SPEED	Searchable Property Environmental Electronic Database

CERTIFICATION

I, Kevin Brussee, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 311-313 Wallabout Street, Brooklyn, NY, (NYC VCP Site No. TBD). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional

Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 311-313 Wallabout Street in the East Williamsburg section of Brooklyn, New York, and is currently identified as Block 2250, Lots 36 and 37 on the New York City Tax Map. Figure 1 shows the Site location. Lots 36 and 37 are rectangular shaped lots consisting of a total of 50 feet of street frontage on Wallabout Street and a depth of 100 feet for a total of 5,000 ft². The Site is located on the north side of Wallabout Street between Throop Avenue and Harrison Avenue and is bordered by a parking lot and a multi-family walk-up to the north, several single-story industrial warehouses to the east and west, and several new 4-story residential apartment buildings to the south. A map of the site boundary is shown on Figure 2.

Lot 36 is currently undeveloped and consists of an exposed soil cover. Lot 37 is developed with a 2-story building with a rear yard.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of developing the lot with a new 4-story apartment building with a full cellar level. The cellar level will span nearly the entire length of the lot and will consist of 1,700 ft² of open space, three storage rooms, a small gym, two restrooms, mechanical space, and an elevator shaft. The cellar will be accessible from the street from a stairwell. The first floor will only cover a portion of the basement, creating a 1,500 ft² terrace above the cellar. The first through fourth floors will consist of apartments.

The cellar will require of nearly the entire lot to a depth of approximately 10 feet below grade. Therefore, an estimated 1,800 cubic yards (2,700 tons) of soil will require excavation for the new building's cellar.

Layout of the redevelopment plans for the cellar and first floors are presented in Figure 3. The current zoning designation is R7A. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

A Phase I screening was completed by EBC in 2014. The following Site history was established based on historic Sanborn maps:

Prior to 1887, former Lots 36 and 37 were developed with two story houses. A portion of the two-story house on Lot 37 was also utilized as a store. The properties remained relatively unchanged through 1981, when the residential building on Lot 36 was demolished. Between 1982 and 1986, the 2-story residential building in the rear of Lot 37 was demolished. The residential building on Lot 37 was converted for manufacturing use in 1991 by a company called Vartex Instrument Corp. and was utilized up until at least 2007. Sanborn Maps are included in Attachment A.

The properties were assigned E-designations (E-238) for Hazmat and Air during the Broadway Triangle rezoning action completed by the City in December 2009.

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 5 feet.
2. Site listed as TCE RCRA generator.

Summary of the Work Performed under the Remedial Investigation

EBC performed the following scope of work at the Site in October of 2014:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed six soil borings across the Site, and collected nine soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site and collected three groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and

4. Installed one sub-slab soil gas implant and three soil vapor probes across the Site and collected four samples for chemical analysis.

Summary of Environmental Findings

1. The elevation of the Site is approximately 13 feet.
2. Depth to groundwater is estimated to be approximately 10 feet below sidewalk grade.
3. Regional groundwater flow is generally east-northeast.
4. Depth to bedrock is at the Site is greater than 100 feet.
5. The stratigraphy of the Site from the surface down consists of historic fill material to depths as great as 5 feet, underlain by native brown silty sand.
6. Soil/fill samples results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives and Restricted Residential Soil Cleanup Objectives as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples detected no VOCs above Unrestricted Use SCOs. The VOC trichloroethene (max of 130 µg/kg), was detected in three of the four shallow soil samples (0-2' below surface grade) collected from the historic fill layer at a concentration below Unrestricted Use SCOs, and the VOC p-isopropyltoluene (230 µg/kg) was detected in one of the shallow soil samples collected from the historic fill layer at a concentration below Unrestricted Use SCOs. Five SVOCs, including benz(a)anthracene (max of 1,500 µg/kg), benzo(a)pyrene (max of 1,300 µg/kg), benzo(b)fluoranthene (max of 1,700 µg/kg), chrysene (max of 1,500 µg/kg), and indeno(1,2,3-cd)pyrene (max of 770 µg/kg), were detected above Unrestricted Use and Restricted Residential Use SCOs within two of shallow soil samples collected from the historic fill layer. The pesticides including 4,4'-DDD (max of 33 µg/kg), 4,4'-DDE (max of 200 µg/kg), 4,4'-DDT (max of 360 µg/kg) and dieldrin (27 µg/kg), were detected above Unrestricted Use SCOs in each of three shallow soil samples collected from the historic fill layer, and the soil sample collected from within the basement. PCB-1254 (140 µg/kg) was detected within one of the shallow soil samples above Unrestricted Use SCOs. Several metals including barium (max of 4,590 mg/kg), cadmium (4.65 mg/kg), chromium (max of 161 mg/kg), copper (max of 126 mg/kg), lead (max of 2,840 mg/kg), mercury (max of 2.77 mg/kg), and zinc (max of 3,590 mg/kg) exceeded Unrestricted Use SCOs within each of the shallow soil samples. Of these metals, barium, cadmium, lead,

mercury and zinc also exceeded Restricted Residential Use SCOs. Boring location B4 located under the existing one story building is identified as a metals hot-spot, with the metals barium (4,590 mg/kg), cadmium (4.65 mg/kg), lead (2,840 mg/kg), and zinc (3,590 mg/kg) exceeding Restricted Residential Use SCOs. Overall, with the exception of the metals hot-spot identified at the B4 soil boring location, the soil results were consistent with data identified at sites with historic fill material in NYC.

7. Groundwater samples results were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (GQS) for Class GA (drinking water). Groundwater samples showed no PCBs at detectable concentrations and no pesticides were detected above GQS. One pesticide 4,4,DDT (0.02 µg/L) was detected below GQS in the duplicate sample. The chlorinated VOC trichloroethene (max of 32 µg/L) was detected in all three groundwater samples above GQS, and the chlorinated VOC cis-1,2-dichloroethene (max 7 µg/L) was detected in one of the groundwater samples above GQS. Other VOCs including chloroform (max of 0.43 µg/L), chloromethane (maximum 0.4 µg/L), and methylene chloride (0.22 µg/L) were detected at concentration below their respective GQS. Four SVOCs were detected above GQS including benz(a)anthracene (max of 0.04 µg/L), benzo(b)fluoranthene (0.03 µg/L), bis(2-ethylhexyl)phthalate (5.8 µg/L), and chrysene (max of 0.03 µg/L). Four dissolved metals were detected in groundwater at levels above GQS including iron (max of 2.85 µg/L), manganese (max of 1.5 µg/L), selenium (0.013 µg/L), and sodium(28.2 µg/L).
8. Soil vapor samples collected during the 2014 EBC RI were compared to the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (October 2006) Matrix 1 and Matrix 2 values. Samples indicated petroleum related VOCs were present at low concentrations. Total concentrations of petroleum-related VOCs (BTEX) ranged from 25.48 µg/m³ to 181.84 µg/m³. The CVOC trichloroethylene (TCE) was detected in all four soil gas samples at concentrations ranging from 5.58 µg/m³ to 154 µg/m³. The NYSDOH Final Guidance on Soil Vapor Intrusion (October 2006) notes mitigation is the recommended action for a TCE concentrations above 5 µg/m³ in soil gas. Tetrachloroethylene (PCE) was detected in all four soil gas samples ranging in concentration from 1.36 to 22.6 µg/m³. Carbon tetrachloride (maximum of 0.566 µg/m³) was detected within three of the four soil gas samples, and 1,1,1-trichloroethane (TCA)

was not detected in any of the four soil gas samples. The PCE, carbon tetrachloride and TCA concentrations are below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Y/D G/C LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.11-acre Site located at 311-313 Wallabout Street in the East Williamsburg section of Brooklyn, New York. The Site will be redeveloped with a 3-story residential building with full cellar. The portion of the RI work conducted on the Site was conducted in October of 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 311-313 Wallabout Street in the East Williamsburg section of Brooklyn, New York, and is currently identified as Block 2250, Lots 36 and 37 on the New York City Tax Map. Figure 1 shows the Site location. Both lots are rectangular shaped lots each consisting of 25 feet of street frontage on Wallabout Street and a depth of approximately 100 feet for a total of approximately 5,000 ft². The Site is located on the north side of Wallabout Street between Throop Avenue and Harrison Avenue and is bordered by a parking lot and a multi-family walk-up to the north, several single-story industrial warehouses to the east and west, Wallabout Street to the south. A map of the site boundary is shown on Figure 2.

Lot 36 is currently undeveloped and contains a shipping container. Lot 37 is developed with a 2-story building and a single-story shed with a rear yard.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of developing the lot with a new 4-story apartment building with a full cellar level. The cellar level will span nearly the entire length of the lot and will consist of 1,700 ft² of open space, three storage rooms, a small gym, two restrooms, mechanical space, and an elevator shaft. The cellar will be accessible from the street from a stairwell. The first floor will only cover a portion of the basement, creating a 1,500 ft² terrace above the cellar. The first through fourth floors will consist of apartments.

The cellar will require of nearly the entire lot to a depth of approximately 10 feet below grade. Therefore, an estimated 1,800 cubic yards (2,700 tons) of soil will require excavation for the new building's cellar.

Layout of the redevelopment plans for the cellar and first floors are presented in Figure 3. The current zoning designation is R7A. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area immediately surrounding Site consists of a mix new and older residential buildings, and older industrial buildings. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals or daycare facilities are located within a 250 ft radius of the Site. Intermediate School 318 is located on the north side of Walton Street between Throop Avenue and Harrison Avenue.

Surrounding Property Usage

Direction	Property Description
North – Adjacent Properties	<u>Block 2250, Lot 25</u> - 116 Walton Street A 2,500 ft ² lot currently being redeveloped with a new apartment building. <u>Block 2250, Lot 24</u> - 114 Walton Street A 2,500 ft ² lot developed with a 3-story multi-family walk up.
South – Opposite side of Wallabout Street	<u>Block 2266 Lots 21 through 25</u> - 390-398 Wallabout Street Five 2,500 ft ² lots, each developed with a new 4-story apartment building.
East – Adjacent Properties	<u>Block 2250, Lots 32, 33 and 129</u> - 62-66 Throop Avenue Two industrial warehouses (5,000 ft ² and 2,500 ft ²) and a vacant 3,750 ft ² lot.
West – Adjacent Property	<u>Block 2250, Lot 38</u> - 307 Wallabout Street A single-story 5,000 ft ² industrial warehouse.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I screening was completed by EBC in 2014. The following Site history was established based on historic Sanborn maps:

Prior to 1887, former Lots 36 and 37 were developed with two story houses. A portion of the two-story house on Lot 37 was also utilized as a store. The properties remained relatively unchanged through 1981, when the residential building on Lot 36 was demolished. Between 1982 and 1986, the 2-story residential building in the rear of Lot 37 was demolished. The residential building on Lot 37 was converted for manufacturing use in 1991 by a company called Vartex Instrument Corp. and was utilized up until at least 2007. Sanborn Maps are included in Attachment A. The properties were assigned E-designations (E-238) for Hazmat, Noise and Air during the Broadway Triangle rezoning action completed by the City in December 2009.

2.2 Previous Investigations

EBC is not aware of any previous investigations conducted at the Site.

2.3 Site Inspection

Mr. Kevin Brussee of EBC performed a site inspection on September 22, 2014, beginning at approximately 11:00 am. The reconnaissance included a visual inspection of the property, the sidewalk in front of the Site, and the exterior of adjacent properties. The Site consisted of a abandoned 2-story building with a cellar, a side yard, and a rear yard. A shipping container was located on the side yard, and the rear was excessively overgrown. An 8ft high chain-link fence was erected in front of the building and the side yard, and a chain link fence was erected along the former property line that separated Lots 36 and 37. The basement of the building covered the entire footprint of the building with the exception of the one-story rear addition. The basement consisted of exposed soil, but there appeared to be a concrete slab at one time. No evidence of an aboveground or underground storage tank was observed during the site inspection.

2.4 Areas of Concern

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 5 feet.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kevin Brussee.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

EBC performed the following scope of work at the Site in August of 2014:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed six soil borings across the Site, and collected nine soil for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site and collected three groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and
4. Installed one sub-slab soil gas implant and three soil vapor probes across the Site and collected four samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was not performed as a part of this assessment.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On October 30, 2014, six soil borings (B1 through B6) were installed in the approximate locations shown on Figure 5. The six soil boring locations were chosen to gain representative soil quality information across the Site. For two of the six soil borings, soil samples were collected continuously from grade to a final depth of 16 feet below existing grade and one soil boring was collected continuously from grade to 12 feet below grade, all using a five-foot steel macro-core sampler with acetate liners and Geoprobe direct-push equipment. The other three of the six soil borings were collected utilizing a four foot stainless steel hand auger with disposable plastic liners. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photoionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were detected. From the three soil borings advanced with the five-foot macro-core sampler, soil samples were retained for laboratory analysis from the intervals 0 to 2 feet below grade and 6 to 8 feet below grade. From the three soil borings collected with the hand auger, soil samples were retained from the 0 to 2 foot interval only.

Soil boring details are provided in Table 1. Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B.

Groundwater Monitoring Well Construction

Two temporary 1-inch diameter PVC monitoring wells (MW2 and MW3) with 10 feet of 0.010 slot screen were installed by EBC at the approximate locations shown on Figure 5, set to intersect the water table. Since groundwater was encountered at approximately 10 feet below grade, both monitoring wells were installed to a depth of 16 feet below grade. A third temporary monitoring well (MW1) was installed within the basement of the existing building to a depth of approximately 8 feet. Monitoring well sampling details are provided in Table 1. Monitoring well locations are shown in Figure 5.

Survey

Soil borings, monitoring wells and soil gas sampling locations were located to the nearest 0.10 foot with respect to two or more permanent site features.

Water Level Measurement

Approximate groundwater level measurements were collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well. No free product was observed within the three monitoring wells. Water level data is included in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Nine soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2, 3, 4 and 5. Figure 5 shows the location of samples collected during this RI. Laboratories and analytical methods for soil samples collected during the RI are shown below.

The nine soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis with proper chain of custody to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). With the exception of soil sample B6(0-2) which was analyzed only for volatile organic compounds (VOCs) by EPA Method 8260, all soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals.

Groundwater Sampling

Three groundwater samples and one duplicate sample were collected for chemical analysis during this RI. Groundwater samples were collected from the monitoring wells utilizing dedicated polyethylene tubing and a peristaltic pump. Groundwater samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 9. Sampling logs with information on purging and sampling of groundwater monitoring wells are included in Appendix C. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

One sub-slab soil vapor implants (SS1) and three soil vapor probes (SG1, SG2 and SG3) were installed and four soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10, and the soil vapor sampling logs are included in Attachment D. Methodologies used

for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

The three soil vapor probes were installed using Geoprobe™ equipment and tooling. The approximate location of each of the soil vapor probes is shown on Figure 5. The vapor probes that were installed were the Geoprobe™ Model AT86 series, which are constructed of a 6-inch length of double woven stainless steel wire. The probes were installed to a depth of 6 feet below grade at all locations. Each probe was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the probe to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface.

The sub-slab soil vapor implant installed within the basement was installed by drilling a 1/2 inch to a depth of approximately 1ft with a handheld drill and inserting 1/4 inch polyethylene tubing. The tubing was then sealed at the surface with hydrated granular bentonite.

Soil vapor sampling for the three soil vapor probes and one sub-slab soil gas implant installed on October 29, 2014 was conducted on October 31, 2014. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot ft by 1 ft square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all four sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the four vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment D). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil and groundwater analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 10. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site from the surface down consists of a layer of historic fill material that extends to depths as great as 5 feet below grade in some areas, underlain by native brown silty sand.

Hydrogeology

A table of water level data for monitoring wells MW1-MW3 is included in Table 1. The average depth to groundwater is 10 feet below surface grade.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 2 through 5. Laboratory results from the RI were compared to NYSDEC Part 375 Table 375-6.8(a) and (b) Soil Cleanup Objectives (SCOs) for Unrestricted Use and Restricted Residential Use. A copy of the laboratory report for the soil samples is provided in Attachment D. Figure 6 shows the location and posts the values for soil/fill from the RI that exceeds UUSCOs and RRSCOs.

Data collected during the RI showed no VOCs above Unrestricted Use SCOs. The VOC trichloroethene (max of 130 µg/kg), was detected in three of the four shallow soil samples (0-2' below surface grade) collected from the historic fill layer at a concentration below Unrestricted Use SCOs, and the VOC p-isopropyltoluene (230 µg/kg) was detected in one of the shallow soil samples collected from the historic fill layer at a concentration below Unrestricted Use SCOs. Five SVOCs, including benz(a)anthracene (max of 1,500 µg/kg), benzo(a)pyrene (max of 1,300 µg/kg), benzo(b)fluoranthene (max of 1,700 µg/kg), chrysene (max of 1,500 µg/kg), and indeno(1,2,3-cd)pyrene (max of 770 µg/kg), were detected above Unrestricted Use and Restricted Residential Use SCOs within two of shallow soil samples collected from the historic fill layer. The pesticides including 4,4'-DDD (max of 33 µg/kg), 4,4'-DDE (max of 200 µg/kg), 4,4'-DDT (max of 360 µg/kg) and dieldrin (27 µg/kg), were detected above Unrestricted Use SCOs in each of three shallow soil samples collected from the historic fill layer, and the soil

sample collected from within the basement. PCB-1254 (140 µg/kg) was detected within one of the shallow soil samples above Unrestricted Use SCOs. Several metals including barium (max of 4,590 mg/kg), cadmium (4.65 mg/kg), chromium (max of 161 mg/kg), copper (max of 126 mg/kg), lead (max of 2,840 mg/kg), mercury (max of 2.77 mg/kg), and zinc (max of 3,590 mg/kg) exceeded Unrestricted Use SCOs within each of the shallow soil samples. Of these metals, barium, cadmium, lead, mercury and zinc also exceeded Restricted Residential Use SCOs. Boring location B4 located under the existing one story building is identified as a metals hot-spot, with the metals barium (4,590 mg/kg), cadmium (4.65 mg/kg), lead (2,840 mg/kg), and zinc (3,590 mg/kg) exceeding Restricted Residential Use SCOs. Overall, with the exception of the metals hot-spot identified at the B4 soil boring location, the soil results were consistent with data identified at sites with historic fill material in NYC.

5.3 Groundwater Chemistry

Data collected during the RI performed in October of 2014 is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples collected during the 2014 EBC RI is included in Tables 6 through 9. Figure 7 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA Groundwater Quality Standards (GQS). A copy of the laboratory report for the groundwater samples is provided in Attachment D.

Groundwater samples collected during the RI showed no PCBs at detectable concentrations and no pesticides were detected above GQS. One pesticide 4,4,DDT (0.02 µg/L) was detected below GQS in the duplicate sample. The chlorinated VOC trichloroethene (max of 32 µg/L) was detected in all three groundwater samples above GQS, and the chlorinated VOC cis-1,2-dichloroethene (max 7 µg/L) was detected in one of the groundwater samples above GQS. Other VOCs including chloroform (max of 0.43 µg/L), chloromethane (maximum 0.4 µg/L), and methylene chloride (0.22 µg/L) were detected at concentration below their respective GQS. Four SVOCs were detected above GQS including benz(a)anthracene (max of 0.04 µg/L), benzo(b)fluoranthene (0.03 µg/L), bis(2-ethylhexyl)phthalate (5.8 µg/L), and chrysene (max of 0.03 µg/L). Four dissolved metals were detected in groundwater at levels above GQS including iron (max of 2.85 µg/L), manganese (max of 1.5 µg/L), selenium (0.013 µg/L), and sodium(28.2 µg/L).

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 10. Soil vapor analytical results were compared to New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (October 2006) Matrix 1 and 2 guidance values. Figure 8 shows the location and posts the values for soil vapor samples with detected concentrations of NYSDOH Matrix 1 and 2 compounds.

Data collected during the RI indicated petroleum related VOCs were present at low concentrations. Total concentrations of petroleum-related VOCs (BTEX) ranged from 25.48 $\mu\text{g}/\text{m}^3$ to 181.84 $\mu\text{g}/\text{m}^3$. The CVOC trichloroethylene (TCE) was detected in all four soil gas samples at concentrations ranging from 5.58 $\mu\text{g}/\text{m}^3$ to 154 $\mu\text{g}/\text{m}^3$. The NYSDOH Final Guidance on Soil Vapor Intrusion (October 2006) notes mitigation is the recommended action for a TCE concentrations above 5 $\mu\text{g}/\text{m}^3$ in soil gas. Tetrachloroethylene (PCE) was detected in all four soil gas samples ranging in concentration from 1.36 to 22.6 $\mu\text{g}/\text{m}^3$. Carbon tetrachloride (maximum of 0.566 $\mu\text{g}/\text{m}^3$) was detected within three of the four soil gas samples, and 1,1,1-trichloroethane (TCA) was not detected in any of the four soil gas samples. The PCE, carbon tetrachloride and TCA concentrations are below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

5.4 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected for the Site.

5.5 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

APPENDIX A
PHASE I REPORT

PHASE I Screening Summary

311-313 Wallabout Street, Brooklyn, New York
Block 2250 Lot 36

Lot Info:

The subject site consists of a single lot located on the north side of Wallabout Street in the Williamsburg neighborhood of Brooklyn, New York. The street address of the subject site is 311 and 313 Wallabout Street, Brooklyn, New York 11206, and is identified as Block 2250, Lot 36 on the NYC Tax Map. Lot 36 consists of 50 of street frontage along Wallabout Street and a depth of 100 feet for a total area of 5,000 sf. Lot 36 is zoned R7A.

The subject site was previously designated as Lots 36 and 37, before the two lots were combined into single Lot 36. Lot 37 was the western most lot and consisted of 25 ft of street frontage. Lot 36 was the eastern most lot and consisted of 25 ft of street frontage.

Former Lot 37 (311 Wallabout Street) is currently developed with a 2-story building and a single-story shed with a rear yard, and former Lot 36 (313 Wallabout Street) is undeveloped and overgrown with vegetation.

History:

Prior to 1887, former Lots 36 and 37 were developed with two story houses. A portion of the two-story house on Lot 37 was also utilized as a store. The properties remained relatively unchanged through 1981, when the residential building on Lot 36 was demolished. Between 1982 and 1986, the 2-story residential building in the rear of Lot 37 was demolished. The residential building on Lot 37 was converted for manufacturing use in 1991 by a company called Vartex Instrument Corp. and was utilized up until at least 2007. Sanborn Maps are included in Attachment A. The properties were assigned E-designations (E-238) for Hazmat, Noise and Air during the Broadway Triangle rezoning action completed by the City in December 2009.

Site Visit:

A site visit was conducted at 311-313 Wallabout Street by Mr. Kevin Brussee of Environmental Business Consultants on December 10, 2014.

Mr. Kevin Brussee of EBC performed a site inspection on September 22, 2014, beginning at approximately 11:00 am. The reconnaissance included a visual inspection of the property, the sidewalk in front of the Site, and the exterior of adjacent properties. The Site consisted of a abandoned 2-story building with a cellar, a side yard, and a rear yard. A shipping container was located on the side yard, and the rear was excessively overgrown. An 8ft high chain-link fence was erected in front of the building and the side yard, and a chain link fence was erected along the former property line that separated Lots 36 and 37. The basement of the building covered the entire footprint of the building with the exception of the one-story rear addition. The basement consisted of exposed soil, but there appeared to be a concrete slab at one time.

No aboveground storage tanks or evidence of underground storage tanks (e.g. fill port, vent pipe) were observed by or reported to EBC.

Environmental Database Search:

The Site (311 Wallabout Street) is listed in the FINDS, NY Manifest and RCRA NonGen/NLR databases under the name Vartex Instrument Corp. (Vartex). In 2000, Vartex generated/disposed of one drum containing 20 gallons of liquid containing a TCLP trichloroethylene concentration greater than 0.5 mg/L, and seven drums containing F002 (TCE) waste.

The Site is also listed in the NY Spills database (NYSDEC Spill Number 99-12454) under the street address 398 Wallabout Street. A reported hazmat incident noted the presence of full drums containing about 600 gallons of trichloroethylene. Pooling trichloroethylene was noted on the dirt floor, and soil contamination was assumed. The reported owner of the property was Vartex Instrument Corp. The NYSDEC Spill number was closed for not being a spills program matter.

The Site at 417 Manhattan Avenue is listed as an E-Designation site for Hazmat, Noise and Air.

Conclusions/Recommendations

Based upon reconnaissance of the subject site and surrounding properties, and review of historical records and regulatory agency databases, the following Recognized Environmental Conditions (RECs) was identified for the property.

- Trichloroethylene (TCE) was used and stored at the Site. A spill/release of TCE to soil was reported in 1999 after exposure by building occupants. The drums of TCE have been removed and disposed off-Site, but no records of spill cleanup were obtained.

A Phase II Subsurface Investigation consisting of soil, groundwater and soil gas sampling should be performed to determine TCE has impacted soil, groundwater and/or soil gas.

The following environmental issues were identified for the Site:

The Site has been assigned an E-designation (E-238) for Hazmat, Noise and Air as part of the Broadway Triangle rezoning action completed by the City in December of 2009 (CEQR 09HPD019K). An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property.

Typical NYCOER Phase II investigation/sampling requirements for hazmat “E” sites are as follows:

- Collection and laboratory analysis of for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), target analyte list (TAL) metals, PCBs and pesticides.
- Collection and laboratory analysis of groundwater samples for VOCs, SVOCs, TAL metals (filtered and unfiltered), PCBs and pesticides.
- Collection and laboratory analysis of soil gas samples for laboratory analysis of VOCs via EPA Method TO-15.

The Air E requires use of natural gas, and the exhaust stack must be located 30ft from the northern, western and eastern lot lines. The Noise E requires a window - wall attenuation of 30 dBA.

Asbestos and Lead Based Paint

Based on the date of construction of the building, asbestos containing materials (roof, roof flashing, floor tiles, drywall and other concealed materials) and or lead based paint may be present. Prior to any renovations or demolition of the building, an asbestos and lead based paint survey would be needed to determine the asbestos and or lead based paint content of suspect materials.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Env. Business Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

EXECUTIVE SUMMARY

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/11/2014 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 11 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/19/2014 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

Class Code: Does not present a significant threat to the public health or the environment - action may be deferred.				

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 04/09/2014 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/19/2014 has revealed that there are 32 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 11/18/2010 has revealed that there

EXECUTIVE SUMMARY

are 4 NY RES DECL sites within approximately 0.125 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/19/2014 has revealed that there are 22 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/01/2014 has revealed that there are 56 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 29 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 6 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

and vapor barrier designs have been approved by NYC OER. Hannah Moore NYC OER Ph. (212) 442-6372 78-80 Throop LLC. **property owner** c/o Rabsky Group 505 Flushing Ave, # 1D Brooklyn, NY 11205 Attn.: Ph. (718) 237-2261 alternate address: noneno PBS or other spills found as per ACRIS record, 78-80 Throop LLC. owns properties 78 Throop Ave and 80 Throop Ave and as per NYC DOB record, both properties are being developed. also, as per NYC DOB record, site 78 Throop Ave has little "e" designation for hazmat/noise/air. -----1:51 PM:- left message at Rabsky Group. 02/15/13-Hiralkumar Patel. 9:33 AM:- received email from Kevin including Remedial Investigation Report. report forwarded to DEC Sharif for review. after discussing with DEC Sharif, case assigned to him. 01/15/14-Hiralkumar Patel. DEC Nick Lombardo came to discuss PBS application form he received for registration of a 100 gal tank. informed him that contractor found one 1,000 gal and one 550 gal tank at the site. he will talk to contractor to discuss this. case reassigned to DEC Patel. 10:24 AM:- spoke with Kevin. inquired him about remediation work. he mentioned that three lots (78/80/82 Throop Ave) being redeveloped with three separate buildings. all three lots were excavated to about 8-9 ft bg, little into groundwater, for entire footprint. EBC collected endpoint samples. foundation for all three buildings have been poured. asked Kevin to submit report for review. 11:07 AM:- received email from Kevin including report. he mentioned that some soil and liquid manifests are missing which will be submitted soon, once available. reviewed available documents. 1) Remedial Investigation Report dated Oct. 2012:- site located at 78-80 Throop Ave; block 2266; lots # 32 and 33- proposed future use of the site will consist of two identical 4-story apartment buildings- both buildings will have a full cellar beneath the footprint of each building- concrete slab of the cellar will be approx. 6 ft 4 inches below sidewalk level- excavation for each new building and rear cellar-level court yard will likely extend to a depth of approx. 8 ft bg- prior to 1887, the property was developed with a bakery, livery and wagon house. the operation was closed by 1904. sometime between 1904 and 1905 the site was redeveloped with a 5-story mixed use commercial/residential building. the first floor was divided into two commercial spaces and the upper floors were residential. the 5-story mixed use building remained until the entire lot was demolished in 1980. the site has remained undeveloped since, but the land was used for lumber storage until 2003. since 2003, the site has remained vacant- elevation of the property is approx. 14 ft- depth to bedrock is greater than 100 ft- installed four (4) borings (SB-1 through SB-4) to a depth of 10 ft bg- subsurface soil at the site consisted of historic fill, which was primarily comprised of brick, concrete, wood and other debris in a brown silty-sand mix- layer of historic fill extended to a depth of 7 ft bg- native soil consisting of a brown sand is present below the historic fill layer- no PID readings were obtained from any of the soil borings with the exception of slightly elevated readings noted for soil recovered from approx. 8 to 10 ft bg from SB1 (50 ppm) and SB3 (100 ppm)- soil at 8-10 ft bg exhibited a petroleum odor, and was stained slightly grey- collected two soil samples from each boring: one from 0-2 ft bg and another from 8-10 ft bg- collected one duplicate soil sample from boring SB-4 from 0-2 ft bg- found some VOC contamination in deeper soil from 8-10 ft bg- found some SVOC contamination in shallow soil from 0-2 ft bg- installed three (3) 1-inch diameter temporary monitoring wells (in borings SB-1, SB-2 and SB-3)- wells were installed to a depth of 15 ft bg, with 10 ft of

UNDERGROUND (Continued)

S112809841

screen- collected 3 groundwater samples and 1 duplicate groundwater sample- no free product was observed within the three monitoring wells- depth to groundwater is approx. 10 ft bg ----- groundwater flow direction based on prior investigations performed on adjacent properties is from south to north ----- three groundwater samples and one duplicate groundwater sample (from boring SB-1) were collected for analysis- found only chlorinated compounds in groundwater samples- installed three (3) soil vapor probes (VP-1 through VP-3) to a depth of 6 ft bg and collected 3 samples- found petroleum and chlorinated compounds in soil-vapor samples2) Remedial Action Work Plan dated Oct. 2012:- excavation of soil/fill to a depth of approx. 8 ft bg for development purposes and excavation of the area with VOC contamination to an anticipated depth of approx. 10 ft bg- collection and analysis of endpoint samples- installation of vapor barrier below the concrete slab and behind the foundation walls of the two proposed buildings- installation and operation of a passive SSDS below the vapor barrier3) tank removal report dated 09/17/13:- two (2) 1,000 gal USTs removed: one from near the front of 80 Throop Ave (lot 33) and another from near the front of 82 Throop Ave (lot 34)- both lots were excavated to a depth of approx. 7 ft bg (depth of groundwater table) for redevelopment purposes, but additional excavation was performed below the groundwater interface to remove 2 ft smear zone of petroleum impacted soil from across teh front of 60 ft of site- pool of water accumulated within the excavation- total of approx. 784 gal of groundwater and a thin film of oil that accumulated on the groundwater surface was removed- endpoint samples were collected from entire site- no contamination noted in endpoint samples based on available information, case closed.***e" designation**

DEC Memo: Sangesland called "Earth Tech Environmental" back to ask about this "spill"Contact said a 20 gal drum of unknown oil was found on the property during soil borings (part of a phase 2 on the site). Sangesland informed Earth Tech that the property owner was responsible for removing the drum from the site, NOT the DEC.Sangesland told Earth Tech to remove the drum, over excavate any contaminated soil, take 1 end point sample, forward a report to DEC with writeup, test results and waste manifest.04/13/06- Case was transferred from Jake Krimgold to Koon Tang.08/27/2009 - Copy of Phase 2 report was submitted by Earth Tech.In 2005, during excavation of Test Pit #29 on the site, a drum was discovered at approx 7 ft depth. Drum contained unknown black oil which was leaking. Spill was called in to DEC. Visually contaminated soils were excavated from a depth of 10 ft below grade (approx 35 tons) of soil was removed. Soil sample #TP29-10 was tested and came back No VOCs, or SVOCs therefore no additional excavation work was necessary at this site.

Remarks: 1-25 GALLON DRUM IN A TEST PIT: DEC CALL TO SEE IF IT CAN BE PICKED UP:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE" assigned to C. Whitfield in backlog initiative; no file received from region. Original 3/28/01 site info indicates caller was a contractor asked for quote for soil cleanup as part of construction project. The caller was not selected for the work due to price. A search of spills database by location did not reveal any other spill report, however, Property Shark indicated the location is also known as 331 - 341 Wallabout Street. On May 1, 2001 Wallabout Development, LLC was registered with NYSDOS. This location is now occupied by a 7 story 101' X 72' condo built in 2001 owned by Wallabout Development. Next step is to pursue new owner for documentation of soil removal or close administratively. 10/2/09 - Austin - Spill transferred from Albany staff to Ketani, for further investigation - end 10/27/09 - Raphael Ketani. The spill was discovered or took place on 3/28/01. It consisted of a call from someone at a construction company to PTC, an oil spill cleanup contractor. PTC called in the spill, but the nature of the spill was not known. The spill site address is 613 Broadway. However, the previous DEC case manager thought that the site was the location of a condo building that was under construction. This location is 614 Broadway and is listed in Property Shark as the same block and lot as 331-341 Wallabout Street. The block and lot is listed in Property Shark as 2251 and 7501, but ACRIS lists the block as 1003. On top of this, Property Shark doesn't list the address 613. The closest one is 607 and this belongs to the Lindsay Park Houses. So it is not clear whether the condo building is the correct spill location. If 614 Broadway is the correct address, then the condominium building is the correct site. The construction company was Wallabout Development, LLC, 341 Wallabout Street, Ste 1A, Brooklyn, 11206. The general builder was Wallabout Development, Inc., 1454 42 Street, Brooklyn, 11219. Mr. Slavik (917) 364-5803 was the last contact at Wallabout. The site is near the intersection of Manhattan Avenue and Broadway. There is no PBS registration, nor a case file, nor any E-docs. I will make a site visit. 12/7/09 - Raphael Ketani. I made an

APARTMENT BUILDING (Continued)

S104951601

unannounced site visit. The building is of relatively new construction. It is a brick apartment building and sits at the corner of Wallabout Street and Broadway. A side entrance had the address 610 Broadway. A doctor's office is at 341 Wallabout Street. I could not locate the other alternate address, 331 Wallabout Street. I did not see a management company address or name plate in the lobby for the building. There were no oil odors. I rechecked the block and lot information with the address of 331 to 341 Wallabout Street. ACRIS indicated that the block and lot were 2251 and 1003. The owner appears to be Broadway Wallabout Realty, LLC, 341 Wallabout Street, apt 1A, Brklyn, 11206. 12/8/09 - Raphael Ketani. I contacted Mr. Slavik, the last known party who was involved in the building construction. He told me to contact K I Construction (718) 387-0400. I contacted K I Construction and spoke to one of the owners, Aron Kapelyus. He said that the building was built 6 years ago. However, before this, it was a vacant lot for 15 years. Mr. Kapelyus said that the lot was dug out in order to construct the foundation. I asked him whether the basement is one level or two levels. He said that it was just one level and that the digging went down 6 feet. I asked him where the oil contaminated soil was sent to. He said that there was no oil contaminated soil. I asked him whether he can send me copies of the soil disposal manifests. He said that he has none. I asked him whether he can send me a copy of the construction plan for the foundation. He said that he will e-mail it to me. He passed my call to Carol, his secretary, and she took down my e-mail information. 12/14/09 - Raphael Ketani. I never received the plans for the foundation, nor the excavation for the foundation. As the contaminated soil was most likely removed as part of the soil excavation to at least 6 feet below grade, as there were no oil odors in the lobby, nor visible impacts from any contaminated soil, as there is no further information regarding the spill, and as there doesn't appear to be any threat to human safety, or the environment, I am closing the spill case.

Remarks:

CALLER WAS CONTACTED TO GIVE A PRICE ON A CLENA UP JOB AT THE ABOVE LOCATION SITE IS UNDER CONSTRUCTION AFTER CALLER GAVE HIS PRICE THEY TOLD HIM IT WAS TOO MUCH HE IS REPORTING SPILL TO COVER HIMSELF UNK WHEN SPILL OCCURED OR IF IT MAY HAVE ALREADY BEEN REPORTED

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: -Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"12/29/2003 Reassigned from Rommel to Sun.11/03/05-File Update by Sun: A stipulation Agreement was mailed to Susion Developers LLC on 11/03/05 and required to be signed and returned by 11/25/05. (Sun) 11/18/05-File Update by Sun: Final New Order of Consent was sent to Howard D. Stave, Esq. (Attorney for Northland) on 11/15/05. (Sun)02/21/06-File Update by Sun: On 02/10/06, Sun received Phase I and II Environmental Investigation Report fro the Responsible Party, Leo Lefkowitz (718-218-7880). Review of the above reports is in progress. (Sun)06/15/06-Sun: Phase II investigation report showed two soil samples were taken on South Cellar 2' below follor level and one soil sample was taken on North Cellar 2' below Floor Level. Additional investigation is required. (Sun) 10/19/06-The Legal Department received a fax copy (pdf version) of signed Stipulation Agreement from Responsible Party, Sosoin Developers LLC. The Department requires an original of signed Stipulation to be executed by DEC Regional Director. (Sun)11/13/06-Sun called John Urda, DEC's Assistant Regional Attorney about the execution of Stipulation Agreement. He said that he still has not received the original of

signed stips by RP. He will call RP's Lawyer, David Yudelson.
(Sun)11/29/06: The Stipulation Agreement was signed by RP on 10/30/06 and executed by DEC on 11/29/06.03/12/07: A copy of executed stipulation agreement was mailed to Sosoin Development, LLC and also sent to David Yudelson of Sive, Paget & Riesel, P.C. (Sun)03/12/07: Sun received from David Yudelson the Investigation Work Plan on 03/12/07. (Sun)05/11/07: Sun approves the Site Investigation Work Plan with some conditions. The Site Investigation Summary Report is due 08/13/07. (Sun)07/08/08-Sun: Sun sent thr following email to David Yudelson,"Dear Mr. Yudelson:On May 11, 2007, the Department approved a Site Investigation Work Plan submitted by P.W. Grosser Consulting, dated February 8, 2007 for the above referenced site. The Department requires that a Final Investigation Report be submitted by August 13, 2007. As of today, the Department has not received the subject report. Therefore, you will be given two weeks to submit, via email or mail, a copy of the Final Investigation Report .A Final Investigation Report must be received by July 22 2008 or the case will be referred to the Department's Legal Affairs office for initial enforcement proceedings." (Sun)7/8/08-Sun: Sun received the following email from David Yudelson,"Joe - thank you for the email. I have not been in contact with the former client for many months. I will reach out to them and find out what the story is. I will report back. Dave." (Sun)7/15/08-Sun: Sun sent the following email to David Yudelson,"Hi David,Thanks for your response. Can you tell me the phone No and email address of your former client, Sosoin Developers, LLC and its owner, Mr. Leo Lefkowitz. My certified mail to him was twice returned as undeliverable. I need to speak to him. He has signed the Stipulation Agreement. Your information is very important to DEC to complete the cleanup of this site by Mr. Lefkowitz. Your response is urgently requested."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 DEC Memo: 3/29/05 - Austin - Previously unassigned spill report; reassigned to Austin for transfer to Central Office 09/16/05 - Spoke to Wahid Khan. Will send in the report once the NYC dept of housing has reviewed the report. 04/06 - Haven't heard back from Khan on the closure report. refer back to Region 2 - S. Scharf 10/11/06 - Austin - Reassigned from Central Office staff to Ketani, for follow up and closure - end 10/12/06 - Raphael Ketani. The site consists of two lots on the same block. 37 Bartlett Street is block and lot 2269 and 49. 39 Bartlett Street is block and lot 2269 and 48. I tried calling Walter Roberts at the NYC HPD (212) 863-8482, but got the answering machine for a woman. I left a message anyway. I tried calling Wahid Khan (973) 338-6680, but found out he didn't work at Earth Tech anymore. I was transferred to Ahmit Haryani (ext 218) who said that the project manager at the time was Mike Thiagaram (973) 337-4242. He said that he thought the contract with HPD was completed, as well as the

cleanup work. He said this because HPD paid Earth Tech and this doesn't happen unless the closure report is written and submitted and accepted. Mr. Haryani said that Mr. Thiagaram will call me back.12/22/06 - Raphael Ketani. I tried to contact Mr. Thiagaram, but could only leave a voice mail. I contacted Mr. Haryani and he apologized for having not sent the documentation. He said that Earth Tech had been paid, and the HPD had reviewed the cleanup report and had approved it. He said he will look into the matter and he will work to get me the documentation to close the case.4/11/07 - Raphael Ketani. I contacted Mr. Haryani and asked him whether he was able to get the closure report. He said "No" and directed me to call Shampa Chanda of HPD at (212) 863-6364. I spoke to Ms. Chanda. She said the person I should talk to is John Gerrity (212) 863-8052. She said he would know where the report is or its disposition. Ms. Chanda said he will get back to me.7/26/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message.10/18/07 - Raphael Ketani. I contacted Mr. Gerrity regarding the tank failure. He said that he had the data concerning the failure and its cleanup in a much larger report of about 265 pages that concerned the cleanup of the entire 4B property on which the building was situated. He said that the property was adjacent to 2 superfund sites, one of which is the former Pfizer plant. He said that an EIS was written for the rezoning. The rezoning is taking place this December. He said he will send me the full report. Mr. Gerrity added that there is no need for a PBS registration as there are only two 275 gal. tanks. 12/5/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message.12/12/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message.12/19/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but found out that he had moved. His new number is (212) 863-6539. I left a message for him to call me.12/28/07 - Raphael Ketani. Mr. Gerrity called to say that he is still working on getting me a copy of the report for the tanks and the site. He said that there still are elevated levels of contaminants in the soil. He added that the contaminated soil will be removed when the site is developed for housing. 2/13/08 - Raphael Ketani. I spoke to Mr. Gerrity of HPD (212) 863-6539. I asked him for the report. He said he will e-mail the SIR to me right now. I asked him when the residual contamination will be cleaned up. He said that a Letter of Designation was sent to the developer. The developer now has to prepare an application for low income housing. Then the application has to be approved and other paperwork has to follow. Mr. Gerrity said that the whole process may take two years. I told him that DEC Spills can't wait two years for the site to be cleaned up. Mr. Gerrity said that he can't order a dig out of the contamination as that is a capital project. An environmental review has to take place and the go ahead has to be given for a capital project. Then the money gets funded. Right now, HPD doesn't have that much money set aside for this project. He said that they may be able to do soil treatment. I told him that soil treatment may work. I printed out the Draft Phase II SIR, but not all of the laboratory analytical pages (Appendix E) as there were too many to print out on the group printer. I did print all of the pages before and after Appendix E. 2/14/08 - Raphael Ketani. I finished my review of the 7/14/05 Draft Phase II - Site Investigation Report (SIR). The only comments I would make are that the soil analytical results for 10 of the test pits at the site had unusually high concentrations of SVOCs. These were the same SVOCs in almost all of the cases - the benzo series analytes and

DEPT. OF HOUSING (Continued)

S109059193

their combustion products, plus fluorene, phenanthrene, and pyrene. Naphthalene was either non-detect or very low in concentration, suggesting that the contaminants are not oil derived, but either ash or cinders. The site has a history of development and commercial activity from at least the late 1800s, according to the SIR. I tried to contact Mr. Gerrity (212) 863-6539 regarding which tank was mentioned in the report that had the tank failure, but I could only leave a message. I also intend to discuss the source of the high SVOCs in the test pit soils as there are no borings log descriptions. 3/13/08 - Raphael Ketani. After checking with the NYC Property Tax database, I have concluded that this site (37 and 39 Bartlett Street) is not part of Site 4B and that I have the wrong report. The block is the same (2269), but it is the eastern half of the block. What I probably need is the report for site 4A! This is the western half of block 2269. I tried to contact Mr. Gerrity, but could only leave a message. I checked the PBS database and didn't find a record for either address. 3/31/08 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message. 4/11/08 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message with his secretary. She said she will let him know I called regarding site 4A. 4/30/08 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message. Mr. Gerrity called me back. He said that he apologized for not sending the Site 4A report. He said that he has it and he will have a copy hand delivered to DEC this week. 6/17/08 - Raphael Ketani. Today I received the Site 4A Draft Phase II - Site Investigation Report produced by Earth Tech and dated July 14, 2005. This is the correct report for this site, not the Site 4B report. 6/26/08 - Raphael Ketani. I reviewed the Site 4A Draft Phase II. The soil analyticals for Test Pits TP-10 to TP-18 (lots 48 and 49) were mostly non-detect or below TAGM RSCO limits. Groundwater contamination was not elevated for these lots, nor were the soil analyticals for the tank graves (USTs 3 and 6) significant. Based upon the soil and groundwater analyticals in the Site 4A Draft Phase II, I am closing the spill case.

Site Description:

Location: Pfizer Sites B and D (collectively Site No. V00350) are located at the addresses 59-71 and 73-87 Gerry St. (Pfizer Site B), and 191 Harrison Ave and 60-66 Gerry St. (Pfizer Site D) in Brooklyn New York. Pfizer Site B is comprised of Block 2266, Lot 46 and part of Lot 1, and Pfizer Site D is comprised of Block 2269 Lot 1. It should be noted that references to Site B and Site D below are names designated by the Volunteer (Pfizer Inc.) for their properties and do not refer to Department designated Sites or operable units. Site Features: The VCP site comprised of Pfizer Site B and Site D is 1.47 acres in size. Pfizer Site B, located on the north side of Gerry Street, is bordered by Harrison Avenue to the west; multi-family residences, a former auto body garage and vacant land to the north; vacant land to the east; and Gerry Street and Pfizer Site D to the south. Pfizer Site B is currently vacant. Pfizer Site D, located on the south side of Gerry Street, is bordered by Harrison Avenue to the west; vacant lots to the east; Gerry Street and Pfizer Site B to the north; and a vacant, condemned apartment building and Bartlett Street to the South. Pfizer Site D consists of five interconnected buildings. These buildings surround three sides of a condemned apartment building (not Pfizer owned) that abuts Site D to the south and fronts on Bartlett Street. Current Zoning/uses: The Site is located in a commercial district overlay within a residential zoning district. Historical Use: Pfizer leased the western portion of Site B from the previous owner from 1954 to 2004; it has been vacant since the 1950s and occasionally used as a parking lot. The western portion of Pfizer Site B was sold by then-owner Ruth Apfrelbaum to Congregation YGS in 2004. The eastern portion of the property was purchased by Pfizer in 1964 and used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizers ownership, it was used as a garage and truck rental facility. Site D was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. Soil removal activities were performed on the eastern portion of Pfizer Site B in 2002, and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of impacted soil and 18,449 gallons of groundwater (including perched groundwater). Sampling performed since the removal activities indicate that VOCs are no longer present in soil; and that petroleum-related VOCs in groundwater have been substantially reduced. Operable Units: An operable unit represents a portion of a remedial program for a site

MAP FINDINGS

"SITE B" PFIZER (Continued)

S106906497

that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Because of the separate ownership and separate remediation and development schedules, the Site has been divided into two Operable Units. The eastern portion of Site B as well as Site D, owned by Pfizer, is Operable Unit 1 (OU-1). The western portion of Site B, owned by Congregation YGS, is Operable Unit 2 (OU-2). Site Geology and Hydrogeology: The Site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. On Site B, groundwater flow direction is generally northeast in the eastern portion of the Site and west/northwest in the western portion of the site. It has not yet been confirmed if groundwater flow direction is similar for Site D.

Env Problem:

Nature and Extent of Contamination: OU-1 Eastern portion of Site B and Site D (Pfizer-owned properties): Soil: On the OU-1 portion of Site B, investigations have identified volatile organic compounds (VOCs) in soil; both petroleum-related BTEX compounds (benzene, toluene, ethylbenzene and xylenes) and chlorinated solvents (cVOCs). The source area was determined to be the eastern portion of Site B to a depth of approximately 8 to 10 feet below grade. Soil removal activities were performed in 2002, and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of impacted soil and 18,449 gallons of groundwater (including perched groundwater). Following the removal activities, sampling indicated that VOCs in soil no longer exceed NYSDEC Soil Cleanup Objectives (SCOs). Semi-volatile organic compounds (SVOCs) and metals have also been identified on Site B. Metals include lead as high as 2,020 parts per million (ppm), mercury as high as 61.4 ppm, arsenic as high as 307 ppm, barium as high as 1,250 ppm, and chromium as high as 75.7 ppm. SVOCs include benzo(a)anthracene as high as 75 ppm, chrysene as high as 87 ppm, benzo(a)pyrene as high as 59 ppm, indeno(1,2,3-cd)pyrene as high as 43 ppm, and dibenz(a,h)anthracene as high as 25 ppm. A Remedial Investigation is underway at Site D. Preliminary sampling has identified chlorinated VOCs in soil at elevated levels in one boring on the eastern part of the site. Tetrachloroethene was detected at 2.2 ppm, trichloroethene at 2.7 ppm, cis-1,2-dichloroethene at 120 ppm, and vinyl chloride at 1.2 ppm. Groundwater: On the OU-1 portion of Site B, investigations have identified two distinct contaminant plumes: a BTEX plume and a cVOC plume. Chlorinated VOCs (cVOCs) were found to persist throughout the majority of the Site, whereas BTEX compounds were limited to the eastern portion of the Site to a depth of approximately 10 to 30 ft bls. The cVOC plume is present across the entire Site to an approximate depth of 10 to 30 ft bls. In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the source removal work. The system was operated from October, 2006 to February, 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective (approximately 158.67 pounds of VOCs were removed throughout the operation of the system); however, removal of VOCs became asymptotic and operation of the

MAP FINDINGS

"SITE B" PFIZER (Continued)

S106906497

system was therefore discontinued in February 2011. The system remains intact, however. The AS/SVE system has been effective in reducing BTEX compounds in groundwater to below groundwater standards. Currently, some petroleum-related contaminants are still present; however, the primary contaminants of concern remaining following operation of the AS/SVE system are cVOCs. In February 2011 groundwater sampling on Site B, cVOCs detected in groundwater included: tetrachloroethene as high as 22 ppb, trichloroethene as high as 18 ppb, cis-1,2-dichloroethene as high as 350 ppb, and vinyl chloride as high as 29 ppb. A Remedial Action Work Plan is being prepared to address remaining contamination. On Site D, preliminary sampling performed to date has identified chlorinated VOCs in groundwater on the eastern part of the Site. Tetrachloroethene was detected as high as 4,500 ppb, trichloroethene as high as 1,300 ppb, cis-1,2-dichloroethene as high as 110,000 ppb, and vinyl chloride as high as 15,000 ppb. These contaminants have been identified at levels exceeding standards, criteria and guidance as deep as 30-35 feet below surface grade. Soil vapor: Soil vapor has been monitored quarterly on OU-1 from two sampling points since August, 2010. Chlorinated solvents have been detected in soil vapor at a maximum concentration of 120 ug/m3 (tetrachloroethene). OU-2: The western portion of Site B (Congregation YGS-owned) is currently under remediation. Following description is for conditions prior to remediation. Soil: Soil on OU-2 contains metals and SVOCs indicative of urban fill, which exists throughout this OU, to depths of approximately 10 feet below grade. Metals that exceed SCOs include lead as high as 6,730 parts per million (ppm), mercury as high as 16.1 ppm, arsenic as high as 20.5 ppm, chromium as high as 33.6 ppm, and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm, chrysene as high as 270 ppm, benzo(a)pyrene as high as 220 ppm, indeno(1,2,3-cd)pyrene as high as 110 ppm, and dibenz(a,h)anthracene as high as 58 ppm. Groundwater: Chlorinated solvents have been detected in on-site groundwater and are suspected to be coming from the Pfizer property (OU-1) to the east and south. Prior to the operation of the air sparge/soil vapor extraction (AS/SVE) system on OU-1, cis-1,2-dichloroethene was detected as high as 390 parts per billion (ppb) and vinyl chloride as high as 45 ppb. Groundwater sampling performed in 2008 (during the time period of AS/SVE system operation) indicated that these contaminants have decreased in concentration but are still present: cis-1,2-dichloroethene was detected at 97 ppb and vinyl chloride at 21 ppb. Groundwater sampling in 2008 also detected benzene at 1.6 ppb. Soil vapor: Chlorinated solvents and BTEX compounds have been detected in soil vapor. In May 2009 (the most recent soil vapor data available), tetrachloroethene was detected in each of 2 soil vapor sampling points, as high as 180 ug/m3. Individual BTEX compounds were detected below 50 ug/m3.

Health Problem:

Since the site is fenced and covered with weathered asphalt and gravel people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil

vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

BROWNFIELDS:

Program: BCP
Site Code: 333571
Site Description:

Site B is located in the eastern portion of the Pfizer facility and is bordered on the north by a poultry market and vacant land, a three-story apartment building, and an auto body garage and yard; on the south by Gerry St.; on the east by a portion of the auto body garage and yard, and a storage lot; and on the west by Harrison Ave.. Building demolishing in 1996 has left a reinforced concrete slab across half of the eastern portion of site B. The western portion of site B is covered with gravel and is being used as a parking lot. The site is being investigated and remediated under VP Agreement ? see site no. V00350.

Env Problem: Based upon preliminary investigations, Pfizer completed on-site and off-site delineation of petroleum related impacts in the fill material and conducted an Interim Remedial Measure (IRM) in December 2002. IRM included removal the removal of 4,735 tons of petroleum related impacted soils and more than 18,000 gallons of groundwater (including perched groundwater). In addition, nine UST?s and other subsurface structures were removed and properly disposed off-Site. Investigations indicate a plume of groundwater contamination that extends north to the property border. Soil gas investigation is on-going.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

Patel responded to the site of a junk yard.04/18/08-Hiralkumar Patel. visited site on 04/16/08. met Joe Ehrenfeld at junk yard. during site visit found multiple spots of contaminated soil and some puddles of oil under junk. found oil going into onsite drains. as per Joe, all drains at the site are not connected to city sewer. found speedy dry around aboveground waste oil tanks. Joe mentioned that oil overfilled and spilled on concrete surface. typical junk yard site. asked Joe to clean areas. Joe mentioned that property has been sold and new owner is planning to build residential complex. Joe mentioned that new owner has did some sampling at the site. as per Joe, property sold to White Gloves, who are located next to the subject site. subject site has two 275 gal ASTs. no PBS record found. <-----Lee Avenue

Garage Inc. Iser Ehrenfeld **owner of 650 Broadway** Joe Ehrenfeld 650 Broadway Brooklyn, NY Ph. (718) 388-6470 email: leeavgrage@aol.com alternate addresses for 650 Broadway: 89-95 Bartlett St 654-660 Broadway 648 Broadway from city records, owner of subject site is M&G Housing Corp. and city record shows that property has been included in a tax lien sale. <-----met Erry Frankel at White Glove. she doesn't know about any contract or transaction for next door property. she will ask someone in upper management and will call back. White Gloves 85 Bartlett Street Brooklyn, NY Attn.: Etty Frankel Ph. (718) 387-8181 Ext. 109 during conversation, Joe mentioned that site at 646 Broadway was also his property in past and they sold it. currently site 646 Broadway is under construction. M&G Housing Corp. **owner of 646 Broadway** 26 Rutledge Street Brooklyn, NY contractor for 646 Broadway: Delux builders Ph. (718) 625-6476 result of site visit: - no PBS record found for two 275 gal waste oil AST at 650 Broadway - from city record search found that 646 Broadway (which is currently under construction) and 650 Broadway (where Junk yard is located) both properties are owned by M&G Housing Corp. - as per Joe, new owner will develop residential complex actions required: - registration of waste oil tanks at 650 Broadway - soil investigation/remediation at 650 Broadway need to send letter for after confirming current owner and potential buyer of the subject site. may requires report review for any investigation at 646 Broadway, as it was part of junk yard and now under development. see pics on e-docs. 4/25/08 - CSL sent to Iser Ehrenfeld 12/06/11 - DECP iper received and reviewed phase II from Charles Sosik of EBC. A total of 10 soil borings (B1 - B10) were advanced on June 24, 2011. Soil sample results were compared to the Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in NYSDEC CP51 Soil Cleanup Guidance (10/21/10). Analytical data for the soil samples are summarized in Tables 1 and 2, and a copy of the laboratory analytical report is included in Appendix B. As presented in Tables 1 and 2, there were no VOCs reported above unrestricted use SCOs in any of the sample locations. Two SVOC parameters were reported above unrestricted SCOs and four were reported above restricted residential SCOs in the 5-10 foot interval of boring B8. There were no other SVOC parameters reported at elevated levels in the remaining samples. Groundwater sample results were compared to the water quality standards specified in NYSDEC Groundwater Quality Standards (GQSs). Analytical data for the groundwater samples are summarized in Tables 3 and 4 and a copy of the laboratory analytical report is included in Appendix B. VOCs were reported above standards at a single location (B6) with MTBE at a concentration of 15 ug/L (standard = 10 ug/L) and toluene at a concentration of 40 ug/L (standard = 5 ug/L). SVOCs were also reported above standards in a single location (B7), with chrysene at a concentration of 5.9 ug/L and a J qualifier (standard = 0.002 or MDL). Although much of the surface of the site is heavily stained from historic use as a truck repair facility there were no VOC parameters reported above unrestricted SCOs in the soil samples. Based on the parameters detected and the concentrations reported, the SVOCs reported above unrestricted and restricted residential SCOs in the B8 location were clearly related to historic fill materials and not petroleum from the historic use of the property. EBC recommends scraping off the top several inches of soil above the asphalt/concrete cap and properly disposing of this material off-site. DUMPING OIL ABOUT 250 GALLONS LOOKING FOR DEC TO REPORT

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110019850375

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description:

The "Organics/Suciac Block" site is located in the central portion of the Pfizer Inc. facility in the Williamsburg section of Brooklyn, NY. Gerry Street, Harrison Avenue, Union Avenue and Wallabout Street border this block. The site was first developed for chemical manufacturing between 1854-1888. Operations continued there until 1989 and all buildings were demolished by March of 1995. The Organic/Suciac block is situated within a high-density, mixed urban/commercial/ industrial zone. Pfizer decommissioned the Organic/Suciac block with the intent to utilize it for future redevelopment and/or beneficial use. As part of the decommissioning process, all buildings were demolished. The present concrete slab is continuous throughout the Block and varies in thickness from 0.5 and 1.5 feet. In 1997, waste from the site was excavated and disposed off site, which included 18.12 tons of mercury and lead hazardous soils. Also, a total of 1,930 tons of benzene hazardous soils were excavated and disposed off-site. In 1999/2000, the excavated soil (approximately 420.3 tons) was classified as a petroleum contaminated non-hazardous material, and was transported off-site and disposed. Institutional Controls: On June 22, 2001, Pfizer presented the deed restrictions for recording in the Kings County Registrars Office. These restrictions state that unless additional response actions are performed at the Site to allow its use for residential purposes, the Site shall be prohibited from being used for purposes other than industrial, commercial and/or recreational purposes without the expressed written permission from the Department.

Env Problem:

In 1997, waste from the site was excavated and disposed off site, which included 18.12 tons of mercury and lead hazardous soils. Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 07/31/06-Hiralkumar Patel. Left message for Mr. Thomas.found one old open spill case at this site. old spill # is 0230038. DEC Andre is handling this case under remediation. spoke with DEC Andre. this site was previously owned by Gaseteria and they are working on remediation project. now this site owned by BP and any new spill will be handled by BP Service. so this case will be investigated separately from old case.08/01/06-Hiralkumar Patel. received message from Bob from Kromco. there was minor leak at joint in flexible pipe. leak was contained in dispenser pen. pipe fixed and now in working condition.case closed.
Remarks: LINE TEST FAILURE- FAILING AT DISPENSER 9 & 10

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"12/1/05 - Obligado - Review Baseline Assessment Report, submitted by Delta, 10/4/02. location had 2 4000 gallon gasoline and 1 4000 gallon Deisel UST, an dformarly 9 550 gallon USTS removed in 1990. A total of 9 boring locations and 16 soil samples collected. During UST installation, excavation base sample collected shows 6190 ppb MTBE. Sensitive Receptors reported are 3 story residence with basement downgradient and across the street. Sensitive Receptors reported are 3 story residence with basement downgradient and across the street 80 ft to west. Closest Public School (PS 122) is 660 ft west of the subject site. East River 5500 ft west and English Kills 5500 ft east. USGS observation well 2600 ft southwest. Ground water located at 9 ft bgs. soil underlain by coarse silty clay with lenses of silty sand. Ground water flow to southwest. Soil Analytical Results:SB1(5-9') : 632 ppb benzene, 5230 ppb toluene, 30,400 ppb xylenes; SB6(9-9.5) : 410 ppb benzene, 2250 ppb toluene, 15800 ppb xylenes; SB7(8-9.5) : 74.4 ppb benzene, 4240 ppb xylenes; SB9 (7-8') : 176 ppb benzene, 3310 ppb toluene, 17100 ppb xylenes, 380 ppb MTBE;SB9 (18-20) : 1010 ppb MTBE. SS1 Base - 6190 ppb MTBE. Ground Water Analytical results:SB6 : 294 ppb benzene, 92.4 ppb toluene, 5240 ppb MTBE; SB7 : 18.3 ppb benzene, 48.7 toluene, 74.5 ethylbenzene, 447 ppb xylenesSB8 : 198 ppb MTBESB9 : 5560 ppb benzene, 2280 ppb toluene, 3190 ethylbenzene, 11200 xylenes, 6500 ppb MTBESubsurface Investigation Workplan, submitted by AGS. 933 tons of petroleum impacted soil transported off site by BP. Site is currently an operating BP station. 2 Gw samples collected from Tank Mat Wells show 7.4 ppb benzene and 140 ppb MTBE at MW-North and 1.4 ppb benzene and 45 ppb MTBE at WM-South. Proposes the installation of 3 wells along the western site boundary. 12/7/05 - Obligado - Meeting with Gaseteria and ASR. Well install scheduled for Dec. 05. 12/19/05 - Obligado - Voice mail from Steve Muller on 12/15. Says drilling has been rescheduled for either 12/21 or 12/22/05. 1/5/05 - Obligado - Spoke with Steve Muller, 4 wells installed at the site, 1 additional existing well was found. All 5 wells were sampled. 3/8/06 - Obligado - Review Investigation Summary Report, submitted by ASR, dated February 28, 2006. 4 wells installed, 1 well preexisting. GW between 6 and 8.5 ft bgs. Soil samples collected from a 12 inch interval at the ground water intersect. No mention of PID readings or split spoon sampling. Ground water samples collected 1 week later. Notable Soil Results in ppb:MW-5 - 12800 ppb xylenesMW-3 - 9200 ppb MTBENotable GW Results in ppb:MW-1 - 3000 benzene, 920 ethylbenzene, 4610 xylenes, 1200 MTBE, 12780 total VOCsMW-2 - 250 benzene, 290 toluene, 3200

MTBEMW-4 - 180 benzene, 1500 MTBEMW-5 - 120 MTBE
Recomends: Further investigation is necessary, survey to determine flow direction, further delineation of plume required. 4/27/06 - Obligado - Sent letter requiring submission of workplan by 5/20/06/16/06 - Obligado - delivery confirmation on 5/1/06.6/9/06 - Obligado - Sent email to S. Muller requiring immediate submission of workplan.7/19/06 - Obligado - Meeting with ASR, Gasteria, and DEC. According to ASR, additional delineation is not possible due to subway. Will submit a RAP.9/12/06 - Obligado - On 9/7/06, I emailed Gasteria a Multi Site Stipulation Agreement including this site. Sent via mail on 9/12/06. Due date for RAP according to Corrective Action Schedule is 9/15/06.11/1/06 - Obligado - RAP received.12/19/06 - Obligado - Reviewed RAP. Disapprove of RAP. Only 2 application points proposed. Required at least 2 more additional points to cover treatment area. Also required more detailed OM&M plan. Sent RAP Addendum required email to Steve Muller. New due date for RAP Addendum is January 29, 2007.2/1/07 - Obligado - Received RAP Addendum. Proposed 4 application wells. Detailed pre and post injection monitoring parameters. Quarterly sampling for VOCs and Heterotrophic Plate Count. Treatment volume is 15000 ft³. Anticipate 12-16 months to remediate the site using this method. Sent email RAP approval. Due date for BioRem application is May 13, 2007.4/25/07 - Obligado - Spoke with Steve Muller. He has procured a drilling contractor to install Biorem Injection points.5/13/08 - Obligado - Review 1Q08 Update Quarterly Report - Bioremediation began on May 2, 2007. 4 bioapplication wells were installed. Biorem is injected monthly. BTEX ND in MW1, MW2, MW3, MW4. BTEX in MW5 is 4023, ND MTBE. LNAPL not detected.6/24/08 - Obligado - Review 2Q08 update report. BTEX ND in MW2, MW3, and MW4 but 5635 ug/L in MW5. Heterotrophic Plate Count is 44,000 in MW5 compound to 1500 in June of 2007. Proposes continued monthly applications of bio-solution and concentrating application adjacent to MW5. Proposes continued monitoring. 8/20/08 - Obligado - Meeting with Gasteria, ASR, DEC. They will investigate the depath to subway next time on=site to determine if it is a barrier to flow. 3 more months of injections, then evaluate effectiveness. Soil manifests from excavation activities by BP/Delta.12/9/08 - Obligado - Review 3Q08 quartelry report. MW5 had 6000 BTEX. No subway depth investigation. last injection will be December. 5/11/09 - Obligado - Review Investigation Work Plan - proposes installation of 2 wells off-site and submission of a report within 60 days. Approved Work Plan. Report due 7/11/09.1/15/10 - Obligado - I reviewed the RIR report. On-site, max BTEX was 693 in MW5 all other wells at or close to ND. This data was from April 2009. I emailed Steve Muller to inquire if there were more up dated analytical results from the 4th quarter. He forwarded me the 4th quarter results, BTEX in MW5 increased to 3200 ug/L. There were some SVOC impacts in the new. The two downgradient wells were ND for VOCs. I sent a letter to Gasteria requiring additional investigation on-site to investigate continued gw contamination at MW5. Soil borings and wells are required in closer proximity to the USTs. Sent a letter requiring an investigation workplan within 45 days.5/13/10 - Obligado - I reviewed an investigation work plan for the 3 additional borings/wells as required. 3 wells are proposed around the tank field to determine if there is a continuing source to the ground water contamination at MW5. A report will be submitted in 90 days. I sent approval for the report.2/8/11 - Obligado - I reviewed the 4Q10 report. BTEX was detected up to 4500 ug/L in newly installed well MW8.2/10/11 -

Remarks: Obligado - I emailed a letter to Gaseteria approving the Investigation report and requiring a RAP within 90 days.2/16/11 - Obligado - GASeteria meeting with DEC. RAP due by the end of May 2011.10/6/11 - Obligado - GASeteria submits RAP for MNA.10/3/13 - Obligado - 2nd Quarter 2013 report. After decreasing concentrations for several quarters in MW5, recent monitoring shows up to 0.15 ft of free product in MW8. As per 9/26/13 meeting, Gaseteria will place product socks in wells. BTEX up to 2,930 ug/L in MW8. Contaminated soil and groundwater found. Data reported to DEC by Delta despite knowledge by Gaseteria since 8/5/2002.

DER Facility ID: 244426
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"1/2/2004 Reassigned from Rommel to Sun. (Also refer to Spill # 93-03325 for this site)07/08/04 This spill is closed. To be investigated and remediated under Spill #93-03325.01/12/06-The spill is reopened since this spill was caused by gasoline, while Spill #93-03325 was caused by #6 fuel oil. 1/12/2006 - Feng - Called Pfizer Inc and spoke with Manuel Lopez (718-780-0947). He remembers that they have been sent the some report to DEC. He would contact his engineer and find the information DEC need and get back to DEC. (RJF)1/12/2006 - Feng - Faxed the two spill report to Samantha Plourde (718-780-8380) and request to send 1) tank closure report, 2) any other site investigation/site assessment, to DEC. (RJF)1/27/2006 - Feng - Reviewed the Tank Closure Report of 12/10/1999, sent on 1/20/2006 by Pfizer. These 6 USTs were discovered during pre-construction activities in the northwestern corner. The site was a former Texaco gasoline station some time in the 1940's. 6 USTs in the northwestern corner of the site were confirmed by the insurance maps. Pfizer registered and removed the USTs performed from 5/17/1999 to 9/30/1999. 6 soil boringw were done prior the removal activities. Analyticals show SB-6 (10'-12' bg) with high contamination, 840 ppb Toluene, 10,000 ppb Ethylbenzene, 51,800 ppb Xylene, 20,000 ppb 1,3,5-Trimethylbenzene, and 40,000 ppb 1,2,4-Trimethylbenzene. To further delineate the SB-6, SB-6A to SB-6E (12'-14')were drilled and sampled, lab result indicated low VOCs. And removed all the soil above the clay layer (12' bg plus 0.5'-1.0' of the clay). The tankks found no carcks or holes. After tank removal, precipitation occurred for several days and the rain water run into the excavation, water removed and tested, found 6,047 ppb BTEX. All the piping associated with the USTs were removed. Soil removal extented to where the pre-USt removal soil samples contained concentration of VOCs below DEC STARS. Total of 286.18 tons of soil were removed. The report attached with lab analyticals sheet for soil sample, but not indiated the location of sample taken and not mentioned in the narrative text. Backfilled with clean sand and permanent asphalt pavement was placed on top. Requested spill closure. (RJF)1/27/2006 - Feng - Send letter to Pfizer request of 1) groundwater sample in the vicinity of the former SB-6 boring location, 2) clarification of the soil sample presented in the lab report attached in App C. Result due 4/3/2006. Faxed to Scott Glash (Roux). (RJF)02/09/06: This spill transferred from R.Feng to S.Kraszewski.03/06/06: Recieved letter from Pfizer, dated March 2, 2006. Pfizer is requesting that the Department suspend the April 3rd deadline for the subsurface investigation. Pfizer believes that the Department is not familiar with all documentaiton related to this spill. Pfizer will collect and review all historic

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

documentation and correspondence related to the closure and removal of the gasoline USTs. This information will be submitted to the DEC by March 15, 2006. Pfizer believes that based on the contents of this letter that an additional investigation will not be necessary. - SK 03/24/06: Received detailed summary of closure activities from Pfizer. Currently under review. - SK03/27/06: Reviewed all documents for the UST closure. This additional information was sent in response to the DEC's request for a complete subsurface delineation both on-site and off-site. Pfizer believes that with the information supplied in this closure summary that there is no need for further investigation and NFA should be issued. Pfizer has also included documentation and explanations in response to R.Feng's letter issued January 2006 and previous DEC requests: No post-exc samples taken: Pfizer contests that retrieving samples would cause stockpiling of contaminated soil and leave the excavation open, which is a hazard. Instead, they conducted soil borings to eliminate the hazards associated with an open excavation. Furthermore, Pfizer feels that the soil borings properly delineated the horizontal extent of the contamination since they were conducted until no VOCs were detected by PID. Rainwater from the excavation was sampled and found to contain high levels of BTEX: It was a waste characterization sample, a composite from several sources. Pfizer states this water sample was mixture of rainwater from the USTs, the excavation and waste water used to clean each UST. A soil samples with highly elevated VOC concentrations was detected but it was not mentioned in the report summary nor is it given a location on the site plan: This sample was also a composite sample, collected from each UST. Sand material was discovered within the USTs and this sample was used to characterize the tank solids for proper disposal. It did not come from the excavation. R.Feng requests GW samples: Pfizer attached results from two GW samples taken from the former tank area in June 2004. The samples were taken from 8 to 10 fbg using low-flow purging techniques. Actetone was detected in both samples, a common laboratory contaminant. Naphthalene and Xylenes were detected but below GW standards. Boring logs, PID logs, information of perched GW and explanations of work methods are also included in response to a February 2000 letter from DEC to provide information for these shortcomings in the UST closure report from 1999. - SK03/27/03: Called Manuel Lopez to ask about the report. He said it would be best to contact Omar at Roux & Associates. I called and left Omar (631-232-2600) a voicemail to call me back. - SK03/28/06: Rob Kovacs for Roux and Associates called in place of Omar. I asked Rob about the clay layer and he said based on historic production wells used by Pfizer and Roux & Associates' experience with the surrounding area they have mapped out the extent of the clay layer. Rob is emailing me a map with the known extent of the clay layer. - SK03/31/06: Received PDF of the geologic cross section for that area and an overhead map. After careful consultation and consideration with supervisor J.Kolleeny, we feel that based on all of the available information at hand, this spill poses no threat to GW, the environment or the public. NFA letter sent out. Closed out. - SK

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO/DEMEO"7/14/2002 - 21:05pm: Ms Zhao spoke with Nathan Edeson. Spill has been contained. There is no drains or valves involved. Clean up was in progress by contractor Tradewind by the time of contact. Zhao has requested clean up statement from Tradewind and will follow-up on it.7/16/2002 - A follow up call Zhao made to Mr Edeson. Spill cause was found due to the gauge system, not the pump. Tradewind went back yesterday and have got clean up completed. Clean up statement will be furnished within two days by Tradewind. Mr Edeson will then forward it to DEC with some requested clean up pictures.9/17/2003 - Spill closed upon a site visit on 9/15/2003 and final clean up statement received on 9/16/2003.

Remarks: BUILDING 16 (MAIN BUILDING), FIRST FLOOR. LEAK FROM A PUMP ON THEIR HEATING SYSTEM. MOST WAS CONFINED WITHIN THE BUILDING. ABOUT 5 GALLONS SPILLED ONTO THE SIDEWALK. SPEEDY DRI APPLIED BY PLANT EMPLOYEES. TRADEWIND ENVIRONMENTAL WAS CONTACTED FOR CLEAN UP. SIDEWALK HAS BEEN CLEANED UP. THEY'RE NOW WORKING INSIDE. PUMP TAKEN OUT OF SERVICE FOR REPAIRS.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was

"SUN"7/6/04 - AUSTIN - TRANSFERRED FROM GARDINEER TO SUN - RELATED TO SPILL #990181 - END07/08/04-Sun- Also refer to Spill # 99-01811 for the same site. 02/09/06: This spill transferred from R.Feng to S.Kraszewski.03/06/06: Recieved letter from Pfizer, dated March 2, 2006. The letter states that the Department's verbal request for documentation of UST closure from 1993 is unnecessary since significant remedial work has taken place to address this spill since 1993 and also an NFA letter has been issued. The NFA supposedly declares that the VCA (Voluntary Cleanup Agreement) performed by Pfizer has been completed. SK spoke with Manuel Lopez, Director of Environmental Health and Safety for Pfizer. I requested a copy of the NFA letter be faxed for confirmation. - SK03/07/06: Reviewed NFA letter faxed by Pfizer. Will discuss with J.Kolleeny and K.Tang. - SK04/05/06: Apparently, when this site became involved with the Voluntary Clean-Up Agreement (VCP) the spill number should have been closed. This spill closed out. - SK

Remarks: ENZEP DIVISOR OF ENSI TO DO WORK 6 BOROUGHES TAKEN EACH BORINGS SHOW CONTAMINATION ON SOIL AND GROUND WATER. WILL REMOVE TANKS 6/21/ WOULD LIKE DEC TO VISIT SITE. 2 TANKS 3000-10000 ONE OTHER FILLED.CASE FILE BEING HANDLED BY HAZ. WASTE SECTION.

Engineer Mr. Daniel Shiel the following is a description of the process and then the system problem:Process:Acetone is used in the process of coating pills. After the material leaves the "pills bath" area, the vapor acetone is collected and piped to a chiller/condensor on the plant roof. This "Edwards Unit" chiller/condensor has 3 stages which drops the vapor temperature in 3 steps to 85°F below zero. At that point the acetone is in liquid form and is recovered via pipe and collected. This material is then tanked and removed from the site. (Pfizer states that a company purchases this recondensed acetone from them).Problem:Somewhere in the second stage of this unit is a leak. The Pfizer representative stated that there is probably a crack in the line someplace, but the exact location has not been found. Pfizer states that they first became aware of the problem in early March 2001 and took the system out of service for approx. 10 days to perform routine maintenance to the unit and to try to find the problem. The specific problem was not found and not fixed. The equipment was put back into operation.At the site visit, it was clear that acetone was leaking to the atmosphere. Pfizer says that they have done a mass balance which shows that they are still retrieving approx. 91% of the total process acetone, above their legal limit (limit is someplace in the low 80's %). Pfizer also had LEL meters on the equipment to show that they have remained below approx 50% of the LEL explosive limits. However, there is no alarm on this meter. The meter is read several times per day by plant personnel.Pfizer rep also said the units are actually 2 separate parallel process lines running at the same time. He believes that the leak is only in one side of the system. The system can operate with only one side of the process system in operation, only at a lower volume and therefore a lower pill production rate.In order to repair the system, the unit would need to be lifted off the roof of the building, lowered to the street level, opened and re-welded. Pfizer said they had an equipment rep on site later today to quote them on the cost and time needed to build a replacement unit. ECO Dussault issued 2 tickets. 6NYCRR Part 595.3.a.2.ii and .iii with a May 17, 2001 court appearance date.Since this is a release to the atmosphere it may include the NYSDEC Air Unit. Since it is a material AFTER production (of the pills) it may be considered by NYSDEC RCRA Dept.4/3/2001 Officer Dussault spoke with Dan Shiel (Pfizer) later on the afternoon of 4/2. Mr. Shiel said that Pfizer met with the manufacturer of the Edwards unit and he said it would take about 6 to 8 weeks to build and install a new unit. Until that time, Mr. Shiel said they may try to find a way to run just the first and third stage of the system and bypass the second unit. This will still allow some condensation of the process acetone and may allow the production line to operate (perhaps at a reduced rate)

Remarks: caller states that the company has had a leak since June on the roof of the building from the Edwards unit. They do not want to fix this due to the down time and the cost. Dennis Pappas engineer of charge

DEC Memo: 02/02/11- Zhune spoke to Russel Downey 908-413-0811. Site is a Pfizer Factory. Property is going to be sold. During investigation found groundwater contamination. Requested report. Mr. Russel will send the report.04/04/12-Roux Associates sent the Petroleum Investigation Report dated June 24, 2011.Property solution performed Phase I and Phase II subsurface investigation activities at site E and F on behalf of Acumen Capital Partner, LLC (Acumen)(buyer). Phase II.- Included the completion of 24 soil borings, with the collection of 24 soil borings samples and 7 groundwater samples were collected from temporary well. Of the 24 borings completed 12 were located on Site E and 12 were located on Site F. Four (4) of the seven groundwater samples were collected on Site E, and the remaining three collected on Site F.Only The property solution's borings designated SB-19,SB-20/GW-20, SB-21, SB-22/GW-22, SB-23, SB-24 and SB-25 were completed within the former Main Plant near the former Fitness

U003074670

Center. The analytical results indicated that soil and groundwater collected from boring SB-22/GW-22 (located within the Former Fitness Center) contained elevated concentrations of VOCs. The soil samples collected from the four (4) borings located near SB-22 as well as borings located at the west end of the former Main Plant (SB-19 and SB-20) did not have any exceedances. The groundwater sample collected from boring SB-20/GW-20) at 15 to 16 ft bls. detected VOCs below the applicable limit. In response to the identification of groundwater impacts in phase II beneath the Main Plant, Roux Associates on behalf of Pfizer conducted focused investigation activities in April, May and June 2011. The focused investigation included the installation of four(4) deep wells BMW-10, BMW-11, BMW-12, BMW-13 and a total of three (3) soil borings TPNE, TPSE, TPSW. Groundwater samples were collected from wells BMW-10 through BMW-13 and soil borings TPNE, TPSE, TPSW. The analytical results indicated the following VOCs (BTEX, 1,3,5 trimethylbenzene, Isopropylbenzene, naphthalene, n-propylbenzene, and p-isopropyltoluene) were detected above the acceptable limits in the groundwater sample collected from BMW-11. LNAPL was found in well BMW-11 at a thickness of 2.76 feet. A sample of LNAPL was collected for gas chromatography product characterization analysis. The LNAPL was identified as leaded gasoline. The groundwater sample collected from boring TPNE indicated the following VOCs(BTEX, 1,3,5 trimethylbenzene, Isopropylbenzene, MTBE, naphthalene and n-propylbenzene) detected above the acceptable limits. BP evaluated Groundwater flow directions in shallow perched water. BP reported groundwater flow to be in the northeast direction at the BP service station. Pfizer's assessment evaluated Groundwater flow directions in deep water. Pfizer reported that Groundwater flow in the deep zone was to the southwest. 04/11/12- Roux Associated Inc. sent the Supplemental Petroleum Investigation Report dated July 22, 2011 105/07/12-This spill has been transferred to Hassan Hussein of the Hazardous Material Unit. 1/24/2013 - Raphael Ketani. The spill case for this Commercial Property at 630 Flushing Avenue, Brooklyn, 11206 was transferred to me. The spill was called in on 2/1/11 due to the discovery of oil contaminated soil samples. The block and lot are 1720 and 1. The deed date is 2/11/11. The property was sold by Pfizer, Inc., 235 East 42nd Street, NY, 10017 to Acumen Capital Partners (ACP) BK I, LLC, 37-18 Northern Blvd., Ste. 300, LIC, 11101. PBS is #2-017329. There were 31 tanks. Twenty five (25) were closed, 1 was converted to non-regulatory use and 5 are active. The tank sizes ranged from 62 gals. to 30,000 gal. The products contained were #6 oil, #2 oil, diesel, gasoline and other. Presently, there are 6 active tanks. They range in size from 62 gals. to 20,000 gals. The two 20,000 gal. tanks contain #6 oil and others (300 gal., 275 gal. and 62 gal.) contain diesel fuel. A 275 gal. tank contains #2 heating oil is also active. 3/18/13 - Raphael Ketani. Matthew (Mat) Carroll, P.E., of Tenen Environmental, LLC (646) 606-2332, ext 103 [121 West 27th Street, Suite 1004, New York, NY 10001, mcarroll@tenen-env.com] called today regarding the site. He is the new consultant for ACP. I tried to contact him, but could only leave a message. Mr. Carroll called me back. He said that Pfizer is still involved in the remediation of the property, even though ACP bought the site. They are the responsible party. Mr. Carroll will send me the two ROUX reports for my review. However, Pfizer is contending that there is a gas station upgradient which is the source of the contamination. Mr. Carroll sent me the following contact information: Please address all correspondence related for Spill #1011062 to: Robert Kovacs, Sr.

Raphael Ketani. I reviewed the 6/24/11 Petroleum Investigation Report
which was produced by Roux Associates, Inc. for Pfizer. Groundwater
impacts were found under the main plant on the north side where the
former Fitness Center used to be. Roux did investigations during
April, May and June of 2011. Borings and wells were installed. The
data indicates that the source is the BP Service Station (formerly
AMOCO; active spill #0104597) to the north at 655 Flushing Avenue.
The BP investigation was limited to the shallow soil and groundwater
above the silty clay (which averages 10 feet bgs). Pfizer
investigated the groundwater in the deeper zone.Roux states in the
report that their evidence for BP being the source is the following:
1) BP is 70 feet away from the main building (site E) and has a long
history of impacts to the the soil and the groundwater2) petroleum
contamination was found beneath the Pfizer main plant as part of
utility work which took place by the utility company (they don't
state who this is, but it was probably Con Ed) - the utility company
filed reports regarding the contamination3) the deeper groundwater
zone is hydraulically downgradient from BP4) almost 3 feet of NAPL
was found on the south side of Flushing Avenue and the fingerprint of
the oil indicated that it was leaded gasoline5) Roux identified
extremely elevated VOC concentrations in the deeper groundwater zone
- there were 38,700 ppb of total BTEX in the groundwater 8 feet south
of BP in the deeper zone6) Pfizer had 2 small USTs under the north
part of the main building (former Fitness Center) - the soil results
did not indicate any impacts from the USTs - the USTs were in 12
inches of concrete in an intact vault and were decommissioned in
19887) information from Pfizer and BP for routine groundwater
sampling provides data from the south side of Flushing Avenue
supporting that the Pfizr USTs did not leak 8) MTBE is present in the
deeper groundwater samples from the Pfizer site, but the timing does
not support that the impacts are related to the Pfizer operations -
Pfizer decommissioned the USTs in 1988 before the widespread use of
MTBE in 1992 - MTBE bearing gasoline was stored at BP for years and
BP had many releases of gas - in 2001 there was a gasoline release
with MTBE where the MTBE concentrations were up to 385,000 ppb in the
groundwaterThe main plant consists of buildings 55, 16, 16A,
warehouse A and warehouse AA. The majority of the main plant (site E)
is buildings 16 and 16A - 8 story buildings. Operations at the plant
ceased during November 2008. On 2/11/11, the ownership changed to
Acumen Capital Partners (ACP) BK I LLC. Site F is the parking lot to
the south. Property Solutions performed the Phase II during October
2010 and January 2011 for sites E and F. They did 24 borings. Seven
(7) groundwater samples were taken from temporary wells. Twelve (12)
borings were performed at site E and 12 borings were performed at
site F. Four (4) groundwater samples were taken at site E and 3
groundwater samples were taken at site F. A small portion of the
sampling was done near the former Fitness Center in warehouse A and
pertains to this investigation. The borings and wells were SB-19,
SB-20/GW20, SB-21, SB-22/GW-22, SB-23 to SB-25. Groundwater from G-22
was taken on 1/6/11 and had elevated VOCs of gasoline. The sample was

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

collected at 16.5 to 20 feet bgs, below the perched water table at 10 feet bgs. Anthropogenic fill is present from 5 to 12 feet bgs. Silty clay is present throughout the area and is 15 feet thick. The Upper Glacial Aquifer underlies the silty clay at 20 to 30 feet bgs. Thin perched lenses of groundwater are present throughout the area. A perched water table is present at 5 to 8 feet below the site. The perched water table follows the surficial topography of the clay. The clay is 6 feet below the southwest part of the BP site and 11 feet below the northeast part of the site. The BP wells are in the perched horizon. BP reported that the groundwater flowed to the northeast. Permanent wells BMW-10 to BMW-13 indicate that the deeper groundwater flows to the southwest. The deeper groundwater is likely affected by pumping by NYCT for its subway tunnels. Their pumping wells are to the west of the main building. The pumping also likely affects the vertical gradient. Gauging took place at BMW-10 to BMW-13 on May 3 to June 8 during 2011. LNAPL was found to be 2.76 feet thick at BMW-11 on 6/8/11. Property Solutions did borings SB-19 to SB-25 near the Fitness Center. Only SB-22 at 7.5 to 8 feet bgs had soil VOCs that were above the unrestricted CP-51 standards. There were 5 VOCs above the standards. Naphthalene at 16,000 ppb, n-butylbenzene at 14,000 ppb, n-propylbenzene at 7000 ppb, ethylbenzene at 2300 ppb. The soil samples from the rest of the borings had results that were below the unrestricted standards. On 1/26/11, Property Solutions collected groundwater samples from GW-20 and GW-22. Low levels of BTEX were detected at 15 to 16 feet bgs. The sample from GW-22 beneath the Fitness Center had many VOC hits that were above the unrestricted standards. Permanent well BMW-11 had many VOC hits that were above the unrestricted standards. From 6/6/11 to 6/8/11, Roux took groundwater samples from 3 borings. All had samples with exceedences. Groundwater samples from boring TPNE (in the sidewalk at the south edge of the BP station) were taken at 13 to 15 feet bgs, 15 to 17 feet bgs, and at 17 to 19 feet bgs. There were many VOC exceedences amongst the samples. The highest BTEX result was from the sample from 13 to 15 feet bgs. The groundwater samples that were taken at 15 to 17 feet bgs and at 17 to 19 feet bgs from boring TPSW directly downgradient (southwest) of the station had low VOC hits. I finished my review of the 6/24/11 Petroleum Investigation Report. I looked at Plate 1 - Generalized Hydrogeological Cross Section - of the report. All of the wells - temporary and permanent - were partially screened at the top in the silty clay. This is not proper practice. There is no explanation in the report why this was done. Any groundwater samples that would be taken from these wells would entrain some of the clay sediment due to disturbance of the clay as a result of the collection process. So, the geochemistry of the groundwater is not representative of just the Upper Glacial Aquifer. Analytes which had adhered to the clay flakes were incorporated in each groundwater sample. Additionally, water samples which are taken from soil borings typically do not have as high concentrations of analytes as would samples from permanent wells. Also, from the boring logs in the report, it is not entirely clear that the perched aquifer and the glacial aquifer are truly separated at a distance. If the NYCT is pumping groundwater, then their actions could cause some groundwater to seep down from above. _____ Comments by Ketani: -----The soil results from SB-22 for the sample from 7.5 to 8 feet bgs in the former diesel and gasoline USTs area (the former Fitness Center) had naphthalene and n-butylbenzene hits above 10,000 ppb. The ethylbenzene hit was 2,300 ppb and the

Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

n-propylbenzene hit was 7,000 ppb. Though the soil results for the samples from SB-21 and SB-23 to SB-25 which surround SB-22 did not have exceedences or were non-detect. The groundwater results from temporary well GW-22 in the former diesel and gasoline USTs area had high VOC exceedences in the sample from 16.5 to 20 feet bgs. However, the groundwater results from temporary well TPSW about 65 feet to the east and permanent well BMW-10 about 35 feet to the east have a small number of very low hits and no exceedences. These soil and groundwater results suggest that one of the UST systems probably leaked. More borings and permanent wells need to be installed in this area. Additionally, the BP Service Station that is referred to in the report has an active spill number, #0104597. According to a report in the e-docs, groundwater flow in the perched water table is due northeast, away from the Pfizer site. Also, MTBE was introduced to gasoline nationally during 1979. So, it is not impossible that there used to be MTBE bearing gasoline in the gas UST below the former fitness center location before the tank was removed during 1988.3/29/13 - Raphael Ketani. Next, I reviewed the Roux Supplement to Petroleum Investigation Report dated 7/22/11. Of significance was that staff from Roux stated in this Supplement report that the former DEC case manager should obtain all of the UST and piping information for the BP Service Station from the respective DEC file. They also stated that the Phase I and the Phase II were not done for Pfizer. So, Pfizer can't vouch for the reliability of the reports. Also, they stated, Acumen Captial Partners may consider the reports to be confidential and may not feel comfortable releasing them to the DEC. However, Roux did provide some information regarding the USTs under the Pfizer site and neighboring facilities in this Supplement report. The staff from Roux stated that tank closure reports weren't required to be submitted when the tanks were decommissioned during 1988. They state that soil samples were collected from TPNE, TPSW, TPSE, BMW-10 to BMW-13, but the samples were not submitted to the laboratory for analysis. The information contained in the report consisted of documents related to the UST decommissioning which took place throughout the site and Sanborn maps. The 550 gal. diesel UST (#211) and the 550 gal. gasoline UST (#212) under the Fitness Center were pressure tested during 1984 and held the pressure (9/27/84 and 10/24/84 Tone Gasoline Tank and Pump Inc. letters). In a 12/28/88 tank decommissioning letter, it is stated that tanks #211 and #212 in the former Wha garage were cut up from 12/13/88 to 12/16/88. In the process of cutting them up, it was noticed that the gasoline UST had leaked into the vault. The gasoline was collected and the vault was ventilated in order to remove the vapors. It was noticed that the floor of the vault was pitted due to leaked gasoline. However, it was reported in the letter that the tank removal crew did not notice signs of chipping of the floor or any loose concrete. _____ Comments by Ketani:----- From the information in the 7/22/11 report, it is apparent that there was at least a gasoline spill. How the gasoline UST could have passed its integrity test in 1984 and be found to have leaked anyway is not clear. There are no details regarding how the testing was performed. So the test may not have been valid compared to later integrity testing methods. Additionally, the pitted floor suggests that the leaking had been going on for some time. Also, there still is no information regarding the locations of the associated piping for the USTs and the locations of the pump islands. Clearly, more investigation needs to be done. A draft letter was submitted to

U003074670

Hassan Hussein, EE III and head of Unit C, requesting that a work plan be submitted for conducting an investigation around and under the vault, next to any remaining piping and in the vicinity of the pump islands. Soil and groundwater sampling was requested. The letter was approved by Mr. Hussein and was sent out. A due date of April 30 was set for submission of the work plan. 4/15/13 - Raphael Ketani. Mr. Kovacs (631) 232-2600 tried to call me today regarding the March 29, 2013 letter and left a voice message. I tried to contact him, but could only leave a voice message. 4/16/13 - Raphael Ketani. Mr. Kovacs and I discussed the site and the soil and groundwater results for SB-22 and GW-22, respectively. I pointed out that the soil contamination results from the surrounding borings at the same level did not have exceedences. Also, the groundwater results for GW-22 were higher than a sidegradient well that was sampled at the same depth. I added that there was a letter in the Roux 7/22/11 report which stated that a gasoline leak had been discovered. Mr. Kovacs argued that all of the contamination was from the BP site across the street. I reiterated that the soil and groundwater results and the letter suggested a local source of contamination. I asked him for soil and groundwater contamination delineation. Mr. Kovacs stated that the tank vault was in the former loading dock area, which had been filled in with 4 feet of concrete. However, they had cored thick concrete before. So they could do borings in this area. Mr. Kovacs added that Pfizer was not objecting to doing more investigative work in this area, but that they wanted to make sure everyone was on the same page and that the DEC was considering the groundwater flow from the northeast from the BP site. I repeated my previous statement that the DEC had determined that there is a local source of contamination under the former Pfizer site and that delineation is being required. Mr. Kovacs stated that he will talk to the people at Pfizer. With that, the conversation ended. 4/17/13 - Raphael Ketani. Mr. Kovacs sent me an e-mail requesting an extension of the deadline for submitting the work plan. He asked for a deadline of June 3, 2013. I granted his request. 6/4/13 - Raphael Ketani. I reviewed the Work Plan for Additional Petroleum Investigation Activities dated 5/29/13 and submitted by Roux Associates on behalf of Pfizer, Inc. The work plan contained the same information and arguments as I had read in the previous 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. Roux Associates added that the timing of the use of the gasoline and diesel USTs below the former fitness center and the soil data generated by Property Solutions does not support that the impacts associated with spill #1011062 are related to the Pfizer operations. Pfizer removed the USTs in 1988 before the widespread use of high concentrations of MTBE beginning in 1992. There was no MTBE in the soil samples below the Pfizer site where the USTs used to be. High concentrations of MTBE were found in the groundwater beneath the former fitness center. Property Solutions collected 7 soil samples from 5 borings in the vicinity of the USTs and found only slight soil contamination in one sample. In the work plan, Roux proposes conducting three tasks. Task 1 would be to do one round of groundwater gauging and sampling at wells BMW-10 to 13. Roux would request that the DEC gain access for them to the wells on the BP site. They will have the samples tested only via method 8260. Task 2 would involve submitting a report of their findings. Roux will make recommendations for either additional investigations, or to close the spill case, or to link the spill case to the BP site. Task 3 involved having a meeting with the DEC to

U003074670

discuss their findings and additional data. I drafted a response letter for the review of Mr. Hussein. In the letter, I explained that the information and statements that were in the 5/29/13 work plan were the same as were included in the 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. So, the Department was again requesting that a soil and groundwater investigation take place as previously requested in our 3/29/13 letter. I added that we will send a letter to Acumen requesting their cooperation for allowing the wells to be installed. However, it would be up to Pfizer to obtain permission from BP for gaining access to their wells. I set a deadline of 7/12/13 for submission of a new work plan. 6/5/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/6/13 - Raphael Ketani. In response to the 6/5/13 letter, Matthew Basso of Pfizer called me. He tried to explain to me that Pfizer wasn't responsible for the contamination under the vault. He used the same information as had been presented in the 6/24/11 report and the 7/22/11 report. I explained to him that his discussion wasn't going to change the Department's request for a soil and groundwater investigation. I added the lower groundwater hits of the deep well to the northeast, the finding of free product in the vault, the discovery of soil contamination in the unsaturated zone below the vault and the presence of high contamination in the groundwater just under the vault. Mr. Basso explained that he had witnessed the consultants for the BP station across the street doing remedial work. He said that they were injecting treatment solutions. Mr. Basso added that the gas station has lost a lot of product and it is going under the former Pfizer site. I told Mr. Basso that the Department was aware of the problems at the BP station and that they were being addressed. I did admit to him that some of the contamination may be going under part of the former Pfizer site, but that the contamination in the former vault area was a different matter that was solely the responsibility of Pfizer. Mr. Basso stated that the groundwater was flowing from the BP site to the former Pfizer building. I told him that this was not true for the perched water table. He also stated that he didn't believe the new owners of the property, Acumen, would allow Pfizer to drill through the floor of the former fitness center. I told him that I will write a letter requesting Acumen's cooperation regarding the investigation. At the end of the conversation, Mr. Basso requested a meeting with the DEC. I told him to talk to everyone at his end and get them to agree on a date for next week. He said that he will do this. Later, Mr. Kovacs (631) 232-2600 sent me an e-mail stating that Pfizer, Acumen and Roux would be able to meet with staff from the DEC on Monday, June 10th, at 2:00PM. I confirmed that this was an acceptable meeting time. A draft letter was submitted to Mr. Hussein which requested the cooperation of Acumen in allowing Roux Associates to conduct an investigation in the vicinity of the vault. Mr. Hussein approved the letter and it was sent out. 6/10/13 - Raphael Ketani. The meeting took place as scheduled. In attendance were Matthew Basso from Pfizer, Robert Kovacs and Charlie McGuckin from Roux Associates, and Hassan Hussein and myself. The former Pfizer site and the BP gas station to the north were discussed. Mr. Kovacs and Mr. McGuckin presented the same information as I had read from previous reports. They showed one new map which showed that, at one time, the Wallabout Creek had flowed near the vicinity of the former vault and in adjacent areas. So the area contained stream sediments. Mr. Kovacs and Mr. McGuckin stated that the gas contamination in the former

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

vault area was from the BP site due to deep groundwater flow towards the southwest in the regional aquifer. They commented that the NYCT was pumping from a well to the southwest for the G train line. So, this well had moved groundwater flow to the southwest. I stated that groundwater flow was to the northeast in the perched water table and to the southwest in the regional aquifer. I stated that the gas contamination in the vicinity of the vault was from a former gas UST that had been observed to have leaked. I also stated that there was gas contamination in the shallow unsaturated soil in the vicinity of the vault. So the contamination in the immediate vicinity had come from the UST, not the BP site. They countered that the gasoline below the vault contained MTBE and this chemical was not in the Pfizer gas UST when it was removed in 1988. They also stated that the groundwater analytes had the signature of BP gas. I told the Roux consultants that the wells were never screened properly. Some were screened in the clay. So it is not clear what the true groundwater chemical makeup is. I requested a work plan for conducting 4 soil borings around the former vault location, installing a properly screened well in the shallow zone and another in the deeper regional aquifer, and to take a Shelby tube sample and do permeability testing for the confining layer between the two bodies of groundwater. Mr. McGuckin objected to the request for more investigating. He said that Pfizer had done enough to determine subsurface conditions and that there was no point in doing more work. He again stated that all of the contamination was due to the spilling at the BP station. He added that there was a well 75 feet to the east of the Pfizer vault with 3 feet of product in it. Mr. Basso stated that this gasoline could be fingerprinted to prove that it belonged to BP. I added that more soil and groundwater data must be obtained in order to determine the subsurface conditions and in order to determine where the contamination had originated from. Otherwise, BP will not accept responsibility with so little information. Mr. Basso said that he will approach his management with the DEC demand and our argument why more work needed to be done. Following this meeting, Mr. Hussein and I had a meeting with June Feng, the DEC project manager for the BP station at 655 Flushing Avenue, Brooklyn (spill case #0104597). Specifically, we asked her whether the BP investigation had done off site delineation of the spill and whether there presently were leaking USTs and product on the groundwater. Ms. Feng said that, presently, there were no leaking USTs and no product on the groundwater. She said that wells were only installed on the BP property. I told her about the 3 feet of product that had been found in the Roux Associates well BMW-11, which was about 100 feet east of the vault in question and downgradient from the BP station (as regards the deeper aquifer flow). Ms. Feng asked whether the gasoline had ever been fingerprinted. I told her "No." She said that she could not understand how gasoline could make its way down from the perched water table to the regional aquifer. I told her I was not sure either how this had happened, but the Roux Associates consultants were stating that this happened. She then asked whether the gasoline could have followed a utility conduit. I told her that this was possible, but I wasn't sure it would stay in the aquifer as gasoline floats on water. Ms. Feng and I thought about how the gasoline could have ended up below a perched water table, but we did not find an answer. 6/11/13 - Raphael Ketani. Ms. Feng sent me a "c-c" for an e-mail she had sent to Nicholas Onufrak of BP. She warned him that Pfizer and their consultants were telling the DEC that the gasoline contamination was

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

from the 655 Flushing Avenue site. Later, Mr. Onufrak responded back that he had received the e-mail.6/12/13 - Raphael Ketani. Mr. Basso sent me an e-mail in which he stated that Pfizer was working on a work plan and intended to submit it by July 12, 2013.7/22/13 - Raphael Ketani. I reviewed the 7/18/13 Workplan for Additional Focused Subsurface Investigation. The work plan was written in response to the DEC 3/29/13 letter in which additional investigative work was requested around the vault. ROUX also made the same arguments that the source of the contamination under the former Pfizer plant is from the BP service station across the street. They also recapped the results of the previous investigations from 2011. They state that NAPL was found on 6/8/11 at BMW-11 and was identified as leaded gasoline. Also, they state in the report that, given the geologic and hydrogeologic conditions in the subsurface and the presence of NAPL in the deep groundwater zone downgradient of the BP station and the presence of MTBE in the groundwater, it is strongly suggested that the impacts at SB-22/GW-22 are not the result of former Pfizer operations, but the result of the long history of releases from the BP station.ROUX will do a focused field investigation involving a Phase I and, if necessary, a Phase II. After the work is done, a summary report will be prepared and a meeting with DEC staff will be requested to discuss the results and determine what should happen next. The Phase II will be performed only if contaminated soil is found below the former UST locations. Five shallow soil borings will be performed around the vault and dispenser area to the top of the silty clay. Soil and groundwater samples will be analyzed via methods 8260 and 8270. The perched water table samples will be collected from 3 temporary wells. Only temporary wells can be installed due to the height restrictions inside of the Fitness Center (it will only accomodate small equipment). Undisturbed soil samples will be collected from the silty clay and the sandy layer below it for permeability testing. If there are no discernable soil impacts in the shallow soil, then they will bore down below the silty clay layer and sample the soil just above the deep groundwater. The existing deep wells BMW-10 to BMW-13 will be gauged and sampled. If the Phase II is necessary, then two additional wells will be installed at two more locations within the Fitness Center footprint and the groundwater will be sampled beneath the silty clay. The Phase II would also involve the collection of additional perched water samples.I looked at the proposed soil boring and well locations depicted in Figure 7 of the report. The locations seemed reasonable.I drafted a letter for the review of Mr. Hussein in which I stated that the Department had approved the 7/18/13 work plan.7/24/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today.10/15/13 - Raphael Ketani. As there has been no word regarding activity at the site, I sent an e-mail to the three individuals involved in the spill case from Pfizer and Roux (Mr. Basso at (908) 901-7096/bassom@pfizer.com; Mr. Kovacs at (631) 232-2600/rkovacs@rouxinc.com; Mr. McGuckin at (631) 232-2600/cmcguckin@rouxinc.com). The e-mail mentioned that the 7/18/13 work plan had been approved and reports were due to the Department on September 19 (phase I) and on October 8 (phase II). I requested updated information regarding the investigation around the vault.In response to my e-mail, Mr. Basso sent me the message:The Pfizer /Roux project team met today to review the Phase I /Phase II data, that includes comprehensive soil sampling data, perched groundwater zone data, deep groundwater gauge data-as obtained as

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

part of the approved Workplan. Today we also reviewed schedule, where Pfizer had earmarked a touchbase meeting for its internal team in early October, and wrap-up to document the Phase I/Phase II results and conclusions this week. My apologize for this delay, and we met today in order to prepare an update for NYSDEC on this project. Please note: we had significant technical difficulty to get the smallest made geoprobe rig into the interior study location of the Acumen Capital Partners building to successfully achieve the intrusive sampling, and needed to arrange for the right equipment, which slowed our progress. I will ask that Roux Associates follow-up on my e-mail to better communicate the schedule for submitting to DEC the WorkPlan Report. Via this email I am keeping the site owner (Acumen) informed of our progress. Best regards, Matt Basso, MS, CHMM. Later, Mr. Kovacs sent me an e-mail stating that the Phase I was completed, but with great difficulty. They had to find a drilling machine that was small enough to fit into the health club and they had to hire a specialized drilling company to drill through 7 feet of concrete. However, they did the soil borings, took soil and perched groundwater samples and gauged the deep groundwater wells. They hope to get permission from BP to gauge their on site wells, also. The report will be submitted on November 15, 2013. 11/20/13 - Raphael Ketani. I reviewed the ROUX Associates Additional Focused Subsurface Investigation report dated 11/13/13. During 9/9/13 and 9/10/13, ROUX Associates drilled 5 soil borings - RSB-1 to RSB-5. RSB-1 was adjacent to the location of SB-22/GW-22 and RSB-5 was very close by. The other borings were installed radially around the former UST locations (1 550 gal. diesel UST-west and 1 550 gal. gas UST-east) and the former dispenser location. According to the report, the UST had been removed during 1988 and the vault was filled with concrete. (It should be noted that the introduction of MTBE in gasoline took place nationally in the U.S. during 1979 and was banned by New York State beginning on January 1, 2004.) Before the borings took place, the 7 feet of concrete was cored on 8/26/13 and 8/27/13. The bottom 6 inches of concrete at RSB-1 was collected for permeability testing. The soil was bored just into the confining silt and clay layer. The boring terminated at the groundwater at 16 to 19 feet below grade. The soil and groundwater samples were tested via methods 8260 and 8270. Two (2) soil cores were collected for permeability testing and grain size analysis from boring RSB-4A (1 foot from RSB-4). The collection device was pushed using the Geoprobe hammer. One sample consisted of shallow fill at 2 to 4 feet bgs and the other sample consisted of silt and clay at 8 to 10 feet bgs. The 2 to 4 foot sample from RSB-4A was 71.5% sand and 28.1% fines (due to the high sand content, the permeability test couldn't be performed). The 8 to 10 foot sample was 47.5% sand and 52.2% silt and clay. This sample tested at a permeability of 2.7×10^{-4} cm/sec. However, there were microfractures in the sample. The true permeability was estimated as probably being 10^{-5} cm/sec. Based on previous soil investigations at the Citric Block near the former Main Building, on the north side of Flushing Avenue, Shelby Tube samples had been collected by ROUX at 8 feet bgs during 1996. These soil samples had permeabilities of 2.87×10^{-7} to 1.8×10^{-6} cm/sec. Though, as regards the permeability of the concrete core, it had not been tested at the time of the writing of this report. This data will be submitted later. The soil sample that had been collected years ago from SB-22 at a depth of 7.5' to 8' had 5 VOC hits from 1900 ppb to 16,000 ppb, but no MTBE. RSB-1 (to the east and next to SB-22) = 7'

sample 15 VOC hits from 100 ppb to 1200 ppb with 390 ppb MTBE; 11' sample almost entirely non-detect with 2300 ppb MTBE; 13' sample almost entirely non-detect with 3700 ppb MTBE; RSB-2 (next to former east side of gas UST) = almost entirely non-detect; RSB-3 (downgradient of the USTs) = 9' sample with 13 VOC hits from 3000 ppb to 62,000 ppb but no MTBE; 14' sample almost entirely non-detect; RSB-4 (far west of SB-22) = 6.5' sample 11 VOC hits from 57 ppb to 8200 ppb but no MTBE; 8' sample 13 VOC hits from 89 ppb to 8500 ppb but no MTBE; RSB-5 (very near and to the northwest of SB-22) = 7' and 9.5' samples almost entirely non-detect. Except for 24,000 ppb of naphthalene in the 8.5' to 10.5' sample from RSB-3, there were no SVOC hits for any of the RSB samples. Groundwater was found at 0.5' to 2.5' below the former location of the USTs (perched groundwater) and at 10' to 13.5' below the former USTs location (deep groundwater). Deep wells BMW-10 to BMW-13 were gauged on 9/10/13. However, BP would not let ROUX have access to their wells on the gas station property. Attempts were made to collect groundwater from the perched water table at RSB-1, RSB-2 and RSB-4. ROUX was successful in collecting perched groundwater only from RSB-2. GW-22 (screened deep 16'-22') = 13 VOCs from 5.9 ppb to 3900 ppb, 10 VOCs 100 ppb or above, 3 VOCs 1000 ppb or above, 3900 ppb MTBE; BMW-11 (deep water) = 6.83' product on 9/10/13, other series wells without product; 9 VOCs with 6 hits from 240 ppb to 6100 ppb, no MTBE; BMW-12 and BMW-13 almost entirely non-detect (deep). TPNE highest VOC concentrations in this series in 2011 with 7 VOC hits to 17,600 ppb and MTBE 200 ppb. TPSE at all levels (13'-15', 15'-17', 17'-19') had the same VOC hits at about the same concentrations, except the sample from the 13'-15' interval had generally slightly higher concentrations. TPSW was almost entirely non-detect. RSB-2 (perched at 7'-9') had 6 VOC hits from 16 ppb to 120 ppb, but no MTBE. SVOCs were almost entirely non-detect for RSB-2, except for 54 ppb of naphthalene. As part of my review, I reviewed reports for the BP site (spill #0104597). I looked at the groundwater flow maps and analytical results in the 3rd Quarter 2004 Quarterly Monitoring Report dated 7/25/05 and the groundwater flow map in the 2nd Quarter 2013 Quarterly Monitoring Report dated 6/28/13. I determined that groundwater flow in the perched horizon is to the northeast while groundwater flow in the regional aquifer is to the southwest. 11/25/13 - Raphael Ketani. I sent a quick e-mail to Mr. Kovacs requesting that Pfizer and ROUX immediately begin product recovery events in order to contain any plumes emanating from BMW-11. 11/26/13 - Raphael Ketani. I drafted a review letter for editing by Mr. Hussein. I stated in the letter that the Department had approved the report. However, the data in the report and the case file indicated that additional work needed to take place. I determined that groundwater was flowing from upgradient to under the former Pfizer site through the deep groundwater horizon. However, there was evidence of contamination from onsite, also. The Department was requiring delineation of the soil contamination downgradient from the former vault and downgradient from BMW-11. Pfizer was also asked to immediately begin product collection at BMW-11 and to submit monthly gauging and product collection reports. A deadline of January 10, 2013 was set for the submission of a delineation work plan. Mr. Hussein approved the letter. 11/27/13 - Raphael Ketani. The AFSI report review letter was sent to Mr. Basso at (908) 901-7096/bassom@pfizer.com, Mr. Kovacs at (631) 232-2600/rkovacs@rouxinc.com and Mr. Rosenblum. After having sent the letter, I met with June Feng, the case manager of the BP Station site to the north. I explained that the data indicated that

Map ID

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

the source of the product at BMW-11 was the BP site. I showed her some pages from various reports describing the subsurface conditions below the Pfizer site and ROUX Associates' findings. I asked her to contact Nicholas Onufrak, the BP representative, regarding this matter and to try and have BP take over the product collection at BMW-11. 12/2/13 - Raphael Ketani. I met with Jeff Vought, Ms. Feng's supervisor, regarding the former Pfizer site and the BP site. I explained the data and showed him the Additional Focused Subsurface Investigation report (AFSI). I also explained that the perched groundwater was flowing northeast, away from the former Pfizer site, while the deeper groundwater was flowing toward the site. He noted what I had told him, but wasn't convinced that the source of the contamination under the Pfizer site was from the BP station. At the end of the day, Mr. Kovacs sent a response e-mail regarding the DEC 11/27/13 AFSI review and response letter. In short, Mr. Kovacs wrote that the responsibility for the contamination lied with the BP station and that Pfizer was not going to do further delineation nor collect the 7 feet of product from BMW-11 which was next to the school. He wrote that I should contact BP and have them do the VEFRing. 12/3/13 - Raphael Ketani. In response to Mr. Kovacs 12/2/13 e-mail, I sent him a response e-mail (with C-Cs to Mr. Basso, Mr. Rosenblum and Mr. Hussein) stating that Pfizer and ROUX had to evacuate BMW-11 immediately as this well had 7 feet of gasoline and it was right next to the school indicated in Figure 2 of the AFSI. ROUX's claim that the gasoline had originated from the BP station hadn't been proven and the product was under the former Pfizer site. So it was Pfizer's responsibility. I added that if Pfizer and ROUX fail to send me an e-mail by December 6 (friday) stating that VEFRing is taking place, then the DEC will open up a PIN case, have its contractor do the work and continue to VEFR the well as required by DEC. I also wrote that our contractor will do the delineation work, bill the DEC, and the DEC will pass the costs along to the Attorney General who will sue Pfizer. A series of response e-mails followed from Mr. Basso. In summation, he said that Pfizer staff were in consultation regarding the presence of gasoline in BMW-11. It was also explained that the building next to BMW-11 was not a school. I asked Mr. Basso to get someone into the building to do indoor air surveying for vapors with a PID meter. Later, I sent Mr. Basso an e-mail stating that I wanted to make a site visit tomorrow to see for myself what the conditions are who is using the former Pfizer building. Mr. Basso agreed to the site visit. 12/4/13 - Raphael Ketani. A site meeting and inspection took place at 2:00PM as planned. In attendance were Mr. Kovacs (631) 232-2600, Mr. Basso (908) 901-7096, Mr. Rosenblum, Mr. Hussein and myself. At the beginning of the lobby entrance, I saw a wall on the left side with many placards indicating the various businesses that were using the former Pfizer main building. Most of the business appeared to be food processing and management companies (i.e. ice cream manufacturing, manufacturing of meals for homebound people, etc.). However, Mr. Rosenblum pointed out that there were some high tech business and his office. He also stated that the businesses were on the upper floors and that the first floor, where we were, was vacant. Next, we went to the former fitness center. Throughout the first floor, I sensed various odors, but all were light and none were noxious. There was one odor from food cooking. The PID meter did not detect any vapors anywhere at the first floor. Mr. Kovacs had the same brand and model of PID meter and his didn't detect any vapors, either. We went to the

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

former fitness center. I continued to take pictures. There were no PID detections. Mr. Kovacs and Mr. Basso explained to everyone that the vault was below the floor and how the soil boring operation went. We saw many places where a piece of floor tile had been removed in order to do a boring and we saw the filled boring holes. Mr. Kovacs showed me where SB-22 had been and where RSB-3 was. He explained that the floor was only 1 or 2 feet thick at the location of RSB-3. Whereas, they had to go through 7 feet of concrete at the location of SB-22. Next, we walked to the first floor level of warehouse A (the eastern part of the main building). Mr. Basso showed us where BMW-11 was. We could also see the BP station across the street. Mr. Hussein, Mr. Basso, Mr. Kovacs and myself discussed the product in BMW-11 and that the data in the ROUX reports showed deep groundwater flow from the BP station and to the Pfizer site. Mr. Basso and Mr. Kovacs stated that there had been many spills at the BP station over the course of many decades. The problem of how the gasoline could get from the perched aquifer to the deeper aquifer was discussed. Mr. Hussein mentioned that there were only wells in the perched horizon at BP. Mr. Kovacs mentioned that BP had installed a lot of tanks and that they had stacked the tanks on top of each other. He stated that he thought BP had stacked the tanks so deep that they penetrated through the confining silty clay layer. Mr. Hussein agreed that the data seemed to suggest the contamination was from the BP station. He stated that delineating the contamination could be done in two ways. First, BP could be asked to do the work. If they were to refuse, then the State would have its own contractor do the work and install deep wells at the BP station in order to determine the deep groundwater flow direction. Mr. Basso stated Pfizer was deferring to BP to do the delineation work. He added that if BP were to do the delineation and groundwater monitoring, then he would gladly give them access to the Pfizer wells. Mr. Hussein asked Mr. Basso for an Executive Summary describing the current environmental conditions and the information that Pfizer and ROUX have found so far. We left this part of the building and entered the middle (building 16) warehouse area. Again, no vapors were detected. There was nothing much to see here. So, we went down to the partial basement. Once inside the partial basement, there was a moderate odor of #2 oil. My meter registered about 1.7 ppm of total VOC vapors. Mr. Kovacs' meter detected the same concentration of vapors. A man was in the basement and he told us that he had just finished cleaning a machine (he didn't say what type of machine it was). I asked him whether any oil had been spilled. He said very little oil had been released. However, he mentioned that he had used a spray cleaner to remove the oil from the surfaces of the machine. We went further into the basement. It was well lit, 78 degrees Fahrenheit and the floor was clean. There was no active ventilation taking place, even though there was a means for the indoor air to be circulated and removed. So the oil vapors were everywhere. Mr. Kovacs stated that we were standing 10 feet below grade. So, we were below the water table, but the walls were dry. Mr. Kovacs pointed out the sump and the sump pumps. The pumps weren't running. I put the nose of the PID meter into a hole through the steel plate covering the sump, but the vapors that were being detected seemed to remain the same. The vapors were actually higher about a few feet above the steel plate. There was nothing else to see. So we left the basement and exited onto Flushing Avenue. I took some pictures outside and the meeting ended. 12/5/13 - Raphael Ketani. Jeff Vought, a supervisor in the Spills Unit, was told about the

EPA ID Number

PFIZER INC BROOKLYN PLANT (Continued)

U003074670

Pfizer site visit and my findings. I had previously talked to him about the data for this site. He contacted Randall Austin, the Regional Spills Engineer, and they contacted Nicholas Onufrak, Project Manager, at the Atlantic Richfield Company (the owners of the BP station). Mr. Onufrak agreed to send a vacuum truck over to suck out the well during the morning of 12/6/13. He also agreed to do at least one more vacuum event. Mr. Onufrak will look at the data for the Pfizer site and decide whether BP is responsible for the gasoline. Mr. Onufrak's contact information is: Atlantic Richfield Company, 1 West Pennsylvania Avenue, Ste. 440, Towson, MD, 21204. Later, Mr. Basso sent me the Executive Summary. I reviewed the document. The majority of the content consisted of Mr. Basso writing that BP was the source of the contamination below the former Pfizer site. He did state that there were soil impacts below the former fitness center. However, he claimed that they were minor and that the results should be compared to the Commercial Soil Standards. At the end of the document, Mr. Basso requested closure of the spill case. 12/6/13 - Raphael Ketani. Mr. Onufrak sent staff at the DEC Spills Unit and myself an e-mail today. He wrote that the evacuation of the well took place. One gallon of NAPL was recovered. A sample was collected for forensic analysis. The vac truck operator collected 637 gals. of total liquids. There was no measureable NAPL in the truck. June Feng, the project manager for the BP spill case, will be contacted by BP. 12/18/13 - Raphael Ketani. I e-mailed Mr. Kovacs regarding BMW-11. I stated that BP had evacuated only 1 gallon of product, but ROUX had measured 7 feet of product in the well several months ago. Mr. Kovacs responded that the well is two inches in diameter and that Antea Group, BP's consultant, had also measured 7 feet of product when they gauged the well before evacuating it on December 6, 2013. 1/14/14 - Raphael Ketani. A planned followup site visit took place in the partial basement of the main former Pfizer building. In attendance were Mr. Rosenbloom and Gavin Cato of ROUX. I walked around the basement with my PID meter. The basement air was at 76 degrees Fahrenheit. There were no oil odors. I put the nose of the meter above my head, at the sump and at the opening to several floor drains. The PID meter didn't detect any volatile chemicals. After this, I left the site. Later, I met with Mr. Hussein to discuss my site visit, the soil and groundwater analytical results and the other data regarding the site. Based upon our discussion and the information regarding the case, Mr. Hussein approved the closure of the spill case. Based upon the information in the spill case, I have determined that there is no threat to the public or the environment from the residual contamination below the site. Therefore, I am closing the spill case effective 1/14/14. As the building is currently being used for commercial purposes and will be used in this fashion for the foreseeable future, I am making this closure in consideration of a comparison of the soil data to the New York State commercial standards. 1/16/14 - Raphael Ketani. A spill closure letter was sent to Mr. Basso. In the letter, I wrote that the Department was requesting that Pfizer leave their wells open so that British Petroleum can use them for groundwater gauging, sampling and product recovery as part of their investigation and remedial efforts.

Date Record Added: 11/30/2000
Date Record Updated: 03/23/2007
Updated By: dcwalsh
Site Description: The Citric Block Site is located in the Williamsburg section of Brooklyn, New York. Gerry Street, Harrison Avenue, and Union Avenue border the Citric Block Site to the north, east, and west, respectively, while Flushing Avenue border the Citric Block Site to the south. The Citric Block Site is situated within a high-density, mixed urban residential commercial industrial zone, approximately one mile east-southeast of the East River. Pfizer decommissioned the Citric Block Site for future redevelopment and/or beneficial use. As part of the decommissioning process, all Citric Block Site buildings were demolished, with demolition activities being completed in August 1995. Presently, the reinforced-concrete slab foundation is the only aboveground remnant of the former buildings. The concrete slab is continuous throughout most of the Citric Block Site, and varies in thickness between approximately 0.5 and 1.5 feet. The remaining portion of the Citric Block Site is covered with asphalt pavement approximately two inches thick with a four-inch aggregate subgrade. The entire Citric Block Site is surrounded by a 10-ft high chain-link fence, and is under continuous security surveillance. The Citric Block Site was developed for chemical manufacturing between 1854 and 1888 and it operated continuously until 1985, and was demolished in 1995. Redevelopment is likely to include paved areas for outdoor activities in the center of the Citric Block Site and a small park in the western portion. The remainder of the Citric Block Site would be capped by either the existing concrete slab or by new pavement. The cap will prevent any direct exposure of future users of the property with fill material. Institutional controls involving Deed restrictions have been implemented. The property can be used for

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Katz notes: wants DEP Tommy Thomas to respond.6/7/96 - ongoing job committent to cleanup 3 sumps. Report of oil into 2 of 3 sumps. Spoke to Steve Zalloughi - black oil (no. 2 oil), PCBs in oil. Con ed doing job in area and has made commitment to clean up. Sumps in basement pump directly to sewer. Con Ed not sure if sewer was impacted. They hired contractor to do boreholes to identify source. Con Ed tied in because of PCBs.12/16/02NFA letter sent to Con Edison. Site Investigation Report prepared by Jacques Whitford (dated July 2002) does not warrant further investigation by Con Ed. Results do indicate impact from other sources (i.e. dry cleaners). Forwarded to Amar Nagi for follow-up.See spill #s 9507055, 9507375, 9507178, 9506191.

Remarks: CALLER WAS CALLED TO LOCATION ABOUT A JOB AND FOUND THE SPILL THEY WOULD LIKE A REP TO RESPOND TO THE SCENE

DEC Memo: Sharif responded to the site on 05/15/07.Two 45,000 gallon UST located behind the building.Contractor was hired to perform the tightness testing, while doing the testing the system could not sustain the pressure.Either fill line or tank itself made way for the oil to come out.Oil pushed up and travelled all over the ground.Significant amount seeped through the foundation wall and entered the basement of the building.FDNY Hazmat also responded and determined the spilled amount as approx. 4,000 gallon by measuring the level in the tank.Eastmond was hired to do the clean up in the basement.All Boro(Phil Faicco: 917.335.0103) was hired to remove the contaminated soil from the tank area, out side of the building and investigate the extent of the release.Letter was sent toLindsey Park Housing Corp.202 Union Ave.Brooklyn, NY 11211 Attn: Jay Silverberg **property manager**Ph. (718) 782-9000email: jadius7@aol.com05/23/07 Sharif inspected the excavation site today and met Phil Faicco from Allboro Environmental.Excavation near the fill line proceeding step

wise. Apparently, one of the fill line had hole on it and released oil to the environment. End point samples are required. Management is willing to close the tanks in place and install new aboveground tank. 06/08/07 Sharif spoke with Phil Faicco today, removal of contaminated soil has been completed and end point sample was taken to confirm that. To close the tank in place, tightness testing is required, I explained it to him. 08/22/08 Reminder letter was sent to Zenith Properties Inc. 202 Union Avenue Brooklyn, New York 11211 Attn: Jay Silverberg, President CERTIFIED MAIL- 7007 2680 0000 0082 4091 (sr) 09/08/08 Rec'd letter requesting extension of the dead line of Sep 15, 2008 to submit all documentations. Pro Test Environmental has been hired to oversee the remediation and submission of closure report. (sr) 10/29/08 Rec'd brief report from Pro Test Environmental dated October 14, 2008. Pro Test reported about removal of 197 tons of contaminated soil, but waste disposal manifest was not provided. Soil borings will be taken through the bottom of the tank, as part of the closure investigation. Borings will be also done along fill line and in the area from where the contaminated soil had been removed. (sr) 05/28/09 Spoke with Tom Leddy of Pro Test. Pro Test preparing work plan which will be sent to DEC in two weeks. (sr) 09/24/09 Rec'd work plan proposing installation of eleven GW monitoring wells. (sr) 10/06/09-Hiralkumar Patel. discussed with DEC Austin about multiple spill numbers (0701867, 0905544, 0906148 & 0905433) under Lindsey Park Housing Corp.. as same management and same contractor working at the site, transferred case 0701867 to Patel. 10/14/09-Hiralkumar Patel. reviewed all available documents. *****

-*-*-*-*05/17/07: DEC Sharif sent letter to Mr. Silverberg requiring investigation of tank test failure. 08/25/08: DEC Sharif sent letter to Mr. Silverberg to submit required documents according to letter dated 05/17/07. Sharif asked to submit documents by the end of 09/15/08. 09/05/08: received letter from Tom Leddy from Protest requesting deadline extension (unspecified time) to submit required documents as per letter dated 05/17/07. Tom mentioned that 196 tons of contaminated soils were removed from around the tanks and along the area where the failed supply and return lines travelled from tank to the building. 10/14/08: received letter report from Bob Urban from Protest with copy of analyticals for endpoint soil samples collected after removal of 196 tons of contaminated soils. no contamination found in endpoint samples. Protest proposed to do soil delineation. 10/18/08: received soil/gw investigation report from Bob Urban from Protest. abstract:- did soil delineation around two 45,000 gal tanks and found extensive contamination- installed total of 20 borings: 18 borings (B-1 through B-18) around tanks and two borings (B-19 and B-20) along remote fill lines- collected total of 23 soil samples from 15 borings (1 soil sample from borings B-5, B-9, B-12, B-14, B-17, B-18, B-19 and B-20; 2 soil samples from B-3, B-4, B-6, B-10, B-13 and B-16; 3 soil samples from B-8)- cut holes in bottom of tank and found oil/water leached back into tanks (12 inches in one, 14 inches in other)- no samples taken through bottom of tanks as found soil contamination around tank beneath tank invert- found high PIDs and free product in soil borings B-5, B-6, B-8, B-9, B-10, B-12, B-13, B-14, B-16 and B-17; free product was found below 8 ft depth- found SVOCs and VOCs contamination soil analyticals:

email to Tom and asked to submit boring logs for borings B-9 to B-20 in soil investigation report dated 10/28/08.9:24 AM:- received missing boring logs in report dated 10/28/08 (see above).05/04/10-Hiralkumar Patel.4:16 PM:- received email from Chris Tomasello from Reliant Consulting, who is working with Protest. they will install one 2 inch well early next week to find groundwater depth.Christopher P. Tomasello, IH Reliant Consulting Services, Inc.Ph. (516) 632-9707 (O) (516) 233-7944(C)email: reliantconsulting@live.com05/05/10-Hiralkumar Patel.9:35 AM:- spoke with Chris. he mentioned that currently they have mixed info about groundwater depth. so before any excavations around tank, they will install 2 inch well to find out current water depth. Chris will send updates next week.05/11/10-Hiralkumar Patel.11:11 AM:- received email from Tom with updates. still waiting for DOB permit. on 05/13/10, they will install one 2 inch well to find out exact depth of water table.06/25/10-Hiralkumar Patel.1:15 PM:- office meeting with DEC Urda, DEC Morenzi, DEC Austin, Mr. Silverberg, Tom, Scott Smiw and Chris O'Donnell. during meeting, agreed upon following:- completion of excavation work at 31 Leonard Street- installation of 6 inch monitoring wells around USTs at 67 Manhattan Ave and pump out of product (as an interim measure before excavation starts)- either installation of soil boring (and three monitoring wells based on results of groundwater sample from soil boring) or soil excavation at 24 Boerum Street and 54 Boerum Street- installation of 6 inch monitoring wells around previously abandoned USTs at 30 Montrose avenueTom will submit revised work plan for 30 Montrose Ave and work plan for wells installation at 67 Manhattan Ave and boring/well installation at 24 and 54 Boerum Street. site visit needed during collection of endpoint samples from north end of excavation at 31 Leonard Street.DEC Urda asked to issue multi-sites STIP.PBS #: 2-093246. as per PBS record, site has two 45,000 gal #6 oil USTs and eight 550 gal diesel USTs. all tanks were installed in Apr. 1964 and all of them are temporarily out-of-service, except one 550 gal diesel tank was removed in Sep. 2009.06/28/10-Hiralkumar Patel.7:54 AM:- received email from DEC Urda inquiring about any tightness test required for seven temporarily out of service 550 gal tanks at the site.06/29/10-Hiralkumar Patel.1:56 PM:- spoke with Mr. Silverberg about eight 550 gal diesel USTs at the site. Mr. Silverberg mentioned that site had only one diesel tank which was removed in Sep. 2009. the remaining seven tanks could be tanks installed at different buildings under Lindsey Park Housing and they may be wrongly registered.1:58 PM:- spoke with DEC Urda and informed him that the site had only one tank and other tanks are located at different buildings.09/21/10-Hiralkumar Patel.11:07 AM:- received email from DEC Urda with copy of signed STIP. DEC regional director signed STIP on 09/16/10. as per the CAP of the signed STIP, following documents are due:- a work plan for free phase product removal at 67 Manhattan Ave is due by end of 10/01/10- an interim spill cleanup report for 31 Leonard Street is due now- tank closure report for buildings 24 Boerum and 54 Boerum street are due on 12/21/10- a remedial investigation report for groundwater investigation at 30 Montrose is due on 02/28/1110/06/10-Hiralkumar Patel.2:26 PM:- spoke with Mr. Silverberg. asked him to submit work plan for product removal, which is considered overdue. Mr. Silverberg will talk to Tom and will send updates.10/26/10-Hiralkumar Patel.12:49 PM:- sent email to Mr. Silverberg and asked to submit a product removal work plan by the end of 11/05/10. informed him that if the work plan is not received by

CONSOLIDATED EDISON (Continued)

S102180042

the end of 11/05/10 then the case will be referred to legal for STIP violation. 3:55 PM:- received a work plan from Bob from Protest. abstract:- plans to address this site in a three phased approach: 1) installation of monitoring/recovery wells, 2) a program to recover the free product from wells and 3) potential for excavation of any additional, accessible, contaminated soils from the area adjacent to the tanks- propose to install eleven 6 inch wells to 30 ft depth with 20 ft of screen and 10 ft riser- groundwater is estimated at approx. 15.5 ft bg- due to nature of the product release (#6 oil), field sampling with a PID is not suggested- to detect the presence of a smear sonze, propose collection of two soil samples: one at the groundwater interface and one at the deepest visually detectable contamination level, or at the terminal depth of 30 ft bg, whichever comes first- proposes that the monitoring/recovery wells be gauged and evacuated with a vacuum truck bi-weekly for a period of six months- a quarterly report on the progress of the remediation will be sent- after the two quarters of collection, the recovery effort will be reviewed- after the vacuum truck remediation program is terminated, will determine if the following soil excavation plan is necessary 10/27/10-Hiralkumar Patel. 12:49 PM:- spoke with Bob and asked to submit revised work plan with following changes:- 25 ft screen in wells (instead of 20 ft as proposed)- continuation of soil boring below 30 ft depth if contamination found extending below that depth. so two soil samples: one at the groundwater interface and second deepest clean- submission of report within 30 days (instead of 60 days as proposed) from receipt of sample data informed Bob that soil borings must be continued to the clean zone (even below 30 ft if contamination extending below that depth), but well can be installed to 30 ft depth. 10/29/10-Hiralkumar Patel. 10:18 AM:- received email from Protest with revised work plan. revised work plan is not acceptable, as propose to delineate only upto 30 ft depth. the department requires complete delineation of soil contamination. 11/01/10-Hiralkumar Patel. 12:42 PM:- left message for Tom. 01/04/11-Hiralkumar Patel. 11:33 AM:- left message for Tom. 11:35 AM:- spoke with Mr. Silverberg about required documents. he will talk to Tom. 11:47 AM:- sent email to Mr. Silverber (and copied to Tom) to submit following documents/information by the end of 01/07/11, to avoid legal enforcement:- work schedule for groundwater investigation at 31 Leonard St- work plan and schedule for product removal at 67 Manhattan Ave- work schedule for groundwater investigation at 30 Montrose Ave- tank closure report for 24 Boerum St 01/05/11-Hiralkumar Patel. 2:56 PM:- received call from Tom. he will submit updates by end of 01/12/11. 01/11/11-Hiralkumar Patel. 3:52 PM:- received email from Tom with updates. protest installed 2 inch diameter well in May 2010 to find out approx. groundwater level. groundwater was found at approx. 13-15 ft bg (instead of 60 ft bg originally suspected). they are preparing revised work plan proposing installation of 11 groundwater observation wells. work plan will be submitted by 01/14/11. 01/18/11-Hiralkumar Patel. 10:40 AM:- spoke with Bob at Protest inquiring about revised work plan. he mentioned that Chris Tomasello is still working on it and will submit by the end of 01/21/11. 01/25/11-Hiralkumar Patel. received work plan from ProTest (at 11:27 PM on 01/24/11). proposes to install total of eleven (11) six inch diameter recovery wells to a depth of 30 ft bg with 25 ft of screen. wells will be gauged and evacuated bi-weekly for a period of six months. 01/26/11-Hiralkumar Patel. after discussing with DEC Austin, case transferred to DEC Vadim due to free product on

groundwater.11:33 AM:- sent email to Tom informing that case has been transferred to remediation group. email copied to DEC Vadim and Mr. Silverberg.summary:- oil leaked into building and was coming out from ground- two 45,000 gal tanks were pumped out and cleaned in May 2007 and been empty since then- oil/water found coming back into tanks through holes in bottom of both tanks**see also spill #: 0103137, 0905433, 0905544, 0906148 and 1000673.**03/29/2011: This spill case was transferred to A. Doronova. - ADReviewed the submitted work plan from ProTest. The work plan proposes subsurface investigation in the vicinity of the two 45,000-gallon closed-in-place USTs, to delineate soil and groundwater contamination. Eleven permanent monitoring wells will be installed with collection of soil and groundwater samples for laboratory analysis. A report summarizing all findings with conclusions and recommendations for further actions will be prepared and submitted to DEC. AD04/01/2011: Issued a letter approving the work plan. DL pdf copy of the letter to eDocs. AD06/20/2011: Received an e-mail from Mr. Tomasello of ProTest dated June 6, 2011, saying:"Ainura,Please be advised that we will be starting the installation of the wells at 67 Manhattan Avenue on June 15 and 16, 2011 (hand clearing of the wells to 5 ft). The project was delayed due to other conflicting work being performed on the site. Due to the amount of work (11 wells) the installation will take a few weeks to complete. Please feel free to call me if you have any questions related to this matter. Regards,Christopher P. Tomasello, IH Reliant Consulting Services, Inc. 2450 Lakeside driveBaldwin, NY 11510 Office/fax 516 632-9707, Cell 516-233-7944 reliantconsulting@live.com"AD09/27/2011: Sent an e-mail to Mr. Tomasello with a reminder that submission of an investigation summary report for the site is due. Later received an e-mail from him saying:"Ainura,The site wells took a long time to install. So far, I have 12 wells installed and only 3 of which are clean. Additional wells are needed to delineate the site. In our of the ISR, I would like to submit a map with product locations and a work plan for additional wells. Would that be acceptable to the department? I would like to keep the ball rolling while they are attentive. Please let me know if this approach would be acceptable. Regards, Christopher P. Tomasello, IH Reliant Consulting Services, Inc. 2450 Lakeside DriveBaldwin, NY 11510 Office/fax 516 632-9707, Cell 516-233-7944 reliantconsulting@live.com"Will discuss this with J. Kolleeny of DEC. AD10/04/2011: Discussed the proposal with J. Kolleeny of DEC. Sent the following e-mail to Mr. Tomasello:"Mr. Tomasello: You can submit a brief work plan for further delineation of a free product plume, for its review and approval by DEC. Thank you, Ainura Doronova"AD10/20/2011: Received an e-mail from Mr. Tomasello saying:"Ms. Doronova,Please find attached, for your review and approval, a work plan for continuing the investigation at 67 Manhattan Avenue, part of Lindsay Park Houses. Please let me know at your earliest convenience, if this plan meets with the Departments approval. Feel free to call me if there are any questions related to this matter. Regards, Christopher P. Tomasello, IH Reliant Consulting Services, Inc. 2450 Lakeside DriveBaldwin, NY 11510 Office/fax 516 632-9707, Cell 516-233-7944 reliantconsulting@live.com"Will review. AD10/21/2011: Reviewed the supplemental investigation work plan. It proposes installation of 12 additional wells with collection of soil and groundwater samples. Locations for some wells are questionable. AD10/24/2011: Discussed work plan with J. Kolleeny of DEC. Called and spoke with Mr. Tomasello regarding wells locations. Asked him to

re-submit site plan with revised wells locations. AD10/28/2011: Received an e-mail from Mr. Tomasello saying:"Ms. Doronova:As per our telephone discussion, I have revised the proposed well placement map. Please note that wells will be attempted in the revised areas and also that some wells are conditional upon the installation of other wells. Please let me know if this plan meets with your approval. Have a nice weekend, Sincerely, Christopher P. Tomasello, IH Reliant Consulting Services, Inc."Will review. AD11/01/2011: Reviewed site plan with the revised wells locations. Discussed work plan with J. Kolleeny of DEC. Issued and sent an approval letter. DL pdf copy of the letter to eDocs. Put site priority as P1. AD05/15/2013: Sent an e-mail to C. Tomasello with a request for site status update. AD06/05/2013: Received the following e-mail from Mr. Tomasello:"Ainura,Sorry I did not get back to you sooner on the status of the two spill cases: 30 Montrose Avenue, Brooklyn NYSDEC Spill No. 0905433 and 67 Manhattan Ave., Brooklyn NYSDEC Spill No. 0701867. There were some aspects of the cases that I needed to review, The following is a status for each: 30 Montrose: Pro Test has taken every possible step to expedite this project. As you know, we met with the department and it was decided that additional borings were needed. Pro Test scheduled the wells to be installed and found out at the last minute that No work, including borings, can be done on the site until the Department of Buildings lifts the stop work order. In order to do so, we needed to amend our excavation permit (through the engineer)to reflect where the proposed borings were in relation to the proposed excavation. This revision was submitted the first week of May, 2013. We are waiting for permission to proceed from the Department of Buildings and cannot do anything on the site until further notice. As soon as we get approval from the department of buildings, ProTest will schedule the installation of the borings and proceed with the required remediation. 67 Manhattan Ave: In the interim, during the wait on the 30 Montrose permit, we have been addressing the issues at 67 Manhattan Avenue. Pro Test and I met with the engineer on the site (April 23, 2013) and obtained from him an idea of what can be physically excavated at the site, the limitations of such a job, and his requirements (missing items list) for the submittal of a permit to excavate with the Building Department. The site is well delineated, as you will see from the report presently being generated, and the product is not migrating from the area adjacent to the tanks. Pro Test has been attempting to pump out the product via vacuum truck. Due to the viscosity of the oil we have not been able to accurately calculate the product thicknesses until our April 19, 2013 pump out of the site. The site is due for another vacuum truck visit next week where we will attempt to verify the product levels. This data will also be included in the completed report. I hope that you can see that we have been actively working on progressing these jobs. If you have any questions on these projects, please feel free to call Tom Leddy or I. Sincerely,Christopher P. Tomasello, IH Reliant Consulting Services, Inc. 2450 Lakeside DriveBaldwin, NY 11510 Office/fax 516 632-9707, Cell 516-233-7944 E-mail: reliantconsulting@live.com Web: www.reliant-consulting.com"AD08/14/2013: Sent an e-mail to C. Tomasello requesting the report submission. AD11/14/2013: Received the following response from C. Tomasello:"Ainura,Sorry for the delay in getting back to you with this status on the sites. Here is the status:67 Manhattan Avenue: this site has also been held up in the permit process. It took an extended period of time to get the site

surveyed, a requirement of the engineer and the building permit. The survey has been performed and the electronic version of survey has been forwarded to the engineer at Vaccaris Engineering. According to the engineer, the permit process shall be initiated shortly. Protest has been recovering product, via vacuum truck, from the recovery wells. This will continue until ground is broken on the site. The report on the well installations is being prepared and will be to your office by the end of the month. Please feel free to call me if you have any questions concerning this up date. As mentioned previously, you will be notified as soon as work starts on either site. Christopher P. Tomasello, IH Reliant Consulting Services, Inc. 2450 Lakeside DriveBaldwin, NY 11510 Office/fax 516 632-9707, Cell 516-233-7944 E-mail: reliantconsulting@live.com Web: www.reliant-consulting.com"AD03/13/2014: Did not receive any response. Sent an e-mail to Mr. Silverberg with a deadline to submit the report by April 3, 2014. AD

Remarks: WHILE TESTING TANK IT LEAKED OUT DURING PRESSURIZING*** IAM MAKING IT UNKNOWN AMOUNT NOW, KEEP GETTING CONFLICTING REPORTS ON AMOUNT*** HAZMAT WOULD LIKE DEC TO RESPOND*****

DEC Region: 2
DER Facility ID: 296385
DEC Memo: 7/26/2005 Sangesland spoke to Christopher DeCarlo (cell #201-694-4943) with Flemming Lee Shue Environmental Consulting.Approx. 20 years ago this site was a gasoline station.There is no DEC - PBS or Spill history for the site.Chris DeCarlo works for the new owner of a property which is now under construction. Apparently the former owner dug out the tanks and left a pit. Now that the new owner has started construction, approx 8 ft below the bottom of the pit they found floating gasoline product. They are in the process of removing product and contaminated soil.Since the consultant knew the DEC proceedure and had already started, no contaminated soil letter was sent.7/26/2005 Sangesland - a second "Spill Report" came in on this site (#0505029). A vapor complaint from a neighbor with the smell of gasoline (95 degree temp today).Sangesland left a voice mail with Chris DeCarlo at Flemming Shue asking him to confirm that the stock piled material is covered and as much "Vapor Abatement" as possible has been done.9/19/05-Reassigned to A. Obligado. (Sun)9/19/05- Obligado-Reviewed fax from Christopher De Carlo of Fleming Lee Shue consultants dated 9/8/05 requesting case manager be assigned to site. Called De Carlo to give him contact info. DeCarlo stated that they completed excavation of soil and taken clean soil endpoint samples. GW sample from bottom of excavation is 18 ppm MTBE and 3.9 ppm benzene. Asks if they can request closure of spill number. Tell him the NYSDEC needs to see the UST closure report before a judgement can be made. DeCarlo says report is in progress and NYSDEC should receive it shortly. 9/19/05 - Obligado - Follow up phone converstation with De Carlo. Ask him to send DEC foundation and vapor barrier details. Inquire about site status - site construction on hold pending permit for excavation. Ask him not to begin construction until the department reviews designs and UST excavation results.10/28/05 - Obligado - Received phone call from De Carlo, says he had sent DEC Remedial Action Report and was waiting for DEC response. Told him that haven't seen report yet, and to email pdf of report. 10/31/05 - Obligado - review Remedial Action Report. 5 gasoline USTs removed previously, no records of soil disposal or analyticals. Upon beginning of FLShue's involvement of the site, the USTs had already been removed and an excavation 3 to 4 ft deep was on site. Continued excavation to 9-10 ft bgs. Excavated laterally until no contaminated soil encountered. 354 tons of soil removed from site. Soil results show no VOC exceedences in endpoint samples, only PAH exceedences in one soil sample, SB-2. Ground water sample collected from bottom of excavation show 3.9 ppb benzene and 18 ppb MTBE. Building construction will include 20 mL high polypropylene vapor barrier. Request NFA based on low concentrations and vapor barrier. Call Chris

FORMER CHARLES PFIZER & CO SITE
407 MARCY AVENUE
BROOKLYN, NY 11206
Site 3 of 5 in cluster AW

NY BROWNFIELDS S113402003
N/A

Relative:
Higher

BROWNFIELDS:
Program: BCP
Site Code: 479327

Actual:
13 ft.

Site Description: Location: The site is located in an urban area in East Williamsburg, Brooklyn and occupies Tax Block 2245 Lot 8. Site Features: The site is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the

MAP FINDINGS

FORMER CHARLES PFIZER & CO SITE (Continued)

S113402003

west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St. was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel.

Env Problem: Nature and Extent of Contamination: Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm). Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building foundation and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of

FORMER CHARLES PFIZER & CO SITE (Continued)

S113402003

site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY" Initial site investigation soil data found soil contamination, however, additional soil sampling by URS failed to duplicate those results and only contaminant in groundwater was MTBE, which seemed likely to be coming from upgradient 90th Precinct. In March 2005, J. Kolleeny approved NFA for the soil at site (and monitoring of groundwater combined with 90th Pct. monitoring), but cautioned that if there were indications that on-site soil contamination was impacting groundwater, additional investigation and/or remediation could be required. In November 2004 URS Groundwater Monitoring report for 90th Precinct and Engine Co. 216, MTBE levels in Eng. Co. 216 wells seem persistent and possibly unrelated to 90th Precinct plume. JK spoke with Jane Staten of URS and agreed that if next round of GW sampling still showed high MTBE levels, situation at Eng. Co. 216 would be re-evaluated. Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006. MW-3 - 150 PPB mtbe in groundwater. Recommendations: maintain DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in

four wells with concentrations up to 60 ppb(July 2006). Benzene and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX). AZ10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ11-6-09 An e-mail was sent to Brian Morrissey/Fatemeh Ashkan/ V. Brevdo: "I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination (i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report." AZ4-25-2011 Reviewed LiRo status report. This spill is associated with four closed in place 550 gallon gasoline USTs. Two soil borings will be installed near these USTs. AZ11-28-2011 A report dated 9-8-2011 stated that drilling for the borings approved by DEC was scheduled for August 2011. AZ6-12-2012 Reviewed a status report dated 3-29-2012. ORC socks were placed in contaminated wells. AZ4-12-2012 Reviewed a status report dated 8-31-2012. Semi-annual sampling is being performed at 12 wells. Downgradient well MW-2 exhibited continued rise in contaminant levels. Left a message for S. Frank. He called back and we discussed the site. He will into it. Maybe LiRo will install a well downgradient of 216-MW-2 AZ9-3-2013 Reviewed a spill closure report for this spill. This spill is associated with the four closed in-place 550-gallon gasoline USTs located on the Engine Company 216 property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with TVOC concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. AZ9-4-2013 The following e-mail sent to S. Frank/V. Brevdo/F. Ashkan:"Dear Steve,I have reviewed Request for Spill Closure dated May 23, 2013. This spill is associated with the four closed in-place 550-gallon gasoline USTs located on the Engine Company 216 property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry

application was performed in March 2004. Stable dissolved phase groundwater plume with Total Volatile Organic Contaminant concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. URS requested that DEC close spill number 9807905. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9807905. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should be gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky

Contact Phone: (718) 726-2181
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"4/12/04-Vought-Spill transferred from Mulqueen to Vought as per Rommel.3/24/06 Diaz - Next steps required - review file, track down contacts.Spill transferred back to Region 23/10/08 - Austin - Spill assigned to Ahmed for followup - end10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end9/23/13 - Raphael Ketani. I spoke to Heidi Unwin (518) 786-4347, Environmental Specialist II, Environmental Compliance Branch regarding the spill. She said that she had been looking through some old records and discovered that the spill had not been closed out. I told her that the DEC had only two letters stating that the investigation and remediation was going to take place. Ms. Unwin stated that she will send the DEC copies of all of the remediation, sampling and disposal information that she has on file.10/8/13 - Raphael Ketani. Ms. Unwin sent 4 documents regarding the tank removal and soil excavation. These documents were: the Solution Mechanical Corp. 7/11/96 pre-excitation soil endpoint analytical report; the Solution Mechanical Corp. 7/18/96 post-excitation soil endpoint analytical report; the Solution Mechanical Corp. 7/26/96 tank removal and remediation report; and the NYS Division of Military and Naval Affairs 10/2/13 Spill Closure Letter.The pre-excitation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. The results were either non-detect or well below the CP-51 unrestricted standards.The post-excitation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. Samples were also taken from the soil stockpile and around the stockpile. The results were almost entirely non-detect for the endpoints and non-detect to well below standards for the soil stockpile samples.The tank removal and remediation report had a map showing where the tanks and the pump islands had been. Both 2,000 gal. USTs had contained gasoline, even though one was labeled as containing diesel. The cause of the spill was the sweating of product from the joints of the fill pipes and the suction lines. The excavation of the soil had started on 6/24/96. The contaminated soil was shipped to a landfill in Albany, NY. Tanks were cleaned and shipped to a scrap metal facility. Manifests were included for the soil and the tanks.The Spill Closure Letter stated that about 63.4 tons of soil had been excavated.10/10/13 - Raphael Ketani. The spill case was presented to Hassan Hussein, supervisor Unit C, Region 2, Remediation for closure. Mr. Hussein accepted the closure of the spill case.Based upon the information in the case record, the site has been successfully remediated and there are no threats to the public of the environment. Therefore, I am closing the spill case effective today.
Remarks: upon digging out tanks it was discovered that soil wascontaminated from gasoline and possibly diesel fuel-areahas been cleaned up

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY" The spill is referred to spill # 8809462. The site is currently under remediation by LiRo Engineers. - II (03/02/05). 4/28/05- Reviewed the monthly monitoring report-Jan/05. A multi-phase extraction system is in place and is performing well. Both vapor and water effluent are under compliance. A trace (.01 ft) of free product persists at one well only as revealed from monthly monitoring data. Quarterly groundwater sampling results show persistently decreasing trend and are close to under compliance. Soil sampling is done semiannually. Routine site monitoring to continue. 3 monthly electronic files have been installed in the eDoc Folder.- II 6/6/05- Reviewed Feb/05 & Mar/05 monthly monitoring reports. The MPE system monitoring data shows that it is working effectively. Neither of the scheduled Quarterly GW sampling nor Semi-annual soil sampling were done during the monitoring period as they were not due in this period. All monitoring wells have become free from Free Product. Routine monitoring to continue as scheduled.- II 7/22/05- Reviewed the Monthly Monitoring Report prepared by LiRo Engineers dated May 27, 2005. The report presents MPE system performance monitoring data for the month of April, 2004. The system monitoring data indicate that vacuum measurements were not taken at two monitoring wells and six (50%) extraction wells. This lack of readings prevents DEC from properly evaluating the system's effectiveness. Sent the above comment to DDC and LiRo via email. Installed the monthly monitoring reports for Feb., Mar. & Apr./05 in the eDoc Folder. - II 8/23/05- Reviewed the May/05 monitoring report. The report presents MPE system operating data and GW sampling results for the month of May/05. Apprx. 0.3 lbs VOC was collected and the MPE system is functioning effectively. Monthly GW sampling could not be

done on wells EW-6 & MW-8 due to deposits lining the inside of the drop tube and well EW-1 & MW-13 for being under water. Over all, the GW contamination has reduced substantially and four of the wells sampled in May/05 still exceed NYSDEC quality criteria for one or more compounds. Routine monitoring will continue.- II.9/19/05- Reviewed the June & July/05 monthly monitoring reports. MPE system is operating effectively. Approx. 2.8 lb VOC was collected during July month which is very high compared to the June month. LiRo did not explain the reason. Quarterly GW sampling was not due during the monitoring period. Routine system monitoring will continue. - II.10/25/05- Reviewed the August/05 monitoring report. The MPE system collected about 0.5 lb VOC during the month and the last month's spike (2.8 lb) is said to be an anomaly. Overall GW contamination at most wells has been significantly reduced. Low level Product has appeared in two wells and they have been sampled for fingerprint analysis. Of the four wells sampled, two wells were non-detect for STARS list compounds. Other two wells showed a very slight increase in TVOC contamination. However, routine monitoring will continue.- II11/18/05- Reviewed the Sept. & Oct/05 monthly monitoring reports. Product appearance in wells LW-1 & MW-1 have been found to be mineral spirit and hydraulic oil respectively by fingerprint analysis. In Sept. & Oct/05 the MPE system collected 4.2 lbs and 2.4 lbs of VOCs respectively. LiRo states this increase in influent VOC levels during the period due to system cleaning and drop tube adjustments which the contractor Franklin conducted during this period. GW sampling was not due during this two months of monitoring period. LiRo recommends to continue operation of the MPE system with improved induced vacuum. LiRo also recommends installation of passive skimmers in two wells having product. LiRo's recommendation for passive skimmers installation and plan for next round of annual soil sampling four borings) are approved with an additional boring to be located in the vicinity of GPR-13. Filed the monthly reports in the eDoc folder.- II01/31/06: This spill transferred from Imdad to Q.Abidi.Reviewed November/05 monthly monitoring report. Quarterly groundwater sampling was not performed during this monitoring period. On Dec.6, 2005 Liro pumped out wells LW-1 and MW-1 with a vacuum truck, removing 1,412 gallons of contaminated fluids, of which an estimated 14 gallons was free product. Liro recommends to continue the system operation. No response letter necessary.- QA02/07/06: Reviewed December/05 Monthly monitoring report. Quarterly groundwater sampling was not performed during the monitoring period. LiRo recommends that the vacuum truck should return to the site to treat wells LW-1 and MW-1. Site is being transferred to Greyhawk. Data show decrease in induced vacuum levels, possibly indicating a line blockage.Liro suggest New CM should evaluate the site and determine whether system should be cleaned, or shut down and only use a vacuum truck on LW-1 and MW-1. Filed the monthly report in the eDoc folder.- QA08/18/06: Transferred to S.Kraszewski. According to URS Bi-monthly update report Rouc performed GW sampling and gauging on April 5, 2006. VOCs detected range from 6 ppb to 532 ppb. SVOCs were below detection. Monthly gauging on May 5, 2006 revealed 0.22 ft of product in LW-02 and 0.01 ft in LW-01. On June 15, 2006 no free product in LW-02 and 0.01 ft of product in LW-01. An absorbent sock was placed in LW-01. - SK08/31/06: Reviewed Quarterly O&M and Monitoring Report for April-June 2006 submitted on July 7, 2006 by Greyhawk/Roux. On April 5, 2006 Roux gauged and monitoring wells EW-1, EW-4, EW-6, EW-9, LW-1 and LW-2. Gauging occurred on May 5 and June 15 as well. GW flow

S104621574

direct was determined to be southernly. No free product in April, but 0.01 ft for LW-1 and 0.22 ft for LW-2 in May. In June, LW-1 had 0.01 ft. All six MWs revealed VOCs ranging from 6 ppb to 532 ppb with several TAGM exceedances. No SVOCs detected in GW. Greyhawk plans on continuing quarterly GW sampling but recommends reducing the gauging and free product removal frequency from monthly to quarterly visits. Low PID readings for influent and effluent air. However, influent air TVOCs reveal 3250 ug/m³ in April and 877 ug/m³ in June. Since the system is still effectively removing volatiles Greyhawk recommends continued operation and maintenance of the MPE system. They will attempt to increase the vacuum in EW-3 and EW-12. SK called Andris Ledins at Greyhawk (718-943-1100.) Left a message to call back. - SK10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM5/31/07 Reviewed Quarterly Monitoring Report for July through September 2006 submitted by Roux and dated Nov. 10, 2006. Free phase product was detected in wells LW-02 (0.01 foot) and product sheen detected in EW-06 on July 20, 2006. During the previous quarterly monitoring period (April through June 2006), free product was detected in well LW-01 (0.01 ft) and LW-02 (0.22 ft). Groundwater samples were collected from wells on the quarterly schedule (more wells are sampled on an annual schedule at this site) and the highest level of TVOCs was 693ug/L in LW-01. The MPE system continues to run however restricted vacuum readings have been observed in multiple monitoring wells and ventilation wells. 6/11/07 Reviewed Quarterly Monitoring Report for October Through December 2006 submitted by Roux and dated March 15, 2007. Free-phase product was detected in wells LW-02 (0.10 ft) and EW-06/MW-08 (0.15 ft) and product sheen was observed in LW-01 during the October gauging event. Wells EW-06/MW-08 was not gauged in December because of a DOS truck was obstructing and LW-01 and LW-02 had petroleum absorbent socks which were removed. Groundwater samples were collected from wells on the quarterly schedule and the highest level of TVOCs was 261ug/L in LW-01. The MPE system has had an uptime of approximately 80 percent during this monitoring period. However, the system has been hampered by the decreased inlet header vacuum, which resulted in the system's inability to extract groundwater and expose the smear zone. Attached in the appendices were an Enhanced Bioremediation Work Plan and Additional Site Investigation Work Plan. The Enhanced Bioremediation Work Plan proposed injecting a bacteria/enzyme mixture at wells LW-01, LW-02 and MW-16. These wells would be monitored to evaluate the effectiveness of the injection. I requested that EW-07/MW-09 be included in the monitoring program and approved the work plan. The Additional Site Investigation Work Plan proposed the advancement of seven soil borings in locations as shown in Figure 8. I requested that the new borings be advanced as close as possible to the original soil samples collected at the beginning of the site investigation and approved the work plan. Additional recommendations to the O&M Procedures are as follows: 1) Convert MPE system to SVE system 2) Reduce frequency of the quarterly groundwater monitoring program to semi-annual 3) Reduce frequency of gauging from monthly to quarterly 4) Remove SVOCs from the groundwater sampling program 5) Remove wells EW-05, MW-12 and MW-15 from the groundwater sampling program. Recommendations 1, 3, 4, and 5 were approved. Since a new remedy is being implemented at the site groundwater monitoring should continue on a quarterly basis for several more rounds. The reduction of monitoring frequency from quarterly semi-annual will be reevaluated at a later date. A letter was sent today with these

BROOKLYN NORTH 03/03A DOS -DDC (Continued)

S104621574

approvals and can be found in edocs. - JAM3/3/08 Reviewed Quarterly O&M and Monitoring Report for period January through June 2007 submitted by Roux and dated September 18, 2007. MPE system operated at the site and as currently configured the MPE system is not operating efficiently to remediate residual soil and groundwater. Groundwater samples were collected from select wells in January and April 2007 for VOCs and SVOCs. No SVOCs were detected in any wells and TVOCs were observed ranging from ND to 84ug/L. Roux states the MPE system has effectively reduced levels of free product and residual soil and groundwater contamination. During the next monitoring event Roux will conduct quarterly monitoring, implement the approved bioremediation WP and convert the MPE system to an SVE system. - JAM6/10/08 Spoke to Brian Morrissey at Roux. He said the DOS is terminating their lease and moving from the site. They will maintain liability for the spill. Several tanks on the site will be closed. The In-situ Bioremediation work plan should be implemented soon. The MPE system will also be converted to an SVE system. I have received emails from Envirotrac notifying the DEC that the MPE system has been shut down due to a faulty solenoid valve. The valve will be replaced and the estimated down time is 1 week. - JAM6/23/08 Spill number 0001698 was closed and consolidated with this spill number. Hoist oil was observed in several wells which has been evacuated or removed by petroleum absorbent sock. I added Hoist Oil to the material list on this spill case. I called Brian Morrissey and let him know that spill number 0001698 was closed and consolidated with this spill. - JAM7/28/08 Reviewed Quarterly Monitoring Report for period July 2007 through May 2008 submitted by Roux and dated June 24, 2008. The MPE system operated at the site with an uptime of 81 percent. As configured the MPE system is not operating effectively and needs optimization. Free product was detected in 4 of the on-site monitoring wells with a max thickness of 0.38feet in well EW-09/MW-03. Product identified as hydraulic oil or heavy lubricating oil. VOCs were detected in several wells with the max detection during the reporting period of 512ug/L in LW-01 in July 2007. Roux advanced six soil borings as per the approved work plan to a depth ranging between 24 to 31 feet. VOCs were detected in 4 of the six borings with a max of 249400ppb in RXSB-02 from interval 19-21fbs. Roux recommends the following: 1. Continue quarterly groundwater monitoring program. 2. Continue using petroleum absorbent socks in wells LW-01 and LW-02. 3. Conduct a soil investigation (as proposed in Appendix E) near the three UST areas in the south-southwester part of the site. 4. Optimize the MPE system performance. I sent an email today approving these recommendations. A work plan should be submitted in a separate letter for approval that describes the optimization of the current MPE system in more detail. The letter should include a process and instrumentation diagram and a site diagram showing the additional extraction points. The report and email are uploaded to eDocs. - JAM9/12/08 Received an email from Tom Hug at Envirotrac. The MPE system was shut down because the discharge line has become clogged and the system is shutting down on a "high water alarm." As soon as the blockage is cleared the system will be restarted. Estimated downtime is 1 week. - JAM5/12/10 Received an email from Stephen Frank at LiRo and Fatemah Ashkan at the NYCDDC. LiRo proposed a conceptual remedy, which includes excavation and removal of USTs on-site as well as injecting chemical oxidants to treat smear zone and groundwater contamination. I sent a reply email stating that, "The proposed approach is acceptable; however, a

BROOKLYN NORTH 03/03A DOS -DDC (Continued)

S104621574

remedial action work plan (RAWP) must be submitted to the DEC for approval. The RAWP should include a detailed description of the proposed excavation/tank removal work with figures showing the proposed excavation limits and an end-point soil sampling plan. The RAWP should also include a chemical oxidant injection plan with a detailed description of the chemical oxidant to be used, how the chemical oxidant will be applied and a monitoring plan to evaluate the effectiveness of the remedy." I also notified them that the EPA Underground Injection Control Program needs to be notified and an application must be submitted to perform the chemical oxidant injections. - JAM6/25/10 Reviewed the Proposed Site Pre-Design Investigation Work Plan for the above referenced site submitted by LiRo Engineers, Inc. (LiRo) dated June 16, 2010. The work plan was prepared for the tanks located on the adjacent property at 314 Rutledge Street and proposes advancing nine soil borings and installing two groundwater monitoring wells. The purpose is to locate the three previously abandoned tanks and delineate soil and groundwater contamination, and to determine the limits of the planned soil excavation and design a chemical oxidation injection program, which constitute the remedial strategy approved by the NYSDEC via email on May 12, 2010. The work plan is uploaded to eDocs. I issued a letter today approving this work plan. A summary report including appropriate diagrams, soil boring logs, well construction logs, and tables summarizing soil and groundwater analytical data should be submitted to the NYSDEC for review. A detailed remedial action plan based on the findings of this investigation should also be included for review and approval. Letter uploaded to eDocs. - JAM11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ2-14-2011 Reviewed revised additional soil and geophysical investigation summary report and remedial action work plan dated 10/13/2010 and received from J. Kolleeny on Dec. 20, 2010. The plan proposed an in-situ chemical oxidation system to treat smear zone and phreatic zone at 314 Rutledge St. Also, the plan proposed excavation of the remaining USTs and excavation of the remaining residual soil contamination and injections of a metal solution, hydrogen peroxide, and a biological treatment at 306 Rutledge Street. An e-e-mail was sent to S. Frank, V. Brevdo and F. Ashkan: "I have reviewed a Revised Soil and Geophysical Summary Report and Remedial Action Work Plan dated October 13, 2010. The Work Plan is approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan." AZ8-18-2011 The following e-mail was received from S. Frank (LiRo) on 8/18/2011: "At the Quarterly meeting we discussed Brooklyn 3/3A. As you know, NYCDOS moved out of the leased site several years ago. There is currently litigation over rent payments and site impacts that have been ongoing between the property owners and NYC. To complicate matters, the former DOS site includes two separate properties (306 Rutledge and 314 Rutledge) that are owned by two different parties. Both parties are separately in litigation with the City. The City is committed to remediating both properties, but in the past, all site contamination was being addressed under a common spill number associated with fuel oil releases on the 306 Rutledge property. We have acquired Sanborn Fire Insurance maps that show that the 314 site had historically been used for dry cleaning and the historical mapping shows "solvent tanks" in the portion of the site where the contamination was identified as mineral spirits (see attached Sanborn Map). A mineral spirits derivative was historically used for dry cleaning. The City

S104621574

has inquired if it would be possible to open a separate spill number for the mineral spirits release at the 314 Rutledge Street property. At the meeting, Vadim indicated that NYSDEC would review the site information and advise DDC with regard to opening a new spill for mineral spirits at 314 Rutledge Street. I was wondering if you have had an opportunity to discuss this issue with him." AZ8/22/2011 The following e-mail was sent by S. Frank (LiRo) to Vadim Brevdo and AZ on 8/22/2011: "Dear Mr. Brevdo, I am writing to follow-up on our quarterly meeting conversation regarding the former use of 314 Rutledge Street for Dry Cleaning and the identification of a mineral spirits release. Mr. Alex Zhitomirsky called me to inquire whether chlorinated dry cleaning hydrocarbon compounds (i.e., tetrachloroethene and/or its breakdown products) were present. LiRo tested for full Target Compound List (TCL) volatile organic compounds during our February 2011 groundwater sampling of wells in the area of concern (314 Rutledge and 306 Rutledge at the common wall with 314 Rutledge) and the results are summarized in the attached table. Based on the February 2011 sampling, there is no evidence that chlorinated compounds are present in groundwater and all samples showed a chemical identification of mineral spirits. Thank you for your attention to this matter and do not hesitate to contact me if your office needs additional information." AZ10/26/2011 An e-mail with the information regarding the Owner of "314 Rutledge, LLC. Contact info: c/o Abraham Glanzer, 718 855-9100. Mailing address: Edith Kahan and/or Abraham Glanzer, 170 Hewes St, Brooklyn, NY 11211." AZ10/31/2011 Discussed this site w/V. Brevdo. Contacted S. Frank of LiRo and requested a technical memo which will summarize all information related to a mineral spirits spill. 12-13-2011 Received an email from S. Frank: "Dear Alex, I wanted to update you on the status of remedial work at Brooklyn 3/3A. We are installing injection wells for the ISCO work at both properties (314 Rutledge and 306 Rutledge) as well as removing tanks that were formerly closed in place in the building interior at 306 Rutledge. In conjunction with the tank removal work, we are over-excavating contaminated soil to the extent possible. We are hoping to finish the well installation and tank removal work this week. We expect the ISCO injection work will begin within a couple of weeks after the well installations are completed." AZ2-13-2012 Reviewed and discussed with V. Brevdo a report by LiRo Former DSNY Brooklyn 03/3a Garage Request for spill number for mineral spirits released at 314 Rutledge. The report states that contamination at 314 Rutledge is a different spill and plume from 206 Rutledge. A spill at 306 Rutledge is allegedly caused by mineral spirits. According to the report, this site was a dry cleaning operation between 1947 and 1965. The Sanborn maps indicate the presence of solvent tanks located along eastern wall of 314 Rutledge which is adjacent to the 306 Rutledge Street property. Petroleum based mineral spirits (Stoddard solvent was historically used in dry cleaning operations. Soil and groundwater investigation completed by EBC (contractor working for 314 Rutledge owner) at 314 Rutledge in 2008 indicated petroleum related VOC in soil and groundwater. EBC recommended the DEC Hotline be notified, however, it was not done. Free phase product fingerprint analysis for the sample from MW-18 (located at 314 Rutledge) identified the product as mineral spirits. Routine groundwater sampling completed in February 2011 from 314 Rutledge wells MW-17 and MW-18 indicated petroleum identification as mineral spirits. DSNY records indicate that petroleum fuel storage and fueling operations were never conducted by DSNY at the 314

S104621574

Rutledge parcel. However, PBS records indicate that there are three 1,500 gal tanks closed and registered by DSNY in 2000. Product stored indicated as gasoline. This discrepancy must be resolved. S. Frank indicated that these tanks were filled with concrete and will be excavated by LiRo. I requested to attempt fingerprinting any remaining product or sludge in the tanks in question. Also, the tanks design should be described. The Sanitation is leasing this site from 1993. LiRo should submit tank inspection results. LiRo should submit any information supporting statement that DSNY did not use 314 Rutledge for fueling or storage. LiRo should include fingerprint analysis of the alleged mineral spirits. The site was discussed with J. Urda. It was decided that V. Brevdo will contact A. Samani and request a conference call with a City lawyer AZ10-3-2012 LiRo issued a report in August 2011, stating that Empire Environmental conducted the tank removal and remedial soil excavation work at 306 Rutledge from December 2011 to January 2012. The report was uploaded to e-docs. AZ10-4-2012 According to LiRo's report dated January 8, 2012, tanks 009, 010 and 011 are 1,500-gallon gasoline USTs which were closed in place at 314 Rutledge in 2000. These tanks were registered as gasoline tqanks. However, according to DSNY records, petroleum fuel was not stored and petroleum fuel operations were not conducted at the 314 Rutledge parcel. The results of geophysical investigation did not indicate the presence of USTs beneath the site. In October 2010, free phase product was observed in 314 Rutledge St. well MW-18. Fingerprint analysis identified the product as mineral spirits. Soil and groundwater contamination are present at 314 Rutledge. However, in the report dated August 8, 2012, LiRo stated that they located and removed previously closed in place mineral spirits tanks at 314 Rutledge Street parcel. A report for the 314 Rutledge Street tank removal will be submitted to DEC under separate cover. Discussed the site with V. Brevdo. AZ1-2-2013 Reviewed LiRo's report dated August 8, 2012. According to the report, Spill#9200212 was opened in in 1992 due to the release of gasoline and hoist oil in the southern portion of the 306 Rutledge parcel of the site. Underground storage tanks (USTs) and aboveground storage tanks (ASTs) used by DSNY for storing gasoline and hoist oil include three 550-gallon USTs (Tanks 012, 013, and 0140, one hoist oil UST and one hoist oil AST). Multi-phase extraction system was made operational in 2002 and shut down in 2008 because of operational issues. The proposed remedial plan included soil/UST excavation to address spill#92002112 in the 306 Rutledge portion of the site. In addition, the plan proposed chemical oxidation to treat mineral spirits contamination supposedly coming from the historic dry cleaning operation at 314 Rutledge. 1-11-2013 A CSL was sent to C/O GLanzer 170 Hewes Street, Brooklyn, NY 11211. Copies were sent to J. Urda/V. Brevdo. AZ12-5-2013 Reviewed a semi-annual monitoring report through March 2013. According to the report, mineral spirit related impacts from the 314 Rutledge St. parcel, are present in in wells near the common wall with 314 Rutledge and two wells located along Rutledge St. These include wells LW-01, MW-16, IP-22, IP-23, IP-29, MW-22 and MW-23. Total VOC concentrations above the standards ranged from 42 ppb to 3,870 ppb. Contamination fingerprint identification completed previously at IP-22 and MW-22 identified mineral spirits. Residual motor fuel impacts, mainly Benzene and MTBE are present at 306 Rutledge wells, RXMW-01, MW-03/EW-09, MW-01 and RXMW-07, located along Heyward Street. Total VOC concentrations above the standards ranged from 7 ppb to 150 ppb. A trace level (less than 0.03') of residual oil has

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"URS investigated site, operated dual-phase extraction system to address free product, soil and groundwater contamination. System operation was terminated in 2002 due to diminishing results. To address remaining groundwater contamination they applied ORC. Groundwater monitoring still ongoing. - JK 4/4/05Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK10/31/2005 Reviewed report dated September 2005. MTBE is at 230 ppb. AZ8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006.MW-3 - 150 PPB mtbe in groundwater.Recommendations: maintain DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60 ppb(July 2006). Benzine and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX): I have reviewed Monitoring Report for October- December 2006 dated March 15, 2007. The report recommended reducing monitoring and reporting frequency to semi-annual. ORC socks

should be placed in wells where VOC concentrations exceed NYSDEC Guidance Values. AZ10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ 7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 56 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ11-6-09 An e-mail was sent to Brian Morrissey/Fatemeh Ashkan/ V. Brevdo: "I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination (i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report." AZ3-29-2011 Reviewed 4,000 gal gasoline tank closure report.3 bottom samples were collected at depth 13 to 16 bgs. Sidewalls samples could not be collected due to the steel sheeting that was previously installed during the original tank installation. Groundwater sample was collected from approximately 13 ft bgs. No visual evidence of contamination was detected. PID readings 0.6 - 2.1 ppm. The tank was in good condition. 456.4 tons of soil was transported for offsite disposal. No VOCs or SVOCs were detected in the soil samples. Groundwater sample contained VOCs detected above NYSDEC TOGs total VOCS 438 ppb. AZ4-27-2011 An e-mail was sent to LiRo/DDC/V. Brevdo: "I have reviewed the Site Turnover Status Report and Semi-Annual Monitoring Report dated January 24, 2011. I concur with the LiRo's recommendations to install two wells near a former 4,000 gal gasoline UST. Since the groundwater contamination was discovered when this UST was removed, two additional wells are required near this tank (a total of four wells).Well MW-01 could be removed from the monitoring schedule, as per LiRo's recommendation. Additional soil borings are approved. There is a number of USTs, including gasoline tanks, closed in place at this site. I recommend that these tanks be removed, if feasible." AZ11-27-2011 Reviewed report dated Aug. 29, 2011. The report stated that the latest groundwater results show VOCs were detected above AWQSGVs in four wells. LiRo will ORC socks and continue semi-annual monitoring. AZ6-11-2012 Additional soil borings SB-01 through SB-04 will be installed. New monitoring wells LMW-01 through LMW-04 will installed in the second quarter of 2012. AZ4-15-2013 ORC socks are installed in MW-02 and MW-08. AZ9-24-2013 The following e-mail was sent to S. Frank/V. Brevdo/F. Ashkan:"Dear Steve,I have reviewed Request for Spill Closure dated May 23, 2013.

This spill is associated with the four closed in-place USTs located on the 90th Precinct property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with Total Volatile Organic Contaminant concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. LiRo requested that DEC close spill number 9512590. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9512590. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should be gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 DEC Memo: 08/25/06 - ZielinskiThe drawing has been received and photos indicating filling lines and vent lines. They run in the basement above a concrete floor. Thew case is closed.8/17/06 - ZielinskiSteven Tsevdos called and said that they have only two 257-gallon tanks on the site. The drawing depicting the location of the closed tank and pipe lines would be sent to DEC. 8/17/06 - ZielinskiReceived soil samples' analyses taken 3 feet below tha tank bottom--no indication of soil contamination (eDOCs). Jim Donelan of Protest faxed a tank test report-- it had been a dry leak. Left a message for Steven Tsevdos, Caring Communities manager, asking for a layout of the failed tank and a number of tanks in service since the subject tank had been closed, and no records of registered tanks at the site.7/17/06 - ZielinskiSent a letter requesting that within three weeks of receipt of this letter, Caring Communities would submit a report, required by the department's letter of September 24, 2003. This letter provides that the Caring Communities must submit soil sample analyses, an explanation of tank failure, and remowe contaminated soil. 7/13/06 - ZielinskiTook photos of at the site. No indication of soil boring. Talked to Mr. Perez- superintendent. Left a note to Mr. Alonso requesting soil sampling results.7/6/06 -

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "BREEN"11/09/05: Joel Rogers, P.E. from Gannett Fleming sent request letter dated June 23, 2005 for elvaluation of Site Investigation Work Plan dated Jan. 13, 2004. Jon sent approval for Site Investigation Work Plan on Feb. 4 2005 to NYCHA. I spoke with Joel, he never recieved approval letter possibly because Steve Saccacio from NYCHA transferred from his position around the time Jon submitted his approval. I spoke with Ralph Trocchio at NYCHA, he said he would look into it. - SKThis spill transferred from J.Kolleeny to S.Kraszewski.11/22/05: Message from Joel Rogers, says he still hasn't recieved approval for work plan. Faxed him copy of approval. - SK02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann.

on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Number of Days to Update: 151	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014
Date Data Arrived at EDR: 03/13/2014
Date Made Active in Reports: 04/09/2014

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency

Number of Days to Update: 18	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/03/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/21/2014	Telephone: 518-402-9622
Date Made Active in Reports: 06/10/2014	Last EDR Contact: 07/17/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 04/01/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/22/2014	Telephone: 518-402-9814
Date Made Active in Reports: 06/13/2014	Last EDR Contact: 05/22/2014
Number of Days to Update: 22	Next Scheduled EDR Contact: 09/01/2014

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 04/09/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/10/2014	Telephone: 518-457-2051

	Data Release Frequency: Semi-Annually

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/22/2014	Telephone: 518-402-9549
Date Made Active in Reports: 06/11/2014	Last EDR Contact: 05/22/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2005	Telephone: 518-402-9549
Date Made Active in Reports: 07/14/2005	Last EDR Contact: 07/07/2005
Number of Days to Update: 6	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

INDIAN LUST R1: Leaking Underground Storage Tanks on Indian Land

A listing of leaking underground storage tank locations on Indian Land.

Date of Government Version: 02/01/2013	Source: EPA Region 1
Date Data Arrived at EDR: 05/01/2013	Telephone: 617-918-1313
Date Made Active in Reports: 11/01/2013	Last EDR Contact: 08/01/2014
Number of Days to Update: 184	Next Scheduled EDR Contact: 11/10/2014

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Elevation:	13 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

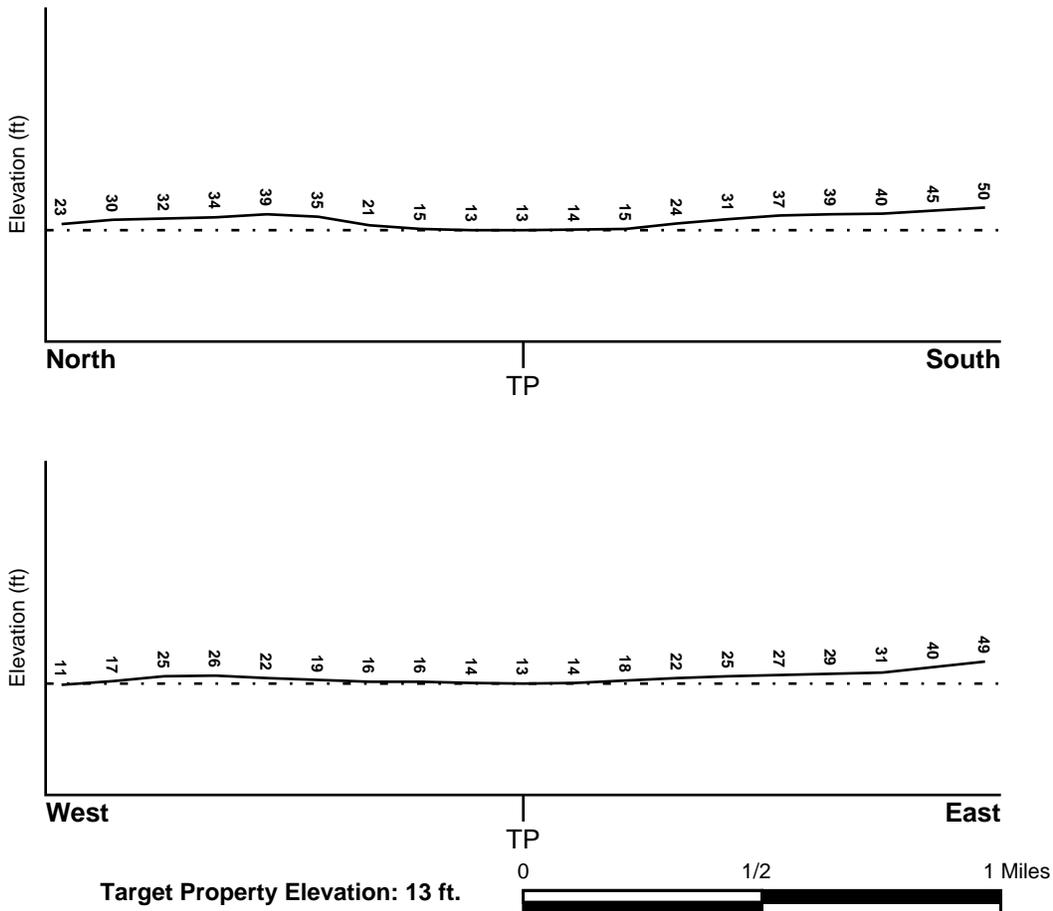

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> KINGS, NY	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map

- 3604970064B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> BROOKLYN	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles WSW
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is present at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

APPENDIX E
LABORATORY REPORTS IN DIGITAL
FORMAT

Monday, November 10, 2014

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 311 WALLABOUT ST., BROOKLYN
Sample ID#s: BH34794 - BH34798

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phyllis Shiller

SDG Comments

November 10, 2014

SDG I.D.: GBH34794

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 3 = This parameter exceeds laboratory specified limits.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

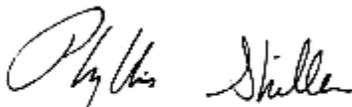

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

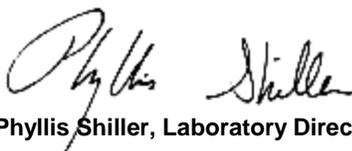

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

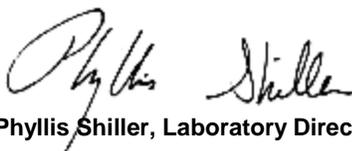

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

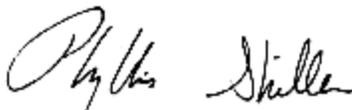

Pesticide Comment:

Due to matrix interference caused by the presence of PCBs in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

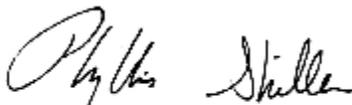

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

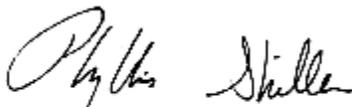

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

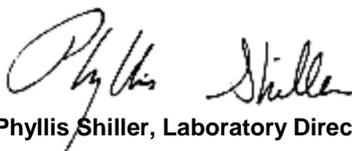

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

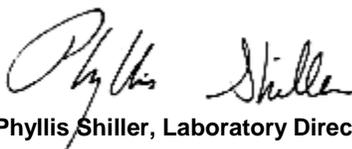

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

100% Solid Assumed

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

TRIP BLANK INCLUDED. %SOLIDS ASSUMED 100%

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

100% Solid Assumed

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Sample Criteria Exceedences Report

GBH34789 - EBC

Criteria: None

State: NY

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units
--------	-------	-----------------	----------	--------	----	----------	----------------	-------------------

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
