location. A summary of groundwater sample collection data is reported in Table 3 (exceedances only) A full summary of the data on soil sample collection for chemical analyses is reported in Table 5 of ESI's RIR in Appendix II. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Appendix IV. Figure 4 shows the location of groundwater sampling. Laboratory analytical methods are outlined later in this section.

On October 15, 2013, a groundwater sample (GW-1) was collected from a pre-existing monitoring well, which was MW-1 installed by ESI in February 2011. In addition, two (2) groundwater samples (GW-2 and GW-3) were collected from two (2) temporary well points from the site. Groundwater samples were obtained from each well location utilizing an inertial pump consisting of a stainless steel check valve and ball. The inertial pump was fitted with dedicated polyethylene tubing, which allowed the groundwater to be brought up to the ground surface for collection.

Groundwater sample collection data, including dates of collection, are reported in Table 4. Well sampling logs with information on purging and sampling of groundwater monitoring wells are included in Appendix IV. Figure 5 shows the location of samples collected in this investigation. All sampling equipment was dedicated; therefore, no decontamination was

required. One trip blank groundwater sample was collected for analysis.

Soil Vapor Sampling

In February 2011, three (3) soil vapor probes were installed and three (3) soil vapor samples (SV-1, SV-5 and SV-6) were collected for chemical analysis by ESI. SV-1 was collected from 9 feet bgs, and SV-5 and SV-6 were collected from 14 feet bgs. The sample depths were planned according to the previous anticipated excavation depth of 14 feet bgs. However, the development plan has changed, and a maximum excavation depth of eight (8) feet is planned. Soil vapor sampling locations are shown on Figure 4. A summary of the soil vapor sample collection data is reported in Table 5. Soil vapor sample collection data are included in Appendix V.

On October 15, 2013, Brinkerhoff collected three (3) soil vapor samples from the site. Soil vapor samples were collected from three (3) vapor probes installed using a Geoprobe drill rig. Prior to sample collection, the sampling points were purged of three (3) volumes using a peristaltic pump. Following purging, a soil vapor sample was collected from five (5) feet bgs using the vacuum from the Summa canister. Soil vapor sampling locations are shown on Figure 5. Soil vapor sample collection data is reported in Table 6. Soil vapor sampling logs are included in Appendix V. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*. (See Table 7 for the NYS DOH Guidance Values.)

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Duane Shinton, Geologist.
Chemical Analytical Laboratory	The chemical analytical laboratories used in the RI (Accredited Analytical Resources, LLC and Integrated Analytical Laboratories, LLC) are NYS DOH ELAP-certified.
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • VOCs by EPA Method 8260 • SVOCs by EPA Method 8270 • Pesticides by EPA Method 8082* • PCBs by EPA Method 8081 • Metals by EPA Method 6010B

Factor	Description
	<p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • VOCs by EPA Method 8260 • SVOCs by EPA Method 8270 • Pesticides by EPA Method 8082 • PCBs by EPA Method 8081 • Metals by EPA Method 6010B <p>Soil vapor analytical methods</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters <p>*The soil samples collected from borings B-6, B-7, and B-9 and the deep soil samples collected at borings B-1, B-2, and B-3 in ESI's RI did not analyze for pesticides or PCBs.</p>

Results of Chemical Analyses

Laboratory data for soil, groundwater, and soil vapor are summarized in Tables 1 through 6. Laboratory data deliverables for all samples evaluated in this RIR are provided in Appendix VI.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Geologic and hydrogeologic data were obtained from soil borings installed at the site as part of the remedial investigation conducted.

Stratigraphy

Geology at the site consists of historic fill material from the surface to an average of eight (8) feet bgs. The fill material includes yellowish brown to dark brown silt and fine sand mixed with concrete, red brick, and rock. Below the fill material is a brown fine silty sand to an average depth of 28 feet bgs where weathered bedrock is encountered.

Hydrogeology

Groundwater level data for all monitoring wells are provided in Table 8. The average depth to water is encountered during the Brinkerhoff RI was 20 feet and the range was 19.45 to 20.97 feet. Groundwater flow direction is toward the north as calculated by ESI in their RIR dated June 11, 2011. Groundwater flow direction is shown in Figure 5 of ESI's RIR in Appendix II.

5.2 Soil Chemistry

Data collected during ESI's RI, dated May 2011, showed that no VOCs, pesticides, or PCBs were detected above the New York State Department of Environmental Conservation (NYSDEC) Part 375-6.8(a) Track 1 Unrestricted Use SCO or Track 2 Restricted Residential Use SCO. The following SVOCs were identified in samples from all six (6) soil borings above their Track 1 Unrestricted or Track 2 Restricted Residential Use SCOs: benzo(a)anthracene (maximum of 22.5 milligrams per kilogram [mg/kg]), benzo(a)pyrene (maximum of 12.4 mg/kg), benzo(b)fluoranthene (maximum of 13.2 mg/kg), benzo(k)fluoranthene (maximum of 13 mg/kg), chrysene (max of 21.8 mg/kg), dibenzo(a,h)anthracene (max of 1.95 mg/kg), and indeno(1,2,3-cd)pyrene (max of 3.8 mg/kg). These were all detected in the shallow soil samples with the exception of one deep soil sample. Nine (9) metals, including arsenic (14.8 ppm), barium (1270 ppm), chromium (46.8 ppm), copper (990 ppm), lead (701 ppm), mercury (0.68 ppm), nickel (39.5 ppm), selenium (5.18 ppm), and zinc (2010 ppm) were detected above their Track 1 Unrestricted Use SCOs. Lead and barium was the only metals that were also detected

above their Track 2 Restricted Residential Use SCOs (maximums of 570 mg/kg and 701 mg/kg, respectively). A laboratory analytical table for soil samples summarizing the compounds with exceeding concentrations is included in Table 1. Figures 6 and 7 show the locations and post the values for soil/fill that exceed the 6NYCRR Part 375 Track 1 and Track 2 SCOs.

Data collected during Brinkerhoff's RI, dated October 2013, indicated that acetone, a common laboratory contaminant, was detected above Track 1 Unrestricted Use SCO but below Track 2 Restricted Residential Use SCO in deep samples from SB-1 and SB-4. Pesticides, including 4,4'-DDD, 4,4'-DDE and 4,4'-DDT, were detected above Track 1 Unrestricted Use SCO in the deep sample from SB-2, and 4,4'-DDE was detected above Track 1 Unrestricted Use SCO in both samples from SB-4. No pesticides were detected above their Track 2 Restricted Residential Use SCOs. Seven (7) SVOCs, including benzo[a]anthracene (maximum of 17.6 mg/kg), benzo[a]pyrene (maximum of 16.4 mg/kg), benzo[b]fluoranthene (maximum of 19.8), benzo[k]fluoranthene (maximum of 18.1 mg/kg), chrysene (maximum of 18.5 mg/kg), dibenzo(a,h)anthracene (maximum of 5.30 mg/kg), and ideno(1,2,3-cd)pyrene (maximum of 10.7) were detected above Track 1 Unrestricted and Track 2 Restricted Residential Use SCO in all soil samples except SB-1B, SB-3A, and SB-3B. Seven (7) metals, including mercury, barium, and lead, were detected above the Track 1 Unrestricted Use SCO. In addition, barium was detected above the Track 2 Restricted Residential Use SCO in SB-2B.

Overall, the findings were consistent with observations for shallow historical fill sites in areas throughout NYC. Data collected during the RI were sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the site. A summary table of data for chemical analyses performed on soil samples is included in Table 2. Figures 8 and 9 show the location and posts the values for soil/fill that exceed the 6NYCRR Part 375 Track 1 and Track 2 SCOs.

5.3 Groundwater Chemistry

Data collected during ESI's RI, dated May 2011, showed that no VOCs, SVOCs, pesticides, or PCBs were detected above their respective groundwater standards. Six (6) metals – aluminum, cobalt, iron, magnesium, manganese and sodium – were identified above the NYSGWS. A table summarizing exceeding concentrations is included in Table 3. Figure 10 shows the location and posts the values for groundwater that exceed the NYSGWS.

Data collected during Brinkerhoff's RI, dated October 2013 showed that no VOCs, SVOCs, pesticides, or PCBs were detected above their respective groundwater standards. Eight (8) metals – aluminum, antimony, beryllium, iron, magnesium, manganese, sodium and thallium – were detected above the NYSGWS. When dissolved, only magnesium, manganese, and sodium, all naturally-occurring metals, were above the NYSGWS.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 4. Exceedances of applicable groundwater standards are shown. Figure 11 shows the locations and posts the values for groundwater that exceeds the NYSGWS.

5.4 Soil Vapor Chemistry

Data collected during ESI's RI, dated May 2011, indicated that several compounds including 1,1,1-Trichloroethane, carbon tetrachloride, methyl tert-butyl ether (MTBE), tetrachloroethylene (PCE) and trichloroethylene (TCE) were not detected in soil vapor samples. Various compounds were detected with low concentrations, including the petroleum-related compounds benzene (maximum 11 micrograms per cubic meter [ug/m^3]), ethylbenzene (maximum $3.4 \text{ ug}/\text{m}^3$), and toluene (maximum $13 \text{ ug}/\text{m}^3$), o-xylene ($3.5 \text{ ug}/\text{m}^3$), and p-&m-xylenes ($8.9 \text{ ug}/\text{m}^3$). Compounds detected with relatively high concentrations include acetone ($180 \text{ ug}/\text{m}^3$ in SV-5), n-Hexane ($300 \text{ ug}/\text{m}^3$ in SV-1), and propylene ($430 \text{ ug}/\text{m}^3$ in SV-1, $220 \text{ ug}/\text{m}^3$ in SV-5). A summary table of data for chemical analyses performed on soil vapor samples is included in Table 5. Figure 12 shows the locations and posts the values for soil vapor samples with detected concentrations.

Data collected during Brinkerhoff's RI in October 2013 indicated that petroleum-related compounds and chlorinated-solvents were detected at low concentrations in all soil vapor samples. The chlorinated solvents 1,1,1-Trichloroethane and TCE were not detected in any of the soil vapor samples. The chlorinated solvent carbon tetrachloride (maximum of $0.38 \text{ ug}/\text{m}^3$) was detected in two samples and PCE (maximum $3.2 \text{ ug}/\text{m}^3$) was detected in all three samples. These concentrations are below their monitoring ranges established by DOH guidance matrix. Various compounds were detected with relatively high concentrations in SV-3, including n-heptane ($87 \text{ ug}/\text{m}^3$), n-hexane ($90 \text{ ug}/\text{m}^3$), toluene ($72 \text{ ug}/\text{m}^3$), and total xylenes ($101 \text{ ug}/\text{m}^3$). In addition, chloroform was detected at $110 \text{ ug}/\text{m}^3$ in SV-1.

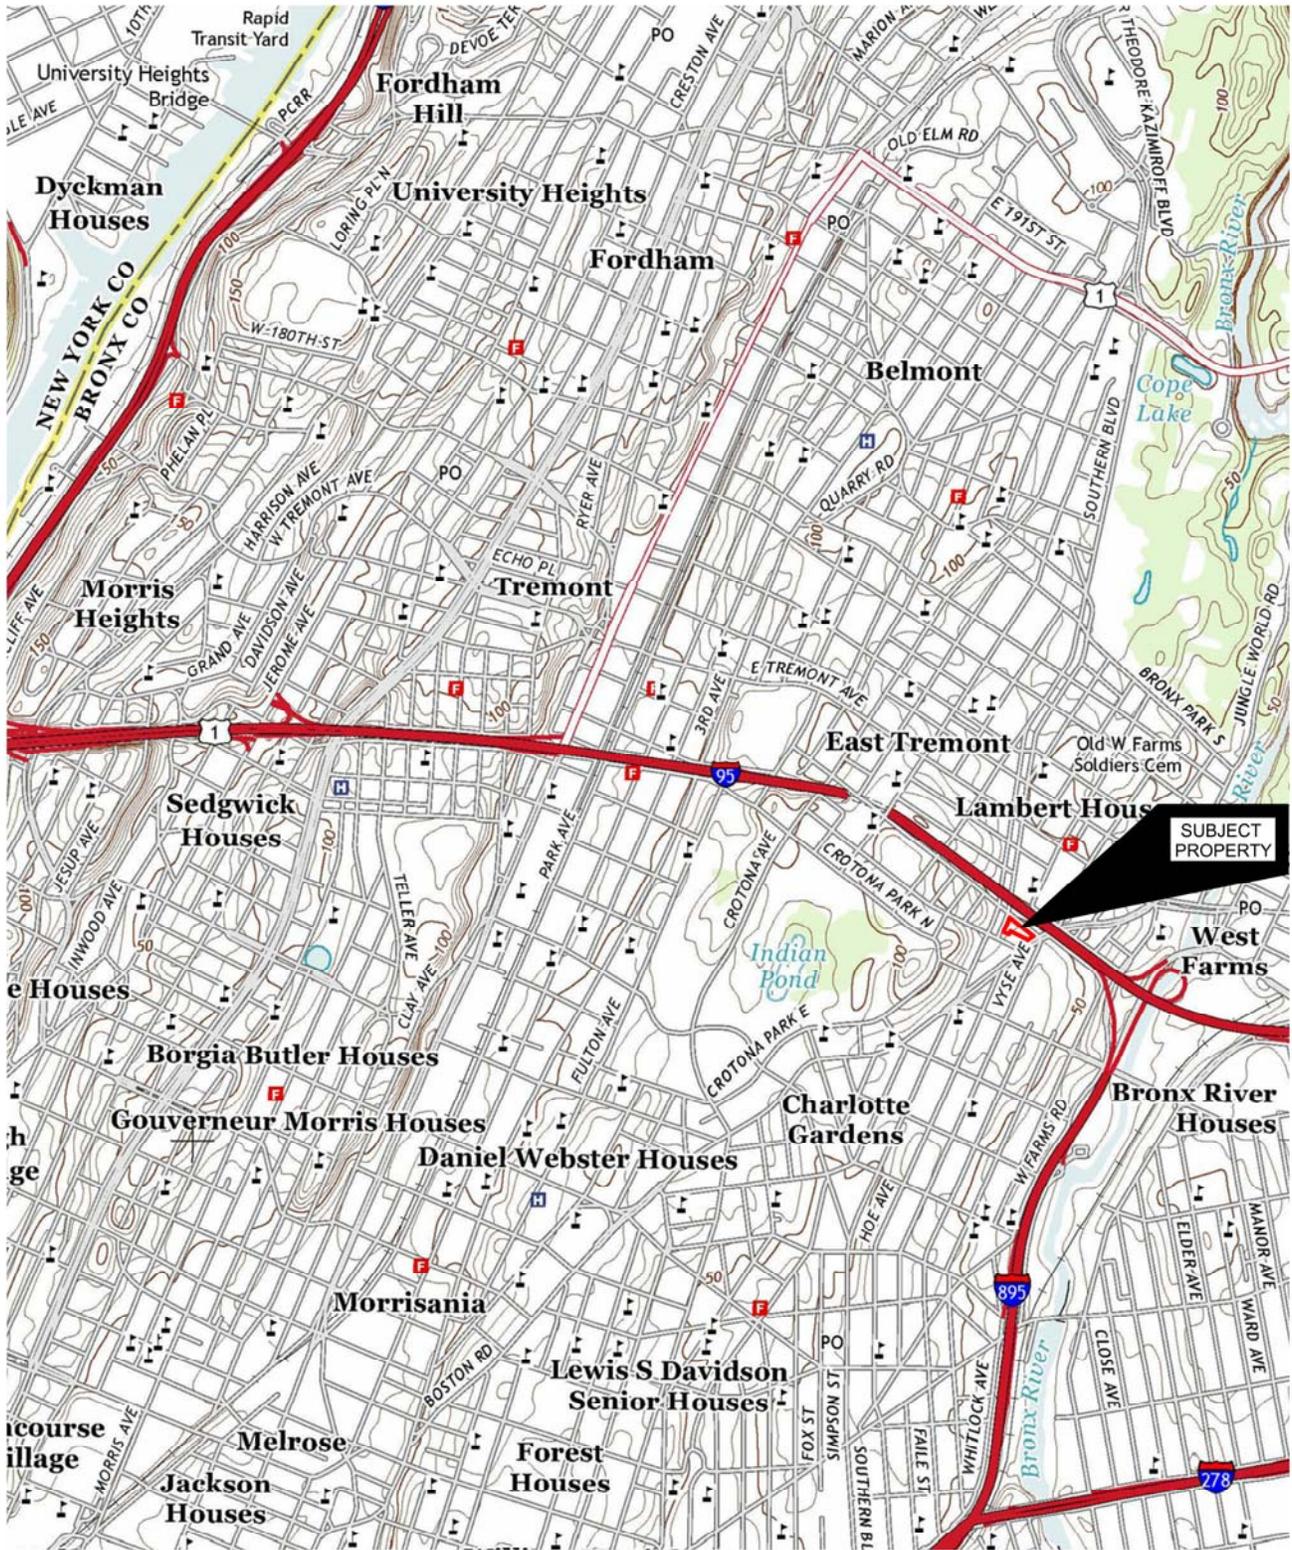

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 6. Guidance values from *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006* are shown in Table 7. Figure 13 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

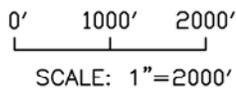

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

NYURU = NY Unrestricted Use Soil Cleanup Objective
 NYRRU = NY Restricted Residential Use Soil Cleanup Objective
RED = exceeds NYURU
 exceeds NYRRU
 Q = Qualifier
Qualifiers:
 B - Indicates compound found in associated blank
 D - Indicates result is based on a dilution
 H - Alternate peak selection upon analytical review
 J - Indicates estimated value for TICs and all results when detected below the RL
 U - Indicates compound analyzed for but not detected
 P - This flag is used for a pesticide/rochlor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported.
 NA - Not Available

Table 3
Groundwater Analytical Data Summary - February 2011
1825 Boston Road, Bronx, NY

CAS#	Compound	NYSGWS	MW-1 Dissolved	MW-1	TW-2 Dissolved	TW-2

NYSGWS = New York State 6NYCRR Part 703.5 Class GA groundwater standards

RED - Indicates result exceeds NYSDEC AWQS

Q - Qualifier

Qualifiers:

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

Table 7
New York State Department of Environmental Conservation Decision Matrices
from Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006

Decision matrices are risk management tools, developed by the NYSDOH in conjunction with other agencies, to provide guidance on a case-by-case basis about actions that should be taken to address current and potential exposures related to soil vapor intrusion. The matrices are intended to be used when evaluating the results from buildings with full slab foundations.

The NYSDOH has developed two matrices to use as tools in making decisions when soil vapor may be entering buildings. The first decision matrix was originally developed for TCE and the second for PCE. As summarized in the table below (Table 3.3 in the NYSDEC VIG), four chemicals have been assigned to the two matrices to date.

Volatile chemicals and their decision matrices

Chemical	Soil Vapor/Indoor Air Matrix
Carbon tetrachloride	Matrix 1
Trichloroethene (TCE)	Matrix 1
Vinyl chloride	Matrix 1

Chemical	Soil Vapor/Indoor Air Matrix
1,1-Dichloroethene	Matrix 2
cis-1,2-Dichloroethene	Matrix 2
Tetrachloroethene (PCE)	Matrix 2
1,1,1-Trichloroethane (1,1,1-TCA)	Matrix 2

Soil Vapor/Indoor Air Matrix 1

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (µg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (µg/m3)			
	< 0.25	0.25 to < 1	1 to < 5.0	5.0 and above
< 5	1. No further action	2. Take reasonable and practical actions to identify source(s) and reduce exposures	3. Take reasonable and practical actions to identify source(s) and reduce exposures	4. Take reasonable and practical actions to identify source(s) and reduce exposures
5 to < 50	5. No further action	6. MONITOR	7. MONITOR	8. MITIGATE
50 to < 250	9. MONITOR	10. MONITOR / MITIGATE	11. MITIGATE	12. MITIGATE
250 and above	13. MITIGATE	14. MITIGATE	15. MITIGATE	16. MITIGATE

Table 7
New York State Department of Environmental Conservation Decision Matrices
from Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006

Soil Vapor/Indoor Air Matrix 2

SUB-SLAB VAPOR CONCENTRATION of COMPOUND ($\mu\text{g}/\text{m}^3$)	INDOOR AIR CONCENTRATION of COMPOUND ($\mu\text{g}/\text{m}^3$)			
	< 3	3 to < 30	30 to < 100	100 and above
< 100	1. No further action	2. Take reasonable and practical actions to identify source(s) and reduce exposures	3. Take reasonable and practical actions to identify source(s) and reduce exposures	4. Take reasonable and practical actions to identify source(s) and reduce exposures
100 to < 1,000	5. MONITOR	6. MONITOR / MITIGATE	7. MITIGATE	8. MITIGATE
1,000 and above	9. MITIGATE	10. MITIGATE	11. MITIGATE	12. MITIGATE

Guide to Matrices 1 and 2

No further action:

Given that the compound was not detected in the indoor air sample and that the concentration detected in the sub-slab vapor sample is not expected to significantly affect indoor air quality, no additional actions are needed to address human exposures.

Take reasonable and practical actions to identify source(s) and reduce exposures:

The concentration detected in the indoor air sample is likely due to indoor and/or outdoor sources rather than soil vapor intrusion given the concentration detected in the sub-slab vapor sample. Therefore, steps should be taken to identify potential source(s) and to reduce exposures accordingly (e.g., by keeping containers tightly capped or by storing volatile organic compound-containing products in places where people do not spend much time, such as a garage or outdoor shed). Resampling may be recommended to demonstrate the effectiveness of actions taken to reduce exposures.

MONITOR:

Monitoring, including sub-slab vapor, basement air, lowest occupied living space air, and outdoor air sampling, is needed to determine whether concentrations in the indoor air or sub-slab vapor have changed. Monitoring may also be needed to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined on a site-specific and building-specific basis, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

MITIGATE:

Mitigation is needed to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system, and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

MONITOR / MITIGATE:

Monitoring or mitigation may be recommended after considering the magnitude of sub-slab vapor and indoor air concentrations along with building- and site specific conditions.

GENERAL NOTES

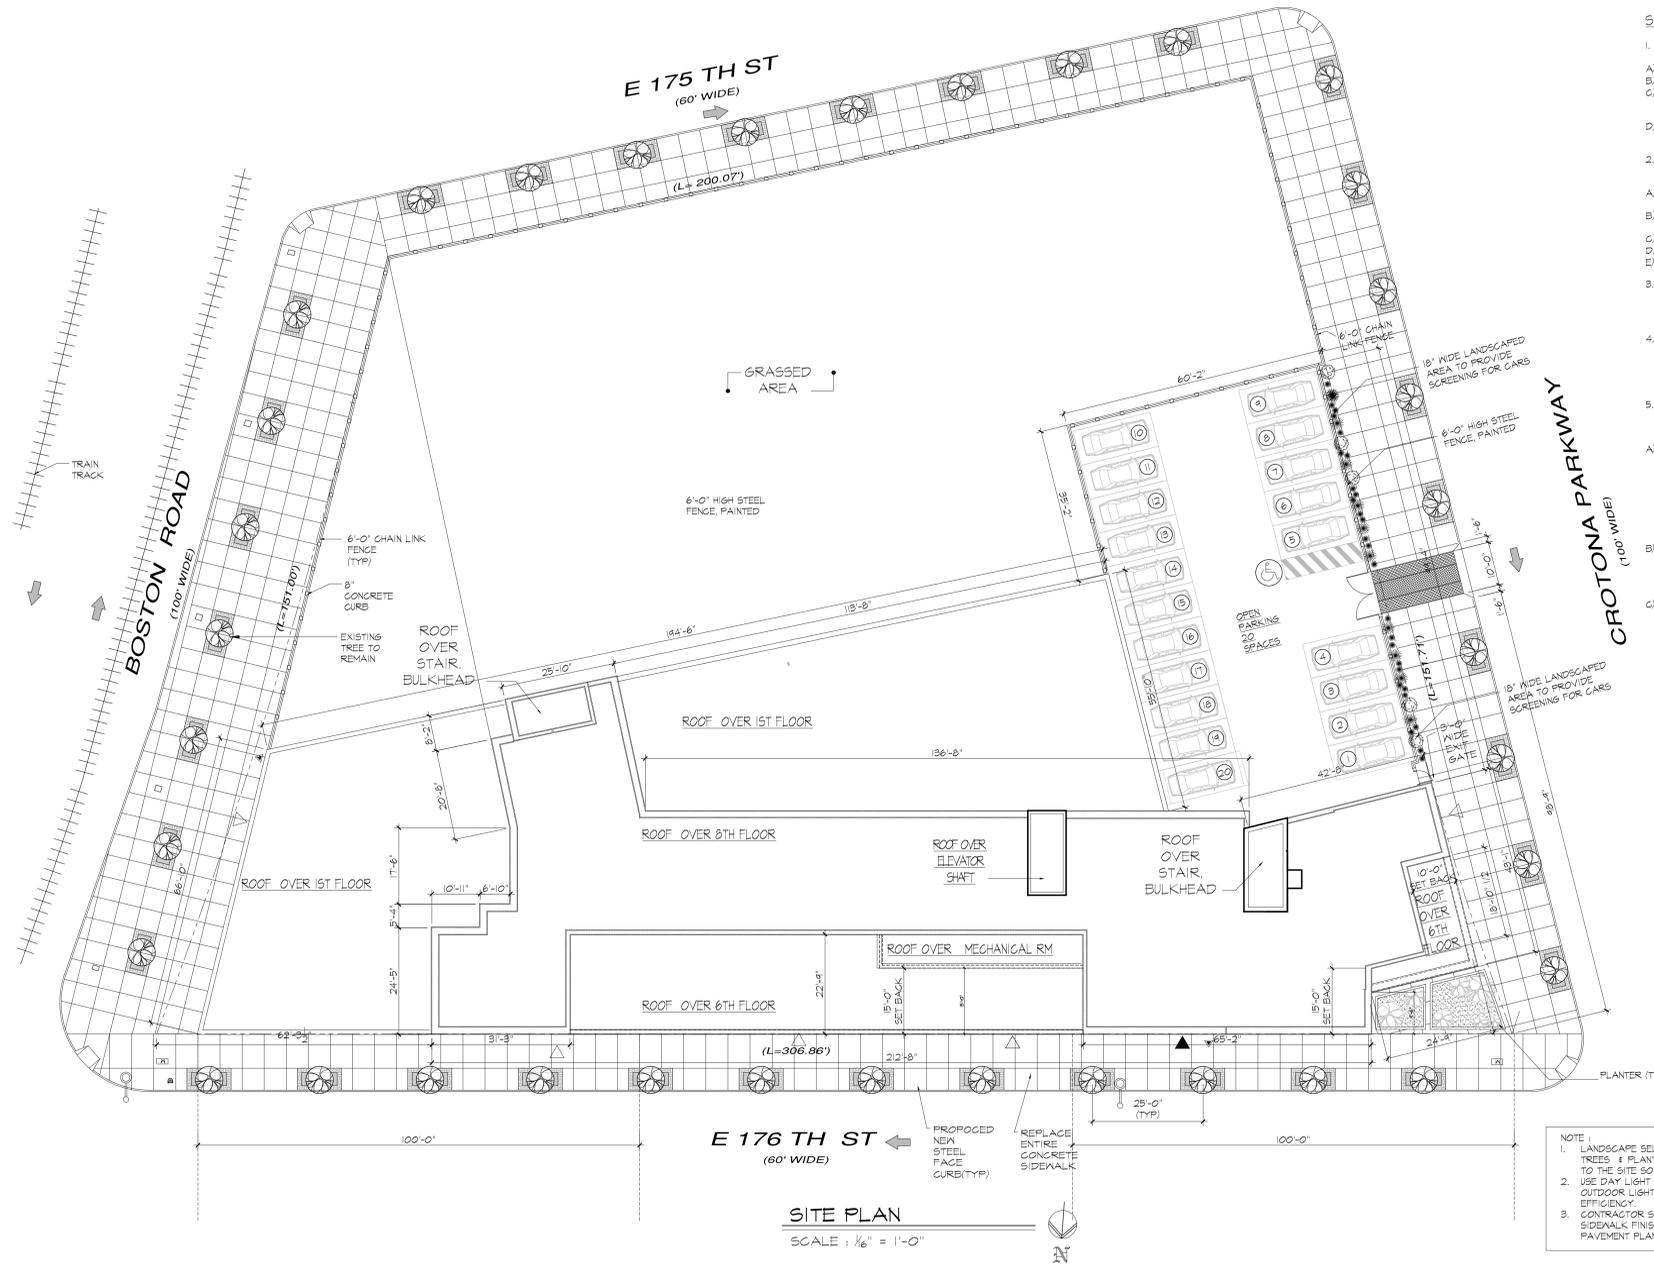

1. ALL FILL USED BELOW SLABS UNDER BUILDINGS AND IN PAVED AREAS SHALL BE QUALITY SANDY MATERIAL, AND SHALL BE COMPACTED IN 2" LAYERS TO 95% DENSITY TO PREVENT SETTLEMENT AS PER ASTM D957, METHOD C.
2. CONTRACTOR MUST ALSO FOLLOW ALL REQUIREMENTS FOR PREPARATION, CLEARING, PROOF ROLLING, AND FILL REPLACEMENT RECOMMENDED BY A REPORT ON SOIL AND FOUNDATION INVESTIGATION.
3. ALL FILL SHALL BE COMPACTED WITH SOIL COMPACTION EQUIPMENT RATHER THAN BY HAND TAMPING (EXCEPT AROUND PIPES, ETC.)
4. THE THICKNESS OF FILL LAYERS PLACED SHALL BE COMPATIBLE WITH THE TYPE OF COMPACTION EQUIPMENT USED.
5. THE ATTAINMENT OF SPECIFIED DENSITIES SHALL BE VERIFIED BY FIELD DENSITY TESTS MADE BY AN INDEPENDENT TESTING LABORATORY ON EACH LAYER OF MATERIAL COMPACTED. ONE TEST PER 5,000 SQ. FT. OF SURFACE AREA SHALL BE MADE ON EACH LAYER WITHIN THE BUILDING.
6. USE ENERGY STAR APPLIANCES, LIGHT FIXTURES AND HEATING SYSTEMS OR THE EQUIVALENT. USE HOLID - PROPAGATING WHICH WILL PRODUCE THE SAME OR COMPARABLE ENERGY EFFICIENCY OR SAVINGS.
7. SELECT NATIVE OR NON INVASIVE NEW TREES AND PLANTS THAT ARE APPROPRIATE TO THE SITE'S SOIL AND MICROCLIMATE.
8. INSTALL WATER CONSERVING FIXTURES THROUGHOUT.
9. USE DAYLIGHT SENSORS OR TIMERS ON OUTDOOR LIGHTING TO MAXIMIZE ENERGY EFFICIENCY.
10. ALL INTERIOR PAINTS, PRIMERS, ADHESIVES AND SEALANTS MUST CONTAIN LOW OR NO VOCs.
11. GREEN LABEL CERTIFIED FLOOR COVERINGS: DO NOT INSTALL CARPETS IN BELOW GRADE LIVING SPACES, ENTRYWAYS, LAUNDRY ROOMS, BATHROOMS, KITCHENS OR UTILITY ROOMS. IF USING CARPET, USE PRODUCTS THAT MEET THE CARPET AND RUG INSTITUTE'S GREEN LABEL CERTIFIED CARPET, PAD AND CARPET ADHESIVES.
12. EXHAUST FANS - BATHROOM: INSTALL ENERGY STAR-LABELED BATHROOM FANS THAT EXHAUST TO THE OUTDOORS AND ARE EQUIPPED WITH A HUMIDISTAT SENSOR OR TIMER, OR OPERATE CONTINUOUSLY.
13. VENTILATION: INSTALL A VENTILATION SYSTEM FOR THE DWELLING UNIT THAT PROVIDES 15 CUBIC FEET PER MINUTE OF FRESH AIR PER OCCUPANT.
14. WATER HEATERS - PREVENTION: INSTALL CONVENTIONAL HOT WATER HEATERS IN ROOMS WITH DRAINS OR CATCH PANS PIPED TO THE EXTERIOR OF THE DWELLING AND WITH NON-WATER SENSITIVE FLOOR COVERINGS.
15. WATER HEATERS: MINIMIZING CO₂ SPECIFY DIRECT VENTED OR COMBUSTION SEALED WATER HEATERS IF THE HEATER IS LOCATED IN A CONDITIONED SPACE.
16. COLD WATER PIPE INSULATION: INSULATE EXPOSED COLD WATER PIPES.
17. MATERIALS IN KET AREAS: USE MATERIALS WITH SMOOTH, DURABLE, CLEANABLE SURFACES. DO NOT USE HOLD - PROPAGATING MATERIALS SUCH AS VINYL WALLPAPER AND UNSEALED GROUT.
18. CLOTHES - DRYER EXHAUST: CLOTHES DRYERS MUST BE EXHAUSTED DIRECTLY TO THE OUTDOORS.
19. INTEGRATED PEST MANAGEMENT: SEAL ALL WALL, FLOOR AND JOINT PENETRATIONS TO PREVENT PEST ENTRY. PROVIDE ROSENET AND CORROSION PROOF SCREENS (E.G. COPPER OR STAINLESS STEEL MESH) FOR LARGE OPENINGS.
20. REDUCED HEAT - ISLAND EFFECT: ROOFING AND PAVING: 1) USE ENERGY STAR - COMPLIANT AND HIGH - EMISSIVE ROOFINGS FOR THE ENTIRE ROOF 2) USE LIGHT - COLORED/HIGH - ALBEDO MATERIALS FOR HARDCAPPED AREAS.
21. ALL DWELLING UNITS ARE HANDICAP ADAPTABLE U.O.N.

EROSION AND SEDIMENT CONTROL PLAN - CONSTRUCTION SEQUENCE

1. ALL EROSION AND SEDIMENT CONTROL MEASURES, EXCLUDING CATCH-BASIN MEASURES, SHALL BE IN PLACE PRIOR TO ANY GRADING OPERATIONS AND INSTALLATION OF PROPOSED STRUCTURES AND UTILITIES.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL REMAIN IN PLACE AND BE MAINTAINED UNTIL CONSTRUCTION IS COMPLETED AND/OR STABILIZED.
3. INSTALL STABILIZED CONSTRUCTION ENTRANCE AS INDICATED ON PLAN.
4. INSTALL SILT FENCE AND/OR HAY BALE BARRIERS DOWN SLOPE OF ALL AREAS TO BE DISTURBED AND DOWN SLOPE OF ALL AREAS DESIGNATED FOR TOPSOIL STOCKPILING.
5. CONSTRUCT BERMS, TEMPORARY SHALES AND PIPES AS NECESSARY TO DIRECT RUNOFF TO TEMPORARY SEDIMENTATION ENTRAPMENT AREAS.
6. CLEAR EXISTING TREES, VEGETATION AND EXISTING STRUCTURES FROM AREAS TO BE FILLED OR EXCAVATED. STRIP AND STOCKPILE TOPSOIL FROM ALL AREAS TO BE DISTURBED. SEED STOCKPILED TOPSOIL WITH TEMPORARY RYE GRASS COVER.
7. PERFORM EXCAVATION AND FILL TO BRING LAND TO DESIRED GRADE. ANY DISTURBED AREAS TO REMAIN BARE SHOULD BE SEEDED WITH TEMPORARY RYE GRASS.
8. INSTALL UNDERGROUND UTILITIES, MANHOLES AND CATCH BASINS. GRATES OF CURB AND FIELD INLETS SHOULD BE LEFT AT ELEVATIONS WHICH PERMIT PROPER COLLECTION OF SURFACE RUNOFF.
9. INSTALL HAY BALE RINGS AROUND ALL CURB AND FIELD INLETS EXCEPT FOR THE BASINS LOCATED AT THE ANTI TRACKING PAD. BASINS AT THE PAD SHALL BE TREATED WITH THE CATCH BASIN-FILTER FABRIC DETAIL.
10. CONSTRUCT CURBS AND INSTALL BASE AND BINDER COURSES OF PAVED AREAS. RAISE GRATES OF CURB AND FIELD INLETS ACCORDINGLY.
11. COMPLETE FINE GRADINGS.
12. RAISE GRATES OF CURB AND FIELD INLETS TO FINAL ELEVATIONS. INSTALL SURFACE COURSE OF PAVEMENT.
13. UPON COMPLETION OF CONSTRUCTION ALL DISTURBED AREAS ARE TO BE SEEDED. REFER TO LANDSCAPING PLAN FOR PERMANENT SEEDING SPECIFICATIONS. ALL TEMPORARY DEVICES SHALL BE REMOVED AND THE AFFECTED AREAS RE-GRADED, PLANTED OR TREATED IN ACCORDANCE WITH THE APPROVED SITE PLANS.

STANDARD EROSION CONTROL NOTES

1. ALL CONTROL MEASURES FOR EROSION AND SEDIMENTATION SHALL COMPLY WITH THE STORMWATER POLLUTION PREVENTION PLAN (SWPPP).
 - A) INSPECTIONS OF ALL CONTROL MEASURES PER THE SWPPP.
 - B) WEEKLY INSPECTIONS AND DOCUMENTATION OF EROSION CONTROL PRACTICES.
 - C) INSPECTIONS OF ALL CONTROL MEASURES BEFORE FORECASTED AND AFTER PERIODS OF HEAVY OR PROLONGED RAIN RESULTING IN MORE THAN 0.5-INCHES.
 - D) WEEKLY INSPECTIONS OF ON AND OFF-SITE AREAS DOWNSTREAM FROM CONSTRUCTION ACTIVITIES.
2. THE INSPECTIONS SHALL BE CONDUCTED BY THE APPLICANT AND/OR HIS REPRESENTATIVE, I.E. THE SITE ENGINEER, OR THE CONTRACTOR, TO DETERMINE THE FOLLOWING:
 - A) THE CONDITIONS OF THE CONTROL MEASURES AND THE NEED FOR REPAIR OR REPLACEMENT.
 - B) THE NEED FOR MAINTENANCE, E.G. REMOVAL OF SEDIMENT FROM BARRIERS, TRAPS, AND BASINS.
 - C) THE NEED FOR ADDITIONAL CONTROL MEASURES.
 - D) THE NEED FOR REAPPLICATION OF SEEDING, NETTING AND/OR MULCHING.
 - E) THE OVERALL EFFECTIVENESS OF THE CONTROL PLAN.
3. ALL TEMPORARY AND PERMANENT CONTROL DEVICES MUST BE MAINTAINED AND REPAIRED AS NEEDED TO ASSURE CONTINUED PERFORMANCE OF THEIR INTENDED FUNCTION. ALL NECESSARY REPAIRS SHALL BE PERFORMED IMMEDIATELY.
4. THESE PLANS INDICATE THE CONTROL MEASURES TO BE PUT IN PLACE. ADDITIONAL CONTROL MEASURES SHALL BE IMPLEMENTED AS SITE CONDITIONS CHANGE AND UNFORESEEN PROBLEMS OCCUR. IMPLEMENTATION OF THE ADDITIONAL CONTROL MEASURES SHALL BE AT THE DISCRETION OF THE SITE INSPECTOR.
5. AN EROSION CONTROL SYSTEM WILL BE UTILIZED BY THE DEVELOPER TO MINIMIZE THE PRODUCTION OF SEDIMENT FROM THE SITE. METHODS TO BE UTILIZED WILL BE THOSE FOUND MOST EFFECTIVE FOR THE SITE AND SHALL INCLUDE ONE OR MORE OF THE FOLLOWING, AS APPLICABLE:
 - A) TEMPORARY SEDIMENTATION ENTRAPMENT AREAS SHALL BE PROVIDED AT KEY LOCATIONS TO INTERCEPT AND CLARIFY SILT-LADEN RUNOFF FROM THE SITE. THESE MAY BE EXCAVATED OR MAY BE CREATED UTILIZING EARTHEN BERMS, RIP-RAP OR CRUSHED STONE DAMS, HAY BALES, OR OTHER SUITABLE MATERIALS. DIVERSION SHALES, BERMS OR OTHER CANALIZATION SHALL BE CONSTRUCTED TO INSURE THAT ALL SILT-LADEN WATERS ARE DIRECTED INTO THE ENTRAPMENT AREAS, WHICH SHALL NOT BE PERMITTED TO FILL IN, BUT SHALL BE CLEANED PERIODICALLY DURING THE COURSE OF CONSTRUCTION. THE COLLECTED SILT SHALL BE DEPOSITED IN AREAS SAFE FROM FURTHER EROSION.
 - B) ALL DISTURBED AREAS EXCEPT ROADWAYS WHICH WILL REMAIN UNFINISHED FOR MORE THAN 30 DAYS SHALL BE TEMPORARILY SEEDED WITH 1/2 LB. OF RYE GRASS OR MULCHED WITH 100 LBS. OF STRAW OR HAY PER 1,000 SQUARE FEET. ROADWAYS SHALL BE STABILIZED AS RAPIDLY AS PRACTICABLE BY THE INSTALLATION OF THE BASE COURSE.
 - C) SILT THAT LEAVES THE SITE IN VIOLATION OF THE REQUIRED PRECAUTIONS SHALL BE COLLECTED AND REMOVED AS DIRECTED BY APPROPRIATE MUNICIPAL AUTHORITIES.

BUILDING IS FULLY SPRINKLERED AND EQUIPPED WITH AN ALTERNATIVE FIRE EXTINGUISHING SYSTEM (STAND PIPE SYSTEM GRADE LEVELS). FIRE ALARM AND DETECTION SYSTEM & A FIRE COMMAND CENTER IN COMPLIANCE WITH THE NYC BUILDING CODE, NYC FIRE CODE & LOCAL FIRE DEPARTMENT REQUIREMENTS.

EGRESS NOTES CHAPTER 10

- MEANS OF EGRESS SHALL HAVE A CEILING HEIGHT NOT LESS THAN 7'-6" (BC 1008)
- OCCUPANT LOAD AS DETERMINED ON TABLE 1004.2
- EXIT AND ACCESS REQUIREMENTS ARE TO BE CALCULATED AS PER TABLE 1008) AS PER SECTION BC 1008
- EXITS, EXIT DISCHARGES AND PUBLIC CORRIDORS SHALL BE ILLUMINATED AT ALL TIMES AS PER BC 1008
- A PUBLIC CORRIDORS AND EXITS SHALL BE PROVIDED WITH ARTIFICIAL LIGHT FIXTURES SUPPLYING AT LEAST TWO FOOT CANDLES MEASURED AT THE FLOOR LEVEL, TO BE MAINTAINED CONTINUOUSLY THROUGHOUT EXITS AND THEIR ACCESS FACILITIES FOR THEIR FULL LENGTH (BC 1008.2)
- EXIT LIGHTING: EXIT SIGNS & THE PORTION OF THE EXTERIOR EXIT DISCHARGE IMMEDIATELY ADJACENT TO EXIT DISCHARGE DOORWAYS SHALL BE CONNECTED TO AN EMERGENCY POWER SOURCE FOR A DURATION NOT LESS THAN 90 MINUTES & SHALL CONSIST OF STORAGE BATTERIES, UNIT EQUIPMENT OR AN ON-SITE GENERATOR (BC 1008.3)
- ALL EXITS SHALL BE KEPT READILY ACCESSIBLE AND UNOBSTRUCTED AT ALL TIMES AS PER SECTION BC 1001
- DOORS ARE TO COMPLY WITH ALL APPLICABLE REQUIREMENTS OF SECTION BC 1008 INCLUDING BUT NOT LIMITED TO THE FOLLOWING:
 - A CLEAR OPENING OF 20" MIN IS REQUIRED AND SHALL BE HEADED BETWEEN THE FACE OF THE DOOR AND THE STOP WITH THE DOOR OPEN 90 DEGREES (SECTION BC 1008.1)
 - DOOR HEIGHT NOT TO BE LESS THAN 6'-8" (BC 1008.1.3)
 - ALL EXIT DOORS ARE TO OPEN IN THE DIRECTION OF EGRESS (1008.2.2) FLOOR LEVELS ON BOTH SIDES OF EXIT AND CORRIDOR DOORS ARE TO BE LEVEL AND AT THE SAME ELEVATION FOR A DISTANCE AT LEAST EQUAL TO THE WIDTH OF THE DOOR (1008.4)
 - EXIT DOORS SHALL BE READILY OPENABLE AT ALL TIMES FROM THE SIDE FROM WHICH EGRESS IS TO BE MADE. DOORS OPENING INTO INTERIOR ENCLOSED SPACES SHALL NOT BE LOCKED FROM EITHER SIDE EXCEPT THAT DOORS MAY BE LOCKED TO PREVENT ACCESS TO THE STAIR FROM THE OUTSIDE AT STREET LEVEL AS PER SECTION 1008.6
- PANIC AND FIRE EXIT HARDWARE SHALL BE INSTALLED ON ALL EGRESS DOORS FROM OCCUPANCY GROUP 'A' OR 'E' HAVING AN OCCUPANT LOAD OF 15 PEOPLE OR MORE AS PER SECTION 1008.8
- REQUIRED EXITS & SHOCK DOORS ARE TO BE SELF-CLOSING (BC 1008.7) WITH A 1 1/2 HOUR FIRE PROTECTION RATING (TABLE 105.3) EXCEPT IN THE FIRST STORY OF EXTERIOR WALLS FACING A STREET THAT HAVE A FIRE SEPARATION DISTANCE OF GREATER THAN 15'-0" (BC 104.6.2) THEN DOORS NEED NOT TO BE RATED.
- STAIRWAYS SHALL COMPLY WITH ALL APPLICABLE REQUIREMENTS STATED IN SECTIONS BC 1007 & 1014 INCLUDING BUT NOT LIMITED TO THE FOLLOWING:
 - STAIR WIDTH SHALL BE DETERMINED AS SPECIFIED IN SECTION 1008) BUT SUCH WIDTH SHALL NOT BE LESS THAN 44" (BC 1004.1) OR 36" (BC 1001.2)
 - AREA OF RESCUE ASSISTANCE SHALL BE 30' X 48" FOR EACH 200 OCCUPANTS AS PER SECTION 1007.6
 - THE CLEAR HEADROOM SHALL BE AT LEAST 6'-8" MINIMUM AS SPECIFIED IN SECTION 1004.2) (R-2 OCCUPANCY)
 - LANDINGS AND PLATFORMS PROVIDED AT THE HEAD AND FOOT OF EACH FLIGHT OF STAIRS SHALL HAVE A MINIMUM WIDTH PERPENDICULAR TO THE DIRECTION OF TRAVEL OF AT LEAST THE WIDTH OF THE STAIR. IN STRAIGHT RUN STAIRS, THE DISTANCE BETWEEN STAIRS WITHIN THE RUN SHALL NOT BE MORE THAN 40'. NO DOOR SHALL SWING INTO A LANDING AND REDUCE THE EGRESS REQUIRED CLEAR WIDTH OF THE STAIR OR STAIR PLATFORM TO BE LESS THAN 75% OF THE REQUIRED WIDTH OR WHEN FULLY OPEN, THE DOOR SHALL NOT PROJECT MORE THAN 7" INTO THE LANDING AS PER SECTION 1004.4
 - RISERS, TREADS, STRINGERS, LANDINGS, PLATFORMS AND GUARDS EXCLUSIVE OF HANDRAILS SHALL BE BUILT OF NONCOMBUSTIBLE MATERIALS WHEN THEY STAIRS ARE CONTAINED WITHIN THE SAME ENCLOSURE. EACH STAIR SHALL BE SEPARATED FROM THE OTHER BY NONCOMBUSTIBLE CONSTRUCTION HAVING A FIRE RESISTANCE RATING EQUAL TO THAT REQUIRED FOR THE STAIR ENCLOSURE (BC 1004.5)
 - ALL INTERIOR STAIRS SHALL EXTEND UP TO THE ROOF (BC 1004.12)
- STAIRS SHALL HAVE HANDRAILS ON EACH SIDE (EXCEPT STAIRS LESS THAN 44" IN WIDTH) HAVING FINGER CLEARANCE OF 1 1/2" MIN, PROJECTING NOT MORE THAN 4 1/2" INTO THE REQUIRED STAIR WIDTH. HEIGHT OF HANDRAIL SHALL BE UNIFORM NOT LESS THAN 34" AND NOT MORE THAN 38" MEASURED ABOVE THE STAIR TREAD NOSING. HANDRAILS SHALL BE DESIGNED IN COMPLIANCE WITH SECTION 1004.11
- THE MAXIMUM VERTICAL RISE OF A SINGLE FLIGHT OF STAIRS BETWEEN FLOORS IS NOT TO EXCEED 12' EXCEPT IN OCCUPANCY GROUP 'A' AND 'E' WHERE THE VERTICAL RISE IS NOT TO EXCEED 8'-0" (SECTION 1004.6)
- INTERIOR REQUIRED STAIRS EXTENDING TO THE ROOF SHALL BE VENTED AS PER THE REQUIREMENTS OF SECTION 1003
- STAIR EXIT DOORS SHALL BE PLACED A DISTANCE APART EQUAL TO NO LESS THAN 15'-0" IN R-2 OCCUPANCY (SECTION 1044.2.3)

- PROTRUDING OBJECTS ARE PERMITTED TO EXTEND BELOW THE MIN. CEILING HEIGHT REQUIRED PROVIDED THAT A MIN. HEADROOM OF 7'-0" IN HEIGHT IS REQUIRED OVER ANY WALKING SURFACE NOT MORE THAN 50% OF THE CEILING AREA CAN BE REDUCED IN HEIGHT BY PROTRUDING OBJECTS SO AS TO OBSTRUCT FULL VIEW OF EXIT SIGNS (SECTION 1003.3)
- CORRIDOR WIDTH SHALL BE DETERMINED AS PER SECTION 1008) BUT NOT LESS THAN 44"
- DEAD END CORRIDORS SHALL NOT EXCEED 80'-0" IN LENGTH (BC 1016.3)
- DOORS WHEN THEY FULLY OPEN & HANDRAILS SHALL NOT REDUCE THE REQUIRED WIDTH BY MORE THAN 7". DOORS IN ANY POSITION SHALL NOT REDUCE THE REQUIRED WIDTH BY MORE THAN 1/2". OTHER NONSTRUCTURAL PROJECTIONS ARE PERMITTED TO PROJECT INTO THE REQUIRED WIDTH 1/2" ON EACH SIDE (BC 1003.2)
- THE FINISHES IN ALL EXITS SHALL BE OF NONCOMBUSTIBLE MATERIALS AS PER CHAPTER 6 AND SUBSECTION 1003.4 OF SECTION BC 1003
- THE LOCATION OF EVERY EXIT ON EVERY FLOOR SHALL BE CLEARLY INDICATED BY EXIT SIGNS (SECTION BC 101) EXIT SIGN SHALL BE PLACED APART SO THAT NO POINT IN THE EXIT CORRIDOR IS MORE THAN 100'-0"

**E 176 ST (60' WIDE)
1ST FLOOR PLAN**

SCALE: 1/8" = 1'-0"

LEGEND:

- CONCRETE FOUNDATION WALL
- CONCRETE BLOCK WALL - 2HR FIRE RATED
- GYPSUM BOARD PARTITION - SEE PLAN FOR SIZE
- MASONRY VENEER
- REMOVABLE KITCHEN BASE CABINET 2'-4" WIDE BY 2'-0" DEEP
- PARTITION - SEE WALL TYPE LEGEND
- FIRE RATED SHAFT WALL
- CARBON MONOXIDE DETECTOR
- EXIT LIGHT AND SIGN - CEILING MOUNTED
- EXIT LIGHT AND SIGN - WALL MOUNTED
- ELECTRICAL PANEL UNIT
- SUSPENDED GYPSUM BOARD

2 HOUR RATED

- 1. 2 HOUR RATED TENANT SEPARATION CHASE WALL - (2) LAYERS OF (1) LAYER 1/2" TYPE 'X' GYPSUM BOARD OVER 3/8" METAL HAT CHANNELS @ 24" O.C. OVER 2 HR RATED CONCRETE BLOCK WALL WITH CONT. GALVANIZED HORIZONTAL TRUSS TYPE REINFORCING AT ALTERNATE COURSES. SEAL TOP OF CONCRETE BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE/METAL FLOOR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND FIRESTOP SEALANT AND FIRESTOP INSULATION WHERE GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #496).
- 2. 2 HOUR RATED EXTERIOR PARTITION - (2) LAYERS OF 3/4" TYPE 'X' GYPSUM BOARD, (INSIDE) 3/8" EXP EXTERIOR GYPSUM BOARD SHEATHING (OUTSIDE) OVER 3/8" GA 18 GALV. METAL STUDS @ 16" O.C. WITH 3/2" BATT INSULATION (UNFACED) (R-15) (UL-424).
- 3. 2 HOUR RATED INTERIOR PARTITION - (2) LAYERS OF 5/8" TYPE 'X' GYPSUM BOARD ON EACH SIDE, 3/8" METAL STUDS @ 16" O.C. WITH 3/2" SOUND ATTENUATION INSULATION, EXTEND GYPSUM BOARD & STUDS UP TO UNDERSIDE OF FLOOR METAL DECK OR ROOF DECK. SEAL TIGHT TO DECK W/ CONT. FIRESTOP SEALANT & FIRESTOP INSULATION. (GA FILE #49-152) (STC 55-55).
- 4. 2 HOUR RATED CMU WALL - CMU WITH CONT. GALVANIZED HORIZONTAL TRUSS TYPE REINFORCING AT ALTERNATE BLOCK COURSES. SEAL TOP OF CONCRETE/METAL BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE/METAL DECK OR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND FIRESTOP INSULATION WHERE GAP EXISTS. BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #496).
- 5. 2 HOUR RATED MECHANICAL SHAFT WALL - (2) LAYERS OF 1/2" TYPE 'X' GYPSUM BOARD ON ONE SIDE OF 2" METAL CH STUDS @ 24" O.C. WITH (1) LAYER OF 1/2" TYPE 'X' GYPSUM LINER PANEL ON SHAFT SIDE W/ 1" MINERAL FIBER INSULATION IN CAVITY. SEAL TOP OF WALL TIGHT TO UNDERSIDE OF CONCRETE DECK W/ CONT. FIRESTOP SEALANT. GA FILE #40-8 (STC-45-44).

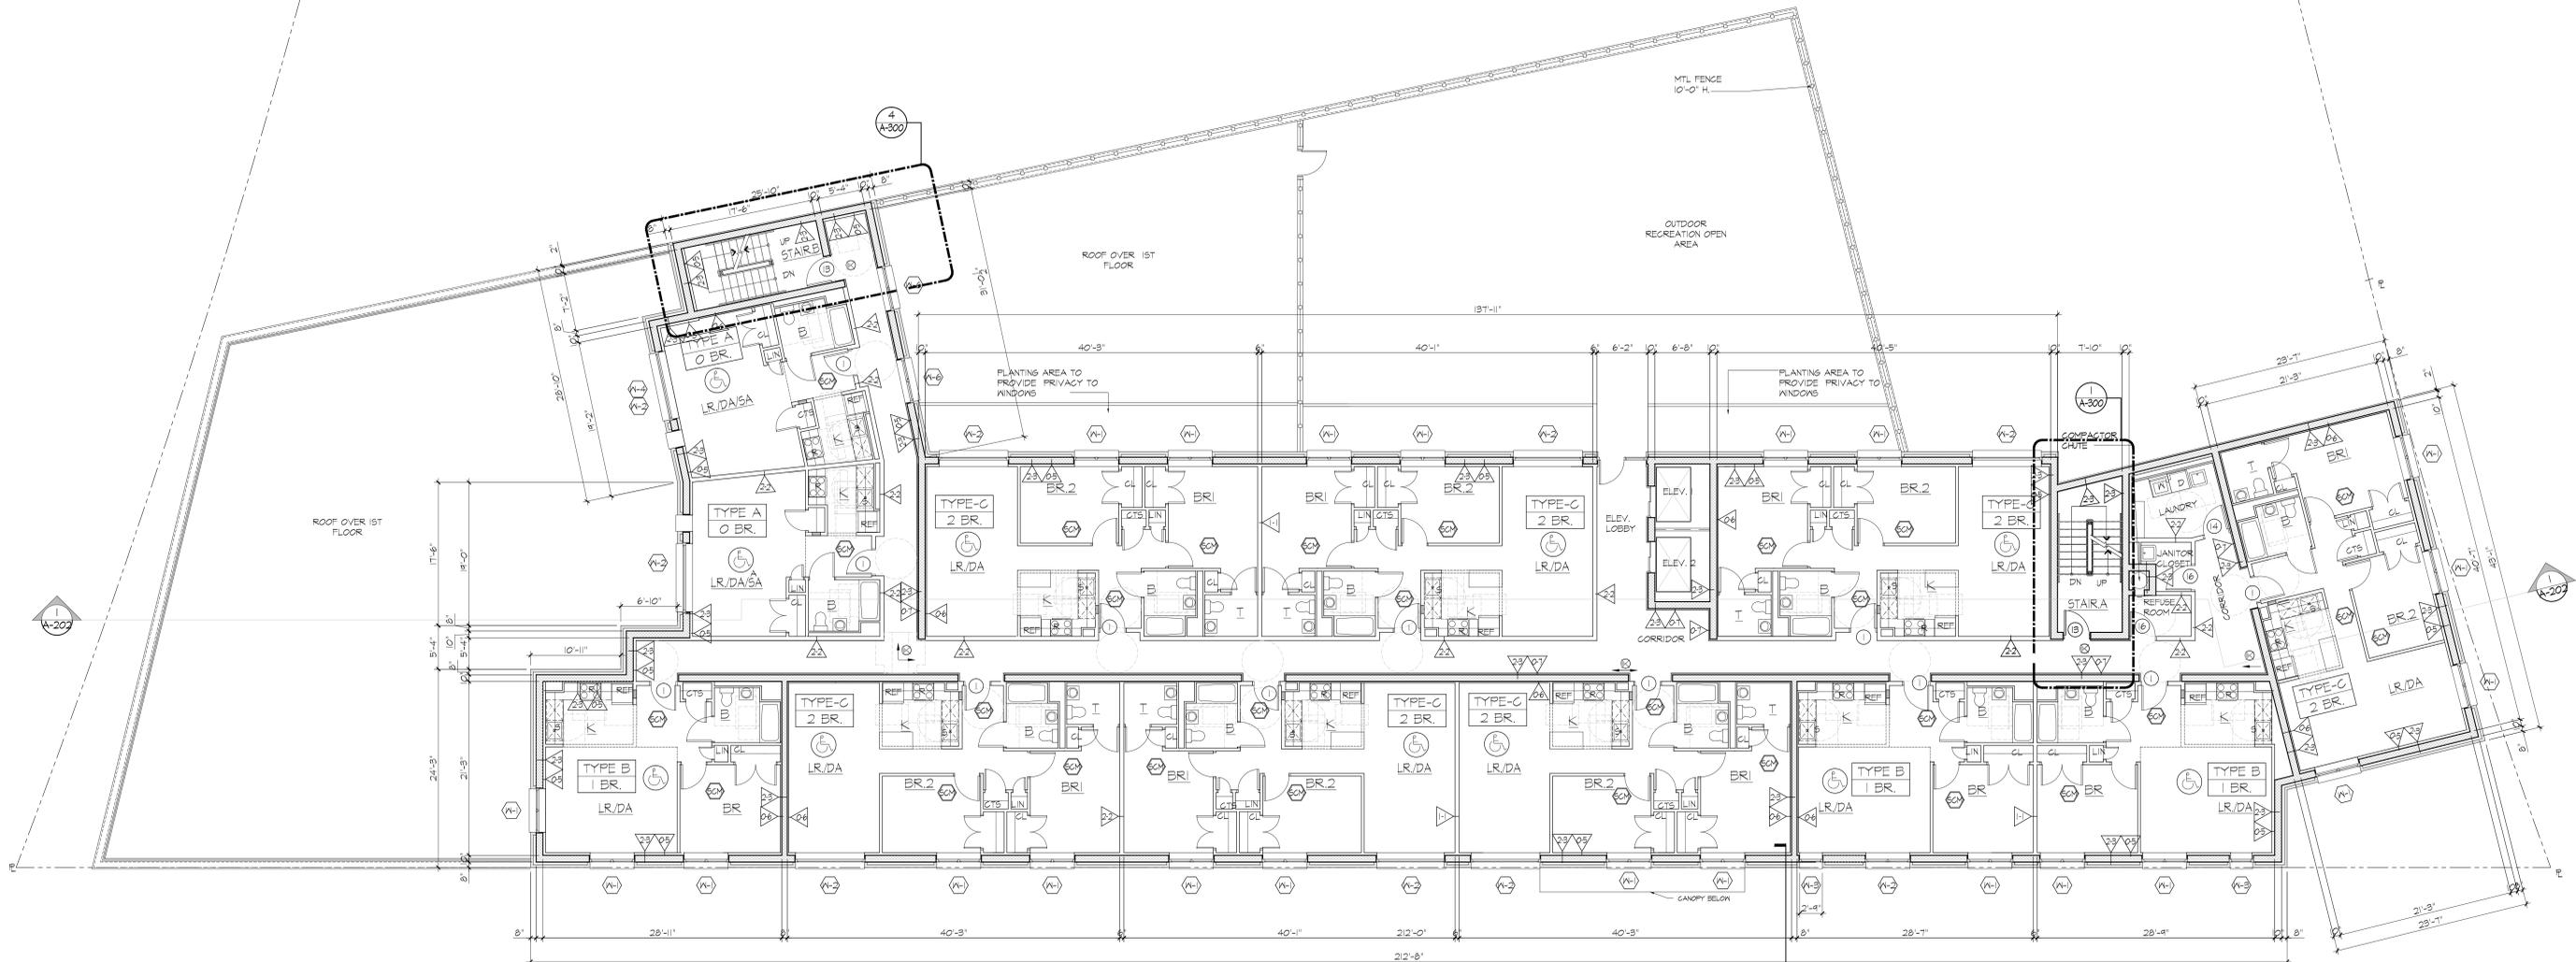

GENERAL NOTES:

1. FOR KITCHEN AND TOILET ELEVATIONS SEE DRAWING A-501.
2. G.C. SHALL COORDINATE SIZE & LOCATION OF ALL HVAC OPENINGS IN CON/METAL DECK WITH MECHANICAL DRAWINGS. CONTRACTOR SHALL COORDINATE SIZE AND LOCATION OF ALL MASONRY OPENINGS AT ELEVATOR ENTRANCES WITH ELEVATOR VENDOR.
3. U.F.A.S. ACCESSIBLE EFFICIENCY UNIT (TOTAL 4 UNITS).
4. U.F.A.S. COMPLIANT H.V.J. EFFICIENCY UNIT - OUTFITTED FOR PEOPLE W/ HEARING OR VISUAL IMPAIRMENTS (TOTAL 2 UNIT).

- WALL TYPE LEGEND:**
- NON RATED**
 - 1. PARTITION - (1) LAYER 3/8" TYPE 'X' GYPSUM BOARD ONE SIDE OF 2" METAL STUDS @ 16" O.C.
 - 2. TYPICAL PARTITION - (1) LAYER 3/8" TYPE 'X' GYPSUM BOARD ON EACH SIDE OF 2 1/2" METAL STUDS @ 16" O.C.
 - 3. BATHROOM CHASE WALL PARTITION - (1) LAYER 3/8" TYPE 'X' WATER RESISTANT GYPSUM BOARD ONE SIDE OF 2" METAL STUDS @ 16" O.C.
 - 4. PARTITION - (1) LAYER OF 3/8" TYPE 'X' GYPSUM BOARD ON EACH SIDE OF 3 3/8" METAL STUDS @ 16" O.C. (APARTMENT ELECTRICAL PANEL).
 - 5. FURRING AT EXTERIOR CMU WALL - (1) LAYER 3/8" TYPE 'X' GYPSUM BOARD ON 3 3/8" GALV. METAL STUDS @ 16" O.C. WITH 3/2" BATT INSULATION UNFACED.
 - 6. FURRING AT INTERIOR CMU WALL (APARTMENT SIDE) - (1) LAYER 3/8" TYPE 'X' GYPSUM BOARD OVER 1 1/2" METAL FURRING @ 16" O.C.
 - 7. FURRING AT INTERIOR CMU WALL (PUBLIC CORRIDOR SIDE) - (1) LAYER 3/8" TYPE 'X' GYPSUM BOARD OVER 3/8" METAL FURRING CHANNELS @ 16" O.C.
 - 1 HOUR RATED**
 - 1. 1 HOUR RATED TENANT SEPARATION PARTITION - (1) LAYER OF 3/8" TYPE 'X' GYPSUM BOARD ON (1) SIDE, (2) LAYERS OF 3/8" TYPE 'X' GYPSUM BOARD ON OTHER SIDE OF 3 3/8" METAL STUDS @ 16" O.C. WITH 3/2" SOUND ATTENUATION INSULATION, EXTEND STUDS & GYPSUM BOARD UP TO UNDERSIDE OF CONCRETE DECK & SEAL TIGHT TO UNDERSIDE OF CONCRETE/METAL DECK AND/OR ROOF DECK W/ CONT. FIRESTOP SEALANT & FIRESTOP INSULATION (GA FILE #49-152) (STC 50-54).

1825 Boston Road

Bronx, New York

PHASE I ENVIRONMENTAL SITE ASSESSMENT

AKRF Project Number 10629

Prepared for:

SoBRO

555 Bergen Avenue, 3rd Floor
Bronx, New York 10455

Prepared by:

AKRF, Inc.

440 Park Avenue South
New York, NY 10016
(212) 696-0670

May 2005

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by the South Bronx Overall Economic Development Corporation (SoBRO) to perform an Environmental Site Assessment of a vacant lot located at 1825 Boston Road in the Bronx, New York. The subject block is bounded to the north by the East 176th Street and the Cross Bronx Expressway, to the east by Boston Road and an elevated municipal subway line, to the south by East 175th Street, and to the west by Southern Boulevard. The site is surrounded primarily by residential and commercial/retail properties. The subject property was developed some time between 1896 and 1901 and operated as a transit rail car and a bus maintenance and repair facility from that time until at least 1989.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current usage of the site as well as similar usage of neighboring properties. This Phase I Environmental Site Assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-00, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 7.0 of this report. This assessment revealed the following environmental conditions in connection with the property:

- Based on State records and a review of previous investigations performed by URS Consultants, Inc. (URS) for the subject property in the early 1990s, a 10,000-gallon fuel oil underground storage tank and two 5,000-gallon diesel underground storage tanks were identified at the subject site. Free product was discovered in a monitoring well installed at the site, which was assumed to have been released from these tanks. A product recovery and groundwater monitoring program conducted from 1996 to 1998 indicated that measurable free product previously discovered at the site was reduced to non-detectable levels. A geophysical investigation conducted by URS and a test pitting program conducted by SoBRO identified no tanks remaining at the subject site, suggesting that the tanks had been removed.
- Historic Sanborn maps indicated that the subject property was developed some time between 1896 and 1901 and operated as a transit rail car and bus maintenance and repair facility until at least 1989. Petroleum products and solvents were likely used as part of the on-site maintenance activities, which have the potential to have affected the subject property.
- Historic fill of unknown origin is likely present underlying the site.
- Debris and trash were observed throughout the site, including plastic and glass bottles, paper, wood, tires, concrete blocks, plastic crates, and metal cans.
- Facilities located on the south-adjacent block included a portion of the former train car and bus repair and maintenance facility (no longer present) and a gasoline station (presently abandoned). These properties are located in a presumed upgradient groundwater flow direction. In addition, the regulatory databases and historical land-use atlases indicated that the surrounding neighborhood has an approximately 80-year history of residential, commercial, and industrial development. These surrounding properties have the potential to have affected local groundwater quality, which may have migrated to the subject site. However, a Phase II investigation was performed by AKRF in 2003 for the south-adjacent block, which included the collection of groundwater samples along East 175th Street, upgradient of the subject property. Petroleum hydrocarbon concentrations detected in the groundwater samples from these areas were below the most stringent regulatory standards (drinking water standards).

Based on the conclusions of this Phase I ESA, the following recommendations are made:

- Tires found at the subject property should be disposed of in accordance with regulatory protocols and taken to an appropriate receiving facility.
- Given that the development of the subject property would involve excavation and disturbance of the existing on-site soil, construction activities may result in temporary increases in exposure pathways for construction workers and workers on nearby sites to unclean urban fill material and potential contaminants in the soil. Therefore, to avoid any potential adverse health impacts, a construction health and safety plan (CHASP) will be prepared and implemented to assure that the construction workers, the surrounding community, and the environment are not adversely affected by the construction activities. The plan would specify the appropriate testing and/or monitoring by field personnel during construction and excavation activities and detail appropriate measures in the event that contamination, underground storage tanks, or other environmental conditions are encountered. Off-site transportation and disposal of fill materials should be in accordance with all applicable regulations.
- If dewatering activities for development of the site necessary, treatment of the groundwater prior to discharge to the municipal sewer may be required. Prior to any dewatering activities, sampling should be performed to insure that any discharged groundwater meets the New York City Department of Environmental Protection (NYCDEP) limitations for effluent to municipal sewers, should this be the designated course of action.

No other recommendations for further study or remediation are warranted at this time.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by the South Bronx Overall Economic Development Corporation (SoBRO) to perform an Environmental Site Assessment of a vacant property located at 1825 Boston Road in the Bronx, New York. The subject block is bounded to the north by the East 176th Street and the Cross Bronx Expressway, to the east by Boston Road and an elevated municipal subway line, to the south by East 175th Street, and to the west by Southern Boulevard. The site is surrounded primarily by residential and commercial/retail properties.

The scope of services for this assessment included the following:

- Visual observations of the project site and surrounding property were made to identify potential sources or indications of chemical contamination. The potential sources of contamination included, but were not limited to, underground storage tanks (USTs), aboveground storage tanks (ASTs), objects that could contain polychlorinated biphenyls (PCBs), and areas where hazardous materials were used, stored, treated, generated and/or disposed. Indications of chemical contamination include stained surfaces and chemical odors.

In addition, readily-observable portions of the properties immediately adjacent to the study site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.

- Published geological and groundwater information was obtained from available sources to determine the possibility of contamination from off-site sources.
- A review of radon concentrations in Bronx County (Bronx) was conducted to determine whether radon levels in the general area comply with United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use atlases for the site and adjacent properties were reviewed to evaluate previous land use.
- The following federal regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and the Brownfield Cleanup Program (BCP). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Air Discharge Facilities (ADF); and the Brownfield Cleanup Program.

2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the site and adjacent areas was performed on April 27, 2005 by Axel Schwendt of AKRF. At the time of the inspection, the weather was cloudy and approximately 60EF, the visibility was good, and the premises was adequately illuminated. The site was inspected for the presence of stained surfaces and soils, storage tanks, drums, transformers, stressed vegetation, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the site inspection are included in Appendix A.

2.1 General Site Conditions

The project site consisted of a vacant lot, enclosed by a ten-foot chain link fence. The majority of the site was unpaved and covered with vegetation, including a few trees. No signs of chemical stress were noted on the on-site vegetation. Two concrete-paved areas and some asphalt paving were located on the northeastern quadrant of the property, which were likely associated with former buildings or structures. This portion of the site was approximately five feet higher in elevation than the rest of the property.

Much of the property appeared to have been re-graded in several places, which likely occurred during or after demolition of the former on-site facility. Based on a review of previous environmental investigations performed at the site (discussed in Section 5.0), the former on-site structure was demolished in 1993. From the surface, soil at the site appeared to comprise urban fill material including sand, silt, gravel, cobbles, brick, concrete, and ash. In some areas, the fill material contained metal, piping, and electrical wires. The western half of the property appeared to have been excavated in several different spots. Exposed broken concrete and brick rubble were observed in these areas that were likely associated with former on-site structures. Some of the concrete rubble in the western portion of the site was observed to contain rebar and wood; a few pieces of concrete contained metal piping. Mr. Sandy Lent, an engineer for SoBRO, indicated that ten test pits had been dug at the site approximately one month ago to ascertain subsurface conditions for development purposes. No report or documentation for the test pitting activities was provided to AKRF. According to Mr. Lent, no underground storage tanks or stained soil were observed during the test pitting activities.

Debris and trash were observed throughout the site, including plastic and glass bottles, paper, wood, tires, concrete blocks, plastic crates, and metal cans. A pile of metal rods on wooden slats was located on one of the concrete-paved areas. No stained surfaces were noted at the subject site and no other significant observations were made. No evidence of underground storage tanks (i.e., vent pipes, fill caps, or concrete patches) was observed at the site.

2.2 Topography and Hydrogeology

The bedrock underlying the project site is mapped as the Manhattan Schist, composed of coarsely crystalline mica schist that has been severely crumpled and folded and shows a marked foliation. The bedrock surface in eastern Bronx is near the surface in the vicinity of the subject site, and bedrock outcrops can be found within several miles of the subject property.

The surface topography at the subject property is sloped to the west, though the general area tends to slope downward towards the east and northeast. The property is situated at an elevation of approximately 60 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level), according to the U.S. Geological Survey Central Park Quadrangle topographic map. Based on local topography, groundwater beneath the subject property most likely flows in a northeasterly direction towards the Bronx River, located approximately ½ mile east of the project

site. This generally concurs with previous investigations performed at the subject property (discussed in Section 5.0), which indicated that groundwater at the site flows to the northeast. The groundwater table at the site was encountered at a depth of approximately eight to ten feet below surface grade. Actual groundwater flow beneath the site can be affected by many factors, including past filling activities, underground utilities and other subsurface openings or obstructions such as basements, bedrock geology, and other factors beyond the scope of this study.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the site inspection, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate past or present use of underground storage tanks (USTs) at the subject property. A review of the State regulatory records identified six registered petroleum USTs for the West Farms Depot, the former train car and bus maintenance and repair facility located on the subject site and south-adjacent property. The State records do not indicate on which portion of the West Farms Depot property the tanks were located. These tanks and off-site underground storage tanks are discussed further in Section 4.2.2.

Based on a review of previous studies performed for the subject property (discussed further in Section 5.0), a heating oil tank and two diesel tanks were formerly located at the subject property portion of the West Farms Depot site. The same studies identified a 7,500-gallon fuel oil UST, a 1,080-gallon waste oil aboveground storage tank (AST), and a 275-gallon lube oil AST for the south-adjacent West Farms Depot property. A comparison with the State records would indicate that three of the State-registered tanks were located at the subject site and comprise a 10,000-gallon fuel oil UST and two 5,000-gallon diesel USTs. A geophysical investigation performed as part of the previous studies and test pits excavated for subsurface characterization did not identify these or any other tanks remaining at the site.

2.3.2 Aboveground Storage Tanks (ASTs)

No evidence, such as concrete foundations, containment walls, pedestals, or steel support structures, was observed during the site visit to indicate that aboveground storage tanks (ASTs) were located on-site. A review of the State regulatory records identified two 550-gallon aboveground storage tanks of unknown contents for the West Farms Depot, the former train car and bus maintenance and repair facility located on the subject site and south-adjacent property. However, based on previous studies performed at the site (discussed further in Section 5.0), these two aboveground tanks were located on the south-adjacent property. These tanks and other off-site aboveground storage tanks are discussed further in Section 4.2.2.

2.4 Polychlorinated Biphenyls (PCBs)

Prior to 1979, polychlorinated biphenyls (PCBs) were widely used for their cooling properties in electrical equipment such as transformers, capacitors, switches and voltage regulators. No potential PCB-containing equipment was observed on-site.

2.5 Utilities

Consolidated Edison (Con Ed) provided electricity to the study site and surrounding area. As the site was vacant at the time of the inspection, it is not certain whether the study site was connected to New York City municipal water and sewer systems. However, based on the historic development at the site, municipal water and sewer services are available. No other utilities were observed to be servicing the property.

2.6 Waste Management and Chemical Handling

No wastes or chemicals were observed to be generated at the subject site. Miscellaneous debris, trash and refuse were observed on the subject property during the site inspection.

2.7 Radon

Radon is a colorless, odorless gas produced by the radioactive decay of certain elements. The most common sources of radon are igneous and metamorphic rocks containing uranium (such as pitchblende), granite, shale, or phosphate, as well as soils or sediments derived from these parent materials. Radon may also be found in soils contaminated with certain industrial wastes (such as uranium or phosphate mine tailings) or in earth-derived building products which include industrial wastes that contain phosphate slag. In areas where the potential for radon accumulation is high, special ventilation systems may offset potential health hazards.

According to data compiled by the Bureau of Radiation Protection, a division of the New York State Department of Health, Bronx County (Bronx) has an average level of basement radon concentration of 0.8 picoCuries/liter. The USEPA recommended action level is 4.0 picoCuries/liter.

3.0 ADJACENT LAND USE

The subject site, which encompasses the entire city block, is bounded to the north by the East 176th Street and the Cross Bronx Expressway, to the east by Boston Road and an elevated municipal subway line, to the south by East 175th Street, and to the east by Southern Boulevard. Residential properties were located north of the study site, across 176th Street. Areas east and west were primarily commercial and residential in nature. A commercial self-storage facility (Storage Deluxe) was present to the south across 175th Street, beyond which was an abandoned gasoline station.

4.0 SITE HISTORY AND RECORDS REVIEW

4.1 Prior Ownership and Usage

4.1.1 Historical Land Use maps

Historical insurance maps were reviewed for indications of industrial usage or other evidence suggesting the use or disposal of hazardous materials on or adjacent to the subject property. Sanborn Fire Insurance maps from 1896, 1901, 1915, 1950, 1977, 1984, and 1989 were reviewed. Copies of portions of these maps are included as Appendix B. Summaries of each map are as follows:

1896

The subject block was primarily vacant with a stable present on the northeastern quadrant. The majority of the surrounding areas were vacant. A few dwellings were located on the surrounding properties.

1901

The subject property and southeast-adjacent lot were occupied by buildings labeled as the Union Railway Company Car House and Repair Shop. The areas surrounding the subject property were primarily vacant, as on the 1896 map, with a few more residential dwellings present on nearby properties.

1915

The Union Railway Company Car House and Repair Shop were present on the subject and south-adjacent blocks. A power house transformer station had been added to the south-adjacent property building. A large municipal park was present to the southwest. A small municipal park was located west-adjacent to the subject site. The surrounding properties had been developed with additional residential and commercial properties.

1950

The subject and south-adjacent properties were occupied by the Third Avenue Transit System car barn and maintenance shop. The power house transformer station on the south-adjacent lot was no longer present. A filling station and car wash were located on the south side of the south-adjacent block, where the abandoned gas station was noted during AKRF's site visit. Another gas station was present further south. The large municipal park was present to the southwest, as in earlier maps, and was labeled "Hylan Park". The surrounding areas were completely developed with commercial and residential properties, including a car garage approximately 800 feet to the southwest.

1977-1989

The property and south-adjacent building were occupied by the Manhattan and Bronx Surface Transit Authority, which used the buildings as a bus garage and maintenance shop. The filling station and car wash were located on the south-adjacent block. The other gas station located further southwest on the 1950 map was no longer present. The surrounding areas were similar to what was shown on the 1950 map.

To summarize, the Sanborn maps indicated that the subject property was developed some time between 1896 and 1901 and operated as either a transit rail car or bus maintenance and repair facility until at least 1989. The gasoline station and car wash on the south-adjacent block were present from some time between 1915 and 1950. This facility is located in a presumed upgradient groundwater flow direction. The buildings developed on the subject site were demolished some time after 1989.

4.1.2 Historical Aerial Photographs

Complete and thorough coverage was available for the subject property utilizing historical land-use maps. The maps typically include detailed information such as dates of construction, building occupants or a vacant status, and use and/or zoning use of structures on the site and surrounding area. Aerial photographs would, most likely, not provide additional, unique information that is pertinent to the environmental condition of the property. As such, aerial photographs were not reviewed for the project site.

4.1.3 Site Interviews

AKRF interviewed Mr. Richard Ross of SoBRO and Mr. Sandy Lent, Engineer for SoBRO for information regarding the subject property. According to Mr. Lent, 10 test pits were excavated at the site to characterize subsurface conditions. The test pits were located mainly on the western portion of the site. Mr. Lent indicated that no tanks or obvious adverse environmental conditions (i.e., staining or hazardous materials) were encountered during the test pitting program.

4.2 Regulatory Review

Toxics Targeting, Inc. of Ithaca, New York, was contracted to obtain information regarding the regulatory status of the property and the surrounding area. This information included records from databases maintained by the USEPA and New York State Department of Environmental Conservation (NYSDEC). AKRF reviewed these records to identify the use, generation, storage, treatment and/or disposal of hazardous material and chemicals, or releases of such materials which may impact the project site. All applicable regulatory databases meet ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. Copies of the pertinent sections of the Toxics Targeting, Inc. report are included in Appendix C.

4.2.1 Federal

The federal records reviewed included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and Air Discharge Facilities (ADF). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

No NPL sites were identified within a one-mile radius of the project site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of known or suspected, uncontrolled or abandoned hazardous waste sites which the USEPA has investigated, or plans to investigate, for a release, or threatened release, of hazardous substances pursuant to the Superfund Act of 1980 (CERCLA). Some of these sites may constitute a potential threat to human health and the environment. While it has been determined by the USEPA that some CERCLIS sites require no action, others could pose a real or perceived environmental threat to neighboring properties, thus affecting property values.

No CERCLIS sites were identified within a one-mile radius of the project site.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on reported releases of petroleum and other potentially hazardous substances.

The subject property was not listed as an ERNS site.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported to the USEPA and/or NYSDEC by a variety of industries on their annual estimated releases of certain chemicals to the environment. The TRIS was mandated by Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986. Available information includes the maximum amount of chemicals stored on-site; the estimated quantity emitted into the air, discharged into bodies of water, injected underground, or released to land; methods used in waste treatment and their efficiency; and data on the transfer of chemicals off-site.

One TRIS site was identified within a ¼-mile radius of the project site. The Arthur Frisch Company, Inc., located at 1816 Boston Road, approximately 200 feet to the southwest, was listed for air emissions in 1988, 1989, and 1993. Based on the information provided in the database, this site is not expected to have affected the subject property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This federal- and state-maintained database contains a listing of sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ¼-mile radius of the subject property.

United States Environmental Protection Agency Civil Enforcement Docket

This database is the USEPA's system for tracking civil judiciary cases filed on behalf of the agency by the Department of Justice.

No US EPA's Civil Enforcement Docket facilities were listed within a ¼-mile radius of the subject property.

Air Discharge Facilities Index (ADF)

This listing of sites tracked by the US EPA AIRS Database includes address information on each facility and the source of its associated air emissions.

Four Air Discharge Facilities were identified within a ¼-mile radius of the study site. Based on the information provided in the database, these ADF facilities are not expected to have affected the subject site.

Brownfield Cleanup Program

In 2003, a New York State law established this successor to the Voluntary Cleanup Program. In addition to liability releases, it established a variety of tax credits for sites remediated through the program. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

Two Brownfield Cleanup sites were listed within a one-mile radius of the subject site. Summaries of these sites are as follows:

- Consolidated Edison Company Bronx Works, listed at West Farms Road and Bronx River Avenue, approximately 1,900 feet southeast of subject site, was reported in the Voluntary Cleanup Program.
- Consolidated Edison Company East 175th Street Station, listed at 1815-1845 Webster Avenue, approximately 5,200 feet northwest of subject site, was reported in the Voluntary Cleanup Program.

No further information was provided in the database for the above-listed facilities. Based on locations and the information provided, these sites are not expected to have affected the subject site.

4.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); and Major Oil Storage Facilities (MOSF).

New York SPILLS Database

The New York SPILLS database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures. The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

Eighty one (81) spills were reported within a ½-mile radius of the subject site, including active status spills and closed status spills. Six (6) of these sites were located within a ¼-mile radius of the subject site. Of those listed within a ⅛-mile radius, three were listed in an upgradient location with respect to groundwater flow direction. Details of these are as follows:

- The NYCTA property, located at 1801 Boston Road, approximately 140 feet southwest of the subject site, was listed for the discovery of an abandoned drum of mineral spirits in 1989. This site was located on the south-adjacent block. The spill was closed in 2001.
- A facility located at 18-30 Southern Boulevard, approximately 410 feet southwest of subject site, was reported as a closed status tank test failure site in 1989. The spill was closed in 1992.
- The Amoco, located at 1776 Southern Boulevard, approximately 600 feet southwest of subject site, was listed as an active spill in March 2003. A gasoline spill of unknown quantity was reported to have affected groundwater. This site was located where the abandoned gasoline station was noted by AKRF on the south side of the south-adjacent block.

Based on its presumed upgradient groundwater flow location, releases from the Amoco facility have the potential to have affected the subject site. Details from all listed spills are included in Appendix C.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those which have filed notification forms in accordance with the Resource Conservation and Recovery Act requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

Eleven (11) RCRA Hazardous Waste Generators and Transporters were listed in a ¼-mile radius around the subject site. Of these eleven, three (3) were listed within ⅛-mile of subject site in a presumed upgradient groundwater flow direction. Details from the listings are as follows:

- NYCDOT West Farms Depot, listed at 1801-1825 Boston Road, was reported by the US EPA as a Large Quantity Generator of hazardous waste. This facility comprised the train car and bus maintenance and repair facility formerly located on the subject site and the south-adjacent block. The site is listed as having generated chemical wastes from 1984 to 1990 including cadmium, chromium, spent halogenated wastes, unknown wastes, and solid wastes exhibiting the characteristic of ignitability.
- The Arthur Frisch Company, located at 1816 Boston Road, approximately 200 feet to the southwest, was listed as a Small Quantity Generator of hazardous waste by the US EPA. The site reportedly generated 330 gallons of solid waste exhibiting the characteristic of corrosivity in 1994. This site was also listed for a Consolidated Edison electrical vault containing 875 kilograms of PCB-containing oil in 1997.
- The Bronxville Zoo/Amoco #581, located at 1776 Southern Boulevard, approximately 600 feet to the southwest, was listed as a Small Quantity Generator of hazardous waste by the US EPA. Approximately 30 pounds of lead were generated in 2001.

These listings denote the generation of reportable quantities of hazardous wastes and are not necessarily indicative of a hazardous material release or adverse environmental condition. Details of additional RCRA sites are included in Appendix C.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities are listed within a ¼-mile radius of the subject property.

Solid Waste Facilities (SWF)

This database includes a listing of landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste. One Solid Waste Facility was identified within a one-mile radius of the study site.

The Delma Construction Company, Inc. facility, located approximately 3,000 feet to the east, was listed as a construction and demolition facility, generating concrete, asphalt,

brick, soil and rock wastes. Based on its location and distance, this site is not expected to have affected the subject property.

Petroleum Bulk Storage (PBS) Database

The New York State PBS lists commercial facilities with registered petroleum tanks located either above or below ground in excess of 1,100 gallons and less than 400,000 gallons.

The West Farms Depot facility, the former train car and bus maintenance and repair facility located on the subject site and south-adjacent block, was listed in the PBS database with six underground storage tanks and two aboveground storage tanks. The locations of these tanks were not noted in the database. Details of the subject property PBS listing are provided in Table 1.

Table 1
Petroleum Bulk Storage Facility Data
West Farms Depot – 1811 Boston Road

Capacity (gallons)	Product Stored	Installation Date	Status
10,000 UST	Fuel Oil	1939	Closed-In-Place 1996
(2) 5,000 UST	Diesel	1939	Closed-In-Place 1996
7,500 UST	Fuel Oil	1939	Closed-In-Place 1996
1,080 UST	Unknown	1939	Closed-In-Place 1996
(2) 550 AST	Unknown	1939	Closed, 1996
275 UST	Unknown	1939	Closed-In-Place 1991

Notes: AST - aboveground storage tank
UST - underground storage tank

Fifty one (51) other PBS facilities were identified within a ¼-mile radius of the subject site. Seven (7) of these facilities were located within ⅛-mile radius of the subject site. Details of the two PBS facilities located within 600 feet of the subject site and in a presumed upgradient groundwater flow direction are provided in Table 2.

Table 2
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Distance / Direction from Study Site
Montefiore Central Laundry 1776 Hoe Avenue	10,000 UST	Fuel Oil	In Service	440 feet SW
Amoco Service Station 1776 Southern Boulevard	(4) 4,000 UST	Gasoline	In Service	600 feet SW
	5,500 UST	Gasoline	In Service	

Notes: UST - underground storage tank

Details of the above-mentioned facilities and additional PBS facilities located within a ¼-mile of the study site are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns.

No State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the subject property.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks waste disposal sites that may pose threats to public health or the environment, but that cannot be remediated using monies from the Hazardous Waste Remediation Fund.

No State Hazardous Substance Waste Disposal Site (SHSWDS) listed within one mile of the subject site.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

There were no Major Oil Storage Facilities reported within a one-mile radius of the subject property.

4.2.3 Local

An electronic search of the New York City Department of Buildings on-line *Building Information System* database was performed. The database typically includes information on current and past Certificates of Occupancy and construction permits, but does not include building plans. The database review revealed no Certificates of Occupancy for the subject property. The database review revealed no issues or violations that would indicate the potential presence of an adverse environmental condition for the subject site.

5.0 PREVIOUS STUDIES

Site Investigation Report – 1801-1805 Boston Road, Bronx, New York by AKRF, Inc. prepared for Storage Deluxe dated July 2003

AKRF, Inc. (AKRF) was contracted by Storage Deluxe to conduct a Subsurface (Phase II) Environmental Site Investigation at the 1801-1805 Boston Road property in Bronx, New York in July 2003. This site is located on the block south-adjacent to the subject property. The Phase II was based on the results of a Phase I Environmental Site Assessment (ESA) performed by AKRF for the site in June 2003. The subsurface investigation focused on petroleum impacts identified during previous environmental site investigations performed by URS Consulting, Inc. (URS), including the presence of free product (oil) on the water table near the former fuel oil fill along Southern Boulevard, and on potential impacts from the former bus and train car maintenance operations formerly located on the subject property and south-adjacent blocks. The investigations performed by URS are discussed below.

The Phase II investigation included the collection of five discrete soil samples and five groundwater samples from throughout the former train car and bus maintenance and repair facility on the south-adjacent block. The samples were laboratory analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs), which are compounds associated with petroleum products. Groundwater was encountered at a depth of approximately eight to 10 feet below grade. Analytical results of the soil samples indicated concentrations of petroleum hydrocarbons below the regulatory guidelines. Only one semi-volatile organic compound was found in a soil sample collected along Southern Boulevard that exceeded regulatory standards. The detected hydrocarbon concentrations were likely indicative of those typically found in urban fill material and were not necessarily reflective of the presence of a petroleum contaminant source area.

Petroleum-like odors were noted by AKRF in the groundwater sampled during the subsurface investigation. However, the concentrations of volatile and semi-volatile organic compounds detected in the groundwater samples were mostly not detected or below the most stringent regulatory standards (drinking water standards). Only one semi-volatile organic compound, chrysene, was detected above the drinking water standards in a groundwater sample collected downgradient of the 7,500-gallon fuel oil underground storage tank, located on the block south-adjacent to the property targeted as part of this Phase I ESA. The concentrations detected in the groundwater may be reflective of groundwater conditions typical of industrial areas, such as those surrounding the subject property. Groundwater in this area of the Bronx is not used as a potable source.

Various Reports and Documentation – West Farms Depot Site - 1801-1805 Boston Road, Bronx, New York by URS Consultants, Inc.

AKRF reviewed information obtained during an environmental assessment performed by AKRF in 2003 for Storage Deluxe regarding the subject property and south-adjacent block (West Farms Depot site). A list of the information obtained is as follows:

1. Remedial Investigation Report dated February 1993;
2. Correspondence and monthly status reports from 1996;
3. Underground Storage Tank Closure Report dated October 1997;
4. Closure Investigation Report dated September 1998; and

From 1991 to 1993, URS Consultants, Inc. (URS) was retained by the New York City Transit Authority to conduct an environmental assessment of the West Farms Depot facility located at Boston Road in Bronx, New York. The assessment included a Phase I Environmental Site Assessment and a Phase II Site Investigation of the two bus maintenance buildings located on both sides of East 175th Street, identified as Buildings #1 and #2. Building #1 corresponded with the former facility located on the subject property targeted by this Phase I ESA, which was reported by URS to have been demolished in 1993. Building #2 corresponded with the portion of the former West Farms Depot facility located on the south-adjacent block. Both properties were investigated for potential impacts from former petroleum underground storage tanks.

Eighteen monitoring wells were installed by URS as part of the site investigation for both West Farms Depot properties, twelve of which were installed at the 1825 Boston Road site. The monitoring wells have since been removed. Groundwater was encountered at approximately 10 feet below grade and determined by URS to flow in a northeasterly direction. Floating product (petroleum) was found in two monitoring wells, one at each property. The free floating product at the subject site was found in the well installed in the sidewalk along East 176th Street. The free floating product at the south-adjacent site was found in the well installed near a 7,500-gallon fuel oil tank fill port located in the sidewalk along

Southern Boulevard. A product recovery system was initiated for the West Farms Depot properties and monthly status reports from 1996 indicate that approximately 71 gallons of petroleum were recovered from both sites.

Information acquired by URS indicated that a heating oil tank was reported for Building #1 in the center of the western portion of the property and two diesel tanks were located along the central eastern boundary of the property, along Boston Road. Building #2 was determined to have a 7,500-gallon fuel oil underground tank, a 1,080-gallon waste oil aboveground tank, and a 275-gallon lube oil aboveground tank. In 1996, a geophysical survey and excavation program were undertaken to confirm the number of underground tanks located at Buildings #1 and #2. No underground storage tanks were discovered for Building #1 and only the 7,500-gallon fuel oil underground tank was found at Building #2. Subsequently, the 7,500-gallon fuel oil tank was closed-in-place by filling it with concrete slurry.

URS performed a subsurface investigation following the closure of the 7,500-gallon fuel oil tank on the south-adjacent block. The investigation entailed a two-year environmental remediation program that included monitoring the on-site groundwater monitoring wells for product (oil), operating the product recovery system, and collecting groundwater samples for laboratory analysis. Results of the monitoring program indicated that measurable free product previously discovered in the two monitoring wells at both West Farms Depot sites was reduced to non-detectable levels from 1996 to 1998. The groundwater sample analytical results indicated that only one petroleum hydrocarbon, naphthalene, was detected above regulatory standards. A "No Further Action" letter was subsequently issued on April 5, 1999, by the New York State Department of Environmental Conservation (DEC) with respect to the closure of the 7,500-gallon fuel oil underground storage tank.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage and usage of neighboring properties. Based on this study, there appears to be a low potential for environmental impairments that would affect future development of this property. This assessment has revealed no evidence of recognized environmental conditions in connection with the property except the following:

- Based on State records and a review of previous investigations performed by URS Consultants, Inc. (URS) for the subject property in the early 1990s, a 10,000-gallon fuel oil underground storage tank and two 5,000-gallon diesel underground storage tanks were identified at the subject site. Free product was discovered in a monitoring well installed at the site, which was assumed to have been released from these tanks. A product recovery and groundwater monitoring program conducted from 1996 to 1998 indicated that measurable free product previously discovered at the site was reduced to non-detectable levels. A geophysical investigation conducted by URS and a test pitting program conducted by SoBRO identified no tanks remaining at the subject site, suggesting that the tanks had been removed.
- Historic Sanborn maps indicated that the subject property was developed some time between 1896 and 1901 and operated as a transit rail car and bus maintenance and repair facility until at least 1989. Petroleum products and solvents were likely used as part of the on-site maintenance activities, which have the potential to have affected the subject property.
- Historic fill of unknown origin is likely present underlying the site.
- Debris and trash were observed throughout the site, including plastic and glass bottles, paper, wood, tires, concrete blocks, plastic crates, and metal cans.
- Facilities located on the south-adjacent block included a portion of the former train car and bus repair and maintenance facility (no longer present) and a gasoline station (presently abandoned). These properties are located in a presumed upgradient groundwater flow direction. In addition, the regulatory databases and historical land-use atlases indicated that the surrounding neighborhood has an approximately 80-year history of residential, commercial, and industrial development. These surrounding properties have the potential to have affected local groundwater quality, which may have migrated to the subject site. However, a Phase II investigation was performed by AKRF in 2003 for the south-adjacent block, which included the collection of groundwater samples along East 175th Street, upgradient of the subject property. Petroleum hydrocarbon concentrations detected in the groundwater samples from these areas were below the most stringent regulatory standards (drinking water standards).

Based on the conclusions of this Phase I ESA, the following recommendations are made:

- Tires found at the subject property should be disposed of in accordance with regulatory protocols and taken to an appropriate receiving facility.
- Given that the development of the subject property would involve excavation and disturbance of the existing on-site soil, construction activities may result in temporary increases in exposure pathways for construction workers and workers on nearby sites to unclean urban fill material and potential contaminants in the soil. Therefore, to avoid any potential adverse health impacts, a construction health and safety plan (CHASP) will be prepared and implemented to assure that the construction workers, the surrounding community, and the environment are not adversely affected by the construction activities. The plan would specify the appropriate testing and/or monitoring by field

personnel during construction and excavation activities and detail appropriate measures in the event that contamination, underground storage tanks, or other environmental conditions are encountered. Off-site transportation and disposal of fill materials should be in accordance with all applicable regulations.

- If dewatering activities for development of the site necessary, treatment of the groundwater prior to discharge to the municipal sewer may be required. Prior to any dewatering activities, sampling should be performed to insure that any discharged groundwater meets the New York City Department of Environmental Protection (NYCDEP) limitations for effluent to municipal sewers, should this be the designated course of action.

No other recommendations for further study or remediation are warranted at this time.

7.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with ASTM Standard E1527-00, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. It is intended for use as a supplement to the property appraisal, and is only to be used as a guide in determining the possible presence or absence of hazardous materials on the subject property at the time of the inspection. This assessment is based upon the review of readily available records relating to previous use of both the project site and the surrounding area, as well as a visual inspection of the current condition of the property. Environmental characteristics at this site and surrounding sites may be subject to change in the future.

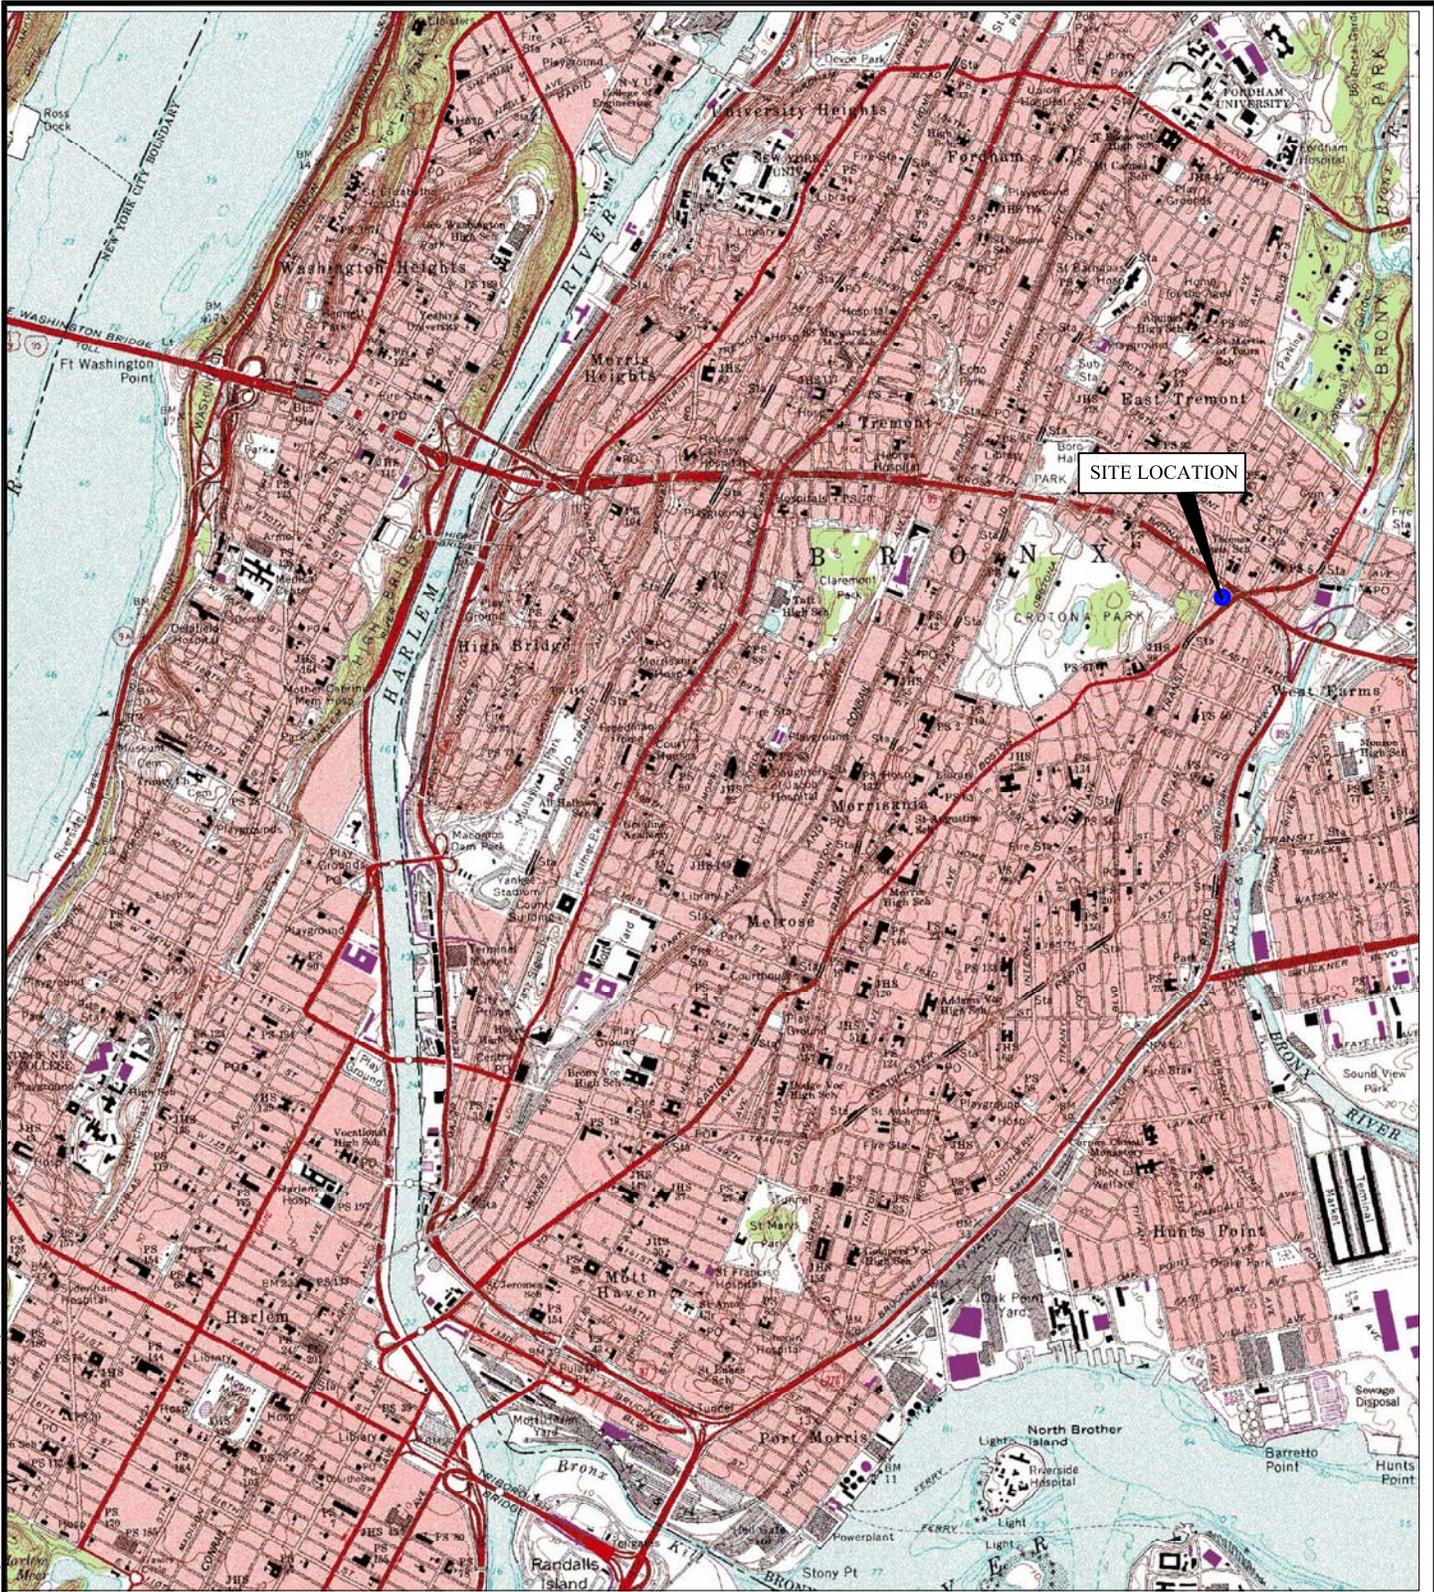

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the site and its surrounding area. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and inspections have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than the South Bronx Overall Economic Development Corporation (SoBRO) and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or negligent or willful acts or omissions.

APPENDIX C
REGULATORY RECORDS REVIEW

*Toxics Targeting
Computerized
Environmental Report*

**1825 Boston Rd
Bronx, NY 10460**

April 28, 2005

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Computerized Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FOUR FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS COMPUTERIZED ENVIRONMENTAL REPORT.

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *How Toxic Sites Are Mapped*
- *Information Source Guide*

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Computerized Environmental Report*. It checks for the presence of 19 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. Finally, a close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information, some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

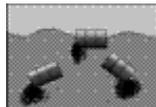

Search Radius

One-Mile

1) ***New York Inactive Hazardous Waste Disposal Site Registry***: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

2) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

3) ***National Priority List for Federal Superfund Cleanup***: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

One-Mile

4) ***New York Hazardous Substance Disposal Site Draft Study***: a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites are not eligible for state clean up funding programs.

One-Mile

5) ***New York State Brownfield Cleanup Sites***: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

One-Mile

6) ***New York Solid Waste Facilities Registry, including New York City 1934 Sites***: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

One-Mile

7) ***New York State Major Oil Storage Facilities***: sites with more than a 400,000 gallon capacity for storing petroleum products.

One-Mile

8) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities***: sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System.

- ***RCRA violations***: waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

One-Mile

9) ***RCRA Corrective Action Activity (CORRACTS)***: waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile

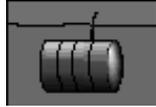

10a) ***Toxic Spills: active*** stationary source spills reported to state environmental authorities, including unremediated leaking underground storage tanks.

Half-Mile

10b) ***Toxic Spills: closed*** stationary and non-stationary source spills reported to state authorities, including remediated leaking underground storage tanks.

Quarter-Mile

11) ***New York and Local Petroleum Bulk Storage Facilities:*** sites with more than an 1,100 gallon capacity for storing petroleum products.

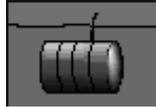

Quarter-Mile

12) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System.

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Quarter-Mile

13) ***New York Chemical Bulk Storage Facilities:*** Sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Quarter-Mile

14) ***Federal Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Quarter-Mile

15) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Quarter-Mile

16) ***Air Discharges:*** Air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Quarter-Mile

17) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Quarter-Mile

18) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

Property only

19) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Computerized Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: 1) additional information on individual sites may be available, 2) newly discovered sites are continually reported and 3) all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The computerized map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;
- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 19 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING* AND REFER TO THE SITE ID NUMBER.
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;
- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code (This information does not appear in the headings for Inactive Hazardous Waste Disposal Sites).
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see *How Sites are Located*, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers;
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites
(A complete description of the codes follows the profiles section).

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced)

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation

MCL: **Drinking Water Standard - Maximum Contaminant Level (MCL)** listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

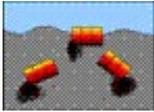

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

- 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
- 2 -- Significant threat to the public health or environment -- action required;
- 3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
- 4 -- Site properly closed --requires continued management;
- 5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
- 2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law.

D₁, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed)

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

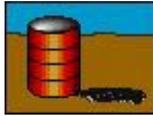

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in Manhattan) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

Please Note: * - Compass directions can vary substantially for sites located very close to the subject property address.

**Site profiles in this report section contain 36 data fields of information obtained from the New York Department of Environmental Conservation. Since 1/1/02, the DEC has only released information for 12 of those data fields: spill name, address components, spill date, close date, material spilled, quantity spilled, units, cause of spill and resource affected. As a result, the other 24 data fields are only updated through 1/1/02. Please note that the "Meets Cleanup Standards" status for individual spills could have changed since that time.

Caller Remarks: CALLER WAS EXCAVATING AT LOCATION FOR FOUNDATION AND ENCOUNTERED CONTAMINATED SOIL. LOT WAS APT BUILDING AT ONE TIME

DEC Investigator Remarks:

On July 31st, 2001, DEC (Zhao & Rossan) investigated a report of petroleum contaminated soil discovered at 716 Fairmont Place, Bronx. Contaminated soils were found on corner of property under location of former bulding foundation.

NYS Office of Alcohol and Substance Abuse ("OASIS") is funding the construction of a 35 room facility on a one acre site (2 City Blocks) at 716 Fairmont Place, Bronx. The facility is being built by NYS Dormitory Authority on a vacant lot sold to VIP Community Service by HPD. The lot contained only foundations from former row houses and a line of basements.

On July 31th, 2001, DEC was notified of petroleum contamination at approximately 10-20 feet below grade under a former basement and in front of a former building. NYS OASIS paid for a Phase I & II before they obtained the property and did not find any contamination.

According to NYS OASIS, HPD provided an agreement that they would be held harmless if any contamination was found on the property.

DEC Sigona contacted Luiz Aragan (212)863-7207 Assist. Commissioner Tech Mgmt as per your suggestion. With consultation from DEC Lodico, DEC Sigona requested information on the time period for when the property was transferred. Whether HPD knows if any USTs or ASTs existed on the property. DEC will also seek information on whether any contamination or Tanks were reported to NYS OASIS before the sale.

HPD told Sigona they would check it out and get back to DEC.

The NYS OASIS plans to determine the extent of contamination and clean it up to DEC standards. We plan to meet with NYS OASIS and possibly HPD to investigate the source of the contamination.

DEC Lodico contacted NYC Law Department and reported that Petroleum contamination has been reported at the above location. Currently, the site is a vacant lot, but previously was the location of row houses. DEC indicated that it was informed that HPD was the former owner of this site. PBS database contains no registration for this location.

DEC requested info on when HPD obtained title to this site and when it transferred title. Any and all information pertaining to petroleum storage tanks at the site has been requested.

** See beginning of spills section for more details.

NO ACTIVE HAZARDOUS SPILLS - MISC. SPILL CAUSES - EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM - IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.

All spills mapped and profiled within 1/4 Mile. Between 1/4 Mile and 1/2 Mile, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

THE FOLLOWING ACTIVE SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/4 MILE AND 1/2 MILE FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, OR VANDALISM. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

DEC Investigator Remarks:

CON ED E2MIS REPORT 1-25-01

1pt of unknown oil on top of water and mud in TM #940. Conduit plate 16-m-1 indicates a sewer connection. TM was being pumped when sheen was noticed on top of water, pumping ws halted. Source /cause of spill unknown. samples taken

Arocor none; PCB <1.00ppm

Unit was pressure tested on 1-28-01 and passed. Secondary cables need to be replaced, the insulation is falling off the cbale which caused smoking in the vault. Cables were not replaced because of rain.

2-15-01 1300hrs.

Feeder 4x45 scheduled to be taken out of service this evening in oder to perform a transformer replacement and an environmental cleanup on 2-16-01 hasbeen cancelled due to a conflict with water pollution plant customer equipment. Feeder will be rescheduled for outage on 2-23-01.

19:45hrs.

Env. Ops. completed cleanup of TM. Crew removed approx. 1pt oil and 1.200gals. of water. Cleaned and double washed the TM, tag removed. Cleanup completed at 19:45hrs.

** See beginning of spills section for more details.

DEC Investigator Remarks:

DEC Investigator Notes:

Third party spill from meat packing plant. Jane O'Connell referred Con Ed to NYC Dept of Health for follow-up. According to Con Ed's Larry Fischer of Bronx/Westchester Underground, there are three vaults that have been affected for many years by the same meat packing plant.

e2MIS Notes:

1 quart of unknown oil on top of 200 gallons of a mix of water, grease (from meat house in front of hole) and oil in manhole #27283. Appears to be a 3rd party spill from meat market. Conduit plate 16-m-1 indicates no sewer connection. Sample will be taken. Address of store 1565 West Farms Road is where 3rd party spill came from.

Caller Remarks: VAULT V-3029. THREE GALLONS UNKNOWN OIL. CONTAINED WITHIN VAULT. NO DRAINS. SAMPLES TAKEN. CLEAN UP PENDING TEST RESULTS. CON EDISON REFERENCE NUMBER 126063.

DEC Investigator Remarks:

con ed e2mis notes:

3 gallons unknown oil in V3029. The cleanup will take place once the sample results are recieved. 0ppm pcb. When crew was disp. to do the clean up at the location given no tag was at the initial address. Upon investigation the wrong address was given at the time of the initial report. The wrong address was also put on the report from the chem lab with the sample results. The correct address was put on e2mis and a new sample taken from the address shown on front page.

Inspected 4 vaults at the location of 180th street and boston road and could not find V-3029. Also there was no environmental tag or any sign of oil in the vaults. He proceeded to E.178th street and clinton ave. and inspected teh vault there and found no sign of oil or any environmental tag. This cleanup must have been previously completed and not signed off. We concur and are considering this job completed.

Correct vault number is 3025.
 Tags removed. No oil was found in vault.

Caller Remarks: caller was contacted to clean up he has no further info at this time

DEC Investigator Remarks:

Temporary tank and boilers at site. Contractor or site personnel switched the return line to the small (400 gallon) tanks built into the boiler trailer. The tank on the trailer overflowed out through the vent line. Approximatley 25 gallons spilled. Alps called their contractor (Petroleum Tank Cleaners) to do the clean up. Close out. (see also spill #9600613, called in by NYCHA).

** See beginning of spills section for more details.

CLOSED STATUS HAZARDOUS SPILLS - MISC. SPILL CAUSES - EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM - IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.
 All spills mapped and profiled within 1/4 Mile. Between 1/4 Mile and 1/2 Mile, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

Please Note: * - Compass directions can vary substantially for sites located very close to the subject property address.

**Site profiles in this report section contain 36 data fields of information obtained from the New York Department of Environmental Conservation. Since 1/1/02, the DEC has only released information for 12 of those data fields: spill name, address components, spill date, close date, material spilled, quantity spilled, units, cause of spill and resource affected. As a result, the other 24 data fields are only updated through 1/1/02. Please note that the "Meets Cleanup Standards" status for individual spills could have changed since that time.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

- B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
- D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.
- D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.
- D006 Cadmium
- D007 Chromium
- D008 Lead
- F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a computerized version of the U. S. Census map using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each *Toxic Site Profile*, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a computerized version of the U. S. Census map. These site locations are identified "address-matched."

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxics Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect .

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Computerized Environmental Reports contain government and other information compiled on 19 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **Inactive Hazardous Waste Disposal Site Registry**: New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. ASTM required.* Fannie Mae required.**
Source: New York State Department of Environmental Conservation.²

Profile data updated through: 8/20/2004.

Data obtained by Toxics Targeting: 08/23/2004.

New Facilities updated to: 8/20/2004.

Data obtained by Toxics Targeting: 08/23/2004.

2) **CERCLIS**: Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. NPL sites are also included in CERCLIS. ASTM required.* Fannie Mae required.**

Source: U. S. Environmental Protection Agency.¹

Profile data updated through: 07/14/2004.

Data obtained by Toxics Targeting: 08/06/2004.

New Facilities updated through: 07/14/2004.

Data obtained by Toxics Targeting: 08/06/2004.

3) **National Priority List for Federal Superfund Cleanup**: Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. ASTM required.* Fannie Mae required.**

Source: U. S. Environmental Protection Agency.¹

Profile data updated from: 07/27/2004.

Data obtained by Toxics Targeting: 07/28/2004.

New Facilities updated through: 07/27/2004.

Data obtained by Toxics Targeting: 07/28/2004.

4) **Hazardous Substance Waste Disposal Site Study**: NYS database of waste disposal sites that may pose threats to public health or the environment, but cannot be remediated using monies from the Hazardous Waste Remedial Fund.

Source: New York State Department of Environmental Conservation.²

Data updated to: 5/16/2000.

Data obtained by Toxics Targeting: 5/16/2000.

5) **Brownfield Cleanup Sites**: NYS database of sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Source: New York State Department of Environmental Conservation.²

Data updated to: 1/21/2005.

Data obtained by Toxics Targeting: 2/28/2005.

6) **Solid Waste Facilities**: NYS database of solid waste facilities, including, but not limited to, landfills, incinerators, transfer stations, recycling centers. ASTM required.* Fannie Mae required.**

Source: New York State Department of Environmental Conservation.²

Data updated to: 12/31/2001.

Data obtained by Toxics Targeting: 3/16/2002.

Also includes a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Source: City of New York Department of Sanitation (1984). Waste Disposal Problem in New York City: A Proposal For Action.

7) **Major Oil Storage Facilities**: NYS database of facilities licensed pursuant The to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. Data withheld by the NYSDEC as of 4/1/2002. Fannie Mae required.**

Source: New York State Department of Environmental Conservation.² Data update schedule: rolling basis.

New facilities updated through: 1/1/2002.

New facilities data obtained by Toxics Targeting: 1/11/2002.

Tank data updated through: 1/1/2002.

Tank data obtained by Toxics Targeting: 1/11/2002.

8) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases**:

(a) **Manifest Information**: New York State database of hazardous waste facilities and shipments regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law and the Resource Conservation and Recovery Act (RCRA).

ASTM required.* Fannie Mae required.**

Source: New York State Department of Environmental Conservation.²

New facilities updated through: 6/14/2004.

New facilities obtained by Toxics Targeting: 6/21/2004.

Manifest transactions data updated to: 6/14/2004.

Manifest transactions data obtained by Toxics Targeting: 6/21/2004.

(b) **RCRA Notifier, Violations, and Corrective Action Activity (CORRACTS) Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.* Fannie Mae required.**

1.0 INTRODUCTION

The South Bronx Overall Economic Development Corporation (SoBRO) intends to undertake development of affordable housing at a 49,800 square foot (sf) (1.14 acre) vacant lot located at 1825 Boston Road in the Bronx, New York City (Figure 1).

The site currently bears a Restrictive Declaration (RD) as a condition of the 2010 rezoning of the site by the New York City Planning Commission and the City Council. At the time of the rezoning, it was believed some level of environmental remediation prior to residential redevelopment would be required. The placement of the RD allowed a finding that no significant adverse hazardous materials impact would occur with site development, once the site was investigated and appropriate remedial measures, if any, were put in place prior to occupancy.

In this regard, SoBRO intends to undertake remedial investigation under the oversight of the Mayor's Office of Environmental Remediation (MOER), and then apply for the New York City Brownfield Cleanup Program (NYC BCP) as a "Preferred Community Development" project. *The submittal of this Revised Remedial Investigation Work Plan (RIWP) is in response to discussions and comments with/from MOER NYC BCP. Revisions to the RIWP will be bold/italicized for expeditious review.*

1.1. Purpose

This RIWP stresses data collection and site characterization to determine the nature and extent of potential site contamination. The Plan focuses on those areas of the site where construction is anticipated (*i.e., entire property*), but does not neglect the surrounding area. Employing the resulting data, would allow for proper construction planning and the implementation of appropriate remedial measures, if required. These data would provide a basis for the development of a Construction Health and Safety Plan for the implementation of such remedial measures, thus protecting both site construction and future facility workers.

Performing a thorough remedial investigation will enable the project to undergo the NYC BCP as a Preferred Community Development Project that will bring economic benefit to a distressed part of the Bronx

Going through the NYC BCP process, beginning at the investigation stage, will deliver a high-quality, comprehensive cleanup and increase the overall safety and viability of the area

1.2. Site Location and Description

The proposed project site is located within the Crotona Park section of the Borough of the Bronx, at 1825 Boston Road, Bronx, NY 10460 Identified on the New York City tax map as Block 2984 / Lot 46. The site is bounded by Boston Road, East 175th Street, Crotona Parkway, and East 176th Street, within the boundaries of Bronx Community Board #3. The

Revised Proposed Remedial Investigation Work Plan
Crotona Terrace Site – 1825 Boston Road
Bronx, NY

site has been vacant since 1989, and formerly housed a transit rail car and bus maintenance and repair facility.

The surrounding area (Figure 2) consists of residential, commercial, and manufacturing uses, as well as vacant properties. The site lies across Crotona Parkway from Crotona Park, a large regional NYC Department of Park facility to the west, and to the south of the Cross Bronx Expressway (I-95).

Based on a May 2005 Phase I Environmental Site Assessment prepared by AKRF, Inc., the following areas of concern (AOCs) were identified:

- Based on State records and a review of previous investigations performed by URS Consultants, Inc. (URS) for the subject property in the early 1990s, a 10,000-gallon fuel oil underground storage tank and two 5,000-gallon diesel underground storage tanks were (*reportedly*) identified at the subject site. Free product was discovered in a monitoring well installed at the site, which was assumed to have been released from these tanks. A product recovery and groundwater monitoring program conducted from 1996 to 1998 indicated that measurable free product previously discovered at the site was reduced to non-detectable levels. A geophysical investigation and test pit program was conducted by URS on behalf of SoBRO, which identified that no tanks remained on the subject site, suggesting that they had been removed. *The URS geophysical investigation and test pit report was not available for review.*
- Historic Sanborn maps indicated that the subject property was developed sometime between 1896 and 1901 and operated as a transit rail car and bus maintenance and repair facility until at least 1989. Petroleum products and solvents were likely used as part of the on-site maintenance activities, which have the potential to have affected the subject property.
- Historic fill of unknown origin is likely present underlying the site.
- Debris and trash were observed throughout the site, including plastic and glass bottles, paper, wood, tires, concrete blocks, plastic crates, and metal cans.
- Facilities located on the south-adjacent block included a portion of the former train car and bus repair and maintenance facility (no longer present) and a gasoline station (presently abandoned). These properties are located in a presumed upgradient groundwater flow direction. *The former gas station (1800 Southern Blvd) is currently within the NYS BCP remedial action program.*
- In addition, the regulatory databases and historical land-use atlases indicated that the surrounding neighborhood has an approximately 80-year history of residential, commercial, and industrial development. These surrounding properties have the potential

to have affected local groundwater quality, which may have migrated to the subject site. However, a Phase II investigation was performed by AKRF in 2003 for the south-adjacent block, which included the collection of groundwater samples along East 175th Street, upgradient of the subject property. Petroleum hydrocarbon concentrations detected in the groundwater samples from these areas were below the most stringent regulatory standards (drinking water standards).

- A Phase II Investigation undertaken by Ethan Eldon in 2003, found petroleum hydrocarbon concentrations detected in the site's groundwater were below the most stringent regulatory standards. This was also reported in the AKRF Phase I noted above.

1.3. Site Geology, Hydrogeology, and Topography

The bedrock underlying the project site is mapped as the Manhattan Schist, composed of coarsely crystalline mica schist that has been severely crumpled and folded and shows a marked foliation. The bedrock surface in eastern Bronx is near the surface in the vicinity of the subject site, and bedrock outcrops can be found within several miles of the subject property.

The surface topography at the subject property is sloped to the west, though the general area tends to slope downward towards the east and northeast. The property is situated at an elevation of approximately 60 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level), according to the U.S. Geological Survey Central Park Quadrangle topographic map. Based on local topography, groundwater beneath the subject property most likely flows in a northeasterly direction towards the Bronx River, located approximately ½ mile east of the project site.

In the AKRF study, groundwater at the site was noted to be at a depth of approximately eight to ten feet below surface grade. This report noted that actual groundwater flow beneath the site can be affected by many factors, including past filling activities, underground utilities and other subsurface openings or obstructions such as basements, bedrock geology, and other factors, including the proximity of the trench of the Cross Bronx Expressway.

A geotechnical study undertaken by Approved Testing Laboratories Inc (ATL) in December 2007. They advanced 22 borings to determine the site geological conditions regarding the design of the proposed building's foundations. No "environmental" samples were collected for hazardous materials. Ground water was encountered at only one of the 22 locations sampled, at a depth of 21 feet below ground surface.

1.4. Proposed Future Site Development

As noted above, the subject property is current vacant and is proposed for redevelopment as a mixed-use residential, community facility, and street level retail project (Figure 3). When completed, the Site will have approximately:

- 185,256 sf of residential development (approximately 175 dwelling units in 7 stories)
- 29,629 sf of commercial / retail floor area on the ground floor
- 1,700 sf of community facility space
- 100 accessory parking spaces on the ground floor and in the cellar

1.5. Previous Environmental Reports

- AKRF Phase I Environmental Site Assessment, May 2005
- URS Consultants, Remedial Investigation Report–West Farms Depot Site February 1993.
- Ethan Eldon, Phase II Investigation Workplan and HASP, April 2007
- Equity Environmental Engineering, December 2009, Crotona Terrace / 1825 Boston Road Environmental Assessment Statement (08DCP054X)
- Approved Testing Laboratories, December 2007. SPT – Boring Soil Exploration and Foundation Recommendations

2.0 SITE INVESTIGATION

2.1 Investigation Objective

This Remedial Investigation Work Plan (RIWP) stresses data collection and site characterization to determine the nature and extent of potential site contamination. The Plan focuses on those areas of the site where construction is anticipated, but does not neglect the surrounding area. Employing the resulting data, would allow for proper construction planning and the implementation of appropriate remedial measures, if required. These data would provide a basis for the development of a Construction Health and Safety Plan for the implementation of such remedial measures, thus protecting both site construction and future facility workers.

2.2 Overview of Investigation Services

To accomplish the projects objectives, Equity will employ a variety of techniques and methodologies. These will include:

- Ground Penetrating Radar / Magnetometer surveys
- Advancement of soil borings for the collection of soil samples from various depths below ground surface
- Installation of temporary and permanent groundwater monitoring wells
- Installation of temporary soil gas monitoring locations

2.3 Site Preparation Services

Prior to any fieldwork and during field events to assure the validity and reliability of the

data /samples collected, the following tasks will be undertaken:

2.3.1 Utility Markout

Prior to the onset of drilling, the drilling subcontractor will place a One-Call Utility Survey Request to have the local utility companies' mark out existing utilities on and entering the subject property.

2.3.2 Equipment Calibration

Prior to any field event, all field equipment to be employed will be serviced and calibrated per the manufacturer's specifications. A maintenance / calibration log will be assigned to each such device. During field events, equipment will be calibrated per the manufacturer's requirements / recommendations. Such information will also be recorded in an appropriate logbook or journal.

2.3.3 Subcontractor Coordination

The project manager or designate will coordinate the engagement of all subcontractors, assuring that they have the request experience, training, and insurance, as well as a complete understanding of their assignment during their engagement on the project.

2.3.4 Health & Safety Plan

The Construction Health and Safety Plan (HASP) to implement this RIWP can be found in Appendix 2.

2.4 Proposed Investigative Services

2.4.1 Geophysical Survey

Prior to the start of any intrusive subsurface investigation, a geophysical survey using magnetometry and ground-penetrating radar (GPR) will be performed *across the entire site*. The geophysical subcontractor will conduct the survey to determine if there are any USTs and/or buried utilities, foundations, or other magnetic anomalies onsite. If any USTs are identified during the survey, a separate protocol if necessary will be prepared to address the closure and removal of the tank(s) in accordance with all applicable New York State Department of Environmental Conservation (NYSDEC) regulations.

2.4.2 Soil Boring Installation

Twelve (12) soil borings will be installed across the site (Figure 4). Six (6) soil borings will be advanced to 24 feet below ground surface (bgs) and six (6) soil borings will be advanced to 44 feet bgs (to meet the CEQR requirement of minimum of 30 feet beyond the proposed footing depth [i.e., 14 feet]). Borings will be advanced to the proposed depths or refusal to bedrock. In the case of the 24 feet bgs soil borings; if bedrock is encountered or the soil to groundwater interface. This provides coverage of greater than 10.5 borings per acres. Five (5) of the 44 feet bgs soil borings will be converted into temporary well points and discussed in detail in section 2.4.3 below.

All soil borings will be installed using direct-push drilling technology. Samples will be continuously retrieved from the boring using dedicated 2-inch diameter, 5-foot long macro-core tubes with disposable acetate liners. The soil lithology, color, moisture content, and presence of staining or odors will be described and classified. The borings will be screened using visual and olfactory senses as well as using a photo-ionization detector (PID).

Two (2) soil samples will be collected from each soil boring location. The first soil sample will be collected from the 0 to 2-inch interval bgs (surface) and the second soil sample will be collected from the soil to groundwater interface or area exhibiting the highest degree of staining, odors or PID reading.

All soil samples will be analyzed for the following suite of parameters:

- Volatile Organic Compounds (VOCs) by USEPA method 8260
- Semivolatile Organic Compounds (SVOCs) by USEPA method 8270
- Pesticides by USEPA method 8081
- Polychlorinated Biphenyls (PCBs) by USEPA method 8082
- Target Analyte List Metals (TAL Metals)

Waste Characterization: Soil samples will be collected from the soil borings for the purpose of conducting in-place soil disposal waste classification for the site. These waste-classification soil samples will be used to aid in the determination of soil transportation and disposal costs.

2.4.3 Temporary Well Point/Monitoring Well Installation

Five (5) of the above 44 feet bgs soil boring locations will have temporary well points (TWPs) installed for the purpose of groundwater evaluation. Three of the

TWPs will be converted to permanent groundwater monitoring wells for groundwater quality and flow determination.

The monitoring wells will be installed using Hollow Stem Auger (HSA) drilling techniques. During the installation, a PID will be used to screen soil cuttings for indications of contamination. In addition, field observations included the color, composition, and presence of visible contamination and/or odors will be noted. Upon attaining the selected depth, 2-inch PVC well material will be lowered into the borehole through the HSA flights. A gravel pack of No. 1 sand will be introduced within the annular space starting at the bottom of the borehole and extending to a maximum of two-feet above the well screen. A grout-slurry will be added into the remainder of the annular space. A steel flush mount cover and locking mechanism will be set into the cement slurry. The well will be completed with a watertight flange cover and well lock. The well will be developed until a turbid-free discharge is obtained.

Groundwater samples will be collected from the three (3) monitoring wells and analyzed for the following suite of parameters:

- Volatile Organic Compounds (VOCs) by USEPA method 8260
- Semivolatile Organic Compounds (SVOCs) by USEPA method 8270
- Pesticides by USEPA method 8081
- Polychlorinated Biphenyls (PCBs) by USEPA method 8082
- Target Analyte List Metals (TAL Metals) both filtered and unfiltered

2.4.4 Quality Assurance/Quality Control

Quality Assurance/Quality Control procedures will be implemented to guarantee the integrity of the samples and the scientific data. Sampling equipment used will be either disposable single use items or decontaminated between uses with a mixture of Alconox detergent and water. The PID will be calibrated prior to use with 100 parts per million of Isobutylene gas in accordance with the manufacturer's operation manual. All Samples will be collected in laboratory prepared glassware and preserved in accordance with NYSDEC Sampling Guidelines and Protocols.

Soil samples will be collected in 8-ounce wide mouth glass jars with Teflon liners and preserved with ice to maintain a temperature of 4 degrees Celsius. Groundwater samples will be collected in 40-ml glass vials with Teflon liners preserved with Hydrochloric Acid (for VOCs), 1-liter unpreserved glass amber bottles with Teflon liners (for SVOCs, PCBs, Pesticides), and 1-liter polyethylene bottles with polyethylene liners preserved with Nitric Acid (for filtered TAL Metals), which will all also be preserved with ice to maintain a temperature of 4 degrees Celsius.

Both soil and groundwater samples will be delivered under chain of custody procedures to an accredited laboratory.

Per NYSDEC DER-10 Technical Guidance Document (May 2010), groundwater QA/QC samples will consist of one (1) duplicate, one (1) field blank and one (1) trip blank (for VOCs only). QA/QC samples for soil will consist of one (1) duplicate and one (1) field blank.

Laboratory analytical results of the soil samples will be compared to NYSDEC Part 375 Soil Cleanup Objectives (SCO) regulatory standards and groundwater samples will be compared to NYSDEC TOGS class GA groundwater quality standards. The laboratory report will be included in a Remedial Investigation Report (RIR) for review.

Soil boring logs indicating soil lithology, soil recovery, PID readings, and depth to groundwater, will be maintained and submitted in the RIR for review.

The boreholes, upon their completion, will be backfilled with soil cuttings.

2.4.5 Groundwater Flow and Direction Determination

The newly installed monitoring wells will be surveyed by a New York-licensed surveyor for elevation, vertical coordinates relative to the North American Vertical Datum of 1988 (NAVD 88) and horizontal elevation relative to the North American Datum of 1983 (NAD 83) and New York State Plane Coordinates. Copies of the soil boring/well logs will be included in the RIR. This data will be used to construct a groundwater contour interval map for determination of groundwater flow direction.

2.4.6 Soil Vapor

Six soil vapor collection points will be installed at the property's lot lines. Soil vapor points will be advanced to 24 feet (or just above the soil to groundwater interface) and soil vapor samples collected in a laboratory supplied, summa canister. Isopropyl alcohol will be used as a tracer for the soil vapor sampler. The soil vapor samples will be analyzed for Total Organic Compounds (TO+15).

2.4.7 Waste Disposal

Waste derived from the investigation's soil boring program will be backfilled into the boreholes. Any remaining material will be containerized in appropriate disposal containers. These containers will be staged in a secure area on site and characterized. Following completion of onsite activities, disposal of soil cutting, if

any, will be done employing an appropriately licensed transporter and disposal site.

3.0 REPORTING

Following the completion of all field activities and receipt of all analytical data, and manifests, a Remedial Investigation Report (RIR) will be prepared, for review and approval by the New York City Office of Environmental Remediation (OER). The RIR will provide conclusions and recommendations, based on an evaluation and interpretation of the data collected during the remedial investigation. RIWP field and analytical data will be summarized and compared to the New York State Department of Environmental Conservation's (DEC) Subpart 375 Soil Cleanup Objectives.

If the investigative findings of the RIWP reveal impacted soil, groundwater, or a soil gas issue at the site, a detailed Remedial Action Work Plan (RAWP) and an updated Construction Health and Safety Plan will be included as a part of the RIR.

4.0 PROJECT SCHEDULE

Equity will begin implementing the scope of work immediately upon OER approval of this work plan. The anticipated schedule is:

- The field investigation would start as soon as a driller could be engaged and will be completed in three to four days, depending on site access and weather
- Sample analyses would be completed in three weeks
- Report preparation would take from five to seven days.

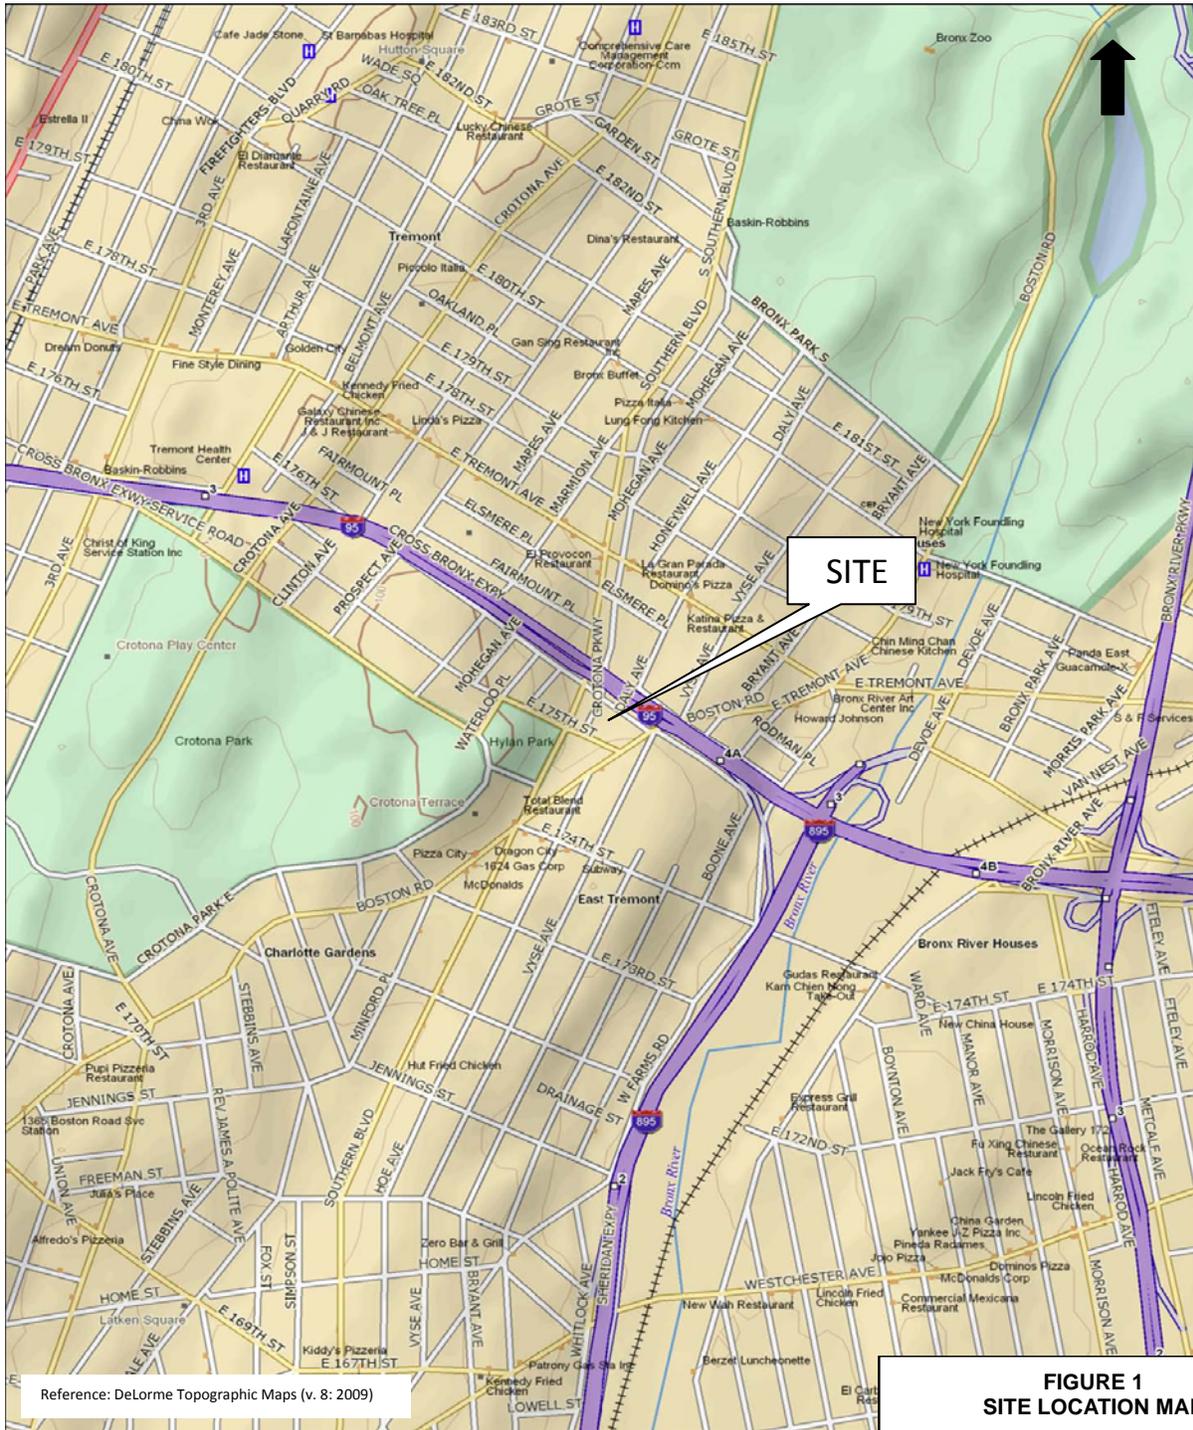

The RIR would be available in about 4 to 5 weeks from the start of fieldwork.

When the schedule has been formalized, the OER staff will be notified of the sampling start date and invited to attend the site kick-off meeting.

EMERGENCY CONTACTS

In the event of any situation or unplanned occurrence requiring assistance, the appropriate contact(s) should be made from the list below. For emergency situations, contact should first be made with the site coordinator who will notify emergency personnel who will then contact the appropriate response teams. This emergency contacts list must be in an easily accessible location at the site.

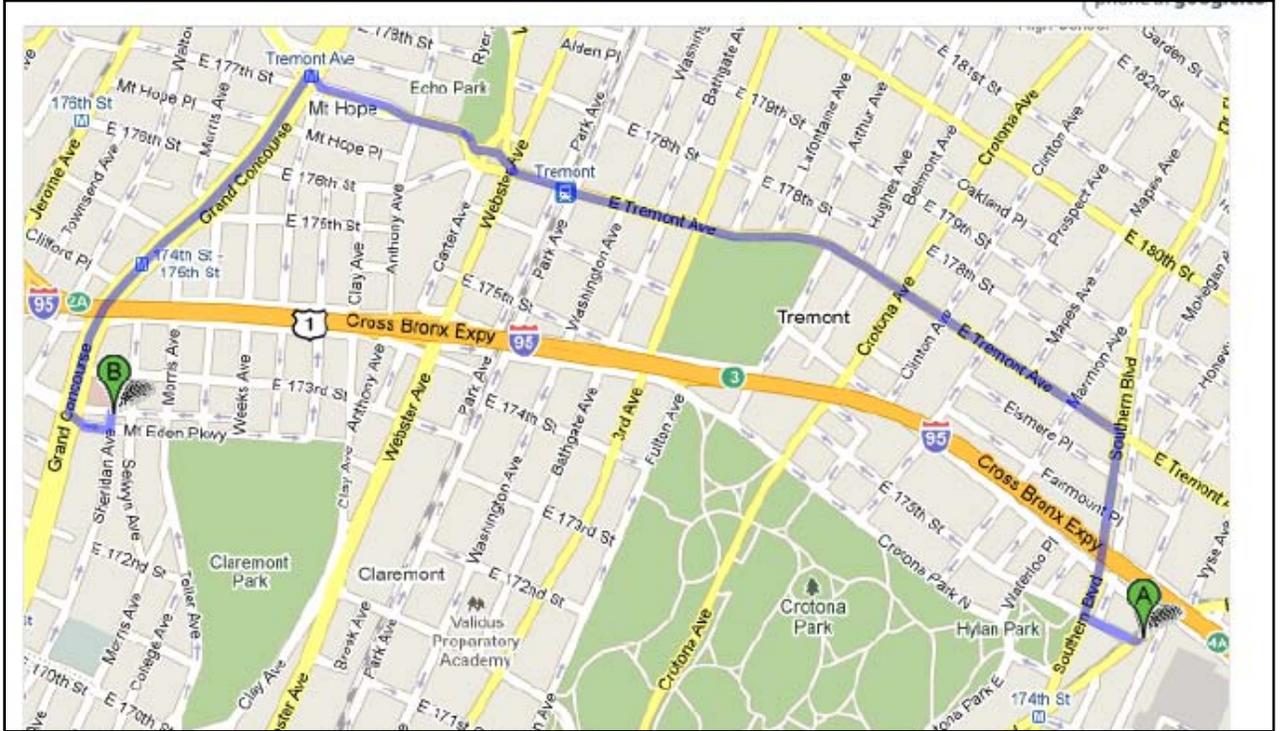

<u>Contingency Contacts</u>	<u>Phone Number</u>
Nearest phone located on-site,	To be determined (site utilities subject to relocation(s))
Fire	911 (Emergencies)
Police	911 (Emergencies)
NY One Call Center (3 working days notice required)	(800)-272-4480
Poison Control Center	(800) 764-7661
<u>Medical Emergency</u>	
Ambulance:	911

The hospital (New York Hospital Medical Center) location is shown on the next page. Travel time from the site to Bronx Lebanon Hospital Center, 1650 Grand Concourse, Bronx, NY 10457, is approximately 2.3 miles away and takes approximately 8 minutes. The Hospital phone number is 718.590.1800.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

Table 1-1 Health and Safety Summary Table

Level D

Activities include the following:

- Installation of soil borings, temporary monitoring wells, and soil gas collection points
- Clearing and grading of the site for construction.
- Installation of subsurface utilities and building foundation.
- Soil characterization for offsite soil disposal.

If the level of volatile organic compounds does not exceed 5 ppm. 4-gas monitoring will be conducted during all intrusive activities, safe levels are as follows:

- Carbon Monoxide: 0-35ppm
- LEL: 0-10%
- Oxygen: 19.5%-23.5%
- Benzene: 0-5ppm

Level C

If the level of volatile organic compounds exceed 5 ppm; If 4-gas monitoring exceeds 35ppm (CO), LEL: >10%, Oxygen <19.5% or >23.5%, Benzene: >5ppm.

Organic Vapor data will be collected as a precaution utilizing a photo- ionization detector (PID). During the installation of the soil borings and wells, lower explosive limits (LELs) may be present; as a result, monitoring will be conducted around the breathing zone of the workers and in the vicinity of any open boreholes. If LEL limits of 10% or greater are reached, work will be suspended to allow for the borehole to ventilate.

During site activities, dust creation may be expected to be present in significant amounts. If dust creation, as a result of site activities, increases to visible/nuisance levels, a portable aerosol monitor will be (MiniRAM) utilized to collect readings as a precaution.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

1. INTRODUCTION

1.1 Purpose and Requirements

The purpose of this safety plan is to establish personnel protection standards and mandatory safety practices and procedures. This plan assigns responsibilities, establishes standard operating procedures, and provides for contingencies that may arise while operations are being conducted at the 1825 Boston Road property.

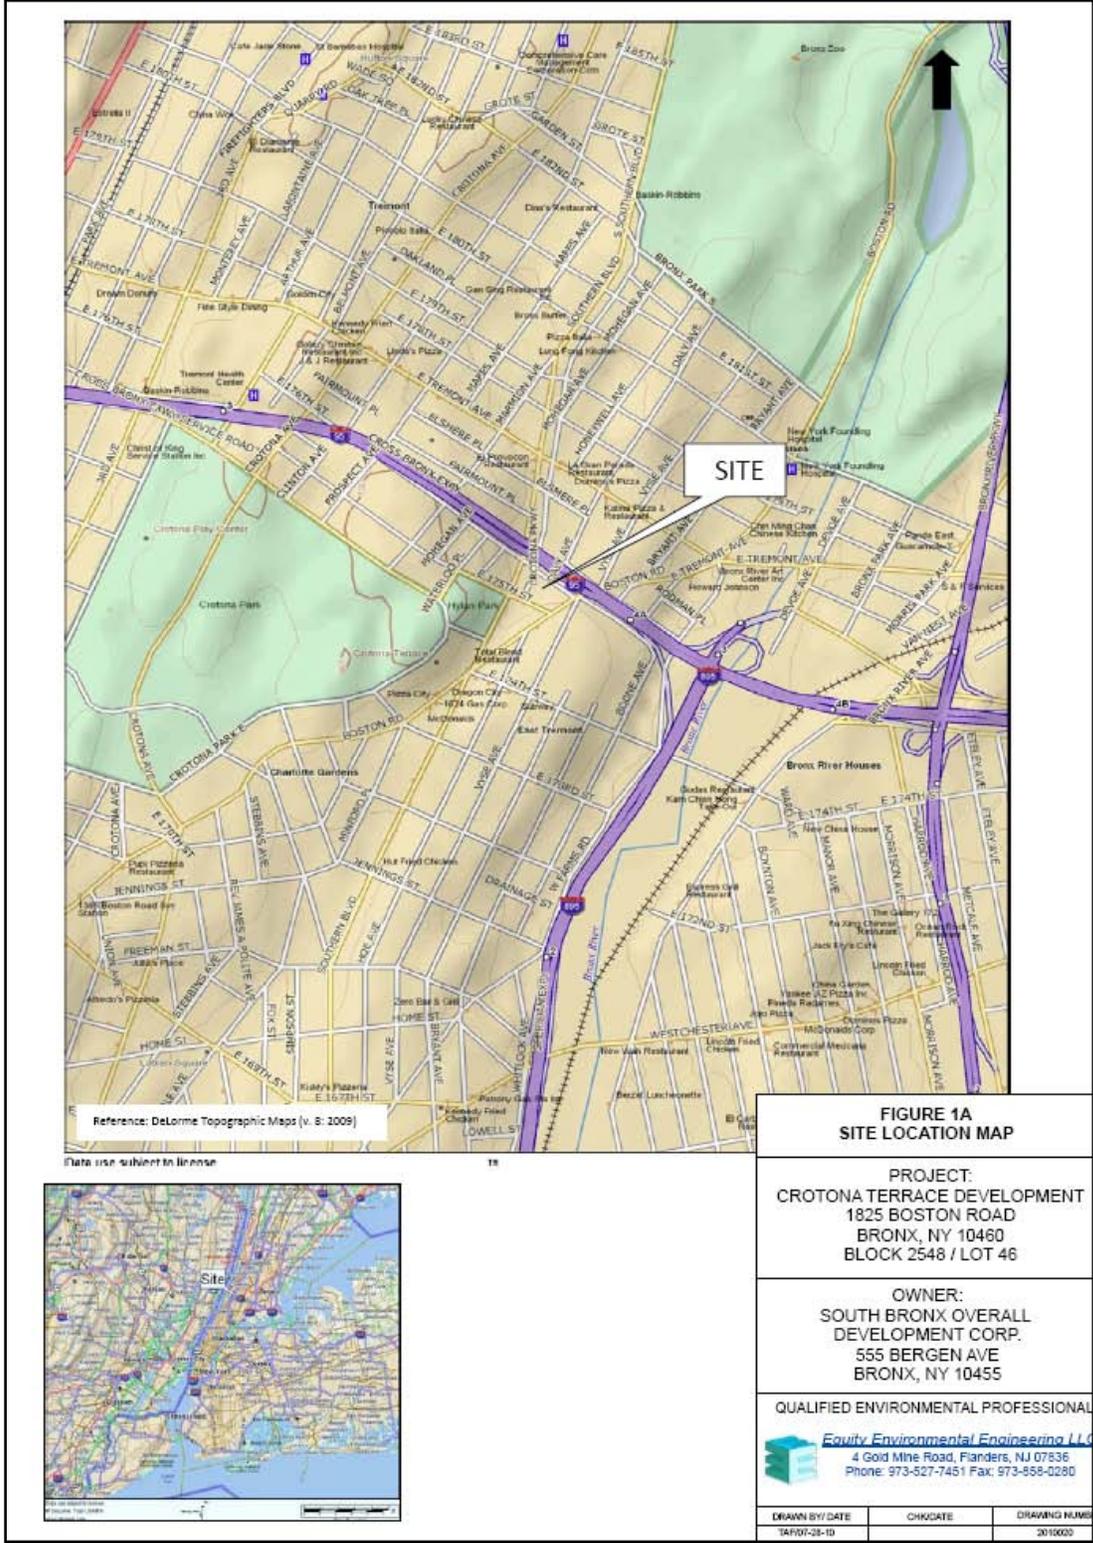

The provisions of the plan are mandatory for all on-site personnel. Any supplemental plans used by subcontractors shall conform to this plan as a minimum. All personnel who engage in project activities must be familiar with this plan, comply with its requirements, and sign the Plan Acceptance Form (Attachment B), page number B-5, prior to working on the site. The Plan Acceptance Form must be submitted to the construction firm's Health and Safety Officer.

1.2 Site Description

The proposed project site is located within the Crotona Park section of the Borough of the Bronx, at 1825 Boston Road, Bronx, NY 10460 Identified on the New York City tax map as Block 2984 / Lot 46. The site is bounded by Boston Road, East 175th Street, Crotona Parkway, and East 176th Street, within the boundaries of Bronx Community Board #3. The site has been vacant since 1989, and formerly housed a transit rail car and bus maintenance and repair facility.

Figure 2: Site Location Map follows

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

1.3 Scope of Work

The scope of work includes activities associated with the construction of a new affordable housing project. These activities include the following:

- Clearing and grading of the site for construction.
- Installation of subsurface utilities and building foundation.
- Soil characterization for offsite soil disposal.
- Construction of a below grade parking facility in the cellar of the new building.

1.4 Project Team Organization

Table 1-2 describes the responsibilities of all on-site personnel associated with this project. The names of principal on-site personnel associated with this project are delineated below:

Project Manager: TBD

Field Team Leader: TBD

Site Health and Safety Officer: TBD

All personnel have been appropriately trained in hazardous waste safety procedures including the operating and fitting of personal protective equipment, and are experienced with the types of field operations to be employed at the site.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

TABLE 1-2
ON-SITE PERSONNEL
AND RESPONSIBILITIES

PROJECT MANAGER - Reports to upper-level management, has authority to direct response operations, and assumes total control over site activities.

Responsibilities:

- Prepares and organizes the background review of the situation, the Work Plan, the Health and Safety Plan, and the field team.
- Obtains permission for site access and coordinates activities with appropriate officials.
- Ensures that the Work Plan is completed and on schedule.
- Briefs the field teams on their specific assignments.
- Uses the Site Health and Safety Officer to ensure that health and safety requirements are met.
- Prepares the final report and support files on the response activities.
- Serves as the liaison with public officials.

SITE HEALTH AND SAFETY OFFICER - Advises the Project Manager on all aspects of health and safety on site and stops work if any operation threatens worker or public health or safety.

Responsibilities:

- Periodically inspects protective clothing and equipment.
 - Ensures that protective clothing and equipment are properly stored and maintained.
 - Controls entry and exit at the Access Control Points.
 - Coordinates health and safety program activities with the Office Health and Safety Representative.
 - Confirms each team member's suitability for work based on a physician's recommendation.
 - Monitors the work parties for signs of stress, such as cold exposure, heat stress, and fatigue.
 - Implements the Health and Safety Plan.
 - Conducts periodic inspections to determine if the Health and Safety Plan is being followed.
 - Enforces the "buddy" system.
-
-

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

TABLE 1-2 (CONTINUED)
ON-SITE PERSONNEL AND RESPONSIBILITIES

- Knows emergency procedures, evacuation routes, and the telephone numbers of the ambulance, local hospital, poison control center, fire department, and police department.
- Notifies, when necessary, local public emergency officials.
- Coordinates emergency medical care.
- Sets up decontamination lines and the decontamination solutions appropriate for the type of chemical contamination on the site.
- Controls the decontamination of all equipment, personnel, and samples from the contaminated areas.
- Assures proper disposal of contaminated clothing and materials.
- Ensures that all required equipment is available.
- Advises medical personnel of potential exposures and consequences.
- Notifies emergency response personnel by telephone or radio in the event of an emergency.

FIELD TEAM LEADER - Responsible for field team operations and safety.

Responsibilities:

- Manages field operations.
- Executes the Work Plan and schedule.
- Enforces safety procedures.
- Coordinates with the Site Health and Safety Officer in determining the personal protection level.
- Enforces site control.
- Documents field activities and sample collection.
- Serves as a liaison with public officials.

WORK TEAM – Drilling contractors. The work party must consist of at least two people.

Responsibilities:

- Safely completes the on-site tasks required to fulfill the Work Plan.
 - Complies with the Health and Safety Plan.
 - Notifies Site Health and Safety Officer or supervisor of suspected unsafe conditions.
-
-

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

2. RISK ANALYSIS

2.1 Chemical Hazards

Several contaminants (Semi-Volatile Organic Compounds, Volatile Organic Compounds) have been identified onsite that may be encountered during various field tasks at the subject property. Potential contaminants and their relevant properties are shown in Table 2-1. Material safety data sheets (MSDS) for these contaminants have been included in this HASP.

2.2 Physical Hazards

2.2.1 Heat Stress

The use of Level C protective equipment, or greater, may create heat stress. Monitoring of personnel wearing personal protective clothing should commence when the ambient temperature is 72°F or above. Table 2-2 presents the suggested frequency for such monitoring. Monitoring frequency should increase as ambient temperature increases or as slow recovery rates are observed. Refer to the Table 2-3 below to assist in assessing when the risk for heat related illness is likely. To use this table, the ambient temperature and relative humidity must be obtained (a regional weather report should suffice). Heat stress monitoring should be performed by the Site Health and Safety Officer, who shall be able to recognize symptoms related to heat stress.

To monitor the workers, be familiar with the following heat-related disorders and their symptoms:

- **Prickly Heat** (Heat rash)
 - Painful, itchy red rash. Occurs during sweating, on skin covered by clothing.
- **Heat Cramps**
 - Painful spasm of arm, leg or abdominal muscles, during or after work.
- **Heat Exhaustion**
 - Headache, nausea, dizziness. Cool, clammy, moist skin. Heavy sweating. Weak, fast pulse. Shallow respiration, normal temperature.
- **Heat Fatigue**
 - Weariness, irritability, loss of skill for fine or precision work. Decreased ability to concentrate. No loss of temperature control.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

2.1 CONTAMINANTS OF CONCERN				
(REFER TO MSDS'S & PROJECT FILES FOR MORE DETAILED CONTAMINANT INFORMATION)				
Contaminant	Exposure Limit^b	IDLH^c	Symptoms and Effects of Exposure	PIP^d (eV)
Dibenzo(a,h)anthracene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Bis(2-ethylhexyl)phthalate	5 mg/m ³	NA	Eye, skin, respiratory tract irritation; carcinogen; adverse reproductive effects.	NA
Indeno(1,2,3-cd)pyrene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Benzo(a)anthracene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Benzo(a)pyrene	0.2 mg/m ³	80 mg/m ³	Dermatitis, bronchitis	NA
Benzo(b)fluoranthene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Benzene	10 ppm	500ppm	Irritate skin and eyes. CNS depression (excitement, headache, dizziness, drowsiness, nausea). Respiratory tract irritation	NA
Ethyl Benzene	100 ppm	800ppm	Irritate skin, eyes, mucus membrane, headaches, coma, dermatitis	NA
IsoButylene			The amount of Iso-butylene in this mixture should not present any symptoms of toxicity if this mixture is breathed.	NA
Arsenic	0.01 mg/m ³	5 ppm as Ca	Ulceration of nasal septum, respiratory irritation, dermatitis, gastrointestinal disturbances, peripheral neuropathy, hyperpigmentation	NA

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

2.1 CONTAMINANTS OF CONCERN (REFER TO MSDS'S & PROJECT FILES FOR MORE DETAILED CONTAMINANT INFORMATION)				
Contaminant	Exposure Limit ^b	IDLH ^c	Symptoms and Effects of Exposure	PIP ^d (eV)
Barium	0.5 mg/m ³	50 mg/m ³	Irritates skin, eyes, upper respiratory, skin burns, gastroenteritis, muscle spasms, slow pulse, extrasystoles, hypokalemia	NA
Copper	1 mg/m ³	100 mg/m ³	Eye, nose, pharynx irritant; nasal perforation; metallic taste; dermatitis.	NA
Lead	0.05 mg/m ³	10 mg/m ³	Eye, skin irritation, gastrointestinal irritation with nausea, vomiting and diarrhea, respiratory irritation, CNS, weight loss, lassitude, insomnia, hypotension, anorexia, abdominal discomfort and colic, flu-like symptoms, chest/muscle pain, increased white cell count.	NA

Footnotes:

^a Specify sample-designation and media: SB (Soil Boring), A (Air), D (Drums), GW (Groundwater), L (Lagoon), TK (Tank), S (Surface Soil), SL (Sludge), SW (Surface Water).

^b Appropriate value of PEL, REL, or TLV listed.

^c IDLH = immediately dangerous to life and health (units are the same as specified "Exposure Limit" units for that contaminant); NL = No limit found in reference materials; CA = Potential occupational carcinogen.

^d PIP = photoionization potential; NA = Not applicable; UK = Unknown.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

2.2 Potential Routes of Exposure		
<p>Dermal: Contact with contaminated media. This route of exposure is minimized through proper use of PPE, as specified in Section 4.</p>	<p>Inhalation: Vapors and contaminated particulates. This route of exposure is minimized through proper respiratory protection and monitoring, as specified in Sections 4 and 5, respectively.</p>	<p>Other: Inadvertent ingestion of contaminated media. This route should not present a concern if good hygiene practices are followed (e.g., wash hands and face before drinking or smoking).</p>

2.3 Suggested Frequency of Physiological Monitoring for Fit and Acclimated workers^A

Adjusted Temperature ^b	Normal Work Ensemble ^C	Impermeable Ensemble
90°F or above (32.2°C) or above	After each 45 min. of work	After each 15 min. of work
87.5°F (30.8°-32.2°C)	After each 60 min. of work	After each 30 min. of work
82.5°-87.5°F (28.1°-30.8°C)	After each 90 min. of work	After each 60 min. of work
77.5°-82.5°F (25.3°-28.1°C)	After each 120 min. of work	After each 90 min. of work
72.5°-77.5°F (22.5°-25.3°C)	After each 150 min. of work	After each 120 min. of work

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- **Heat Syncope** (Heat Collapse)
 - Fainting while standing in a hot environment.
- **Heat Stroke**
 - Headache, nausea, weakness, hot dry skin, fever, rapid strong pulse, rapid deep respirations, loss of consciousness, convulsions, coma. **This is a life threatening condition.**

Do not permit a worker to wear a semi-permeable or impermeable garment when they are showing signs or symptoms of heat-related illness.

To monitor the worker, measure:

- Heart rate. Count the radial pulse during a 30-second period as early as possible in the rest period.
 - If the heart rate exceeds 100 beats per minute at the beginning of the rest period, shorten the next work cycle by one-third and keep the rest period the same.
 - If the heart rate still exceeds 100 beats per minute at the next rest period, shorten the following work cycle by one-third. A worker cannot return to work after a rest period until their heart rate is below 100 beats per minute.
- Oral temperature. Use a clinical thermometer (3 minutes under the tongue) or similar device to measure the oral temperature at the end of the work period (before drinking).
 - If oral temperature exceeds 99.6°F (37.6°C), shorten the next work cycle by one-third without changing the rest period. A worker cannot return to work after a rest period until their oral temperature is below 99.6°F.
 - If oral temperature still exceeds 99.6°F (37.6°C) at the beginning of the next rest period, shorten the following cycle by one-third.
 - Do not permit a worker to wear a semi-permeable or impermeable garment when oral temperature exceeds 100.6°F (38.1°C).

2.2.2 Prevention of Heat Stress

Proper training and preventative measures will aid in averting loss of worker productivity and serious illness. Heat stress prevention is particularly important because once a person suffers from heat stroke or heat exhaustion, that person may be predisposed to additional heat related illness. To avoid heat stress the following steps should be taken:

- Adjust work schedules.
- Mandate work slowdowns as needed.
- Perform work during cooler hours of the day if possible or at night if adequate lighting can be provided.
- Provide shelter (air-conditioned, if possible) or shaded areas to protect personnel during rest periods.
- Maintain worker's body fluids at normal levels. This is necessary to ensure that the cardiovascular system functions adequately. Daily fluid intake must approximately equal the amount of water lost in perspiration, id., eight fluid ounces (0.23 liters) of water must be ingested for approximately every eight ounces (0.23 kg) of weight lost. The normal thirst mechanism is not sensitive

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

enough to ensure that enough water will be drunk to replace lost perspiration. When heavy sweating occurs, encourage the worker to drink more. The following strategies may be useful:

- Maintain water temperature 50^o to 60^oF (10^o to 16.6^oC).
- Provide small disposable cups that hold about four ounces (0.1 liter).
- Have workers drink 16 ounces (0.5 liters) of fluid (preferably water or dilute drinks) before beginning work.
- Urge workers to drink a cup or two every 15 to 20 minutes, or at each monitoring break. A total of 1 to 1.6 gallons (4 to 6 liters) of fluid per day are recommended, but more may be necessary to maintain body weight.
- Train workers to recognize the symptoms of heat related illness.

2.2.3 Cold-Related Illness

If work on this project is conducted in the winter months, thermal injury due to cold exposure can become a problem for field personnel. Systemic cold exposure is referred to as hypothermia. Local cold exposure is generally labeled frostbite.

Hypothermia: Hypothermia is defined as a decrease in the patient core temperature below 96^oF. The body temperature is normally maintained by a combination of central (brain and spinal cord) and peripheral (skin and muscle) activity. Interference with any of these mechanisms can result in hypothermia, even in the absence of what normally is considered a "cold" ambient temperature. Symptoms of hypothermia include shivering, apathy, listlessness, sleepiness, and unconsciousness.

Frostbite. Frostbite is both a general and medical term given to areas of local cold injury. Unlike systemic hypothermia, frostbite rarely occurs unless the ambient temperatures are less than freezing and usually less than 20^oF. Symptoms of frostbite include a sudden blanching or whitening of the skin; the skin has a waxy or white appearance and is firm to the touch; tissues are cold, pale, and solid.

2.2.4 Prevention of Cold-Related Illness

- Educate workers to recognize the symptoms of frostbite and hypothermia
- Identify and limit known risk factors:
- Assure the availability of enclosed, heated environment on or adjacent to the site.
- Assure the availability of dry changes of clothing.
- Develop the capability for temperature recording at the site.
- Assure the availability of warm drinks.

Monitoring

Start (oral) temperature recording at the job site:

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- At the Field Team Leader's discretion when suspicion is based on changes in a worker's performance or mental status.
- At a worker's request.
- As a screening measure, two times per shift, under unusually hazardous conditions (e.g., wind-chill less than 20°F, or wind-chill less than 30°F with precipitation).
- As a screening measure whenever any worker on the site develops hypothermia.

Any person developing moderate hypothermia (a core temperature of 92°F) cannot return to work for 48 hours.

2.3 Hazards Analysis

Refer to Section 6.1.1 for heavy equipment safety requirements. Check with local utilities before conducting any ground invasive procedures. Chemical exposure typically occurs as subsurface soils are brought to the surface. The breathing zone shall be screened with a Mini-RAE or equivalent air monitoring device appropriate for the known, onsite contaminants. If contaminant levels reach action limits as specified in Section 3, upgrades in personal protection will be initiated. Onsite personnel shall start work in Level D PPE, which will include use of hard hats and eye and hearing protection when the equipment is operational.

Employees shall keep clothing dry with adequate rain gear. Use proper personal protective clothing. Inspect equipment to ensure that it is proper working order. All handling of potentially contaminated soils and/or groundwater will begin in Level D with careful monitoring of the sampler's breathing zone using the Mini-Rae as needed. Outer nitrile and inner latex gloves will be included in standard Level D requirements whenever handling samples.

- a. For work levels of 250 kilocalories/hour.
- b. Calculate the adjusted air temperature ($t_{a\ adj}$) by using this equation $t_{a\ adj} = t_a\ ^\circ F + (13 \times \% \text{ sunshine})$. Measure air temperature (t_a) with a standard mercury-in-glass thermometer, with the bulb shielded from radiant heat. Estimate percent sunshine by judging what percent time the sun is not covered by clouds that are thick enough to produce a shadow. (100 percent sunshine = no cloud cover and a sharp, distinct shadow; 0 percent sunshine = no shadows.)
- c. A normal work ensemble consists of cotton coveralls or other cotton clothing with long sleeves and pants.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

3. PERSONNEL PROTECTION AND MONITORING

3.1 Medical Surveillance

Project personal will utilize the services of a licensed occupational health physician with knowledge and/or experience in the hazards associated with the project to provide the medical examinations and surveillance specified herein.

Personnel involved in this operation are to have undergone medical surveillance prior to employment with their employer, and thereafter at 12-month intervals. The 12-month medical examination includes a complete medical and work history and a standard occupational physical. The examination includes: all major organ systems, complete blood count with differential (CBC), and a SMAC/23 blood chemistry screen which includes calcium, phosphorous, glucose, uric acid, BUN, creatinine, albumin, SGPT, SGOT, LDH, globulin, A/G ratio, alkaline phosphatase, total protein, total bilirubin, triglyceride, cholesterol, and a creatinine/BUN ratio. Additionally a pulmonary function test will be performed by trained personnel to record Forced Vital Capacity (FVC) and Forced Expiratory Volume in second (FEV_{1.0}). An audiogram and visual acuity measurement, including color perception, is administered. The medical exam is performed under the direction of a licensed Occupational Health Physician. The physician provides a medical certification regarding the fitness or unfitness for employment on hazardous waste projects. This evaluation includes any restrictions that may be indicated for each employee. The evaluation will be repeated as indicated by substandard performance or evidence of particular stress that is evident by injury or time loss illness on the part of any worker.

3.2 Site Specific Training

The Site Health and Safety Officer will be responsible for developing a site specific occupational hazard training program and providing training to all personnel that are to work at the site. This training will consist of the following topics:

- Names of personnel responsible for site safety and health.
- Safety procedures and hazards specific to the site.
- Proper use of personal protective equipment.
- Work practices by which the employee can minimize risk from hazards.
- Safe use of engineering controls and equipment on the site.
- Acute effects of compounds at the site.
- Decontamination procedures.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

3.3 Personal Protective Equipment and Action Levels

3.3.1 Conditions for Level D

Level D protection will be worn as required for the investigation. Level D protection will consist of:

- Coveralls
- Safety boots
- Nitrile outer and Latex inner gloves (must be worn during all sampling activities)
- Hard hat (must be worn during drilling activities)
- Safety glasses with side shields (Splash goggles must be worn if a splash hazard is present)
- Hearing protection (must be worn during activities as necessary)

3.3.2 Conditions for Level C

The level of personal protection will be upgraded to Level C if any of the following conditions are met:

For Volatile Organic Compounds:

- If the level of volatile organic compounds exceeds 5 ppm;

For Nonvolatile and Semi volatile Compounds:

- If the level of total dust exceeds 1.7 mg/m³;

It is possible to directly monitor the concentrations of airborne volatile organic compounds from gasoline, which might be generated as a result of wind erosion of soils. To avoid any potential exposure, workers will wet down the surrounding area with water if work is being conducted in a non-vegetated area or downwind of a non-vegetated area on a windy day. If the site health and safety officer or any member of the field team does not feel that these measures are sufficient, then workers may don a full-face air-purifying respirator equipped with HEPA cartridges.

As this site is located in a densely populated and heavily trafficked area, the breathing zone along the street must be conducted to ensure pedestrian safety during construction. If an upgrade from Level D to Level C is required, additional air monitoring along Pacific Street will be required.

Equipment Required For Level C

Level C protection will consist of:

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- Full-face air-purifying respirator
- Combination dust/organic vapor cartridges
- Tyvek overall suit
- Nitrile outer and latex inner gloves
- Safety boots
- Hard hat (must be worn during excavation activities)

3.3.3 Conditions for Level B or Retreat

The level of personal protection will be upgraded to Level B or personnel shall retreat to an upwind location if any of the following conditions are met. If the concentrations of volatile organics, which can be detected with a Photo Ionization Detector (PID), equal or exceed 25 ppm (based on the presence of methylene chloride). Additional air monitoring in the exclusion zone as well as along Pacific Street will be required if there is an upgrade from Level C to Level B. The NYCDEP should also be notified of the upgrade and additional monitoring plans. Work will not be done at Level A at the subject property.

Equipment Required For Level B

Level B protection will consist of:

- Airline or SCBA respirator with Grade D breathing air
- Poly-coated Tyvek overall suit
- 5-minute escape SCBA (with airline only)
- Nitrile outer and latex inner gloves, taped at cuffs
- Safety boots
- Hard hat

OSHA Requirements for Personal Protective Equipment

All personal protective equipment used during the course of this field investigation must meet the following OSHA standards:

Type of Protection	Regulation	Source
Eye and Face	29 CFR 1910.133 29 CFR 1926.102	ANSI Z87.1-1968
Respiratory	29 CFR 1910.134 29 CFR 1926.103	ANSI Z88.1-1980
Head	29 CFR 1910.135 29 CFR 1926.100	ANSI Z89.1-1969
Foot	29 CFR 1910.136 29 CFR 1926.96	ANSI Z41.1-1967

ANSI = American National Standards Institute

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

Both the respirator and cartridges specified for use in Level C protection must be fit-tested prior to use in accordance with OSHA regulations (29 CFR 1910.1025; 29 CFR 1910.134).

Air purifying respirators cannot be worn under the following conditions:

- Oxygen deficiency
- IDLH concentrations
- High relative humidity
- If contaminant levels exceed designated use concentrations.

3.4 Monitoring Requirements

Monitoring for organic vapors in the breathing zone will be conducted with a photo- ionization detector (PID). Monitoring for explosive conditions will be conducted with a four-gas meter. Readings will be taken continuously while investigating contaminated soils. Readings will be conducted upwind and downwind of excavation activities at least once per hour on the site in order to monitor for the release of airborne contaminants from the exclusion zone. If downwind levels of organic vapors or explosive conditions exceed upwind levels by more than the amount indicated in Table 1-1, steps will be taken to upgrade the level of PPE or reduce the concentrations. This may include, but not be limited to suspending work.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

4. WORK ZONES AND DECONTAMINATION

4.1 Site Work Zones

To reduce the spread of hazardous materials by workers from potentially contaminated areas to the clean areas, zones will be delineated at the site. The flow of personnel between the zones will be controlled. The establishment of the work zones will help ensure that: personnel are properly protected against the hazards present where they are working, work activities and contamination are confined to the appropriate areas, and personnel can be located and evacuated in an emergency.

4.1.1 Exclusion Zone

Exclusion zones will be established at the site for all activities; unprotected onlookers should be located at the property boundary and upwind of excavation activities. In the event that volatile organics are detected in the breathing zone as discussed in Section 3, all personnel within the exclusion zone must don Level C protection. Exclusion zones will also be established during any activity when Level C protection is established as a result of conditions discussed in Section 3.

All personnel within the exclusion zone will be required to use the specified level of protection. No eating, drinking, or smoking will be allowed in the exclusion or decontamination zones.

4.1.2 Decontamination Zone

Should it be necessary to establish an exclusion zone, the decontamination zone will be utilized. This zone will be established between the exclusion zone and the support zone, and will include the personnel and equipment necessary for decontamination of equipment and personnel (discussed below). Personnel and equipment in the exclusion zone must pass through this zone before entering the support zone. This zone should always be located upwind of the exclusion zone.

4.1.3 Support Zone

The support zone will include the remaining areas of the job site. Break areas, operational direction and support facilities (to include supplies, equipment storage and maintenance areas) will be located in this area. No equipment or personnel will be permitted to enter the support zone from the exclusion zone without passing through the personnel or equipment decontamination station. Eating, smoking, and drinking will be allowed only in this area.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

4.2 Decontamination

Due to the low level of contaminants expected, any water used in decontamination procedures will be disposed of on-site.

4.2.1 Decontamination of Personnel

Decontamination will not be necessary if only Level D protection is used. However, disposable gloves used during sampling activities should be removed and bagged; personnel should be encouraged to remove clothing and shower as soon as is practicable at the end of the day. All clothing should be machine-washed. All personnel will wash hands and face prior to eating and before and after using the restroom.

Decontamination will be necessary if Level C protection is used. The following OSHA-specified procedures include steps necessary for complete decontamination prior to entry into the support zone, and steps necessary if a worker only needs to change a respirator or respirator canister.

The site health and safety officer can modify the twelve-station decontamination process, dependent upon the extent of contamination.

Station 1: Segregated Equipment Drop

Deposit equipment used on the site (tools, sampling devices and containers, monitoring instruments, clipboards, etc.) on plastic drop cloths or in different containers with plastic liners. Each will be contaminated to a different degree. Segregation at the drop reduces the possibility of cross-contamination.

Station 2: Suit/Safety Boot and Outer-Glove Wash

Thoroughly wash chemically resistant suit, safety boots and outer gloves. Scrub with long-handle, soft-bristle scrub brush and copious amounts of Alconox/water solution.

Necessary equipment includes:

1. Wash tub (30 gallon or large enough for person to stand in)
2. Alconox/water solution
3. Long-handle soft-bristle scrub brushes

Station 3: Suit/Safety Boot and Outer-Glove Rinse

Rinse off Alconox/water solution using copious amounts of water. Repeat as many times as necessary.

Necessary equipment includes:

1. Wash tub (30 gallon or large enough for person to stand in)

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

2. Spray unit
3. Water
4. Long-handle, soft-bristle scrub brushes

Station 4: Outer Gloves Removal

Remove the outer gloves and deposit in individually marked plastic bags.

Necessary equipment includes:

1. Plastic bag

Station 5: Canister or Mask Change

If a worker leaves the exclusion zone to change a canister (or mask), this is the last step in the decontamination procedures. The worker's canister is exchanged, new outer glove donned, and joints taped. Worker returns to duty. Otherwise, the worker proceeds to Station 6.

Necessary equipment includes:

1. Canister (or mask)
2. Tape
3. Gloves

Station 6: Removal of Chemically Resistant Suit

With assistance of helper, remove suit. Deposit in container with plastic liner.

Necessary equipment includes:

1. Container with plastic liner

Station 7: Inner-Glove Wash

Wash inner gloves with Alconox/water solution that will not harm skin. Repeat as many times as necessary.

Necessary equipment includes:

1. Alconox/water solution
2. Wash tub
3. Long-handle, soft-bristle brushes

Station 8: Inner-Glove Rinse

Rinse inner gloves with water. Repeat as many times as necessary.

Necessary equipment includes:

1. Water
2. Wash tub

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

Station 9: Respirator Removal

Remove face-piece. Avoid touching face. Wash respirator in clean, sanitized solution, allow to dry and deposit face-piece in plastic bag. Store in clean area.

Necessary equipment includes:

1. Plastic bags
2. Sanitizing solution
3. Cotton

Station 10: Inner-Glove Removal

Remove inner gloves and deposit in container with plastic liner.

Necessary equipment includes:

1. Container with plastic liner

Station 11: Field Wash

Wash hands and face.

Necessary equipment includes:

1. Water
2. Soap
3. Tables
4. Wash basins or buckets
5. Clean towels

Station 12: Redress

If re-entering exclusion zone put on clean field clothes (e.g., Tyvek, gloves, etc.).

Necessary equipment includes:

1. Table
2. Clothing

4.2.2 Decontamination of Heavy Equipment

Drilling equipment (e.g. rods, augers, etc...) will be steam cleaned and decontaminated prior leaving the site. The equipment will be decontaminated in the following manner:

- The heavy equipment will be steam cleaned to remove gross contamination.
- Sensitive equipment, such as field meters and surveying instruments, will be wiped with a clean, damp cloth.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

5. SAMPLE SHIPMENT

Samples collected, if any, during this remedial action will be classified as non-hazardous samples. In general, hazardous samples are collected from areas where high concentrations of contamination are known or suspected.

5.1 Hazardous Samples

The majority of the environmental samples, if collected, from the site will be shipped as non-hazardous samples. If these conditions exist in grossly contaminated soils, then the grossly contaminated soil samples will be shipped as DOT Hazardous Materials. For example, the designation "Flammable Liquid" or "Flammable Solid" can be used. Refer to International Air Transport Association Guidelines for shipping dangerous goods if the carrier will move the package by air. A completed airway bill must accompany the package and all appropriate labels must be attached to the package.

The example flammable samples will be transported as follows:

1. Collect sample in a 16-ounce or smaller glass or polyethylene container with nonmetallic teflon-lined screw cap. Allow sufficient air space (approximately 10% by volume) so container is not liquid full at 54 °C (130 °F). If collecting a solid material, the container plus contents should not exceed 1 pound net weight. If sampling for volatile organic analysis, fill VOA container to septum but place the VOA container inside a 16-ounce or smaller container so the required air space may be provided. Large quantities, up to 3.786 liters (1 gallon), may be collected if the sample's flash point is 23 °C (75 °F) or higher. In this case, the flash point must be marked on the outside container (e.g., carton, cooler), and shipping papers should state that "Flash point is 73 °F or higher."
2. Seal sample and place in a 4-mil-thick polyethylene bag, one sample per bag.
3. Place sealed bag inside a metal jerrican with noncombustible, absorbent cushioning material (e.g., vermiculite or earth) to prevent breakage, one bag per can. Pressure-close the can and use clips, tape or other positive means to hold the lid securely.
4. Mark the can with:
 - Name and address of originator
 - "Flammable Liquid N.O.S. UN 1993"
 - (or "Flammable Solid N.O.S. UN 1325")

NOTE: UN numbers are now required in proper shipping names.
5. Place one or more metal cans in a strong outside container such as an approved plastic cooler or DOT labeled fiberboard box. Preservatives are not used for hazardous waste site samples.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

6. Prepare for shipping:

"Flammable Liquid, N.O.S. UN 1993" or "Flammable Solid, N.O.S. UN 1325"; "Cargo Aircraft Only (if more than 1 quart net per outside package); "Limited Quantity" or "Ltd. Qty."; "Laboratory Samples"; "Net Weight" or "Net Volume" (of hazardous contents) should be indicated on shipping papers and on outside of shipping container. "This Side Up" or "This End Up" should also be on container. Sign shipper certification. The emergency number for shipping dangerous goods: Chem-Tel (800) 255-3924.

7. Stand by for possible carrier requests to open outside containers for inspection or modify packaging. It is wise to contact carrier before packing to ascertain local packaging requirements and not to leave area before the carrier vehicle (aircraft, truck) is on its way.

5.2 Shipping Papers

Proper shipping papers should be filled out and maintained within the driver's reach, whenever personnel carries hazardous materials in a vehicle in quantities above those allowed for Materials of Trade (MOTs). Such materials may include more than 8 gallons of the following:

- Gasoline (for use in a generator) UN1203, Guide #27
- Methanol (for use in decontamination procedures) UN 1230, Guide #28
- Nitric Acid (for use in decontamination procedures) UN 1760, Guide #60
- Hydrochloric Acid (for use in decontamination procedures) UN 1789, Guide #60

Other materials may include the following:

- > 220 pounds of compressed Gas [Air, Compressed] (calibration gas for the FID, or Grade D breathing air for Level B work) UN 1002, Class 2.2.
- Other hazardous materials as defined by the DOT.

Appropriate MSDSs should be maintained with the shipping papers and/or the pocket DOT Emergency Response Guidebook.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

6. ACCIDENT PREVENTION AND CONTINGENCY PLAN

6.1 Accident Prevention

All field personnel will receive health and safety training prior to the initiation of any site activities. On a day-to-day basis, individual personnel should be constantly alert for indicators of potentially hazardous situations and for signs and symptoms in themselves and others that warn of hazardous conditions and exposures. Rapid recognition of dangerous situations can avert an emergency. Before daily work assignments, regular meetings should be held. Discussion should include:

- Tasks to be performed.
- Time constraints (e.g., rest breaks, cartridge changes).
- Hazards that may be encountered, including their effects, how to recognize symptoms or monitor them, concentration limits, or other danger signals.
- Emergency procedures.

6.1.1 Vehicles and Heavy Equipment

Working with large motor vehicles and heavy equipment could be a major hazard at this site. Injuries can result from equipment hitting or running over personnel, impacts from flying objects, or overturning of vehicles. Vehicle and heavy equipment design and operation will be in accordance with 29 CFR, Subpart O, 1926.600 through 1926.602. In particular, the following precautions will be utilized to help prevent injuries/accidents.

- Brakes, hydraulic lines, light signals, fire extinguishers, fluid levels, steering, tires, horn, and other safety devices will be checked at the beginning of each shift.
- Large construction motor vehicles will not be backed up unless:
 - The vehicle has a reverse signal alarm audible above the surrounding noise level;
or
 - The vehicle is backed up only when an observer signals that it is safe to do so.
- Heavy equipment or motor vehicle cabs will be kept free of all nonessential items, and all loose items will be secured.
- Large construction motor vehicles and heavy equipment will be provided with necessary safety equipment (seat belts, rollover protection, emergency shut-off in case of rollover, backup warning lights and audible alarms.)
- Blades and buckets will be lowered to the ground and parking brakes will be set before shutting off any heavy equipment or vehicles.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

6.1.2 Electrical

- Only qualified personnel are permitted to work on unprotected energized electrical systems.
- Only authorized personnel are permitted to enter high-voltage areas.
- Electrical wiring and equipment will be handled only by those qualified to do so. All electrical wiring and equipment must be considered energized until lockout/tag out procedures is implemented.
- All electrical equipment, power tools, and extension cords must be inspected for damage prior to use. Do not use defective electrical equipment, remove from service.
- All temporary wiring, including extension cords and electrical power tools, must have ground fault circuit interrupters (GFCIs) installed.
- Extension cords must be:
 - equipped with third-wire grounding.
 - covered, elevated, or protected from damage when passing through work areas.
 - protected from pinching if routed through doorways.
 - not fastened with staples, hung from nails, or suspended with wire.
- Electrical power tools and equipment must be effectively grounded or double-insulated UL approved.
- Electric power tools and equipment must be operated and maintained according to manufacturers' instructions.
- Safe clearance distances between overhead power lines and any electrical conducting material must be maintained unless the power lines have been de-energized and grounded, or where insulating barriers have been installed to prevent physical contact. (Maintain at least 10 feet from overhead power lines for voltages of 50 kV or less, and 10 feet plus ½ inch for every 1 kV over 50 kV).
- Temporary lights shall not be suspended by their electric cord unless designed for suspension. Lights shall be protected from accidental contact or breakage.
- Electrical equipment, tools, switches, and outlets must be protected from environmental elements.

6.1.3 Fire/Explosion

- Fire extinguishers shall be provided so that the travel distance from any work area to the nearest extinguisher is less than 100 feet. When 5 gallons or more of a flammable or combustible liquid is being used, an extinguisher must be within 50 feet.
Extinguishers must:
 - be maintained in a fully charged and operable condition,
 - be visually inspected each month, and
 - undergo a maintenance check each year.
- The area in front of extinguishers must be kept clear.
- "Exit" signs and "Fire Extinguisher" signs must be posted over existing doors and extinguisher locations.
- Combustible materials stored outside should be at least 10 feet from any building.
- Solvent waste and oily rags must be kept in a fire resistant, covered container until removed from the site.
- Flammable/combustible liquids must be kept in approved containers, and must be stored in an approved storage cabinet.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

6.2 Contingency Plan

6.2.1 Emergency Procedures

In the event that an emergency develops on site, the procedures delineated herein are to be immediately followed. Emergency conditions are considered to exist if:

- Any member of the field crew is involved in an accident or experiences any adverse effects or symptoms of exposure while on site.
- A condition is discovered that suggests the existence of a situation more hazardous than anticipated.

General emergency procedures, and specific procedures for personal injury and chemical exposure, are described in the health and safety plan.

6.2.2 Chemical Exposure

If a member of the field crew demonstrates symptoms of chemical exposure, the procedures outlined below should be followed:

- Another team member (buddy) should remove the individual from the immediate area of contamination. The buddy should communicate to the Field Team Leader (via voice and hand signals) of the chemical exposure. The Field Team Leader should contact the appropriate emergency response agency.
- Precautions should be taken to avoid exposure of other individuals to the chemical.
- If the chemical is on the individual's clothing, the chemical should be neutralized or removed if it is safe to do so.
- If the chemical has contacted the skin, the skin should be washed with copious amounts of water.
- In case of eye contact, an emergency eyewash should be used. Eyes should be washed for at least 15 minutes.
- All chemical exposure incidents must be reported in writing to the Office Health and Safety Representative. The Site Health and Safety Officer or Field Team Leader is responsible for completing the accident report (See Appendix B of this Section).

6.2.3 Personal Injury

In case of personal injury at the site, the following procedures should be followed:

- Another team member (buddy) should signal the Field Team Leader that an injury has occurred.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- A field team member trained in first aid can administer treatment to an injured worker.
- The victim should then be transported to the nearest hospital or medical center. If necessary, an ambulance should be called to transport the victim.
- For less severe cases, the individual can be taken to the site dispensary.
- The Field Team Leader or Site Health and Safety Officer is responsible for making certain that an accident report form is completed. This form is to be submitted to the Office Health and Safety Representative. Follow-up action should be taken to correct the situation that caused the accident.

6.2.4 Evacuation Procedures

- The Field Team Leader will initiate evacuation procedure by signaling to leave the site.
- All personnel in the work area should evacuate the area and meet in the common designated area.
- All personnel suspected to be in or near the contract work area should be accounted for and the whereabouts of missing persons determined immediately.
- The Field Team Leader will then give further instruction.

6.2.5 Procedures Implemented in the Event of a Major Fire, Explosion, or On-Site Health Emergency Crisis

- Notify the paramedics and/or fire department, as necessary;
- Signal the evacuation procedure previously outlined and implements the entire procedure;
- Isolate the area;
- Stay upwind of any fire;
- Keep the area surrounding the problem source clear after the incident occurs;
- Complete an accident report form and distribute to appropriate personnel.

6.2.6 Communication

Communication via either radio or cellular phone will be maintained between the field office and all work parties. In case of emergency or accident, the field emergency response person will immediately notify the field office via the communication equipment.

Field team members will use the *buddy* system while performing field activities. Buddies will pre-arrange hand signals for communication. The following hand signals are suggested:

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

- _ **Hand gripping throat:** out of air, cannot breathe.
- _ **Grip partner's wrist or place both arms straight up overhead:** Leave area immediately, no debate.
- _ **Place both arms overhead in form of an "X":** Need assistance.
- _ **Thumbs up:** OK, I am all right; or I understand.
- _ **Thumbs down:** No or negative.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

APPENDIX A

AIR MONITORING EQUIPMENT CALIBRATION AND MAINTENANCE

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

AIR MONITORING EQUIPMENT CALIBRATION AND MAINTENANCE

All monitoring instruments must be calibrated and maintained periodically. The operator must understand the limitations and possible sources of error for each instrument. The operator shall ensure that the instruments respond properly to the substances that they are designed to monitor. Portable air quality monitoring equipment that measures total ionizables present, such as the Rae Systems Mini-RAE[□] must be calibrated at least once each day. Four gas meters must be calibrated at least once each day. Real time aerosol monitors, such as the MINI-RAM[□], must be zeroed at the beginning of each workday. The specific instructions for calibration and maintenance provided for each instrument should be followed.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

APPENDIX B

FORMS FOR HEALTH AND SAFETY-RELATED ACTIVITIES

Note: The OSHA Job Safety and Health Protection Poster must be posted prominently during field activities. The following page is an example of the poster to be used in the field. The actual poster must be an 11 inch by 17-inch size version of this page.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

(Page 1 of 2)

ACCIDENT REPORT FORM

Project Name: _____

INJURED OR ILL EMPLOYEE

1. Name _____ Social Security # _____
(First) (Middle) (Last)

2. Home Address _____
(No. and Street) (City or Town) (State and Zip)

3. Age _____ 4. Sex: Male () Female ()

5. Occupation _____

(Specific job title, not the specific activity employee was performing at time of injury)

6. Department _____

(Enter name of department in which injured person is employed, even though they may have been temporarily working in another department at the time of injury)

EMPLOYER

7. Name _____

8. Mailing Address _____
(No. and Street) (City or Town) (State and Zip)

9. Location (if different from mailing address): _____

THE ACCIDENT OR EXPOSURE TO OCCUPATIONAL ILLNESS

10. Place of accident or exposure _____
(No. and Street) (City or Town) (State and Zip)

11. Was place of accident or exposure on employer's premises? ____ (Yes/No)

12. What was the employee doing when injured? _____

(Be specific - was employee using tools or equipment or handling material?)

13. How did the accident occur? _____
(Describe fully the events that resulted in the injury or

occupational illness. Tell what happened and how. Name objects and

substances involved. Give details on all factors that led to accident. Use separate sheet if needed)

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

(Page 2 of 2)

14. Time of accident: _____

15. Date of injury or initial diagnosis of occupational illness _____
(Date)

16. WITNESS
TO ACCIDENT

(Name)	(Affiliation)	(Phone No.)
(Name)	(Affiliation)	(Phone No.)
(Name)	(Affiliation)	(Phone No.)

OCCUPATIONAL INJURY OR OCCUPATIONAL ILLNESS

17. Describe the injury or illness in detail; indicate part of body affected.

18. Name the object or substance, which directly injured the employee. (For example, object that struck employee; the vapor or poison inhaled or swallowed; the chemical or radiation that irritated the skin; or in cases of strains, hernias, etc., the object the employee was lifting, pulling, etc.)

19. Did the accident result in employee fatality? _____ (Yes or No)

20. Number of lost workdays ____/restricted workdays ____ resulting from injury or illness?

OTHER

21. Did you see a physician for treatment? _____ (Yes or No) _____ (Date)

22. Name and address of physician _____

(No. and Street) (City or Town) (State and Zip)

23. If hospitalized, name and address of hospital _____

(No. and Street) (City or Town) (State and Zip)

Date of report _____ Prepared by _____

Official position _____

Construction Health & Safety Plan

PROJECT HEALTH AND SAFETY PLAN

AND WORK PLAN ACCEPTANCE FORM

I have read and agree to abide by the contents of the Work Plan and Health and Safety Plan for the following project:

(Project Title)

(Project Number)

Furthermore, I have read and am familiar with the work plan or proposal, which describes the fieldwork to be conducted and the procedures to be utilized in the conduct of this work.

Name (print)

Signature

Date

Place in project Health and Safety File as soon as possible

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

SITE-SPECIFIC HEALTH AND SAFETY TRAINING

(For All employees on site)

I hereby confirm that site-specific health and safety training has been conducted by the site health and safety officer who included:

- Names of personnel responsible for site safety and health
- Safety, health, and other hazards at the site
- Proper use of personal protective equipment
- Work practices by which the employee can minimize risk from hazards
- Safe use of engineering controls and equipment on the site
- Acute effects of compounds at the site
- Decontamination procedures

For the following project:

STANDARD SAFE WORK PRACTICES

Material Safety Data Sheet

Ethylbenzene

ACC# 00596

Section 1 - Chemical Product and Company Identification

MSDS Name: Ethylbenzene**Catalog Numbers:** AC118080000, AC118080025, AC118080250, AC118080251, AC118085000, 11808-0010, O2751-1**Synonyms:** Ethylbenzol; Phenylethane.**Company Identification:**

Fisher Scientific
1 Reagent Lane
Fair Lawn, NJ 07410

For information, call: 201-796-7100**Emergency Number:** 201-796-7100**For CHEMTREC assistance, call:** 800-424-9300**For International CHEMTREC assistance, call:** 703-527-3887

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
100-41-4	Ethylbenzene	>99	202-849-4

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: clear, colorless liquid. Flash Point: 15 deg C.

Warning! Flammable liquid and vapor. Causes eye, skin, and respiratory tract irritation. May be harmful if inhaled. Aspiration hazard if swallowed. Can enter lungs and cause damage. May cause central nervous system depression.

Target Organs: Central nervous system.

Potential Health Effects

Eye: Causes severe eye irritation. Causes redness and pain.**Skin:** Causes skin irritation. Prolonged and/or repeated contact may cause irritation and/or dermatitis. May be absorbed through the skin. Causes redness and pain.**Ingestion:** May cause irritation of the digestive tract. May cause gastrointestinal irritation with nausea, vomiting and diarrhea. May cause central nervous system depression, characterized by excitement, followed by headache, dizziness, drowsiness, and nausea. Advanced stages may cause collapse, unconsciousness, coma and possible death due to respiratory failure. Aspiration of material into the lungs may cause chemical pneumonitis, which may be fatal.**Inhalation:** Inhalation of high concentrations may cause central nervous system effects characterized by nausea, headache, dizziness, unconsciousness and coma. Causes respiratory tract irritation. Vapors may cause dizziness or suffocation.**Chronic:** Chronic inhalation may cause effects similar to those of acute inhalation.

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
71-43-2	Benzene	> 99	200-753-7

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: clear colorless liquid. Flash Point: -11 deg C.

Danger! Extremely flammable liquid and vapor. Vapor may cause flash fire. Harmful if swallowed, inhaled, or absorbed through the skin. Causes eye, skin, and respiratory tract irritation. Contains benzene. Benzene can cause cancer. Aspiration hazard if swallowed. Can enter lungs and cause damage. May cause blood abnormalities. May cause central nervous system effects.

Target Organs: Blood, central nervous system, respiratory system, eyes, bone marrow, immune system, skin.

Potential Health Effects

Eye: Causes eye irritation.

Skin: Causes skin irritation. Harmful if absorbed through the skin. Prolonged and/or repeated contact may cause defatting of the skin and dermatitis.

Ingestion: May cause central nervous system depression, characterized by excitement, followed by headache, dizziness, drowsiness, and nausea. Advanced stages may cause collapse, unconsciousness, coma and possible death due to respiratory failure. May cause effects similar to those for inhalation exposure. Aspiration of material into the lungs may cause chemical pneumonitis, which may be fatal.

Inhalation: Causes respiratory tract irritation. May cause drowsiness, unconsciousness, and central nervous system depression. Exposure may lead to irreversible bone marrow injury. Exposure may lead to aplastic anemia. Potential symptoms of overexposure by inhalation are dizziness, headache, vomiting, visual disturbances, staggering gait, hilarity, fatigue, and other symptoms of CNS depression.

Chronic: May cause bone marrow abnormalities with damage to blood forming tissues. May cause anemia and other blood cell abnormalities. Chronic exposure to benzene has been associated with an increased incidence of leukemia and multiple myeloma (tumor composed of cells of the type

normally found in the bone marrow). Immunodepressive effects have been reported. This substance has caused adverse reproductive and fetal effects in laboratory animals.

Section 4 - First Aid Measures

Eyes: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical aid.

Skin: In case of contact, flush skin with plenty of water. Remove contaminated clothing and shoes. Get medical aid if irritation develops and persists. Wash clothing before reuse.

Ingestion: Potential for aspiration if swallowed. Get medical aid immediately. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If vomiting occurs naturally, have victim lean forward.

Inhalation: If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Use water spray to keep fire-exposed containers cool. Extremely flammable liquid and vapor. Vapor may cause flash fire. Approach fire from upwind to avoid hazardous vapors and toxic decomposition products. Vapors are heavier than air and may travel to a source of ignition and flash back. Vapors can spread along the ground and collect in low or confined areas. This liquid floats on water and may travel to a source of ignition and spread fire. May accumulate static electricity.

Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or appropriate foam.

Flash Point: -11 deg C (12.20 deg F)

Autoignition Temperature: 498 deg C (928.40 deg F)

Explosion Limits, Lower: 1.3 vol %

Upper: 7.1 vol %

NFPA Rating: (estimated) Health: 2; Flammability: 3; Instability: 0

Section 6 - Accidental Release Measures

General Information: Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks: Absorb spill with inert material (e.g. vermiculite, sand or earth), then place in suitable container. Avoid runoff into storm sewers and ditches which lead to waterways. Remove all sources of ignition. Provide ventilation. Approach spill from upwind. Use water spray to cool and disperse vapors, protect personnel, and dilute spills to form nonflammable mixtures.

Section 7 - Handling and Storage

Handling: Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Ground and bond containers when transferring material. Avoid contact with eyes, skin, and clothing. Empty containers retain product residue, (liquid and/or vapor), and can be dangerous. Take precautionary measures against static discharges. Keep container tightly closed. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose empty containers to heat, sparks or open flames. Use only with adequate ventilation. Keep away from heat, sparks and flame. Avoid breathing vapor.

Storage: Keep away from sources of ignition. Store in a tightly closed container. Keep from contact with oxidizing materials. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Use process enclosure, local exhaust ventilation, or other engineering controls to control airborne levels below recommended exposure limits. Use explosion-proof ventilation equipment. Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. See 29CFR 1910.1028 for the regulatory requirements for the control of employee exposure to benzene.

Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Benzene	0.5 ppm TWA; 2.5 ppm STEL; Skin - potential significant contribution to overall exposure by the cutaneous route	0.1 ppm TWA 500 ppm IDLH	1 ppm TWA; 10 ppm TWA (applies to industry segments exempt from the benzene standard at 29 CFR 1910.1028); 25 ppm Ceiling (applies to industry segments exempt from the 1 ppm TWA and 5 ppm STEL of the benzene standard); 0.5 ppm Action Level; 1 ppm TWA; 5 ppm STEL (Cancer hazard, Flammable - see 29 C FR 1910.1028)

OSHA Vacated PELs: Benzene: 10 ppm TWA (unless specified in 1910.1028)

Personal Protective Equipment

Eyes: Wear chemical splash goggles.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

Section 9 - Physical and Chemical Properties

Physical State: Liquid

Appearance: clear colorless

Odor: sweetish odor - aromatic odor

pH: Not applicable.

Vapor Pressure: 75 mm Hg @ 20 deg C

Vapor Density: 2.8 (air=1)

Evaporation Rate: Not available.

Viscosity: 0.647mPa @ 20 deg C

Boiling Point: 80.1 deg C

Freezing/Melting Point: 5.5 deg C

Decomposition Temperature: Not available.

Solubility: 0.180 g/100 ml @ 25°C

Specific Gravity/Density: 0.8765 @ 20°C

Molecular Formula: C₆H₆

Molecular Weight: 78.11

Section 10 - Stability and Reactivity

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Ignition sources, excess heat, confined spaces.

Incompatibilities with Other Materials: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported.

Section 11 - Toxicological Information

RTECS#:**CAS#** 71-43-2: CY1400000**LD50/LC50:**

CAS# 71-43-2:

Dermal, guinea pig: LD50 = >9400 uL/kg;
 Draize test, rabbit, eye: 88 mg Moderate;
 Draize test, rabbit, eye: 2 mg/24H Severe;
 Draize test, rabbit, skin: 20 mg/24H Moderate;
 Inhalation, mouse: LC50 = 9980 ppm;
 Inhalation, mouse: LC50 = 24 mL/kg/2H;
 Inhalation, rat: LC50 = 10000 ppm/7H;
 Inhalation, rat: LC50 = 34 mL/kg/2H;
 Inhalation, rat: LC50 = 6.5 mL/kg/4H;
 Oral, mouse: LD50 = 4700 mg/kg;
 Oral, rat: LD50 = 930 mg/kg;
 Oral, rat: LD50 = 1 mL/kg;

Oral, rat: LD50 = 1800 Benzene is considered very toxic; probable human oral lethal dose would be 50-500 mg/kg. Human inhalation of approximately 20,000 ppm (2% in air) was fatal in 5-10 minutes. While percutaneous absorption of liquid benzene through intact human skin can be limited (e.g., 0.05% of the applied dose), the absorbed dose via direct dermal contact combined with that received from body surface exposure to benzene in workplace air is such that a substantial fraction (20-40%) of the total exposure is due to skin absorption.

Carcinogenicity:

CAS# 71-43-2:

- **ACGIH:** A1 - Confirmed Human Carcinogen
- **California:** carcinogen, initial date 2/27/87
- **NTP:** Known carcinogen
- **IARC:** Group 1 carcinogen

Epidemiology: IARC has concluded that epidemiological studies have established the relationship between benzene exposure and the development of acute myelogenous leukemia, and that there is sufficient evidence that benzene is carcinogenic to humans.

Teratogenicity: Inhalation, rat: TCLO = 50 ppm/24H (female 7-14 day(s) after conception) Effects on Embryo or Fetus - extra-embryonic structures (e.g., placenta, umbilical cord) and Effects on Embryo or Fetus - fetotoxicity (except death, e.g., stunted fetus).; Inhalation, mouse: TCLO = 5 ppm (female 6-15 day(s) after conception) Effects on Embryo or Fetus - cytological changes (including somatic cell genetic material) and Specific Developmental Abnormalities - blood and lymphatic systems (including spleen and marrow).

Reproductive Effects: Inhalation, rat: TCLO = 670 mg/m³/24H (female 15 day(s) pre-mating and female 1-22 day(s) after conception) female fertility index (e.g. # females pregnant per # sperm positive females; # females pregnant per # females mated).; Oral, mouse: TDLo = 12 gm/kg (female 6-15 day (s) after conception) Fertility - post-implantation mortality (e.g. dead and/or resorbed implants per total number of implants).

Mutagenicity: DNA Inhibition: Human, Leukocyte = 2200 umol/L.; DNA Inhibition: Human, HeLa cell = 2200 umol/L.; Mutation Test Systems - not otherwise specified: Human, Lymphocyte = 5 umol/L.; Cytogenetic Analysis: Inhalation, Human = 125 ppm/1Y.; Cytogenetic Analysis: Human, Leukocyte = 1 mmol/L/72H.; Cytogenetic Analysis: Human, Lymphocyte = 1 mg/L.

Neurotoxicity: See actual entry in RTECS for complete information.

Other Studies:

Section 12 - Ecological Information

Ecotoxicity: Fish: Mosquito Fish: TLm = 395 mg/L; 24 Hr; UnspecifiedFish: Goldfish: LC50 = 46 mg/L; 24 Hr; Modified ASTM D 1345Fish: Fathead Minnow: LC50 = 15.1 mg/L; 96 Hr; Flow-through at 25°C (pH 7.9-8.0)Fish: Rainbow trout: LC50 = 5.3 mg/L; 96 Hr; Flow-through at 25°C (pH 7.9-8.0)Fish: Bluegill/Sunfish: LD50 = 20 mg/L; 24-48 Hr; Unspecified If benzene is released to soil, it will be subject to rapid volatilization near the surface and that which does not evaporate will be highly to very highly mobile in the soil and may leach to groundwater. If benzene is released to water, it will be subject to rapid volatilization. It will not be expected to significantly adsorb to sediment, bioconcentrate in aquatic organisms or hydrolyze. It may be subject to biodegradation.

Environmental: If benzene is released to the atmosphere, it will exist predominantly in the vapor phase. Gas-phase benzene will not be subject to direct photolysis but it will react with photochemically produced hydroxyl radicals with a half-life of 13.4 days. The reaction time in polluted atmospheres which contain nitrogen oxides or sulfur dioxide is accelerated with the half-life being reported as 4-6 hours. Benzene is fairly soluble in water and is removed from the atmosphere in rain.

Physical: Products of photooxidation include phenol, nitrophenols, nitrobenzene, formic acid, and peroxyacetyl nitrate.

Other: No information available.

Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

RCRA P-Series: None listed.

RCRA U-Series:

CAS# 71-43-2: waste number U019 (Ignitable waste, Toxic waste).

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List

CAS# 71-43-2 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information

MSDS Creation Date: 6/11/1999

Revision #8 Date: 9/11/2008

The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.

Section 4 - First Aid Measures

Eyes: Flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately.

Skin: Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

Ingestion: Do not induce vomiting. If victim is conscious and alert, give 2-4 cupfuls of milk or water. Never give anything by mouth to an unconscious person. Get medical aid immediately.

Inhalation: Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. Use water spray to keep fire-exposed containers cool. Flammable liquid and vapor. Vapors are heavier than air and may travel to a source of ignition and flash back. Vapors can spread along the ground and collect in low or confined areas. This liquid floats on water and may travel to a source of ignition and spread fire. May accumulate static electricity.

Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or appropriate foam.

Flash Point: 15 deg C (59.00 deg F)

Autoignition Temperature: 432 deg C (809.60 deg F)

Explosion Limits, Lower: 1.2%

Upper: 6.8%

NFPA Rating: (estimated) Health: 2; Flammability: 3; Instability: 0

Section 6 - Accidental Release Measures

General Information: Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks: Absorb spill with inert material (e.g. vermiculite, sand or earth), then place in suitable container. Remove all sources of ignition. Provide ventilation. Control runoff and isolate discharged material for proper disposal. Use water spray to cool and disperse vapors and protect personnel.

Section 7 - Handling and Storage

Handling: Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Use with adequate ventilation. Ground and bond containers when transferring material. Avoid contact with eyes, skin, and clothing. Empty containers retain product residue, (liquid and/or vapor), and can be dangerous. Keep container tightly closed. Keep away from heat, sparks and flame. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose empty containers to heat, sparks or open flames. Avoid breathing vapor or mist.

Storage: Keep away from sources of ignition. Store in a tightly closed container. Keep from contact with oxidizing materials. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Ethylbenzene	100 ppm TWA; 125 ppm STEL	100 ppm TWA; 435 mg/m ³ TWA 800 ppm IDLH	100 ppm TWA; 435 mg/m ³ TWA

OSHA Vacated PELs: Ethylbenzene: 100 ppm TWA; 435 mg/m³ TWA

Personal Protective Equipment

Eyes: Wear chemical splash goggles.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.

Section 9 - Physical and Chemical Properties

Physical State: Liquid

Appearance: clear, colorless

Odor: aromatic odor

pH: Not available.

Vapor Pressure: 9.6 mm Hg @ 25 deg C

Vapor Density: 3.7 (air=1)

Evaporation Rate: <1 (butyl acetate=1)

Viscosity: 0.63 mPa s 20 C

Boiling Point: 136 deg C

Freezing/Melting Point: -95 deg C

Decomposition Temperature: Not available.

Solubility: Insoluble.

Specific Gravity/Density: 0.86

Molecular Formula: C₈H₁₀

Molecular Weight: 106.17

Section 10 - Stability and Reactivity

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Ignition sources, excess heat.

Incompatibilities with Other Materials: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported.

Section 11 - Toxicological Information

RTECS#:**CAS#** 100-41-4: DA0700000**LD50/LC50:**

CAS# 100-41-4:

Draize test, rabbit, eye: 500 mg Severe;

Inhalation, mouse: LC50 = 35500 mg/m³/2H;Inhalation, rat: LC50 = 55000 mg/m³/2H;

Oral, rat: LD50 = 3500 mg/kg;

Oral, rat: LD50 = 3500 mg/kg;

Skin, rabbit: LD50 = 17800 uL/kg;

Inhalation rat LC50: 17.2 mg/l/4H from BASF.

Carcinogenicity:

CAS# 100-41-4:

- **ACGIH:** A3 - Confirmed animal carcinogen with unknown relevance to humans
- **California:** carcinogen, initial date 6/11/04
- **NTP:** Not listed.
- **IARC:** Group 2B carcinogen

Epidemiology: No information found**Teratogenicity:** No information found**Reproductive Effects:** No information found**Mutagenicity:** Mutation in mammalian somatic cells(Rodent,mouse) Lymphocyte = 80 mg/L.**Neurotoxicity:** No information found**Other Studies:**

Section 12 - Ecological Information

Ecotoxicity: Fish: Rainbow trout: LC50 = 14.0 mg/L; 96 Hr.; Static Bioassay Fish: Fathead Minnow: LC50 = 12.1 mg/L; 96 Hr.; Flow-through Bioassay Fish: Bluegill/Sunfish: LC50 = 150.0 mg/L; 96 Hr.; Static Bioassay, pH 6.5-7.9, 21-23 degrees C Water flea EC50 = 2.1 mg/L; 48 Hr.; Static Bioassay Water flea EC50 = 75.0 mg/L; 48 Hr.; Static Bioassay Shrimp (mysidoposis bahia), LC50=87.6 mg/L/96hr. Sheepshead minnow LC50=275 mg/L/96hr. Fathead minnow LC50=42.3 mg/L/96hr in hard water & 48.5 mg/L/96hr in softwater.

Environmental: Experimental data on the bioconcentration of ethylbenzene include a log BCF of 1.9 in goldfish and the log BCF of 0.67 for clams exposed to the water-soluble fraction of crude oil. Using its octanol/water partition coefficient (log Kow = 3.15) and using a recommended regression equation, one can calculate a log BCF in fish of 2.16 indicating that ethylbenzene should not significantly bioconcentrate in aquatic organisms. Ethylbenzene has a moderate adsorption for soil. The measured Koc for silt loam was 164

Physical: The predominant photochemical reaction of ethylbenzene in the atmosphere is with hydroxyl radicals; the tropospheric half-life for this reaction is 5.5 and 24 hr in the summer and winter, actively. Degradation is somewhat faster under photochemical smog situations. Photooxidation products which have been identified include ethylphenol, benzaldehyde, acetophenone and m- and p-ethylnitrobenzene. Ethylbenzene is resistant to hydrolysis. Ethylbenzene does not significantly absorb light above 290 nm in methanol solution.

Other: No information available.

Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

RCRA P-Series: None listed.

RCRA U-Series: None listed.

Section 14 - Transport Information

	US DOT	Canada TDG
Shipping Name:	ETHYLBENZENE	ETHYLBENZENE
Hazard Class:	3	3
UN Number:	UN1175	UN1175
Packing Group:	II	II
Additional Info:		FLASHPOINT 15 C

Section 15 - Regulatory Information

US FEDERAL

TSCA

CAS# 100-41-4 is listed on the TSCA inventory.

Health & Safety Reporting List

CAS# 100-41-4: Effective 6/19/87, Sunset 6/19/97

Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

Section 12b

None of the chemicals are listed under TSCA Section 12b.

TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

CERCLA Hazardous Substances and corresponding RQs

CAS# 100-41-4: 1000 lb final RQ; 454 kg final RQ

SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPO.

SARA Codes

CAS # 100-41-4: immediate, delayed, fire.

Section 313

This material contains Ethylbenzene (CAS# 100-41-4, >99%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

Clean Air Act:

CAS# 100-41-4 is listed as a hazardous air pollutant (HAP).

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

Clean Water Act:

CAS# 100-41-4 is listed as a Hazardous Substance under the CWA. CAS# 100-41-4 is listed as a Priority Pollutant under the Clean Water Act. CAS# 100-41-4 is listed as a Toxic Pollutant under the Clean Water Act.

OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

STATE

CAS# 100-41-4 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

California Prop 65

The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Ethylbenzene, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: None of the chemicals in this product are listed.

European/International Regulations

European Labeling in Accordance with EC Directives

Hazard Symbols:

XN F

Risk Phrases:

R 11 Highly flammable.

R 20 Harmful by inhalation.

Safety Phrases:

S 16 Keep away from sources of ignition - No smoking.

S 24/25 Avoid contact with skin and eyes.

S 29 Do not empty into drains.

WGK (Water Danger/Protection)

CAS# 100-41-4: 1

Canada - DSL/NDSL

CAS# 100-41-4 is listed on Canada's DSL List.

Canada - WHMIS

This product has a WHMIS classification of B2, D2B, D2A.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List

CAS# 100-41-4 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information
--

MSDS Creation Date: 4/28/1999

Revision #6 Date: 11/29/2007

The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.

DIBENZO(a,h)ANTHRACENE**0431**

October 1995

CAS No: 53-70-3

RTECS No: HN2625000

EC No: 601-041-00-2

1,2:5,6-Dibenzanthracene

C₂₂H₁₄

Molecular mass: 278.4

TYPES OF HAZARD/ EXPOSURE	ACUTE HAZARDS/SYMPTOMS	PREVENTION	FIRST AID/FIRE FIGHTING
FIRE	Combustible.	NO open flames.	Water spray, powder.
EXPLOSION			
EXPOSURE		AVOID ALL CONTACT!	
Inhalation		Local exhaust or breathing protection.	Fresh air, rest.
Skin	Redness. Swelling. Itching.	Protective gloves. Protective clothing.	Remove contaminated clothes. Rinse and then wash skin with water and soap.
Eyes	Redness.	Face shield or eye protection in combination with breathing protection.	First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to a doctor.
Ingestion		Do not eat, drink, or smoke during work. Wash hands before eating.	Rinse mouth.

SPILLAGE DISPOSAL

Sweep spilled substance into sealable containers; if appropriate, moisten first to prevent dusting. Carefully collect remainder, then remove to safe place.
Personal protection: P3 filter respirator for toxic particles.

EMERGENCY RESPONSE**SAFE STORAGE**

Well closed.

IPCSInternational
Programme on
Chemical Safety

Prepared in the context of cooperation between the International Programme on Chemical Safety and the European Commission ©
IPCS 2005

SEE IMPORTANT INFORMATION ON THE BACK.

IMPORTANT DATA**Physical State; Appearance**

COLOURLESS CRYSTALLINE POWDER.

Occupational exposure limits

TLV not established.

Routes of exposure

The substance can be absorbed into the body by inhalation, through the skin and by ingestion.

Inhalation risk

Evaporation at 20°C is negligible; a harmful concentration of airborne particles can, however, be reached quickly.

Effects of long-term or repeated exposure

The substance may have effects on the skin, resulting in photosensitization. This substance is probably carcinogenic to humans.

PHYSICAL PROPERTIES

Boiling point: 524°C

Melting point: 267°C

Relative density (water = 1): 1.28

Solubility in water: none

Octanol/water partition coefficient as log Pow: 6.5

ENVIRONMENTAL DATA

Bioaccumulation of this chemical may occur in seafood.

NOTES

This is one of many polycyclic aromatic hydrocarbons - standards are usually established for them as mixtures, e.g., coal tar pitch volatiles. However, it may be encountered as a laboratory chemical in its pure form.

Insufficient data are available on the effect of this substance on human health, therefore utmost care must be taken.

Do NOT take working clothes home.

DBA is a commonly used name.

This substance is one of many polycyclic aromatic hydrocarbons (PAH).

Card has been partly updated in October 2005. See section EU classification.

ADDITIONAL INFORMATION**LEGAL NOTICE**

Material Safety Data Sheet

Benzo[a]pyrene, 98%

ACC# 37175

Section 1 - Chemical Product and Company Identification

MSDS Name: Benzo[a]pyrene, 98%

Catalog Numbers: AC105600000, AC105600010, AC105601000, AC377200000, AC377200010, AC377201000 AC377201000

Synonyms: 3,4-Benzopyrene; 3,4-Benzpyrene; Benzo[def]chrysene.

Company Identification:

Acros Organics N.V.
One Reagent Lane
Fair Lawn, NJ 07410

For information in North America, call: 800-ACROS-01

For emergencies in the US, call CHEMTREC: 800-424-9300

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
50-32-8	Benzo[a]pyrene	>96	200-028-5

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: yellow to brown powder.

Danger! May cause harm to the unborn child. May impair fertility. May cause eye, skin, and respiratory tract irritation. Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. Cancer hazard. May cause allergic skin reaction. May cause heritable genetic damage.

Target Organs: Reproductive system, skin.

Potential Health Effects

Eye: May cause eye irritation.

Skin: May cause skin irritation. May be harmful if absorbed through the skin. May cause an allergic reaction in certain individuals.

Ingestion: May cause irritation of the digestive tract. The toxicological properties of this substance have not been fully investigated. May be harmful if swallowed.

Inhalation: May cause respiratory tract irritation. The toxicological properties of this substance have not been fully investigated. May be harmful if inhaled.

Chronic: May cause cancer in humans. May cause reproductive and fetal effects. Laboratory experiments have resulted in mutagenic effects.

Section 4 - First Aid Measures

Eyes: Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.

Skin: Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

Ingestion: Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

Inhalation: Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion.

Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or appropriate foam.

Flash Point: Not available.

Autoignition Temperature: Not available.

Explosion Limits, Lower: Not available.

Upper: Not available.

NFPA Rating: (estimated) Health: 2; Flammability: 0; Instability: 0

Section 6 - Accidental Release Measures

General Information: Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks: Clean up spills immediately, observing precautions in the Protective Equipment section. Sweep up, then place into a suitable container for disposal. Avoid generating dusty conditions. Provide ventilation.

Section 7 - Handling and Storage

Handling: Wash thoroughly after handling. Use with adequate ventilation. Minimize dust generation and accumulation. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid ingestion and inhalation.

Storage: Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate ventilation to keep airborne concentrations low.

Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Benzo[a]pyrene	0.2 mg/m ³ TWA (as benzene soluble aerosol) (listed under Coal tar pitches).	0.1 mg/m ³ TWA (cyclohexane-extractable fraction) (listed under Coal tar pitches). 80 mg/m ³ IDLH (listed under Coal tar	0.2 mg/m ³ TWA (as benzene soluble fraction) (listed under Coal tar pitches).

		pitches).
--	--	-----------

OSHA Vacated PELs: Benzo[a]pyrene: No OSHA Vacated PELs are listed for this chemical.

Personal Protective Equipment

Eyes: Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

Section 9 - Physical and Chemical Properties

Physical State: Powder

Appearance: yellow to brown

Odor: faint aromatic odor

pH: Not available.

Vapor Pressure: Not available.

Vapor Density: Not available.

Evaporation Rate: Not available.

Viscosity: Not available.

Boiling Point: 495 deg C @ 760 mm Hg

Freezing/Melting Point: 175 - 179 deg C

Decomposition Temperature: Not available.

Solubility: 1.60x10⁻³ mg/l @25°C

Specific Gravity/Density: Not available.

Molecular Formula: C₂₀H₁₂

Molecular Weight: 252.31

Section 10 - Stability and Reactivity
--

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Dust generation.

Incompatibilities with Other Materials: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported.

Section 11 - Toxicological Information

RTECS#:

CAS# 50-32-8: DJ3675000

LD50/LC50:

Not available.

Carcinogenicity:

CAS# 50-32-8:

- **ACGIH:** A2 - Suspected Human Carcinogen

- **California:** carcinogen, initial date 7/1/87
- **NTP:** Suspect carcinogen
- **IARC:** Group 1 carcinogen (listed as Coal tar pitches).

Epidemiology: No information found

Teratogenicity: No information found

Reproductive Effects: Adverse reproductive effects have occurred in experimental animals.

Mutagenicity: Mutagenic effects have occurred in humans. Mutagenic effects have occurred in experimental animals.

Neurotoxicity: No information found

Other Studies:

Section 12 - Ecological Information

No information available.

Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

RCRA P-Series: None listed.

RCRA U-Series:

CAS# 50-32-8: waste number U022.

Section 14 - Transport Information

	US DOT	Canada TDG
Shipping Name:	NOT REGULATED FOR DOMESTIC TRANSPORT	ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOL (Benzo{a} pyrene)
Hazard Class:		9
UN Number:		UN3077
Packing Group:		III

Section 15 - Regulatory Information

US FEDERAL

TSCA

CAS# 50-32-8 is listed on the TSCA inventory.

Health & Safety Reporting List

None of the chemicals are on the Health & Safety Reporting List.

Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

Section 12b

None of the chemicals are listed under TSCA Section 12b.

TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

CERCLA Hazardous Substances and corresponding RQs

CAS# 50-32-8: 1 lb final RQ; 0.454 kg final RQ

SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPQ.

SARA Codes

CAS # 50-32-8: immediate, delayed.

Section 313

This material contains Benzo[a]pyrene (CAS# 50-32-8, >96%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR

Clean Air Act:

This material does not contain any hazardous air pollutants.

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

Clean Water Act:

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 50-32-8 is listed as a Priority Pollutant under the Clean Water Act.

None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

STATE

CAS# 50-32-8 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

California Prop 65

The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Benzo[a]pyrene, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: CAS# 50-32-8: 0.06 æg/day NSRL

European/International Regulations

European Labeling in Accordance with EC Directives

Hazard Symbols:

T N

Risk Phrases:

R 43 May cause sensitization by skin contact.

R 45 May cause cancer.

R 46 May cause heritable genetic damage.

R 60 May impair fertility.

R 61 May cause harm to the unborn child.

R 50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Safety Phrases:

S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

S 53 Avoid exposure - obtain special instructions before use.

S 60 This material and its container must be disposed of as hazardous waste.

S 61 Avoid release to the environment. Refer to special instructions /safety data sheets.

WGK (Water Danger/Protection)

CAS# 50-32-8: No information available.

Canada - DSL/NDSL

CAS# 50-32-8 is listed on Canada's DSL List.

Canada - WHMIS

This product has a WHMIS classification of D2A.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List

CAS# 50-32-8 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information
--

MSDS Creation Date: 9/02/1997

Revision #7 Date: 6/30/2006

The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.

ARSENIC, 1,000 UG/ML OR 10,000 UG/ML

1. Product Identification

Synonyms: None

CAS No.: Not applicable to mixtures.

Molecular Weight: Not applicable to mixtures.

Chemical Formula: Not applicable to mixtures.

Product Codes: 5704, 5718, 6442

2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Arsenic	7440-38-2	0.1 - 1%	Yes
Nitric Acid	7697-37-2	< 4%	Yes
Water	7732-18-5	> 95%	No

3. Hazards Identification

Emergency Overview

DANGER! CORROSIVE. LIQUID AND MIST CAUSE SEVERE BURNS TO ALL BODY TISSUE. MAY BE FATAL IF SWALLOWED OR INHALED. AFFECTS

LIVER, KIDNEYS, LUNGS AND TEETH. CANCER HAZARD. CONTAINS INORGANIC ARSENIC WHICH CAN CAUSE CANCER. Risk of cancer depends on duration and level of exposure.

SAF-T-DATA^(tm) Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Cancer Causing)

Flammability Rating: 0 - None

Reactivity Rating: 1 - Slight

Contact Rating: 3 - Severe (Corrosive)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: White (Corrosive)

Potential Health Effects

Nitric acid is extremely hazardous; it is corrosive, reactive, an oxidizer, and a poison. The health effects from exposure to diluted forms of this chemical are not well documented. They are expected to be less severe than those for concentrated forms which are referenced in the descriptions below.

Inhalation:

Corrosive! Inhalation of vapors can cause breathing difficulties and lead to pneumonia and pulmonary edema, which may be fatal. Other symptoms may include coughing, choking, and irritation of the nose, throat, and respiratory tract. Arsenic may cause inflammation of the mucous membranes with cough and foamy sputum, restlessness, dyspnea, cyanosis, and rales. Symptoms like those from ingestion exposure may follow. May cause pulmonary edema.

Ingestion:

Corrosive! Swallowing nitric acid can cause immediate pain and burns of the mouth, throat, esophagus and gastrointestinal tract. Arsenic is highly toxic! May cause burning in esophagus, vomiting, and bloody diarrhea. Symptoms of cold and clammy skin, low blood pressure, weakness, headache, cramps, convulsions, and coma may follow. May cause damage to liver and kidneys. A suspected fetal toxin. Death may occur from circulatory failure. Estimated lethal dose 120 milligrams.

Skin Contact:

Corrosive! Can cause redness, pain, and severe skin burns. Concentrated solutions cause deep ulcers and stain skin a yellow or yellow-brown color.

Eye Contact:

Corrosive! Vapors are irritating and may cause damage to the eyes. Contact may cause severe burns and permanent eye damage.

Chronic Exposure:

Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid. Arsenic on repeated or prolonged skin contact may cause bronzing of the skin, edema, dermatitis, and lesions. Repeated or prolonged inhalation of dust may cause damage to the nasal septum. Chronic exposure from inhalation or ingestion may cause hair and weight loss, a garlic odor to the breath and perspiration, excessive salivation and perspiration, central nervous system damage, hepatitis, gastrointestinal disturbances, cardiovascular damage, and kidney and liver damage. Arsenic compounds are known human carcinogens and may be teratogenic

based on effects in laboratory animals.

Aggravation of Pre-existing Conditions:

Persons with pre-existing skin disorders, eye disease, or cardiopulmonary diseases may be more susceptible to the effects of this substance.

4. First Aid Measures

Immediate first aid treatment reduces the health effects of this substance. First aid procedures given apply to concentrated solutions. Exposures to dilute solutions may not require these extensive first aid procedures.

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion:

If swallowed, give large quantities of water to drink and get medical attention immediately. Never give anything by mouth to an unconscious person.

Skin Contact:

In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately. Contaminated work clothes should be laundered by individuals who have been informed of the hazards of exposure to this substance.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

Note to Physician:

If emesis is unsuccessful after two doses of Ipecac, consider gastric lavage. Monitor urine arsenic level. Alkalinization of urine may help prevent disposition of red cell breakdown products in renal tubular cells. If acute exposure is significant, maintain high urine output and monitor volume status, preferably with central venous pressure line. Abdominal X-rays should be done routinely for all ingestions. Chelation therapy with BAL, followed by n-penicillamine is recommended, but specific dosing guidelines are not clearly established.

5. Fire Fighting Measures

Fire:

Not combustible, but concentrated material is a strong oxidizer and its heat of reaction with reducing agents or combustibles may cause ignition.

Explosion:

Concentrated material reacts explosively with combustible organic or readily oxidizable materials such as: alcohols, turpentine, charcoal, organic refuse, metal powder, hydrogen sulfide, etc. Reacts with most metals to release hydrogen gas which can form explosive mixtures with air.

Fire Extinguishing Media:

If involved in a fire, use water spray.

Special Information:

Increases the flammability of combustible, organic and readily oxidizable materials. In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Neutralize with alkaline material (soda ash, lime), then absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker NEUTRASORB® acid neutralizers are recommended for spills of this product.

7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Protect from physical damage. Keep out of direct sunlight and away from heat, water, and incompatible materials. Do not wash out container and use it for other purposes. When diluting, the acid should always be added slowly to water and in small amounts. Never use hot water and never add water to the acid. Water added to acid can cause uncontrolled boiling and splashing. Wear special protective equipment (Sec. 8) for maintenance break-in or where exposures may exceed established exposure levels. Wash hands, face, forearms and neck when exiting restricted areas. Shower, dispose of outer clothing, change to clean garments at the end of the day. Avoid cross-contamination of street clothes. Wash hands before eating and do not eat, drink, or smoke in workplace. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

For Nitric Acid:

OSHA Permissible Exposure Limit (PEL):

2 ppm (TWA)

ACGIH Threshold Limit Value (TLV):

2 ppm (TWA); 4 ppm (STEL)

For Inorganic Arsenic compounds (as As):

- OSHA Permissible Exposure Limit (PEL):

10 ug/m³ (TWA), 5 ug/m³(Action Level), cancer hazard.

- ACGIH Threshold Limit Value (TLV):
0.01 mg/m³ (TWA), A1, confirmed human carcinogen.

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded, wear a supplied air, full-facepiece respirator, airlined hood, or full-facepiece self-contained breathing apparatus. Canister-type respirators using sorbents are ineffective.

Skin Protection:

Rubber or neoprene gloves and additional protection including impervious boots, apron, or coveralls, as needed in areas of unusual exposure to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

Other Control Measures:

Any area where inorganic arsenic is stored, handled, used, etc., must be established as a 'Regulated Area' with controlled access, limited to authorized persons. Containers of inorganic arsenic and Regulated Areas must be labeled to show a CANCER SUSPECT AGENT is present. Eating, drinking, and smoking should not be permitted in areas where solids or liquids containing arsenic or lead compounds are handled, processed, or stored. See OSHA substance-specific standard for more information on personal protective equipment, engineering and work practice controls, medical surveillance, record keeping, and reporting requirements. (arsenic: 29 CFR 1910.1018; lead: 29 CFR 1910.1025).

9. Physical and Chemical Properties

Appearance:

Clear, colorless liquid.

Odor:

Odorless.

Solubility:

Infinitely soluble.

Specific Gravity:

No information found.

pH:

No information found.

% Volatiles by volume @ 21C (70F):

> 99

Boiling Point:

No information found.

Melting Point:

No information found.

Vapor Density (Air=1):

No information found.

Vapor Pressure (mm Hg):

No information found.

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage. Containers may burst when heated.

Hazardous Decomposition Products:

When heated to decomposition, emits toxic nitrogen oxides fumes and hydrogen nitrate.

Emits toxic fumes of arsenic when heated to decomposition.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

A dangerously powerful oxidizing agent, concentrated nitric acid is incompatible with most substances, especially strong bases, metallic powders, carbides, hydrogen sulfide, turpentine, and combustible organics.

Conditions to Avoid:

Heat, incompatibles.

11. Toxicological Information

Toxicological Data:

For arsenic: oral rat LD50: 763 mg/kg. Investigated as a tumorigen, mutagen, reproductive effector. For Nitric Acid: Investigated as a mutagen and reproductive effector.

Carcinogenicity:

For arsenic and inorganic arsenic compounds:

Regulated by OSHA as a carcinogen.

EPA / IRIS classification: Group A - Known human carcinogen.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Arsenic (7440-38-2)	Yes	No	1
Nitric Acid (7697-37-2)	No	No	None
Water (7732-18-5)	No	No	None

12. Ecological Information

Environmental Fate:

No information found.

Environmental Toxicity:

No information found.

13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

Barium, 1000 ug/mL (0.10% w/v)

1. Product Identification

Synonyms: None

CAS No.: Not applicable to mixtures.

Molecular Weight: 137.33

Chemical Formula: BaCO₃ and HNO₃ in H₂O

Product Codes: 6920

2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Barium Carbonate	513-77-9	< 1%	No
Nitric Acid	7697-37-2	1 - 2%	Yes
Water	7732-18-5	97 - 98%	No

3. Hazards Identification

Emergency Overview

DANGER! CORROSIVE. LIQUID AND MIST CAUSE SEVERE BURNS TO ALL BODY TISSUE. MAY BE FATAL IF SWALLOWED OR INHALED. VAPOR

IRRITATING TO EYES AND RESPIRATORY TRACT. INHALATION MAY CAUSE LUNG AND TOOTH DAMAGE.**J.T. Baker SAF-T-DATA^(tm)** Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Life)

Flammability Rating: 0 - None

Reactivity Rating: 1 - Slight

Contact Rating: 3 - Severe (Corrosive)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD;
PROPER GLOVESStorage Color Code: White (Corrosive)
-----**Potential Health Effects**

Nitric acid is extremely hazardous; it is corrosive, reactive, an oxidizer, and a poison. The following hazards are for concentrated solutions. Hazards of less concentrated solutions may be reduced. Degree of hazard for reduced concentrations is not currently addressed in the available literature.

Inhalation:

Corrosive! Inhalation of vapors can cause coughing, choking, inflammation of the nose, throat, and upper respiratory tract, and in severe cases, pulmonary edema, circulatory failure, and death.

Ingestion:

Corrosive! Swallowing can cause immediate pain and burns of the mouth, throat, esophagus and gastrointestinal tract. May cause nausea, vomiting, and diarrhea, and in severe cases, death.

Skin Contact:

Corrosive! Can cause redness, pain, and severe skin burns. Concentrated solutions cause deep ulcers and stain skin a yellow or yellow-brown color.

Eye Contact:

Corrosive! Vapors are irritating and may cause damage to the eyes. Contact may cause severe burns and permanent eye damage.

Chronic Exposure:

Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid.

Aggravation of Pre-existing Conditions:

Persons with pre-existing skin disorders, eye disease, or cardiopulmonary diseases may be more susceptible to the effects of this substance.

4. First Aid Measures

Immediate first aid treatment reduces the health effects of this substance.

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

Ingestion:

If swallowed, DO NOT INDUCE VOMITING. Give large quantities of water. Never give anything by mouth to an unconscious person. Get medical attention immediately.

Skin Contact:

Immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention immediately. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

5. Fire Fighting Measures

Fire:

Not combustible, but concentrated material is a strong oxidizer and its heat of reaction with reducing agents or combustibles may cause ignition.

Explosion:

Concentrated material reacts explosively with combustible organic or readily oxidizable materials such as: alcohols, turpentine, charcoal, organic refuse, metal powder, hydrogen sulfide, etc. Reacts with most metals to release hydrogen gas which can form explosive mixtures with air.

Fire Extinguishing Media:

Use any means suitable for extinguishing surrounding fire.

Special Information:

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Neutralize with alkaline material (soda ash, lime), then absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Protect from physical damage. Keep out of direct sunlight and away from heat, water, and incompatible materials. Do not wash out container and use it for other purposes. When diluting, the acid should always be added slowly to water and in small amounts. Never use

hot water and never add water to the acid. Water added to acid can cause uncontrolled boiling and splashing. When opening metal containers, use non-sparking tools because of the possibility of hydrogen gas being present. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

For Nitric Acid:

OSHA Permissible Exposure Limit (PEL):

2 ppm (TWA)

ACGIH Threshold Limit Value (TLV):

2 ppm (TWA); 4 ppm (STEL)

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded, wear a supplied air, full-facepiece respirator, airlined hood, or full-facepiece self-contained breathing apparatus. Canister-type respirators using sorbents are ineffective.

Skin Protection:

Rubber or neoprene gloves and additional protection including impervious boots, apron, or coveralls, as needed in areas of unusual exposure to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

9. Physical and Chemical Properties

Appearance:

Clear, colorless liquid.

Odor:

Odorless.

Solubility:

Complete (100%)

Specific Gravity:

No information found.

pH:

No information found.

% Volatiles by volume @ 21C (70F):

ca. 99

Boiling Point:

No information found.

Melting Point:

No information found.

Vapor Density (Air=1):

No information found.

Vapor Pressure (mm Hg):

No information found.

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage.

Hazardous Decomposition Products:

When heated to decomposition, emits toxic nitrogen oxides fumes and hydrogen nitrate.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

A dangerously powerful oxidizing agent, concentrated nitric acid is incompatible with most substances, especially strong bases, metallic powders, carbides, hydrogen sulfide, turpentine, and combustible organics.

Conditions to Avoid:

Heat and incompatibles.

11. Toxicological Information

For Nitric Acid: Investigated as a mutagen and reproductive effector.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Barium Carbonate (513-77-9)	No	No	None
Nitric Acid (7697-37-2)	No	No	None
Water (7732-18-5)	No	No	None

12. Ecological Information

Environmental Fate:

No information found.

Environmental Toxicity:

No information found.

13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved incinerator or disposed in a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

14. Transport Information

Domestic (Land, D.O.T.)

Proper Shipping Name: CORROSIVE LIQUID, ACIDIC, INORGANIC, N.O.S.

COPPER METAL

1. Product Identification

Synonyms: C.I. 77400; Arwood Copper

CAS No.: 7440-50-8

Molecular Weight: 63.546

Chemical Formula: Cu

Product Codes:

J.T. Baker: 1714, 1720, 1732, 1736

Mallinckrodt: 1733, 4649

2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Copper	7440-50-8	90 - 100%	Yes

3. Hazards Identification

Emergency Overview

WARNING! HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION

TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS THE LIVER AND KIDNEYS. CHRONIC EXPOSURE MAY CAUSE TISSUE DAMAGE.

SAF-T-DATA^(tm) Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Life)

Flammability Rating: 1 - Slight

Reactivity Rating: 2 - Moderate

Contact Rating: 1 - Slight

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD;
PROPER GLOVES

Storage Color Code: Green (General Storage)

Potential Health Effects

Inhalation:

Inhalation of dusts and fumes of metallic copper causes irritation of the upper respiratory tract, congestion of nasal mucous membranes, ulceration and perforation of the nasal septum, and pharyngeal congestion. Inhalation of copper fumes may give rise to metal fume fever (high temperature, metallic taste, nausea, coughing, general weakness, muscle aches, and exhaustion).

Ingestion:

Copper ingestion causes nausea, vomiting, abdominal pain, metallic taste, and diarrhea. Ingestion of large doses may cause stomach and intestine ulceration, jaundice, and kidney and liver damage.

Skin Contact:

Causes irritation to skin. Symptoms include redness, itching, and pain. Exposure to copper dust may cause a greenish-black skin discoloration.

Eye Contact:

Small copper particles in the eyes may cause irritation, discoloration, and damage.

Chronic Exposure:

Prolonged or repeated exposure to copper can discolor skin and hair and irritate the skin; may cause mild dermatitis, runny nose, and irritation of the mucous membranes. Repeated ingestion may damage the liver and kidneys. Repeated inhalation can cause chronic respiratory disease.

Aggravation of Pre-existing Conditions:

Persons with pre-existing skin disorders or impaired liver, kidney, or pulmonary function or pre-existing Wilson's disease may be more susceptible to the effects of this material.

4. First Aid Measures

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion:

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person.

Skin Contact:

Immediately flush skin with plenty of soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

5. Fire Fighting Measures

Fire:

Not considered to be a fire hazard since the bulk solid does not burn, but very finely divided particles (ultra-fine powder) may burn in air.

Explosion:

Not considered to be an explosion hazard. Reactions with incompatibles may pose an explosion hazard. Liquid copper explodes on contact with water. High concentrations of finely divided copper particles in the air may present an explosion hazard.

Fire Extinguishing Media:

Use any means suitable for extinguishing surrounding fire.

Special Information:

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Sweep up and containerize for reclamation or disposal. Vacuuming or wet sweeping may be used to avoid dust dispersal. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Avoid exposure to air and moisture. Isolate from incompatible substances. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

Copper Dust and Mists, as Cu:

- OSHA Permissible Exposure Limit (PEL) -

1 mg/m³ (TWA)

- ACGIH Threshold Limit Value (TLV) -

1 mg/m³ (TWA)

Copper Fume:

- OSHA Permissible Exposure Limit (PEL) -

0.1 mg/m³ (TWA)

- ACGIH Threshold Limit Value (TLV) -

0.2 mg/m³ (TWA)

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded and engineering controls are not feasible, a full facepiece particulate respirator (NIOSH type N100 filters) may be worn for up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

Skin Protection:

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

9. Physical and Chemical Properties

Appearance:

Reddish, metallic solid.

Odor:

Odorless.

Solubility:

Insoluble in water.

Density:

8.94

pH:

No information found.

% Volatiles by volume @ 21C (70F):

0

Boiling Point:

2595C (4703F)

Melting Point:

1083C (1981F)

Vapor Density (Air=1):

Not applicable.

Vapor Pressure (mm Hg):

1 @ 1628C (2962F)

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage. Copper becomes dull when exposed to air; on exposure to moist air it gradually converts to the carbonate. On long standing, a white, highly explosive peroxide deposit may form.

Hazardous Decomposition Products:

No information found.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

Copper is incompatible with oxidizers, alkalis, acetylene, chlorine plus oxygen difluoride, phosphorus, nitric acid, potassium peroxide, 1-bromo-2-propyne, sulfur plus chlorates. Reacts violently with ammonium nitrate, bromates, iodates, chlorates, ethylene oxide, hydrozoic acid, potassium oxide, dimethyl sulfoxide plus trichloroacetic acid, hydrogen peroxide, sodium peroxide, sodium azide, sulfuric acid, hydrogen sulfide plus air, and lead azide. A potentially explosive reaction occurs with acetylenic compounds. Copper ignites on contact with chlorine, fluorine (above 121C), chlorine trifluoride, and hydrazinum nitrate (above 70C). An incandescent reaction occurs with potassium dioxide.

Conditions to Avoid:

Incompatibles and prolonged exposure to air and moisture.

11. Toxicological Information

No LD50/LC50 information found relating to normal routes of occupational exposure. Investigated as a tumorigen and a reproductive effector.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated

LEAD METAL

1. Product Identification

Synonyms: Granular lead, pigment metal; C.I. 77575

CAS No.: 7439-92-1

Molecular Weight: 207.19

Chemical Formula: Pb

Product Codes:

J.T. Baker: 2256, 2266

Mallinckrodt: 5668

2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Lead	7439-92-1	95 - 100%	Yes

3. Hazards Identification

Emergency Overview

POISON! DANGER! MAY BE FATAL IF SWALLOWED OR INHALED. CAUSES

IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. NEUROTOXIN. AFFECTS THE GUM TISSUE, CENTRAL NERVOUS SYSTEM, KIDNEYS, BLOOD AND REPRODUCTIVE SYSTEM. POSSIBLE CANCER HAZARD. MAY CAUSE CANCER BASED ON ANIMAL DATA. Risk of cancer depends on duration and level of exposure.

SAF-T-DATA^(tm) Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Cancer Causing)

Flammability Rating: 3 - Severe (Flammable)

Reactivity Rating: 1 - Slight

Contact Rating: 2 - Moderate (Life)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: Red (Flammable)

Potential Health Effects

Inhalation:

Lead can be absorbed through the respiratory system. Local irritation of bronchia and lungs can occur and, in cases of acute exposure, symptoms such as metallic taste, chest and abdominal pain, and increased lead blood levels may follow. See also Ingestion.

Ingestion:

POISON! The symptoms of lead poisoning include abdominal pain and spasms, nausea, vomiting, headache. Acute poisoning can lead to muscle weakness, "lead line" on the gums, metallic taste, definite loss of appetite, insomnia, dizziness, high lead levels in blood and urine with shock, coma and death in extreme cases.

Skin Contact:

Lead and lead compounds may be absorbed through the skin on prolonged exposure; the symptoms of lead poisoning described for ingestion exposure may occur. Contact over short periods may cause local irritation, redness and pain.

Eye Contact:

Absorption can occur through eye tissues but the more common hazards are local irritation or abrasion.

Chronic Exposure:

Lead is a cumulative poison and exposure even to small amounts can raise the body's content to toxic levels. The symptoms of chronic exposure are like those of ingestion poisoning; restlessness, irritability, visual disturbances, hypertension and gray facial color may also be noted.

Aggravation of Pre-existing Conditions:

Persons with pre-existing kidney, nerve or circulatory disorders or with skin or eye problems may be more susceptible to the effects of this substance.

4. First Aid Measures

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion:

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention.

Skin Contact:

Immediately flush skin with plenty of soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

5. Fire Fighting Measures

Fire:

Not considered to be a fire hazard. Powder/dust is flammable when heated or exposed to flame.

Explosion:

Not considered to be an explosion hazard.

Fire Extinguishing Media:

Use any means suitable for extinguishing surrounding fire. Do not allow water runoff to enter sewers or waterways.

Special Information:

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode. Can produce toxic lead fumes at elevated temperatures and also react with oxidizing materials.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Sweep up and containerize for reclamation or disposal. Vacuuming or wet sweeping may be used to avoid dust dispersal. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Isolate from incompatible substances. Areas in which exposure to lead metal or lead compounds may occur should be identified by signs or appropriate means, and access to the area should be limited to authorized persons. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all

warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

For lead, metal and inorganic dusts and fumes, as Pb:

-OSHA Permissible Exposure Limit (PEL): 0.05 mg/m³ (TWA)

For lead, elemental and inorganic compounds, as Pb:

-ACGIH Threshold Limit Value (TLV): 0.05 mg/m³ (TWA), A3 animal carcinogen
ACGIH Biological Exposure Indices (BEI): 30 ug/100ml, notation B (see actual Indices for more information).

For lead, inorganic:

-NIOSH Recommended Exposure Limit (REL): 0.1 mg/m³ (TWA)

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded and engineering controls are not feasible, a half-face high efficiency particulate respirator (NIOSH type N100 filter) may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece high efficiency particulate respirator (NIOSH type N100 filter) may be worn up to 50 times the exposure limit, or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

Skin Protection:

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

Other Control Measures:

Eating, drinking, and smoking should not be permitted in areas where solids or liquids containing lead compounds are handled, processed, or stored. See OSHA substance-specific standard for more information on personal protective equipment, engineering and work practice controls, medical surveillance, record keeping, and reporting requirements. (29 CFR 1910.1025).

9. Physical and Chemical Properties

Appearance:

Small, white to blue-gray metallic shot or granules.

Odor:

Odorless.

Solubility:

Insoluble in water.

Density:

11.34

pH:

No information found.

% Volatiles by volume @ 21C (70F):

0

Boiling Point:

1740C (3164F)

Melting Point:

327.5C (622F)

Vapor Density (Air=1):

No information found.

Vapor Pressure (mm Hg):

1.77 @ 1000C (1832F)

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage.

Hazardous Decomposition Products:

Does not decompose but toxic lead or lead oxide fumes may form at elevated temperatures.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

Ammonium nitrate, chlorine trifluoride, hydrogen peroxide, sodium azide, zirconium, disodium acetylide, sodium acetylide and oxidants.

Conditions to Avoid:

Heat, flames, ignition sources and incompatibles.

11. Toxicological Information

Toxicological Data:

Investigated as a tumorigen, mutagen, reproductive effector.

Reproductive Toxicity:

Lead and other smelter emissions are human reproductive hazards. (Chemical Council on Environmental Quality; Chemical Hazards to Human Reproduction, 1981).

Carcinogenicity:

EPA / IRIS classification: Group B2 - Probable human carcinogen, sufficient animal evidence.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Lead (7439-92-1)	No	No	2B

12. Ecological Information

Environmental Fate:

When released into the soil, this material is not expected to leach into groundwater. This material may bioaccumulate to some extent.

Environmental Toxicity:

No information found.

13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste facility. Although not a listed RCRA hazardous waste, this material may exhibit one or more characteristics of a hazardous waste and require appropriate analysis to determine specific disposal requirements. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

14. Transport Information

Not regulated.

15. Regulatory Information

-----\Chemical Inventory Status - Part 1\-----

WARNING:

THIS PRODUCT CONTAINS CHEMICALS KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER AND BIRTH DEFECTS OR OTHER REPRODUCTIVE HARM.

Australian Hazchem Code: None allocated.

Poison Schedule: S6

WHMIS:

This MSDS has been prepared according to the hazard criteria of the Controlled Products Regulations (CPR) and the MSDS contains all of the information required by the CPR.

16. Other Information

NFPA Ratings: Health: **3** Flammability: **1** Reactivity: **0**

Label Hazard Warning:

POISON! DANGER! MAY BE FATAL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. NEUROTOXIN. AFFECTS THE GUM TISSUE, CENTRAL NERVOUS SYSTEM, KIDNEYS, BLOOD AND REPRODUCTIVE SYSTEM. POSSIBLE CANCER HAZARD. MAY CAUSE CANCER BASED ON ANIMAL DATA. Risk of cancer depends on duration and level of exposure.

Label Precautions:

Do not get in eyes, on skin, or on clothing.

Do not breathe dust.

Keep container closed.

Use only with adequate ventilation.

Wash thoroughly after handling.

Label First Aid:

If swallowed, induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Wash clothing before reuse. In all cases, get medical attention.

Product Use:

Laboratory Reagent.

Revision Information:

MSDS Section(s) changed since last revision of document include: 3.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

STANDARD SAFE WORK PRACTICES

- 1) Eating, drinking, chewing tobacco, smoking and carrying matches or lighters is prohibited in a contaminated or potentially contaminated area or where the possibility for the transfer of contamination exists.
- 2) Avoid contact with potentially contaminated substances. Do not walk through puddles, pools, mud, etc. Avoid, whenever possible, kneeling on the ground, leaning or sitting on equipment or ground. Do not place monitoring equipment on potentially contaminated surfaces (i.e., ground, etc).
- 3) All field crewmembers should make use of their senses to alert them to potentially dangerous situations in which they should not become involved; i.e., presence of strong and irritating or nauseating odors.
- 4) Prevent, to the extent possible, spills. In the event that a spill occurs, contain liquid if possible.
- 5) Field crewmembers shall be familiar with the physical characteristics of investigations, including:
 - Wind direction
 - Accessibility to associates, equipment, vehicles
 - Communication
 - Hot zone (areas of known or suspected contamination)
 - Site access
 - Nearest water sources
- 6) All wastes generated during activities on-site should be disposed of as directed by the project manager or his on-site representative.
- 7) Protective equipment as specified in the section on personnel protection will be utilized by workers during the initial site reconnaissance, and other activities.

CERTIFICATION

I, Paul Ciminello, am a Qualified Environmental Professional, as defined in proposed RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Crotona Terrace Site, (NYC BCP Site No. [11TEMP001X]). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Description, Physical Setting and Site History

The “Crotona terrace site (BCP ID: 11TEM001X) is located within the Crotona Park section of the Borough of the Bronx, at 1825 Boston Road, Bronx, NY 10460 (Block 2984, Lot 46). The site is bounded by Boston Road, East 175th Street, Crotona Parkway, and East 176th Street. The site has been vacant since 1989 and formerly contained a rail car and bus maintenance facility. The Applicant is South Bronx Overall Economic Development Corp.

Summary of Past Uses of Site and Areas of Concern

1. Available information indicates that the project site was developed sometime between 1886 and 1901 and operated as a transit rail car and bus maintenance and repair facility until approximately 1989.
2. Previous environmental reports have suggested the potential presence of a 10,000-gallon fuel oil underground storage tank and two 5,000-gallon diesel underground storage tanks, at the site during the early 1990s. Previous reports also indicate that free product was encountered in an on-site monitoring well; and that a product recovery system installed at the site from 1996-1998 reduced the amount of free product present to non-measurable levels. A subsequent geophysical investigation documented the absence of any on-site tanks.
3. Historic fill of unknown origin is present on-site (throughout the site).
4. Adjoining and surrounding properties have been subject to an approximately 80-year history of commercial, industrial and residential development. Specifically, located in the immediate vicinity of the project site to the south are a former transit and bus maintenance facility and an abandoned gasoline station. This former gasoline station (1800 Southern

Boulevard) is currently within the NYS BCP remedial action program. Such adjoining and surrounding sites have the potential to contribute to the degradation of groundwater quality in the vicinity of the project site.

5. A Phase II Investigation performed by Ethan Eldon in 2003 found petroleum hydrocarbon concentrations detected in on-site groundwater above “the most stringent regulatory standards”.

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 13 soil borings across the entire project Site, and collected 23 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed 5 groundwater monitoring wells throughout the Site to establish groundwater flow and collected 3 groundwater samples for chemical analysis to evaluate groundwater quality (as per the Equity Environmental Engineering, LLC Revised Proposed Remedial Investigation Workplan, included as Appendix A);
4. Installed 6 soil vapor probes around Site perimeter and collected 6 samples for chemical analysis.

Summary of the Hydrogeological Findings

1. Elevation of the property ranges from 70.56 to 59.26 feet.
2. Depth to groundwater ranges from 9 to 15 feet below surface grade at the Site.
3. Groundwater flow is generally from west to east beneath the Site.
4. Depth to bedrock is approximately 9 feet at the eastern end of the Site and 34.5 feet at the far northwest corner of the Site.
5. The stratigraphy of the western portion of the site is comprised of urban fill from the surface to 11’ below surface grade (bsg). The fill is underlain by 12 feet of dark brown organic silt, which is underlain by 10-12 feet of coarse gray sand above weathered bedrock

at 34.5 feet below surface grade. At the eastern end of the site, fill extends from the surface to 9 feet where bedrock was encountered at 9 feet below surface grade.

Summary of the Environmental Contamination

1. Soil/fill samples collected during the RI confirmed the presence of elevated concentrations of SVOCs on-Site. The presence of these compounds was consistent with the presence of historic fill.
2. Groundwater samples collected during the RI confirmed the absence of elevated concentrations of [SVOCs] on-Site.
3. Soil vapor samples collected during the RI confirmed the absence of elevated concentrations of [VOCs] on-Site.
4. Based on the results of this RI, ESI concludes that there is no evidence to suspect disposal of significant quantities of hazardous waste.

REMEDIAL INVESTIGATION REPORT

1.0 INTRODUCTION AND PROJECT OBJECTIVES

1.1 PROJECT BACKGROUND

South Bronx Overall Economic Development Corp. has enrolled in the New York City Brownfield Cleanup Program (NYC BCP) to investigate and remediate a 1.14-acre site located at 1825 Boston Road in Bronx, New York City. Mixed-use residential, a community facility and a street level retail establishment is proposed for the property. This RIR summarizes the nature and extent of contamination. The RI work was performed between February 4th, 2011 and March 1st, 2011. The goal of this RIR is to provide sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment pursuant to RCNY§ 43-1407(f).

1.2 SITE LOCATION AND DESCRIPTION

The Site is located in Bronx, New York City and is identified as Block 2948 and Lot 46 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 1.14-acres and is bounded by East 176th Street to the north, East 175th Street to the south, Boston Road to the east, and Crotona Parkway to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is vacant.

1.3 CONTEMPLATED REDEVELOPMENT PLAN

This RI was performed to compile and evaluate data and information necessary to develop a remedial action work plan in a manner that will render the Site protective of human health and the environment consistent with the contemplated future use. The contemplated future use of the Site includes a residential development, and a community facility use and will include a street level retail development and cellar parking. Construction excavations will extend to 14' below surface grade across the entire site. Layout of the proposed site development is presented in Figure 3. The

current zoning designation is R71 with C2-2 commercial overlay. The proposed site use is consistent with existing zoning for the property.

1.4 DESCRIPTION OF SURROUNDING PROPERTY

The project site is located in a mixed use urban area with I-95 adjoining to the north and commercial and office buildings adjoining to the west, east and south.

Sensitive Receptors

No sensitive receptors are located within a 500 foot radius of the project site.

2.0 SITE HISTORY

2.1 PAST USES AND OWNERSHIP

The project site was developed sometime between 1886 and 1901 and operated as a transit rail car and bus maintenance and repair facility until approximately 1989. A 10,000-gallon fuel oil underground storage tank and two 5,000-gallon diesel underground storage tanks were potentially identified at the site during the early 1990s. No record of their removal is known to exist; however, a subsequent geophysical investigation (circa 1996-1998) documented the absence of any on-site tanks.

The site was previously owned by the City of New York and was sold to New York City Development Corporation in 2002. The property is currently owned by CBC associates owned it since 2002 (and purchased it from New York City Development Corporation).

2.2 PREVIOUS INVESTIGATIONS

A Phase II Investigation performed by AKRF in 2003 found petroleum hydrocarbon concentrations detected in on-site groundwater above “the most stringent regulatory standards”. Historic fill of unknown origin is also present on-site and adjoining and surrounding properties have been subject to an approximately 80-year history of commercial, industrial and residential development.

2.3 SIGNIFICANT HISTORICAL ENVIRONMENTAL SITE FEATURES

A Site inspection was performed on February 4, 2011 to identify features of environmental significance that define Areas of Concern (AOC). Areas of Concern generally include areas where existing or former activities are known or suspected to have resulted in generation, manufacture, refinement, transport, storage, handling, treatment, discharge, release and/or disposal.

The AOCs identified for this site include:

1. Historic fill is present throughout the site

2.4 INTERIM REMEDIAL MEASURES

No IRMs have been performed at the Site by ESI as part of the current investigation; however, a product recovery system had been historically operational at the site between 1996 and 1998.

3.0 PROJECT ORGANIZATION AND MANAGEMENT

3.1 PROJECT ORGANIZATION

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Paul Ciminello and oversight of fieldwork was performed by Richard Hooker both of ESI.

3.2 HEALTH AND SAFETY

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. The Health and Safety Plan (HASP) is included in Appendix B.

3.3 COMMUNITY AIR MONITORING

No excavation work was performed as part of this RIR, and therefore the CAMP was not applicable.

3.4 INVESTIGATION DERIVED WASTE

Hazardous waste, concentrated solid or semi-solid substances, soils with free product or NAPL and/or grossly contaminated media were not generated during the investigation. Loosely packed

fill at the well locations absorbed auger tailings and no solid wastes were therefore generated during the installation of monitoring wells. In the absence of field evidence of contamination purge water from the wells was discharged through activated carbon on-site subsequent to groundwater sampling.

4.0 REMEDIAL INVESTIGATION ACTIVITIES AND OBSERVATIONS

The Applicant undertook the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 13 soil borings across the entire project Site, and collected 23 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed 5 groundwater monitoring wells throughout the Site to establish groundwater flow and collected 3 groundwater samples for chemical analysis to evaluate groundwater quality (as per the Equity Environmental Engineering., LLC Revised Proposed Remedial Investigation Workplan, included as Appendix A);
4. Installed 6 soil vapor probes around Site perimeter and collected 6 samples for chemical analysis.

4.1 GEOPHYSICAL INVESTIGATION

No geophysical study was performed. Prior to conducting fieldwork the site was covered in snow, which prevented the study and after the snow had cleared the uneven surface topography of the site (bricks, debris, concrete fragments etc.) made large portions of the site inaccessible to the necessary equipment. The Equity Environmental Engineering., LLC Revised Proposed Remedial Investigation Workplan, dated September 2010, indicated that a historic geophysical survey of the site had found no evidence of underground tanks.

4.2 BORINGS AND MONITORING WELLS

Drilling and Soil Logging

Boring logs were prepared by a geotechnical engineer for all soil samples to document subsurface conditions. Boring logs include a description of the following: soil types and non-soil materials; soil screening results from field instrument measurements (i.e. photoionization detector, flame ionization detector); depth to groundwater; presence of soil mottling; presence of odor, vapors, soil discoloration; and presence of free and/or residual product. Boring logs with this information are attached in Appendix C. A map showing the location of soil borings and monitor wells is shown in Figure 4.

The RIR included a boring to the first confining bed with continuous soil sampling, geologic description, and PID screening.

Groundwater Monitoring Well Construction

Five groundwater monitoring wells were installed and establish the groundwater flow direction. Of these, two groundwater monitor wells are down-hydraulic-gradient (MW- and MW-4 and one up-hydraulic-gradient TW-2.. MW-3, was installed at the eastern end of the site at a location where bedrock was encountered at 9' bsg. During well installation evidence of perched water was encountered; however, when sampling was attempted the well was found to be dry. The sampled wells were MW-1, MW-4 and TW-2.

Surveying

Land survey was used to identify the arbitrary vertical location of all monitor wells in order to develop a groundwater contour map.

Water Level Measurement

One round of static water levels were obtained to determine groundwater elevation and the groundwater flow direction; this data is included in Table 1. Groundwater head data were collected and the height of each well casing was surveyed and depth to static groundwater was measured using an electronic depth meter accurate to the nearest 0.01-foot. Data was gathered at the time of water quality sampling on March 1, 2011. Maximum depth to water was encountered at TW-1, in

the central portion of the site (approximately 25 feet bsg). Minimum depth to water encountered at MW-8, at the western-central portion (approximately 18 feet bsg). These data indicate that the overall direction of groundwater flow at the site is to the east.

4.3 GEOLOGICAL AND HYDROGEOLOGICAL CONDITIONS

Stratigraphy

The average thickness of historic fill is 7' and ranges from 12' to 5' below surface grade.

Bedrock Depth

The depth to bedrock varies between 9' bsg at the eastern end of the site and 35.4' bsg at the northwestern corner of the site.

Hydrogeology

A table of water level data for all monitor wells is included in Table 1. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 5. The average depth to groundwater is 20.77' and the range in depth is 17.24' to 25'. Groundwater flow is from west to east.

4.4 SAMPLE COLLECTION AND CHEMICAL ANALYSIS

Sampling performed as part of the field investigation was conducted for all AOCs (which includes the entire site) identified in this RIR and considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 2. Figure 4 shows the location of samples collected in this investigation.

All field personnel wore dedicated, disposable gloves, and all samples were placed into laboratory supplied glassware. Samples were collected directly from the split spoon sampler or acetate sleeve. The sample collection equipment was decontaminated using water, soapy (alconox) water, methanol (followed by a clean water rinse) and nitric acid (followed by a clean water rinse), prior to the collection of each material sample, to avoid cross-contamination between samples.

Soil samples collected during all invasive investigation were screened by visual and olfactory means and using a calibrated PID. Results of soil screening are recorded on the soil boring logs.

Groundwater Sampling

Groundwater sampling of monitor wells was performed using a peristaltic pump. Groundwater sample collection data including dates of collection is reported in Table 2. Well sampling logs with information on purging and sampling of groundwater monitor wells is included in Appendix D. Figure 4 shows the location of samples collected in this investigation.

All sampling equipment was dedicated so no decontamination was therefore required.

Prior to groundwater sample collection, monitor well head spaces were screened using a calibrated PID. Results of groundwater screening are recorded on the well purging logs.

Soil Vapor Sampling

Soil vapor sampling was performed using summa canisters with one hour flow controllers. Soil vapor sample collection data including dates of collection is reported in Table 2. Soil vapor sampling logs are included in Appendix E. Figure 4 shows the location of samples collected in this investigation.

All sampling equipment was dedicated so no decontamination was therefore required.

Prior to soil vapor sample collection, soil vapor well and ambient air was screened using a calibrated PID. Results of soil vapor screening are recorded on the soil vapor sampling logs.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed under a quality assurance program that includes the following:

Factor	Description
The project's scope and Project goals	To provide a remedial action that is protective of public health and the environment for the intended use of the property.
Project Direction	This project is directed by Paul Ciminello
Quality Assurance Officer	The chemical analytical quality assurance is directed by Paul Ciminello
Site maps showing sample locations	A Site map showing the location of samples collected in this program are included in Figures 4
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS DOH ELAP certified and were York Analytical Laboratories
Chemical Analytical Methods	<p>Chemical Analytical Methods for all environmental sampling performed under this RI are</p> <p>for soil samples and groundwater samples:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>for soil vapor samples:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.. <p>Table 3 includes the media type (soil, groundwater, soil vapor,) and the following data for each media:</p> <ul style="list-style-type: none"> • number or frequency of samples collected; • analytical methods used; • the number and type of duplicate samples collected. <p>Methodologies used for soil vapor, sub-slab, indoor and ambient air quality assessment conform to the <i>NYS DOH Final Guidance on Soil Vapor Intrusion dated October 2006</i>.</p>
Standards, Criterion and Guidance	Soil samples were compared to Track 1 (for Track 1 cleanups) / Soil Cleanup Objectives. Groundwater samples were compared to New York State groundwater standards. Soil vapor results were evaluated using the protocol established by New York State Department of Health.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Table 4, 5 and 6. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix F.

4.5 ENVIRONMENTAL EVALUATION

4.5.1 SOIL/FILL

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 4.

4.5.1.1 COMPARISON OF SOIL/FILL WITH SCGS

No field evidence of petroleum contamination was encountered during the extension of borings; however, some of the fill encountered contained regulated materials (including fabric, plastic, metal and wood fragments) and soil samples document the presence of SVOCs at concentrations above guidance levels in on-site soils. The following provides a summary of analytical results:

- No VOCs, Pesticides or PCBs were detected above their respective guidance levels.
- The following SVOCs were detected above their respective guidance levels:

Sample B-1 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 5,330 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 5,230 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 7,090 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 7,090 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 3,920 ug/Kg.

Dibenzo (a,h) anthracene (guidance level 330 ug/Kg) was detected at 1,950 ug/Kg.

Ideno (123 cd pyrene guidance level 3,300 ug/Kg) was detected at 3,300 ug/Kg.

B-2 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 6,490 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 5,680 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 8,580 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 6,430 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 7,040 ug/Kg.

Ideno (123 cd pyrene guidance level 3,300 ug/Kg) was detected at 3,800 ug/Kg.

B-3 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 3,790 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 3,520 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 3,550 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 3,580 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 3,640 ug/Kg.

Dibenzo (a,h) anthracene (guidance level 330 ug/Kg) was detected at 848 ug/Kg.

Ideno (123 cd pyrene guidance level 3,300 ug/Kg) was detected at 1,700 ug/Kg.

B-4 (0-2)

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 9,930 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 7,920 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 3,050 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 6,740 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 9,480 ug/Kg.

Dibenzo (a,h) anthracene (guidance level 330 ug/Kg) was detected at 1,640 ug/Kg.

Ideno (123 cd pyrene guidance level 3,300 ug/Kg) was detected at 2,660 ug/Kg.

B-6 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 7,380 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 4,680 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 3,560 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 3,560 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 5,890 ug/Kg.

Dibenzo (a,h) anthracene (guidance level 330 ug/Kg) was detected at 502 ug/Kg.

Ideno (123 cd pyrene guidance level 3,300 ug/Kg) was detected at 1,280 ug/Kg.

B-7 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 8,670 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 5,930 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 5,320 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 5,890 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 9,270 ug/Kg.

Ideno (123 cd pyrene guidance level 3,300 ug/Kg) was detected at 1520 ug/Kg.

B-9 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 4,050 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 2,890 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 2,220 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 2,990 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 3,990 ug/Kg.

B-9 (15.5')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 22,500 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 12,400 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 13,200 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 13,000 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 21,800 ug/Kg.

B-11 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 5,120 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 4,840 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 3,840 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 4,240 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 5,120 ug/Kg.

B-12 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 3,540 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 1,970 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 1,800 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 2,210 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 3,280 ug/Kg.

B-13 (0-2')

Benzo (a) anthracene (guidance level 1,000 ug/Kg) was detected at 14,100 ug/Kg.

Benzo (a) pyrene (guidance level 1,000 ug/Kg) was detected at 6,670 ug/Kg.

Benzo (b) fluoranthene (guidance level 1,000 ug/Kg) was detected at 7,050 ug/Kg.

Benzo (k) fluoranthene (guidance level 800 ug/Kg) was detected at 7,990 ug/Kg.

Chrysene (guidance level 1,000 ug/Kg) was detected at 14,400 ug/Kg.

The following metals were detected above their respective guidance levels:

B-1 (0-2')

Lead (guidance level 63 mg/Kg) at 100 mg/Kg

Zinc (guidance level 10 mg/Kg) at 114 mg/Kg

B-1 (25'-26')

Nickel (guidance level 30 mg/Kg) at 30 mg/Kg.

B-2 (0-2')

Chromium (guidance level 30 mg/Kg) at 35 mg/kg.

Copper (guidance level 50 mg/Kg) at 171 mg/Kg.

Lead (guidance level 63) at 398 mg/Kg.

Zinc (guidance level 109 mg/Kg at 298 mg/Kg.

B-2 (22'-24')

Chromium (guidance level 30 mg/Kg) at 32.8 mg/Kg.

Nickel (guidance level 30 mg/Kg) at 32.6 mg/Kg.

B-3 (0-2')

Copper (guidance level 50 mg/Kg) 265 mg/Kg.

Lead (guidance level 63 mg/Kg) at 411 mg/Kg.

Mercury (guidance level 0.18 mg/Kg) at 0.583 mg/Kg.

Nickel (guidance level 30 mg/Kg) at 39.1 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 1,750 mg/Kg.

B-5 (0-2')

Copper (guidance level 50 mg/Kg) at 146 mg/Kg.

Lead (guidance level 63 mg/Kg) at 216 mg/Kg.

B-5 (15'-17')

Chromium (guidance level 30 mg/Kg) at 46.1 mg/Kg.

Nickel (guidance level 30 mg/Kg) at 36.1 mg/Kg.

B-6 (0-2')

Arsenic (guidance level 13 mg/Kg) at 14.8 mg/Kg).

Chromium (guidance level 30 mg/Kg) at 36 mg/Kg.

Copper (guidance level 50 mg/Kg) 990 mg/Kg.

Lead (guidance level 63 mg/Kg) at 572 mg/Kg.

Nickel (guidance level 30 mg/Kg) at 44 mg/Kg.

Selenium (guidance level 3.9 mg/Kg) at 5.18 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 2,010 mg/Kg.

B-6 (6'-8')

Copper (guidance level 50 mg/Kg) 80 mg/Kg.

Lead (guidance level 63 mg/Kg) at 457 mg/Kg.

Nickel (guidance level 30 mg/Kg) at 44 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 177 mg/Kg.

B-7 (0-2')

Barium (guidance level 350 mg/Kg) at 570 mg/Kg.

Chromium (guidance level 30 mg/Kg) at 30.6 mg/Kg.

Copper (guidance level 50 mg/Kg) 68.9 mg/Kg.

Lead (guidance level 63 mg/Kg) at 458 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 454 mg/Kg.

B-7 (10.5')

Copper (guidance level 50 mg/Kg) 255 mg/Kg.

Lead (guidance level 63 mg/Kg) at 297 mg/Kg.

Mercury (guidance level 0.18 mg/Kg) at 0.688 mg/Kg.

B-9 (0-2')

Barium (guidance level 350 mg/Kg) at 613 mg/Kg.

Copper (guidance level 50 mg/Kg) 69.4 mg/Kg.

Lead (guidance level 63 mg/Kg) at 342 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 445 mg/Kg.

B-9 (15.5')

Barium (guidance level 350 mg/Kg) at 1,270 mg/Kg.

Chromium (guidance level 30 mg/Kg) at 46.8 mg/Kg.

Copper (guidance level 50 mg/Kg) 73 mg/Kg.

Lead (guidance level 63 mg/Kg) at 701 mg/Kg.

Mercury (guidance level 0.18 mg/Kg) at 0.486 mg/Kg.

Nickel (guidance level 30 mg/Kg) at 39.5 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 1,720 mg/Kg.

B-11 (0-2')

Copper (guidance level 50 mg/Kg) 55.6 mg/Kg.

Lead (guidance level 63 mg/Kg) at 183 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 267 mg/Kg.

B-11 (7.5')

Chromium (guidance level 30 mg/Kg) at 31.8 mg/Kg.

B-12(0-2')

Copper (guidance level 50 mg/Kg) 156 mg/Kg.

Lead (guidance level 63 mg/Kg) at 408 mg/Kg.

Selenium (guidance level 3.9 mg/Kg) at 3.96 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 306 mg/Kg.

B12 (9'-10')

Copper (guidance level 50 mg/Kg) 58mg/Kg.

Lead (guidance level 63 mg/Kg) at 113mg/Kg.

Selenium (guidance level 3.9 mg/Kg) at 4.2 mg/Kg.

B-13 (0-2')

Barium (guidance level 350 mg/Kg) at 667 mg/Kg.

Chromium (guidance level 30 mg/Kg) at 44.5 mg/Kg.

Copper (guidance level 50 mg/Kg) 138 mg/Kg.

Lead (guidance level 63 mg/Kg) at 626 mg/Kg.

Zinc (guidance level 109 mg/Kg) at 692 mg/Kg.

Shallow soils (0-2') contain elevated concentrations of SVOCs and some metals, but no field evidence of petroleum contamination was observed while conducting investigation activities. Development plans for the site include excavation of all soils to a depth of 14' below surface grade which will remove all contaminated soils from the site. The deep sample from one boring (B-9 15.5') also contained elevated SVOCs and metals and this location will require additional excavation (beyond construction excavation depth). Excavated materials will likely require management as non-hazardous regulated waste.

Figure 6 shows the location soil/fill that exceed the 6NYCRR Part 375-6.8 (a).

4.5.2 GROUNDWATER

A summary table of data for chemical analyses performed on groundwater samples is included in Table 5. 6NYCRR Part 703.5 Class GA groundwater standards are shown.

4.5.2.1 COMPARISON OF GROUNDWATER WITH SCGS

No VOCs, SVOCs, PCBs, Pesticides, or Metals were detected above their respective guidance levels in any of the samples. No filed evidence of contamination was observed during sample collection.

4.5.3 SOIL VAPOR

A summary table of data for chemical analyses performed on soil vapor samples is included in Table 6. Guidance values from NYS DOH Final Guidance on Soil Vapor Intrusion (October 2006) are shown.

4.5.3.1 COMPARISON OF SOIL VAPOR WITH SCGS

No VOCs were detected above guidance levels in any of the samples. Low concentrations of VOCs, below guidance levels, were detected in all the samples. These results support the conclusion that the project site has not been significantly impacted by VOC vapors. Table 6 shows a comparison of soil vapor results NYS DOH Final Guidance on Soil Vapor Intrusion (October 2006) values. Figure 13 shows the location and posts the values for soil vapor samples with elevated concentrations.

4.6 OTHER REPORTING

No photographs were taken during RI activities.

4.7 PRIOR ACTIVITY

Based on an evaluation of the data and information from the RIR, the presence of significant amounts of inactive hazardous waste disposal as defined in 6 NYCRR Part 375 is not suspected at this site.

4.8 IMPEDIMENTS TO REMEDIAL ACTION

There are no known impediments to remedial action at this property.

Table 2.3 - Soil Vapor Sample Collection Data

Boring ID	Location	Depth of Sample*	Summa Canister Vacuums
SV-1	18' north of TW- 2 and 25' east of western property line	9'	28 psi at start 3 psi at end
SV-2	Southwest corner of site. 22' east of western property line and 21' north of southern property line.	14'	30 psi at start 2 psi at end
SV-3	Southeast corner of site. 15' north of southern property line and 28.5' west of eastern property line.	14'	30 psi at start 2 psi at end
SV-4	Central portion of property (in area of concrete pavement). 94' west of MW-2 and 106' south of northern property line.	14'	31 psi at start 3 psi at end
SV-5	Eastern portion of site. 7.5' west of eastern property line and 39' southwest of MW-2.	14'	31 psi at start 3 psi at end
SV-6	Northern central portion of property. 152' west of eastern property line and 12' south of northern property line.	14'	29 psi at start 2 psi at end

Soil vapor sample depths were based on the proposed maximum depth of construction excavations (14'). Sample SV1 was collected at a shallower depth of 9' because of the presence of shallow groundwater in that location.

Notes:

Regulatory criteria based on BCP Unrestricted Use SCOs, 6 NYCRR Part 375, Table 375-6.8(a).

J - Data indicate the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than zero. The concentration given is an approximate value;

B-Dil: Detected in method blank(s) associated with the sample analysis. This is a common lab artifact which is found at ND-25 ppb. No dilution factor has been applied to these compounds to eliminate artificially inflated results; B Analyte is found in the associated analysis batch blank.

ND = Not Detected ; NE = No value listed

Blue shade indicates detectable concentrations

Bold and yellow shade indicates exceedance of applicable regulatory criteria

1.0 INTRODUCTION

The South Bronx Overall Economic Development Corporation (SoBRO) intends to undertake development of affordable housing at a 49,800 square foot (sf) (1.14 acre) vacant lot located at 1825 Boston Road in the Bronx, New York City (Figure 1).

The site currently bears a Restrictive Declaration (RD) as a condition of the 2010 rezoning of the site by the New York City Planning Commission and the City Council. At the time of the rezoning, it was believed some level of environmental remediation prior to residential redevelopment would be required. The placement of the RD allowed a finding that no significant adverse hazardous materials impact would occur with site development, once the site was investigated and appropriate remedial measures, if any, were put in place prior to occupancy.

In this regard, SoBRO intends to undertake remedial investigation under the oversight of the Mayor's Office of Environmental Remediation (MOER), and then apply for the New York City Brownfield Cleanup Program (NYC BCP) as a "Preferred Community Development" project. *The submittal of this Revised Remedial Investigation Work Plan (RIWP) is in response to discussions and comments with/from MOER NYC BCP. Revisions to the RIWP will be bold/italicized for expeditious review.*

1.1. Purpose

This RIWP stresses data collection and site characterization to determine the nature and extent of potential site contamination. The Plan focuses on those areas of the site where construction is anticipated (*i.e., entire property*), but does not neglect the surrounding area. Employing the resulting data, would allow for proper construction planning and the implementation of appropriate remedial measures, if required. These data would provide a basis for the development of a Construction Health and Safety Plan for the implementation of such remedial measures, thus protecting both site construction and future facility workers.

Performing a thorough remedial investigation will enable the project to undergo the NYC BCP as a Preferred Community Development Project that will bring economic benefit to a distressed part of the Bronx

Going through the NYC BCP process, beginning at the investigation stage, will deliver a high-quality, comprehensive cleanup and increase the overall safety and viability of the area

1.2. Site Location and Description

The proposed project site is located within the Crotona Park section of the Borough of the Bronx, at 1825 Boston Road, Bronx, NY 10460 Identified on the New York City tax map as Block 2984 / Lot 46. The site is bounded by Boston Road, East 175th Street, Crotona Parkway, and East 176th Street, within the boundaries of Bronx Community Board #3. The

Revised Proposed Remedial Investigation Work Plan
Crotona Terrace Site – 1825 Boston Road
Bronx, NY

site has been vacant since 1989, and formerly housed a transit rail car and bus maintenance and repair facility.

The surrounding area (Figure 2) consists of residential, commercial, and manufacturing uses, as well as vacant properties. The site lies across Crotona Parkway from Crotona Park, a large regional NYC Department of Park facility to the west, and to the south of the Cross Bronx Expressway (I-95).

Based on a May 2005 Phase I Environmental Site Assessment prepared by AKRF, Inc., the following areas of concern (AOCs) were identified:

- Based on State records and a review of previous investigations performed by URS Consultants, Inc. (URS) for the subject property in the early 1990s, a 10,000-gallon fuel oil underground storage tank and two 5,000-gallon diesel underground storage tanks were (*reportedly*) identified at the subject site. Free product was discovered in a monitoring well installed at the site, which was assumed to have been released from these tanks. A product recovery and groundwater monitoring program conducted from 1996 to 1998 indicated that measurable free product previously discovered at the site was reduced to non-detectable levels. A geophysical investigation and test pit program was conducted by URS on behalf of SoBRO, which identified that no tanks remained on the subject site, suggesting that they had been removed. *The URS geophysical investigation and test pit report was not available for review.*
- Historic Sanborn maps indicated that the subject property was developed sometime between 1896 and 1901 and operated as a transit rail car and bus maintenance and repair facility until at least 1989. Petroleum products and solvents were likely used as part of the on-site maintenance activities, which have the potential to have affected the subject property.
- Historic fill of unknown origin is likely present underlying the site.
- Debris and trash were observed throughout the site, including plastic and glass bottles, paper, wood, tires, concrete blocks, plastic crates, and metal cans.
- Facilities located on the south-adjacent block included a portion of the former train car and bus repair and maintenance facility (no longer present) and a gasoline station (presently abandoned). These properties are located in a presumed upgradient groundwater flow direction. *The former gas station (1800 Southern Blvd) is currently within the NYS BCP remedial action program.*
- In addition, the regulatory databases and historical land-use atlases indicated that the surrounding neighborhood has an approximately 80-year history of residential, commercial, and industrial development. These surrounding properties have the potential

to have affected local groundwater quality, which may have migrated to the subject site. However, a Phase II investigation was performed by AKRF in 2003 for the south-adjacent block, which included the collection of groundwater samples along East 175th Street, upgradient of the subject property. Petroleum hydrocarbon concentrations detected in the groundwater samples from these areas were below the most stringent regulatory standards (drinking water standards).

- A Phase II Investigation undertaken by Ethan Eldon in 2003, found petroleum hydrocarbon concentrations detected in the site's groundwater were below the most stringent regulatory standards. This was also reported in the AKRF Phase I noted above.

1.3. Site Geology, Hydrogeology, and Topography

The bedrock underlying the project site is mapped as the Manhattan Schist, composed of coarsely crystalline mica schist that has been severely crumpled and folded and shows a marked foliation. The bedrock surface in eastern Bronx is near the surface in the vicinity of the subject site, and bedrock outcrops can be found within several miles of the subject property.

The surface topography at the subject property is sloped to the west, though the general area tends to slope downward towards the east and northeast. The property is situated at an elevation of approximately 60 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level), according to the U.S. Geological Survey Central Park Quadrangle topographic map. Based on local topography, groundwater beneath the subject property most likely flows in a northeasterly direction towards the Bronx River, located approximately ½ mile east of the project site.

In the AKRF study, groundwater at the site was noted to be at a depth of approximately eight to ten feet below surface grade. This report noted that actual groundwater flow beneath the site can be affected by many factors, including past filling activities, underground utilities and other subsurface openings or obstructions such as basements, bedrock geology, and other factors, including the proximity of the trench of the Cross Bronx Expressway.

A geotechnical study undertaken by Approved Testing Laboratories Inc (ATL) in December 2007. They advanced 22 borings to determine the site geological conditions regarding the design of the proposed building's foundations. No "environmental" samples were collected for hazardous materials. Ground water was encountered at only one of the 22 locations sampled, at a depth of 21 feet below ground surface.

1.4. Proposed Future Site Development

As noted above, the subject property is current vacant and is proposed for redevelopment as a mixed-use residential, community facility, and street level retail project (Figure 3). When completed, the Site will have approximately:

- 185,256 sf of residential development (approximately 175 dwelling units in 7 stories)
- 29,629 sf of commercial / retail floor area on the ground floor
- 1,700 sf of community facility space
- 100 accessory parking spaces on the ground floor and in the cellar

2.0 SITE INVESTIGATION

2.1 Investigation Objective

This Remedial Investigation Work Plan (RIWP) stresses data collection and site characterization to determine the nature and extent of potential site contamination. The Plan focuses on those areas of the site where construction is anticipated, but does not neglect the surrounding area. Employing the resulting data, would allow for proper construction planning and the implementation of appropriate remedial measures, if required. These data would provide a basis for the development of a Construction Health and Safety Plan for the implementation of such remedial measures, thus protecting both site construction and future facility workers.

2.2 Overview of Investigation Services

To accomplish the projects objectives, Equity will employ a variety of techniques and methodologies. These will include:

- Ground Penetrating Radar / Magnetometer surveys
- Advancement of soil borings for the collection of soil samples from various depths below ground surface
- Installation of temporary and permanent groundwater monitoring wells
- Installation of temporary soil gas monitoring locations

2.3 Site Preparation Services

Prior to any fieldwork and during field events to assure the validity and reliability of the

data /samples collected, the following tasks will be undertaken:

2.3.1 Utility Markout

Prior to the onset of drilling, the drilling subcontractor will place a One-Call Utility Survey Request to have the local utility companies' mark out existing utilities on and entering the subject property.

2.3.2 Equipment Calibration

Prior to any field event, all field equipment to be employed will be serviced and calibrated per the manufacturer's specifications. A maintenance / calibration log will be assigned to each such device. During field events, equipment will be calibrated per the manufacturer's requirements / recommendations. Such information will also be recorded in an appropriate logbook or journal.

2.3.3 Subcontractor Coordination

The project manager or designate will coordinate the engagement of all subcontractors, assuring that they have the request experience, training, and insurance, as well as a complete understanding of their assignment during their engagement on the project.

2.3.4 Health & Safety Plan

The Construction Health and Safety Plan (HASP) to implement this RIWP can be found in Appendix 2.

2.4 Proposed Investigative Services

2.4.1 Geophysical Survey

Prior to the start of any intrusive subsurface investigation, a geophysical survey using magnetometry and ground-penetrating radar (GPR) will be performed *across the entire site*. The geophysical subcontractor will conduct the survey to determine if there are any USTs and/or buried utilities, foundations, or other magnetic anomalies onsite. If any USTs are identified during the survey, a separate protocol if necessary will be prepared to address the closure and removal of the tank(s) in accordance with all applicable New York State Department of Environmental Conservation (NYSDEC) regulations.

2.4.2 Soil Boring Installation

Twelve (12) soil borings will be installed across the site (Figure 4). Six (6) soil borings will be advanced to 24 feet below ground surface (bgs) and six (6) soil borings will be advanced to 44 feet bgs (to meet the CEQR requirement of minimum of 30 feet beyond the proposed footing depth [i.e., 14 feet]). Borings will be advanced to the proposed depths or refusal to bedrock. In the case of the 24 feet bgs soil borings; if bedrock is encountered or the soil to groundwater interface. This provides coverage of greater than 10.5 borings per acres. Five (5) of the 44 feet bgs soil borings will be converted into temporary well points and discussed in detail in section 2.4.3 below.

All soil borings will be installed using direct-push drilling technology. Samples will be continuously retrieved from the boring using dedicated 2-inch diameter, 5-foot long macro-core tubes with disposable acetate liners. The soil lithology, color, moisture content, and presence of staining or odors will be described and classified. The borings will be screened using visual and olfactory senses as well as using a photo-ionization detector (PID).

Two (2) soil samples will be collected from each soil boring location. The first soil sample will be collected from the 0 to 2-inch interval bgs (surface) and the second soil sample will be collected from the soil to groundwater interface or area exhibiting the highest degree of staining, odors or PID reading.

All soil samples will be analyzed for the following suite of parameters:

- Volatile Organic Compounds (VOCs) by USEPA method 8260
- Semivolatile Organic Compounds (SVOCs) by USEPA method 8270
- Pesticides by USEPA method 8081
- Polychlorinated Biphenyls (PCBs) by USEPA method 8082
- Target Analyte List Metals (TAL Metals)

Waste Characterization: Soil samples will be collected from the soil borings for the purpose of conducting in-place soil disposal waste classification for the site. These waste-classification soil samples will be used to aid in the determination of soil transportation and disposal costs.

2.4.3 Temporary Well Point/Monitoring Well Installation

Five (5) of the above 44 feet bgs soil boring locations will have temporary well points (TWPs) installed for the purpose of groundwater evaluation. Three of the

TWPs will be converted to permanent groundwater monitoring wells for groundwater quality and flow determination.

The monitoring wells will be installed using Hollow Stem Auger (HSA) drilling techniques. During the installation, a PID will be used to screen soil cuttings for indications of contamination. In addition, field observations included the color, composition, and presence of visible contamination and/or odors will be noted. Upon attaining the selected depth, 2-inch PVC well material will be lowered into the borehole through the HSA flights. A gravel pack of No. 1 sand will be introduced within the annular space starting at the bottom of the borehole and extending to a maximum of two-feet above the well screen. A grout-slurry will be added into the remainder of the annular space. A steel flush mount cover and locking mechanism will be set into the cement slurry. The well will be completed with a watertight flange cover and well lock. The well will be developed until a turbid-free discharge is obtained.

Groundwater samples will be collected from the three (3) monitoring wells and analyzed for the following suite of parameters:

- Volatile Organic Compounds (VOCs) by USEPA method 8260
- Semivolatile Organic Compounds (SVOCs) by USEPA method 8270
- Pesticides by USEPA method 8081
- Polychlorinated Biphenyls (PCBs) by USEPA method 8082
- Target Analyte List Metals (TAL Metals) both filtered and unfiltered

2.4.4 Quality Assurance/Quality Control

Quality Assurance/Quality Control procedures will be implemented to guarantee the integrity of the samples and the scientific data. Sampling equipment used will be either disposable single use items or decontaminated between uses with a mixture of Alconox detergent and water. The PID will be calibrated prior to use with 100 parts per million of Isobutylene gas in accordance with the manufacturer's operation manual. All Samples will be collected in laboratory prepared glassware and preserved in accordance with NYSDEC Sampling Guidelines and Protocols.

Soil samples will be collected in 8-ounce wide mouth glass jars with Teflon liners and preserved with ice to maintain a temperature of 4 degrees Celsius. Groundwater samples will be collected in 40-ml glass vials with Teflon liners preserved with Hydrochloric Acid (for VOCs), 1-liter unpreserved glass amber bottles with Teflon liners (for SVOCs, PCBs, Pesticides), and 1-liter polyethylene bottles with polyethylene liners preserved with Nitric Acid (for filtered TAL Metals), which will all also be preserved with ice to maintain a temperature of 4 degrees Celsius.

Both soil and groundwater samples will be delivered under chain of custody procedures to an accredited laboratory.

Per NYSDEC DER-10 Technical Guidance Document (May 2010), groundwater QA/QC samples will consist of one (1) duplicate, one (1) field blank and one (1) trip blank (for VOCs only). QA/QC samples for soil will consist of one (1) duplicate and one (1) field blank.

Laboratory analytical results of the soil samples will be compared to NYSDEC Part 375 Soil Cleanup Objectives (SCO) regulatory standards and groundwater samples will be compared to NYSDEC TOGS class GA groundwater quality standards. The laboratory report will be included in a Remedial Investigation Report (RIR) for review.

Soil boring logs indicating soil lithology, soil recovery, PID readings, and depth to groundwater, will be maintained and submitted in the RIR for review.

The boreholes, upon their completion, will be backfilled with soil cuttings.

2.4.5 Groundwater Flow and Direction Determination

The newly installed monitoring wells will be surveyed by a New York-licensed surveyor for elevation, vertical coordinates relative to the North American Vertical Datum of 1988 (NAVD 88) and horizontal elevation relative to the North American Datum of 1983 (NAD 83) and New York State Plane Coordinates. Copies of the soil boring/well logs will be included in the RIR. This data will be used to construct a groundwater contour interval map for determination of groundwater flow direction.

2.4.6 Soil Vapor

Six soil vapor collection points will be installed at the property's lot lines. Soil vapor points will be advanced to 24 feet (or just above the soil to groundwater interface) and soil vapor samples collected in a laboratory supplied, summa canister. Isopropyl alcohol will be used as a tracer for the soil vapor sampler. The soil vapor samples will be analyzed for Total Organic Compounds (TO+15).

2.4.7 Waste Disposal

Waste derived from the investigation's soil boring program will be backfilled into the boreholes. Any remaining material will be containerized in appropriate disposal containers. These containers will be staged in a secure area on site and characterized. Following completion of onsite activities, disposal of soil cutting, if

any, will be done employing an appropriately licensed transporter and disposal site.

3.0 REPORTING

Following the completion of all field activities and receipt of all analytical data, and manifests, a Remedial Investigation Report (RIR) will be prepared, for review and approval by the New York City Office of Environmental Remediation (OER). The RIR will provide conclusions and recommendations, based on an evaluation and interpretation of the data collected during the remedial investigation. RIWP field and analytical data will be summarized and compared to the New York State Department of Environmental Conservation's (DEC) Subpart 375 Soil Cleanup Objectives.

If the investigative findings of the RIWP reveal impacted soil, groundwater, or a soil gas issue at the site, a detailed Remedial Action Work Plan (RAWP) and an updated Construction Health and Safety Plan will be included as a part of the RIR.

4.0 PROJECT SCHEDULE

Equity will begin implementing the scope of work immediately upon OER approval of this work plan. The anticipated schedule is:

- The field investigation would start as soon as a driller could be engaged and will be completed in three to four days, depending on site access and weather
- Sample analyses would be completed in three weeks
- Report preparation would take from five to seven days.

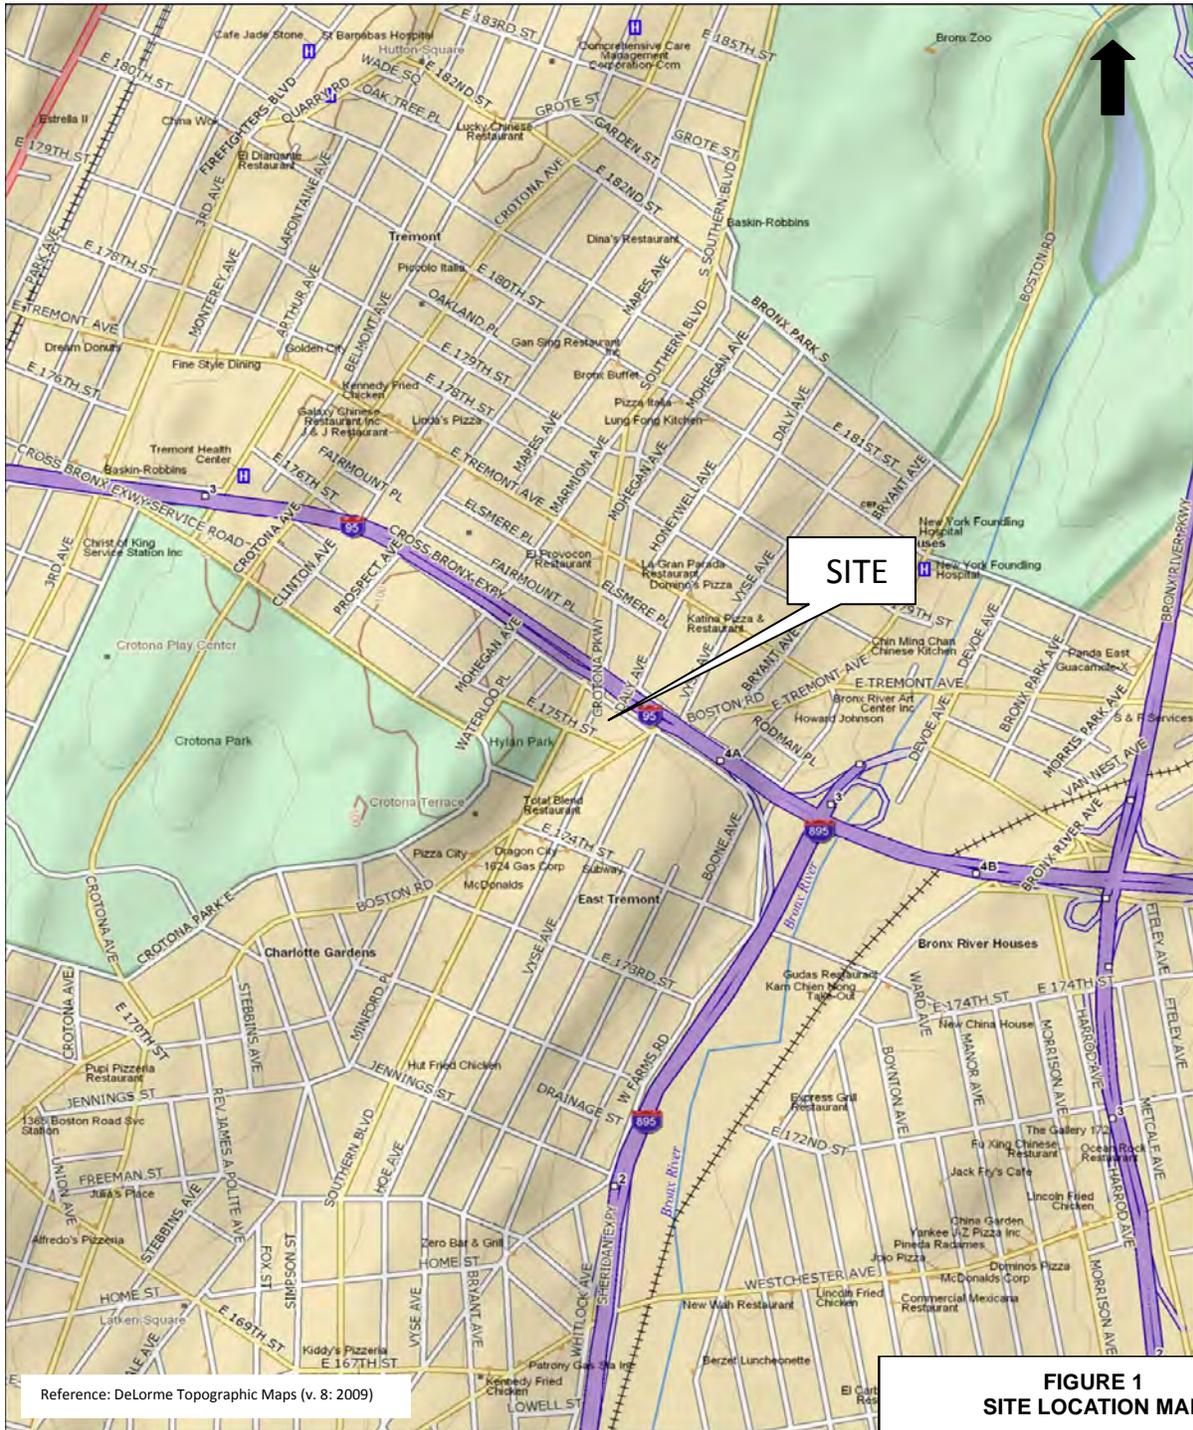

The RIR would be available in about 4 to 5 weeks from the start of fieldwork.

When the schedule has been formalized, the OER staff will be notified of the sampling start date and invited to attend the site kick-off meeting.

EMERGENCY CONTACTS

In the event of any situation or unplanned occurrence requiring assistance, the appropriate contact(s) should be made from the list below. For emergency situations, contact should first be made with the site coordinator who will notify emergency personnel who will then contact the appropriate response teams. This emergency contacts list must be in an easily accessible location at the site.

<u>Contingency Contacts</u>	<u>Phone Number</u>
Nearest phone located on-site,	To be determined (site utilities subject to relocation(s))
Fire	911 (Emergencies)
Police	911 (Emergencies)
NY One Call Center (3 working days notice required)	(800)-272-4480
Poison Control Center	(800) 764-7661
<u>Medical Emergency</u>	

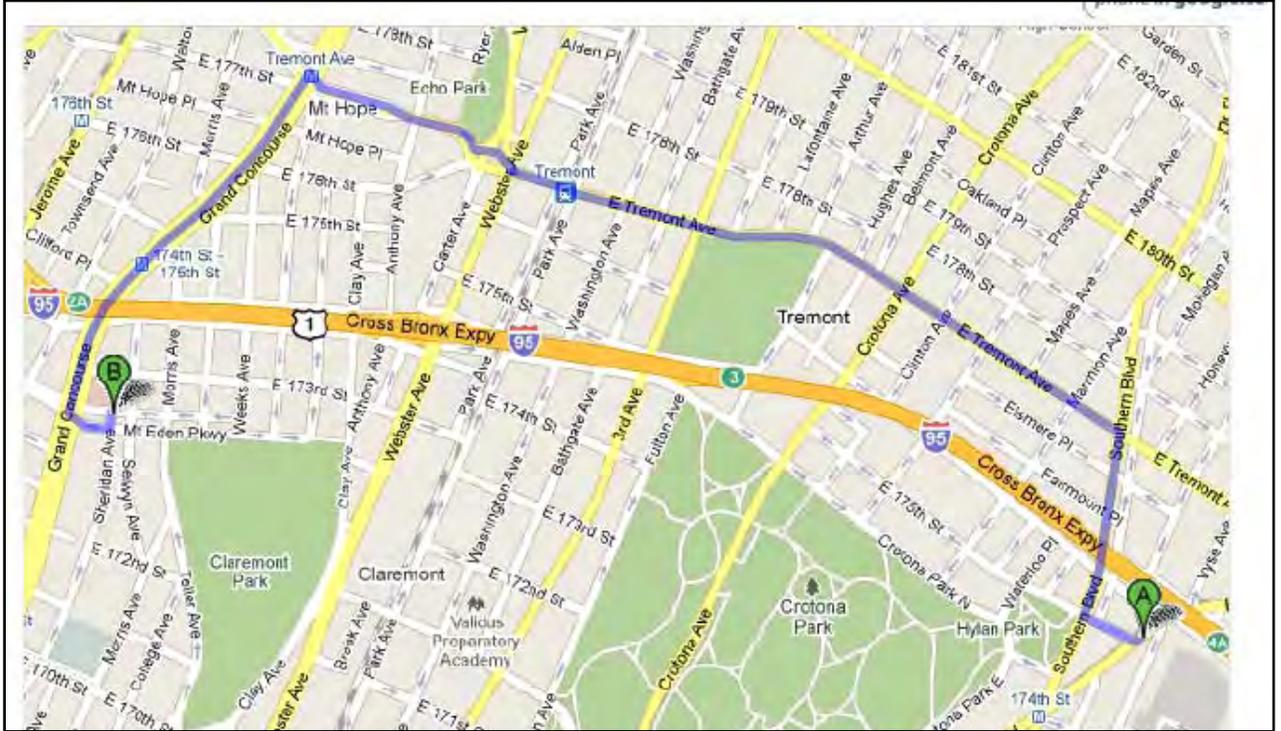

Ambulance: 911

The hospital (New York Hospital Medical Center) location is shown on the next page. Travel time from the site to Bronx Lebanon Hospital Center, 1650 Grand Concourse, Bronx, NY 10457, is approximately 2.3 miles away and takes approximately 8 minutes. The Hospital phone number is 718.590.1800.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

Table 1-1 Health and Safety Summary Table

Level D

Activities include the following:

- Installation of soil borings, temporary monitoring wells, and soil gas collection points
- Clearing and grading of the site for construction.
- Installation of subsurface utilities and building foundation.
- Soil characterization for offsite soil disposal.

If the level of volatile organic compounds does not exceed 5 ppm. 4-gas monitoring will be conducted during all intrusive activities, safe levels are as follows:

- Carbon Monoxide: 0-35ppm
- LEL: 0-10%
- Oxygen: 19.5%-23.5%
- Benzene: 0-5ppm

Level C

If the level of volatile organic compounds exceed 5 ppm; If 4-gas monitoring exceeds 35ppm (CO), LEL: >10%, Oxygen <19.5% or >23.5%, Benzene: >5ppm.

Organic Vapor data will be collected as a precaution utilizing a photo- ionization detector (PID). During the installation of the soil borings and wells, lower explosive limits (LELs) may be present; as a result, monitoring will be conducted around the breathing zone of the workers and in the vicinity of any open boreholes. If LEL limits of 10% or greater are reached, work will be suspended to allow for the borehole to ventilate.

During site activities, dust creation may be expected to be present in significant amounts. If dust creation, as a result of site activities, increases to visible/nuisance levels, a portable aerosol monitor will be (MiniRAM) utilized to collect readings as a precaution.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

1. INTRODUCTION

1.1 Purpose and Requirements

The purpose of this safety plan is to establish personnel protection standards and mandatory safety practices and procedures. This plan assigns responsibilities, establishes standard operating procedures, and provides for contingencies that may arise while operations are being conducted at the 1825 Boston Road property.

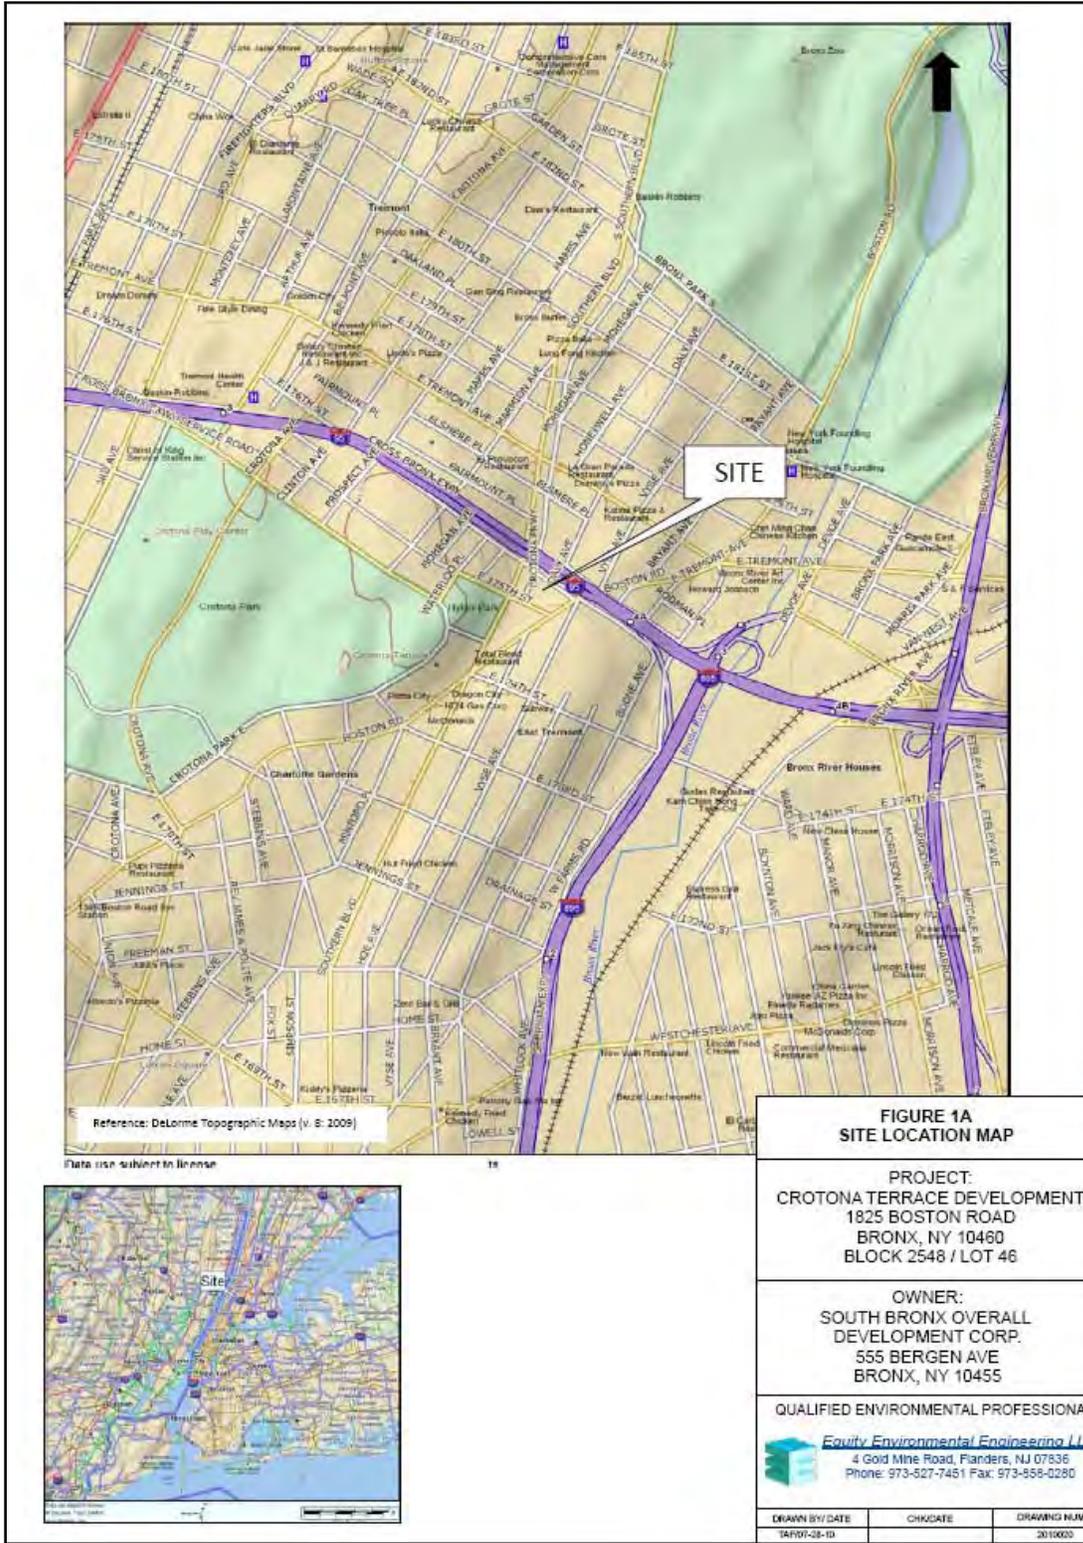

The provisions of the plan are mandatory for all on-site personnel. Any supplemental plans used by subcontractors shall conform to this plan as a minimum. All personnel who engage in project activities must be familiar with this plan, comply with its requirements, and sign the Plan Acceptance Form (Attachment B), page number B-5, prior to working on the site. The Plan Acceptance Form must be submitted to the construction firm's Health and Safety Officer.

1.2 Site Description

The proposed project site is located within the Crotona Park section of the Borough of the Bronx, at 1825 Boston Road, Bronx, NY 10460 Identified on the New York City tax map as Block 2984 / Lot 46. The site is bounded by Boston Road, East 175th Street, Crotona Parkway, and East 176th Street, within the boundaries of Bronx Community Board #3. The site has been vacant since 1989, and formerly housed a transit rail car and bus maintenance and repair facility.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

1.3 Scope of Work

The scope of work includes activities associated with the construction of a new affordable housing project. These activities include the following:

- Clearing and grading of the site for construction.
- Installation of subsurface utilities and building foundation.
- Soil characterization for offsite soil disposal.
- Construction of a below grade parking facility in the cellar of the new building.

1.4 Project Team Organization

Table 1-2 describes the responsibilities of all on-site personnel associated with this project. The names of principal on-site personnel associated with this project are delineated below:

Project Manager: TBD

Field Team Leader: TBD

Site Health and Safety Officer: TBD

All personnel have been appropriately trained in hazardous waste safety procedures including the operating and fitting of personal protective equipment, and are experienced with the types of field operations to be employed at the site.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

TABLE 1-2
ON-SITE PERSONNEL
AND RESPONSIBILITIES

PROJECT MANAGER - Reports to upper-level management, has authority to direct response operations, and assumes total control over site activities.

Responsibilities:

- Prepares and organizes the background review of the situation, the Work Plan, the Health and Safety Plan, and the field team.
- Obtains permission for site access and coordinates activities with appropriate officials.
- Ensures that the Work Plan is completed and on schedule.
- Briefs the field teams on their specific assignments.
- Uses the Site Health and Safety Officer to ensure that health and safety requirements are met.
- Prepares the final report and support files on the response activities.
- Serves as the liaison with public officials.

SITE HEALTH AND SAFETY OFFICER - Advises the Project Manager on all aspects of health and safety on site and stops work if any operation threatens worker or public health or safety.

Responsibilities:

- Periodically inspects protective clothing and equipment.
 - Ensures that protective clothing and equipment are properly stored and maintained.
 - Controls entry and exit at the Access Control Points.
 - Coordinates health and safety program activities with the Office Health and Safety Representative.
 - Confirms each team member's suitability for work based on a physician's recommendation.
 - Monitors the work parties for signs of stress, such as cold exposure, heat stress, and fatigue.
 - Implements the Health and Safety Plan.
 - Conducts periodic inspections to determine if the Health and Safety Plan is being followed.
 - Enforces the "buddy" system.
-
-

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

TABLE 1-2 (CONTINUED)
ON-SITE PERSONNEL AND RESPONSIBILITIES

- Knows emergency procedures, evacuation routes, and the telephone numbers of the ambulance, local hospital, poison control center, fire department, and police department.
- Notifies, when necessary, local public emergency officials.
- Coordinates emergency medical care.
- Sets up decontamination lines and the decontamination solutions appropriate for the type of chemical contamination on the site.
- Controls the decontamination of all equipment, personnel, and samples from the contaminated areas.
- Assures proper disposal of contaminated clothing and materials.
- Ensures that all required equipment is available.
- Advises medical personnel of potential exposures and consequences.
- Notifies emergency response personnel by telephone or radio in the event of an emergency.

FIELD TEAM LEADER - Responsible for field team operations and safety.

Responsibilities:

- Manages field operations.
- Executes the Work Plan and schedule.
- Enforces safety procedures.
- Coordinates with the Site Health and Safety Officer in determining the personal protection level.
- Enforces site control.
- Documents field activities and sample collection.
- Serves as a liaison with public officials.

WORK TEAM – Drilling contractors. The work party must consist of at least two people.

Responsibilities:

- Safely completes the on-site tasks required to fulfill the Work Plan.
 - Complies with the Health and Safety Plan.
 - Notifies Site Health and Safety Officer or supervisor of suspected unsafe conditions.
-
-

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

2. RISK ANALYSIS

2.1 Chemical Hazards

Several contaminants (Semi-Volatile Organic Compounds, Volatile Organic Compounds) have been identified onsite that may be encountered during various field tasks at the subject property. Potential contaminants and their relevant properties are shown in Table 2-1. Material safety data sheets (MSDS) for these contaminants have been included in this HASP.

2.2 Physical Hazards

2.2.1 Heat Stress

The use of Level C protective equipment, or greater, may create heat stress. Monitoring of personnel wearing personal protective clothing should commence when the ambient temperature is 72°F or above. Table 2-2 presents the suggested frequency for such monitoring. Monitoring frequency should increase as ambient temperature increases or as slow recovery rates are observed. Refer to the Table 2-3 below to assist in assessing when the risk for heat related illness is likely. To use this table, the ambient temperature and relative humidity must be obtained (a regional weather report should suffice). Heat stress monitoring should be performed by the Site Health and Safety Officer, who shall be able to recognize symptoms related to heat stress.

To monitor the workers, be familiar with the following heat-related disorders and their symptoms:

- **Prickly Heat** (Heat rash)
 - Painful, itchy red rash. Occurs during sweating, on skin covered by clothing.
- **Heat Cramps**
 - Painful spasm of arm, leg or abdominal muscles, during or after work.
- **Heat Exhaustion**
 - Headache, nausea, dizziness. Cool, clammy, moist skin. Heavy sweating. Weak, fast pulse. Shallow respiration, normal temperature.
- **Heat Fatigue**
 - Weariness, irritability, loss of skill for fine or precision work. Decreased ability to concentrate. No loss of temperature control.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

2.1 CONTAMINANTS OF CONCERN				
(REFER TO MSDS'S & PROJECT FILES FOR MORE DETAILED CONTAMINANT INFORMATION)				
Contaminant	Exposure Limit^b	IDLH^c	Symptoms and Effects of Exposure	PIP^d (eV)
Dibenzo(a,h)anthracene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Bis(2-ethylhexyl)phthalate	5 mg/m ³	NA	Eye, skin, respiratory tract irritation; carcinogen; adverse reproductive effects.	NA
Indeno(1,2,3-cd)pyrene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Benzo(a)anthracene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Benzo(a)pyrene	0.2 mg/m ³	80 mg/m ³	Dermatitis, bronchitis	NA
Benzo(b)fluoranthene	200MG/CUM	NA	See Coal Tar Derivatives	NA
Benzene	10 ppm	500ppm	Irritate skin and eyes. CNS depression (excitement, headache, dizziness, drowsiness, nausea). Respiratory tract irritation	NA
Ethyl Benzene	100 ppm	800ppm	Irritate skin, eyes, mucus membrane, headaches, coma, dermatitis	NA
IsoButylene			The amount of Iso-butylene in this mixture should not present any symptoms of toxicity if this mixture is breathed.	NA
Arsenic	0.01 mg/m ³	5 ppm as Ca	Ulceration of nasal septum, respiratory irritation, dermatitis, gastrointestinal disturbances, peripheral neuropathy, hyperpigmentation	NA

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

2.1 CONTAMINANTS OF CONCERN (REFER TO MSDS'S & PROJECT FILES FOR MORE DETAILED CONTAMINANT INFORMATION)				
Contaminant	Exposure Limit ^b	IDLH ^c	Symptoms and Effects of Exposure	PIP ^d (eV)
Barium	0.5 mg/m ³	50 mg/m ³	Irritates skin, eyes, upper respiratory, skin burns, gastroenteritis, muscle spasms, slow pulse, extrasystoles, hypokalemia	NA
Copper	1 mg/m ³	100 mg/m ³	Eye, nose, pharynx irritant; nasal perforation; metallic taste; dermatitis.	NA
Lead	0.05 mg/m ³	10 mg/m ³	Eye, skin irritation, gastrointestinal irritation with nausea, vomiting and diarrhea, respiratory irritation, CNS, weight loss, lassitude, insomnia, hypotension, anorexia, abdominal discomfort and colic, flu-like symptoms, chest/muscle pain, increased white cell count.	NA

Footnotes:

^a Specify sample-designation and media: SB (Soil Boring), A (Air), D (Drums), GW (Groundwater), L (Lagoon), TK (Tank), S (Surface Soil), SL (Sludge), SW (Surface Water).

^b Appropriate value of PEL, REL, or TLV listed.

^c IDLH = immediately dangerous to life and health (units are the same as specified "Exposure Limit" units for that contaminant); NL = No limit found in reference materials; CA = Potential occupational carcinogen.

^d PIP = photoionization potential; NA = Not applicable; UK = Unknown.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

2.2 Potential Routes of Exposure		
<p>Dermal: Contact with contaminated media. This route of exposure is minimized through proper use of PPE, as specified in Section 4.</p>	<p>Inhalation: Vapors and contaminated particulates. This route of exposure is minimized through proper respiratory protection and monitoring, as specified in Sections 4 and 5, respectively.</p>	<p>Other: Inadvertent ingestion of contaminated media. This route should not present a concern if good hygiene practices are followed (e.g., wash hands and face before drinking or smoking).</p>

2.3 Suggested Frequency of Physiological Monitoring for Fit and Acclimated workers^A

Adjusted Temperature ^b	Normal Work Ensemble ^C	Impermeable Ensemble
90°F or above (32.2°C) or above	After each 45 min. of work	After each 15 min. of work
87.5°F (30.8°-32.2°C)	After each 60 min. of work	After each 30 min. of work
82.5°-87.5°F (28.1°-30.8°C)	After each 90 min. of work	After each 60 min. of work
77.5°-82.5°F (25.3°-28.1°C)	After each 120 min. of work	After each 90 min. of work
72.5°-77.5°F (22.5°-25.3°C)	After each 150 min. of work	After each 120 min. of work

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- **Heat Syncope** (Heat Collapse)
 - Fainting while standing in a hot environment.
- **Heat Stroke**
 - Headache, nausea, weakness, hot dry skin, fever, rapid strong pulse, rapid deep respirations, loss of consciousness, convulsions, coma. **This is a life threatening condition.**

Do not permit a worker to wear a semi-permeable or impermeable garment when they are showing signs or symptoms of heat-related illness.

To monitor the worker, measure:

- Heart rate. Count the radial pulse during a 30-second period as early as possible in the rest period.
 - If the heart rate exceeds 100 beats per minute at the beginning of the rest period, shorten the next work cycle by one-third and keep the rest period the same.
 - If the heart rate still exceeds 100 beats per minute at the next rest period, shorten the following work cycle by one-third. A worker cannot return to work after a rest period until their heart rate is below 100 beats per minute.
- Oral temperature. Use a clinical thermometer (3 minutes under the tongue) or similar device to measure the oral temperature at the end of the work period (before drinking).
 - If oral temperature exceeds 99.6°F (37.6°C), shorten the next work cycle by one-third without changing the rest period. A worker cannot return to work after a rest period until their oral temperature is below 99.6°F.
 - If oral temperature still exceeds 99.6°F (37.6°C) at the beginning of the next rest period, shorten the following cycle by one-third.
 - Do not permit a worker to wear a semi-permeable or impermeable garment when oral temperature exceeds 100.6°F (38.1°C).

2.2.2 Prevention of Heat Stress

Proper training and preventative measures will aid in averting loss of worker productivity and serious illness. Heat stress prevention is particularly important because once a person suffers from heat stroke or heat exhaustion, that person may be predisposed to additional heat related illness. To avoid heat stress the following steps should be taken:

- Adjust work schedules.
- Mandate work slowdowns as needed.
- Perform work during cooler hours of the day if possible or at night if adequate lighting can be provided.
- Provide shelter (air-conditioned, if possible) or shaded areas to protect personnel during rest periods.
- Maintain worker's body fluids at normal levels. This is necessary to ensure that the cardiovascular system functions adequately. Daily fluid intake must approximately equal the amount of water lost in perspiration, id., eight fluid ounces (0.23 liters) of water must be ingested for approximately every eight ounces (0.23 kg) of weight lost. The normal thirst mechanism is not sensitive

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

enough to ensure that enough water will be drunk to replace lost perspiration. When heavy sweating occurs, encourage the worker to drink more. The following strategies may be useful:

- Maintain water temperature 50^o to 60^oF (10^o to 16.6^oC).
- Provide small disposable cups that hold about four ounces (0.1 liter).
- Have workers drink 16 ounces (0.5 liters) of fluid (preferably water or dilute drinks) before beginning work.
- Urge workers to drink a cup or two every 15 to 20 minutes, or at each monitoring break. A total of 1 to 1.6 gallons (4 to 6 liters) of fluid per day are recommended, but more may be necessary to maintain body weight.
- Train workers to recognize the symptoms of heat related illness.

2.2.3 Cold-Related Illness

If work on this project is conducted in the winter months, thermal injury due to cold exposure can become a problem for field personnel. Systemic cold exposure is referred to as hypothermia. Local cold exposure is generally labeled frostbite.

Hypothermia: Hypothermia is defined as a decrease in the patient core temperature below 96^oF. The body temperature is normally maintained by a combination of central (brain and spinal cord) and peripheral (skin and muscle) activity. Interference with any of these mechanisms can result in hypothermia, even in the absence of what normally is considered a "cold" ambient temperature. Symptoms of hypothermia include shivering, apathy, listlessness, sleepiness, and unconsciousness.

Frostbite. Frostbite is both a general and medical term given to areas of local cold injury. Unlike systemic hypothermia, frostbite rarely occurs unless the ambient temperatures are less than freezing and usually less than 20^oF. Symptoms of frostbite include a sudden blanching or whitening of the skin; the skin has a waxy or white appearance and is firm to the touch; tissues are cold, pale, and solid.

2.2.4 Prevention of Cold-Related Illness

- Educate workers to recognize the symptoms of frostbite and hypothermia
- Identify and limit known risk factors:
- Assure the availability of enclosed, heated environment on or adjacent to the site.
- Assure the availability of dry changes of clothing.
- Develop the capability for temperature recording at the site.
- Assure the availability of warm drinks.

Monitoring

Start (oral) temperature recording at the job site:

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- At the Field Team Leader's discretion when suspicion is based on changes in a worker's performance or mental status.
- At a worker's request.
- As a screening measure, two times per shift, under unusually hazardous conditions (e.g., wind-chill less than 20°F, or wind-chill less than 30°F with precipitation).
- As a screening measure whenever any worker on the site develops hypothermia.

Any person developing moderate hypothermia (a core temperature of 92°F) cannot return to work for 48 hours.

2.3 Hazards Analysis

Refer to Section 6.1.1 for heavy equipment safety requirements. Check with local utilities before conducting any ground invasive procedures. Chemical exposure typically occurs as subsurface soils are brought to the surface. The breathing zone shall be screened with a Mini-RAE or equivalent air monitoring device appropriate for the known, onsite contaminants. If contaminant levels reach action limits as specified in Section 3, upgrades in personal protection will be initiated. Onsite personnel shall start work in Level D PPE, which will include use of hard hats and eye and hearing protection when the equipment is operational.

Employees shall keep clothing dry with adequate rain gear. Use proper personal protective clothing. Inspect equipment to ensure that it is proper working order. All handling of potentially contaminated soils and/or groundwater will begin in Level D with careful monitoring of the sampler's breathing zone using the Mini-Rae as needed. Outer nitrile and inner latex gloves will be included in standard Level D requirements whenever handling samples.

- a. For work levels of 250 kilocalories/hour.
- b. Calculate the adjusted air temperature ($t_{a\ adj}$) by using this equation $t_{a\ adj} = t_a\ ^\circ F + (13 \times \% \text{ sunshine})$. Measure air temperature (t_a) with a standard mercury-in-glass thermometer, with the bulb shielded from radiant heat. Estimate percent sunshine by judging what percent time the sun is not covered by clouds that are thick enough to produce a shadow. (100 percent sunshine = no cloud cover and a sharp, distinct shadow; 0 percent sunshine = no shadows.)
- c. A normal work ensemble consists of cotton coveralls or other cotton clothing with long sleeves and pants.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

3. PERSONNEL PROTECTION AND MONITORING

3.1 Medical Surveillance

Project personnel will utilize the services of a licensed occupational health physician with knowledge and/or experience in the hazards associated with the project to provide the medical examinations and surveillance specified herein.

Personnel involved in this operation are to have undergone medical surveillance prior to employment with their employer, and thereafter at 12-month intervals. The 12-month medical examination includes a complete medical and work history and a standard occupational physical. The examination includes: all major organ systems, complete blood count with differential (CBC), and a SMAC/23 blood chemistry screen which includes calcium, phosphorous, glucose, uric acid, BUN, creatinine, albumin, SGPT, SGOT, LDH, globulin, A/G ratio, alkaline phosphatase, total protein, total bilirubin, triglyceride, cholesterol, and a creatinine/BUN ratio. Additionally a pulmonary function test will be performed by trained personnel to record Forced Vital Capacity (FVC) and Forced Expiratory Volume in second (FEV_{1.0}). An audiogram and visual acuity measurement, including color perception, is administered. The medical exam is performed under the direction of a licensed Occupational Health Physician. The physician provides a medical certification regarding the fitness or unfitness for employment on hazardous waste projects. This evaluation includes any restrictions that may be indicated for each employee. The evaluation will be repeated as indicated by substandard performance or evidence of particular stress that is evident by injury or time loss illness on the part of any worker.

3.2 Site Specific Training

The Site Health and Safety Officer will be responsible for developing a site specific occupational hazard training program and providing training to all personnel that are to work at the site. This training will consist of the following topics:

- Names of personnel responsible for site safety and health.
- Safety procedures and hazards specific to the site.
- Proper use of personal protective equipment.
- Work practices by which the employee can minimize risk from hazards.
- Safe use of engineering controls and equipment on the site.
- Acute effects of compounds at the site.
- Decontamination procedures.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

3.3 Personal Protective Equipment and Action Levels

3.3.1 Conditions for Level D

Level D protection will be worn as required for the investigation. Level D protection will consist of:

- Coveralls
- Safety boots
- Nitrile outer and Latex inner gloves (must be worn during all sampling activities)
- Hard hat (must be worn during drilling activities)
- Safety glasses with side shields (Splash goggles must be worn if a splash hazard is present)
- Hearing protection (must be worn during activities as necessary)

3.3.2 Conditions for Level C

The level of personal protection will be upgraded to Level C if any of the following conditions are met:

For Volatile Organic Compounds:

- If the level of volatile organic compounds exceeds 5 ppm;

For Nonvolatile and Semi volatile Compounds:

- If the level of total dust exceeds 1.7 mg/m³;

It is possible to directly monitor the concentrations of airborne volatile organic compounds from gasoline, which might be generated as a result of wind erosion of soils. To avoid any potential exposure, workers will wet down the surrounding area with water if work is being conducted in a non-vegetated area or downwind of a non-vegetated area on a windy day. If the site health and safety officer or any member of the field team does not feel that these measures are sufficient, then workers may don a full-face air-purifying respirator equipped with HEPA cartridges.

As this site is located in a densely populated and heavily trafficked area, the breathing zone along the street must be conducted to ensure pedestrian safety during construction. If an upgrade from Level D to Level C is required, additional air monitoring along Pacific Street will be required.

Equipment Required For Level C

Level C protection will consist of:

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- Full-face air-purifying respirator
- Combination dust/organic vapor cartridges
- Tyvek overall suit
- Nitrile outer and latex inner gloves
- Safety boots
- Hard hat (must be worn during excavation activities)

3.3.3 Conditions for Level B or Retreat

The level of personal protection will be upgraded to Level B or personnel shall retreat to an upwind location if any of the following conditions are met. If the concentrations of volatile organics, which can be detected with a Photo Ionization Detector (PID), equal or exceed 25 ppm (based on the presence of methylene chloride). Additional air monitoring in the exclusion zone as well as along Pacific Street will be required if there is an upgrade from Level C to Level B. The NYCDEP should also be notified of the upgrade and additional monitoring plans. Work will not be done at Level A at the subject property.

Equipment Required For Level B

Level B protection will consist of:

- Airline or SCBA respirator with Grade D breathing air
- Poly-coated Tyvek overall suit
- 5-minute escape SCBA (with airline only)
- Nitrile outer and latex inner gloves, taped at cuffs
- Safety boots
- Hard hat

OSHA Requirements for Personal Protective Equipment

All personal protective equipment used during the course of this field investigation must meet the following OSHA standards:

Type of Protection	Regulation	Source
Eye and Face	29 CFR 1910.133 29 CFR 1926.102	ANSI Z87.1-1968
Respiratory	29 CFR 1910.134 29 CFR 1926.103	ANSI Z88.1-1980
Head	29 CFR 1910.135 29 CFR 1926.100	ANSI Z89.1-1969
Foot	29 CFR 1910.136 29 CFR 1926.96	ANSI Z41.1-1967

ANSI = American National Standards Institute

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

Both the respirator and cartridges specified for use in Level C protection must be fit-tested prior to use in accordance with OSHA regulations (29 CFR 1910.1025; 29 CFR 1910.134).

Air purifying respirators cannot be worn under the following conditions:

- Oxygen deficiency
- IDLH concentrations
- High relative humidity
- If contaminant levels exceed designated use concentrations.

3.4 Monitoring Requirements

Monitoring for organic vapors in the breathing zone will be conducted with a photo- ionization detector (PID). Monitoring for explosive conditions will be conducted with a four-gas meter. Readings will be taken continuously while investigating contaminated soils. Readings will be conducted upwind and downwind of excavation activities at least once per hour on the site in order to monitor for the release of airborne contaminants from the exclusion zone. If downwind levels of organic vapors or explosive conditions exceed upwind levels by more than the amount indicated in Table 1-1, steps will be taken to upgrade the level of PPE or reduce the concentrations. This may include, but not be limited to suspending work.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

4. WORK ZONES AND DECONTAMINATION

4.1 Site Work Zones

To reduce the spread of hazardous materials by workers from potentially contaminated areas to the clean areas, zones will be delineated at the site. The flow of personnel between the zones will be controlled. The establishment of the work zones will help ensure that: personnel are properly protected against the hazards present where they are working, work activities and contamination are confined to the appropriate areas, and personnel can be located and evacuated in an emergency.

4.1.1 Exclusion Zone

Exclusion zones will be established at the site for all activities; unprotected onlookers should be located at the property boundary and upwind of excavation activities. In the event that volatile organics are detected in the breathing zone as discussed in Section 3, all personnel within the exclusion zone must don Level C protection. Exclusion zones will also be established during any activity when Level C protection is established as a result of conditions discussed in Section 3.

All personnel within the exclusion zone will be required to use the specified level of protection. No eating, drinking, or smoking will be allowed in the exclusion or decontamination zones.

4.1.2 Decontamination Zone

Should it be necessary to establish an exclusion zone, the decontamination zone will be utilized. This zone will be established between the exclusion zone and the support zone, and will include the personnel and equipment necessary for decontamination of equipment and personnel (discussed below). Personnel and equipment in the exclusion zone must pass through this zone before entering the support zone. This zone should always be located upwind of the exclusion zone.

4.1.3 Support Zone

The support zone will include the remaining areas of the job site. Break areas, operational direction and support facilities (to include supplies, equipment storage and maintenance areas) will be located in this area. No equipment or personnel will be permitted to enter the support zone from the exclusion zone without passing through the personnel or equipment decontamination station. Eating, smoking, and drinking will be allowed only in this area.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

4.2 Decontamination

Due to the low level of contaminants expected, any water used in decontamination procedures will be disposed of on-site.

4.2.1 Decontamination of Personnel

Decontamination will not be necessary if only Level D protection is used. However, disposable gloves used during sampling activities should be removed and bagged; personnel should be encouraged to remove clothing and shower as soon as is practicable at the end of the day. All clothing should be machine-washed. All personnel will wash hands and face prior to eating and before and after using the restroom.

Decontamination will be necessary if Level C protection is used. The following OSHA-specified procedures include steps necessary for complete decontamination prior to entry into the support zone, and steps necessary if a worker only needs to change a respirator or respirator canister.

The site health and safety officer can modify the twelve-station decontamination process, dependent upon the extent of contamination.

Station 1: Segregated Equipment Drop

Deposit equipment used on the site (tools, sampling devices and containers, monitoring instruments, clipboards, etc.) on plastic drop cloths or in different containers with plastic liners. Each will be contaminated to a different degree. Segregation at the drop reduces the possibility of cross-contamination.

Station 2: Suit/Safety Boot and Outer-Glove Wash

Thoroughly wash chemically resistant suit, safety boots and outer gloves. Scrub with long-handle, soft-bristle scrub brush and copious amounts of Alconox/water solution.

Necessary equipment includes:

1. Wash tub (30 gallon or large enough for person to stand in)
2. Alconox/water solution
3. Long-handle soft-bristle scrub brushes

Station 3: Suit/Safety Boot and Outer-Glove Rinse

Rinse off Alconox/water solution using copious amounts of water. Repeat as many times as necessary.

Necessary equipment includes:

1. Wash tub (30 gallon or large enough for person to stand in)

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

2. Spray unit
3. Water
4. Long-handle, soft-bristle scrub brushes

Station 4: Outer Gloves Removal

Remove the outer gloves and deposit in individually marked plastic bags.

Necessary equipment includes:

1. Plastic bag

Station 5: Canister or Mask Change

If a worker leaves the exclusion zone to change a canister (or mask), this is the last step in the decontamination procedures. The worker's canister is exchanged, new outer glove donned, and joints taped. Worker returns to duty. Otherwise, the worker proceeds to Station 6.

Necessary equipment includes:

1. Canister (or mask)
2. Tape
3. Gloves

Station 6: Removal of Chemically Resistant Suit

With assistance of helper, remove suit. Deposit in container with plastic liner.

Necessary equipment includes:

1. Container with plastic liner

Station 7: Inner-Glove Wash

Wash inner gloves with Alconox/water solution that will not harm skin. Repeat as many times as necessary.

Necessary equipment includes:

1. Alconox/water solution
2. Wash tub
3. Long-handle, soft-bristle brushes

Station 8: Inner-Glove Rinse

Rinse inner gloves with water. Repeat as many times as necessary.

Necessary equipment includes:

1. Water
2. Wash tub

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

Station 9: Respirator Removal

Remove face-piece. Avoid touching face. Wash respirator in clean, sanitized solution, allow to dry and deposit face-piece in plastic bag. Store in clean area.

Necessary equipment includes:

1. Plastic bags
2. Sanitizing solution
3. Cotton

Station 10: Inner-Glove Removal

Remove inner gloves and deposit in container with plastic liner.

Necessary equipment includes:

1. Container with plastic liner

Station 11: Field Wash

Wash hands and face.

Necessary equipment includes:

1. Water
2. Soap
3. Tables
4. Wash basins or buckets
5. Clean towels

Station 12: Redress

If re-entering exclusion zone put on clean field clothes (e.g., Tyvek, gloves, etc.).

Necessary equipment includes:

1. Table
2. Clothing

4.2.2 Decontamination of Heavy Equipment

Drilling equipment (e.g. rods, augers, etc...) will be steam cleaned and decontaminated prior leaving the site. The equipment will be decontaminated in the following manner:

- The heavy equipment will be steam cleaned to remove gross contamination.
- Sensitive equipment, such as field meters and surveying instruments, will be wiped with a clean, damp cloth.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

5. SAMPLE SHIPMENT

Samples collected, if any, during this remedial action will be classified as non-hazardous samples. In general, hazardous samples are collected from areas where high concentrations of contamination are known or suspected.

5.1 Hazardous Samples

The majority of the environmental samples, if collected, from the site will be shipped as non-hazardous samples. If these conditions exist in grossly contaminated soils, then the grossly contaminated soil samples will be shipped as DOT Hazardous Materials. For example, the designation "Flammable Liquid" or "Flammable Solid" can be used. Refer to International Air Transport Association Guidelines for shipping dangerous goods if the carrier will move the package by air. A completed airway bill must accompany the package and all appropriate labels must be attached to the package.

The example flammable samples will be transported as follows:

1. Collect sample in a 16-ounce or smaller glass or polyethylene container with nonmetallic teflon-lined screw cap. Allow sufficient air space (approximately 10% by volume) so container is not liquid full at 54 °C (130 °F). If collecting a solid material, the container plus contents should not exceed 1 pound net weight. If sampling for volatile organic analysis, fill VOA container to septum but place the VOA container inside a 16-ounce or smaller container so the required air space may be provided. Large quantities, up to 3.786 liters (1 gallon), may be collected if the sample's flash point is 23 °C (75 °F) or higher. In this case, the flash point must be marked on the outside container (e.g., carton, cooler), and shipping papers should state that "Flash point is 73 °F or higher."
2. Seal sample and place in a 4-mil-thick polyethylene bag, one sample per bag.
3. Place sealed bag inside a metal jerrican with noncombustible, absorbent cushioning material (e.g., vermiculite or earth) to prevent breakage, one bag per can. Pressure-close the can and use clips, tape or other positive means to hold the lid securely.
4. Mark the can with:
 - Name and address of originator
 - "Flammable Liquid N.O.S. UN 1993"
 - (or "Flammable Solid N.O.S. UN 1325")

NOTE: UN numbers are now required in proper shipping names.
5. Place one or more metal cans in a strong outside container such as an approved plastic cooler or DOT labeled fiberboard box. Preservatives are not used for hazardous waste site samples.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

6. Prepare for shipping:

"Flammable Liquid, N.O.S. UN 1993" or "Flammable Solid, N.O.S. UN 1325"; "Cargo Aircraft Only (if more than 1 quart net per outside package); "Limited Quantity" or "Ltd. Qty."; "Laboratory Samples"; "Net Weight" or "Net Volume" (of hazardous contents) should be indicated on shipping papers and on outside of shipping container. "This Side Up" or "This End Up" should also be on container. Sign shipper certification. The emergency number for shipping dangerous goods: Chem-Tel (800) 255-3924.

7. Stand by for possible carrier requests to open outside containers for inspection or modify packaging. It is wise to contact carrier before packing to ascertain local packaging requirements and not to leave area before the carrier vehicle (aircraft, truck) is on its way.

5.2 Shipping Papers

Proper shipping papers should be filled out and maintained within the driver's reach, whenever personnel carries hazardous materials in a vehicle in quantities above those allowed for Materials of Trade (MOTs). Such materials may include more than 8 gallons of the following:

- Gasoline (for use in a generator) UN1203, Guide #27
- Methanol (for use in decontamination procedures) UN 1230, Guide #28
- Nitric Acid (for use in decontamination procedures) UN 1760, Guide #60
- Hydrochloric Acid (for use in decontamination procedures) UN 1789, Guide #60

Other materials may include the following:

- > 220 pounds of compressed Gas [Air, Compressed] (calibration gas for the FID, or Grade D breathing air for Level B work) UN 1002, Class 2.2.
- Other hazardous materials as defined by the DOT.

Appropriate MSDSs should be maintained with the shipping papers and/or the pocket DOT Emergency Response Guidebook.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

6. ACCIDENT PREVENTION AND CONTINGENCY PLAN

6.1 Accident Prevention

All field personnel will receive health and safety training prior to the initiation of any site activities. On a day-to-day basis, individual personnel should be constantly alert for indicators of potentially hazardous situations and for signs and symptoms in themselves and others that warn of hazardous conditions and exposures. Rapid recognition of dangerous situations can avert an emergency. Before daily work assignments, regular meetings should be held. Discussion should include:

- Tasks to be performed.
- Time constraints (e.g., rest breaks, cartridge changes).
- Hazards that may be encountered, including their effects, how to recognize symptoms or monitor them, concentration limits, or other danger signals.
- Emergency procedures.

6.1.1 Vehicles and Heavy Equipment

Working with large motor vehicles and heavy equipment could be a major hazard at this site. Injuries can result from equipment hitting or running over personnel, impacts from flying objects, or overturning of vehicles. Vehicle and heavy equipment design and operation will be in accordance with 29 CFR, Subpart O, 1926.600 through 1926.602. In particular, the following precautions will be utilized to help prevent injuries/accidents.

- Brakes, hydraulic lines, light signals, fire extinguishers, fluid levels, steering, tires, horn, and other safety devices will be checked at the beginning of each shift.
- Large construction motor vehicles will not be backed up unless:
 - The vehicle has a reverse signal alarm audible above the surrounding noise level;
or
 - The vehicle is backed up only when an observer signals that it is safe to do so.
- Heavy equipment or motor vehicle cabs will be kept free of all nonessential items, and all loose items will be secured.
- Large construction motor vehicles and heavy equipment will be provided with necessary safety equipment (seat belts, rollover protection, emergency shut-off in case of rollover, backup warning lights and audible alarms.)
- Blades and buckets will be lowered to the ground and parking brakes will be set before shutting off any heavy equipment or vehicles.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

6.1.2 Electrical

- Only qualified personnel are permitted to work on unprotected energized electrical systems.
- Only authorized personnel are permitted to enter high-voltage areas.
- Electrical wiring and equipment will be handled only by those qualified to do so. All electrical wiring and equipment must be considered energized until lockout/tag out procedures is implemented.
- All electrical equipment, power tools, and extension cords must be inspected for damage prior to use. Do not use defective electrical equipment, remove from service.
- All temporary wiring, including extension cords and electrical power tools, must have ground fault circuit interrupters (GFCIs) installed.
- Extension cords must be:
 - equipped with third-wire grounding.
 - covered, elevated, or protected from damage when passing through work areas.
 - protected from pinching if routed through doorways.
 - not fastened with staples, hung from nails, or suspended with wire.
- Electrical power tools and equipment must be effectively grounded or double-insulated UL approved.
- Electric power tools and equipment must be operated and maintained according to manufacturers' instructions.
- Safe clearance distances between overhead power lines and any electrical conducting material must be maintained unless the power lines have been de-energized and grounded, or where insulating barriers have been installed to prevent physical contact. (Maintain at least 10 feet from overhead power lines for voltages of 50 kV or less, and 10 feet plus ½ inch for every 1 kV over 50 kV).
- Temporary lights shall not be suspended by their electric cord unless designed for suspension. Lights shall be protected from accidental contact or breakage.
- Electrical equipment, tools, switches, and outlets must be protected from environmental elements.

6.1.3 Fire/Explosion

- Fire extinguishers shall be provided so that the travel distance from any work area to the nearest extinguisher is less than 100 feet. When 5 gallons or more of a flammable or combustible liquid is being used, an extinguisher must be within 50 feet.
Extinguishers must:
 - be maintained in a fully charged and operable condition,
 - be visually inspected each month, and
 - undergo a maintenance check each year.
- The area in front of extinguishers must be kept clear.
- "Exit" signs and "Fire Extinguisher" signs must be posted over existing doors and extinguisher locations.
- Combustible materials stored outside should be at least 10 feet from any building.
- Solvent waste and oily rags must be kept in a fire resistant, covered container until removed from the site.
- Flammable/combustible liquids must be kept in approved containers, and must be stored in an approved storage cabinet.

Construction Health & Safety Plan

Crotona Terrace – 1825 Boston Road

6.2 Contingency Plan

6.2.1 Emergency Procedures

In the event that an emergency develops on site, the procedures delineated herein are to be immediately followed. Emergency conditions are considered to exist if:

- Any member of the field crew is involved in an accident or experiences any adverse effects or symptoms of exposure while on site.
- A condition is discovered that suggests the existence of a situation more hazardous than anticipated.

General emergency procedures, and specific procedures for personal injury and chemical exposure, are described in the health and safety plan.

6.2.2 Chemical Exposure

If a member of the field crew demonstrates symptoms of chemical exposure, the procedures outlined below should be followed:

- Another team member (buddy) should remove the individual from the immediate area of contamination. The buddy should communicate to the Field Team Leader (via voice and hand signals) of the chemical exposure. The Field Team Leader should contact the appropriate emergency response agency.
- Precautions should be taken to avoid exposure of other individuals to the chemical.
- If the chemical is on the individual's clothing, the chemical should be neutralized or removed if it is safe to do so.
- If the chemical has contacted the skin, the skin should be washed with copious amounts of water.
- In case of eye contact, an emergency eyewash should be used. Eyes should be washed for at least 15 minutes.
- All chemical exposure incidents must be reported in writing to the Office Health and Safety Representative. The Site Health and Safety Officer or Field Team Leader is responsible for completing the accident report (See Appendix B of this Section).

6.2.3 Personal Injury

In case of personal injury at the site, the following procedures should be followed:

- Another team member (buddy) should signal the Field Team Leader that an injury has occurred.

Construction Health & Safety Plan Crotona Terrace – 1825 Boston Road

- A field team member trained in first aid can administer treatment to an injured worker.
- The victim should then be transported to the nearest hospital or medical center. If necessary, an ambulance should be called to transport the victim.
- For less severe cases, the individual can be taken to the site dispensary.
- The Field Team Leader or Site Health and Safety Officer is responsible for making certain that an accident report form is completed. This form is to be submitted to the Office Health and Safety Representative. Follow-up action should be taken to correct the situation that caused the accident.

6.2.4 Evacuation Procedures

- The Field Team Leader will initiate evacuation procedure by signaling to leave the site.
- All personnel in the work area should evacuate the area and meet in the common designated area.
- All personnel suspected to be in or near the contract work area should be accounted for and the whereabouts of missing persons determined immediately.
- The Field Team Leader will then give further instruction.

6.2.5 Procedures Implemented in the Event of a Major Fire, Explosion, or On-Site Health Emergency Crisis

- Notify the paramedics and/or fire department, as necessary;
- Signal the evacuation procedure previously outlined and implements the entire procedure;
- Isolate the area;
- Stay upwind of any fire;
- Keep the area surrounding the problem source clear after the incident occurs;
- Complete an accident report form and distribute to appropriate personnel.

6.2.6 Communication

Communication via either radio or cellular phone will be maintained between the field office and all work parties. In case of emergency or accident, the field emergency response person will immediately notify the field office via the communication equipment.

Field team members will use the *buddy* system while performing field activities. Buddies will pre-arrange hand signals for communication. The following hand signals are suggested:

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

- _ **Hand gripping throat:** out of air, cannot breathe.
- _ **Grip partner's wrist or place both arms straight up overhead:** Leave area immediately, no debate.
- _ **Place both arms overhead in form of an "X":** Need assistance.
- _ **Thumbs up:** OK, I am all right; or I understand.
- _ **Thumbs down:** No or negative.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

APPENDIX A

AIR MONITORING EQUIPMENT CALIBRATION AND MAINTENANCE

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

AIR MONITORING EQUIPMENT CALIBRATION AND MAINTENANCE

All monitoring instruments must be calibrated and maintained periodically. The operator must understand the limitations and possible sources of error for each instrument. The operator shall ensure that the instruments respond properly to the substances that they are designed to monitor. Portable air quality monitoring equipment that measures total ionizables present, such as the Rae Systems Mini-RAE[□] must be calibrated at least once each day. Four gas meters must be calibrated at least once each day. Real time aerosol monitors, such as the MINI-RAM[□], must be zeroed at the beginning of each workday. The specific instructions for calibration and maintenance provided for each instrument should be followed.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

APPENDIX B

FORMS FOR HEALTH AND SAFETY-RELATED ACTIVITIES

Note: The OSHA Job Safety and Health Protection Poster must be posted prominently during field activities. The following page is an example of the poster to be used in the field. The actual poster must be an 11 inch by 17-inch size version of this page.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

(Page 1 of 2)

ACCIDENT REPORT FORM

Project Name: _____

INJURED OR ILL EMPLOYEE

1. Name _____ Social Security # _____
(First) (Middle) (Last)

2. Home Address _____
(No. and Street) (City or Town) (State and Zip)

3. Age _____ 4. Sex: Male () Female ()

5. Occupation _____
(Specific job title, not the specific activity employee was performing at time of injury)

6. Department _____
(Enter name of department in which injured person is employed, even though they may have been temporarily working in another department at the time of injury)

EMPLOYER

7. Name _____

8. Mailing Address _____
(No. and Street) (City or Town) (State and Zip)

9. Location (if different from mailing address): _____

THE ACCIDENT OR EXPOSURE TO OCCUPATIONAL ILLNESS

10. Place of accident or exposure _____
(No. and Street) (City or Town) (State and Zip)

11. Was place of accident or exposure on employer's premises? ____ (Yes/No)

12. What was the employee doing when injured? _____

(Be specific - was employee using tools or equipment or handling material?)

13. How did the accident occur? _____
(Describe fully the events that resulted in the injury or

occupational illness. Tell what happened and how. Name objects and

substances involved. Give details on all factors that led to accident. Use separate sheet if needed)

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

(Page 2 of 2)

14. Time of accident: _____

15. Date of injury or initial diagnosis of occupational illness _____
(Date)

16. WITNESS
TO ACCIDENT

_____	_____	_____

SITE-SPECIFIC HEALTH AND SAFETY TRAINING

(For All employees on site)

I hereby confirm that site-specific health and safety training has been conducted by the site health and safety officer who included:

- Names of personnel responsible for site safety and health
- Safety, health, and other hazards at the site
- Proper use of personal protective equipment
- Work practices by which the employee can minimize risk from hazards
- Safe use of engineering controls and equipment on the site
- Acute effects of compounds at the site
- Decontamination procedures

For the following project:

Material Safety Data Sheet

Ethylbenzene

ACC# 00596

Section 1 - Chemical Product and Company Identification

MSDS Name: Ethylbenzene**Catalog Numbers:** AC118080000, AC118080025, AC118080250, AC118080251, AC118085000, 11808-0010, O2751-1**Synonyms:** Ethylbenzol; Phenylethane.**Company Identification:**

Fisher Scientific
 1 Reagent Lane
 Fair Lawn, NJ 07410

For information, call: 201-796-7100**Emergency Number:** 201-796-7100**For CHEMTREC assistance, call:** 800-424-9300**For International CHEMTREC assistance, call:** 703-527-3887

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
100-41-4	Ethylbenzene	>99	202-849-4

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: clear, colorless liquid. Flash Point: 15 deg C.

Warning! Flammable liquid and vapor. Causes eye, skin, and respiratory tract irritation. May be harmful if inhaled. Aspiration hazard if swallowed. Can enter lungs and cause damage. May cause central nervous system depression.

Target Organs: Central nervous system.

Potential Health Effects

Eye: Causes severe eye irritation. Causes redness and pain.**Skin:** Causes skin irritation. Prolonged and/or repeated contact may cause irritation and/or dermatitis. May be absorbed through the skin. Causes redness and pain.**Ingestion:** May cause irritation of the digestive tract. May cause gastrointestinal irritation with nausea, vomiting and diarrhea. May cause central nervous system depression, characterized by excitement, followed by headache, dizziness, drowsiness, and nausea. Advanced stages may cause collapse, unconsciousness, coma and possible death due to respiratory failure. Aspiration of material into the lungs may cause chemical pneumonitis, which may be fatal.**Inhalation:** Inhalation of high concentrations may cause central nervous system effects characterized by nausea, headache, dizziness, unconsciousness and coma. Causes respiratory tract irritation. Vapors may cause dizziness or suffocation.**Chronic:** Chronic inhalation may cause effects similar to those of acute inhalation.

Material Safety Data Sheet

Benzene

ACC# 02610

Section 1 - Chemical Product and Company Identification

MSDS Name: Benzene

Catalog Numbers: AC167660000, AC167660010, AC167660025, AC167660250, AC167665000, AC168650250, AC295330000, AC295330010, AC295330025, AC295330250, AC296880000, AC296880010, AC296880025, AC296880250, AC610230010, AC610231000, AC611001000, B243-4, B245-4, B245-500, B411-1, B411-4, B412-1, S79920ACS

Synonyms: Benzol; Cyclohexatriene; Phenyl hydride.**Company Identification:**

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
71-43-2	Benzene	> 99	200-753-7

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: clear colorless liquid. Flash Point: -11 deg C.

Danger! Extremely flammable liquid and vapor. Vapor may cause flash fire. Harmful if swallowed, inhaled, or absorbed through the skin. Causes eye, skin, and respiratory tract irritation. Contains benzene. Benzene can cause cancer. Aspiration hazard if swallowed. Can enter lungs and cause damage. May cause blood abnormalities. May cause central nervous system effects.

Target Organs: Blood, central nervous system, respiratory system, eyes, bone marrow, immune system, skin.

Potential Health Effects

Eye: Causes eye irritation.

Skin: Causes skin irritation. Harmful if absorbed through the skin. Prolonged and/or repeated contact may cause defatting of the skin and dermatitis.

Ingestion: May cause central nervous system depression, characterized by excitement, followed by headache, dizziness, drowsiness, and nausea. Advanced stages may cause collapse, unconsciousness, coma and possible death due to respiratory failure. May cause effects similar to those for inhalation exposure. Aspiration of material into the lungs may cause chemical pneumonitis, which may be fatal.

Inhalation: Causes respiratory tract irritation. May cause drowsiness, unconsciousness, and central nervous system depression. Exposure may lead to irreversible bone marrow injury. Exposure may lead to aplastic anemia. Potential symptoms of overexposure by inhalation are dizziness, headache, vomiting, visual disturbances, staggering gait, hilarity, fatigue, and other symptoms of CNS depression.

Chronic: May cause bone marrow abnormalities with damage to blood forming tissues. May cause anemia and other blood cell abnormalities. Chronic exposure to benzene has been associated with an increased incidence of leukemia and multiple myeloma (tumor composed of cells of the type

normally found in the bone marrow). Immunodepressive effects have been reported. This substance has caused adverse reproductive and fetal effects in laboratory animals.

Section 4 - First Aid Measures

Eyes: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical aid.

Skin: In case of contact, flush skin with plenty of water. Remove contaminated clothing and shoes. Get medical aid if irritation develops and persists. Wash clothing before reuse.

Ingestion: Potential for aspiration if swallowed. Get medical aid immediately. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If vomiting occurs naturally, have victim lean forward.

Inhalation: If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Use water spray to keep fire-exposed containers cool. Extremely flammable liquid and vapor. Vapor may cause flash fire. Approach fire from upwind to avoid hazardous vapors and toxic decomposition products. Vapors are heavier than air and may travel to a source of ignition and flash back. Vapors can spread along the ground and collect in low or confined areas. This liquid floats on water and may travel to a source of ignition and spread fire. May accumulate static electricity.

Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or appropriate foam.

Flash Point: -11 deg C (12.20 deg F)

Autoignition Temperature: 498 deg C (928.40 deg F)

Explosion Limits, Lower: 1.3 vol %

Upper: 7.1 vol %

NFPA Rating: (estimated) Health: 2; Flammability: 3; Instability: 0

Section 6 - Accidental Release Measures

General Information: Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks: Absorb spill with inert material (e.g. vermiculite, sand or earth), then place in suitable container. Avoid runoff into storm sewers and ditches which lead to waterways. Remove all sources of ignition. Provide ventilation. Approach spill from upwind. Use water spray to cool and disperse vapors, protect personnel, and dilute spills to form nonflammable mixtures.

Section 7 - Handling and Storage

Handling: Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Ground and bond containers when transferring material. Avoid contact with eyes, skin, and clothing. Empty containers retain product residue, (liquid and/or vapor), and can be dangerous. Take precautionary measures against static discharges. Keep container tightly closed. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose empty containers to heat, sparks or open flames. Use only with adequate ventilation. Keep away from heat, sparks and flame. Avoid breathing vapor.

Storage: Keep away from sources of ignition. Store in a tightly closed container. Keep from contact with oxidizing materials. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Use process enclosure, local exhaust ventilation, or other engineering controls to control airborne levels below recommended exposure limits. Use explosion-proof ventilation equipment. Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. See 29CFR 1910.1028 for the regulatory requirements for the control of employee exposure to benzene.

Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Benzene	0.5 ppm TWA; 2.5 ppm STEL; Skin - potential significant contribution to overall exposure by the cutaneous route	0.1 ppm TWA 500 ppm IDLH	1 ppm TWA; 10 ppm TWA (applies to industry segments exempt from the benzene standard at 29 CFR 1910.1028); 25 ppm Ceiling (applies to industry segments exempt from the 1 ppm TWA and 5 ppm STEL of the benzene standard); 0.5 ppm Action Level; 1 ppm TWA; 5 ppm STEL (Cancer hazard, Flammable - see 29 C FR 1910.1028)

OSHA Vacated PELs: Benzene: 10 ppm TWA (unless specified in 1910.1028)

Personal Protective Equipment

Eyes: Wear chemical splash goggles.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

Section 9 - Physical and Chemical Properties

Physical State: Liquid

Appearance: clear colorless

Odor: sweetish odor - aromatic odor

pH: Not applicable.

Vapor Pressure: 75 mm Hg @ 20 deg C

Vapor Density: 2.8 (air=1)

Evaporation Rate: Not available.

Viscosity: 0.647mPa @ 20 deg C

Boiling Point: 80.1 deg C

Freezing/Melting Point: 5.5 deg C

Decomposition Temperature: Not available.

Solubility: 0.180 g/100 ml @ 25°C

Specific Gravity/Density: 0.8765 @ 20°C

Molecular Formula: C₆H₆

Molecular Weight: 78.11

Section 10 - Stability and Reactivity

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Ignition sources, excess heat, confined spaces.

Incompatibilities with Other Materials: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported.

Section 11 - Toxicological Information

RTECS#:**CAS#** 71-43-2: CY1400000**LD50/LC50:**

CAS# 71-43-2:

Dermal, guinea pig: LD50 = >9400 uL/kg;
 Draize test, rabbit, eye: 88 mg Moderate;
 Draize test, rabbit, eye: 2 mg/24H Severe;
 Draize test, rabbit, skin: 20 mg/24H Moderate;
 Inhalation, mouse: LC50 = 9980 ppm;
 Inhalation, mouse: LC50 = 24 mL/kg/2H;
 Inhalation, rat: LC50 = 10000 ppm/7H;
 Inhalation, rat: LC50 = 34 mL/kg/2H;
 Inhalation, rat: LC50 = 6.5 mL/kg/4H;
 Oral, mouse: LD50 = 4700 mg/kg;
 Oral, rat: LD50 = 930 mg/kg;
 Oral, rat: LD50 = 1 mL/kg;

Oral, rat: LD50 = 1800 Benzene is considered very toxic; probable human oral lethal dose would be 50-500 mg/kg. Human inhalation of approximately 20,000 ppm (2% in air) was fatal in 5-10 minutes. While percutaneous absorption of liquid benzene through intact human skin can be limited (e.g., 0.05% of the applied dose), the absorbed dose via direct dermal contact combined with that received from body surface exposure to benzene in workplace air is such that a substantial fraction (20-40%) of the total exposure is due to skin absorption.

Carcinogenicity:

CAS# 71-43-2:

- **ACGIH:** A1 - Confirmed Human Carcinogen
- **California:** carcinogen, initial date 2/27/87
- **NTP:** Known carcinogen
- **IARC:** Group 1 carcinogen

Epidemiology: IARC has concluded that epidemiological studies have established the relationship between benzene exposure and the development of acute myelogenous leukemia, and that there is sufficient evidence that benzene is carcinogenic to humans.

Teratogenicity: Inhalation, rat: TCLO = 50 ppm/24H (female 7-14 day(s) after conception) Effects on Embryo or Fetus - extra-embryonic structures (e.g., placenta, umbilical cord) and Effects on Embryo or Fetus - fetotoxicity (except death, e.g., stunted fetus).; Inhalation, mouse: TCLO = 5 ppm (female 6-15 day(s) after conception) Effects on Embryo or Fetus - cytological changes (including somatic cell genetic material) and Specific Developmental Abnormalities - blood and lymphatic systems (including spleen and marrow).

Reproductive Effects: Inhalation, rat: TCLO = 670 mg/m³/24H (female 15 day(s) pre-mating and female 1-22 day(s) after conception) female fertility index (e.g. # females pregnant per # sperm positive females; # females pregnant per # females mated).; Oral, mouse: TDLo = 12 gm/kg (female 6-15 day (s) after conception) Fertility - post-implantation mortality (e.g. dead and/or resorbed implants per total number of implants).

Mutagenicity: DNA Inhibition: Human, Leukocyte = 2200 umol/L.; DNA Inhibition: Human, HeLa cell = 2200 umol/L.; Mutation Test Systems - not otherwise specified: Human, Lymphocyte = 5 umol/L.; Cytogenetic Analysis: Inhalation, Human = 125 ppm/1Y.; Cytogenetic Analysis: Human, Leukocyte = 1 mmol/L/72H.; Cytogenetic Analysis: Human, Lymphocyte = 1 mg/L.

Neurotoxicity: See actual entry in RTECS for complete information.

Other Studies:

Section 12 - Ecological Information

Ecotoxicity: Fish: Mosquito Fish: TLm = 395 mg/L; 24 Hr; UnspecifiedFish: Goldfish: LC50 = 46 mg/L; 24 Hr; Modified ASTM D 1345Fish: Fathead Minnow: LC50 = 15.1 mg/L; 96 Hr; Flow-through at 25°C (pH 7.9-8.0)Fish: Rainbow trout: LC50 = 5.3 mg/L; 96 Hr; Flow-through at 25°C (pH 7.9-8.0)Fish: Bluegill/Sunfish: LD50 = 20 mg/L; 24-48 Hr; Unspecified If benzene is released to soil, it will be subject to rapid volatilization near the surface and that which does not evaporate will be highly to very highly mobile in the soil and may leach to groundwater. If benzene is released to water, it will be subject to rapid volatilization. It will not be expected to significantly adsorb to sediment, bioconcentrate in aquatic organisms or hydrolyze. It may be subject to biodegradation.

Environmental: If benzene is released to the atmosphere, it will exist predominantly in the vapor phase. Gas-phase benzene will not be subject to direct photolysis but it will react with photochemically produced hydroxyl radicals with a half-life of 13.4 days. The reaction time in polluted atmospheres which contain nitrogen oxides or sulfur dioxide is accelerated with the half-life being reported as 4-6 hours. Benzene is fairly soluble in water and is removed from the atmosphere in rain.

Physical: Products of photooxidation include phenol, nitrophenols, nitrobenzene, formic acid, and peroxyacetyl nitrate.

Other: No information available.

Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

RCRA P-Series: None listed.

RCRA U-Series:

CAS# 71-43-2: waste number U019 (Ignitable waste, Toxic waste).

None of the chemicals are on the Health & Safety Reporting List.

Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

Section 12b

None of the chemicals are listed under TSCA Section 12b.

TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

CERCLA Hazardous Substances and corresponding RQs

CAS# 71-43-2: 10 lb final RQ (received an adjusted RQ of 10 lbs based on potential carcinogeni

SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPO.

SARA Codes

CAS # 71-43-2: immediate, delayed, fire.

Section 313

This material contains Benzene (CAS# 71-43-2, > 99%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

Clean Air Act:

CAS# 71-43-2 is listed as a hazardous air pollutant (HAP).

This material does not contain any Class 1 Ozone depleters.

This material does not contain any Class 2 Ozone depleters.

Clean Water Act:

CAS# 71-43-2 is listed as a Hazardous Substance under the CWA. CAS# 71-43-2 is listed as a Priority Pollutant under the Clean Water Act. CAS# 71-43-2 is listed as a Toxic Pollutant under the Clean Water Act.

OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

STATE

CAS# 71-43-2 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

California Prop 65

The following statement(s) is(are) made in order to comply with the California Safe

Drinking Water Act:

WARNING: This product contains Benzene, a chemical known to the state of California to cause cancer. WARNING: This product contains Benzene, a chemical known to the state of California to cause male reproductive toxicity.

California No Significant Risk Level: CAS# 71-43-2: 6.4 æg/day NSRL (oral); 13 æg/day NSRL (inhalation)

European/International Regulations

European Labeling in Accordance with EC Directives

Hazard Symbols:

T F

Risk Phrases:

R 11 Highly flammable.

R 36/38 Irritating to eyes and skin.

R 45 May cause cancer.

R 46 May cause heritable genetic damage.

R 48/23/24/25 Toxic : danger of serious damage to health by prolonged exposure through inhalation, contact with skin and if swallowed.

R 65 Harmful: may cause lung damage if swallowed.

Safety Phrases:

S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

S 53 Avoid exposure - obtain special instructions before use.

WGK (Water Danger/Protection)

CAS# 71-43-2: 3

Canada - DSL/NDSL

CAS# 71-43-2 is listed on Canada's DSL List.

Canada - WHMIS

This product has a WHMIS classification of B2, D2A, D2B.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List

CAS# 71-43-2 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information

MSDS Creation Date: 6/11/1999

Revision #8 Date: 9/11/2008

The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.

Section 4 - First Aid Measures

Eyes: Flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately.

Skin: Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

Ingestion: Do not induce vomiting. If victim is conscious and alert, give 2-4 cupfuls of milk or water. Never give anything by mouth to an unconscious person. Get medical aid immediately.

Inhalation: Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. Use water spray to keep fire-exposed containers cool. Flammable liquid and vapor. Vapors are heavier than air and may travel to a source of ignition and flash back. Vapors can spread along the ground and collect in low or confined areas. This liquid floats on water and may travel to a source of ignition and spread fire. May accumulate static electricity.

Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or appropriate foam.

Flash Point: 15 deg C (59.00 deg F)

Autoignition Temperature: 432 deg C (809.60 deg F)

Explosion Limits, Lower: 1.2%

Upper: 6.8%

NFPA Rating: (estimated) Health: 2; Flammability: 3; Instability: 0

Section 6 - Accidental Release Measures

General Information: Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks: Absorb spill with inert material (e.g. vermiculite, sand or earth), then place in suitable container. Remove all sources of ignition. Provide ventilation. Control runoff and isolate discharged material for proper disposal. Use water spray to cool and disperse vapors and protect personnel.

Section 7 - Handling and Storage

Handling: Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Use with adequate ventilation. Ground and bond containers when transferring material. Avoid contact with eyes, skin, and clothing. Empty containers retain product residue, (liquid and/or vapor), and can be dangerous. Keep container tightly closed. Keep away from heat, sparks and flame. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose empty containers to heat, sparks or open flames. Avoid breathing vapor or mist.

Storage: Keep away from sources of ignition. Store in a tightly closed container. Keep from contact with oxidizing materials. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Ethylbenzene	100 ppm TWA; 125 ppm STEL	100 ppm TWA; 435 mg/m ³ TWA 800 ppm IDLH	100 ppm TWA; 435 mg/m ³ TWA

OSHA Vacated PELs: Ethylbenzene: 100 ppm TWA; 435 mg/m³ TWA

Personal Protective Equipment

Eyes: Wear chemical splash goggles.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.

Section 9 - Physical and Chemical Properties

Physical State: Liquid

Appearance: clear, colorless

Odor: aromatic odor

pH: Not available.

Vapor Pressure: 9.6 mm Hg @ 25 deg C

Vapor Density: 3.7 (air=1)

Evaporation Rate: <1 (butyl acetate=1)

Viscosity: 0.63 mPa s 20 C

Boiling Point: 136 deg C

Freezing/Melting Point: -95 deg C

Decomposition Temperature: Not available.

Solubility: Insoluble.

Specific Gravity/Density: 0.86

Molecular Formula: C₈H₁₀

Molecular Weight: 106.17

Section 10 - Stability and Reactivity

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Ignition sources, excess heat.

Incompatibilities with Other Materials: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported.

Section 11 - Toxicological Information

RTECS#:**CAS#** 100-41-4: DA0700000**LD50/LC50:**

CAS# 100-41-4:

Draize test, rabbit, eye: 500 mg Severe;

Inhalation, mouse: LC50 = 35500 mg/m³/2H;Inhalation, rat: LC50 = 55000 mg/m³/2H;

Oral, rat: LD50 = 3500 mg/kg;

Oral, rat: LD50 = 3500 mg/kg;

Skin, rabbit: LD50 = 17800 uL/kg;

Inhalation rat LC50: 17.2 mg/l/4H from BASF.

Carcinogenicity:

CAS# 100-41-4:

- **ACGIH:** A3 - Confirmed animal carcinogen with unknown relevance to humans
- **California:** carcinogen, initial date 6/11/04
- **NTP:** Not listed.
- **IARC:** Group 2B carcinogen

Epidemiology: No information found**Teratogenicity:** No information found**Reproductive Effects:** No information found**Mutagenicity:** Mutation in mammalian somatic cells(Rodent,mouse) Lymphocyte = 80 mg/L.**Neurotoxicity:** No information found**Other Studies:**

Section 12 - Ecological Information

Ecotoxicity: Fish: Rainbow trout: LC50 = 14.0 mg/L; 96 Hr.; Static Bioassay Fish: Fathead Minnow: LC50 = 12.1 mg/L; 96 Hr.; Flow-through Bioassay Fish: Bluegill/Sunfish: LC50 = 150.0 mg/L; 96 Hr.; Static Bioassay, pH 6.5-7.9, 21-23 degrees C Water flea EC50 = 2.1 mg/L; 48 Hr.; Static Bioassay Water flea EC50 = 75.0 mg/L; 48 Hr.; Static Bioassay Shrimp (mysidopsis bahia), LC50=87.6 mg/L/96hr. Sheepshead minnow LC50=275 mg/L/96hr. Fathead minnow LC50=42.3 mg/L/96hr in hard water & 48.5 mg/L/96hr in softwater.

Environmental: Experimental data on the bioconcentration of ethylbenzene include a log BCF of 1.9 in goldfish and the log BCF of 0.67 for clams exposed to the water-soluble fraction of crude oil. Using its octanol/water partition coefficient (log Kow = 3.15) and using a recommended regression equation, one can calculate a log BCF in fish of 2.16 indicating that ethylbenzene should not significantly bioconcentrate in aquatic organisms. Ethylbenzene has a moderate adsorption for soil. The measured Koc for silt loam was 164

Physical: The predominant photochemical reaction of ethylbenzene in the atmosphere is with hydroxyl radicals; the tropospheric half-life for this reaction is 5.5 and 24 hr in the summer and winter, actively. Degradation is somewhat faster under photochemical smog situations. Photooxidation products which have been identified include ethylphenol, benzaldehyde, acetophenone and m- and p-ethylnitrobenzene. Ethylbenzene is resistant to hydrolysis. Ethylbenzene does not significantly absorb light above 290 nm in methanol solution.

Other: No information available.

Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

California Prop 65

The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Ethylbenzene, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: None of the chemicals in this product are listed.

European/International Regulations

European Labeling in Accordance with EC Directives

Hazard Symbols:

XN F

Risk Phrases:

R 11 Highly flammable.

R 20 Harmful by inhalation.

Safety Phrases:

S 16 Keep away from sources of ignition - No smoking.

S 24/25 Avoid contact with skin and eyes.

S 29 Do not empty into drains.

WGK (Water Danger/Protection)

CAS# 100-41-4: 1

Canada - DSL/NDSL

CAS# 100-41-4 is listed on Canada's DSL List.

Canada - WHMIS

This product has a WHMIS classification of B2, D2B, D2A.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List

CAS# 100-41-4 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information
--

MSDS Creation Date: 4/28/1999

Revision #6 Date: 11/29/2007

The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.

DIBENZO(a,h)ANTHRACENE**0431**

October 1995

CAS No: 53-70-3

RTECS No: HN2625000

EC No: 601-041-00-2

1,2:5,6-Dibenzanthracene

C₂₂H₁₄

Molecular mass: 278.4

TYPES OF HAZARD/ EXPOSURE	ACUTE HAZARDS/SYMPTOMS	PREVENTION	FIRST AID/FIRE FIGHTING
FIRE	Combustible.	NO open flames.	Water spray, powder.
EXPLOSION			
EXPOSURE		AVOID ALL CONTACT!	
Inhalation		Local exhaust or breathing protection.	Fresh air, rest.
Skin	Redness. Swelling. Itching.	Protective gloves. Protective clothing.	Remove contaminated clothes. Rinse and then wash skin with water and soap.
Eyes	Redness.	Face shield or eye protection in combination with breathing protection.	First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to a doctor.
Ingestion		Do not eat, drink, or smoke during work. Wash hands before eating.	Rinse mouth.

SPILLAGE DISPOSAL

Sweep spilled substance into sealable containers; if appropriate, moisten first to prevent dusting. Carefully collect remainder, then remove to safe place.
Personal protection: P3 filter respirator for toxic particles.

EMERGENCY RESPONSE**SAFE STORAGE**

Well closed.

IPCSInternational
Programme on
Chemical Safety

Prepared in the context of cooperation between the International Programme on Chemical Safety and the European Commission ©
IPCS 2005

SEE IMPORTANT INFORMATION ON THE BACK.

IMPORTANT DATA**Physical State; Appearance**

COLOURLESS CRYSTALLINE POWDER.

Occupational exposure limits

TLV not established.

Routes of exposure

The substance can be absorbed into the body by inhalation, through the skin and by ingestion.

Inhalation risk

Evaporation at 20°C is negligible; a harmful concentration of airborne particles can, however, be reached quickly.

Effects of long-term or repeated exposure

The substance may have effects on the skin, resulting in photosensitization. This substance is probably carcinogenic to humans.

PHYSICAL PROPERTIES

Boiling point: 524°C

Melting point: 267°C

Relative density (water = 1): 1.28

Solubility in water: none

Octanol/water partition coefficient as log Pow: 6.5

ENVIRONMENTAL DATA

Bioaccumulation of this chemical may occur in seafood.

NOTES

This is one of many polycyclic aromatic hydrocarbons - standards are usually established for them as mixtures, e.g., coal tar pitch volatiles. However, it may be encountered as a laboratory chemical in its pure form.

Insufficient data are available on the effect of this substance on human health, therefore utmost care must be taken.

Do NOT take working clothes home.

DBA is a commonly used name.

This substance is one of many polycyclic aromatic hydrocarbons (PAH).

Card has been partly updated in October 2005. See section EU classification.

ADDITIONAL INFORMATION**LEGAL NOTICE**

Neither the EC nor the IPCS nor any person acting on behalf of the EC or the IPCS is responsible for the use which might be made of this information

Material Safety Data Sheet

Benzo[a]pyrene, 98%

ACC# 37175

Section 1 - Chemical Product and Company Identification

MSDS Name: Benzo[a]pyrene, 98%

Catalog Numbers: AC105600000, AC105600010, AC105601000, AC377200000, AC377200010, AC377201000 AC377201000

Synonyms: 3,4-Benzopyrene; 3,4-Benzpyrene; Benzo[def]chrysene.

Company Identification:

Acros Organics N.V.
One Reagent Lane
Fair Lawn, NJ 07410

For information in North America, call: 800-ACROS-01

For emergencies in the US, call CHEMTREC: 800-424-9300

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
50-32-8	Benzo[a]pyrene	>96	200-028-5

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: yellow to brown powder.

Danger! May cause harm to the unborn child. May impair fertility. May cause eye, skin, and respiratory tract irritation. Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. Cancer hazard. May cause allergic skin reaction. May cause heritable genetic damage.

Target Organs: Reproductive system, skin.

Potential Health Effects

Eye: May cause eye irritation.

Skin: May cause skin irritation. May be harmful if absorbed through the skin. May cause an allergic reaction in certain individuals.

Ingestion: May cause irritation of the digestive tract. The toxicological properties of this substance have not been fully investigated. May be harmful if swallowed.

Inhalation: May cause respiratory tract irritation. The toxicological properties of this substance have not been fully investigated. May be harmful if inhaled.

Chronic: May cause cancer in humans. May cause reproductive and fetal effects. Laboratory experiments have resulted in mutagenic effects.

Section 4 - First Aid Measures

Eyes: Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.

Skin: Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

Ingestion: Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

Inhalation: Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion.

Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or appropriate foam.

Flash Point: Not available.

Autoignition Temperature: Not available.

Explosion Limits, Lower: Not available.

Upper: Not available.

NFPA Rating: (estimated) Health: 2; Flammability: 0; Instability: 0

Section 6 - Accidental Release Measures

General Information: Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks: Clean up spills immediately, observing precautions in the Protective Equipment section. Sweep up, then place into a suitable container for disposal. Avoid generating dusty conditions. Provide ventilation.

Section 7 - Handling and Storage

Handling: Wash thoroughly after handling. Use with adequate ventilation. Minimize dust generation and accumulation. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid ingestion and inhalation.

Storage: Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Engineering Controls: Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate ventilation to keep airborne concentrations low.

Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Benzo[a]pyrene	0.2 mg/m ³ TWA (as benzene soluble aerosol) (listed under Coal tar pitches).	0.1 mg/m ³ TWA (cyclohexane-extractable fraction) (listed under Coal tar pitches). 80 mg/m ³ IDLH (listed under Coal tar	0.2 mg/m ³ TWA (as benzene soluble fraction) (listed under Coal tar pitches).

pitches).

OSHA Vacated PELs: Benzo[a]pyrene: No OSHA Vacated PELs are listed for this chemical.

Personal Protective Equipment

Eyes: Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

Section 9 - Physical and Chemical Properties

Physical State: Powder

Appearance: yellow to brown

Odor: faint aromatic odor

pH: Not available.

Vapor Pressure: Not available.

Vapor Density: Not available.

Evaporation Rate:Not available.

Viscosity: Not available.

Boiling Point: 495 deg C @ 760 mm Hg

Freezing/Melting Point:175 - 179 deg C

Decomposition Temperature:Not available.

Solubility: 1.60x10⁻³ mg/l @25°C

Specific Gravity/Density:Not available.

Molecular Formula:C₂₀H₁₂

Molecular Weight:252.31

Section 10 - Stability and Reactivity

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Dust generation.

Incompatibilities with Other Materials: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported.

Section 11 - Toxicological Information

RTECS#:

CAS# 50-32-8: DJ3675000

LD50/LC50:

Not available.

Carcinogenicity:

CAS# 50-32-8:

- **ACGIH:** A2 - Suspected Human Carcinogen

- **California:** carcinogen, initial date 7/1/87
- **NTP:** Suspect carcinogen
- **IARC:** Group 1 carcinogen (listed as Coal tar pitches).

Epidemiology: No information found

Teratogenicity: No information found

Reproductive Effects: Adverse reproductive effects have occurred in experimental animals.

Mutagenicity: Mutagenic effects have occurred in humans. Mutagenic effects have occurred in experimental animals.

Neurotoxicity: No information found

Other Studies:

Section 12 - Ecological Information

No information available.

Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

RCRA P-Series: None listed.

RCRA U-Series:

CAS# 50-32-8: waste number U022.

Section 14 - Transport Information

	US DOT	Canada TDG
Shipping Name:	NOT REGULATED FOR DOMESTIC TRANSPORT	ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOL (Benzo{a} pyrene)
Hazard Class:		9
UN Number:		UN3077
Packing Group:		III

Section 15 - Regulatory Information

US FEDERAL

TSCA

CAS# 50-32-8 is listed on the TSCA inventory.

Health & Safety Reporting List

None of the chemicals are on the Health & Safety Reporting List.

Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

Section 12b

None of the chemicals are listed under TSCA Section 12b.

TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

CERCLA Hazardous Substances and corresponding RQs

CAS# 50-32-8: 1 lb final RQ; 0.454 kg final RQ

SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPQ.

SARA Codes

CAS # 50-32-8: immediate, delayed.

Section 313

This material contains Benzo[a]pyrene (CAS# 50-32-8, >96%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR

Clean Air Act:

This material does not contain any hazardous air pollutants.

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

Clean Water Act:

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 50-32-8 is listed as a Priority Pollutant under the Clean Water Act.

None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

STATE

CAS# 50-32-8 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

California Prop 65

The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Benzo[a]pyrene, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: CAS# 50-32-8: 0.06 æg/day NSRL

European/International Regulations

European Labeling in Accordance with EC Directives

Hazard Symbols:

T N

Risk Phrases:

R 43 May cause sensitization by skin contact.

R 45 May cause cancer.

R 46 May cause heritable genetic damage.

R 60 May impair fertility.

R 61 May cause harm to the unborn child.

R 50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Safety Phrases:

S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

S 53 Avoid exposure - obtain special instructions before use.

S 60 This material and its container must be disposed of as hazardous waste.

S 61 Avoid release to the environment. Refer to special instructions /safety data sheets.

WGK (Water Danger/Protection)

CAS# 50-32-8: No information available.

Canada - DSL/NDSL

CAS# 50-32-8 is listed on Canada's DSL List.

Canada - WHMIS

This product has a WHMIS classification of D2A.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List

CAS# 50-32-8 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information
--

MSDS Creation Date: 9/02/1997

Revision #7 Date: 6/30/2006

The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.

Arsenic	7440-38-2	0.1 - 1%	Yes
Nitric Acid	7697-37-2	< 4%	Yes
Water	7732-18-5	> 95%	No

3. Hazards Identification

Emergency Overview

DANGER! CORROSIVE. LIQUID AND MIST CAUSE SEVERE BURNS TO ALL BODY TISSUE. MAY BE FATAL IF SWALLOWED OR INHALED. AFFECTS

LIVER, KIDNEYS, LUNGS AND TEETH. CANCER HAZARD. CONTAINS INORGANIC ARSENIC WHICH CAN CAUSE CANCER. Risk of cancer depends on duration and level of exposure.

SAF-T-DATA^(tm) Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Cancer Causing)

Flammability Rating: 0 - None

Reactivity Rating: 1 - Slight

Contact Rating: 3 - Severe (Corrosive)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: White (Corrosive)

Potential Health Effects

Nitric acid is extremely hazardous; it is corrosive, reactive, an oxidizer, and a poison. The health effects from exposure to diluted forms of this chemical are not well documented. They are expected to be less severe than those for concentrated forms which are referenced in the descriptions below.

Inhalation:

Corrosive! Inhalation of vapors can cause breathing difficulties and lead to pneumonia and pulmonary edema, which may be fatal. Other symptoms may include coughing, choking, and irritation of the nose, throat, and respiratory tract. Arsenic may cause inflammation of the mucous membranes with cough and foamy sputum, restlessness, dyspnea, cyanosis, and rales. Symptoms like those from ingestion exposure may follow. May cause pulmonary edema.

Ingestion:

Corrosive! Swallowing nitric acid can cause immediate pain and burns of the mouth, throat, esophagus and gastrointestinal tract. Arsenic is highly toxic! May cause burning in esophagus, vomiting, and bloody diarrhea. Symptoms of cold and clammy skin, low blood pressure, weakness, headache, cramps, convulsions, and coma may follow. May cause damage to liver and kidneys. A suspected fetal toxin. Death may occur from circulatory failure. Estimated lethal dose 120 milligrams.

Skin Contact:

Corrosive! Can cause redness, pain, and severe skin burns. Concentrated solutions cause deep ulcers and stain skin a yellow or yellow-brown color.

Eye Contact:

Corrosive! Vapors are irritating and may cause damage to the eyes. Contact may cause severe burns and permanent eye damage.

Chronic Exposure:

Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid. Arsenic on repeated or prolonged skin contact may cause bronzing of the skin, edema, dermatitis, and lesions. Repeated or prolonged inhalation of dust may cause damage to the nasal septum. Chronic exposure from inhalation or ingestion may cause hair and weight loss, a garlic odor to the breath and perspiration, excessive salivation and perspiration, central nervous system damage, hepatitis, gastrointestinal disturbances, cardiovascular damage, and kidney and liver damage. Arsenic compounds are known human carcinogens and may be teratogenic

based on effects in laboratory animals.

Aggravation of Pre-existing Conditions:

Persons with pre-existing skin disorders, eye disease, or cardiopulmonary diseases may be more susceptible to the effects of this substance.

4. First Aid Measures

Immediate first aid treatment reduces the health effects of this substance. First aid procedures given apply to concentrated solutions. Exposures to dilute solutions may not require these extensive first aid procedures.

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion:

If swallowed, give large quantities of water to drink and get medical attention immediately. Never give anything by mouth to an unconscious person.

Skin Contact:

In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately. Contaminated work clothes should be laundered by individuals who have been informed of the hazards of exposure to this substance.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

Note to Physician:

If emesis is unsuccessful after two doses of Ipecac, consider gastric lavage. Monitor urine arsenic level. Alkalinization of urine may help prevent disposition of red cell breakdown products in renal tubular cells. If acute exposure is significant, maintain high urine output and monitor volume status, preferably with central venous pressure line. Abdominal X-rays should be done routinely for all ingestions. Chelation therapy with BAL, followed by n-penicillamine is recommended, but specific dosing guidelines are not clearly established.

5. Fire Fighting Measures

Fire:

Not combustible, but concentrated material is a strong oxidizer and its heat of reaction with reducing agents or combustibles may cause ignition.

Explosion:

Concentrated material reacts explosively with combustible organic or readily oxidizable materials such as: alcohols, turpentine, charcoal, organic refuse, metal powder, hydrogen sulfide, etc. Reacts with most metals to release hydrogen gas which can form explosive mixtures with air.

Fire Extinguishing Media:

If involved in a fire, use water spray.

Special Information:

Increases the flammability of combustible, organic and readily oxidizable materials. In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Neutralize with alkaline material (soda ash, lime), then absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker NEUTRASORB® acid neutralizers are recommended for spills of this product.

7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Protect from physical damage. Keep out of direct sunlight and away from heat, water, and incompatible materials. Do not wash out container and use it for other purposes. When diluting, the acid should always be added slowly to water and in small amounts. Never use hot water and never add water to the acid. Water added to acid can cause uncontrolled boiling and splashing. Wear special protective equipment (Sec. 8) for maintenance break-in or where exposures may exceed established exposure levels. Wash hands, face, forearms and neck when exiting restricted areas. Shower, dispose of outer clothing, change to clean garments at the end of the day. Avoid cross-contamination of street clothes. Wash hands before eating and do not eat, drink, or smoke in workplace. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

For Nitric Acid:

OSHA Permissible Exposure Limit (PEL):

2 ppm (TWA)

ACGIH Threshold Limit Value (TLV):

2 ppm (TWA); 4 ppm (STEL)

For Inorganic Arsenic compounds (as As):

- OSHA Permissible Exposure Limit (PEL):

10 ug/m³ (TWA), 5 ug/m³(Action Level), cancer hazard.

- ACGIH Threshold Limit Value (TLV):
0.01 mg/m³ (TWA), A1, confirmed human carcinogen.

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded, wear a supplied air, full-facepiece respirator, airlined hood, or full-facepiece self-contained breathing apparatus. Canister-type respirators using sorbents are ineffective.

Skin Protection:

Rubber or neoprene gloves and additional protection including impervious boots, apron, or coveralls, as needed in areas of unusual exposure to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

Other Control Measures:

Any area where inorganic arsenic is stored, handled, used, etc., must be established as a 'Regulated Area' with controlled access, limited to authorized persons. Containers of inorganic arsenic and Regulated Areas must be labeled to show a CANCER SUSPECT AGENT is present. Eating, drinking, and smoking should not be permitted in areas where solids or liquids containing arsenic or lead compounds are handled, processed, or stored. See OSHA substance-specific standard for more information on personal protective equipment, engineering and work practice controls, medical surveillance, record keeping, and reporting requirements. (arsenic: 29 CFR 1910.1018; lead: 29 CFR 1910.1025).

9. Physical and Chemical Properties

Appearance:

Clear, colorless liquid.

Odor:

Odorless.

Solubility:

Infinitely soluble.

Specific Gravity:

No information found.

pH:

No information found.

% Volatiles by volume @ 21C (70F):

> 99

Boiling Point:

No information found.

Melting Point:

No information found.

Vapor Density (Air=1):

No information found.

Vapor Pressure (mm Hg):

No information found.

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage. Containers may burst when heated.

Hazardous Decomposition Products:

When heated to decomposition, emits toxic nitrogen oxides fumes and hydrogen nitrate.

Emits toxic fumes of arsenic when heated to decomposition.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

A dangerously powerful oxidizing agent, concentrated nitric acid is incompatible with most substances, especially strong bases, metallic powders, carbides, hydrogen sulfide, turpentine, and combustible organics.

Conditions to Avoid:

Heat, incompatibles.

11. Toxicological Information

Toxicological Data:

For arsenic: oral rat LD50: 763 mg/kg. Investigated as a tumorigen, mutagen, reproductive effector. For Nitric Acid: Investigated as a mutagen and reproductive effector.

Carcinogenicity:

For arsenic and inorganic arsenic compounds:

Regulated by OSHA as a carcinogen.

EPA / IRIS classification: Group A - Known human carcinogen.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category

Environmental Toxicity:

No information found.

13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

-----**Potential Health Effects**

Nitric acid is extremely hazardous; it is corrosive, reactive, an oxidizer, and a poison. The following hazards are for concentrated solutions. Hazards of less concentrated solutions may be reduced. Degree of hazard for reduced concentrations is not currently addressed in the available literature.

Inhalation:

Corrosive! Inhalation of vapors can cause coughing, choking, inflammation of the nose, throat, and upper respiratory tract, and in severe cases, pulmonary edema, circulatory failure, and death.

Ingestion:

Corrosive! Swallowing can cause immediate pain and burns of the mouth, throat, esophagus and gastrointestinal tract. May cause nausea, vomiting, and diarrhea, and in severe cases, death.

Skin Contact:

Corrosive! Can cause redness, pain, and severe skin burns. Concentrated solutions cause deep ulcers and stain skin a yellow or yellow-brown color.

Eye Contact:

Corrosive! Vapors are irritating and may cause damage to the eyes. Contact may cause severe burns and permanent eye damage.

Chronic Exposure:

Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid.

Aggravation of Pre-existing Conditions:

Persons with pre-existing skin disorders, eye disease, or cardiopulmonary diseases may be more susceptible to the effects of this substance.

4. First Aid Measures

Immediate first aid treatment reduces the health effects of this substance.

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

Ingestion:

If swallowed, DO NOT INDUCE VOMITING. Give large quantities of water. Never give anything by mouth to an unconscious person. Get medical attention immediately.

Skin Contact:

Immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention immediately. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

5. Fire Fighting Measures

Fire:

Not combustible, but concentrated material is a strong oxidizer and its heat of reaction with reducing agents or combustibles may cause ignition.

Explosion:

Concentrated material reacts explosively with combustible organic or readily oxidizable materials such as: alcohols, turpentine, charcoal, organic refuse, metal powder, hydrogen sulfide, etc. Reacts with most metals to release hydrogen gas which can form explosive mixtures with air.

Fire Extinguishing Media:

Use any means suitable for extinguishing surrounding fire.

Special Information:

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Neutralize with alkaline material (soda ash, lime), then absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Protect from physical damage. Keep out of direct sunlight and away from heat, water, and incompatible materials. Do not wash out container and use it for other purposes. When diluting, the acid should always be added slowly to water and in small amounts. Never use

hot water and never add water to the acid. Water added to acid can cause uncontrolled boiling and splashing. When opening metal containers, use non-sparking tools because of the possibility of hydrogen gas being present. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

For Nitric Acid:

OSHA Permissible Exposure Limit (PEL):

 Reactivity: No (Mixture / Liquid)

Australian Hazchem Code: None allocated.

Poison Schedule: S6

WHMIS:

This MSDS has been prepared according to the hazard criteria of the Controlled Products Regulations (CPR) and the MSDS contains all of the information required by the CPR.

16. Other Information

NFPA Ratings: Health: **3** Flammability: **0** Reactivity: **0**

Label Hazard Warning:

DANGER! CORROSIVE. LIQUID AND MIST CAUSE SEVERE BURNS TO ALL BODY TISSUE. MAY BE FATAL IF SWALLOWED OR INHALED. VAPOR IRRITATING TO EYES AND RESPIRATORY TRACT. INHALATION MAY CAUSE LUNG AND TOOTH DAMAGE.

Label Precautions:

Do not get in eyes, on skin, or on clothing.

Do not breathe vapor or mist.

Use only with adequate ventilation.

Wash thoroughly after handling.

Keep container closed.

Label First Aid:

In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is

difficult, give oxygen. If swallowed, DO NOT INDUCE VOMITING. Give large quantities of water. Never give anything by mouth to an unconscious person. In all cases get medical attention immediately.

Product Use:

Laboratory Reagent.

Revision Information:

MSDS Section(s) changed since last revision of document include: 3, 14, 16.

COPPER METAL

1. Product Identification

Synonyms: C.I. 77400; Arwood Copper

CAS No.: 7440-50-8

Molecular Weight: 63.546

Chemical Formula: Cu

Product Codes:

J.T. Baker: 1714, 1720, 1732, 1736

Mallinckrodt: 1733, 4649

2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Copper	7440-50-8	90 - 100%	Yes

3. Hazards Identification

Emergency Overview

WARNING! HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION

TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS THE LIVER AND KIDNEYS. CHRONIC EXPOSURE MAY CAUSE TISSUE DAMAGE.

SAF-T-DATA^(tm) Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Life)

Flammability Rating: 1 - Slight

Reactivity Rating: 2 - Moderate

Contact Rating: 1 - Slight

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD;
PROPER GLOVES

Storage Color Code: Green (General Storage)

Potential Health Effects

Inhalation:

Inhalation of dusts and fumes of metallic copper causes irritation of the upper respiratory tract, congestion of nasal mucous membranes, ulceration and perforation of the nasal septum, and pharyngeal congestion. Inhalation of copper fumes may give rise to metal fume fever (high temperature, metallic taste, nausea, coughing, general weakness, muscle aches, and exhaustion).

Ingestion:

Copper ingestion causes nausea, vomiting, abdominal pain, metallic taste, and diarrhea. Ingestion of large doses may cause stomach and intestine ulceration, jaundice, and kidney and liver damage.

Skin Contact:

Causes irritation to skin. Symptoms include redness, itching, and pain. Exposure to copper dust may cause a greenish-black skin discoloration.

Eye Contact:

Small copper particles in the eyes may cause irritation, discoloration, and damage.

Chronic Exposure:

Prolonged or repeated exposure to copper can discolor skin and hair and irritate the skin; may cause mild dermatitis, runny nose, and irritation of the mucous membranes. Repeated ingestion may damage the liver and kidneys. Repeated inhalation can cause chronic respiratory disease.

Aggravation of Pre-existing Conditions:

Persons with pre-existing skin disorders or impaired liver, kidney, or pulmonary function or pre-existing Wilson's disease may be more susceptible to the effects of this material.

4. First Aid Measures

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion:

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person.

Skin Contact:

Immediately flush skin with plenty of soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

5. Fire Fighting Measures

Fire:

Not considered to be a fire hazard since the bulk solid does not burn, but very finely divided particles (ultra-fine powder) may burn in air.

Explosion:

Not considered to be an explosion hazard. Reactions with incompatibles may pose an explosion hazard. Liquid copper explodes on contact with water. High concentrations of finely divided copper particles in the air may present an explosion hazard.

Fire Extinguishing Media:

Use any means suitable for extinguishing surrounding fire.

Special Information:

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Sweep up and containerize for reclamation or disposal. Vacuuming or wet sweeping may be used to avoid dust dispersal. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Avoid exposure to air and moisture. Isolate from incompatible substances. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

Copper Dust and Mists, as Cu:

- OSHA Permissible Exposure Limit (PEL) -

1 mg/m³ (TWA)

- ACGIH Threshold Limit Value (TLV) -

1 mg/m³ (TWA)

Copper Fume:

- OSHA Permissible Exposure Limit (PEL) -

0.1 mg/m³ (TWA)

- ACGIH Threshold Limit Value (TLV) -

0.2 mg/m³ (TWA)

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded and engineering controls are not feasible, a full facepiece particulate respirator (NIOSH type N100 filters) may be worn for up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

Skin Protection:

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

9. Physical and Chemical Properties

Appearance:

Reddish, metallic solid.

Odor:

Odorless.

Solubility:

Insoluble in water.

Density:

8.94

pH:

No information found.

% Volatiles by volume @ 21C (70F):

0

Boiling Point:

2595C (4703F)

Melting Point:

1083C (1981F)

Vapor Density (Air=1):

Not applicable.

Vapor Pressure (mm Hg):

1 @ 1628C (2962F)

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage. Copper becomes dull when exposed to air; on exposure to moist air it gradually converts to the carbonate. On long standing, a white, highly explosive peroxide deposit may form.

Hazardous Decomposition Products:

No information found.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

Copper is incompatible with oxidizers, alkalis, acetylene, chlorine plus oxygen difluoride, phosphorus, nitric acid, potassium peroxide, 1-bromo-2-propyne, sulfur plus chlorates. Reacts violently with ammonium nitrate, bromates, iodates, chlorates, ethylene oxide, hydrozoic acid, potassium oxide, dimethyl sulfoxide plus trichloroacetic acid, hydrogen peroxide, sodium peroxide, sodium azide, sulfuric acid, hydrogen sulfide plus air, and lead azide. A potentially explosive reaction occurs with acetylenic compounds. Copper ignites on contact with chlorine, fluorine (above 121C), chlorine trifluoride, and hydrazinum nitrate (above 70C). An incandescent reaction occurs with potassium dioxide.

Conditions to Avoid:

Incompatibles and prolonged exposure to air and moisture.

11. Toxicological Information

No LD50/LC50 information found relating to normal routes of occupational exposure. Investigated as a tumorigen and a reproductive effector.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Copper (7440-50-8)	No	No	None

12. Ecological Information

Environmental Fate:

No information found.

Environmental Toxicity:

No information found.

13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste disposal facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

14. Transport Information

Not regulated.

LEAD METAL

1. Product Identification

Synonyms: Granular lead, pigment metal; C.I. 77575

CAS No.: 7439-92-1

Molecular Weight: 207.19

Chemical Formula: Pb

Product Codes:

J.T. Baker: 2256, 2266

Mallinckrodt: 5668

2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Lead	7439-92-1	95 - 100%	Yes

3. Hazards Identification

Emergency Overview

POISON! DANGER! MAY BE FATAL IF SWALLOWED OR INHALED. CAUSES

IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. NEUROTOXIN. AFFECTS THE GUM TISSUE, CENTRAL NERVOUS SYSTEM, KIDNEYS, BLOOD AND REPRODUCTIVE SYSTEM. POSSIBLE CANCER HAZARD. MAY CAUSE CANCER BASED ON ANIMAL DATA. Risk of cancer depends on duration and level of exposure.

SAF-T-DATA^(tm) Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Cancer Causing)

Flammability Rating: 3 - Severe (Flammable)

Reactivity Rating: 1 - Slight

Contact Rating: 2 - Moderate (Life)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: Red (Flammable)

Potential Health Effects

Inhalation:

Lead can be absorbed through the respiratory system. Local irritation of bronchia and lungs can occur and, in cases of acute exposure, symptoms such as metallic taste, chest and abdominal pain, and increased lead blood levels may follow. See also Ingestion.

Ingestion:

POISON! The symptoms of lead poisoning include abdominal pain and spasms, nausea, vomiting, headache. Acute poisoning can lead to muscle weakness, "lead line" on the gums, metallic taste, definite loss of appetite, insomnia, dizziness, high lead levels in blood and urine with shock, coma and death in extreme cases.

Skin Contact:

Lead and lead compounds may be absorbed through the skin on prolonged exposure; the symptoms of lead poisoning described for ingestion exposure may occur. Contact over short periods may cause local irritation, redness and pain.

Eye Contact:

Absorption can occur through eye tissues but the more common hazards are local irritation or abrasion.

Chronic Exposure:

Lead is a cumulative poison and exposure even to small amounts can raise the body's content to toxic levels. The symptoms of chronic exposure are like those of ingestion poisoning; restlessness, irritability, visual disturbances, hypertension and gray facial color may also be noted.

Aggravation of Pre-existing Conditions:

Persons with pre-existing kidney, nerve or circulatory disorders or with skin or eye problems may be more susceptible to the effects of this substance.

4. First Aid Measures

Inhalation:

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion:

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention.

Skin Contact:

Immediately flush skin with plenty of soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact:

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

5. Fire Fighting Measures

Fire:

Not considered to be a fire hazard. Powder/dust is flammable when heated or exposed to flame.

Explosion:

Not considered to be an explosion hazard.

Fire Extinguishing Media:

Use any means suitable for extinguishing surrounding fire. Do not allow water runoff to enter sewers or waterways.

Special Information:

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode. Can produce toxic lead fumes at elevated temperatures and also react with oxidizing materials.

6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Sweep up and containerize for reclamation or disposal. Vacuuming or wet sweeping may be used to avoid dust dispersal. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Isolate from incompatible substances. Areas in which exposure to lead metal or lead compounds may occur should be identified by signs or appropriate means, and access to the area should be limited to authorized persons. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all

warnings and precautions listed for the product.

8. Exposure Controls/Personal Protection

Airborne Exposure Limits:

For lead, metal and inorganic dusts and fumes, as Pb:

-OSHA Permissible Exposure Limit (PEL): 0.05 mg/m³ (TWA)

For lead, elemental and inorganic compounds, as Pb:

-ACGIH Threshold Limit Value (TLV): 0.05 mg/m³ (TWA), A3 animal carcinogen

ACGIH Biological Exposure Indices (BEI): 30 ug/100ml, notation B (see actual Indices for more information).

For lead, inorganic:

-NIOSH Recommended Exposure Limit (REL): 0.1 mg/m³ (TWA)

Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded and engineering controls are not feasible, a half-face high efficiency particulate respirator (NIOSH type N100 filter) may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece high efficiency particulate respirator (NIOSH type N100 filter) may be worn up to 50 times the exposure limit, or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

Skin Protection:

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Eye Protection:

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

Other Control Measures:

Eating, drinking, and smoking should not be permitted in areas where solids or liquids containing lead compounds are handled, processed, or stored. See OSHA substance-specific standard for more information on personal protective equipment, engineering and work practice controls, medical surveillance, record keeping, and reporting requirements. (29 CFR 1910.1025).

9. Physical and Chemical Properties

Appearance:

Small, white to blue-gray metallic shot or granules.

Odor:

Odorless.

Solubility:

Insoluble in water.

Density:

11.34

pH:

No information found.

% Volatiles by volume @ 21C (70F):

0

Boiling Point:

1740C (3164F)

Melting Point:

327.5C (622F)

Vapor Density (Air=1):

No information found.

Vapor Pressure (mm Hg):

1.77 @ 1000C (1832F)

Evaporation Rate (BuAc=1):

No information found.

10. Stability and Reactivity

Stability:

Stable under ordinary conditions of use and storage.

Hazardous Decomposition Products:

Does not decompose but toxic lead or lead oxide fumes may form at elevated temperatures.

Hazardous Polymerization:

Will not occur.

Incompatibilities:

Ammonium nitrate, chlorine trifluoride, hydrogen peroxide, sodium azide, zirconium, disodium acetylide, sodium acetylide and oxidants.

Conditions to Avoid:

Heat, flames, ignition sources and incompatibles.

11. Toxicological Information

Toxicological Data:

Investigated as a tumorigen, mutagen, reproductive effector.

Reproductive Toxicity:

Lead and other smelter emissions are human reproductive hazards. (Chemical Council on Environmental Quality; Chemical Hazards to Human Reproduction, 1981).

Carcinogenicity:

EPA / IRIS classification: Group B2 - Probable human carcinogen, sufficient animal evidence.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Lead (7439-92-1)	No	No	2B

12. Ecological Information

Environmental Fate:

When released into the soil, this material is not expected to leach into groundwater. This material may bioaccumulate to some extent.

Environmental Toxicity:

No information found.

13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste facility. Although not a listed RCRA hazardous waste, this material may exhibit one or more characteristics of a hazardous waste and require appropriate analysis to determine specific disposal requirements. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

Construction Health & Safety Plan
Crotona Terrace – 1825 Boston Road

STANDARD SAFE WORK PRACTICES

- 1) Eating, drinking, chewing tobacco, smoking and carrying matches or lighters is prohibited in a contaminated or potentially contaminated area or where the possibility for the transfer of contamination exists.
- 2) Avoid contact with potentially contaminated substances. Do not walk through puddles, pools, mud, etc. Avoid, whenever possible, kneeling on the ground, leaning or sitting on equipment or ground. Do not place monitoring equipment on potentially contaminated surfaces (i.e., ground, etc).
- 3) All field crewmembers should make use of their senses to alert them to potentially dangerous situations in which they should not become involved; i.e., presence of strong and irritating or nauseating odors.
- 4) Prevent, to the extent possible, spills. In the event that a spill occurs, contain liquid if possible.
- 5) Field crewmembers shall be familiar with the physical characteristics of investigations, including:
 - Wind direction
 - Accessibility to associates, equipment, vehicles
 - Communication
 - Hot zone (areas of known or suspected contamination)
 - Site access
 - Nearest water sources
- 6) All wastes generated during activities on-site should be disposed of as directed by the project manager or his on-site representative.
- 7) Protective equipment as specified in the section on personnel protection will be utilized by workers during the initial site reconnaissance, and other activities.

APPENDIX C

Soil Boring Geologic Logs

Appendix C: Soil Boring Logs

Boring ID	Location	Depth of Boring	Soil Characteristics	Groundwater Encountered	PID Reading	Field Observations
B-1/ MW-1	Northwestern corner of the site. 20.5' south of northern boundary and 10' east of western boundary.	0-2	10% recovery. Medium brown sandy soil with concrete at tip.	No	0.0	Fill comprised of brick, concrete, asphalt fragments with some metal, plastic and wood from surface to 7'. No evidence of contamination
		2-4	10% recovery. Loose medium brown sandy soil with concrete at tip	No	0.0	
		4-6	50% recovery. Brick fragments mixed with medium brown sandy soil.	No	0.0	
		6-8	Asphalt fragments, brick, slightly moist medium brown sandy soil. Dark brown organic silt at 7.	No	0.0	
		8-22	Dark brown organic silt becoming moist at 18'.	Saturated at 20'	0.0	
		22-24	Saturated course gray mixed with layers of silt	Saturated	0.0	
		24-26	Yellowish gray silty clay becoming sandy	Saturated	0.0	
		26-34.5' bedrock refusal at 34'9"	Gray course sand with weathered bedrock at tip.	Saturated	0.0	
B-2/ TW-1	Central western portion of site. 81' south of northern boundary and 98' east of western boundary.	0-2	Fill (brick, concrete, asphalt) mixed with medium brown sandy soil.	No	0.0	Fill comprised of brick, concrete, asphalt fragments with some metal, plastic and wood from surface to 8'. No evidence of contamination.
		2-4	Fill (brick, concrete, asphalt) mixed with medium brown sandy soil.	No	0.0	
		4-6	10% recovery. Fill (brick, concrete, asphalt) mixed with medium brown sandy soil.	No	0.0	
		6-8	Zero recovery.	No	0.0	
		8-20	Dark gray organic silt.	No	0.0	
		20-30 bedrock refusal	Fine yellowish gray silty clay becoming sand.	Saturated at 20'	0.0	
B-3/ TW-2	Western edge of site. 12' east of western boundary and 51' from southern boundary	0-10	Fill with bricks, concrete, asphalt fragments.	No	0.0	Fill comprised of brick, concrete, asphalt fragments to 10'. No evidence of contamination.
		10-29.5 bedrock refusal	Saturated, fine, medium brown silty sand.	Saturated at 10'	0.0	
B-4 /MW-2	Northeast portion of site, 75' south of northern boundary and 30' west of western boundary.	0-2	Medium brown sandy soil mixed with fill.	No	0.0	Fill comprised of brick, concrete, asphalt fragments to 9'. No evidence of contamination.
		2-9 bedrock refusal.	Fill comprised of brick, concrete and asphalt fragments.	Moist at 9'	0.0	

Boring ID	Location	Depth of Boring	Soil Characteristics	Groundwater Encountered	PID Reading	Field Observations
B-5/MW-3	Central southern portion of site. 100' east of western boundary and 28' north of southern boundary.	0-11	Fill comprised of brick, asphalt, concrete and stone fragments.	No	0.0	Fill comprised of brick, concrete, asphalt fragments to 11'.
		11-17	Heavy dark brown organic silt.	Saturated at 17	0.0	No evidence of contamination.
		17-27	Yellowish medium brown sand.	Saturated	0.0	
B-6	Central northwestern portion of site. 83' from northern boundary and 46' from western boundary.	0-4	Fill with dark brown soil, stone and pale yellowish gray sand. Wood at tip.	No	0.0	Fill comprised of brick, wood, concrete, asphalt fragments.
		4-6.8 refusal	Wood fragments, dark brown soil. Concrete at tip.	No	0.0	No evidence of contamination.
B-7	Central southwestern portion of site. 58' from the western property line and 65' from the southern property line.	0-4	Rock fragments above fill comprised of brick and stone fragments.	No	0.0	Fill comprised of brick, wood, concrete, asphalt fragments.
		4-8	Rock fragments above fill comprised of brick and stone fragments. Wood fragments at 5.5' and 7'.	No	0.0	No evidence of contamination.
		8-10.5 refusal	Dark gray sand becoming finer. Concrete at tip.	No	0.0	
B-8	Central portion of site. 103' from the western property line and 73' north of the southern property line.	0-4	Very fine medium brown sand mixed with fill.	No	0.0	Fill comprised of brick, wood, concrete, asphalt fragments.
		4-8	Zero recovery.	No	0.0	No evidence of contamination.
		8-16	5% recovery. Fine medium brown silty sand.	No	0.0	
		16-20	Dark gray silty clay becoming darker to 18', then medium coarse sands.	No	0.0	
		20-24	Medium brown clay to 21' and then saturated gray sand.	Saturated at 21'	0.0	
B-9	In central portion of site 85' west of eastern boundary and 94' south of northern boundary.	0-8	Concrete breach. Dark brown soil with brick and concrete fragments. Fabric and plastic fragments present in fill.	No	0.0	Fabric and plastic fragments present in fill.
		8-15.5 refusal	Dark brown soil becoming dense and silty with depth.	No	0.0	No evidence of contamination.
B-10	Northeastern portion of property. 25' south of northern property line and 106' west of eastern property line.	0-5.5 refusal	Concrete breach. Dark brown soil with brick and concrete fragments.	No	0.0	Fill comprised of brick, wood, concrete, asphalt fragments. No evidence of contamination.

Boring ID	Location	Depth of Boring	Soil Characteristics	Groundwater Encountered	PID Reading	Field Observations
B-11	Southeastern portion of site.	0-4	Topsoil with gray powdered rock to 2' and then medium brownish green sand.	No	0.0	No evidence of contamination.
		4-7.5 bedrock refusal	Powdered rock above fine light brown sand with concrete fragments.	No	0.0	
B-12	Southern central portion of property. 151' east of western property line and 30' north of southern property line.	0-8	Ash with cinders and brick fragments mixed with coarse yellowish brown sand.	No	0.0	Fill comprised of ash, cinders, brick, wood, concrete, asphalt fragments. No evidence of contamination.
		8-12	Fill ends at 10' then heavy silty clay with 6" of sand at tip.	No	0.0	
B-13	Southwest corner of site. 22' east of western property line and 21' north of southern property line.	0-8	Brick and fill mixed with coarse dark brown sand and wood fragments.	No	0.0	Fill comprised of brick, wood, concrete, asphalt fragments. No evidence of contamination.
		8-14	Coarse dark sand and silt.	No	0.0	

APPENDIX D

Groundwater Sampling and Well Purging Logs

Appendix D: Groundwater Sampling Logs

Well ID	Location	Depth of Well	Depth to Groundwater from top of PVC	Volume Purged (gallons)	PID Reading	Field Observations
MW-1	Northwestern corner of the site. 20.5' south of northern boundary and 10' east of western boundary.	35' 9"	18.35'	9	0.0	Cloudy purge becoming clear. No evidence of contamination
MW-3	Central southern portion of site. 100' east of western boundary and 28' north of southern boundary.	27'	18.40'	5	0.0	Cloudy purge becoming clear. No evidence of contamination
TW-2	Western edge of site. 12' east of western boundary and 51' from southern boundary	20'	11.26'	5	0.0	Cloudy purge becoming clear. No evidence of contamination

Note: Per the Workplan, three of the five groundwater sampling points were sampled. MW-2 was discovered to be dry and could not therefore be sampled and temporary monitoring point TW-2 was sampled instead.

APPENDIX E

Soil Vapor Sampling Logs

Appendix E: Soil Vapor Sampling Logs

Boring ID	Location	Depth of Sample*	Summa Canister Vacuums	Groundwater Encountered	PID Reading	Field Observations
SV-1	18' north of TW- 2 and 25' east of western property line	9'	28 psi at start 3 psi at end	No	0.0	No evidence of contamination
SV-2	Southwest corner of site. 22' east of western property line and 21' north of southern property line.	14'	30 psi at start 2 psi at end	No	0.0	No evidence of contamination
SV-3	Southeast corner of site. 15' north of southern property line and 28.5' west of eastern property line.	14'	30 psi at start 2 psi at end	No	0.0	No evidence of contamination
SV-4	Central portion of property (in area of concrete pavement). 94' west of MW-2 and 106' south of northern property line.	14'	31 psi at start 3 psi at end	No	0.0	No evidence of contamination
SV-5	Eastern portion of site. 7.5' west of eastern property line and 39' southwest of MW-2.	14'	31 psi at start 3 psi at end	No	0.0	No evidence of contamination
SV-6	Northern central portion of property. 152' west of eastern property line and 12' south of northern property line.	14'	29 psi at start 2 psi at end	No	0.0	No evidence of contamination
<ul style="list-style-type: none"> Soil vapor sample depths were based on the proposed maximum depth of construction excavations. Sample SV1 was collected at a shallower depth of 9' because of the presence of shallow groundwater in that location. 						

Ecosystems Strategies, Inc.

APPENDIX F

Laboratory Data Deliverables

Technical Report

prepared for:

Ecosystems Strategies, Inc.
24 Davis Avenue
Poughkeepsie NY, 12603
Attention: Richard Hooker

Report Date: 03/11/2011
Client Project ID: SB10180.40
York Project (SDG) No.: 11C0083

Ecosystems Strategies, Inc.
24 Davis Avenue
Poughkeepsie NY, 12603
Attention: Richard Hooker

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 02, 2011 and listed below. The project was identified as your project: **SB10180.40**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 11C0083

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Volatile Organics, 8260 List

Log-in Notes:

Sample Notes:

Sample Prepared by Method: EPA 5035B

CAS No.	Parameter	Result	Flag	Units	MDL	RL	Dilution	Reference Method	Date/Time Prepared	Date/Time Analyzed	Analyst
106-46-7	1,4-Dichlorobenzene	ND		ug/kg dry	1.5	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
594-20-7	2,2-Dichloropropane	ND		ug/kg dry	2.1	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
95-49-8	2-Chlorotoluene	ND		ug/kg dry	1.1	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
106-43-4	4-Chlorotoluene	ND		ug/kg dry	1.1	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
71-43-2	Benzene	ND		ug/kg dry	1.1	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
108-86-1	Bromobenzene	ND		ug/kg dry	1.4	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
74-97-5	Bromochloromethane	ND		ug/kg dry	2.9	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
75-27-4	Bromodichloromethane	ND		ug/kg dry	1.4	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
75-25-2	Bromoform	ND		ug/kg dry	1.3	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
74-83-9	Bromomethane	ND		ug/kg dry	2.8	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
56-23-5	Carbon tetrachloride	ND		ug/kg dry	2.3	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
108-90-7	Chlorobenzene	ND		ug/kg dry	0.78	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
75-00-3	Chloroethane	ND		ug/kg dry	1.7	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
67-66-3	Chloroform	ND		ug/kg dry	0.80	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
74-87-3	Chloromethane	ND		ug/kg dry	2.0	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
156-59-2	cis-1,2-Dichloroethylene	ND		ug/kg dry	2.1	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
10061-01-5	cis-1,3-Dichloropropylene	ND		ug/kg dry	0.78	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
124-48-1	Dibromochloromethane	ND		ug/kg dry	1.5	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
74-95-3	Dibromomethane	ND		ug/kg dry	3.0	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
75-71-8	Dichlorodifluoromethane	ND		ug/kg dry	1.8	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
100-41-4	Ethyl Benzene	ND		ug/kg dry	0.78	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
87-68-3	Hexachlorobutadiene	ND		ug/kg dry	0.96	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
98-82-8	Isopropylbenzene	ND		ug/kg dry	0.87	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
1634-04-4	Methyl tert-butyl ether (MTBE)	ND		ug/kg dry	0.85	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
75-09-2	Methylene chloride	15	J, B	ug/kg dry	2.4	21	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
91-20-3	Naphthalene	ND		ug/kg dry	1.1	21	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
104-51-8	n-Butylbenzene	ND		ug/kg dry	0.71	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
103-65-1	n-Propylbenzene	ND		ug/kg dry	1.3	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
95-47-6	o-Xylene	ND		ug/kg dry	1.1	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
1330-20-7P/M	p- & m- Xylenes	ND		ug/kg dry	1.2	21	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
99-87-6	p-Isopropyltoluene	ND		ug/kg dry	0.56	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
135-98-8	sec-Butylbenzene	ND		ug/kg dry	1.2	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
100-42-5	Styrene	ND		ug/kg dry	0.96	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
98-06-6	tert-Butylbenzene	ND		ug/kg dry	1.0	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS
127-18-4	Tetrachloroethylene	ND		ug/kg dry	1.2	10	2	EPA SW846-8260B	03/08/2011 07:56	03/08/2011 07:56	SS

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-01	The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
B-Dil	Detected in method blank(s) associated with the sample analysis. This is a common lab artifact which is found at ND-25 ppb. No dilution factor has been applied to these compounds to eliminate artificially inflated results.
B	Analyte is found in the associated analysis batch blank.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

Corrective Action:

Field Chain-of-Custody Record

Poughkeepsie NY, 12603
Attention: Richard Hooker

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 07, 2011 and listed below. The project was identified as your project: **SB10180.40**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 11B0154

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

S-01	The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
IS-01	Certain internal standards were suppressed due to matrix effects. The sample was reanalyzed to confirm this matrix interference.
B	Analyte is found in the associated analysis batch blank.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

Corrective Action:

Soil Vapor Sampling Log - February, 2011

Boring ID	Location	Depth of Sample*	Summa Canister Vacuums	Groundwater Encountered	PID Reading	Field Observations
SV-1	18' north of TW- 2 and 25' east of western property line	9'	28 psi at start 3 psi at end	No	0.0	No evidence of contamination
SV-2	Southwest corner of site. 22' east of western property line and 21' north of southern property line.	14'	30 psi at start 2 psi at end	No	0.0	No evidence of contamination
SV-3	Southeast corner of site. 15' north of southern property line and 28.5' west of eastern property line.	14'	30 psi at start 2 psi at end	No	0.0	No evidence of contamination
SV-4	Central portion of property (in area of concrete pavement). 94' west of MW-2 and 106' south of northern property line.	14'	31 psi at start 3 psi at end	No	0.0	No evidence of contamination
SV-5	Eastern portion of site. 7.5' west of eastern property line and 39' southwest of MW-2.	14'	31 psi at start 3 psi at end	No	0.0	No evidence of contamination
SV-6	Northern central portion of property. 152' west of eastern property line and 12' south of northern property line.	14'	29 psi at start 2 psi at end	No	0.0	No evidence of contamination
<ul style="list-style-type: none"> Soil vapor sample depths were based on the proposed maximum depth of construction excavations. Sample SV1 was collected at a shallower depth of 9' because of the presence of shallow groundwater in that location.

Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- E Concentration exceeds calibration range
- D Data reported from a dilution
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

Methodology Summary

EPA 6010B

A 1-5 gram portion of soil is digested with nitric acid and hydrogen peroxide. The digestate is then refluxed with either nitric acid or hydrochloric acid. The basis of ICAP method is the measurement of atomic emission by an optical spectroscopy technique. The ICAP technique is specified in Method 6010B.

EPA 7471A

The mercury in the sample is reduced to the elemental state and detected by the cold vapor technique in a closed system. The analytical procedure associated with the Cold Vapor technique is derived from EPA Method 7470A.

EPA 8081/8082

A 30g portion of soil is mixed with anhydrous sodium sulfate and is serially extracted with 1:1 methylene chloride and acetone. The extract is dried and solvent/exchanged to hexane during concentration. A measured amount is injected onto a GC and the analytes are detected by an electron capture detector.

EPA 8151

The pH of either solid or aqueous sample is adjusted to <2 with sulfuric acid. The acidified sample is then extracted with ethyl ether for aqueous samples and acetone/ethyl ether for solid samples. The extract is hydrolyzed with the addition of KOH and washed with ethyl ether. After hydrolysis, the sample is acidified to pH <2 and extracted with ethyl ether. The extract is then concentrated to a final concentrated extract of 1.0 ml. The esterified sample extract is analyzed by GC-ECD.

EPA 8260

An inert gas is purged through a 5g sample by EPA Method 5035. Alternatively the soil is extracted with methanol. A portion of extract is spiked into a purging vessel and purged by an inert gas. The vapor is swept through a sorbent column where the purgeables are trapped. The sorbent column is heated and back-flushed with the inert gas to desorb the purgeables onto a GC capillary column. The GC is temperature programmed to separate the purgeables which are then detected with a mass spectrometer

EPA 8270

A 30g portion of soil is mixed with anhydrous sodium sulfate and is extracted with 1:1 methylene chloride and acetone mixture. The methylene chloride extract is dried and concentrated and a measured amount is injected onto a GC and the analytes are detected with a mass spectrometer.

EPA 9014

A representative portion of sample is weighed and placed into a cyanide distillation apparatus. The cyanide as hydrocyanic acid is released from cyanide complexes by means of a reflux-distillation operation and absorbed in a scrubber containing sodium hydroxide solution. The cyanide ion in the absorbing solution is then determined colorimetrically.

SM 2540 G

A representative 5-10 grams of solid sample is placed in a preweighed weighing dish. The sample is dried in an oven at 103-105°C for 12-24 hrs. Alternatively the constant weight of dried sample is attained for the drying period less than 12 hrs. The remaining weight of sample after drying to the original weight expressed in percentage is determined as percent solid.

Semivolatile Organic Compounds EPA Method SW846 8270

Sample Prepared by Method: EPA 3550B GCMS

62-75-9	N-Nitrosodimethylamine	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
108-95-2	Phenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
111-44-4	bis(2-chloroethyl)ether	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
95-57-8	2-Chlorophenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
541-73-1	1,3-Dichlorobenzene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
106-46-7	1,4-Dichlorobenzene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
100-51-6	Benzyl alcohol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
95-50-1	1,2-Dichlorobenzene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
95-48-7	2-Methylphenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
39638-32-9	bis(2-chloroisopropyl)ether	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
106-44-5	3 & 4-Methylphenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
621-64-7	N-Nitroso-di-n-propylamine	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
67-72-1	Hexachloroethane	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
98-95-3	Nitrobenzene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
78-59-1	Isophorone	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
88-75-5	2-Nitrophenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
105-67-9	2,4-Dimethylphenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
65-85-0	Benzoic acid	ND	852	3420	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
111-91-1	bis(2-chloroethoxy)methane	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
120-83-2	2,4-Dichlorophenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
120-82-1	1,2,4-Trichlorobenzene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
91-20-3	Naphthalene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
106-47-8	4-Chloroaniline	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
87-68-3	Hexachlorobutadiene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
59-50-7	4-Chloro-3-methylphenol	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
91-57-6	2-Methylnaphthylene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U
77-47-4	Hexachlorocyclopentadiene	ND	342	1710	ug/kg dry	10	10/17/13 09:04	10/21/13 17:10/JMM	EPA 8270C	U

10/25/2013 11:29

Methodology Summary

EPA 6010B

An aliquot of sample is digested with nitric acid. The digestate is then refluxed with either nitric acid or hydrochloric acid. The basis of ICAP method is the measurement of atomic emission by an optical spectroscopy technique. The ICAP technique is specified in Method 6010B.

EPA 7470A

The mercury in the sample is reduced to the elemental state and detected by the cold vapor technique in a closed system, the analytical procedure associated with the Cold Vapor technique is derived from EPA Method EPA7470A.

EPA 8081/8082

A one liter portion of aqueous sample is serially extracted with methylene chloride. The extract is dried and solvent/exchanged to hexane during concentration. A measured amount is injected onto a GC and the analytes are detected by an electron capture detector.

EPA 8260

Volatile organic compounds are purged from a 10ml sample with an inert gas. The purgeables are trapped in a sorbent column. The sorbent column is heated and back-flushed with the inert gas to desorb the purgeables onto a GC capillary column. The GC is temperature programmed to separate the purgeables which are then detected with a mass spectrometer.

EPA 8270

A 1 liter aqueous sample is serially extracted with methylene chloride at a pH greater than 11 and again at a pH less than 2. The methylene chloride extract is dried and concentrated. The extracts are combined and spiked with the internal standards prior to the injection. A measured amount is injected onto a GC and the analytes are detected with a mass spectrometer.

SM 4500CN E

An appropriate volume of sample is placed into a cyanide distillation apparatus. Cyanide gas is liberated from the aqueous solution upon addition of sulfuric acid, magnesium chloride and heat. The gas is trapped in a scrubber containing sodium hydroxide solution. The concentration of cyanide in the caustic solution is determined colorimetrically.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Daniel Miguel, Technical Director

EPA TO-15 DATA PACKAGE

ANALYTICAL DATA PACKAGE FOR THE
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
ALBANY NEW YORK 12233

Integrated Analytical Laboratories, LLC
Project#: Crotona Terrace
SDG #: E13-10160
Date of first sample receipt: 10/18/2013

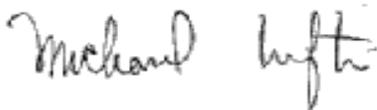

Randolph, NJ 07869
Contract #: NA
NJDEP Certification#: 14751
Date of last sample receipt: 10/18/2013

Client: Brinkerhoff Environmental Services
Project/Site: Crotona Terrace/NY

Client Sample Number	Laboratory Sample	Sample Location	Date/Time of Collection
SV-1	E13-10160-01	NA	10/15/2013 9:04
SV-2	E13-10160-02	NA	10/15/2013 9:10
SV-3	E13-10160-03	NA	10/15/2013 9:17
SV-1 Dup	E13-10160-21	NA	10/15/2013 9:04

This report shall not be reproduced, except in its entirety, without the written consent of Integrated Analytical Laboratories, LLC. The test results included in this report relate only to the samples analyzed. The results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of data contained in this hardcopy data package and in the computer-readable data submitted on CD/diskette and by electronic mail has been authorized by the laboratory manager or his designee, as verified by the following signature.

Michael H. Leftin, Ph.D.
Laboratory Director

SV-1 Dup	E13-10160-21	10/18/2013	10/21/2013	1.0	NA

Sample Receipt: Samples were received in good condition. Documentation was in order.
 Samples were received at IAL by: Padraic Jenkins

Sample Preparation: None required.

Sample Analysis:

- Hold Time:* All within recommended hold times.
- Instrument Calibration:* Meets method criteria.
- Analysis performed by:* Jeff Schmitt
- Analysis nonconformities:* none
- Tentatively Identified Compounds:* Tentatively Identified Compounds (TICs) are determined using a NIST library search. TICs are reported at 10% of the applicable internal standard. Dilution factors are calculated into the final reported result. Since the compounds found are tentatively identified, the conversion from ppbv to ug/m3 may not be made.
- Dilutions:* Dilutions, if necessary, will be conducted directly on the instrument up to a 50x dilution. When dilutions of 100x to 50,000x are necessary, the laboratory must inject a volume of sample into another certified clean canister and add humidified Z-1 zero air to the remainder of the canister volume. Tedlar bags are not used for dilutions.

On-instrument dilutions are conducted as follows:

Dilution Factor	Sample Volume Injected
1	500ml
2.5	200ml
5	100ml
10	50ml
20	25ml
25	20ml
50	10ml

CASE NARRATIVE

ANALYTICAL DATA PACKAGE FOR THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION ALBANY NEW YORK 12233

Integrated Analytical Laboratories, LLC
 Project #: Crotona Terrace
 SDG #: E13-10160
 Date of first sample receipt: 10/18/2013

Randolph, NJ 07869
 Contract#: NA
 NJDEP Certification#: 14751
 Date of last sample receipt: 10/18/2013

Client: Brinkerhoff Environmental Services
 Project/Site: Crotona Terrace / NY

Canister-to-canister dilutions are conducted as follows:

A certified clean canister is obtained and evacuated to approximately -30"Hg. Both the clean/dilution canister and sample canister are fitted with a ¼" Swagelok® nut fitting equipped with septa. Depending on dilution factor necessary, a sample aliquot is removed from the canister and injected into the clean canister using 30cc Multifit gas-tight syringe. Once the correct sample aliquot has been transferred, the dilution canister should be connected to the humidified Z-1 zero air supply and filled to ambient pressure (0"Hg).

Dilution Factor	Sample Aliquot	Z-1 Make-up Added
100	60ml	5940ml
1000	6ml	5994ml

If further dilutions need to be made from the dilution canister, they may be made on-instrument. Using a 100x dilution canister, the following on-instrument dilutions can be produced:

Dilution Factor	Sample Volume Injected
100	500ml
250	200ml
500	100ml
1000	50ml
2000	25ml
2500	20ml
5000	10ml

Using a 1000x dilution canister, the following on-instrument dilutions can be produced:

Dilution Factor	Sample Volume Injected
1000	500ml
2500	200ml
5000	100ml
10,000	50ml
20,000	25ml
25,000	20ml
50,000	10ml

If further dilutions need to be made from the dilution canister, beyond 50,000x, a subsequent canister-to-canister dilution must be made using the above prescribed protocol.

GC Column and ID: Instrument AA: RTX-1 SN 1119138, Instrument AF: RTX-1 SN 869201

Calibration Standards: Only gas phase standards were used. Primary and second-source standards provided by Scott Specialty Gases / Air Liquide

Working Standards: Primary source standards are created from:
- Scott Gas Cylinder #AAL073524, valid 3/4/13 through 3/5/14
@ 100ppb per compound, with exception of m&p-xylenes @ 200ppb. Standard is directly introduced into the instrument for 40ppbv, 20ppbv, 10ppbv, and 2ppbv concentrations. Dilutions are made accordingly, on instrument, with humidified clean air. The 10ppbv standard is also used for the Daily Calibration Verification Standard (DCVS) and Closing Calibration Verification Standard (CCCVS)

On Instrument AF, a canister for the 0.20ppbv standard is prepared and contains a standard at 1ppbv (2ppbv m&p-xylenes). A 1:5 dilution is made from this canister. This same standard canister is used for the Reporting Limit Laboratory Control Sample (RLLCS).

On Instrument AA, the 0.20ppbv standard is diluted on instrument, using humidified clean air, from the primary source cylinder. This same process is used for the RLLCS.

The second source standard, used as the Initial Calibration Verification Standard (ICVSS) and Laboratory Control Sample (LCS), is introduced into the instrument in the same manner as the primary source standard, using:

- Scott Gas Cylinder #CC358741, valid 6/3/13 through 6/4/14.
@ 100ppb per compound, with exception of m&p-xylenes @ 200ppb.

Internal standards are created from:

- Scott Gas, Cylinder #ALM029426, valid 5/13/2013 through 5/14/2016 or
- Scott Gas, Cylinder #ALM037473, valid 1/9/2013 through 12/28/2013
@ 100ppb per compound. Standard is directly introduced into the instrument to reach the 10ppbv concentrations. 1:10 Dilutions are made on instrument with humidified clean air. 50ml of internal standard is added to every standard, method blank, instrument blank, and sample run.

10/03/2013

100 ppbv internal standard mix - prepared in cylinder #ALM012015
10 ppbv per standard/sample - 50 ml injected

100 ppbv calibration standard - prepared in cylinder #AAL073524.

40 ppbv standard - 200 ml injected

20 ppbv standard - 100 ml injected

10 ppbv standard* - 50 ml injected

*Standard also used for CCCVS

2 ppbv standard - 10 ml injected

1 ppbv calibration standard - prepared in canister #2885.

Integrated Analytical Laboratories LLC

Summary of Results

Brinkerhoff Environmental Services
 1805 Atlantic Avenue
 Manasquan, NJ 08736
 Attn: Doug Harm
 Project: Crotona Terrace
 Site: NY

Report Date: 10/23/13
 SDG Number: E13-10160
 Date Received: 10/18/13
 Date Analyzed: 10/21/13
 Data File: AA7819
 Summa ID: 3289

Analysis: Volatile Organic Compounds by EPA Method TO-15

Compound	CAS #	SV-3		Reporting Limits	
		ppbv	ug/m3	ppbv	ug/m3
Acetone	67-64-1	30	70	0.20	0.48
Benzene	71-43-2	ND	ND	0.20	0.64
Bromodichloromethane	75-27-4	ND	ND	0.20	1.3
Bromoform	75-25-2	ND	ND	0.20	2.1
Bromomethane	74-83-9	ND	ND	0.20	0.78
1,3-Butadiene	106-99-0	ND	ND	0.20	0.44
Chlorobenzene	108-90-7	ND	ND	0.20	0.92
Chloroethane	75-00-3	ND	ND	0.20	0.53
Chloroform	67-66-3	ND	ND	0.20	0.98
Chloromethane	74-87-3	ND	ND	0.20	0.41
Carbon disulfide	75-15-0	ND	ND	0.20	0.62
Carbon tetrachloride	56-23-5	0.06	0.38	0.04	0.25
Cyclohexane	110-82-7	0.72	2.5	0.20	0.69
Dibromochloromethane	124-48-1	ND	ND	0.20	1.7
1,2-Dibromoethane	106-93-4	ND	ND	0.20	1.5
1,2-Dichlorobenzene	95-50-1	ND	ND	0.20	1.2
1,3-Dichlorobenzene	541-73-1	ND	ND	0.20	1.2
1,4-Dichlorobenzene	106-46-7	ND	ND	0.20	1.2
Dichlorodifluoromethane	75-71-8	0.49	2.4	0.20	0.99
1,1-Dichloroethane	75-34-3	ND	ND	0.20	0.81
1,2-Dichloroethane	107-06-2	ND	ND	0.20	0.81
1,1-Dichloroethene	75-35-4	ND	ND	0.20	0.79
1,2-Dichloroethene (cis)	156-59-2	ND	ND	0.20	0.79
