CERTIFICATION

I, Kimberly Somers, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located 141 Metropolitan Avenue, Brooklyn, NY, (OER Project Number 16EHAZ282K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 141 Metropolitan Avenue in the Williamsburg section of Brooklyn, New York, and is currently identified as Block 2358, Lot 24 on the New York City Tax Map. Figure 1 shows the Site location. Lot 24 is a rectangular shaped lot consisting of 25 linear feet of street frontage along Metropolitan Avenue and extending approximately 77 feet deep for a total area of 1,940 ft². The Site is located on the north side of Metropolitan Avenue and is bordered by mixed-use building to the north and east, a commercial use to the west, and a residential building to the south (across Metropolitan Avenue). A map of the site boundary is shown on Figure 2.

The Site currently is developed with a three-story residential apartment building with a full cellar and rear yard.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new four-story residential apartment building with a cellar the full size of the building footprint. The building and cellar footprint will encompass the first 51'4" of the Site. The remainder of the Site will feature a capped rear yard at grade. The cellar will contain a 412 ft² open cellar, a laundry room, a hot water heater room, utility rooms and stairwells. The first through fourth floors will consist of residential apartments.

The proposed building footprint will require excavation to a depth of approximately 5 feet below existing cellar grade and to 12 feet below grade into an approximate 725 ft² portion of the existing rear yard. Additional excavation to one foot will be conducted in the proposed 625 ft² rear yard for grading purposes. An estimated 291 cubic yards (437 tons) of soil will require excavation for the new building's cellar and rear yard. The building will not be equipped with any parking areas. Existing foundation walls will be removed. The water table is present at a

depth of approximately 32 feet below grade, and therefore will not be encountered during excavation.

Layout of the redevelopment plans for the cellar and first floor is presented in Figure 3. The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

A Phase I Environmental Site Assessment was completed by BSD Environmental Group in February 2016. The following Site history was established based on historic Sanborn maps:

The Site appears to have been developed prior to 1887 with a three-story semi-detached residential structure with a rear yard. No changes were made to the structure through 2007.

No recognized environmental conditions (RECs) were identified for the Site; however, the following environmental issue was identified:

- Lot 24 was assigned an E-designation (E-138) for Hazmat as part of the Greenpoint-Williamsburg rezoning action completed by the City in May 2005 (CEQR # 04DCP003K).

Areas of Concern (AOCs) identified for the Site include:

- The Site is identified as being assigned an E-designation (E-138) for Hazmat as part of the Greenpoint-Williamsburg rezoning action completed by the City in May 2005 (CEQR # 04DCP003K).

Summary of the Work Performed under the Remedial Investigation

EBC performed the following scope of work at the Site in March 2016:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.).
2. Installed four soil borings across the Site, and collected six soil samples for chemical analysis from the soil borings.

3. Due to access restrictions at the Site, groundwater monitoring wells could not be installed. The installation and sampling of two groundwater monitoring wells will be postponed until building demolition is completed.
4. Installed three soil gas implants and collected three soil gas samples for chemical analysis.

Summary of Environmental Findings

1. The elevation of the Site is approximately 32 feet above mean sea level.
2. Depth to groundwater is estimated to be approximately 32 feet below sidewalk grade.
3. Groundwater flow is generally northwest.
4. Depth to bedrock is at the Site is greater than 100 feet.
5. The stratigraphy of the Site consists of up to 5 feet of historic fill at one location (SB1) at approximately 10-12 ft below grade in the front portion of the Site. Historic fill did not extend beneath the cellar slab in the rear portion of the Site. Native soil was found 10-12 feet below sidewalk grade at SB4. Samples collected at grade did not contain fill material and consisted of native brown silty sand.
6. Soil/fill samples results were compared to New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill results showed no PCBs or VOCs detected above Unrestricted Use SCOs in any of the samples collected. One VOC, acetone, was detected in trace amounts in all of the six samples collected. One PCB, PCB-1,260 (max. of 66 µg/kg), was detected in trace amounts in two of the six samples collected in both shallow and deep soil. One pesticide, 4,4-DDT was detected above the Unrestricted Use SCO in two samples in both shallow and deep soil. Several SVOCs were detected, but only benzo(k)fluoranthene (max. of 930 µg/kg) and chrysene (max. of 1,400 µg/kg) exceeded Unrestricted Use SCOs, and benz(a)anthracene (max. of 1,200 µg/kg), benzo(a)pyrene (max. of 1,100 µg/kg) and indeno(1,2,3-cd)pyrene (840 µg/kg) exceeded Restricted Residential use SCOs in one subslab soil sample. The highest concentration of SVOCs was detected in SB1, at a depth of 8 to 10 feet below grade. Several metals including arsenic (max of 52.8 mg/kg), barium (max. of 1,100 mg/kg), cadmium (4.21 mg/kg),

chromium (max. of 43.6 mg/kg), copper (max. of 440 mg/kg), lead (max. of 3,980 mg/kg), mercury (max. of 14.9 mg/kg) and zinc (max. of 317 mg/kg) exceeded Unrestricted Use SCOs in deeper soils. Of these metals, arsenic, barium, copper, lead and mercury also exceeded Restricted Residential Use SCOs in one boring (SB1). The highest concentration of metals was found in deeper soils at SB1, which represent a hotspot. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

7. Soil vapor samples collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples collected during the RI showed moderate levels of petroleum-related VOCs and low levels of chlorinated VOCs. The total concentration of petroleum-related VOCs (BTEX) ranged from 1,028.6 $\mu\text{g}/\text{m}^3$ to 1,143.7 $\mu\text{g}/\text{m}^3$. Highest BTEX concentrations were detected for m&p xylene (max. of 677 $\mu\text{g}/\text{m}^3$). Chlorinated VOCs, tetrachloroethylene (PCE) and carbon tetrachloride were detected in all three soil gas samples with maximum concentrations of 0.8 $\mu\text{g}/\text{m}^3$ and 0.78 $\mu\text{g}/\text{m}^3$, respectively. Trichloroethylene (TCE) was detected in one of three soil gas samples at a maximum concentration of 0.27 $\mu\text{g}/\text{m}^3$. 1,1,1-trichloroethane (TCA) was not detected any of the three soil gas samples collected. Concentrations of the chlorinated VOCs were below the monitoring level ranges established within the NYSDOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Park Remodeling LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 1,940 square foot (ft²) site located at 141 Metropolitan Avenue in the Williamsburg section of Brooklyn, New York. The Site will be redeveloped with a new 4-story residential apartment building. The portion of the RI work conducted on the Site was conducted in March 2016. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 141 Metropolitan Avenue in the Williamsburg section of Brooklyn, New York, and is currently identified as Block 2358, Lot 24 on the New York City Tax Map. Figure 1 shows the Site location. Lot 24 is a rectangular shaped lot consisting of 25 linear feet of street frontage along Metropolitan Avenue and extending approximately 77 feet deep for a total area of 1,940 ft². The Site is located on the north side of Metropolitan Avenue and is bordered by mixed-use building to the north and east, a commercial use to the west, and a residential building to the south (across Metropolitan Avenue). A map of the site boundary is shown on Figure 2.

The Site currently is developed with a three-story residential apartment building with a full cellar and rear yard.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new four-story apartment building with a cellar the full size of the building footprint. The building and cellar footprint will encompass the first 51'4" of the site. The remainder of the site will feature a capped rear yard at grade. The cellar will contain a 412 ft² open cellar, a laundry room, a hot water heater room, utility rooms and stairwells. The first through fourth floors will consist of residential apartments.

The proposed building footprint will require excavation to a depth of approximately 5 feet below existing cellar grade and to 12 feet below grade into an approximate 725 ft² portion of the existing rear yard. Additional excavation to one foot will be conducted in the proposed 625 ft² rear yard for grading purposes. An estimated 291 cubic yards (437 tons) of soil will require excavation for the new building's cellar and rear yard. The building will not be equipped with any parking areas and existing foundation walls will be removed. The water table is present at a depth of approximately 32 feet below grade, and therefore will not be encountered during excavation.

Layout of the redevelopment plans for the cellar and first floor is presented in Figure 3. The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area immediately surrounding Site consists of a mixed-use building to the north, and multi-family walk-ups to the east and south (across Metropolitan Avenue), and a commercial office building to the west. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. P.S. 084 is located approximately 450 feet southwest of the Site. No other hospitals, schools or daycare facilities are located within a 500 ft radius of the Site.

Surrounding Property Usage

Direction	Property Description
North – Adjacent Property	<u>Block 2358, Lot 7501</u> – 100 North 3 rd Street A 9,819 sf ft lot developed with a six-story mixed-use building.
South – Across Metropolitan Avenue	<u>Block 2364, Lot 19</u> – 140 Metropolitan Avenue A 1,979 sf ft lot developed with a six-story residential apartment building.
East – Adjacent Property	<u>Block 2358, Lot 23</u> – 143 Metropolitan Avenue A 1,925 sf ft lot developed with a mixed-use building.
West – Adjacent property	<u>Block 2358, Lot 7503</u> – 135 Metropolitan Avenue A 3,908 sf ft lot developed with a four-story commercial office building.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I Environmental Site Assessment was completed by BSD Environmental Group in February 2016. The following Site history was established based on historic Sanborn maps:

The Site appears to have been developed prior to 1887 with a three-story semi-detached residential structure with a rear yard. No changes were made to the structure through 2007.

No recognized environmental conditions (RECs) were identified for the Site; however, the following environmental issue was identified:

- Lot 24 was assigned an E-designation (E-138) for Hazmat as part of the Greenpoint-Williamsburg rezoning action completed by the City in May 2005 (CEQR # 04DCP003K).

2.2 Previous Investigations

EBC is not aware of any previous investigations performed at the Site.

2.3 Site Inspection

A site inspection was conducted by EBC on March 4, 2016. During the time of inspection, the Site was developed with a three-story residential building with a full cellar and rear yard. The rear yard contained a large wooden deck and a small shed. The cellar was previously used for office space and was vacant during the time of inspection. No tanks or evidence of tanks (e.g. fill port, vent pipe, etc.) was observed by EBC.

2.4 Areas of Concern

Areas of Concern (AOCs) identified for the Site include:

1. The Site is identified as being assigned an E-designation (E-138) for Hazmat as part of the Greenpoint-Williamsburg rezoning action completed by the City in May 2005 (CEQR # 04DCP003K).

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kimberly Somers.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

EBC performed the following scope of work at the Site in March 2016:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.).
2. Installed four soil borings across the Site, and collected six soil samples for chemical analysis from the soil borings.
3. Due to access restrictions at the Site, groundwater monitoring wells could not be installed. The installation and sampling of two groundwater monitoring wells will be postponed until building demolition is completed.
4. Installed three soil gas implants and collected three soil gas samples for chemical analysis.

4.1 Geophysical Investigation

A site inspection was not conducted by EBC because the majority of the lot will be excavated to a depth of 12 ft below grade and there were no indications of USTs on-Site.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On March 15, 2016, four soil borings (SB1 through SB4) were installed in the approximate locations shown on Figure 5. The soil boring locations were chosen to gain representative soil quality information across the Site. Due to access restrictions all soil borings were performed via hand auger. At soil boring SB2, hand auguring could only be performed to a final depth of approximately 5 feet below grade; therefore, in order to obtain a sample from the 10 to 12 foot interval near this area, SB4 was installed within the cellar adjacent to SB2.

At SB-2 and SB3, soil samples were collected from grade to 4 feet below grade. Soil samples were collected from beneath the cellar grade to a final depth of 4 feet (approximately 12 feet below grade) at SB1 and SB4. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photoionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were detected. Two soil samples were retained from soil boring SB1, representing the 8 to 10 foot interval below grade and the 10 to 12 foot interval below grade. One soil sample was retained from soil

boring SB4, representing the 10 to 12 foot interval below grade. One soil sample was retained from soil boring SB2, representing the interval 0 to 2 feet below grade. Two soil samples were retained from soil boring SB3, representing the 0 to 2 feet below grade and 2 to 4 foot below grade interval.

Soil boring details are provided in Table 1. Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B.

Groundwater Monitoring Well Construction

Groundwater quality at the Site could not be determined during the RI sampling in March 2016. Due to the restrictive access at the Site, groundwater monitoring wells were not able to be installed. Groundwater sampling will be conducted at the Site upon demolition of the existing building. Two temporary groundwater monitoring wells will be installed.

Survey

Soil borings, monitoring wells and soil gas sampling locations were located to the nearest 0.10 foot with respect to two or more permanent site features.

Water Level Measurement

Upon installation of the two groundwater monitoring wells after building demolition, approximate groundwater level measurements will be collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for

evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Six soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2, 3, 4 and 5. Figure 5 shows the location of samples collected during this RI. Laboratories and analytical methods for soil samples collected during the RI are shown below.

The soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis with proper chain of custody to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples retained from borings SB1-SB4 were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals.

Groundwater Sampling

No groundwater samples were collected during the March 2016 RI. Due to the restrictive access at the Site, groundwater monitoring wells were not able to be installed. Groundwater sampling will be conducted at the Site upon demolition of the existing building. Two temporary groundwater wells will be installed.

Soil Vapor Sampling

Since the hand auger limited the depths of the soil vapor samples, three soil vapor implants were installed and three soil vapor samples were collected for chemical analysis during this RI. The location of SS3 was moved to the cellar level adjacent to the side rear yard in order to obtain a soil vapor sample from the 10 to 12 foot interval. The three soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10, and the soil vapor sampling logs are included in Attachment D. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

The soil vapor implants were installed using hand equipment and tooling. The approximate location of each of the soil vapor implants is shown on Figure 5. Each soil vapor implant consisted of ¼ inch polyethylene tubing which extended approximately 2 feet beyond the cellar slab. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the probe to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Soil vapor sampling for the three soil vapor probes installed on March 15, 2016 was conducted on March 22, 2016. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot ft by 1 ft square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all three soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the three vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2

hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment D). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil and groundwater analytical methods: <ul style="list-style-type: none">• TAL Metals by EPA Method 6010C (rev. 2007);• VOCs by EPA Method 8260C (rev. 2006);• SVOCs by EPA Method 8270D (rev. 2007);• Pesticides by EPA Method 8081B (rev. 2000);• PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none">• VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil and soil vapor are summarized in Tables 2 through 6. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site consists of up to 5 feet of historic fill at one location (SB1), at approximately 10-12 ft below grade. Historic fill did not extend beneath the cellar slab in the rear portion of the Site. Shallow soil samples did not contain fill material and consisted of native brown silty sand.

Hydrogeology

A table of water level data for the monitoring wells is included in Table 1. The depth to groundwater is expected to be approximately 32 feet below grade. Groundwater flow is generally northwest, based on a review of topographical maps.

5.2 Soil Chemistry

Soil/fill samples results were compared to New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill results showed no PCBs or VOCs detected above Unrestricted Use SCOs in any of the samples collected. One VOC, acetone, was detected in trace amounts in all of the six samples collected. One PCB, PCB-1,260 (max. of 66 $\mu\text{g}/\text{kg}$), was detected in trace amounts in two of the six samples collected in both shallow and deep soil. One pesticide, 4,4-DDT was detected above Unrestricted Use SCOs in two samples in both shallow and deep soil. Several SVOCs were detected, but only benzo(k)fluoranthene (max. of 930 $\mu\text{g}/\text{kg}$) and chrysene (max. of 1,400 $\mu\text{g}/\text{kg}$) exceeded Unrestricted Use SCOs, and benz(a)anthracene (max. of 1,200 $\mu\text{g}/\text{kg}$), benzo(a)pyrene (max. of 1,100 $\mu\text{g}/\text{kg}$) and indeno(1,2,3-cd)pyrene (840 $\mu\text{g}/\text{kg}$) exceeded Restricted Residential use SCOs in one subslab soil sample. The highest concentration of SVOCs was found in SB1 at a depth of 8 to 10 feet below grade. Several metals including arsenic (max of 52.8 mg/kg), barium (max. of 1,100 mg/kg), cadmium (4.21 mg/kg), chromium (max. of 43.6 mg/kg), copper (max. of 440 mg/kg), lead (max. of 3,980 mg/kg), mercury (max. of 14.9 mg/kg) and zinc (max. of 317 mg/kg) exceeded Unrestricted Use SCOs in deeper soils. Of these metals, arsenic, barium, copper, lead and mercury also exceeded Restricted Residential Use SCOs in one boring (SB1).

The highest concentration of metals was found in deeper soils at SB1, which represent a hotspot. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

5.3 Groundwater Chemistry

Groundwater samples were not collected at this point in the investigation.

5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples collected during the RI showed moderate levels of petroleum-related VOCs and low levels of chlorinated VOCs. The total concentration of petroleum-related VOCs (BTEX) ranged from 1,028.6 $\mu\text{g}/\text{m}^3$ to 1,143.7 $\mu\text{g}/\text{m}^3$. Highest BTEX concentrations were detected for m&p xylene (max. of 677 $\mu\text{g}/\text{m}^3$). Chlorinated VOCs, tetrachloroethylene (PCE) and carbon tetrachloride were detected in all three soil gas samples with maximum concentrations of 0.8 $\mu\text{g}/\text{m}^3$ and 0.78 $\mu\text{g}/\text{m}^3$, respectively. Trichloroethylene (TCE) was detected in one of three soil gas samples at a maximum concentration of 0.27 $\mu\text{g}/\text{m}^3$. 1,1,1-trichloroethane (TCA) was not detected any of the three soil gas samples collected. Concentrations of the chlorinated VOCs were below the monitoring level ranges established within the NYSDOH soil vapor guidance matrix.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected for the Site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

SCOPE OF THIS PHASE I ENVIRONMENTAL SURVEY

To thoroughly inspect all accessible areas and facilities in and around the properties located at *141 Metropolitan Avenue (Block: 2358, Lot: 24), Brooklyn, NY 11249* and to assess the environmental status of the subject property. The tasks were conducted via a visual inspection of the site, review of available historical records documenting usage of the property along with persons knowledgeable about the subject property.

This survey assessed any ongoing or former operations, whether current or former operators/lessees used or stored chemicals on the premises, if any waste materials arising from operations have been dumped on the premises or if any landfill operations have taken place.

Visual inspection of the immediate vicinity around the premises were also conducted, wherever possible or reasonable, in order to determine whether any sites adjoining the premises are used for heavy manufacturing or the generation, storage, shipping or disposal of hazardous waste, chemical materials or fuel supplies; if there are any underground or suspended transformer, capacitors, etc. containing PCB's on the subject property or if there are any underground storage tanks.

As part of this environmental survey, inquiry was made with the U.S. Environmental Protection Agency and appropriate State and Local Agencies in order to ascertain the location of any potential, alleged or known hazardous waste sites within a one half mile radius of subject property. The CERCLIS (Comprehensive Emergency Response, Compensation and Liability Information System) is the U.S. EPA's compilation of such alleged, potential or known hazardous waste sites brought to the attention of the U.S. EPA Office of Emergency and Remedial Response, which has been, will be or are currently under investigation for suspected or known environmentally hazardous activities. The National Priorities List (NPL) is the U.S. EPA's listing of known contaminated sites, which have been targeted for clean up due to the immediate threat posed to human health, and/or the environmental integrity of that property as well as its marketability.

If appropriate inquiry was also made with the US Environmental Protection Agency and appropriate State and Local agencies regarding their acknowledgment that the presence and/or disposal of hazardous or toxic chemicals, if any, are within their guidelines and compliance.

Recommendations, wherever appropriate, have been given as to the action, if any, which should be taken to confirm with the most current guidelines and rules for compliance as set forth by these agencies.

The Phase I Environmental Survey is limited in budget and scope. No sampling, testing or laboratory analysis is conducted unless so noted and the assessment is based on the professional opinion of the Environmental Consultant. The Phase I Environmental Survey is not and should not be considered a warranty or guarantee about the presence or absence of environmental contaminants which might affect the subject property.

The owner is responsible for investigating environmental liens on the subject properties. This report was prepared in accordance with ASTM E-1527-05 protocols for Phase I Environmental Site Assessments.

EXECUTIVE SUMMARY

SITE DESCRIPTION

- The subject property is known as:
141 Metropolitan Avenue, Brooklyn, NY 11249
Block: 2358, Lot: 24; located in Brooklyn Community District 1
The lot is a rectangular shaped parcel, which has a square footage of approximately 1,940 square feet in size.
- The lot is situated in a mixed use neighborhood which is zoned as MX-8.
- The lot is situated northeast of Metropolitan Avenue, between Berry Street and Wythe Avenue in the Borough of Brooklyn in the City of New York.
- BSD performed a site reconnaissance on February 15, 2016.

FUEL OIL AND GASOLINE STORAGE TANK

- During our site reconnaissance, no visual indications of fuel oil and/or gasoline storage tanks were identified.

ASBESTOS

LOCATION	FOOTAGE	CONDITION	RECOMMENDATION
<i>141 Metropolitan Avenue</i>			
<i>Entire Building</i>	<i>N/A</i>	<i>N/A</i>	<i>Visually No Presumed friable Asbestos Containing Materials were identified within the structure. No structure present onsite; BSD was unable to determine if flaking and or chipped paint exists on the dumped debris.</i>

Please note: NO core samples were taken during this inspection unless noted, in the event of change in present status, e.g., demolition, alteration, modification, all suspect materials should tested and verified free of any ACM by a certified asbestos investigator.

LEAD PAINT

- During our site reconnaissance, interior basement walls and ceiling depicted chipped/flaking paint.

Please note: NO paint samples were taken during this inspection unless noted, in the event of change in present status, e.g., demolition, alteration, modification, all suspect materials should tested and verified free of Lead by a certified lead inspector.

MOLD

- During our site reconnaissance, signs of potential mold growth were identified on the toilet walls and cabinet area within the basement.

Please note: NO mold samples were taken during this inspection unless noted, in the event of change in present status, e.g., demolition, alteration, modification, all suspect materials should tested and verified free of Mold by a certified mold inspector.

EXECUTIVE SUMMARY

PCB's

- During site inspections, no suspected transformers were identified within the subject property.

SURROUNDING AREAS

NORTH	COMMERCIAL/RESIDENTIAL PROPERTIES
SOUTH	COMMERCIAL/RESIDENTIAL PROPERTIES
WEST	COMMERCIAL/RESIDENTIAL PROPERTIES
EAST	RESIDENTIAL PROPERTIES

SITE HISTORY

Certified Sanborn® Map Report

- In reviewing the history of the building on the property, a Sanborn Map Search was conducted and it was determined that 141 Metropolitan Avenue was developed prior to the mapped year 1887 with a three-story semi-detached residential structure with rear yard. No changes were made to the structure to mapped year 2007.

SITE ACTIVITIES

- During our site reconnaissance, the subject property was depicted each as a three-story semi-detached walk-up apartment building with full basement and rear yard. The basement of the building was vacant and the first through third floors were occupied with tenants at the time of our reconnaissance. The basement of the building was utilized in the past as office space and the first floor through third floor were utilized as apartments.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

- The subject property is listed with the City of New York as having an E-Designation for hazardous materials (E-138) under CEQR #04DCP003K. The subject property was listed with E-138 as a potential of onsite/adjacent to iron works activity. See Appendix E (*E-Designation Site Summary Table*).

ENVIRONMENTAL DATA RESEARCH

- An Environmental Data Research was performed for the subject lot and no Recognized Environmental Conditions (RECs) were identified.

141 Metropolitan Avenue,
Brooklyn, NY 11249

CONCLUSIONS AND RECOMMENDATIONS

Based on the site inspections performed and the data reviewed, BSD has concluded that the current conditions/usage of the subject properties does not raise any concerns of RECs at this time.

In the event where redevelopment will be taking place onsite, the E-Designation for Hazardous Materials listed on the site must be satisfied prior to the issuance of a NYCDOB Work Permits.

Danny D. Singh, CES QEP

Submitted by:

Jacob Goldenberg

INTRODUCTION

GENERAL

The general purpose of this Phase-I Environmental Site Assessment is to determine whether or not the property is subject to certain Recognized Environmental Conditions (*RECs*) that may affect property use or increase the risk of liability exposure associated with the property. Recognized Environmental Conditions include the presence or possible presence of hazardous substances or petroleum related products that indicate an existing release, past release, or a significant threat of a release into structures on the property, into the ground, groundwater or surface water. Recognized Environmental Conditions can include past uses, disposal practices, spills, off-site contamination, and regulatory compliance.

This Environmental Site Assessments report includes a description of the subject property and surrounding areas, review of records and contains information gathered during site reconnaissance and interviews. BSD Environmental Group (BSD) Phase-I Environmental Site Assessments are prepared by environmental professionals, supervised by Professional Engineers.

LIMITING CONDITIONS & METHODOLOGY UTILIZED

The limiting conditions and methodology used in preparing this Phase-I Environmental Site Assessments report are those contained in ASTM Standard E1527-05. This practice does not address requirements of any state or local laws or any federal laws other than the appropriate inquiry provisions of *CERCLA's "Innocent Landowner Defense"*. Users are cautioned that federal, state and local laws may impose environmental assessments obligations that are beyond the scope of this practice. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on property that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

The report is not, and should not be construed as, a guaranty, warranty, or certification of the presence or absence of any toxic substances, (which can be made only with testing), and contains no formal plans or recommendations to rectify or remediate the presence of any toxic substances, (which may be subject to regulatory approval). No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice under ASTM Standards is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property.

Except for acts and omissions by BSD, or its employees which are shown to be grossly negligent and which represent intentional misconduct, the client has agreed, to the maximum extent permitted by law, to hold harmless and indemnify BSD from and against any and all claims and liabilities arising in respect to the Environmental Site Assessment performed by BSD on behalf of the client. All liability on the part of BSD shall be limited solely to the cost of this report. BSD shall have no liability for any other damages, whether consequential, compensatory, punitive, or special arising out of, incidental to, or as a result of this report. BSD assumes no liability for the use of this report by any person of entity other than the client for whom the report was prepared.

SURVEY FINDINGS

The Phase-I Environmental Site Assessment (ESA) survey was conducted on the properties located at 141 Metropolitan Avenue, Brooklyn, NY 11249, beginning with a visual inspection by an Environmental Professional to determine if hazardous or potentially toxic materials or substances might be present. A Phase-I Environmental Site Assessment does not involve any sampling, testing or laboratory analysis of on-site soil or groundwater, unless so noted and cannot confirm the nature of subsurface soil or groundwater quality on the subject properties.

SITE INFORMATION

Location and Legal Description

The subject property is situated northeast of Metropolitan Avenue, southeast of Wythe Avenue and northwest of Berry Street in the Borough of Brooklyn in the City of New York. The lot is rectangular shaped parcel, which is approximately 1,940 square feet.

The subject property is developed with a semi-detached three-story walk-up apartment building with full basement and a rear yard.

Site and Vicinity Characteristics

The subject site and vicinity characteristics listed were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the subject property. It was determined that the subject property topography gradient slopes generally north-northwest; however, site reconnaissance did not depict any major depressions or rolling hills. The target property is approximately 32ft. above sea level. The groundwater flow beneath the subject property is assumed to be generally west-southwest towards the East River. Groundwater contour maps developed by the United States Geologic Survey (USGS Groundwater Flow and USGS Contour Map).

Current Uses of the Subject Property

During our site reconnaissance, the subject property was depicted as a three-story semi-detached walk-up apartment building with full basement and rear yard. The building is currently unoccupied; the basement was utilized as office space and the first floors through third floors were utilized as dwelling spaces. The rear yard was mainly a recreational space with a wood framed deck and small storage shed.

Historical Usage of the Subject Property

In reviewing the history of the subject property, a Sanborn Map Search was conducted and it was determined that 141 Metropolitan Avenue was developed prior to the mapped year 1887 with a semi-detached three-story residential structure with a rear yard. Maps reviewed were not consecutive years and depicted data gaps. Maps with data gaps did not show any changes to the subject property up to mapped year 2007.

A Sanborn site history “mapping and geographic” search was conducted for approximately a 100-year span with data gaps and **28** maps were provided (see documentation).

YEAR	141 Metropolitan Avenue, Brooklyn, NY
1887	<i>Prior to 1887, subject property was developed with a three-story semi-detached residential building with rear yard.</i>
2007	<i>Same as previous mapped years</i>

Data gaps exist with the Sanborn maps reviewed; however, onsite activities were consistent. Surrounding properties had changes, but not to impact the subject properties.

Current and Past Uses of the Surrounding Properties

The past and current uses of the adjoining properties are residential and commercial properties; industrial properties are scattered within a one-mile radius to the lot. The property borders are as follows:

SURROUNDING AREAS	
NORTH	COMMERCIAL PROPERTIES
SOUTH	COMMERCIAL/RESIDENTIAL PROPERTIES
WEST	RESIDENTIAL PROPERTIES
EAST	COMMERCIAL/RESIDENTIAL PROPERTIES

ENVIRONMENTAL SITE ASSESSMENT

A visual inspection of the subject property and surrounding areas took place on February 15, 2016 by Mr. Danny D. Singh.

GENERAL DESCRIPTION OF STRUCTURE

Improvements

The lot is a rectangular shaped parcel, which is approximately 1,940 square feet in size. The lot is currently developed with a three-story semi-detached residential apartment building with full basement and rear yard.

Streets

The subject property is situated northeast of Metropolitan Avenue, northwest of Berry Street, southeast of Wythe Avenue and southwest of N. 4th Street in the Borough of Brooklyn in the City of New York.

Potable Water Supply

The potable water in the neighborhood supply comes from the municipal water supply system within the vicinity.

Sewage Disposal

The sewage disposal in the neighborhood is provided by the municipal sewer system.

Heating and Cooling System

The building onsite is heated with a gas-fired boiler and individual (portable) window units were previously utilized.

RECORD REVIEW

(SEE RADIUS MAP SEARCH ATTACHED AS APPENDIX A)

Federal RCRA generators list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERCLIS-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 9 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal leaking storage tank lists

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/12/2016 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/05/2016 has revealed that there are 11 NY SWF/LF sites within approximately 0.5 miles of the target property.

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures; tank failures or tank overfills.

A review of the LTANKS list, as provided by EDR, and dated 11/16/2015 has revealed that there are 36 LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

A review of the NY UST list, as provided by EDR, and dated 12/29/2015 has revealed that there are 22 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS UST sites within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS: These facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

A review of the NY CBS list, as provided by EDR, and dated 12/29/2015 has revealed that there are 9 NY CBS sites within approximately 0.25 miles of the target property.

NY MOSF: These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater.

A review of the NY MOSF list, as provided by EDR, and dated 12/29/2015 has revealed that there are 2 NY MOSF sites within approximately 0.5 miles of the target property.

NY AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

A review of the NY AST list, as provided by EDR, and dated 12/29/2015 has revealed that there are 35 AST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 5 NY CBS AST sites within approximately 0.25 miles of the target property.

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF AST site within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

NY ENG CONTROLS: Environmental Remediation sites that have engineering controls in place.

A review of the NY ENG CONTROLS list, as provided by EDR, and dated 01/12/2016 has revealed that there is 1 NY ENG CONTROLS site within approximately 0.5 miles of the target property.

Environmental Remediation sites that have institutional controls in place.

A review of the NY INST CONTROL list, as provided by EDR, and dated 01/12/2016 has revealed that there are 2 NY INST CONTROL site within approximately 0.5 miles of the target property.

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 01/12/2016 has revealed that there are 2 NY VCP sites within approximately 0.5 miles of the target property.

NY BROWNFIELDS: Brownfields Site List.

A review of the NY BROWNFIELDS list, as provided by EDR, and dated 01/12/2016 has revealed that there are 6 NY BROWNFIELDS sites within approximately 0.5 miles of the target property.

Local Lists of Landfill / Solid Waste Disposal Sites

Registered Recycling Facility List from the Department of Environmental Conservation.

A review of the NY SWRCY list, as provided by EDR, and dated 01/05/2016 has revealed that there are 2 NY SWRCY site within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 10 NY HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/16/2015 has revealed that there are 20 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 48 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 04/22/2013 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

NY DRYCLEANERS: A listing of all registered dry-cleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 10/16/2015 has revealed that there is 1 NY DRYCLEANERS site within approximately 0.25 miles of the target property.

NY E DESIGNATION: Lots designation with an “E” on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 11/18/2015 has revealed that there is 94 NY E DESIGNATION site within approximately 0.125 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the MANIFEST list, as provided by EDR, and dated 11/02/2015 has revealed that there are 107 MANIFEST sites within approximately 0.25 miles of the target property.

CT MANIFEST: Hazardous waste manifest information.

A review of the CT MANIFEST list, as provided by EDR, and dated 11/02/2015 has revealed that there are 1 CT MANIFEST site within approximately 0.25 miles of the target property.

TX Ind. Haz Waste: The Industrial and Hazardous Waste Database contains summary reports by waste handlers, generators and shippers in Texas.

A review of the TX Ind. Haz Waste list, as provided by EDR, and dated 11/02/2015 has revealed that there is 1 TX Ind. Haz Waste site within approximately 0.25 miles of the target property.

PA MANIFEST: Hazardous waste manifest information.

A review of the PA MANIFEST list, as provided by EDR, and dated 11/02/2015 has revealed that there is 1 PA MANIFEST site within approximately 0.25 miles of the target property.

NJ MANIFEST: Hazardous waste manifest information.

A review of the NJ MANIFEST list, as provided by EDR, and dated 11/02/2015 has revealed that there are 8 NJ MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP site within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto site within approximately 0.125 miles of the target property.

Due to poor or inadequate address information, the following sites were not mapped. Count: 7 records.

FINDINGS AND RECOMMENDATIONS

The following are recommendations based on the Phase I Environmental Survey conducted at the properties located at 141 Metropolitan Avenue, Brooklyn, NY 11249.

On February 15, 2016 a Phase I Environmental Site Assessment of the above-mentioned property was conducted in accordance with the generally accepted assessment protocol. The Phase I Environmental Site Assessment relied primarily on visual observations made during inspection and review of available historical documents as they relate to current and past usages of the subject property. Additionally, the immediate vicinity of the subject property was inspected in order to ascertain the likelihood of toxic or hazardous substances or other agents to be present at surrounding locations, which might adversely affect the subject site.

SEE “EXECUTIVE SUMMARY” & “RECOMMENDATIONS.”

**THE FOLLOWING ARE FINDINGS AND RECOMMENDATIONS MADE BY A
BSD ENVIRONMENTAL CONSULTANT:**

Asbestos Containing Materials (ACM)

Asbestos is the generic name for a group of naturally occurring hydrated mineral silicates that are characterized by fibers or bundles of fine single crystal fibers. The New York City Department of Environmental Protection defines asbestos containing materials as “any material which contains more than one percent asbestos by weight.” Asbestos materials were used for many years in a variety of ways in building construction due to its excellent acoustic insulating and thermal barrier properties. The durability of asbestos fibers and their small size and fibrous shape make asbestos an unusual environmental contaminant. Water infiltration, contact during routine maintenance and age are major factors breaking down asbestos containing materials and creating exposure problems. According to the Environmental Protection Agency and included in the publication #EPA 560/5-85-024 “Guidance for Controlling Asbestos Containing Materials (ACM) in Buildings “asbestos containing materials are found in three forms: (1) Sprayed or troweled on ceilings and walls and structural steel; (2) in insulation around hot and cold piping, ducts, boilers and tanks; and (3) in a non-friable state in products such as ceilings/ floor tiles, wallboards and outside materials such as shingles and roofing materials in general, ACM in the first two categories is of greatest concern, especially if it is friable, causing the materials to release fibers into the air.

Presumed Asbestos Containing Material (PACM)

Site reconnaissance performed did not identify visually any suspected ACM.

In the event of change in present status, e.g., demolition, alteration, modification, all suspect materials should analyzed and verify free of any ACM by a certified asbestos investigator.

Lead Based Paint (LBP)

Paint samples were **NOT** taken for lead content, the subject property is vacant lots. However, in older buildings it is likely that lead based paint was used within the multi-layered painted surfaces. (Lead base paint was banned in 1978). Lead paint can be hazardous if digested, especially by small children.

During our site reconnaissance, interior basement walls and ceiling depicted chipped/flaking paint.

In the event of change in present status, e.g., demolition, alteration, modification, all suspect materials should analyzed and verify free of Lead by a certified inspector.

Radon

While radon has not been identified by the State of New York Department of Health as a major problem in Kings County, the problem is site-specific and the potential health risk should be assessed.

Mold

Samples were **NOT** taken for the presence of mold, the subject property.

During our site reconnaissance, signs of potential mold growth were identified on the toilet walls and cabinet area within the basement.

Please note: NO mold samples were taken during this inspection unless noted, in the event of change in present status, e.g., demolition, alteration, modification, all suspect materials should be tested and verified free of Mold by a certified mold inspector.

Presence of PCB's in Transformers and Other Electrical Equipment

An inspection was conducted at the subject property and in the immediate vicinity for the presence of any underground, surface or suspended transformers and visible power supply sources. Oil-containing transformers are known to frequently contain PCBs (Polychlorinated biphenyls). PCBs are contained in older transformers and other electrical equipment and have the potential for serious health risks. The U.S. Environmental Protection Agency, Regulations 40 CFR Part 761, regulates the level of PCB content in such transformers and electrical equipment.

During site inspections, no suspected transformers were identified in the vicinity of the subject properties.

Fuel Oil and Gasoline Storage Tanks

The New York State Department of Environmental Conservation regulates the storage and handling of petroleum storage facilities. Aboveground and Underground storage tanks storing petroleum can, if not properly installed and maintained, because serious environmental problems include contamination of a water supply. In an effort to prevent leaks and spills, the Petroleum Bulk Storage Law (Article 17, Title 10 of the Environmental Conservation Law) requires the DEC to develop and enforce a State Code for the storage and handling of petroleum. The resulting regulations are Parts 612, 613 and 614. Any facility with a stationary tank combined capacity exceeding 1,100 gallons must be registered with the New York State Department of Environmental Conservation.

During our site reconnaissance, no visual indications of fuel oil and/or gasoline storage tanks were identified.

**141 Metropolitan Avenue,
Brooklyn, NY 11249**

BSD Environmental Group has conducted this Phase I Environmental Survey as an aid in determining the presence of potentially toxic or hazardous chemicals or substances as of the date of inspection. Observations are made herein and conclusions drawn are not to be considered as a warranty or guarantee, and are based solely upon those areas directly visible and observable, without the removal or alterations of any item or structure and reflect conditions as on the day of inspection.

BSD Environmental Group their principals and employees are indemnified for any future changes or conditions of deterioration in or on the subject property. Inasmuch as each has made not guarantees of the premises, expressed or implied in connection with this report, any liability, which each may have, shall be limited to the fee for the inspection of the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FYN PAINT AND LACQUE	230 KENT AVENUE	WNW 1/8 - 1/4 (0.176 mi.)	AN220	371

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERCLIS-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

RADIAC RESEARCH CORP	33 S FIRST ST	WSW 1/8 - 1/4 (0.192 mi.)	AU245	465

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 9 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/12/2016 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/05/2016 has revealed that there are 11 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/16/2015 has revealed that there are 36 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 10 NY HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/16/2015 has revealed that there are 20 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 48 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 04/22/2013 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

BUG, PEOPLES WORKS Facility Id: HS2016	KENT AVE.	NNE 1/4 - 1/2 (0.427 mi.)	BT357	884

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 11/02/2015 has revealed that there are 107 NY MANIFEST sites within approximately 0.25 miles of the target property.

CT MANIFEST: Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

A review of the CT MANIFEST list, as provided by EDR, and dated 11/02/2015 has revealed that there is 1 CT MANIFEST site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within

EXECUTIVE SUMMARY

approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND/VOUGHT 1/30/2002-VOUGHT-Site visit by Kolleeny, Sangesland and Vought on 11/19/2001. KC Transporters is a subcontractor for Empire State Oil (contact:Dave 718-627-5100). Owner of property is Manuel Sosa (was out of town at time of spill). Owner's representative was his daughter Olga Sosa (718-384-7490) who was on-site. According to Olga, KC had hired AL Eastmond and Sons to perform the cleanup. Eastmond began the cleanup including the vacuuming of free product. According to Olga at this point in the

S102142732

cleanup she was approached by Paul Sano from KC who asked her to sign a waiver relieving KC of all responsibility of the spill. Olga refused and as a result she ordered the cleanup to stop. The DEC arrived on-site and explained that she was indeed responsible for the cleanup as the owner of the property. She was given a list of contractors and agreed to choose one immediately. Paul Sano explained the reason for the spill was a missing section of pipe from the tank to the boiler. Olga and her brother (Dave Sosa) said they had not had the pipe removed and it was in place up until the delivery. They only noticed the missing section after KC Transporters repairmen had inspected the spill in the basement. Furthermore according to Dave Solsa a toolbox next to the missing section of pipe owned by the Sosas had oil stained handprints on it and was missing wrenches. The issue of how the pipe section was removed was never resolved. Visual evidence of overfill included the staining on the wall by the vent pipe and the oil stains out of manyways on the top of the tank. Officer Michael Mat of the NYSDEC arrived on-site and issued KC Transporters a ticket for failure to report a spill within 2 hours (see spill and call received times). Olga Sosa was also issued a ticket for not updating the name on the PBS registration after they bought the property from the previous owner. 11/21/2001-Petroleum Tank Cleaners (PTC) arrives on-site to complete cleanup and were hired by Olga. PTC arrived on-site and used speedy dry to pick up the remaining free product and steam cleaned the cellar and the vent pipe wall on the sidewalk. There were no floor drains or sewers affected and the entire cellar floor was concrete. For spill closure the following were requested (dates are when the materials were provided): 1) pictures of cleanup and letter of tank piping repair from Olga (1/03/2002) 2) Disposal manifests from PTC (1/30/2002). Spill closed by Vought 1/30/2002."

Remarks:

"PROBLEM WITH OIL PUMP CAUSED PRODUCT TO SPILL - EASTMAN HAS BEEN CONTACTED FOR CLEAN UP - PRODUCT WAS VACUUMED OFF BASEMENT FLOOR AND THEN BUILDING OWNER'S TOLD THEM TO LEAVE"

so that it can be moved and the spill can be cleaned. Field contact:
 Gerry Violett (917)378-2136. Sent soil contamination letter to:
 Steven P. Ucellini, Project Manager J. R. Holzmacher, P.E., LLC 300
 Wheeler Road, Suite 303 Hauppauge, NY 11788 Received email from S.
 Ucellini. He directed G. Violett to excavate all affected amterial
 and place on and cover material with plastic as soon as the excavator
 is operable. He is concerned about groundwater depth which is 20 feet
 down. DEC Piper to respond. bf Piper arrived onsite. Contamianted
 soil was on poly sheeting. It will be sampled and disposed of . E-doc
 manifest when received. Closed."

have 2 one floor industrial buildings on the site. Unknown history.
***** Site has a city E designation (unknown why?)***** 11/08/07
I responded to the site with ECO Jennifer Okonuk on 11/06/07
afternoon.Phase II report, RAP and HASP are in eodcs,will review
soon.This is a construction site where contaminated soil is being
removed to a disposal facility.Soil contamination relevant to
urbanfill.Site Manager: Gerry Violette,(917)3782136.(SR) 03/19/08
Spoke with Gerry Violette today.The removal of contaminated soil is
halfway down the lot.Excavation extended below the contamination
level and end point shows clean soil, as per Gerry.Gerry also
indicated that air monitoring is being done continuously.According to
Phase II investigation, VOCs were within TAGM in soil and ground
water.SVOCs were slightly above TAGM, can be attributed to fill
material.(sr) 06/11/08-Hiralkumar Patel. another spill reported at
the site (spill #: 0802803). as per Steven (631-234-2220 Ext. 105)
from JR Holzmarcher, found heavy soil contamination at depth of 20 ft
bg. took samples and waiting for results. will do further excavation
after results available. monitoring air at the site. 06/18/08 I had a
site meeting this morning with Steven P Uccellini and Richard Rozycki
from J.R.Holzmacher LLC.One location on th elot showed higher PID
reading though end point sample shows VOC/SVOC are below TAGM.I
suggested to resample the area including ponded water sample.Whole
site will be end point sampled in a grid pattern.(sr) 05/08/09 Rec'd
closure report, will review shortly.(sr) 05/11/09 In the former
loading dock area, diesel-like odor and dark gray to black soil was
noticed.No tanks discovered during the soil excavation.Soil samples
showed low concentrations of several constituents but no constituents
exceeded their respective RSCOs. Excavated soil from the former
loading dock area were disposed of.No voc/svoc constituents were
detected in two ground water samples.Ground water @20-25 ft. Ground
water was also investigated as part of Phase II investigation.NFA
required.(sr)"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "3/29/07 - Raphael Ketani. I visited the site today 281 Berry Street. I met Kevin Waters of P.W. Grosser Consulting (212) 653-8744 and Robert Kearns of American Environmental Assessment Corp. (631) 586-2000. American Environmental Assessment was doing the physical work of pulling the tanks. There was also a company that was doing the pipe, electrical line, tank and other structural mark-outs. The site is an old gas station with the following addresses: 128 to 134 Grand Street, and 251 to 255 and 259 to 263 Berry Street. The site is right on the corner and is opposite a school. Except for the old gas station building, a small square manhole and a set of cellar doors, there was nothing visible on the surface. American Environmental had already pulled the tanks out when I arrived at about 11:30AM. The two tanks were the only ones detected. The tanks were in very good shape and had no rust holes, but did have lots of puncture holes from the front loader that was used to get them out of the ground. They came out of a concrete vault. Mr. Waters said that the tanks had water in them and had previously been cleaned out. I looked inside and the tanks did look clean. There were only very slight odors of gasoline. I took PID readings of the soil that fell into the vault from outside it. I had readings of the 200s ppb, though I had one hit of 530 ppb and one hit of 2600 ppb. Mr. Waters said that the slight contamination had come from some old fuel piping that had been broken up and he thought some residual liquids had spilled onto the soil. Mr. Waters went into the square manhole and saw a steel beam nearby and some pipes. The cellar doors were opened and old pieces of wood and historic fill with ash and cinders were present. There was some space above the historic fill and the steel beams and pipe could also be seen. I asked Mr. Waters whether the tanks had ever been registered. He said he will look into the matter. Later, at about 4:00PM, Mr. Waters called me up to say that they broke through the floor of the vault and detected vapors of 50 ppm. They also found old pieces of wood with black gelatinous material on it and free product floating on a pool of water. He said the water table was 6 feet below grade. He said there was a creosote like odor. Mr. Waters took VOA samples of the water and a sample of the black gelatinous material. I told him the site will need many soil borings and sampling and to send me a plan to be approved by DEC. He said he will send the plan and the analytical results. 4/3/07 - Raphael Ketani. I tried to find

EPA ID Number

OLD GAS STATION (Continued)

S108467160

the PBS registration for the 2 tanks that were removed. There were no listings for either the Grand Street addresses nor the Berry Street addresses. I left a message for Mr. Waters to call me regarding getting the tanks registered. 4/4/07 - Raphael Ketani. Mr. Waters called me back and asked how to get the tanks registered. I explained it to him. I also told him that he will have to submit a plan for doing soil borings throughout the property and taking groundwater samples. He said that Frank Castelano, project manager at P.W. Grosser, will do the investigation plan. 4/6/07 - Raphael Ketani. Mr. Waters sent me the following e-mail: This is Kevin Waters from PW Grosser. We received the results of the petroleum product ID and the results show that it is not petroleum based. Frank and I were wondering if there is anything else in the area that this substance could be from. The GRO/DRO lab data is attached. The analytical results that were attached to the e-mail indicated that there was no fuel oil (i.e. #2 oil or diesel) contamination and the only GRO detected was TOTAL GRO TPH. 4/10/07 - Raphael Ketani. I called up Mr. Waters and spoke to him about the results. He said that his crew is going back to break up the vault floor and do soil sampling. I asked him to take another groundwater sample for method 8260 just to see what specific analytes are present and their concentrations. He said he would do this. I asked him about registering the two tanks. He said they were both 550 gal. tanks. He said he spoke to Nick Lombardo of PBS and Mr. Lombardo told him they didn't need to be registered as the total site capacity was only 1100 gal. 5/2/07 - Raphael Ketani. I received the 5/2/07 UST Removal/Groundwater Sampling report from Kris Almskog of P.W. Grosser (631) 589-6353. 5/3/07 - Raphael Ketani. I reviewed the UST Removal/Groundwater Sampling report. The 1/26/07 Phase II Environmental Site Assessment performed by Associated Environmental Services indicates that soil samples from borings B-1 to B-3 are at or below the TAGM standards for VOCs. Soil boring samples B-1 to B-4 are below the RSCOs for SVOCs, except for several low exceedences of benzo series analytes and chrysene. However, groundwater samples from B-2 and B-3 show significant VOC contamination (up to 329 ppb total xylenes). The 3/29/07 analytical results for the groundwater sample and the sludge sample indicate that the groundwater is still contaminated with various gasoline VOC analytes that exceed TAGM. Though not nearly as high as the groundwater samples from 1/26/07. The sludge had some VOC contamination and large (3800 ppb bis(2-ethylhexylphthalate and pyrene 1300 ppb) hits, but the bis may be a lab artifact. Mr. Almskog proposes to install 4 new groundwater monitoring wells and take new soil and water samples. The proposed locations looked alright in Figure 2. I e-mailed Mr. Almskog that the submitted report and the proposed plan for additional investigation looked fine. I added that the well annulus should be filled with grout, not cuttings. Also, I stated that the wells should be developed after the grout cures and the water samples should be taken no earlier than 2 weeks from the date of development. 5/17/07 - Raphael Ketani. I received the following e-mail from Mr. Almskog today: Rafiel, Thanks for your comments regarding the proposed work plan. I met with the property developer yesterday to discuss the path forward. Based upon his upcoming construction schedule, they will be installing several geotechnical borings throughout the site in the next few weeks. In an effort to better determine sub-surface conditions, PWGC will witness these soil borings, and possibly have monitoring wells installed in these locations. Based upon the findings of the limited investigation

OLD GAS STATION (Continued)

S108467160

during the geotechnical drilling, and the potential for construction excavation to begin in the next several months, the proposed work plan may be modified to better investigate areas not covered by the geotechnical and excavation work. I will contact you when we have a more solid schedule going forward. 6/6/07 - Raphael Ketani. Frank P. Castellano, Vice President of P.W. Grosser (631) 589-6353 sent me an e-mail requesting to be c-c'd on all future DEC correspondences. 6/29/07 - Raphael Ketani. Mr. Almskog called to say that the owner is thinking of digging out the entire site down 10 feet. He added that the original plan called for installing groundwater monitoring wells, but the dig out would preclude that. I told him that the course of action the DEC would prefer would be to dig everything out and then suck up all of the contaminated water. He said that was his idea, too. However, right now the owners are discussing which plan they will go with. I told him to keep me informed. Mr. Almskog also mentioned that there is a drum of oil or grease on the site. He said it belongs to spill case #0702880. Sharif Rahman of Spills Region 2 told Mr. Almskog that the owner of the former gas station has to take the drum away and dispose of it properly. Mr. Almskog told Mr. Rahman that he will have this done. I have combined the drum case with the active spill case #0613966 and closed spill case #0702880. 10/4/07 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a message. 10/17/07 - Raphael Ketani. Mr. Almskog called back. He said that the drum has been taken away and he has the manifest for it. The manifest was sent via e-mail and I printed it out. He added that demolition of the building will take place over the course of the next several weeks. P.W. Grosser will be on site during the demolition to monitor the soils coming out of the site and possibly install wells after the demolition is done. He added that end point samples will be taken after the basement depth is reach. I told Mr. Almskog that the groundwater should be collected if it has a sheen on it. He said he will do this. 11/29/07 - Raphael Ketani. I tried to contact Mr. Almskog, but could only leave a message. 12/4/07 - Raphael Ketani. Mr. Almskog left me the following e-mail today: I just left a message for you regarding the status at the above referenced site. According to the developer, the demolition of the existing structure is underway and it is anticipated that the concrete floor slab will be removed this week. Following removal of the slab, the plan is to begin excavating on the eastern portion of the site and move to the west, where the USTs were removed earlier this year. Once excavation in the vicinity of the removed UST occurs, PWGC will be onsite to document the removal effort and document sub-surface conditions and collect the necessary endpoint samples. When the developer gets closer to this stage, you will be notified so that we can discuss the path forward based upon what is found. 1/9/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a voice mail. 1/10/08 - Raphael Ketani. I received the following e-mail from Mr. Almskog: I just spoke to my client and have the following update for the above referenced site. The building that was on the property has been demolished and the slab on grade has been removed. There is a construction fence surrounding the site. The NYCDOB have approved the structural plans and the approval of the shoring plans is anticipated to be completed in the next two weeks. Following receipt of an approved shoring plan, the developer plans on beginning excavation immediately for the basement and to further investigate the area in the vicinity of the UST. I have expressed the need to begin the excavation/investigation as soon as possible to the

OLD GAS STATION (Continued)

S108467160

developer and I will contact you when they begin the excavation in the area of the former UST area. Thanks Kris E. Almskog 2/25/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a voice mail. 3/6/08 - Raphael Ketani. Mr. Almskog returned my call. He said that the owner is again not moving forward on the project. The owner is claiming that he needs to get the permits to do the shoring before any digging can take place. The owner claims that he will have the permits in about 2 weeks. However, Mr. Almskog commented that this was an old story and seemed more like a delaying tactic. He said we'll see. 4/8/08 - Raphael Ketani. I spoke to Mr. Almskog. He said that the owner sent him an e-mail that he had to suspend work because the City stopped him due to down-zoning. I asked him what this meant. He said he didn't know. He added that the owner told him the work will resume once the stop order is lifted. I asked him to find out what was going on and to push the owner to get back to work because there is a school across the street. Mr. Almskog said he will call the owner and let him know that the DEC wants him to move on the project. 5/28/08 - Raphael Ketani. Mr. Almskog (631)589-6353 called and stated that the owner still hasn't received the necessary permits to do the shoring work. However, this is expected to be resolved very soon. Mr. Almskog expects the digging to start in the next two weeks and he will call with a firmer date. 8/19/08 - Raphael Ketani. I spoke to Mr. Almskog. He said that he has been trying to get information regarding the site from the owner's representative, but no one has been returning his calls and the one contact he had left the company. He told me the management company is: CS Management, 410 Broadway, Brooklyn, 11211, Attn: Yol Soble. I sent a strongly worded letter to Mr. Soble requesting information about work at the site, registration of the tanks, and collection and sampling of contaminated groundwater. 9/15/08 - Raphael Ketani. I contacted Mr. Almskog today. He told me that Mr. Soble is no longer with CS Management. There is a new manager there now (he wasn't sure of his name). He said the CS Management is not going to build on the property right now as the financial backers have hesitated to spend the money due to the economy. However, he said, they will go ahead with the off-site investigation. He said that a plan is being put together right now. Mr. Almskog said that he will send it to me when it is finalized. I told Mr. Almskog that a PID meter survey will have to be done in the basements, first floors and elsewhere in the neighboring building and the school across the street. He said that it will be done and DEC will receive the results. 10/27/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a message. 10/30/08 - Raphael Ketani. Mr. Almskog called. He said that they did the air survey in the school on 10/10/08 - a report will be sent. They used a PID meter and found no hits of VOCs. They could not get access to the basement of the apartment building next door because no one was available. I told Mr. Almskog to go to the property databases, find out who owns the place, and send them a letter requesting access. He said that he will do this. Demolition of the old gas station will take place sometime during the next week and a half, and will be followed by excavation. After this, a determination will be made as regards how much more remediation is necessary. Mr. Almskog said that he will call me back with a progress report. 11/21/08 - Raphael Ketani. I tried to reach Mr. Almskog, but could only leave a message. 12/2/08 - Raphael Ketani. I contacted Mr. Almskog (631) 589-6353 regarding the site. He sent letters to the

OLD GAS STATION (Continued)

S108467160

buildings next to the site, but they haven't received a response yet. One person refused entry. He asked that DEC send letters requesting entry to do the vapor survey. I told him that I will do so if he provides the addresses. He said that he will send the addresses via e-mail. Mr. Almskog said that nothing is happening at the site, but he will contact the developer. 136 Grand Street and 257 Berry Street are two addresses that need letters. For 136 Grand Street (block and lot 2392/13), the owners of record are: Cecilia Holzman 123 S. Second Street, Brklyn., 11211 For 257 Berry Street (block and lot 2392/7), the owners of record are: William S. Burg Property, LLC 111 S. Second Street, Brklyn, 11211 12/3/08 - Raphael Ketani. I sent out the letters to Ms. Holzman and to William S. Burg Property, LLC. 12/8/08 - Raphael Ketani. Today I received copies of the letters that P.W. Grosser Consulting had sent to Ms. Holzman and to the owners of 257 Berry Street. These letters requested permission to enter the buildings and take indoor air vapor readings. 12/22/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353 regarding progress with the indoor air surveying of the neighboring buildings. However, I could only leave a message as he was on vacation and wont be back until 12/29/08. 12/30/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a message. 1/8/09 - Raphael Ketani. Mr. Almskog (631) 589-6353 left a voice message. He said that he had been out on vacation during the holidays and that is why he didn't get back to me until now. He said that he has had no response from the neighbors of the site regarding allowing him to do a vapor survey inside their buildings. He also has had no response from the developer of the site regarding collecting the contaminated water and removing any contaminated soil. 1/9/09 - Raphael Ketani. I spoke to Mr. Almskog. He said that there is no progress at the site and the management representative isn't returning his phone calls. He said that he would have talked to the owner, but he was not given that number. He said that the management representative is Isaac Stiems (stymes) (718) 599-8300. The new address of the management company is 116 Nostrand Avenue, Brklyn., 11205. I called up Mr. Stiems and left him a voice message threatening legal action if there is no progress regarding the remediation by 1/16/09. A little while later, he returned my call. We spoke about the site. I reminded him that there are children in the school across the street who may be affected by vapors from the contaminated groundwater at the site. He told me that he wasn't sure when the remediation will restart, but that it will be sometime in January. He said that the general contractor would know better. I told him that the DEC doesn't want to speak to the general contractor. I told him we need to speak with the owner himself. After about a minute on hold, Mr. Chaskiel Strulovitch (owner) got on the phone. I explained DEC's concerns about the site regarding the school across the street and the need to complete the remediation of the site. I told him that there is contaminated groundwater and soil. He asked How do you know the groundwater is coming from my site? It could be coming from somewhere else. He said that his site is clean. I told him that his site is a former gas station and as such it is the most likely site. I added that DEC has analytical results showing that there is groundwater contamination up to about 280 ppb for one analyte and that this is way above TAGM standards. He said that he understood what I was saying and that he will restart the remediation and remove the groundwater and soil anyway. I said that is what DEC wants. I asked him when this will start. He said that the remediation will begin sometime in January

OLD GAS STATION (Continued)

S108467160

and no later than January 31. I told him that if the remediation does not take place by January 31, then the DEC will immediately refer the case to the Office of General Counsel. He gave me his phone number (718) 599-8300, ext 202 and his cell number (917) 385-1269. 1/30/09 - Raphael Ketani. I had not heard from Mr. Strulovitch that the remediation of the project had restarted. I called up Mr. Almskog and he said that he hasn't heard anything, either, and his calls haven't been returned. Therefore, I sent a Case Initiation Form to Legal. 7/21/09 - Raphael Ketani. The owners of the site have finally stated that they are willing to do the investigative and cleanup work. 8/4/09 - Raphael Ketani. Mr. Kahn of ESPL (212) 363-3775 called to let me know that the owners have paid all of their fines to DEC. He said that the owners told him to go ahead with the remediation project and so he will be sending DEC a work plan soon. Today I received the Executed Order on Consent from DEC's Region 2 Office of General Counsel. The effective date is 8/4/09. 8/11/09 - Raphael Ketani. Chris Almskog and John Eichler of P.W. Grosser (212) 653-8744 called me for a conference call. Mr. Almskog stated that the owners have retained P.W. Grosser. We discussed the site and what types of contamination and environmental issues are present. Mr. Almskog stated that DEC will receive a work plan very soon. 8/12/09 - Raphael Ketani. Mr. Eichler (631) 589-6353 left a message today regarding work at the site. I tried to call him back, but could only leave a message. I stated that the gas tanks have to be registered. I also stated that it was good that the owner plans to dig out the property to four feet below grade. However, the contamination probably extends under the sidewalks and maybe beyond. The DEC will ask for borings through the sidewalks and across the street. All contamination must be removed. Mr. Eichler left a message that P.W. Grosser will put in wells on-site and off-site. Also, he stated that a PBS application will be filled out for the site. 8/20/09 - Raphael Ketani. Today I received the Remedial Investigation Work Plan dated 8/17/09 from P.W. Grosser. I reviewed the work plan. The only comments I had were that all soil samples and groundwater samples must be tested for either method 8021 plus MTBE or method 8260, the annulus should be filled with grout above the bentonite seal, that well development should take place no sooner than 24 hours after the grout has cured, and that well sampling should take place no sooner than two weeks after development. I approved the work plan and sent Mr. Eichler and Mr. Almskog of P.W. Grosser my comments. 9/11/09 - Raphael Ketani. I tried to contact Mr. Eichler (631) 589-6353 regarding progress at the site, but could only leave a message. 9/14/09 - Raphael Ketani. Mr. Almskog sent me an e-mail stating that he expected to get the approval from the client this week to start the investigation work. 9/15/09 - Raphael Ketani. At the request of Mr. Almskog, letters were again sent to Mr. Burg and Ms. Holzman requesting their assistance regarding the performance of indoor vapor surveys at their properties by P.W. Grosser. 9/16/09 - Raphael Ketani. Mr. Almskog left a message that excavation had restarted and a third UST was found at the site. The UST appears to be a 550 gal. waste oil tank in a concrete jacket. He will let me know what transpires. 9/21/09 - Raphael Ketani. Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593 called to ask about the letter she had received regarding testing the air in the building for vapors. She was concerned about having her building get a red flag and who was going to pay for getting rid of the vapors if they are found to be unhealthy. I explained to her that I wasn't sure about the red flag and that it sounded like a real estate issue.

MAP FINDINGS

OLD GAS STATION (Continued)

S108467160

I told her that the owner of 128 Grand Street would be responsible for mitigating any vapors through the work of his consultant, P.W. Grosser. She said that some months back, she had water coming into her building from the neighboring property and that she ended up paying for the waterproofing. I told her that DEC would see to it that the owner of the site cooperates and installs a vapor mitigation system. We went over the subject and I tried reassuring her that any vapor issues would be resolved at the owner's expense. She said that she wanted to talk to the supervisor of the Spills Unit. I gave her Randall Austin's phone number. At the end of our conversation, she mentioned that they were driving piles next door. She put the phone to the window and I could hear piles being driven. I asked her what these piles were for. She said that they were putting in the piles for a foundation. I asked her how long this has been going on. She said that it has been happening all day. I contacted Mr. Almskog (631) 589-6353 and I asked him why the owner of the site was putting in foundation pilings. He said that he wasn't aware that pilings were going to be put in, except for the sidewalk shoring. I told him that they are driving piles right now. I added that contaminated soil removal will be impossible with the pilings in place. Mr. Almskog said that this wasn't a problem. He said that he's been on a number of projects where soil was excavated between the piles. Mr. Almskog added that the remediation work takes place slowly, but that it gets done. Meanwhile, he said, he will talk to the owner about the pile driving. Before the conversation ended, I added that the 8/17/09 work investigation plan did not include a schedule regarding when the soil borings will take place, when the installation of the monitoring wells will take place, and so forth. I told him that this was required in the CAP in the Order. He said that he will send DEC an implementation schedule. I asked him about the tank registration. He said that he had mailed the registration forms to the owner last week for all 3 tanks. I asked him for an update regarding the owner information. He said that Chaskiel Strulovitch is still the owner, but, now, the company is called Grand Suites, LLC. He said that CS Management is part of Grand Street, LLC. The company address is 116 Nostrand Avenue, Brklyn., 11205. I made an unannounced site visit. I met Shagi Freed (347) 683-7677 of Wongold Construction, 30-81 54 Street, #2E, Woodside, NY, 11377 (718) 986-1816. The former gas station building had been torn down and some of the soil had been removed from the site. A pile driver was pushing thin, long steel pilings into the soil. Mr. Freed didn't tell me his title, but he said that he was in charge of the shoring and pile driving project. I asked him what was going on. He said that his company was driving steel pilings just to support the steel sheeting that will be installed to keep the sidewalk from falling into the site. He showed me an approved plan from the NYC DOB for the pile driving and shoring. Everything looked like it was going according to plan. All of the work was along the edge of the property. There were no odors. The soil profile in one exposed area was of medium yellow brown glacial outwash sand. It didn't have an odor and didn't look darkened by contamination. After this, I left the site. 9/22/09 - Raphael Ketani. A letter went out to Mr. Strulovitch, with a c-c to Mr. Almskog, stating that an implementation schedule must be submitted to the DEC for the boring, well installation and other work that was mentioned in the investigation work plan. 9/23/09 - Raphael Ketani. I received a message from Mr. Almskog (631) 589-6353 that a fourth UST was found yesterday. There was also some oily water in the vicinity.

OLD GAS STATION (Continued)

S108467160

The tank was 5 to 6 feet below the sidewalk. I spoke to Mr. Almskog and he said that he will get a vacuum truck to the site to suck up the oil and water. He said that, from his experience, there shouldn't be a water table at so shallow a depth. He said that they had seen a slab when they were taking out the first two tanks from their vault. He is not sure whether there actually is a sub-basement below the site, but his crew will check on this. I reminded Mr. Almskog that all four tanks must be registered and that he should be prepared to find more tanks. He said that he will keep his eyes out for them. I told him to keep me informed. He said he will. 9/24/09 - Raphael Ketani. Randall Austin, Chief of the Spills Unit, told me today that he had spoken to Ms. Crandall (718) 384-5593 regarding the work that was taking place and the request that the P.W. Grosser consultants be allowed to enter her building to do air monitoring. She said that the odors outside her building were bad from the oil and that they were entering her building whenever she opened a window. She also said that her neighbor, Cecilia Holzman (718) 782-4313/(646) 321-8352, was having water and mud enter her building through the walls. Mr. Austin told her that the odors will be dealt with and asked me to see to it, and the problem with the mud and water. I contacted Ms. Holzman and she said that the problem has been going on for a year. She said that her property borders the former gas station property on Grand Street. She said that the NYC DOB won't do anything regarding the oil and water. She said that her building is at 136 Grand Street. I told her that I will contact the consultants and have them look into the matter and correct the problem. I contacted Mr. Almskog (631) 589-6353. I told him that his crew will have to put down either odor suppressing foam or do something else to abate the odors. I told him that people are complaining that the odors are coming into their apartments when they open the windows. He said the fourth tank will be removed tomorrow. I told him that a neighbor at 136 Grand Street has mud and water coming into her building from outside. I told him that this has been going on for a year and it is not stopping. I gave him Ms. Holzman's name, phone number, and address. He said that he will contact her and inspect the situation. Mr. Almskog said that he has an appointment to do the indoor air surveys from October 5 to October 10. 9/28/09 - Raphael Ketani. At 1:55PM on 9/25/09, I received the investigation work plan schedule for the project (see E-docs). Generally, it looked alright. I responded by e-mail stating that he should have a separate interval in the schedule for soil sampling when borings are performed, and another one for soil sampling when the wells are installed. I also wrote that the remediation may need its own schedule if there is going to be more than one activity, but that he can hold off sending me this until we know what the remediation will entail. Mr. Almskog also sent me an e-mail at 2:38PM on the same day. It was an outline of the activities that will take place in order to abate the odors (see E-docs). The outline looked acceptable. I spoke to Ms. Holzman (718) 782-4313/(646) 321-8352 today regarding the situation with the water and mud coming through her basement wall. She said that it is still continuing. She said that she has been trying for many months to get the owners of the former gas station to fix the problem. However, she has had no success. So she has hired a lawyer to help her. She said that there are molds from all of the wetness and they are affecting her breathing. I asked her whether she would be willing to have Mr. Almskog come over and do the indoor air testing as the DEC would like and to take a look at the situation in her basement. She said she

OLD GAS STATION (Continued)

S108467160

would be willing. I gave her Mr. Almskog's phone number and asked her to set up the appointment. Ms. Holzman added that she was concerned about the stability of her building as they are digging close by. I told her that she should talk to Mr. Almskog and the owner to get the problems resolved. Ms. Crandall had left me a message on Friday, 9/25/09, at 3:12PM stating that she came back from a class field trip and her apartment smelled strongly of oil. She said that the windows had been closed all day and that a neighbor told her the odors were unbearable. She said that she turned red from the chemicals in the vapors and that her skin started to itch. Ms. Crandall said that this was because she is very sensitive to all chemicals. She added that the workers at the site put dirt on the oil to get rid of the odors. I tried to contact Ms. Crandall (718) 384-5593, but I could only leave a message. Next, I contacted Mr. Almskog (631) 589-6353. We spoke at length about the site, the work and how it was affecting the neighbors. Mr. Almskog said that he spoke to Ms. Crandall during last Friday at 3:30PM. She was pleasant and didn't seem upset. She said that the odors were strong in her apartment, but not as strong as before. He told her what they were doing to reduce the odors and mentioned that they were going to put BioSolve on the oil. He said that he spoke to Randall Austin, Chief of the Spills Unit, on Friday and explained the situation. He said that he is rushing the characterization of the stockpiled soil at the site so that it won't sit there for a long time. He said that, right now, nothing is happening at the site as it is Yom Kippur. However, Mr. Almskog stated that the work will resume tomorrow, 9/29/09. He said that the slab they had found below the site is the remains of another foundation. They broke through the slab and dug down. Mr. Almskog added that they dug down 16 feet at the former location of the first two tanks that were removed from the vault. He said that as they dug deeper, the soil got cleaner and the odors abated. The soil borings and wells will be installed at the end of this week. Mr. Almskog told Ms. Crandall that he will do the indoor air survey next week. He told her to talk to the NYS Dept. of Health about the vapors and her health concerns. Mr. Almskog spoke to Ms. Holzman's foreman. He said that Ms. Holzman refused the water proofing that the owner of the site had offered. He said that this offer was made 6 months ago. Ms. Holzman told Mr. Almskog that she is going to sue the owner of the site. I asked Mr. Almskog to reach out to her again and try to set up an appointment for indoor air surveying and to see the basement. He said he will try, but the owners told him not to contact her as they will try to deal with her. Ms. Crandall (718) 384-5593 called me back at 12:50PM. She said that she opened up her windows and could not smell the oil. She said that the soil covering the site had stopped the odors. She asked what was going to happen next. I told her that the work crew will start again tomorrow as today is a holiday. I told her that they plan to remove the oil contaminated soil this week. She said that she was happy about this. 9/29/09 - Raphael Ketani. Rocky Wenskus of P.W. Grosser (631) 589-6353/cell (516) 233-4692 called to request that I inspect the site after they do more excavating tomorrow. He wanted me to check on the thoroughness of their efforts to remove all of the contaminated soil. I told him that I will make a site inspection at about 2PM. He said that would be good. However, I told him that the contamination may not end at the property line and to be prepared to deal with contamination under the sidewalk and the street. He said he understood. 9/30/09 - Raphael Ketani. I visited the site today at 2PM at the request of Mr. Wenskus. I met Matthew

S108467160

Conlon of P.W. Grosser (office (631) 589-6353/cell (631) 664-2016; he works under Mr. Almskog and Mr. Wenskus and is the field hydrogeologist) and Shagi Freed (347) 683-7677. I toured the site. The construction company had dug out a long trench along the south side of the site. The trench ran along and under the foundation for the newly constructed building next door. The material exposed in the trench under the building consisted of rubble from an older building, yellow brown layers of sand and gravel, a black layer of ash, and what looked like a remnant of a foundation (see E-docs). There was a combination septic and weathered gasoline odor coming from the east end of the trench. Mr. Conlon said that they had dug out an old cesspool from this area. I put my PID meter near the soil just above this location and had a reading of about 220 ppb of total vapors. I told Mr. Conlon and Mr. Freed about this and they told me that this soil will be dug out and added to the stockpile of contaminated soil. Mr. Freed said that the pile will be removed this Friday morning. I told him to make sure it remains well covered by plastic as it is supposed to rain later this week. I added that if the rain percolates down through the contaminated soil, it will wash the contamination into the clean soil below. Mr. Freed and Mr. Conlon said that they understood. I measured the vapor concentrations under the plastic for the stockpile. The PID readings were up to 11.3 ppm. I looked over the site. There wasn't much taking place. The shoring to protect the sidewalk had been completed. Mr. Conlon said that the site investigation and well installation will start this Friday and the first wells will be installed along the Berry Street side (west side) of the site. Mr. Freed said that his crew will start digging along the east side of the site. After this, I left. 10/1/09 - Raphael Ketani. I drafted a well installation letter at the request of Mr. Wenskus. Mr. Austin, Chief of the Spills Unit, approved the letter and it went out today. 10/14/09 - Raphael Ketani. I tried to contact Mr. Wenskus (631) 589-6353 regarding progress at the site, but could only leave a message. 10/15/09 - Raphael Ketani. Today I received a progress update via e-mail from Mr. Wenskus. It was a large e-mail. So I put it in the E-docs. The content of the e-mail was that they have been doing the boring and well installations for the past two weeks. The well across Grand Street could not be installed as the prospective location for the well was over a store's basement. A new location will be chosen. Originally, they were using a Geoprobe, but made no progress as they kept hitting refusal. So they switched to augering. Depth to water presently appears to be 50 feet, but this is below sea level. Vapor surveys with a PID meter resulted in no detections for the school or the neighboring buildings. Additional soil was excavated from the site. End point soil samples were sent to the lab for analysis. 10/19/09 - Raphael Ketani. Mr. Wenskus and Mr. Almskog called me in a conference call. They discussed what took place with the well installation program. They said that they managed to install a well across the street next to the school and two wells in the sidewalk along Berry Street at the perimeter of the site, but not in the sidewalk across Grand Street. They said that, at first, they used a geoprobe, but it hit refusal. Then they used an auger rig and managed to get three wells in down to the regional water table. However, no wells could be installed in the sidewalk across Grand Street as the basements for the buildings there extend under the sidewalk. They added that the drilling in this area is very difficult. Installation of the three successful wells took an even larger, stronger rig as the other auger rig kept hitting refusal. The

S108467160

driller believes that there is a boulder layer below at 32 to 36 feet below grade. Boulders were brought up within the site during excavation of the contaminated soil. It took a week to install the three wells. We agreed to the installation of one more well for the project for the time being. This well will be put through the sidewalk along Grand Street right at the perimeter of the site. This way, they will not encounter basements and they will have enough wells to triangulate the groundwater flow direction. They mentioned that they measured the groundwater level in the wells. Mr. Almskog said that they found the groundwater to be at greater than 50 feet below grade. The site, according to the USGS topographic maps, is at an elevation of 43 feet above sea level. I told them that this discrepancy may be due to a loss of porosity as a result of the boring. Clay and silt may have entered into enough pores such that the groundwater will need time to equilibrate slowly to its actual level. I told them to give the wells at least several days to reach their true groundwater level, and to proceed with the last well installation. They agreed to do this. 10/30/09 - Raphael Ketani. Mr. Wenskus sent me a site map depicting the location of the borings and well locations as of 10/22/09. It was attached to the following e-mail: Attached is a figure from the Berry and Grand Street site that shows the location of completed soil borings, monitoring wells and endpoint samples. We have achieved clean endpoints and soils at each location with the exception of SB-3. At SB-3 there is still some impacted soil at a depth of approximately 26-28 feet below grade. We are scheduled to collect groundwater samples next week from the four monitoring wells that were installed at the site. 11/13/09 - Raphael Ketani. Mr. Wenskus sent me an e-mail with an attached diagram depicting the locations of the borings, the wells, and the excavated area. He stated that the groundwater samples didn't have petroleum analytes, but chlorinated solvents were found. He also stated in the e-mail that contamination was found at depth at EP-3 and EP-4, but that it was excavated and that soil samples from later borings (EP-7 and EP-8) did not have petroleum analyte hits. I e-mailed back that the DEC needed a full report of the findings with analyte tables, and that a well needed to be installed on the edge of the site in the sidewalk along Grand Street. I remarked in the e-mail that we needed to see what was coming from upgradient. 12/1/09 - Raphael Ketani. Danny Sing of Don Carlo Environmental (718) 857-3100 called to say that the owners of the site are switching from P.W. Grosser to Don Carlo. He wanted to know what DEC was still owed. I told him that a well needed to be installed in the sidewalk which runs along the Grand Street side of the site, and that a full investigation report has to be submitted to the DEC. He asked whether the developer can start constructing the foundation as the sidewalk next to the site along Berry Street may collapse. I told him that the developer may do this anyway, but if all of the contamination is not removed, then it can be an expensive proposition to use soil treatment solution injections to get rid of the contamination. Mr. Sing told me he will send me an update by e-mail. 12/2/09 - Raphael Ketani. I spoke to Mr. Sing. He repeated his previous statement that the developer wanted to start foundation construction in order to prevent the sidewalk on the Berry Street side from collapsing. I told him that shoring had been installed along both the Grand Street and Berry Street sides of the site. He said he wasn't aware of this. I added that the DEC didn't see the need to start foundation construction as the shoring was in place. He said that he will go to the site very soon to see what the

OLD GAS STATION (Continued)

S108467160

conditions are. He asked whether DEC wanted Don Carlo to take a groundwater sample from the Grand Street well at the time of the drilling. I told him No. Just to sample all of the wells once the Grand Street well is ready for sampling. I asked him what he will do if more contaminated soil is encountered. He said that it will be excavated and field screened with a PID. He said he will send off a representative sample to a lab for analysis. I told him that the DEC would like a copy of the analyses. Mr. Sing said that he will send the results. 12/23/09 - Raphael Ketani. I spoke to Mr. Sing (718) 857-3100. He said that no work is taking place at the site. He also said that Don Carlo Environmental has not been retained yet. He said that his company was given a verbal approval, but there are 5 owners and everyone has to agree on the remediation plan. He will let me know what takes place. 12/29/09 - Raphael Ketani. Mr. Almskog of P.W. Grosser sent me a copy of an e-mail that was sent to the owners of the site. In essence, the e-mail stated that P.W. Grosser had reports to issue regarding the removal of the tanks and soil sampling results. However, these reports will not be submitted to the DEC, nor the owners, until P.W. Grosser is paid for the work that was performed. He added that if payment is not received, the reports will not be submitted to the DEC, and, therefore, the case will not be closed and will be considered a site with contamination. Mr. Sing called and stated that Don Carlo has been officially retained by Grand Street LLC. They will mobilize either on 12/30/09 or 12/31/09 for installing the well in Grand Street. 1/13/10 - Raphael Ketani. I contacted Mr. Sing. He said that they have been trying to install a well along the Grand Street side of the property since 1/8/10, but they keep hitting refusal at about 30 feet. I asked him what type of equipment they were using to drill the well. He said it was a geoprobe and that they have damaged all of their penetration points. He added that the hammer for the geoprobe has also been damaged. I told him that it could be a big boulder down there. He said that he thought it was bedrock. I told him that bedrock is not so shallow in that area. I added that DEC wants a well along Grand Street, and that if one type of equipment doesn't work, then they should try another type. He said that he will discuss this with the owners. 1/22/10 - Raphael Ketani. I had a phone conversation today with Mr. Singh (718) 857-3100 (doncarlo@aol.com) as a result of a voice mail he had left on 1/21/10 and as a result of an e-mail he had sent also on 1/21/10. Mr. Singh had written that the well was installed 5 feet from the southeastern property line. He explained over the phone that this was really 5 feet from the neighboring property at 136 Grand Street (essentially 5 feet from the east corner of the site). He wrote that the well was installed last week to 44 feet below grade and that a groundwater sample was collected on 1/20/10. I told Mr. Singh that he should let the well sit for at least two weeks before sampling. I told him that everything is disturbed from the well installation and so the sample is not representative of ambient or normal groundwater conditions. We agreed to another round of sampling on February 19 for all of the wells. Mr. Singh had also asked whether the owners can construct the foundation on the site. I told him that DEC has not received a remediation report indicating that the contaminated soil has been completely removed. I told him that we have some soil end point data, but that's all. He said that he will put together the remediation report. I told him that the DEC needs pictures of the work, tables of end point results, manifests and other information. He said that he will include this. 2/2/10 - Raphael Ketani. I

OLD GAS STATION (Continued)

S108467160

received an e-mail yesterday from Mr. Almskog regarding the status of the investigation and remediation report that is supposed to be submitted by P.W. Grosser to DEC. Mr. Almskog wrote that they have contract issues with the owners, Grand Suites, LLC, and that the report can't be submitted until this is resolved. The full e-mail is in the E-docs. 2/9/10 - Raphael Ketani. I checked the latest PBS registration for the site. The PBS registration is #2-611177 for 251-255 Berry Street. There are 5 tanks. Two 550 gal. gasoline tanks have been removed. The other 3 tanks were converted to non-regulatory use. These tanks are a 550 gal. gasoline tank, a waste oil tank, and another tank. However, this is not correct. All of the tanks that were at the site were removed. So the registration is not correct. A review of the 11/13/09 e-mail from P.W. Grosser indicates that there is significant contamination at depth at the location of SB-3. It is not clear why this location has such high contaminant levels. Grand Suites, LLC needs to conduct more soil borings in the eastern half of the site, including the area of the former service station footprint. Additionally, the DEC has not received the Site Investigation Report, nor the Remedial Action Work Plan. Therefore, the owners, Grand Suites, LLC, are in violation of the Order on Consent. Mr. Singh also sent me an e-mail requesting a letter whereby DEC orders the owners to conduct end point sampling throughout the site. I will send a letter concerning the four issues to Mr. Strulovitch. 2/10/10 - Raphael Ketani. John Urda, Assistant Regional Attorney, wrote his own letter. He sent this letter to Mr. Strulovitch today in place of my letter (see E-docs). 2/11/10 - Raphael Ketani. I received a call from Mr. Singh (718) 857-3100/cell (347) 728-0768. He said that the owner wanted something in writing from DEC requesting that the end point sampling be conducted. He also want the DEC to state in the letter that Grand Suites, LLC can go forward with constructing the building foundation. I told Mr. Singh that the DEC will not write such a letter. I told him that there is high contamination at depth at the location of soil boring SB-3, which is next to the UIC structure (a former garage dry well). I told him that, due to the results, the DEC is concerned that there is more contamination in the eastern half of the site. Therefore, more soil borings must be performed in this eastern area. Mr. Singh had no comment regarding the request for the additional borings. I told him that our legal counsel, Mr. Urda, had sent Mr. Strulovitch a letter indicating that he was in violation of the Consent Order as the site investigation report wasn't submitted by 12/17/09. I added that he owes DEC a \$50,000 fine and that the letter indicates the need for more borings and end point samples. Mr. Singh said that he understood. With that the conversation ended. Next, I talked to Mr. Almskog of P.W. Grosser (631) 589-6353. I asked him about the UIC structure. He said that, as best as P.W. Grosser could determine, it was a dry well that was within the footprint of the former garage building. He said that, from the soil analytical results for SB-3, material was probably dumped down the dry well. I asked him which were the reports that P.W. Grosser was holding on to pending payment by Mr. Strulovitch. He said that he has the UST Closure Report, the Indoor Air Resurvey Report, and the October 2009 soil sampling results report. 2/18/10 - Raphael Ketani. Mr. Singh sent me an e-mail with a letter attached which was the Preliminary Groundwater Sampling from MW-3 report. The letter was dated 2/16/10. The letter report concerned the preliminary groundwater results for MW-3. The VOCs and SVOCs were almost entirely non-detect. There were a small number of very low hits well below TAGM. However, there was a

OLD GAS STATION (Continued)

S108467160

PCE hit of 15 ppb and a TCE hit of 8.2 ppb. There was also a groundwater elevation measurement of 58.25' below grade. This is very different from the other measurements for groundwater elevation which were a little above 46'. I wrote back asking whether the well had been properly developed. From my inspection of the site, I didn't remember a significant elevation change along the sidewalk that borders Grand Street. A 12 foot elevation difference just didn't seem possible. I wrote that the groundwater elevation should be resurveyed. I added that, when all of the groundwater chlorinated solvent concentrations are taken into account, it seems like the former waste oil UST site is the source of the PCE and TCE. I mentioned that the DEC still needed the full soil and groundwater results from P.W. Grosser to get the complete chemical picture.

2/22/10 - Raphael Ketani. Mr. Urda sent Mr. Strulovitch a letter today. The letter stated, amongst other things, that if the RIR is submitted by March 8, 2010, then DEC will suspend the February 10, 2010 Notice of Noncompliance. The RIR must include the followup indoor air survey results, analytical data, documentation of field activities, and a lab report with full groundwater analyticals. Also, it was written that soil end point sampling must be performed throughout the site and that the contamination at SB-3 must be remediated. The PBS registration must be changed to reflect that all of the tanks have been removed.

3/8/10 - Raphael Ketani. Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593 called late today. She informed me that digging had taken place on 3/5/10 (friday) right next to her building (the new condominium building that is next to the site and fronts on Berry Street). The crew excavated along her foundation until they hit the footings which had been poured about October 2009. She said that the footings were 12 feet down and had been covered with fill material that had been brought from the outside. Ms. Crandall added that the DOB had stopped them from pouring more footings as they didn't have a permit. She also said that they told her that the DEC had given them permission to pour the footings. I told her that we never did such a thing. Ms. Crandall added that the owners use different addresses for the site for different agencies. They use 130 Grand Street for letters to the NYC DOB. Finally, she said that they took soil samples from the area where they were excavating. I told her that I will look into the matter.

3/9/10 - Raphael Ketani. I tried to contact Mr. Singh (718) 857-3100/cell (347) 728-0768, but could only leave a message regarding the excavating and soil sampling. Later, I contacted Mr. Singh. He said that what was going on was something different than what the caller stated. He said that they were doing soil sampling on thursday in the four sidewalls for the site. He said that they collected 18 soil samples and sent them off for processing. He said that he had PID readings for some of the samples and that the DEC will get the report. I told him that soil samples of the off site backfill are not valid samples. He said that he and his crew didn't sample off site fill, but only in place soils. His crew had to move some shoring supporting the wooden sheeting in order to take the samples. I stated that the DEC was requesting end point sampling throughout the site as there is high contamination in the dry well. I added that since the dry well was so contaminated, the DEC suspects that liquids were probably spilled on the former floor of the building that used to be on the site. I also mentioned that these liquids probably seeped through the floor and into the soil below. That is why the DEC wants sampling to take place within the footprint

MAP FINDINGS

OLD GAS STATION (Continued)

S108467160

of the former service building. I told him that I will look for the report in the mail. 3/31/10 - Raphael Ketani. I hadn't received the soil end point report. So I tried to contact Mr. Singh at his office (718) 857-3100. However, I could only leave a message. 4/1/10 - Raphael Ketani. I hadn't received the soil end point report. So I tried to contact Mr. Singh at his office (718) 857-3100. However, I could only leave a message. 4/2/10 - Raphael Ketani. I hadn't received the soil end point report. So I tried to contact Mr. Singh at his office (718) 857-3100/cell (347) 728-0768. However, no one picked up the phone. 4/7/10 - Raphael Ketani. I tried to contact Mr. Singh, but he wasn't in. So I spoke to the president of Don Carlo Environmental, Romeo Santos. I explained to him that the DEC had requested some time back that a site wide end point sampling survey be performed. I told him that the DEC has yet to see this work take place. I added that back on 2/11/10, Mr. Urda had sent Mr. Strulovitch a letter stating that he was subject to a \$50,000 fine for not submitting the SIR by the due date and that more end point sampling needed to take place. I told Mr. Santos that end points needed to be taken within the footprint of the former service garage as PCE contamination and other contaminants had been found in the dry well at the location of SB-3. Mr. Santos said that end points were taken in the sidewalls under the sidewalk and that the DEC should get this report very soon. I told Mr. Santos this was fine, but that the waste oil UST also appeared to be a source of volatiles. He said that he didn't think so and that he thought the contaminants were coming from off-site. I told him that I'll look at the report when I receive it. Later, Mr. Singh called me and said that the sidewall end point sample report was sent to the DEC today by Fed Ex. I told him that I will keep an eye out for it. Today I received the Tank Closure Report dated March 2010 and began my review. 4/9/10 - Raphael Ketani. I finished my review of the Tank Closure Report. The report shows that 18 soil samples were taken, 8 for the BS series on 1/27/10, and 10 for the EP series on 3/4/10. According to the site map provided, the locations of the borings appear to cover the site adequately. All of the analyses indicate that the contaminant concentrations are well below TAGM, except for the benzo series of analytes and their combustion products. These analytes are typically at the hundreds of ppb concentration at many sites throughout New York City. The other oil indicator analytes are at very low concentrations and suggest that there is very little oil contamination of the soil. Soil samples were taken at 10' below ground surface for the BS series of borings, and at 6' below ground surface for the EP series of borings. It is not stated in the report why the BS series of borings went down to only 10 feet. It is also not stated how they could go only 6 feet down for the EP series of borings and still get an undisturbed sample in the same location as the deeper BS sample. Also, I checked the PBS registration, #2-611177. Two tanks have status #5, closed and removed, but three tanks have status #3, converted to non-regulatory use. All of the tanks have closure dates, but they all need to have status #5. Also, I do concur with the removal of the soil in the north and south/southeast areas of the site. I spoke to Mr. Singh. He said that the BS series went down only 10 feet because this was one foot below the level that the owner will excavate all of the soil at the site. He said that the BS series of borings were through the ground. However, the EP series of borings were in the sidewalls of the site. That's why they are only 6 feet below the ground. Mr. Singh commented that there is soil contamination in the north and

OLD GAS STATION (Continued)

S108467160

south/southeast parts of the site. He said that he told the owner, Mr. Strulovitch, that the soil has to come out. I told Mr. Singh that the DEC was in agreement with this plan. I told Mr. Singh that three of the tanks that were removed had a status of converted to non-regulatory use. I told him that this was incorrect and to change it to status #5, closed and removed. He said that he will do this. I added that there still is contamination in the dry well at the location of boring SB-3 that was put in by P.W. Grosser. I told him that it's about 26' to 28' down. He said that he will look into the matter. I told him that the contamination needs to be addressed some how. Next, I told him that there was a legal agreement between the owners and DEC that another round of groundwater samples have to be taken and another indoor PID survey of the school and the neighboring buildings. He said that he will have this done. I told him that the DEC needs a surveyed groundwater elevation flow map to the nearest hundredth of a foot. He said that this will be done. He asked that the DEC send a letter requesting that all of these actions be taken. I told him I will. A letter was drafted for Don Carlo Environmental wherein the owner was responsible, as per the Order on Consent, for continuing the groundwater monitoring, submitting a groundwater flow map, conducting another indoor air PID survey, and registration of all five tanks as closed and removed. In the letter, DEC also requested that the contaminated soil in the north and south-southeast parts of the property be removed, and that the contaminated soil in the dry well be remediated. The letter was approved by Mr. Austin and sent out today. 4/13/10 - Raphael Ketani. I received the following e-mail from Taxy Texeira of Don Carlo: Please be advised that Don Carlo met with the owners of the subject property today and it was concluded to start with the excavation/remediation tomorrow (April 14, 2010). Also the PID survey will be performed within the basements of the adjacent buildings (apartment and school) and the corrected/updated PBS Application was submitted to the respective department for recordation. 4/19/10 - Raphael Ketani. I received an e-mail from Ms. Texeira. She wrote that the area of SB-3 is not a dry well, but just a contaminated area. She sent me 3 photos of the location of SB-3 (see E-docs). She also stated that the location of SB-3 is part of the area that they plan to remediate and that they presently have 120 cu. yds. of contaminated soil on site that is being stored for shipment. I wrote back that they needed to remove the contaminated soil very soon in order to minimize any odors. I also asked her to include in the remediation plan how Don Carlo will manage the deep contamination at SB-3. Ms. Texeira e-mailed me back that the soil will be hauled away tomorrow. She added that the contamination at SB-3 will be dug out as much as possible. I wrote that if the deep soil can't be dug out, then they will have to use soil treatment. 4/26/10 - Raphael Ketani. I received a call on 4/23/10 (while I was out for the day) from Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593/cell (718) 757-5664 (one of the neighbors). She stated that the owners of the site were putting in footings. Today, I contacted Mr. Singh (718) 857-3100/cell (347) 728-0768 and tried to find out what was going on at the site. He said that he wasn't sure, and that he will find out and call me back. Mr. Singh called me back. He said that the construction company is installing a grade beam to protect the sidewalk along Grand Street. He said that no footing or foundation work is taking place. The results for the soil end point samples that were taken some time ago have not come back yet. He added that it will take maybe three

OLD GAS STATION (Continued)

S108467160

additional days for turnaround of the sample processing. I told him that it's alright. Mr. Singh asked whether the owners can install footings where the end points indicate that the soil meets or is below TAGM standards. I told him that this would also be alright. He said that he is putting a package of soil disposal manifests and other documents together to send to DEC. Mr. Singh mentioned that the contaminated soil at SB-3 was dug out down to 18 feet. He said that he purchased the soil treatment solution for treating the deep contamination from about 18 feet down to 28 feet. I told him that he will have to let the solution work for at least one month after it is injected. Then he will have to take a confirmatory sample. Mr. Singh said that he understood. I reminded him that groundwater samples still needed to be taken. He said that he will have this done. I tried to contact Ms. Crandall, but could only leave a message that the construction which was taking place was only the installation of a grade beam, not footings. 04/27/10 - Raphael Ketani. I made an unannounced site visit. I initially met the construction manager and the developer's representative. I saw that they had constructed a long footing along the Grand Street side of the property. The footing ended before the northwest corner of the site (see E-docs). A backhoe operator was removing soil along the Berry Street side of the property. He had dug up some gray soil with a slight weathered gasoline odor (see E-docs). I pointed this out to the two people I had just met. They said that the soil will be removed from the site. I told them to remove it as soon as possible in order to prevent odor complaints. I looked over the site and didn't see any issues that needed addressing. The owner's representative told me that Mr. Singh and Mr. Santos were in the area and that they wanted to meet with me at the site. I agreed and stayed for their arrival. I met Mr. Singh and Mr. Santos. I pointed out the contaminated soil in the southwest corner (next to Ms. Crandall's building) that needed to be removed. Mr. Singh said that this is where the remote fills were and that the soil will be drummed up tomorrow. I mentioned that, as per the Order, Don Carlo had to submit another round of groundwater analytical data, a groundwater flow map, the soil end point data for the contaminated soil that was taken away, another round of indoor PID monitoring data, and the confirmatory soil sample data for the post-treatment sampling of the deep contaminated soil at SB-3. Mr. Singh said that he was aware of this and that he will submit the full report to DEC. After this, I left the site. 5/17/10 - Raphael Ketani. I received the 5/14/10 Subsurface Remediation Report from Don Carlo Environmental. I began my review. 5/18/10 - Raphael Ketani. I finished my review of the SRR. Two test pits (TP-1 and TP-2) were excavated on 4/14 and 4/16. One test pit consists of the area around SB-3. The other test pit concerned the L shaped area along the Berry Street and Grand Street sides. Five endpoint soil samples were taken from each pit on 4/20. The diagram showed where the test pits were, but not the endpoint locations. Also, there was no groundwater data. The Regensis HRC treatment solution was injected on 5/10. They were not able to gain access to the neighboring buildings or the school in order to perform a second round of indoor air monitoring. I spoke to Mr. Singh (718) 857-3100/cell (347) 728-0768 about the report. He said that he will send a new diagram showing the endpoint locations. He added that they will take confirmatory soil samples at the HRC injection site in one month. I asked him whether the staff from Regensis had recommended such a short wait time. He said that they had. I asked him what had transpired with the indoor air testing. He

OLD GAS STATION (Continued)

S108467160

said that the Polish woman who owns the property on Grand Street simply refused to allow them to enter her building. Ms. Crandall told them that they had to have insurance before she would allow them to enter her building. Also, she said that she had to consult her attorney. The principal of the school across the street told them that they needed a permit from the School Construction Authority in order to do the indoor air survey. I told Mr. Singh that the second round of indoor air surveying would have been just to confirm the first round results, which showed no impacts from the site. I told him that he didn't have to do a second indoor air survey. I asked him what had happened to the gasoline contaminated soil that I had seen during my 4/27/10 visit. He said that the soil was drummed up and the manifest for the soil is in the SRR. Lastly, I told Mr. Singh that the DEC was owed the results of the next round of groundwater samples and the confirmatory soil sample from the SB-3 area. He said that groundwater sampling will take place this week. Mr. Singh also wanted a letter from the DEC approving the SRR and stating that foundation construction can start. I told him that I will see whether Mr. Austin, my supervisor, will allow me to write such a letter dealing with foundation construction. I added that the monitoring wells must remain intact and accessible and the area of SB-3 must also remain accessible. He said that they will. With that, I told him that the DEC is approving the SRR. Later, Mr. Singh sent me the revised Figure 1 for the SRR. I looked it over and it showed the endpoint locations. I put it in the e-docs. 5/20/10 - Raphael Ketani. I submitted a draft letter to Randall Austin, Chief of the Spills Unit, approving the Subsurface Remediation Report. Mr. Austin approved the letter and it went out today. 5/24/10 - Raphael Ketani. Moishe Blum called requesting permission to build on the property. He was on a speaker phone. I could tell that someone else was in the room because there were conversations going on between him and the other person. I told him that we still needed to see the results of the confirmatory soil sampling and the next round of groundwater samples. He said that he wasn't going to build the first floor, just do other work. I told him that the DEC is not going to give permission to build in some area, but not in others, or to do certain work, but not other work. I said that we don't want to get into such a complex permitting situation. I added that DEC first wants to see the environmental project come to a conclusion and then we will say it's alright to build. Mr. Blum said that he understood and the conversation ended. 5/25/10 - Raphael Ketani. Don Middleton, Jr. of Middleton Environmental called to ask whether 128 Grand Street was close to closer regarding the spill. I asked him who he represented. He said that he represented a bank and they were wondering whether or not to give the owners of 128 Grand Street a loan for the building construction. I told him that a confirmatory soil sample still needed to be taken at the location of the contamination hot spot, formerly SB-3. I added that the soil analyticals may indicate that more treatment is necessary. He asked about whether any groundwater sampling needed to take place. I told Mr. Middleton that Don Carlo Environmental must take at least one round of groundwater samples. I added that the well closest to the former location of the buried waste oil tank had hits of chlorinated solvents and the DEC wants to see whether the solvents came from the tank or off site. Mr. Middleton said that he understood and the conversation ended. 6/15/10 - Raphael Ketani. Mr. Almskog of P.W. Grosser (631) 589-6353 called to inform the DEC that they have been subpoenaed to produce their records regarding the spill site. He said

S108467160

that he wasn't sure who was making the request or why. 6/18/10 - Raphael Ketani. Today Mr. Singh (718) 857-3100 sent me a report dated 6/17/10 containing groundwater analytical results for four (4) wells and confirmatory soil sample analytical results for a sample taken at 32 feet below grade where the treatment solution was injected (former SB-3 site - drywell). The results were completely non-detect for all 5 environmental samples with the exception of some chlorinated solvents which appeared to be coming from offsite and upgradient: tetrachloroethene trichloroethene cis-1,2-dichloroethene MW-3 (upgradient) 16 56 17 MW-1 (waste oil tank) 16 55 16 MW-4 (downgradient 8.7 62 14 MW-5 from former tanks) 19 58 15 I found the report to be acceptable and I told Mr. Singh that the DEC considered the remediation to be complete. Based upon the data in the case file and the 6/17/10 report, I have determined that the contamination has been removed from the site. Also, the owners plan to install a vapor barrier over the site before the above ground part of the building is constructed. As the contamination on site has been removed, I have determined that there is no threat to the public or the environment from conditions at the site. Therefore, I am closing the spill case. 7/7/10 - Raphael Ketani. Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593/cell (718) 757-5664 called yesterday and wanted to know whether the site had been cleaned up and whether the owners and the developers were allowed to construct on the property. I told her that the soil and groundwater test results all indicated that the oil and gas contamination had been cleaned up. So, the spill case was closed on June 18, 2010. She said that was fine, and the conversation ended."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "6/23/15: Mahat DEC Mahat contacted Mr. Danny Singh inquiring more about the spill and its nature. He mentioned that during the excavation for the foundation they discovered some gasoline contaminated soil. Sample has been taken from the bottom of the open excavation. Work has been stopped until the laboratory result will be published. A work plan will be proposed to the owner to remediate the site. 7/6/15: Mahat e/c: DEC Mahat received an email from Mr. Singh providing property owner information: Mr. Mahat, Per our telephone conversation and your recent request, please see the following: Property Owner: Grand 26, LLC 233 Kent Avenue, Apt. 4 Brooklyn, NY 11249 And/or Mr. Shai Iluz 150 Grand Street Brooklyn, NY 11249 Tel: 718-216-1500 As of Wednesday, June 24, 2015 gasoline contaminated soil was encountered during ongoing excavation at the site. Excavation was put on hold and grab/composite soil samples were collected and submitted for laboratory analysis. Soil samples will be analyzed for intended disposal facility's waste characterization

requirements. Upon receipt of the laboratory analytical results a copy will be sent to you for your records. If further information is needed, please do not hesitate to contact me. Regards, Dhanraj Singh 7/17/15: Mahat DEC Mahat received an email from Mr. Singh updating the project: Mr. Mahat: Please note that the waste (soil) characterization for the soil samples taken and analyzed were submitted to a PA disposal facility. The facility accepted the soil and arrangements are being made to excavate and transport the soil off site to the designated disposal facility in PA. All soil removed from the site will be documented on legal waste manifest. I will coordinate with you as the job progresses and prior to the collection of endpoint soil samples. Regards, Dhanraj Singh 7/28/15: Mahat DEC Mahat received another email update from Mr. Singh. Mr. Mahat, To date we have removed twelve truck loads of gasoline contaminated soil from the mentioned site. Impacted soil was excavated in a safe manner whereas not to disturb the onsite one-story structure with excavation sidewalls sloped at 45 degrees angle down to termination depth of approximately 14 feet bgs. All excavated materials were manifested and transported offsite to a permitted disposal facility in Pennsylvania. We are at a point where the impacted soil was removed and excavation depth has to stop in order to secure the onsite structure. I will be collecting post excavation (endpoint) soil samples tomorrow and would like to backfill site to the desired grade. Kindly advise if you would like to come out to the site for inspection or we are permitted to sample and backfill. Regards, Dhanraj Singh Mr. Mahat, To date we have removed twelve truck loads of gasoline contaminated soil from the mentioned site. Regards, Dhanraj Singh DEC Mahat left a voice message to Dhanraj Singh for a call back. 8/28/15: Mahat e/c: DEC Mahat received a closure report on the spill case. It has been uploaded on D2 for reference. Spill case is waiting for a closure report review. Review Pending. 9/8/15: Mahat DEC Mahat reviewed the report: WORK PERFORMED: Work performed involved: * Soil excavation, loading of trucks for legal transportation offsite to disposal facility. * During excavation, a 550-gallon previously used gasoline UST was which was encased with concrete was excavated and exposed. * The tank was purged and cut opened in order to access the interior contents. * Tank bottoms were removed and interior walls was scrape cleaned and made gas free. * All tanks contents removed were contained into a NYCDOT 55-gallon drum. * The tank loaded as a whole and disposed of as scrap metal including piping. * Upon completion of the tank removal process, soil remediation continued at the site. * A total of twelve (12) trucks transported 401.49 tons of gasoline contaminated soil from the subject property. * Five (5) post excavation soil samples were collected as grab samples from the bottom of the grave and the four (4) side walls. * Soil samples were field screened for petroleum utilizing a portable Photo Ionization Detector (PID) model

PGM-30. Soil samples did not depict any smell of petroleum; however, discoloration in the soil was identified. * Due to structural issues, the excavation grave which was 11ft W x 18ft L x 14ft D was backfilled Soil samples collected were placed into laboratory certified glass jars, labeled BS-1 and EP-1 through EP-4 and documented on a Chain of Custody form. * The soil samples were submitted to York Analytical Laboratories in Stratford, CT for analysis using EPA Test Methods 8260 for Volatile Organic Compounds (VOCs) and 8270 for Semi-Volatile Organic Compounds (SVOCs). * Submittal of Site Remediation report to the NYSDEC Spills Unit for closure of open spill number 1503264. * Submittal of NYSDEC Petroleum Bulk Storage (PBS) application for the registration/deregistration of the two (2) removed tanks (1/1,080-gallon #2 fuel oil and 1/550-gallon gasoline USTs). FINDINGS: Laboratory analytical results of the soil samples identified one (1) low level VOC (Tetrachloroethylene) and nine (9) low level SVOCs (Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Fluoranthene, Phenanthrene and Pyrene) were detected in the four (4) endpoint wall samples which were collected at seven feet (7) below grade surface (bgs); contaminants detected were well below their respective regulatory guidance values. Laboratory analytical results were compared with NYSDEC Unrestricted Use Soil Cleanup Objectives. Conclusion/Recommendations: Based on the work completed (tanks and impacted soil removed from the site) and laboratory analytical results, BSD has concluded that the gasoline impacted soil was removed from the site in accordance with the NYSDEC remediation protocol; however due to site restrictions where limited working space allowed the removal of all contaminated soil, residual contamination were left onsite. BSD recommends that prior to the site restoration; a passive venting system together with a vapor barrier should be incorporated with the site renovation. Based on the report that is submitted on 8/28/15, the Department does not warrant any remedial investigation on the site. No further action is required. Spill case will be closed on NYSDEC Spill Database. "

Remarks: "waiting for lab to pick up - smells like gas"

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 34833
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
F01 - Pipe External Protection - Painted/Asphalt Coating
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J02 - Dispenser - Suction Dispenser
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
L00 - Piping Leak Detection - None
B01 - Tank External Protection - Painted/Asphalt Coating
G02 - Tank Secondary Containment - Vault (w/access)
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "2/8/05, 3:43 PM - e-mail from Matthew Madsen, Con Ed project manager: Remember that 'spill' we talked about this morning at Kent and Metropolitan? Well, as it turns out, what they were looking at was foam glass insulation (the typical configuration for the pipeline inside to out is pipe, coal tar, expanded foam glass insulation, and then a canvass wrap as an outer layer). During pre-work test pitting and sampling, all of these layers have been sampled in the past. The foam glass and canvas are non-ACM and have not turned up any hazardous constituents (the pore space in the foam glass does contain hydrogen sulfides, so there is an odor when you cut or crush the stuff). Any way you slice it, there is no oil spill/release at this location. Close out. (JHO) ~~~~~ e2mis no. 157121: 08-FEB-2005 10:45 HRS. CONSTRUCTION MGMT.DEPT. CH.CONSTRUCTION INSPECTOR J.RUIZ EMP# 50415 REPORTS: WHILE ON LOCATION FOR REMOVAL OF A OIL PIPE LINE (KENT AVE PROJECT) FOUND APPROX. 50 GAL'S OF UNKNOWN OIL ON SOIL IN A TRENCH. NO WATER. OWNER OF SUBSTANCES IS UNKNOWN. MR. RUIZ MADE NOTIFICATION TO EH&S REMEDIATION MATHEW MADSEN, WHO WAS GOING TO CONTACT THE DEP. UPDATE 08-FEB-2005 11:50 HRS. MR.J.RUIZ REPORTS: THE NAME OF THE PROJECT IS THE #7 FUEL OIL LINE REMOVAL PROJECT AND IT IS UNDER THE CONTROL OF EH&S REMEDIATION. UPDATE 08-FEB-2005 13:55 HRS. ERT W.CAPUNE EMP# 85485 REPORTS: ARRIVED ON LOCATION 12:15 HRS. AFTER INVESTIGATION OF EXCAVATION FOUND SUBSTANCE TO BE FOAM GLASS. AS PER A CONVERSATION WITH EHS S.M.E. ANDREA SCHMITZ TO DISCUSS INCIDENT: THERE IS NO REASON TO BELIEVE THE FOAM CONTAINS ASBESTOS BUT WILL SAMPLE ANYWAY."
Remarks: "REMEDATION PROJECT: NUMBER 7 FUEL LINE OIL REMOVAL: NO WATER INVOLVED AND NO TO 5 QUESTIONS: CONED # 157121"

DEC Memo:

"Sangesland spoke to Hardik Parekh at EEA Inc. He said the site is a vacant lot CSL sent to owner: Joe Matarese, 484 Union Ave, Brooklyn, NY 11211 EEA forwarded to DEC a copy of the Phase 2 report (see E-Docs) Case reassigned from Sangesland to Ahmed 10/27/11 - Austin - Spill Transferred from Ahmed to Rahman - end 07/16/13- Closure report in edocs.Summary from closure report: No VOCs were detected in the soil or ground water.A vapor barrier 20 mil HDPE was installed below the slab of the cellar and behind all foundation walls. A total of approx. 4764.38 tons of non hazardous soil was transported to the Clean Earth of NJ.In accordance with the RAP, EBC collected endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed. As shown in Figure 6, the Site was divided into five zones with the acronyms A, B, C, D, and E. From each of the five zones, EBC collected five endpoint samples. The samples were labeled A1, A2, A3, A4, A5, etc. The endpoint samples collected from Zones A, B and C were analyzed for SVOCs (8270) and metals, and the endpoint samples collected from Zones D and E were analyzed for VOCs, SVOCs,pesticides/PCBs, and metals. A copy of each of the laboratory

reports for the endpoint soil samples is attached in Appendix E and the results are summarized in Table 1 - Volatile Organic Compounds, Table 2 - Semi-Volatile Compounds, Table 3 - Pesticides/PCBs, and Table 4 - Metals. No SVOCs were detected within any of the 25 endpoint samples at a concentration above NYSDEC Part 375.6 Unrestricted Use Soil Cleanup Objectives (SCOs). No metals were detected above Unrestricted Use SCOs within 22 of the 25 endpoint samples. Two of the endpoint samples in Zone B contained chromium at a concentration slightly above Unrestricted Use SCOs, but well below Restricted Residential SCOs. Zinc was detected slightly above Unrestricted Use SCOs within one soil sample collected from Zone A. Soil disturbance and intrusive activities were completed in accordance with the procedures outlined in the site specific CHASP and RAP approved by the NYCDEP in June 2008. No surface soils and/or fill were utilized for backfilling or grading purposes. NFA required.(sr)"

Actual:
18 ft.

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which has started in 2011. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigations and negotiations, starting in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system is being negotiated. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2012 performed by the Volunteer's consultant. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. This site is being remediated under a Voluntary Cleanup Agreement (see site no. V00380).

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are highly contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene,

S108524789

toluene, and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and ConEd parking lot. c) concentrations: Groundwater monitoring conducted at the site revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in few of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In July 2011, the RCRA closure work plan was approved and in November 2011, EPA started the RCRA site investigation as a response to the Department's request for emergency action. RCRA closure activities continued through 2012.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Code: 56974
Site Description: Location:The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features:On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning:The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood

MAP FINDINGS

FYN PAINT & LAQUER CO. INC. (Continued)

S108524789

has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and coarse sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Update By: JHOCONNE
Site Description:

The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.-Off-Site is located in an urban area Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site. Nature and Extent of Contamination: The remedial investigation for the C224154 site revealed: a) contamination: the soil, soil vapor and the groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from C224154. b) areal/depth

extent: the VOC plume from site C224154 extends across the footprint of the Fyn Paint building under the adjacent sidewalks, parking lot and streets. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells. Further investigation is needed to fully delineate the extent of off-site contamination.

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Record Added Date: 12/04/2014
Record Updated Date: 06/22/2015
Update By: JHOCONNE
Site Description:

Location: The Fyn Paint and Lacquer Co., Inc. site (the former VCP site no. V00380) is located in an urban area at 230 Kent Avenue in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Alternate addresses for the Property are: 230-232 Kent Avenue; 76-80 River Street; and, 29-37 North First Street. Site Features: The site consists of a 0.135-acre lot improved with a partial two-story industrial/warehouse building with a gross floor area of approximately 5,862 ft². A small basement is used for the heating oil tank, furnace and controls for the sprinkler system. Current Zoning and Land Use: The site land use is currently recorded as Industrial and Manufacturing. Zoning for the Property is M3-1, which is designated for areas with heavy industries that generate noise, traffic or pollutants. The on-site building is currently vacant. Past Use of the Site: Past land uses associated with the site include a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow sediments beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is approximately 500 feet away from the site boundary.

Env Problem:

Nature and Extent of Contamination: The remedial investigation for the former V00380 site revealed: a) contamination: in the soil, soil vapor and groundwater, which are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer, extends across the footprint of the Fyn Paint building into the adjacent sidewalks, ConEdison's parking lot and the former MOSF 2-1480. c) concentrations: Groundwater monitoring conducted in 2006

S108524789

revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated under the VCA. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP) was approved for off site (OU-2/ actual C224154A) contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed and started to operate. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer under the VCA ceased operation of the DPES. As a result, the VC Agreement was terminated. In 2015, the prospective purchaser of the site applied and was accepted as Volunteer in the BCP. In March 2015, the DPES was restarted. Significant Threat: The site presents a significant threat to public health due to the potential for on-site and off-site soil vapor intrusion, and to the environment for on-site and off-site soil and groundwater contamination.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur on-site and off-site needs to be evaluated.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	21553
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	417
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	1
Waste code:	D005
Waste name:	BARIUM
Amount (Lbs):	7410
Waste code:	D007
Waste name:	CHROMIUM
Amount (Lbs):	19120
Waste code:	D008
Waste name:	LEAD
Amount (Lbs):	19110

Tank Closed: 00/00
Capacity (Gal): 700
Chemical: Xylene (mixed)
Tank Location: Indoors, Belowground
Tank Type: Steel/carbon steel
Total Tanks: 0
Tank Secret: False
Tank Secondary Containment: None
Tank Error Status: No Missing Data
Date Entered: 07/25/1989
Certified Date: 07/30/1999
Substance: Single Hazardous Substance on DEC List
Internal Protection: None
External Protection: Painted/Asphalt Coating
Pipe Location: Aboveground
Pipe Type: Steel/Iron
Pipe Internal: Epoxy Liner
Pipe External: None
Pipe Flag: None
Leak Detection: None
Overfill Protection: None
Haz Percent: 50
Last Test: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Program: BCP
 Site Code: 463657
 Acres: 0.92
 HW Code: C224159
 SWIS: 2401
 Town: New York City
 Record Added Date: 05/01/2012
 Record Updated Date: 01/06/2016
 Update By: JHOCONNE
 Site Description:

Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem:

Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem:

Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Land type: Facility is not located on Indian land. Additional information is not known.
Classification: TSD
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste

Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Event date: 02/10/1993
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 12/28/2000
Event: RFA Determination Of Need For An RFI, RFI is Not Necessary;

Event date: 12/28/2000
Event: RFA Completed

Event date: 09/24/2009
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/24/2009
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site Description:

Actual:
12 ft.

Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem:

Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem:

Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride(VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and

affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480

for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177.

Env Problem: Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.

Health Problem: Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

SWIS: 2401
Town: New York City
Record Added Date: 07/02/2013
Record Updated Date: 10/01/2015
Update By: JHOCONNE

Site Description: Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the east by mixed commercial/residential buildings. Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One sump and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The second floor consists of 11 residential units. Current Zoning and Land Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. Past Use of the Site: Former Cleaners Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to October, 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximately 100 feet below ground surface (fbsg). Based on the local topography, groundwater most likely flows

Env Problem: in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbsg.
Nature and Extent of Contamination Limited information about site contamination has been obtained through investigations performed on an adjacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see former site no. 224177).a) Contaminants: The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and identified these contaminants in soil, groundwater, and soil vapor.b) Area/depth extent: The extent of the contamination has not been determined yet.c) Concentrations: Soil: PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with UUSCO of 0.02 ppm).Groundwater: PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb).Soil vapor: PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3. Significant Threat:The site presents a significant human health threat due to the high concentrations of PCE, TCE, and DCE in soil vapor and the potential for exposures to site-related contaminants via soil vapor intrusion.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling identified impacts to the indoor air quality of the on-site building and immediate actions have been taken to minimize exposures. Additional evaluation is needed to determine whether soil vapor intrusion is a concern for off-site buildings.

RCRA NonGen / NLR:

Date form received by agency: 03/20/2012
Facility name: WILLIAMSBURG SQUARE LLC
Facility address: 154 N 7TH ST
BROOKLYN, NY 11211
EPA ID: NYD001384072
Mailing address: BROWVALE LANE
LITTLE NECK, NY 11362
Contact: JERRY LEBEDOWICZ
Contact address: PO BOX 22-0434
BROOKLYN, NY 112220434
Contact country: US
Contact telephone: (917) 607-7112
Contact email: VIPERUKI@AOL.COM
EPA Region: 02
Land type: Private
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: WILLIAMSBURG SQUARE LLC
Owner/operator address: BROWVALE LANE
LITTLE NECK, NY 11362
Owner/operator country: US
Owner/operator telephone: (718) 229-7111
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: 03/01/2003
Owner/Op end date: Not reported

Owner/operator name: JERRY LEBODOWICZ
Owner/operator address: Not reported
Not reported

Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: 10/06/2011
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No

DEC Memo: "Tank test failure. PBS file shows tank in service, but next tank test due prior to the date of this spill. PBS registration expired in 2000. Need to follow up. 9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf 4/30/08 Sent Old TTF letter to: Jerry Lebedowicz Williamsburg Square LLC 52-47 Browvale Lane Little Neck, NY 11362 Address obtained from tank closure application. bf 5/2/08 Received message from J. Lebedowicz to call him back. bf 5/5/089 Received call from J. Lebedowicz tank was closed. Athena Environmental sampled after tank was removed. bf 6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf" "3K TANK FAILED PETRO TITE WITH A LEAK RATE OF -.161GPH."

187 BEDFORD AVE - TTF (Continued)

S106123807

12/3/05: CBN Called Alex Wersocki (718) 963-2659 and left a message for hm to call me back, but haven't heard from him yet. 12/1/08 bf: Sent ttf old spill letter to: Alexander Wersocki 187 Bedford Avenue Brooklyn, NY 11211 10/14/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: none no other spills found. PBS #: 2-608263. as per PBS record, the site has one 2,000 gal #2 oil UST, in-service, installed in Jun. 1983. as per documents available on PBS database, the tank system was found tight during test on 11/26/2008 and 01/31/2014. Alexander Wersocki **property owner** 187 Bedford Avenue Brooklyn, NY 11211 PH. (718) 963-2659 (646) 287-6165 email: dg.nycbdrs@gmail.com 2/12/15 TJD Spill reassigned from DeMeo to Patel 03/24/15-Hiralkumar Patel. 10:35 AM:- went to site for inspection, but no one was available to provide access to the basement. found a color coded fill port and vent pipe by the building wall, at the southeast corner of the building (adjacent to building 189 Bedford Ave). 10:43 AM:- spoke with Mr. Wersocki. he mentioned that he doesn't remember the actual cause of test failure in 2003, but the tank system was tested tight after 2003. he confirmed no spill inside building. 10:47 AM:- spoke with Richard (917-647-6475), who maintains the boiler system at the site. he confirmed that the site has an underground tank which was found tight during recent testing. he also confirmed no signs of oil spill within building. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, no information that this tank test failure will be an issue in the future and the tank system was found tight during subsequent testing."  Record Added Date: 06/01/2007
 Record Updated Date: 08/07/2009
 Update By: yywong
 Site Description:

Actual:
26 ft.

This is a new BCP application which pertains to properties located at 285 and 291 Metropolitan Ave., Brooklyn, Kings County. This site is approximately 0.25 acres in size in an urban area. Surrounding uses are commercial and residential. Directly to the north, across the street from the site on North 4th Street, is a public school. The site consists of an automobile repair facility (former gas station) and a neighboring garage with residential uses on the second floor. The future use for this site is residential and commercial. Suspected and known contaminants are petroleum and metals and MTBE which are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Review of application terminated since the applicant is no longer an entity authorized in NYS to make the application. Following termination of the BCP application, the site was referred back for investigation and remediation under spill no. 0607903.

Env Problem:

A limited investigation was performed on 291 Metropolitan Ave in October 2006 and spill number 0607903 was assigned. From four soil borings, one soil sample was collected from each. From another two soil borings, two samples were collected from each. From two borings, a grab groundwater was collected in each. The groundwater was contaminated with BTEX compounds and MTBE. Additional investigation will be required to define the extent of contamination.

 DEC Memo: "TTF sent to property manager: Mr. Martin Gurshon 233 Broadway - Suite 2704 New York, NY 10279 11/20/09. J.Krimgold reviewed the letter report submitted by Pro Test Enviro and dated 10/30/09. According to the letter the tank system failed the test due to a leak in the supply and/or return lines. The damaged portions of these line were replaced and the tank system retested and passed. During excavation of piping contaminated soil was encountered. This soil was excavated, drummed and properly disposed of. End point samples show no contaminant above TAGM limits. Case closed."

Remarks:

"1518 The caller advised dispatch the tank has failed their test and requested to obtain a spill number. No water ways have been affected. This was just a tank test failure. The owner will be incharge of the fixing of the system. At this time chemicals have spilled. 4000 gallon underground tank."

Site Description: The site is located in an urban area in Brooklyn. The site is a rectangular shaped parcel along the southern side of South 4th St, between Berry St. and Bedford Ave. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center flanked by two smaller 1 story structures. All three buildings were constructed in the early to mid 1900's and are in varying stages of deterioration. The Site previously had a variety of uses, including an adhesives factory and an electrofoaming laboratory, but always manufacturing. The eastern building has been listed as a warehouse since the 1970s, but also was used as a factory, including a dye factory. The Volunteer was not the property owner and withdrew from the VCP. The owner of the property did an independent renovation of the buildings.

Env Problem: In 1998, the following removals were recommended: Various wastes from the buildings, PBS tanks, contaminated soil with VOCs and SVOCs in excess of recommended soil cleanup objectives in TAGM 4046. Air sampling was also recommended. The building was renovated without of DEC knowledge and/or oversight.

Health Problem: Not reported

Update By:	JHOCONNE
Site Description:	Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.382 acres in size with a single story vacant warehouse covering the entire site. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for

Env Problem:

warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

Nature and Extent of Contamination: During the Remedial Investigation, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern include the VOCs trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Soil - During the investigation in January 2014, TCE was detected at concentrations of up to 88 parts per million (ppm), above the restricted-residential SCO of 21 parts per million (ppm). With the exception of 2 samples, TCE was detected in all other samples above the unrestricted use SCO of 0.47 ppm. Low levels of SVOCs, including benzo(a)pyrene at 1.99 ppm and chrysene at 1.82 ppm, were detected at concentrations exceeding the UUSCO. In addition, metals including mercury at 4.24 ppm, copper at 100 ppm and lead at 122 ppm were detected at concentrations exceeding UUSCOs. Site-related soil contamination does not extend off-site based on the available data. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Metals detected in groundwater at concentrations exceeding the standards include mercury at 3.5 ppb, copper at 332 ppb and lead at 1640 ppb. It should be noted that these metals were detected in unfiltered samples. Site-related groundwater contamination does not extend off-site based on the available data. Soil vapor - TCE was detected at concentrations of up to 1,600,000 ug/m³ and cis-1,2-DCE at concentrations of up to 15,000 ug/m³. Elevated concentrations of contaminants in soil vapor were found at the property boundaries and may extend off-site.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor

S116550038

intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. Additional sampling is needed to evaluate the potential for soil vapor intrusion to impact off-site structures.

 Update By: GTBOBERS
 Site Description:

Location: The site is located in the Williamsburg section of the borough of Brooklyn, Kings County. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The property is currently developed with an asphalt-paved parking lot, with a small attendant's booth. Portions of the lot are also utilized as a Zip-Car rental/parking facility. Current Zoning and Land Use: The property is currently a vacant lot. The zoning is commercial/industrial/high density residential. Past use of the site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant. The property was then developed (as early as 1887) with the three single-family residential homes. Between 1905 and 1916, the northern portion of the site was developed with a commercial storage building. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: According to USGS geologic maps of the area, the bedrock in the Brooklyn area is an igneous intrusive classified as Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Soil at the site is described as historic fill materials to a depth of approximately 15 feet below the surface followed by native brown fine sand with silt and some clay.

Env Problem:

Information submitted with the BCP application regarding the environmental condition at the site is under review and will be revised as additional information becomes available. Nature and Extent of Contamination: Groundwater: Based upon investigations conducted to date, the primary contaminants are trimethylbenzene and ethylbenzene. All three on-site groundwater sampling points show VOC contamination in excess of SCGs. Groundwater is about 12 feet below ground surface, and all samples were taken just below the groundwater table. Total VOCs were reported to be as high as 1,173,000 ug/kg. Soil: Based upon investigations conducted to date, the primary soil contaminant is Benzene. Benzene and several other contaminants were found above Restricted Residential Soil Cleanup Objectives. Also, total SVOCs were as high as 4,358,000 ug/kg. All three on-site sampling points exhibited soils contamination.

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

DEMEO 9/23/03, ROSSAN; DDO: Tank test failure letter was prepared and sent to: Mr. Frank Dross F N W Mechanical 139 North 10th Street Brooklyn, NY 11211 Ed. 10/3/05: CBN Called Phil Fazin, the tank tester and was told he would get back to DEC with more info. 9/22/06 ttf letter sent to owner: Sandra Maislen San Ten Raz LLC 120 Pleasant St., Apt. 2 Brookline, MA 02446 bf 11/13/06 On 10/12/06, received letter from Sandra Maislen in response to ttf letter. Reviewed letter and the attachments. The fill line, stick line, and vent line failed. I called Petroleum Tanks to see if they remember detecting any contamination when lines were replaced. I was told Mark Salamack was the person in charge of the tank repairs. He was in a meeting at the time of the call and I left a message for him to call me. Mr. Salamack (718-624-4842) called me back and told me that there was no observed contamination and no elevated reading on the PID meter used at the time of the repairs. NFA. bf"
Remarks: "RECOMMEND TO UNCOVER-EVALUATE AND RE-TEST"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM MONITORING. 402 Metropolitan Avenue, Brooklyn Owner: Estate of James J. Mannix and Joseph M. Mattone Leased by: Joseph Macchia - Northland Marketing Spill #8907310 reported on 10/24/89 when four 550 gallon underground storage tanks (USTs) failed a tank test. Spill #9212269 was reported on 1/28/93 when Soil Mechanics (hired by the Estate of James Mannix and Joseph Mattone) installed three on-site monitoring wells and encountered 3 1/4 feet of gasoline in MW3. Spill # 9213355 reported on 3/2/93 when six 550 USTs failed a tightness test. Repairs were made to the stick box and vent lines and the tanks passed a retest on 4/2/93 3/9/93 Case No. R2-0941-93-03 initiated. 12/6/94 Order on Consent No. R2-0966-93-03 signed by Joseph Macchia. All three spill numbers cited in Schedule B - Petroleum Discharge and Clean-Up Violations. After the signing of the Consent Order, Macchia contracted Berninger Environmental as their consultant. Including the three wells installed by Soil Mechanics, there is now a total of thirteen monitoring wells both on and off-site. The site is currently on a monthly monitoring and bailing schedule. According to the February 2001 Monitoring Report, the hottest well is MW-3 (in the middle of the property, downgradient of the tank mat) with a total of .97 feet of floating product. The report also indicates that a total of 304 gallons of free product has been bailed from the site wells during these monthly visits. In numerous meetings and letters dated 8/12/98 and 1/22/99 and 9/30/97, DEC required Northland to periodically perform Vacuum Enhanced Fluid Recovery (VEFR) until the tanks are removed and a permanent remediation system installed. According to DEC's file, VEFR was only performed on five occasions with a total of 267 gallons of free product recovered. 9/12/03 Letter mailed to Joe Macchia requiring additional investigation and remediation. 09/23/03 Reassigned from Rommel to Sun. 02/12/04-Sun-File Update by Sun: -On 09/22/03, Joe Sun sent and also faxed a letter and Stipulation Agreement to Joseph Macchia, Jr. of Northland Marketing Corp. requesting complete delineation of petroleum contamination, submittal of Investigation Summary Report followed by a submittal of a Remedial Action Plan. The investigation must include, but not limited to the following: (1) Confirm groundwater flow direction by surveying site wells, (2) Install additional wells to delineate the contamination to the west, (3) Implement a sampling program, on a quarterly basis, for all non-product monitoring wells and analyze for EPA Method 8270 B/N and 8021 including MTBE, (4) Determine the type of product in MW-9 via product ID analysis, (5) Repair MW-3. Currently the cap for the 2 PVC casing cannot be placed due to insufficient clearance between top of casing and its manhole cover. The PVC casing needs to be shortened.

S100494817

The Department set a deadline of October 3, 2003 for signing of the Stipulation Agreement by the Respondent. -Monthly Monitoring Report (January 2004, by Berninger Environmental, Inc. (Water Berninger, 631-588-2251): The monitoring wells were gauged on 12/22/03. The free phase products were detected on three monitoring wells: 0.59 feet on MW-1, 0.93 feet on MW-3 and 1.20 feet on MW-6. Snow/ice covered the following monitoring wells: MW-7, MW-8, MW-12 and Mw-13, and thus those wells were not gauged. Consultant's Report stated that it appears that other contractors are working on site, areas fenced off with locked gates, thus denying access to monitoring wells, for at least the sixth time drum for bailing product is missing, various utility mark outs, missing well designation markings etc.

-02/12/04-Joe Sun called the Manager of the current Used Car4 Services on-site (Alex Tulchistka, 718-388-2424) about what kind of construction activities are being performed onsite. He replied that no new construction activity is performed and no fence or locked gate was installed onsite as far as he knew. Joe Sun then called Walter Berninger again and informed him the conflict information from the Car Service Manager. Berninger will take the picture next time when they perform the monitoring activity and provide more details on gauging the monitoring wells. 12/30/04 File Update by Sun: On 12/21/04, Joe Sun mailed a letter to Kenneth Raisch and Christopher Todd of The Estate of James Mannix and Joseph Matton informing them that the Remedial Action Plan (RAP) submitted by their consultant, Advanced Site Restoration (ASR) has been reviewed by the Department and has the following comments: - ASR proposed two remedial approaches for managing the petroleum-contaminated soil to be excavated on site. The first approach, transport off-site and proper disposal, is approved by the Department. The alternative, stabilization/solidification approach, is not approved as proposed. If ASR still wishes to pursue this approach the Department has the following comments and requirements which need to be addressed and a revised RAP needs to be resubmitted for review: 1.To evaluate the effectiveness of the proposed remedial process on the subject site, the horizontal hydraulic gradient at the site must be determined, and the hydraulic conductivity and porosity of the soil must be estimated. The seepage velocity and direction of the ground water flow must be calculated. 2.Redraft the Soil Remediation section (page 5) for clarity, and refer to the product as cold mix asphalt as is done in the applicable Beneficial Use Determination (BUD) approvals. 3.The use of the term cement based (page 6, second to last paragraph) is potentially confusing. The 2001 amendment to BUD Approval 93-0007 allows for the addition of Portland Cement to improve the physical properties of the product, but the petroleum contamination is still stabilized with asphalt emulsion. 4.The sampling schedule required by the BUD (sampling method, analytical method, number of samples and timing of samples) should be tabulated and included in the RAP. 5.The proposed uses for the cold mix asphalt (see page 6, second to last paragraph) are not consistent with the BUD (see 2001 amendment to BUD Approval 93-0007, Operational Requirements, bullet 2). Use of this material as a substitute for conventional asphalt pavement would be a more appropriate application. The Department has the following comments regarding the proposed free product recovery and groundwater remediation. These issues must be addressed in the revised RAP: 1.Provide the formula used to calculate the amount of BioRem required. 2.The plan to periodically re-inoculate the site with BioRem is troubling. If conditions are suitable for the constituent

402 METROPOLITAN AV/BKLYN (Continued)

S100494817

bacteria in BioRem to grow, re-inoculation would be unnecessary. If conditions are unsuitable for growth, the addition of more of the same bacteria will not change things. BioRem should be contacted to learn the optimum conditions for growth, and the acceptable concentrations. A sampling plan to determine if conditions on the site are within these ranges should be provided for review. BioRem should also provide information about the terminal electron acceptors utilized by their proprietary bacteria so the attenuative capacity of the site can be estimated, and compared to the concentration of residual contamination. This comparison is best done with TPH data, rather than the STARS list of compounds for gasoline spills that is usually requested. 3. There is a potential for LNAPL to be present in areas outside the limits of the proposed excavation. If this is confirmed, depending upon the estimated amount of LNAPL, another technology in addition to BioRem may be required for remediation. 4. The 8 to 18 month time frame allotted for bio-remediation is considerably longer than the 7 to 14 weeks stated in the BioRem H-10 Specification Sheet. A soil and ground water monitoring plan to track the bio-remediation should be developed, and included for review in the re-drafted RAP. 5. The RAP should have a provision that samples will be collected and analyzed at the discretion of the ASR site supervisor (see page 9, second to last paragraph) or the direction of the DEC project manager. 6. If soil excavation does not commence soon after the product is removed from the wells with the vac-truck, the wells should be monitored daily for free product and the vac-truck recalled when appropriate. 03/01/05 File Update by Sun: On 02/28/05, Sun sent a letter to the property owner informing him that the Department has reviewed the revised remedial action plan (RAP), prepared by Advanced Site Restoration, LLC dated February 17, 2005. ASR proposed to excavate the contaminated soil and dispose of property off-site and use Bio Rem product H-10 for subsurface bioremediation of hydrocarbon contamination in groundwater. ASR also proposed to remove the free product with a vacuum truck if free-floating hydrocarbons are detected. The Department approves the revised RAP proposed in Reference 1, as noted below: 1. Collection of Soil Samples: As per DER-10 Section 5.4, soil samples must be collected from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the bottom for every 900 square feet of bottom area. In all cases, samples should be biased toward locations of highest expected contamination as indicated by field evidence or PID measurements. 2. Salvage of Existing Groundwater Monitoring Wells: Page 4 of the revised RAP in Reference 1 under Section 5.0 Groundwater Remediation stated that ASR will attempt to salvage any groundwater observation wells still existing on the site. If addition wells are needed, they will be installed strategically, to maximize the data that can be obtained. It should be noted that according to the historical data, free product was detected in monitoring wells MW-1, MW-3, MW-6 and MW-11. These four monitoring wells and other existing wells must be restored at the same locations or at the locations to be consulted with the Department if they were destroyed during excavation. 11/11/05: Sun received UST Closure Report for the subject site, dated 11/07/05. 11/23/05: Review of the monthly report dated 10/19/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb, and MTBE ranged from <NDL to 6,300ppb. A total of 16 Monitoring wells were gauged and sampled. Only one well (MW-11) had free phased product with thickness of 0.23 feet. (Sun) 12/13/05: Review of the monthly report dated 11/10/05 indicated that Total BTEX

S100494817

ranged from <MDL to 20,900 ppb (October, 2005), and MTBE ranged from <NDL to 6,300ppb (October, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.49 feet. (Sun) 02/21/06: Review of the monthly report dated 02/10/06 indicated that Total BTEX ranged from <MDL to 13,060 ppb (December, 2005), and MTBE ranged from <NDL to 10,000ppb (December, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.27 feet. (Sun) 11/14/06-Sun: Based on the Quarterly Report, dated 9/11/06, BTEX ranged 5,258 to 11,180 ppb, and MTBE ranged from 170 ppb to 8000 ppb. (Sun) 04/13/07-Sun: Sun the following email to Chris Tomasello: Hi Chris, I have reviewed the Remediation Progress Report, submitted by ASR, dated January 2007. The Department approves the following recommendations: 1. Stop sampling MW-4, MW-5, MW-6, MW-8, MW-10, MW-12, MW-13. and MW-16. 2. Continue to sample and monitor the remaining groundwater monitoring wells for VOCs only using EPA 8260 method. 3. Continue to monitor the concentrations of BTEX, MTBE, and Total VOCs from MW-1, MW-2, MW-3, MW-11, and MW-14. 4. Continue to monitor the plate counts to determine the colony count for the bacteria. Upon review of the analytical results of new round of groundwater sampling data, the Department will determine if quarterly sampling event shall continue or petition for a NFA is warranted. The Department requires five days advanced notice of any remedial and/or monitoring events at the site. (Sun) 07/17/07-Sun: Review of the Remediation Progress report dated June 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that a total of five (5) groundwater monitoring wells were sampled on 5/2/07. Of the five (5) samples analyzed, four (4) indicated a total BTEX concentration of between 150 and 6,700 parts per billion (ppb), and the remaining one (1) well had total BTEX concentrations of non-detect level. MTBE was detected above the New York State Water Quality Standards in two (2) of the five (5) groundwater monitoring wells. The concentration of the MTBE in both of these two (2) groundwater monitoring wells, was the lowest ever recorded during the twenty month samplin period. High levels of dissolved hydrocarbons have historically been detected in MW-14. MW-14 continues to show the highest levels of dissolved hydrocarbons, although they are at the lowest levels recoreded during twenty month history of sampling the site. Low levels of dissolved hydrocarbons also appeared in MW-1, MW-2.MW-3. AST proposes to monitor the concentration of BTEX, MTBE, and total VOCs by collecting and analyzing groundwater samples frm Mw-1, MW-2, MW-3, Mw-11 and MW-14. ASR will continue to monitor the heterotrophic plate counts to determine the colony count for the bacteria. ASR will continue to document the downward of the residual contamination, to demonstrate that concentrations will continue to acceptable TAGM 4046 Groundwater Standards. 07/20/07-Sun: Review of the groundwater sampling report dated July 14, 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that the groundwater sample collected from MW-14 wells on 7/12/07 indicated a total BTEX concentration at 318 parts per billion (ppb), including Benzene concentration at 52 ppb, and MTBE concentration at 340 ppb. MW-14 has been historically the hot spot with highest BTEX and MTBE concentrations. Based on these low concentratiuons of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE, the spill is closed and NFA letter will be issued. (Sun) 08/16/07-NFA letter was sent to RP and ASR. (Sun) "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II 5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II"

Remarks: "also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167."

Updated By: JAAVERSA

Site Description: This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Not reported

Env Problem: The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide. Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals. The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Health Problem: Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible. Envir. firm will submit such a report soon 2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99 Report should include: 1) Delineate the site 2) Outline what is on the property now and what will be built 3) Identify how the product will be remediated. ALSO SEE SPILL # 0003390 4/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel. 1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if this property was a candidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luck I am requesting a

site visit Alternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North 13th and Wythe Ave Region 2 rep visited the site, but could not get inside to inspect. Site is rented to Nations Rent - Oscar Parker salesman - 718-387-4872 Posted sign showed two different property managers: Segal Realty Group LLC 718-388-9000 M.C. O'Brien Inc. 718-252-9191 Albany review (above) - jcgrathw 1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end 03/09/07-Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant (Nations Rent) at site. 03/14/07-Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property, to call. received message from Mr. Prigozen (Cell: 917-750-4112), property owner. 03/16/07-Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in Florida. as per him, they found this contamination during tank removal and has all paperwork in storage in NY. he will submit these paper once he comes to NY in June 07. Elliot Prigozen 3400 Pen American Drive Miami, Florida 33133 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: elliotp@bobcatzone.com 06/14/07-Hiralkumar Patel. tried cell number for Elliot, but no success. left message for Elliot's son. 06/15/07-Hiralkumar Patel. left message for Elliot's son. 06/18/07-Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back in city after 10 days and will send copies at that time. PBS #: 2-091030. as per PBS record, site had following tanks: 1. two 1,500 gal Lube Oil UST, closed and removed in July 2000 2. one 1,500 gal gasoline UST, closed and removed in July 2000 3. four 550 gal diesel USTs, closed and removed in Dec. 1998 4. one 1,000 gal diesel AST, closed and removed in Apr. 2002 5. one 550 gal gasoline UST, closed-in-place in June 1989 6. one 550 gal diesel UST, closed-in-place 7. one 1,100 gal gasoline UST, closed-in-place total 11 tanks were on-site. sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen. 07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy. 07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs 2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue) 3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples. geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract: - report prepared on Oct. 7, 1998 - four borings were installed (one on each side of excavation area of previous 550 gal UST location) - three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation) - all three samples were analyzed for SVOCs only (as didn't found VOCs in previous sampling) - few SVOC contamination found in sample S-3 (which is

NATIONS RENT (Continued)

S104621824

along Kent ave) abstract of tank closure report for 1500 gal tanks: - removed four 1500 gal single wall, concrete-encased USTs. - from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction - tanks were located approx. 4 ft bg - tanks were in good condition with no corrosion. no visible holes or leaks were noted - sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg - groundwater was not encountered at the site during excavation - approx. 79.16 tons of contaminated soil were removed - highest PID observed in west side wall sample (PID: 398.3 ppm) - due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390) - minor contamination found in soil endpoint samples spoke with Mr. Prigozen. explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations.

07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination, found in 1999, came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Department, then the department requires him to do groundwater delineation with site-specific groundwater flow direction. Mr. Prigozen will look for report. 07/09/07- Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing must be taken by a licenced hauler. 07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract: - an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank was purged and filled with concrete slurry in the southern portion of the site - two soil borings and nine monitoring wells were installed - highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg less than ----- - groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area less than ----- - based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest - free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) less than ----- - minor tetracholorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3) - MTBE contamination (236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank) - highest contamination found in soil sample at BK-6 (near old sediment trap) -----Xylene----Benzene BK-6 (1-3 ft)-----8,730-----2,025 BK-6 (3-5 ft)-----3,320-----327 //during

S104621824

Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.//
07/18/07-Hiralkumar Patel. after reviewing available reports found following: - no groundwater depth information - free product in wells MW-7 and MW-10 along Kent Avneue, but no groundwater flow direction - MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location - benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no groundwater sample taken from there. spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following: - soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation) - soil and groundwater sampling at previous sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw) - complete groundwater delineation (with atleast three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10. asked Mr. Prigozen to check any previous wells exists on site. if not then he needs to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18, 2007. 07/19/07-Hiralkumar Patel. sent letter to Mr. Prigozen requiring soil/groundwater sampling at previous boring locations BK-3 and BK-6 and complete groundwater delineation in area of previous boring locations BK-7 and BK-10. letter emailed to Mr. Prigozen with map (from former phase II report) indicating locations where the Department requires further investigation. 09/06/07-Hiralkumar Patel. received email from Mr. Prigozen. he is contacting companies for price quote.
09/13/07-Hiralkumar Patel. left message for Mr. Prigozen. received call from Mr. Prigozen. he is reviewing quotes from companies and will fanalize next week. he will send company's name next week with scheduling and estimated date for report submission.
09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has hired Hart & Hickman to do the investigative work. they will be on site in two to three weeks. Theron Grim Hart & Hickman, PC Ph. (704) 586-0007 Mr. Prigozen will call once get dates finalized for investigation work. 09/28/07-Hiralkumar Patel. received email from Mr. Prigozen. contractor will start work on Oct. 8th, 2007.
10/23/07-Hiralkumar Patel. received call from Mr. Grim. he just received analytical data from lab and they found contamination and free product in groundwater. Mr. Grim will submit report within two weeks. asked Mr. Grim to send analytical data, groundwater flow direction and site map with sampling locations for review. he will send these tomorrow. 10/26/07-Hiralkumar Patel. received analytical data for few samples and site map. found soil and groundwater contamination in area of former sediment trap. waiting for full report. 11/06/07-Hiralkumar Patel. spoke with Mat Ingalls Hart & Hickman, PC. Mr. Grim is no longer working there. Mat is sending report to Mr. Prigozen to review and approval and once gets approval, he will forward report. Mat Ingalls Ph. (704) 887-4617 email: mingalls@harthickman.com 11/15/07-Hiralkumar Patel. received report from Mr. Ingalls. abstract: - installed four soil borings (BK-3A, BK-6A, BK-7A and BK-10A); three soil samples (BK-3A, BK-7A and BK-10A) were advanced to depth of 5 ft below grade adjacent to existing wells and boring BK-6A was installed adjacent to the northwest corner of the sediment trap and was advanced to depth of 12 ft bg (later converted to temporary well) - installed one temporary

MAP FINDINGS

NATIONS RENT (Continued)

S104621824

well (BK-6A) - found high PID in BK-6A (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth) - sampled recently installed temporary well and two existing wells (BK-3 and BK-7) - depth to groundwater at the site ranges from approx. 5 ft bg in the northern portion of the site to 10 ft bg in the southern portion of the site - map indicates shallow groundwater generally flows to the southwest less than ----- - during static water level measurements, 2.37 ft of free product was measured in monitoring well BK-10 less than ----- - directly south of the bayside fuel oil depot and also upgradient of the subject site is the former Williamburg Manufactured Gas site. soil analyticals: -----BK-6A (5-7 ft)
Benzene-----895 Ethylbenzene-----16,300
Isopropylbenzene-----3,180 p-Isopropyltoluene-----10,200
n-Propylbenzene-----5,780 1,2,4-Trimethylbenzene--22,200
Xylene-----2,530 groundwater analyticals:
-----BK-6 Benzene-----2,110
Ethylbenzene-----844 MTBE-----257
Naphthalene-----697 1,2,4-Trimethylbenzene--3,020
Xylene-----247 conclusions: - based on groundwater elevation data and lack of impacts at the potential source area well BK-7 (previous 550 gal USTs area), it appears the free product in well BK-10 is likely from an offsite source - Bayside fuel oil depot is located adjacent and upgradient, and site is under Voluntary Cleanup Program (ID #: V00587-2) less than ----- - petroleum impacts identified in soil sample collected from BK-6A are likely associated with four 1500 gal USTs located adjacent to sediment trap - lack of groundwater impacts in downgradient monitoring well BK-3 indicates impacts from onsite or upgradient sources have likely not migrated off-site report missing following: - no analysis done to identify product found in well # 10 - no site specific groundwater flow direction available - no information about tidal influence on flow direction 11/20/07-Hiralkumar Patel. left message for Mr. Ingalls to provide missing information. sent email to Mr. Prigozen and Mr. Ingalls with missing information including detailed scaled site plan with all major suspected sites in neighbourhood. 11/21/07-Hiralkumar Patel. received message from Mr. Ingalls. left message for Mr. Ingalls. 11/26/07-Hiralkumar Patel. received email from Mr. Ingalls proposing fingerprint analysis of oil from well # 10, 12 hour tidal survey and detailed site map. sent email to Mr. Ingalls asking 24 hours of tidal survey (instead of 12 hours), fingerprint analysis and detailed site map with surrounding area. 11/28/07-Hiralkumar Patel. received call from Mr. Ingalls. they will do tidal survey on two day period as access available from 8 am to 6 pm only. will submit report after Dec. 10, 2007. 12/13/07-Hiralkumar Patel. received addendum to Phase II report. abstract: - collected groundwater elevation data from monitoring wells BK-3, BK-4, BK-7, BK-8, BK-10 and BK-11 less than ----- - product was found in wells BK-10 and BK-4 less than ----- - tidal influence survey indicates that the monitoring well water levels were consistent during the observation period (9.5 hours) and showed no tidal influence less than ----- - direction of groundwater flow was determined to be southeast less than ----- - product observed in BK-10 is highly weathered middle distillate such as diesel oil or fuel oil less than ----- - floating free product (approx. 0.46 ft) was observed in BK-4; BK-4 is located near four former 1500 gal USTs - collected sample from BK-04 and held at lab (not analyzed) - Bayside Oil is located upgradient from subject site based on

NATIONS RENT (Continued)

S104621824

following, contractor believes that product in BK-10 is from off-site: - product thickness (2.67 ft) - degree of weathering and biological degradation - separation distance (approx. 50 ft) and cross gradient location of BK-10 from the former UST basin - confirmed site groundwater flow direction to the southeast - absence of floating product in BK-7 installed in the immediate vicinity of former UST basin summary: found free product in two wells: BK-4 and BK-10. BK-4 is located in area of previous 1500 gal USTs and BK-10 is located close to corner of Kent ave and N. 13th st. oil in BK-4 could be from previously removed tanks on-site, but oil in BK-10 could be coming from off-site. spoke with Matt. he mentioned that they did not found well BK-4 during Phase II investigation, but found during recent well survey. found free product in well and took sample and it is on hold, in lab. asked Matt to analyze sample from BK-4. also asked him to monitor and remove product from existing wells on-site. discussed with DEC Austin. as owner suspecting off-site spill that impacting well BK-10 at his property, Austin asked to pump out product, weekly for a month to see if any more product comes to the site and then based on product recovery data, may require further work by site owner. sent email to Matt and Mr. Prigozen requiring analysis of sample from BK-4 and monitoring and product removal from existing wells on weekly basis. 12/24/07-Hiralkumar Patel. spoke with DEC Leszek, who is handling project at Bayside Oil. he confirmed that there was no product found in two monitoring wells (MW-4 & MW-12) located along Kent ave, near 91 N 12th street site. 01/08/08-Hiralkumar Patel. spoke with Matt. he submitted proposal for product removal but haven't heard back. spoke with Mr. Prigozen. he hasn't hire anyone to remove product. asked Mr. Prigozen to remove product from wells on his property and also explained him to install well upgradient from well # 10, on sidewalk, to prove any off-site migration. 01/15/08-Hiralkumar Patel. spoke with Mr. Prigozen. he has authorized Matt to pump product out. asked him to schedule upgradient well installation on sidewalk along kent ave. he is waiting for proposal from Matt. left message for Matt to submit analyticals for sample taken from well # 4. also asked to submit schedule for product removal and to plan for upgradient (from well # 10) well installation. 01/17/08-Hiralkumar Patel. received message from Matt. left message for Matt. received analyticals for sample from well BK-4. during fingerprint analysis, found product from well BK-4 in range from degraded gasoline or similar material to diesel or fuel oil. well BK-4 is installed in area of previous 1500 gal USTs. 01/24/08-Hiralkumar Patel. received call from Matt. they are removing product from BK-4 and BK-10. asked them to continue removing product from these wells for about a month and then based on remaining product, the department may require downgradient well from BK-4 and upgradient well from BK-10. Matt will send report. 03/20/08-Hiralkumar Patel. left message for Mr. Ingalls to submit product recovery data. sent email to Mr. Ingalls and Mr. Prigozen to submit product recovery data by end of 03/28/08. 03/24/08-Hiralkumar Patel. received message from Mr. Ingalls. they finished field work and will submit report, once get Mr. Prigozen reviews it. 03/27/08-Hiralkumar Patel. received report from Mr. Ingalls. abstract: - fingerprint result indicate that the product observed in BK-4 is a mix of low boiling material such as petroleum solvent or degraded gasoline, and a middle distillate such as diesel fuel or fuel oil that has undergone extensive biological degradation apparent product thickness (in feet) in BK-4 and BK-10:

BK-10-----2.55-----0.76-----0.56-----0.

91 04/25/08-Hiralkumar Patel. left message from Mr. Ingalls to continue product recovery from both wells until finds clean groundwater. based on recent product recovery report, product thickness in wells BK-04 and BK-10 has been reduced. but closest well to well BK-10 is BK-07 which is 50 ft away and crossgradient and next downgradient well from BK-10 is BK-06A which is 250 ft away and has groundwater contaminated. also closest well to BK-04 is BK-06A which is about 40 ft away and crossgradient and there are no downgradient well from BK-04. discussed with DEC Austin. as product thickness in both wells reduced, Austin believes that this could be localized problem. Austin asked for complete horizontal delineation of groundwater contamination around BK-04, BK-10 and BK-06A. Austin asked to call owner regarding continuous recovery of product and about further groundwater investigation work. spoke with Mr. Prigozen. asked him to continue product recovery from both wells. also mentioned to him regarding further groundwater delineation. Mr. Prigozen still believes that product in both wells coming from off-site. sent letter to Mr. Prigozen requiring removal of product from existing wells and further soil/groundwater delineation around wells BK-04 and BK-10 and previous boring location BK-06A. letter emailed to Mr. Prigozen and Mr. Ingalls. 04/30/08-Hiralkumar Patel. received call from Mr. Ingalls. they still believes that product in BK-10 is coming from off-site. they are planning to install well on sidewalk to see any off-site migration. Mr. Ingalls asked for number of wells around BK-10 and BK-04. mentioned to Mr. Ingalls that the department requires complete delineation which may require multiple wells on-site as well as off-site. asked him to install one permanent well at previous boring location BK-06 as found contaminated groundwater in previous investigation and BK-06 is cross gradient from BK-04. 06/04/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. they are currently removing oil from wells and will install required well in two weeks. 07/08/08-Hiralkumar Patel. spoke with Mr. Ingalls. they are removing oil from wells on weekly basis but haven't heard from owner regarding further well installation. spoke with Mr. Prigozen. he was out for work and just came back. he will talk to Mr. Ingalls regarding further well installation and will submit schedule by end of 07/18/08. 08/25/08-Hiralkumar Patel. left message for Mr. Prigozen. 09/19/08-Hiralkumar Patel. spoke with Mr. Ingalls. he mentioned that he tried few times but no response from Mr. Prigozen. left message for Mr. Prigozen. 09/22/08-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he was out of country and will contact Mr. Ingalls. will install wells in early october. Mr. Prigozen will ask Mr. Ingalls to call with work schedules. 12/01/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. he will call back as was busy. 12/02/08-Hiralkumar Patel. received message from Mr. Prigozen. left message for Mr. Prigozen. 12/03/08-Hiralkumar Patel. received call from Mr. Ingalls. they are still waiting for authorization for required work. received call from Mr. Prigozen. he mentioned that he has gave authorization long time back. asked Mr. Prigozen to contact Mr. Ingalls to solve this confusion and asked to call back with work schedule. received call from Mr. Ingalls. he

MAP FINDINGS

NATIONS RENT (Continued)

S104621824

spoke with Mr. Prigozen and Mr. Prigozen asked him to start work after New Year holiday. mentioned to Mr. Ingalls that required report is overdue since June 2008 and the department can't approve any more extension. he will contact Mr. Prigozen and will call back.

12/04/08-Hiralkumar Patel. received call from Mr. Ingalls. he got approval from Mr. Prigozen for additional work. he spoke with drilling company and can start work from 12/22/08. approves it and asked Mr. Ingalls to submit proposed well location map alongwith existing well locations. sent email to Mr. Ingalls to submit proposed well location map, by end of 12/09/08, including locations of previous borings and wells. email copied to Mr. Prigozen.

12/05/08-Hiralkumar Patel. received email from Ed from Hart & Hickman with proposed well location. they are proposing to install three wells: one upgradient from BK-10 (along property boundry along Kent ave), one downgradient from BK-04 (along N. 12th street) and one downgradient from previous boring BK-06 (across sediment trap which might be route for groundwater contamination.) Edward H. Stephens Hart & Hickman, PC Ph. (704) 586-0007 (704) 887-4609 Fax (704) 586-0373 email: EStephens@harthickman.com sent email to Ed and Mr. Prigozen approving proposed well locations. email copied to Mr.

Ingalls. required investigation report submission by the end of Jan. 26, 2009 and weekly submission of well monitoring/product recovery data. 12/09/08-Hiralkumar Patel. received call from Ed from Hart & Hickman. he asked about location of well BK-14. he proposed to install well downgradient from sediment trap instead of at BK-14. mentioned to Ed that the Department wants well at (suspect) source location (which is sediment trap) to capture mostly contaminated material and based on findings, more wells needs to be installed.

12/15/08-Hiralkumar Patel. spoke with Ed at Hart & Hickman. they have scheduled well installation on 12/29/08. 01/06/09-Hiralkumar Patel. received email from Ed. they installed four monitoring wells on 12/30/08 and will submit report once gets sample analyticals.

02/04/09-Hiralkumar Patel. received email from Ed with site map including results of recent groundwater investigation. four more wells (or borings) were installed. well/boring BK-12 installed upgradient from BK-10. no contamination found in BK-12. well/boring BK-14 installed near previous sediment trap and found contaminated groundwater. well/boring BK-13 installed on southwest side of BK-14, where no contamination found. well/boring BK-15 was installed on northwest of BK-4 and found contaminated groundwater. groundwater analyticals: -----BK-14-----BK-15

Benzene-----1,060 Ethylbenzene-----468

Xylene-----204 Naphthalene-----738-----1,040

02/11/09-Hiralkumar Patel. received call from Ed. he mentioned that during recent survey, they found groundwater flowing in southeast towards northwest portion of the site (near intersection of Kent ave and N. 13th street) and groundwater flowing in south direction towards southeast portion of the site (near intersection of N. 12th street and Wythe ave). according to recent groundwater flow direction, BK-13 is downgradient from BK-14, but cross gradient from BK-4. asked Ed for off-site investigation, downgradient from wells BK-15 and BK-4. also asked for weekly monitoring and recovery of free product. Ed will speak with Mr. Prigozen and will submit complete investigation report. 02/12/09-Hiralkumar Patel. received additional Phase II report (analyticals recorded earlier). abstract: - four borings were advanced to depth of 15 ft bg - one soil sample, with highest PID, from each boring was sent for analysis - groundwater

S104621824

flows to the southeast in the western portion and to the south in eastern portion of the site - found 1.78 ft of free product in BK-10A - strong odor found during installation of wells BK-12 and BK-13 - high PID readings were found during installation of BK-13 (276 ppm at 5 ft) and BK-14 (729 ppm at 6 ft) conclusions from Ed: - free product was not observed in BK-12 (which is upgradient from BK-10) during the recent assessment, it is not common to observe a delay in free product recharge into newly installed monitoring well. BK-12 should be observed over time to confirm occurrence of free product. - based on local groundwater flow direction and the absence of a potential on-site source in the vicinity of the observed free product at BK-10A, H&H believes the observed free product has migrated on-site from the upgradient Bayside Oil Depot. - based upon the result of the receptor survey, soil and groundwater assessment, existing poor groundwater quality in the vicinity of the subject property, and a documented upgradient source of groundwater impacts including free product, soil and groundwater impacts at the site can be most effectively managed through LAND USE RESTRICTIONS AND STANDARD ENGINEERING CONTROLS. 02/20/09-Hiralkumar Patel. spoke with Ed regarding conclusions in submitted report. mentioned to Ed that clean groundwater was found in upgradient well BK-12 which indicates no off-site source. Ed mentioned that they will go back to site to check well again as suspecting that newly installed well could recharge slowly. spoke with Mr. Prigozen. based on results of investigations till date, asked him to start weekly monitoring of all wells, and removal of any product, immediately. also asked him for off-site investigation downgradient from wells BK-4 and BK-15. told him that product must be removed from wells by next week (end of 02/28/09) and weekly thereafter. 02/23/09-Hiralkumar Patel. spoke with Mr. Prigozen. will do product removal on 02/25/09. alternate addresses: 58 Wythe Ave, 91-101 N 12 St, 70-72 Wythe Ave, 82 N 13 St, 92 N 13 St found two old closed spill reports: 1. 0003390:- consolidated with this spill 2. 0207277:- surface spill reported 02/25/09-Hiralkumar Patel. spoke with Mr. Prigozen. he has hired his mechanic guy to bail out product from wells. he mentioned that he got directions from Ed how to remove product and got some forms for recording. he also mentioned that they have waste oil tank on-site and they will collect product into this on-site tank and will pump out tank once get full. asked Mr. Prigozen to call once he reach to site tomorrow (02/26/09). Mr. Prigozen asked to send STIP at following address: Sylvan Holdings LLC. **property owner** c/o Sage Prigozen **Elliot's son** 58-64A Maurice Avenue Maspeth, NY 11378 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: sagep@bobcatzone.com 02/26/09-Hiralkumar Patel. received call from Mr. Prigozen. he has hired Tri-State environment for product removal (not local mechanic). will submit report. asked him to remove product weekly. 02/27/09-Hiralkumar Patel. received call from Mr. Prigozen. he is planning to hire some local investigation team for further investigation. will call back with company's name who will do further investigations. sent STIP to Mr. Prigozen (7005 1820 0007 9827 6066). STIP emailed to Mr. Prigozen. 03/13/09-Hiralkumar Patel. received call from Paul from Ecosystems. they have been hired by Mr. Prigozen. will submit work plan for additional investigation. Paul Ciminello Ecosystems Strategies Inc. Ph. (845) 452-1658 (O) (914) 475-4208 (C) Email: paul@ecosystemsstrategies.com 03/16/09-Hiralkumar Patel. received STIP delivery confirmation (letter delivered on 03/11/09). 03/25/09-Hiralkumar Patel. received email from Ecosystems with work

plan for further investigation. abstract: - will put absorbent pads in wells BK-4 and BK-10 as an interim remedial measure; pads will be changed, as needed, on a weekly basis - will verify groundwater flow direction - propose to install six to ten borings on site - borings will be extended (at a minimum) to the soil/groundwater interface or until refusal - at least two soil samples will be collected: one with highest PID and one at groundwater interface; if no PIDs found then only one soil sample will be collected at groundwater interface - convert one to two borings into a monitoring well - wells will be installed with a ten ft of screen; minimum of 2 ft of screening will extend above water table according to submitted site plan in proposed work plan, Ecosystems is planning to install all borings around BK-10, but no investigation proposed to delineation soil/groundwater contamination around BK-04. less than ----- spoke with Mr. Prigozen. told him that without having signed Stipulation agreement, i can't approve any work plan. Mr. Prigozen mentioned that his attorney asked him not to sign STIP as he might lose right to get fund from brownfield program. Mr. Prigozen will ask his attorney to call. Mr. Prigozen has choose to proceed with proposed plan without having approval from the department. spoke with Paul at Ecosystems. they are at the site today and are surveying all wells to confirm groundwater flow direction. they have put absorbent pads in wells and recovering free product. asked Paul about investigation around BK-04. he is currently concentrating on finding source for BK-10 and will eventually include investigation around BK-04. mentioned to him that the department requires investigation around BK-04 also and will only approve the work plan if includes soil/gw investigation around BK-04 along with investigation around BK-10. 03/26/09-Hiralkumar Patel. received email from Larry Schnapf, environmental attorney representing Mr. Prigozen. Larry claims that contamination found in BK-10 is from an upgradient oil depot, so he advised his client not to sign STIP which result in waiver of rights to seek reimbursement from the spill fund. he mentioned that his client will sign STIP if oil spill fund waiver paragraph deleted from agreement. Larry Schnapf email: Lawrence.Schnapf@srz.com 04/01/09-Hiralkumar Patel. spoke with Paul at Ecosystem. groundwater flow direction found almost in same direction as found earlier. no product found in well upgradient from BK-10. 04/02/09-Hiralkumar Patel. received email from Paul with report. abstract: - groundwater flow measurements are broadly consistent with the findings of previous consultant - groundwater flowing towards the south - review of sanborn maps indicates that the western portion was associated with oil refining activities predominantly performed on the adjoining property to the west (towards bayside oil depot) - numerous tanks are shown on the site between 1887 and 1916 - between 1905 and 1965 a tunnel, that appears to have contained pipes connecting both sites, extended beneath Kent ave less than ----- - according to sanborn maps from 1887 to 1916, western portion of the site (in area of Bk-10) was occupied by an oil refining company and site had multiple tanks on western portion - adjoining to the southwest was MGP site from 1887 to 1916 - 1942 sanborn map showing a tunnel beneath kent ave between the subject site and western property (currently bayside oil depot) spoke with Mr. Schnapf. Mr. Schnapf mentioned that they are suspecting that old tunnel between two properties (current bayside oil depot and subject site) might be bringing contamination on his client's property. he is planning for more soil and groundwater investigation and investigation about a tunnel before signing STIP. discussed with

DEC legal and legal division agreed with this. asked Mr. Schnapf to submit revised work plan for soil and groundwater investigation around BK-4 and BK-10 and tunnel investigation with time schedule. Mr. Schnapf will ask Paul to submit revised work plan by 04/06/09. spoke with Paul at Ecosystems. asked him for revised work plan. also asked him to submit site map with approx. locations of following: - BK-10, BK-4 - previous tanks on the property (from 1887 to 1916) - adjoining MGP site - tunnel under kent ave 04/06/09-Hiralkumar Patel. sent email (at 3:30 PM) to Mr. Prigozen to submit revised work plan by 4 PM today. received revised work plan. abstract: - absorbent booms will be used in wells BK-04 and BK-10 as an interim remedial measures - will sample all wells - proposes to dig minimum of three test pits in area where tunnel was located - test pits will be extended to a maximum depth of 10 ft bg or until groundwater is reached - if contamination found in soil during test pit installation, samples will be collected and soil will be removed for off-site disposal - total of 8 to 12 soil borings will be extended across the site with 3 to 5 of these boring being completed as wells - borings will be extended (at a minimum) to the soil/groundwater interface - two soil samples will be collected from each borings: one at soil/groundwater interface and one at highest PID - will submit investigation report within 10 weeks of the approval less than ----- 04/07/09-Hiralkumar Patel. sent work plan approval letter to Mr. Prigozen. letter emailed to Mr. Prigozen, Paul and Mr. Schnapf. 04/16/09-Hiralkumar Patel. received email from Richard Hooker from Ecosystems. will start investigation work at 8 AM on 04/23/09. 05/06/09-Hiralkumar Patel. received email from Richard. they completed extension of test pits at the western property line and the sampling and laboratory analysis of all existing wells. will install on- and off-site monitoring wells and extension of soil boring on-site on 05/13/09. 06/16/09-Hiralkumar Patel. 4:58 PM:- received email from Paul. he just received comments on the draft report from client and will incorporate these changes. will submit report tomorrow. 06/19/09-Hiralkumar Patel. 3:21 PM:- received investigation summary report from Paul. abstract: - one test pit was installed immediately southeast of center point of western property line - eleven soil borings were installed: nine borings (B-1 through B-9) were installed in the vicinity of BK-4 and two borings (B-10 and B-11) were installed in the vicinity of BK-10 - sampling was conducted at each boring location at five-ft intervals to a maximum depth of 20 ft bg or until refusal was reached - test pit documented the presence of a 10 inch diameter iron pipe in a brick-lined depression - broken end of pipe was found approx. 2.5 ft bg and the pipe was found to extend down to approx. 6 ft bg before turning sharply west beneath Kent Ave - water was encountered in test pit at approx. 4 ft bg and no evidence of contamination was encountered less than ----- - field evidence of contamination was observed at the groundwater interface at most borings extended in the vicinity of BK-4 less than ----- - no field evidence of contamination was encountered in the vicinity of BK-10 less than ===== - soil borings B-1, B-9 and B-10 were completed as temporary monitoring wells MW-1, MW-2 and MW-3 respectively - screen interval from 2 ft above to 8 ft below static groundwater level - free product was noted in monitoring well MW-2 (B-9) and remains in BK-10 - previously unknown well (MW-4) was discovered to the northeast of BK-10 - found free product in BK-10: 4.7 inches of product on 03/25/09 and 4.2 inches of product on 05/13/09 less than ----- - found 1.5 inch

S104621824

repair shop entrance as found heavily impacted soil in boring B7. asked Mr. Prigozen to excavate all following areas: - around BK-10 (as it could be localized problem) - entire abandoned tunnel running towards BK-10 (to investigate any more product in tunnel) - in front of repair shop in area of B-7 - around B-9/MW-2 as found free product in it suggest to remove old abandoned gasoline UST as found 236 ppb MTBE in well BK-3 nearby tank location. Paul suggest to sample BK-3 again before any excavation in this area. mentioned to Mr. Prigozen that based on gw analytical results from BK-3, the department doesn't require removal of the tank, but as they will do excavation in other part of site, it will be easy to use on-site equipments to dug this suspected area. Mr. Prigozen will discuss with Paul regarding gasoline UST removal. found self-contained parts cleaning machine with small tank (probably 15-20 gal). no stains/odors found around parts cleaning machine. found well cap missing for BK-10. asked Paul to replace it. asked Mr. Prigozen to send his tenant's contact info. 12:46 PM:- received email from Mr. Prigozen with tenant's contact info. David Williams Director of Real Estate and Construction Sunbelt Rentals 800 Hartford Turnpike Shrewsbury, MA 01545-4107 Ph. (508) 925-1611 (O) (508) 245-1107 (C) email: David.williams@sunbeltrentals.com 1:40 PM:- left message for Mr. Williams. 3:51 PM:- sent revised STIP to Mr. Prigozen. asked him to submit signed STIP by end of 07/13/09. 07/06/09-Hiralkumar Patel. 1:45 PM:- received message from Mr. Williams. 07/24/09-Hiralkumar Patel. 10:41 AM:- received work plan from Ecosystems. proposes to monitoring/recover product from wells, excavate contaminated soils from areas of B-7 and BK-10. 07/27/09-Hiralkumar Patel. 10:40 AM:- spoke with Paul about work schedule. today he will send cost estimates to Mr. Prigozen and expect to start work by Aug. 3, 2009. asked him to send confirmed work schedule. 10:43 AM:- sent email to Mr. Prigozen approving proposed plan and asked to submit work schedule. email copied to Paul. 08/06/09-Hiralkumar Patel. 11:53 AM:- left message for Paul about work schedule. 12:18 PM:- received message from Paul. he met property owner and tenant yesterday to coordinate excavation and planning to start work on 08/14/09. will send email with confirmed schedule. 08/12/09-Hiralkumar Patel. 10:39 AM:- received email from Paul. they will start soil excavation on 08/21/09 and expect to finish by 08/22/09. 2:10 PM:- sent email to Paul. asked him to call me once excavation starts as planning to visit site during endpoint sample collection. 08/21/09-Hiralkumar Patel. 8:48 AM:- spoke with Richard (845-803-2709) at Ecosystems. they have started excavation in area of BK-10. found contaminated sand, construction debris and clay layer. thick clay layer found right below water table. 11:20 AM:- received call from Richard. while digging area around BK-10, well was destroyed and found brick structure in ground and heavily contaminated soil. 2:00 PM:- visited site. area around BK-10 was excavated and patially backfilled after collecting endpoint samples. found water in excavation, but no product. Richrd mentioned that brick walls found on both side of BK-10 running parallel to N. 13th Street. Richard believes that this channel in ground around BK-10 was holding some product which was appearing in BK-10. crew was excavating area around B-7 (in front of garage entrance) at the time of site visit. found sticky black material from excavation with strange odors. Richard believes that this black material could be source of heavy contamination in B-7. will excavate to depth of 8 ft where contamination found during soil investigation. crew was also working inside garage where B-2 was

MAP FINDINGS

NATIONS RENT (Continued)

S104621824

installed and product found in MW-2. will collect appropriate endpoint samples. left site around 3 PM. 3:47 PM:- received call from Mr. Prigozen. while working inside garage around MW-2, they found abandoned tank in ground. will investigate more. 08/22/09-Hiralkumar Patel. 9:25 AM:- received call from Mr. Prigozen. they are planning to remove tank. 08/24/09-Hiralkumar Patel. 8:09 AM:- received call from Mr. Prigozen. he mentioned that tank removal is not possible as tank is located closed to foundation wall. it is about 1,500 gal tank. as per Mr. Prigozen, tank was full of product when discovered. asked him to pump out tank, clean it and then collect soil samples through bottom and sides of the tank to confirm no contamination around tank. 08/25/09-Hiralkumar Patel. 10:58 AM:- spoke with Mr. Prigozen. they pumped out at least 3,000 gal of product from tank. currently cleaning tank. 09/23/09-Hiralkumar Patel. 2:22 PM:- received call from Mr. Williams from Sunbelt Rentals inquiring about waste oil tank registration. 2:26 PM:- sent email to Mr. Williams with PBS registration form and instruction. 09/28/09-Hiralkumar Patel. 2:54 PM:- left message for Paul inquiring about cleanup report. 10/30/09-Hiralkumar Patel. 2:25 PM:- received tank closure and cleanup report from Ecosystems. abstract: - found shallow (18 inches) dark-stained soil immediately beneath the asphalt during excavation around BK-10 - beneath the stained material, found construction debris to 7 ft bg around BK-10; no evidence of contamination - immediately beneath well BK-10, a brick lined channel was encountered at 10 ft bg; expanding northwest-southeast for approx. 15 ft, the channel contained grossly contaminated sandy soil and debris - excavation in area immediately southeast of the machine shop found no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg - found 3,000 gal previously unknown UST in area of MW-2 inside shop - collected four soil samples through sidewall and two soil samples through bottom of 3,000 gal tank - collected total of six endpoint soil samples (four sidewalls and two bottoms) from each excavations at BK-10 as well as outside of repair shop - collected groundwater samples from wells BK-4, BK-13, BK-14, BK-15 and MW-1 - found little SVOC contamination in endpoint soil samples, but no VOC contamination - found VOC contamination in groundwater sample from BK-13 (but as per report dated 03/04/10, sampling data for BK-13 and BK-14 were switched in the subject report and contamination was actually found in BK-14) - proposes quarterly monitoring for a year based on groundwater result from BK-13 VOC result:

-----BK-14 Benzene-----570
 Toluene-----86 Ethylbenzene-----530
 Xylene-----239 1,2,4-Trimethylbenzene-----1,400
 Naphthalene-----430 MTBE-----87

11/02/09-Hiralkumar Patel. reviewed all previous soil and groundwater data and found: - according to Limited Phase II Environmental Site Assessment, dated Aug. 16, 1999, no contamination found in soil sample in BK-4 at 7-9 ft - found free product in well BK-4, BK-10 and well MW-2 (inside repair shop) - found soil contamination at the entrance of repair shop - contaminated soil removed from area around BK-10 and at the entrance of repair shop - found old 3,000 gal tank inside repair shop nearby MW-2 - collected soil samples through walls and bottom of 3,000 gal UST and found no contamination - installed two wells BK-13 and MW-1 downgradient from BK-4 - no free product

NATIONS RENT (Continued)

S104621824

ever observed in BK-13 and MW-1 - no free product or groundwater contamination observed in BK-4 during sampling in Oct. 2009 - found soil and groundwater contamination in area around sediment trap (BK-6 and BK-6A) - found high PID in BK-6A throughout boring (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth) - no excavation conducted in area of sediment trap spoke with Richard about excavation around sediment trap and BK-6/BK-6A area. Richard mentioned that as found clean sidewall sample from excavation in front of repair shop area, they didn't excavated area around sediment trap. 11/03/09-Hiralkumar Patel. 9:35 AM:- spoke with Mr. Prigozen and informed him that the department requires removal of contaminated soil from area of BK-6/BK-6A (as there was soil contamination above water table and high PID readings during installation of boring BK-6A). also mentioned that the Department suggest to excavate area around BK-4, while excavating area around BK-6A, as found free product earlier. Mr. Prigozen requested copy of site map and he will discuss with Ecosystem. 9:52 AM:- spoke with Richard about location of 3,000 gal tank and MW-2 inside repair shop. Richard mentioned that MW-2 was about 6 ft from tank's north end and there was drain between tank and MW-2. they removed contamination from drain and MW-2 areas. MW-2 was destroyed during excavation work. 10:32 AM:- sent email to Mr. Prigozen with copy of site maps with sample analyticals and asked Mr. Prigozen to remove contaminated soil from area of sediment trap. email copied to Paul. 11/20/09-Hiralkumar Patel. 3:02 PM:- spoke with Mr. Prigozen regarding excavation in sediment trap. he spoke with Paul and waiting for his response. will call back. 11/24/09-Hiralkumar Patel. 10:39 AM:- received email from Richard. they are discussing with Mr. Prigozen and will call back by next week. 12/04/09-Hiralkumar Patel. 2:43 PM:- left message for Mr. Prigozen. 2:47 PM:- spoke with Richard. they are currently discussing and will call back by end of 12/07/09. 3:45 PM:- received call from Mr. Prigozen. he spoke with Richard and will call back once gets answer from Ecosystem next week. 12/09/09-Hiralkumar Patel. received email from Ecosystem (at 5:20 PM on 12/08/09) including response to soil excavation requirement in area of BK-6/BK-4 (response was recalled immediately). Ecosystem proposed for quarterly groundwater sampling instead of soil excavation in area between BK-6 and BK-4 based on endpoint samples from recent excavation and groundwater sample results in Oct. 2009 2:15 PM:- spoke with Mr. Prigozen. based on level of soil contamination and depth of water table, suggested Mr. Prigozen to excavate area around sediment trap and BK-4 to remove probably last spot of contamination. Mr. Prigozen mentioned that he would like to do excavation, if any, in his presence. he is out of NY during winter and will be back in summer. he requested to postpone soil excavation, if any, till summer. based on spill history and soil/gw sample results, approved Mr. Prigozen's request to postpone any soil excavation till summer, but required monthly monitoring and quarterly sampling from existing wells. 2:31 PM:- spoke with Richard at Ecosystem regarding their response which was recalled. Richard mentioned that there is some change in it and will send revised one. Richard requested to hold requirement of gw monitoring and sampling until they submit revised response. 12/15/09-Hiralkumar Patel. 11:38 AM:- spoke with Richard regarding response to soil excavation in area of BK-6/BK-4. Richard mentioned that owner's attorney is currently reviewing it and will submit soon. 12/21/09-Hiralkumar Patel. 2:02 PM:- spoke with Richard and asked to send document by end of tomorrow. 12/22/09-Hiralkumar Patel. received email from Richard (at

NATIONS RENT (Continued)

S104621824

4:29 PM on 12/21/09) including response regarding excavation in area of BK-6/BK-4. Ecosystem recommends at least three quarterly rounds of groundwater sampling from existing wells and continued monitoring of the booms in BK-4 prior to decision regarding implementation of any additional remediation. 12/23/09-Hiralkumar Patel. 1:37 PM:- left message for Mr. Prigozen and informed him that the department is agreed with recommendations for three rounds of quarterly sampling. asked him to provide dates for first round of sampling. 1:39 PM:- spoke with Richard. informed him that the department agreed with their recommendation of quarterly groundwater sampling. asked Richard to send dates for first round of sampling. 1:53 PM:- sent email to Mr. Prigozen and asked to submit first quarterly groundwater sampling report by the end of 02/12/10. email copied to Richard and Paul. 2:54 PM:- received call from Mr. Prigozen. he received email and will ask Paul to collect groundwater samples in Jan. 2010. 03/04/10-Hiralkumar Patel. 12:02 PM:- received first quarterly groundwater sampling report. collected groundwater samples from wells MW-1, BK-4, BK-13, BK-14 and BK-15 on 02/01/10. groundwater samples were analyzed for VOCs (via 8260) only. no free product observed in well BK-4. found VOC contamination in groundwater sample from BK-14 and very minor contamination in other wells. but as per report from Oct. 2009, no contamination found in BK-14, but contamination was found in BK-13. Paul mentioned that sample results for BK-13 and BK-14 were switched in report dated 10/30/09. groundwater analyticals:

-----BK-14 Benzene-----469
Toluene-----89 Ethylbenzene-----485
Xylene-----201 1,2,4-Trimethylbenzene-----1,290
Naphthalene-----266 MTBE-----61

06/22/10-Hiralkumar Patel. received quarterly groundwater sampling report from Ecosystems. on 06/08/10, they sampled wells MW-1, BK-4, BK-13, BK-14 and BK-15. found contamination in groundwater sample from well BK-14: the well in previous sediment trap area. found only MTBE (71 ppb) in well BK-4. will sample wells again in Sep. 2010. groundwater analyticals: -----BK-14

Benzene-----600 Toluene-----92
Ethylbenzene-----470 Xylene-----196
1,2,4-Trimethylbenzene-----930 Naphthalene-----250
MTBE-----64

11:56 AM:- spoke with Mr. Prigozen. informed him that groundwater is contaminated near sediment trap area and if they continue groundwater monitoring and are planning for no excavation, then this case may be transferred to remediation group for long-term remediation. Mr. Prigozen will discuss with Ecosystems and will call back by 07/10/10. 07/28/10-Hiralkumar Patel. 11:08 AM:- received email from Mr. Prigozen. he mentioned that they will excavate area around BK-6/BK-4 in August, 2010. Ecosystem will send work schedule. 08/04/10-Hiralkumar Patel. 9:01 AM:- received email from Richard. they have scheduled a soil excavation around sediment trap on 08/12/10. work will start at 9 AM. 09/13/10-Hiralkumar Patel. 11:51 AM:- sent email to Paul inquiring updates. email copied to Mr. Prigozen. 11:53 AM:- received email from Paul. he will submit report by end of Sep., 2010. 10/26/10-Hiralkumar Patel. 1:56 PM:- received supplemental remediation report from Ecosystems. the submitted report doesn't include info about depth of endpoint sidewall samples and sample analyticals were compared with Part 375 instead of TAGM 4046. 10/27/10-Hiralkumar Patel. 10:22 AM:- spoke with Richard at Ecosystems regarding excavation dimension and endpoint sampling depths. Richard mentioned that final excavation was approx. 50 ft by

MAP FINDINGS

NATIONS RENT (Continued)

S104621824

30 ft to 15 ft depth. they collected endpoint sidewall samples at groundwater interface (at 7 ft depth) and bottom soil sample was collected at 15 ft depth. as per Richard, groundwater was seeping into excavation at very low rate, so groundwater was not present in excavation for sampling. asked Richard to submit revised report including info about sidewall sampling depth and sample results comparison with TAGM 4046 instead of Part 375. 10:31 AM:- left message for Mr. Prigozen. informed him that based on results of endpoint samples, the department requires further investigation/remediation. 10:40 AM:- sent email to Richard asking to submit revised report. email copied to Mr. Prigozen. 11:38 AM:- received call from Mr. Prigozen. he mentioned that he doesn't remember discussing about excavation around BK-4 and based on groundwater sampling results, he does not want to dig in area of BK-4. informed Mr. Prigozen that based on quarterly groundwater sampling results from BK-4, the department does not require excavation, but based on endpoint sample results from recent excavation, the department requires further investigation/remediation. 11/30/10-Hiralkumar Patel. 9:32 AM:- spoke with Rich. he will submit revised report. they are proposing for groundwater monitoring at this time and based on monitoring results, may propose additional investigation in former sediment trap area. 12/02/10-Hiralkumar Patel. 2:13 PM:- received revised report from Ecosystems. - excavated area around former sediment trap and well BK-14 - no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg - during excavation, petroleum odors and PID readings between 300 and 600 were recorded - five endpoint samples (four sidewalls and one bottom) were collected from excavation - sampled groundwater in wells BK-4, BK-13, BK-15 and MW-1 - petroleum contaminated soils remain at depths greater than 15 ft below the former sediment trap and below static water level - found heavy contamination in bottom endpoint soil sample - very minor VOC contamination found in groundwater samples (max 43 ppb MTBE in BK-4)

-----bottom 15 ft bg

Benzene-----3,400
Toluene-----2,900
Ethylbenzene-----31,000
Xylene-----5,400
1,2,4-Trimethylbenzene-----210,000
Naphthalene-----29,000
Isopropylbenzene-----19,000
n-Butylbenzene-----33,000
n-Propylbenzene-----37,000

due to heavy soil contamination in endpoint bottom sample and heavy contamination in groundwater sample from well BK-14, which was installed in the vicinity of the sediment trap, the department requires further complete delineation of soil and groundwater investigation including installation of one well at the location of endpoint bottom sample with deeper screen. 12/07/10-Hiralkumar Patel. discussed with DEC Austin regarding soil contamination below water table. he asked to contact MGP project manager in Albany as MGP site was in neighbourhood. 11:10 AM:- spoke with DEC William Ottaway in Albany regarding MGP site. Bill mentioned that Douglas MacNeal is the project manager for MGP site (V-00732) on Kent ave. Bill mentioned that MGP waste contains very high SVOCs and may have some VOCs.

S104621824

reviewed recent report. no SVOCs found in any endpoint sample. 1:38 PM:- sent letter to Mr. Prigozen requiring additional soil and groundwater investigation in former sediment trap area. letter emailed to Mr. Prigozen and Paul. 12/20/10-Hiralkumar Patel. 2:22 PM:- received message from Paul from Ecosystems. 12/21/10-Hiralkumar Patel. 2:31 PM:- left message for Paul. 12/29/10-Hiralkumar Patel. 1:35 PM:- received email from Rich. a well at the former sediment trap will be installed on 01/06/11. 01/04/11-Hiralkumar Patel. 3:21 PM:- spoke with Rich. they will start well installation work around 8 AM. he also mentioned that a new drain structure has been installed in the previous sediment trap area. so they have to relocate the new well. Rich will decide well location once visit the site. 01/06/11-Hiralkumar Patel. 10:01 AM:- received call from Rich. they installed boring in area close to former sediment trap. boring was installed to 19 ft depth where they found refusal. during boring, found 160 ppm on PID at groundwater interface (groundwater at 7 ft depth) and 75 ppm from 10-15 ft depth. there was no recovery in 15-20 ft range. the boring was installed in previously excavated area to 15 ft depth. so highest PID was found at groundwater interface in backfill material. a well will be installed in boring with 15 ft of screen. as high soil contamination found at 15 ft depth in endpoint sample from excavation and as no recovery in 15-20 ft depth, asked Rich to install another boring in area. 11:15 AM:- visited site. Rich installed another boring to 20 ft depth and collected soil from 15 to 20 ft depth only. minor odor noticed in clayey material from 15 to 20 ft depth. asked Rich to collect two soil samples: one at 15-16 and one at 19-20 ft depth. Rich will sample all existing wells, around former sediment trap area, next week. 02/17/11-Hiralkumar Patel. 1:13 PM:- received supplemental investigation report from Rich. abstract: - two soil borings (2B-1 and 2B-2) installed in former sediment trap area - collected two soil samples from each boring: at 7 and 15 ft from 2B-1 and at 15 and 20 ft at 2B-2 - installed 2 inch well (BK-14(R)) at boring 2B-1 with 10 ft of screen (from 5 to 15 ft bg) - sampled water from wells BK-4, BK-13, BK-14(R) and BK-15 - no contamination found in any soil sample (not even in sample at 15 ft bg in 2B-1 which was collected in same area as endpoint bottom sample after excavation around former sediment trap) - very minor contamination found in water samples except sample from BK-14(R) groundwater analyticals: -----BK-14(R)
Benzene-----190 Ethylbenzene-----280
Xylene-----120 1,2,4-Trimethylbenzene-----1,300
Naphthalene-----210 - recommended sampling of wells MW-1, BK-4, BK-13, BK-14(R) and BK-15 after three months 03/17/11-Hiralkumar Patel. discussed with DEC Austin. based on consistent data in well BK-14, Austin asked for remediation. 3:16 PM:- sent letter to Mr. Prigozen requiring submission of a RAP for remediation of contamination in and around the area of the former sediment trap. letter emailed to Mr. Prigozen, Paul and Rich. 05/20/11-Hiralkumar Patel. 10:40 AM:- received call from Paul. he mentioned that as groundwater contamination found in only by former sediment trap area, he propose to monitor groundwater for some time before any active remediation. he will send work plan by 06/03/11. 07/20/11-Hiralkumar Patel. 1:46 PM:- received quarterly groundwater sampling report from Ecosystem. on 04/28/11, groundwater samples were collected from wells MW-1, BK-4, BK-13, BK-14R and BK-15 and analyzed for VOCs only. next round of quarterly sampling is schedule for the end of July 2011. found contamination in samples from BK-14R.

Site Description: Location: Transition from V00704 and C224055. The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn New York in Kings County. The site is approximately six acres in size and is composed of three parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and a large document storage warehouse on the west side of Kent Avenue and a two-story commercial building on the east side of Kent Avenue. Current zoning and land use: The area is zoned Industrial/Commercial. The document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015. It is currently being demolished. The vacant lot is owned by the NYC Parks and Recreation Department and used as an outdoor music venue. The two-story commercial building on the east side of Kent Avenue is

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

K - WILLIAMSBURG WORKS (Continued)

S109209078

in active use. The nearest residential property is located approximately 1 block to the south. Past use of the site: A manufactured gas plant operated on the site from at least 1887 to 1916. Following the decommissioning of the MGP, the now vacant lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. The City of NY has identified this site for construction of a proposed waterfront park, which would extend far beyond site boundaries to the north and south. Site Geology and Hydrogeology: The site is underlain by: urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 7 feet below ground surface. Groundwater flows to the west, toward the East River.

Env Problem: The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath a document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River.

Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Site Description: The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with

Map ID

S102663001

respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment.

Env Problem: The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroleum compounds in sediments/ sludge contained in a large concrete structure (known as "the ash pit"); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined.

S102663001

HW Code: V00732
Site Class: A
SWIS: 2401
Region: 2
Town: New York City
Acres: 2.64
Date Record Added: 06/23/2010
Date Record Updated: 04/08/2015
Updated By: GWCROSS
Site Description: Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site is a currently vacant with no above grade structures. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use, but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the sites proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs in soil, VOCs in groundwater and PCBs in the ash pit sediments. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan

Health Problem: The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as a disposal site. Investigation by the NYSDEC Regional offices indicate that this is an industrial operation to recycle, recover and refurbish drums and that no apparent disposal of hazardous or toxic waste have occurred here.
Env Problem: None known. No apparent disposal of significant quantities of any hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/30/2015	Source: EPA
Date Data Arrived at EDR: 11/07/2015	Telephone: N/A

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/30/2015	Source: EPA

	Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 01/06/2016
Number of Days to Update: 64	Next Scheduled EDR Contact: 04/18/2016
	Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 11/23/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 03/07/2016

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

UTM X (Meters):	587665.1
UTM Y (Meters):	4507571.0
Elevation:	32 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

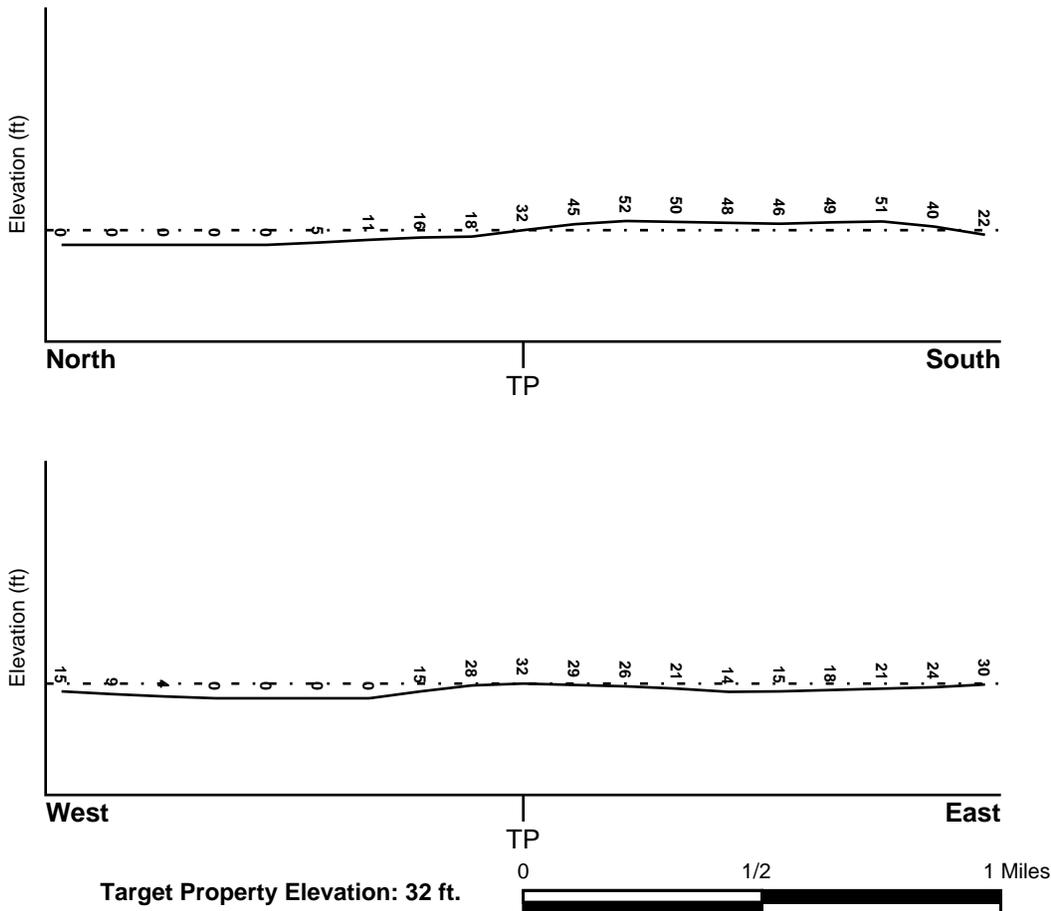

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> KINGS, NY	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> BROOKLYN	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Ordovician
Code: Oe (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

(E)-Designation Site Summary Table
Greenpoint-Williamsburg Rezoning, CEQR # 04DCP003K

E-138

Site	Block(s)	Lot(s)	Site Area (sq. feet)	Site Type	Basis for (E)-Designation	
					Source	Comments Regarding (E)-Designation Cause
211	2277, 2287, 2294, 2301, 2590	See Notes on last page	1,233,485	Projected	Not (E) - Designated	Site currently undergoing investigation, VCP, spills, coal gas
212	2331	7, 8	5,000	Potential	On Site	55 gallon drums stored at lot 8
213	2331	42	10,000	Potential	Adjacent	Star Soap and candle manufacturing adjacent to lot
214	2333	1	40,000	Potential	On Site	Suspect tank on site, historic railroad yard
215	2334	40, 50, 45, 1, 28, 3, 30	45,000	Projected	On Site	Historic rail yard, PBS UST on lot 40
216	2334	23, 22	10,036	Potential	Adjacent	PBS UST at adjacent Site 215 lot 40
217	2335	10, 6, 12	10,000	Potential	On Site	historic gas tank at Lot 10
218	2335	14, 13, 15	20,000	Projected	On Site	Historic auto repair with gas tank at Lot 13
219	2337	20	6,990	Potential	On Site	Tank, historic printing/auto repair on site
220	2338	1	1,582	Projected	Adjacent	Dry Cleaners adjacent to west
221	2339	7	7,920	Potential	On Site	Printing company on site
222	2340	1	214,329	Potential	On Site	C&D Recycling, SWF/LF, PBS, Spills, SQG
223	2341	9	54,850	Potential	On Site	Suspect carpet manufacturing
224	2342	1	47,600	Projected	On Site	SQG, FINDS on Site
225	2342	16	7,500	Potential	On Site	Auto repair on site
226	2342	23, 26	8,608	Potential	On Site	Historic motor freight station at Lot 23
227	2343	5	5,000	Projected	On Site	auto repair, 2 PBS USTs and open spill # 9706521
228	2343	18, 19	5,000	Potential	On Site	Historic machine shop, junk yard at Lot 18
229	2344	5	13,750	Potential	On Site	Furniture Manufacturing on site
230	2344	26	7,550	Projected	On Site	SQG, closed UST
231	2344	25	15,250	Potential	On Site	SQG, historic iron works on Site
232	2344	16	5,792	Potential	On Site	Suspect tank, historic foundry on Site
233	2346	30	11,325	Potential	On Site	Metal works on Site
234	2346	26	5,944	Potential	On Site	Tank, historic motor freight station on site
235	2349	1, 21, 15, 18	72,700	Projected	On Site	Historic freight yard, regulated transfer station, spill
236	2350	1	27,389	Projected	On Site	Historic printing operations on Site
237	2350	2	9,000	Potential	On Site	Historic printing operations on Site
238	2350	4	27,000	Potential	On Site	SQG, FINDS
239	2350	24	9,000	Potential	On Site	PBS UST, historic foundry on site
240	2350	26	27,511	Projected	On Site	Open spill on site
241	2351	40, 1	25,632	Potential	On Site	PBS UST closed in place
242	2351	28	15,753	Potential	On Site	PBS UST, FINDS
243	2352	20	7,500	Potential	On Site	Historic printing operations on Site
244	2353	6, 8	5,000	Potential	On Site	Two 55 gallon drums were observed at Lots 6 and 8
245	2353	26, 13, 28	11,807	Potential	On Site	Gasoline station, tanks at lot 13, closed tanks
246	2357	4, 1	22,975	Potential	Adjacent	Regulated transfer station at adjacent Site 235
247	2357	25	10,000	Potential	On Site	Suspect tank, historic paper product manufacturing
248	2357	18, 20, 22, 21, 24	13,694	Potential	On Site	Historic tank at Lot 24, suspect tank at lot 22
249	2358	1, 38	6,180	Potential	Adjacent	Suspect tank at adjacent Site 247
250	2358	4, 36	10,513	Potential	On Site	Historic metal products manufacturing, gas tank
251	2358	29, 6, 31	20,446	Potential	On Site	Historic tank at Lot 31, tank at Lot 29, closed spills
252	2358	11, 15, 14	9,819	Potential	Adjacent	Iron works at adjacent Site 254 lot 25
253	2358	22	5,550	Potential	Adjacent	Iron works at adjacent Site 254 lot 25
254	2358	25, 27, 24, 28	9,859	Potential	On Site	Iron works at lot 25
255	2363	3, 2	12,607	Potential	On Site	CBS UST and PBS AST, SQG, SSTS, TRIS
256	2363	38, 36	9,428	Potential	On Site	Possible tanks at lot 36 and 38
257	2363	9, 28	30,897	Potential	On Site	Historic junk yard, iron foundry at Lot 9
258	2363	26, 20	6,700	Potential	On Site	Auto repair, PBS AST at lot 26
259	2364	17	11,250	Potential	On Site	Tank at lot 17, AST at lot 16, closed spills
260	2366	1	7,950	Potential	Adjacent	Suspect tank at adjacent Site 261
261	2366	32	13,867	Potential	On Site	Suspect/historic tank on site

Laboratory Reports in Digital Format

Wednesday, March 23, 2016

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 141 METROPOLITAN AVE
Sample ID#s: BK79277 - BK79285

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

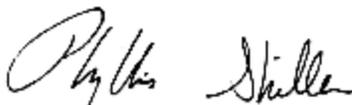

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

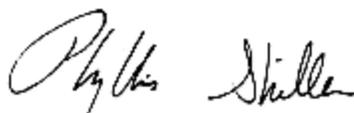

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

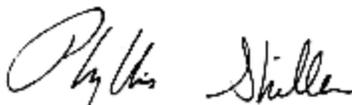

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

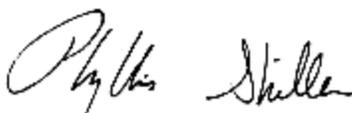

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

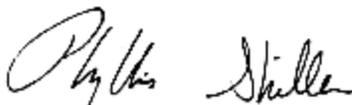

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

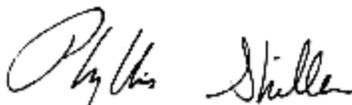

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200. This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Results are reported on an ``as received`` basis, and are not corrected for dry weight., TRIP BLANK INCLUDED.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Sample ID#s: BK86897 - BK86899

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

E = Estimated value quantitated above calibration range for this compound.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit1

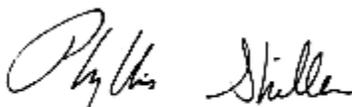

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

E = Estimated value quantitated above calibration range for this compound.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
