2/25/2004-Vought-Spill transferred from Rommel to Vought. File review by Vought: Supplemental Remedial Action Report (ATC Associates, David Winslow 212-353-8280). Clinton Association for a Renewed Environment authorized ATC to remove four (1000-gallon) gasoline USTs, six (550-gallon) gasoline USTs and one (275-gallon) waste oil UST, oversee the removal of historic fill and the installation of a vapor barrier membrane at 740-744 11th Avenue and 557-561 West 52nd Street. Contaminated soil found beneath four (1000-gallon) USTs resulting in filing of spill #0305881 which was closed after the removal of approximately 34 tons of contaminated soil. Additional contaminated soil was found and this spill number was opened and approximately 74 tons of contaminated soil was excavated and removed after excavation to bedrock. "A Singel Barrier Containment System was installed beneath the floor slab of the building..." "In addition ATC supervised the installation of a soil cap on Januar 5, 2004. The containment system consisted of a vegetative and protective layer, 18" of soil including 6" of top soil, a geotextile filter fabric, protective layer, 6" of compacted soil subgrade". Approximately 3777.5 tons of historic fill were also removed from the site. "The upper one foot of the weathered schist was removed to expose comptent bedrock". No groundwater was encountered abover bedrock at this site. No bottom samples were collected due to the presence of bedrock. Report request No Futher Action. Soil analyticals show no TAGM 4046 Soil Cleanup Objective exceedences. Spill closed by Vought due to lack of exceedances, extraordinary amount of soil excavation (3777.5 tons) and competency of bedrock.

Remarks: while doing further digging after a tank removal found contaminated soil

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD"6/22/04. J.Krimgold at site. According to delivery slip actual amount spilled ~6000 gal. Oil delivery Co. Metro Fuel Group delivered oil to wrong (1000 gal) tank instead of to 15,000-gal tank system. Oil released through top of tank, spilled in basement on concrete floor. Some oil went to drains in floor. Action Envt'l (contact Tod @973-896-6185) performing clean up. Ambient Group (Mike Borello cell # 917-376-4179) was hired by CBS as envt'l consulting firm.6/29/04. J.Krimgold met at site with Paul Puccio (CBS), Mike

Borello (Ambient), and Tod (Active Env.). Inspected buildings' basements adjacent to 857 10th Ave and also owned by CBS. Found oil seepages into buildings ~50 and 100 ft respectively from place where release occurred. Oil and water accumulation in pits installed by contractor in basements floor. 12/22/05: This spill transferred from J. Krimgold to S. Kraszewski. Reviewed Remedial Action Monitoring Plan prepared by Ambient Group, Inc. dated 6/23/05. Report is conglomeration of remedial work performed at site from day spill occurred to above-mentioned date. Based on data, conclusions and recommendations are proposed for AOCs (Areas of Concern.) AOC #1: Basement of CBS building where spill occurred. 3 feet of contaminated soil were removed immediately after spill for majority of basement floor; approx 200 tons soil removed. 22 soil borings were advanced in basement to delineate and monitor plume. Free product and GW measurements were taken to determine thickness of product and GW levels. Also, 3 monitoring wells were installed around building exterior to monitor possible free product migration. Borings in basement were converted to total Fluid Recovery wells and would eventually work in tandem with an enhanced fluid recovery system. Initial recovery system involved extracting GW + product from borings to an oil/water separator. Soon after this system was functional, an SVE system was installed to remediate soil. Both systems have been operational since late 2004. Data in report is given as Total Recovery Trend for both systems combined. Data start from Sept 2004 and end in Feb 2005. Overall trend is a decline in product recovery from contaminated wells. Only a handful of 22 wells are still recovering product or vapors, and even fewer recover significant amounts. Proposed action is quarterly monitoring. AOC #2: Adjacent building sub-basement had free product/water seeping through wall at approx 600 gallons/day. Series of wall drains connected to GW pump collect GW for treatment. Borings and MWs not possible in this location. Summary of system will be provided in separate rpt. AOC #3: Free product migration into sub-basement of nearby building (not adjacent to original spill area.) Free product is migrating through preferential pathways between buildings. Walls are rubble-masonry foundations with a history of GW infiltration. 5 MWs have been installed and quarterly monitoring is recommended. Need: report for Recovery System at AOC #2, monitoring updates for AOCs #1 and #3 - SK12/22/05: Called Michael Borello at Ambient Group. He no longer works for them. I was transferred to Gloria, she would find out info about site and have someone contact me. - SK12/22/05: John Mascioli from Ambient Group called regarding spill. I requested any recent documents and monitoring reports he had. Also, Remedial Action Monitoring Plan from June 2005 is missing two figures dealing with MWs at AOC #3. He said they've been monitoring monthly since May for AOCs #1, #2 and #3. They are renewing permit for AOC #2 oil/water separator next week and he will send me document along with missing figures and recent monitoring report. John mentioned that monitoring data for AOC #1 is inconclusive for many wells. - SK01/09/06: Called John Mascioli at Ambient Group, asking about site update report supposedly due last week. John said he is waiting for lab to send him some final results before he can send out report. He expects it to be complete this week. - SK01/30/06: Joseph Holtzberg from Ambient called (917-861-7238) to inform me about site. He wanted to know what information I need to simplify scenario. I said I was still waiting for recovery system update and monitoring data I talked to Jon Mascioli about. They're almost finished with report and will send it

very soon, he said. Also, he would like to have a meeting after I have reviewed report to hammer out a time frame for site activity. I told Joseph I would contact him after I had looked over report. - SK02/02/06: Received documents from Ambient Group. Reviewed Volatile BTEX Air Sampling Results for two SVE systems at 857 10th Ave. Influent and effluent samples since Sept are clean. It appears SVE systems have performed well for extracting petroleum. However, regarding liquid extraction for these wells, no data exists from Feb. 2005 to present. Must have MW and liquid phase extraction data for this system. Received document with latest oil/water separator effluent results for 513 West 56th St., adjacent to CBS basement. Three separate effluent removals show consistent amounts of oil and water, roughly 1/3 of liquid is oil, rest is water and silt. Attached is request for one-year extension of discharge permit. Permit is issued by DEP; DEC does not regulate discharge into sewer. Since amount of oil recovered is constant this seems like plausible request. Continue operation of system until discharge slows or oil is no longer present in effluent. Currently, no seepage is occurring for 518 West 56th St., 3rd area of concern determined in June 2005 Site Investigation Rpt. After in-wall drain tap collector at 513 was installed, seepage through 518 basically ceased. It seems that collector is taking care of both sites. I spoke with Joseph after reviewing documents. I asked for MW measurements and records for liquid phase extraction data. He said information will be sent out as soon as he can arrange it. - SK02/22/06: Reviewed Jan. 2006 Quarterly GW Monitoring Rpt submitted by Ambient Group. Static water level measurements were performed for 5 MWs, both on- and off-site. Also, static level measurements were taken in 24 soil vapor extraction wells. Results are as follows: 1) Only MW-5 in CBS courtyard exhibited free product, 0.25" in depth. GW samples taken from each well revealed dissolved contamination exceeding GW standards for VOCs and SVOCs including BTEX and MTBE for MW-5 only. 2) Five of 24 recovery wells in CBS basement exhibited free product from 1 to 8 inches thick. 3) Approx. 2 feet of silt is present in each recovery well, reducing efficiency significantly. Ambient recommends: a) Continued quarterly monitoring of 5 MWs. b) Removal of silt accumulations in recovery wells, purging of wells and then additional static water level measurements. c) Increase frequency of free product removal from recovery wells. d) Continued operation of wall drain tap and oil/water separator in adjacent building. e) Evaluate capacity loss from 24 vapor extraction wells. f) Perform a survey of GW flow to determine its direction. Site plan does not show locations of 5 MWs, only a CBS basement diagram is provided showing extraction wells. Also, report uses terms "extraction well" and "recovery well" synonymously. Ambient must clarify these issues. - SK02/23/06: S. Kraszewski spoke with John Mascioli from Ambient Group. CBS contact info: Alan Krupski CBS Broadcast Center 527 West 57th Street New York, NY 10019 We clarified information regarding fluid extraction system and SVE system. Apparently, it's a dual-phase recovery system where a drop tube inside PVC recovers total fluids which are then pumped into an oil/water separator for collection and removal. Each of 22 SVE recovery wells contains a drop tube for fluid recovery. Also, in latest rpt it was observed that MW-5 contained product where it previously had none. Since updated site plan was not available with MW locations, it was possible that contamination was spreading. However, MW-5 is located next to adjacent basement where a wall drain tap is installed and already collecting fuel oil. Since contamination

S104278942

is known to be there, no cause for alarm is necessary. - SK 02/27/06:  
Two letters sent out, one addressing SVE systems and requesting add'l air sampling & analysis of all petroleum-related VOCs, not just BTEX. This rpt is due by March 30. Other letter approves Ambient's recommendations for continued operation of fluid extraction system. They also will perform required maintenance on extraction wells and keep wall drain taps with oil/water separator in service. GW flow direction will be recalculated. Comprehensive site plan that includes all wells with 2 basement systems was requested in next quarterly rpt. - SK04/05/06: Spoke with Joe Holtzberg and John Mascioli. Within a week or two, more well readings and air sampling from two systems. By mid-April sampling and gauging work will be underway. Also, Joe and John stressed their client's concerns about how long this work could last because this persistent contamination may be migrating from off-site. I said it will be easier to make a determination after these results arrive at my desk, and the faster I receive them the faster they will have an answer. - SK 06/22/06: Received email from Sean Wallace at Ambient Group, new project manager for site. Email included influent and effluent air sample results from SVE system. Results are clean for both influent and effluent. I called Sean and asked if I could receive entire report, not just pieces. He will mail me a copy of report and fax me rest of results, i.e. GW analyticals, gauging and product thicknesses. GW results show some elevated SVOCs and VOCs in MW-5 as well as 0.4 feet of product. Several other wells exhibit 0.1 to 0.2 feet of free product. MW-5 is located next to adjacent building where a passive recovery system consisting of wall taps to drain oil is already installed. - SK06/26/06: Received & reviewed April 2006 Quarterly GW Monitoring Rpt from Ambient Group. Influent and effluent air sampling results from both SVE systems found no VOCs above detection limits. Since no VOCs were detected from extraction wells, system may have removed all it is capable of removing. 5 recovery wells exhibited 0.1 to 0.2 feet of remaining free product. MW-5 had 0.4 feet of free product, but is next to wall drain tap, which is currently recovering product. Also, MW-5 detected MTBE, not found in diesel, slightly above TOGS standards. Samples from MWs 1 to 4 had no VOCs or SVOCs detected. MWs 1 to 3 are located outside along building perimeter. Ambient recommends continued monitoring and sampling of all wells and SVE emissions, free product removal and pulsing of multiphase system. - SK06/30/06: Spoke with Sean Wallace regarding report. I asked that they always include a site plan displaying entire site, with neighboring streets and other adjacent buildings, plus all MWs, borings and recovery systems. I asked about drain tap system in adjacent basement, and Sean said it is recovering less and less. I asked for manifests of recovered fluids and he said he would get them to me quickly. Also, I told Sean that since SVE system is not recovering any volatiles next course of action would be to shut it down rather than running it and monitoring. I discussed conversation and report with J. Kolleeny. He recommended asking Sean to shut down parts of system that are no longer recovering free product. I sent Sean an Email approval for recommendations in report. - SK08/07/06: SK met on-site with Sean Wallace from Ambient group (212-944-4615) and with Alan Krupski from CBS. Having never been on-site before, I wanted to inspect SVE systems and wall drain-tap system. Effluent from both SVE systems reveals no VOC constituents in air. Ambient is proposing to shut down only one system, SVE2. Ambient will pulse system to see if conditions change at equilibrium. This system runs

S104278942

vertically in each well located in basement. SVE1 will remain on for now in case any odors may appear. Several wells exhibit free product of an inch or less, so they will continue to recover from them. Wall drain tap is still recovering an oil/water mixture because it seems that bedrock forms a depression along basement wall where oil has settled. Only about 10% of mixture is actually oil. I requested that Ambient submit a recommendation for further action regarding operation of systems, especially SVE2. Report is due by end of August. - SK08/31/06: Received July 2006 Quarterly GW Monitoring Report from Ambient Group. Influent and effluent samples from SVE2 show no VOCs or SVOCs detected. GW samples from perimeter MWs reveal no SVOCs or VOCs above TOGS levels. Several recovery wells still exhibit several inches of free product. Ambient recommends continued removal of free product, use of wall drain tap system and O&M of horizontal system SVE1. SVE2 will undergo a pulse test in conjunction with monitoring of all wells to see if system may have an impact on GW; monitoring and sampling of MWs may continue based on results of pulse test. SK sent out approval letter for all recommendations. - SK12/01/2006 - Sean Wallace (Ambient Group) called, asked that project be reassigned due to SK's departure from DEC. They believe remedy is done and are looking to turn system off. I (Vadim Brevdo) suggested they prepare & submit final remediation rpt, which should be consistent with DER-10, and we will review and decide whether remedy is completed or must go on. I committed to discussing this with my staff and having project re-assigned to other P.M.12/05/06: This spill case transferred from S. Kraszewski to J. Kolleeny. Spoke with Sean Wallace of Ambient Group. He said pulsing of SVE system has not increased recovery; also, several wells still have a little free product (0.01-0.02 ft.) that does not seem to be going away, they may consider other options including bioremediation. They are not asking for spill closure yet, but will submit rpt presenting current site status and asking for permanent shutdown of SVE system. - J. Kolleeny12/14/06: Received email from Sean Wallace (Ambient Grp.) with attached rpt summarizing pulse test of SVE2 system (in eDocs, rpt has no title page, no Fig. 1). Email stated: "Here is latest rpt for project, concerning pulse test of SVE 2 system, which we call horizontal system. 22 basement wells are hooked up to SVE system. At start of project, most wells had some free product (8/2004). By 8/2006 only 3 wells (deepest wells) had any product, and after we pumped those out, levels never came back above 0.02 ft. This is when we did shutdown monitoring. Sep-Oct 2006. I'm still collating all previous quarterly rpts along with initial rpts on remediation. Jan 2007 is next scheduled Quarterly; we'd like to make it last one. We will be collecting GW samples, air samples from SVE1 (vapor control system - vertical piping system under new concrete floor) and water & free product levels to demonstrate current conditions are not health concern. We are suggesting that at this point, to attack remaining fuel, bioremediation will be most effective, if further action is called for." - J. Kolleeny12/28/07: Received email from Sean Wallace of Ambient Grp. stating: "We are planning shutdown test of vapor control system at 857 10th Ave (CBS Spill # 04-03162). Purpose is to determine if there will be detectable odor or measurable VOCs in basement area or upper floors if this system is not operating. Plan is to monitor over a weekend. Thus, system would be off for 2-3 days. Would DEC require test to cover longer period of time? This is our main question at this point. As discussed previously, there is no more free product in observation wells. System in place now is

855 TENTH AVENUE (Continued)

S104278942

installed under new concrete floor poured after excavation of top few feet of contaminated soil. There is gravel bed laying over plastic membrane. Horizontal piping leads to carbon bed filter. Inlet and outlet sampling of this system has come back non-detect since April 2006." I sent email reply: "It would be preferable to wait 5 to 7 days to see if odor problems or detectable levels of VOCs develop in building. Please let me know if this is acceptable. Also, is there any residual dissolved-phase GW contamination at site, since free product seems to have been taken care of? (Is GW sampling being performed on regular basis?)" Sean sent reply: "We will take your suggestion to CBS. They definitely want to do things in most acceptable manner, so we will plan for week-long monitoring event. Last GW sample was taken during July '06 Quarterly Monitoring. Method 8270 showed Acenaphthene and Fluorene at 2.5 ug/L and phenanthrene at 0.96 ug/L (D.L. 5.2 ug/L) in only one of monitoring wells in interior courtyard. Method 8260 showed MTBE at 5 ug/L (not additive in fuel #2) and n-butylbenzene and tert-butylbenzene around 2.5 ug/L (D.L. 1.0 ug/L). Perimeter wells were non-detect. We will take samples again for January event." - J. Kolleeny03/20/07: Reviewed January 2007 Quarterly Monitoring Report (in eDocs). Report shows no contam in monitoring wells MW-1 through MW-5 (perimeter & courtyard wells), but low levels of dissolved VOCs (highest are MTBE at 139 ppb and naphthalene at 51 ppb) in several basement wells located near 3 basement wells that still have small amounts of product (from 0.02 ft. to 0.1 ft.); also VOCs in oil/water separator influent, including 169 ppb naphthalene, 122 ppb 1,2,4-trimethylbenzene, and 47 ppb total xylenes, but effluent to sewer is within limits. Influent and effluent air samples for vapor control system SVE1 all ND. Report recommends pulsing SVE1 system to determine if vapor control is still necessary, reducing GW monitoring frequency from quarterly to semi-annual, and continuing to operate perimeter wall drain tap and oil/water separator system until inlet concentrations of target compounds allow direct discharge to sewer. I sent email approving these recommendations to Sean Wallace of Ambient Group on 3/20/07, with cc to Allan Krupski of CBS (212-975-2689, awkrupski@cbs.com), asking that basement wells be monitored in addition to perimeter/courtyard wells. Also asked that SVE1 pulse test include indoor air sampling for specific hydrocarbon compounds, that system influent sample be collected when system is re-started, and that scope of work for indoor air sampling be submitted to DEC when available. Changed spill status from P3 to P2. - J. Kolleeny04/24/07: Received email from Sean Wallace of Ambient Group on 4/19/07, with attached proposed protocol for shutdown test of SVE-1 system with concurrent indoor air monitoring for VOCs (in eDocs), to be performed week of 4/23-27/07. Sent Sean an email asking if this document was for me to review/approve before they do the test; he sent reply stating it was sent to me for information purposes only and that it addressed all concerns I expressed in our phone conversation several weeks ago. - J. Kolleeny07/09/07: Received June 2007 SVE1 Shutdown Test Results rpt by Ambient Group on 6/14/07 (in eDocs). Rpt presents results of indoor air monitoring for total VOCs during 10 days system was shut down, and results of vapor influent grab sample from when system was re-started. According to Ambient, TVOCs detected in indoor air were not above naturally varying background levels. Rpt lacks conclusions & recommendations sections. Spoke with Sean Wallace of Ambient on 7/9/07 and pointed out lack of Conclusions and Recs, and asked for clearer presentation of indoor air results. He said he

855 TENTH AVENUE (Continued)

S104278942

would revise rpt and re-send. He also said no odors were detected in work spaces of bldg while system was shut down. - J. Kolley09/07/07: Received email from Sean Wallace of Ambient on 9/4/07, with attached SVE1 Shutdown Test Results report revised as of 9/4/07 (in eDocs): "Revised report on shutdown test of SVE system. Revisions include 2nd graph of real-time TVOC response with outside air monitoring point included. Site map with sampling locations noted (in pdf with comments). Conclusions section added to body of report. On side note, NYCDEP sewage discharge parameters do not include any SVOCs. As part of recent bi-annual monitoring required for this project, we took grab sample of GW coming into Oil Water Separator unit. This is untreated GW that after separation is discharged to sanitary sewer. There were no VOCs above detection limits. I am assuming that even if all parameters on list were passing quality, presence of SVOCs would still prohibit direct discharge to sewer? We will have monitoring report to you shortly." I spoke with Sean and said I don't think there are DEP discharge limits for specific SVOCs, but he should check with DEP. On 9/7/07, I completed review of revised report, which concluded that residual soil contamination poses no threat to human health via vapor migration into occupied spaces and recommended discontinuing operation of SVE1 system. I issued letter (in eDocs) to Alan Krupski of CBS (cc to Sean Wallace) approving this recommendation, and noting that sampling & gauging of monitoring wells for dissolved-phase contam and product, and operation of perimeter wall tap drains and oil/water separator should continue. - J. Kolley06/06/08: Reviewed Aug.'07 and Feb.'08 Semi-Annual Monitoring Rpts by Ambient Grp. (in eDocs). Aug.'07 rpt presents results of GW sampling done 8/16/07, showing low to moderate levels of VOCs in some wells (including MTBE up to 195 ug/L), and moderate levels of some SVOCs in influent to oil-water separator. Well gauging shows measurable product in only 1 well, B5, at 0.01 to 0.02 ft. Report recommends continuing operation of perimeter wall drain tap & oil-water separator system in basement of 513 W. 56th St. bldg until influent concentrations of target compounds allow direct discharge to sewer, and continuing semi-annual product level gauging and GW sampling of basement and perimeter wells. Feb. '08 rpt presents GW sample results for 2/8/08, showing some increases in dissolved contam levels in number of wells; product detected in 2 wells - B5 at 0.02 ft. and B9 at 0.1 ft. Sample of influent to oil-water separator showed almost no contaminants detected, with 11.35 ug/L total VOCs, and 4.84 mg/L TPH. Report recommends continuing semi-annual product gauging and GW sampling, and notes that continued operation of perimeter wall drain tap & oil-water separator system may not be necessary and may be able to be shutdown or replaced with an alternative device more appropriate for existing conditions. On April 28, 2008, Sean Wallace of Ambient Grp sent me an email asking for response to Feb. '08 report; I replied that report didn't actually make a proposal requiring approval/disapproval. Therefore, Ambient prepared and submitted report called: "Request for Cessation of Groundwater Treatment Portion of Remediation Activity at...[site address]," dated 5/7/08 (in eDocs). I reviewed report, noted that although influent to oil-water sep had no significant VOCs for last two samples, in Feb. and March '08, SVOCs were not analyzed in Mar.'08 sample and had only one event with no detections (in Feb.'08; SVOCs were also not analyzed in Nov. '07 sample, and Aug. '07 sample had SVOC exceedances). I sent email to Sean Wallace: "I've been reviewing Request for Cessation of GW Treatment...etc., dated

**S104278942**

5/7/08 and I noticed in table presenting results of samples of untreated GW entering oil-water separator, that samples were not analyzed for SVOCs during Nov. '07 and Mar. '08 sampling events. Sample collected in Feb. '08 was analyzed for SVOCs, results were below detection limits. I request that another sample of system influent be collected & analyzed for VOCs and SVOCs, to provide another data point and confirm absence of contamination in GW collected by perimeter wall drain tap system, before issuing approval to discontinue operation of that system. Please let me know if this request can be accommodated." Sean sent reply saying they will collect sample next week. - J. Kolleeny06/30/08: Received pdf of Request for Cessation of Groundwater Treatment Portion of Remediation Activity report, revised June 25, 2008, from Sean Wallace of Ambient Group (212-944-4615) via email on 6/25/08 (in eDocs), got hard copy on 6/27/08. Report is same as May '08 report except now has data for influent sample to oil-water separator for 6/4/08 showing all VOCs and SVOCs below detection limits, with mentions of new data in text. I sent letter (in eDocs) approving request to discontinue operation of perimeter wall drain tap and oil-water separator system by email and regular mail to Thomas Guzzi (tjguzzi@cbs.com) of CBS (replaced Alan Krupski), with email cc to Sean Wallace. - J. Kolleeny11/10/08: Received hard copy of Sept. 2008 Semi-Annual Mon Rpt by Ambient Group, dated Oct. 23, 2008 (in eDocs). Rpt notes that Sept. '08 sampling event show some increases in dissolved-phase contam in basement wells, and states that compounds detected and their ratios are more indicative of gasoline than diesel/heating oil; however, I note that highest compound in each sample was naphthalene. Four basement wells had measurable free product, up to 0.18 ft. Rpt recommends continuing with semi-annual product gauging and GW sampling. - J. Kolleeny10/28/09: Completed review of April 2009 Semi-Annual Mon Rpt by Ambient Group, dated June 24, 2009, hard copy received on July 13, 2009 (in eDocs). Rpt recommends cutting back semi-annual GW and product monitoring schedule to annual, but I noticed that 0.6 ft. of product was detected an outdoor well (C2, aka MW5). I called Sean Wallace of Ambient on 10/27/09, said I'd like GW monitoring to continue semi-annually, and that I wanted free product removed by vac truck and wells gauged more often for product. Also asked that future rpts have historic GW and product thickness data (instead of only for most recent event as this rpt had). Sean agreed, and also sent table with historic and most recent product data (in eDocs). On 10/28/09 I sent email (in eDocs) to Thomas Guzzi of CBS, cc's to Bill Grieco of CBS and Sean Wallace of Ambient: "I have completed review of April '09 Semi-Annual Mon Rpt by Ambient Group dated June 24, '09, received by DEC on July 13, '09. Rpt recommends change in frequency of GW sampling at site from semi-annual (i.e., twice yearly) schedule to annual schedule. This recommendation cannot be approved at this time. Data in rpt indicate that one of outdoor monitoring wells, C2 (aka MW5), had 0.6 feet of free product when last gauged in April '09. Removal of free product at spill sites is considered high priority by DEC. We require that product be removed from this well, preferably by vac extraction to exert influence on area around well and encourage add'l product to come into well, and that rate of product recharge into well after recovery event be monitored to determine appropriate schedule for ongoing gauging of well for product and for future product recovery events. Meanwhile, sampling of GW from indoor and outdoor wells for presence of dissolved-phase GW contam should continue on semi-annual basis; since

855 TENTH AVENUE (Continued)

S104278942

last sampling event was on May 1, '09, next semi-annual sampling event should be performed first week of Nov. '09. Results of product recovery event and product recharge monitoring, as well as upcoming GW sampling round, should be presented in next semi-annual monitoring rpt, with appropriate recommendations for further action. Rpt should include tabulated historical GW and product thickness data, in addition to recently collected data. Please feel free to contact me if you have any questions." - J. Kolleeny11/09/09: Received email from Sean Wallace of Ambient: "To keep you up to date. We've scheduled remediation contractor for this week and should be able to have rpt ready prior to holiday. I also went to site (11/6/09) to check on conditions of well that had free product, C2, which was purged during April 2009 event. There was no free product detected, but there was noticeable odor in this well and one adjacent to it, B23. These two are deepest wells and are right next to foundation wall of building to west. But I just wanted to let you know that there is no free product accumulation in well since last measured April 30, 2009. Inside well B17 that had 0.05 ft reading on free product before being pumped in April also has no free product at this date. Our full rpt, as I say, should be available before holiday." - JK12/08/09: Reviewed Nov. 2009 Semi-Ann Mon Rpt by Ambient Grp, dated 12/2/09 (in eDocs). Rpt presents results of Nov. '09 GW sampling & well gauging. Two basement wells had relatively small amts of free product (B9 had 0.03 ft; B10 had 0.12 ft). Perimeter wells had no product or VOC exceedances. Courtyard & basement wells had moderate levels of total VOCs, mostly consistent with previous results; worst basement wells were B8 with 208 ug/L total VOCs, B10 with 202 ug/L TVOCs, and B21 with 201 ug/L TVOCs; worst courtyard well was C2 with 874 ug/L TVOCs (well had free product in April '09); other courtyard wells had much lower TVOCs, in 30-40 ug/L range. Ambient Grp recommended continuing semi-annual monitoring of all wells, with product recovery when detected; short-term (3-month) study of weekly vac truck pumping or other means of applying vacuum to basement wells to see if product recovery can be enhanced in this way; and development of enhanced bioremediation strategy, possibly with targeted use of existing SVE (dual-phase?) system for hydraulic control. If this last strategy is adopted, short-term vac truck study will not be done. This will be discussed at upcoming meeting. - JK12/11/09: Attended meeting at CBS, with Sean Wallace of Ambient Grp, Chris Tomasello of Reliant Consulting Svcs., Inc., Thomas Guzzi and William Grieco of CBS. Chris Tomasello presented plan for addressing remaining contam, involving application of combo of bioremedial solutions and surfactant. I mentioned that bio may not be effective if there is remaining free product in subsurface; Chris said they would try to recover as much product as possible by vac truck before beginning. I asked how they would establish hydraulic control (necessary when surfactant is applied to ensure contam doesn't migrate); Chris suggested us of vac truck on down-gradient wells. I said I would have to check with other DEC to see if that's acceptable. Chris mentioned that he has used this approach successfully at other sites. I asked if they had info on screened interval of existing wells, and said it would be good in general if they had clear 3-D picture of subsurface beneath bldg, including shape of bedrock and thickness of aquifer, before implementing plan; Chris agreed that they needed to do some add'l site characterization work. Sean said they already had some info re: depth to bedrock and aquifer thickness, and would sent it ASAP. Received email with

**855 TENTH AVENUE (Continued)**

**S104278942**

subsurface profiles and aquifer info from Sean later in day (in eDocs). Meeting concluded that they would examine wells and put together plan for add'l site characterization and submit. - J. Kolleeny04/07/10: Sent email inquiry to Sean Wallace of Ambient Grp: "Can you give me update on site? When we met in Dec. '09, we agreed that Chris Tomasello would put together a work plan for add'l investig to delineate soil contam and determine subsurface bedrock configuration, so that he can design remedial plan. Any progress on that? Also, I was wondering if recent heavy rains have caused any unusual appearance (or disappearance) of free product from wells? Have wells been gauged for product recently? (How often are they checked?) If wells haven't been gauged for product since big rains of March, I'd like to request that they be checked." I got email reply from Sean: "Last week Chris and I went out with borescope and confirmed well construction type. Basement wells are slotted down to bottom. So both above and below water line. Two of courtyard wells are not slotted at all. These were historically part of first 5 monitoring wells established. All other wells that are labeled B are of slotted construction type. Chris is putting together statement of our findings. We took readings today also and found very little change since last monitoring event. Only one well had measureable free product at 0.05" and it was well that has almost always had small amount. Two of wells that are usually dry did have some water, but in general, and I'll have to put chart together, I didn't notice that water level was significantly different. Today we had vacuum truck suck out all wells and tomorrow we'll gauge recharge and then take water samples. After this we'll be in position to write rpt with recommendations either for further vacuum truck events or possibly a soil washing/bioremediation event." He then sent follow-up email: "I just compared water levels and there is an extra 0.5' to 1' of water in most wells. More soon!" - JK06/07/10: On 5/19/10, received email from Sean Wallace of Ambient Grp with pdf of April 2010 Semi-Annual Monitoring Rpt (in eDocs). On 6/4/10, received hard copy of rpt, plus pdf of lab data (in eDocs). On 6/7/10, sent email to Sean noting that rpt did not include product thickness data. Got email response from Sean with attached recent and historic product thickness data (in eDocs); email stated: "Here are water levels from May 26th visit on Page 1. Two wells with measureable free product in usual spot (B9 & B10) and B8 is showing some slight product, which it hasn't for awhile. But in Aug 2006 B8 had 1.7 ft (see Page 3 for historical summary of oil layer thickness detected in each well). Page 2 is a map of basement to show locations and also to correlate with graph on Page 4 where I attempt to represent graphically relation of water level to bedrock depth, as measured in each well. Note that lines of well are marked on diagram as A, B, C, D, and E. These are East West gradient. I took liberty of trying to show North-South gradient for Courtyard section and a slice through middle of basement that covers area where free product persists." Will review rpt. - JK07/09/10: Finished review of April 2010 Semi-Ann Rpt by Ambient (in eDocs). Sent email (in eDocs) to Thomas Guzzi of CBS, cc's to William Grieco of CBS and Sean Wallace of Ambient, approving rpt recommendations: "I have reviewed April 2010 Semi-Annual Monitoring Rpt for this spill site, by Ambient Group, Inc. Report recommends: 1. Continuing bi-annual (i.e., twice yearly) monitoring of all wells, with vacuum truck removal of any measurable free product; 2. Performing short-term (3-month) study of free product development using vacuum truck pumping of basement and courtyard wells to influence areas around the

S104278942

wells and evaluate if free product recovery rates can be enhanced in this way.3. Presenting to CBS an enhanced remediation strategy to help move spill case toward closure, involving use of bioremediation in conjunction with soil washing to move residual oil from unsaturated zone soil to water table where it can be recovered by pumping. These recommendations are approved. Ambient Group should proceed to implement recommendations. Feel free to contact me if you have any questions." - J. Kolleeny12/20/10: Received email from Sean Wallace of Ambient Group, with attached pdf file: "Please find attached rpt [in eDocs] for 2nd monitoring event of 2010. Please let me know if you require anything else at this time. I am preparing rpt on effects of vacuum truck pumping (3 events, to be completed by end of year) under separate cover." - J. Kolleeny12/29/10: Reviewed Nov. 2010 Semi-Annual Mon Rpt by Ambient Group, dated 12/20/10 (in eDocs). Rpt summarizes Nov. 2010 GW sampling event, showing low to moderately low levels of dissolved VOCs in basement wells, very low VOCs in courtyard wells. Basement well B5 had "small but visible layer of oil in sample bailer." Rpt states that Ambient will continue bi-annual monitoring of wells, with removal of free product by vac truck when detected, and that Ambient will present an enhanced remediation strategy to help move spill toward closure; bioremediation will be discussed in conjunction with soil washing to mobilize potential residual product from vadose zone to water table where it can be recovered by pumping. - JK03/11/11: On 3/10/11, received email from Sean Wallace of Ambient Group with attached pdf file of Jan. 2011 Spill Monitoring Add'l Rpt: Brief Rpt on Effects of Vacuum Truck Pumping for Enhancing Free Product Recovery (in eDocs). Email stated: "Please find attached our rpt on effects of vacuum truck pumping on enhancement of free product recovery at this site. Our next scheduled Monitoring event is in May. We plan on taking some water level measurements next month (April)." On 3/11/11, I sent email: Thanks for pdf file of rpt. I note that you are now recommending annual GW sampling and periodic product recovery as needed. What happened to idea of bioremediation plus soil washing to de-sorb residual oil from soil, as mentioned in Nov. 2010 Semi-Annual Rpt? Is that no longer being pursued as remedial approach? Please let me know about, and then I will respond to this rpt's recommendations." Sean Wallace sent reply: "Soil washing has been recommended, as you note. However, our client has many levels of decision makers and, as consultant, we are not made privy to mechanism they are using internally to consider further remediation. Our November recommendation was put forth as way to bring closure within a year and I will make that case to them again as we approach next scheduled monitoring event. In absence of remedial action, we feel it would still be acceptable to monitor dissolved concentrations on less frequent basis, as long as more frequent checks for free product were in place, as a precaution. If your dept recommends that we follow up on our Nov 2010 rpt suggestion of soil washing, based on lack of progress with vacuum truck method, then we would of course assist our client in moving forward with that remediation step. Main concern expressed is that there is no 100% guarantee of success and I believe this lack of certainty is cause for hesitation. One train of thought is if levels of dissolved hydrocarbons measured in wells remain consistent, client may wish to pursue a more passive approach. However, if DEC suggests more active remediation, that would carry weight." Rpt presents data on product thickness before & after vacuuming thru Dec. 2010; data show traces of product (up to 0.03 ft. in Dec. 2010, up to 0.07 ft in May 2010)

S104278942

in couple of wells. Rpt recommended reducing dissolved-phase GW sampling from semi-annual to annual, gauging wells for product quarterly and doing vacuum recovery as needed. - JK 4/22/11: I sent email to Sean Wallace of Ambient Group: "Sorry it's taken a while to get back to you about this site. Recommendation in your last rpt to change GW sampling schedule from semi-annual to annual is not approved. DEC's mission is to move spill cases toward closure in an expeditious manner. Semi-annual sampling is not onerous, in my opinion, and will do better job of establishing trends in contaminant levels than will annual sampling. Product recovery may be performed periodically on an as-needed basis, as recommended. However, I would still prefer that Responsible Party follow up on earlier suggestions about developing an enhanced remediation strategy to move this case more quickly toward closure." Received email reply from Sean Wallace: "Thank you. We will inform our client of decision and of preference to follow previous path, i.e., soil washing leading toward expeditious closure." - J. Kolleeny06/09/11: On 6/7/11, received email from Sean Wallace of Ambient Group, with attached pdf file of May 2011 Semi-Annual Mon Rpt dated 6/7/11 (in eDocs); email stated: "Here is rpt for first bi-annual monitoring event for 2011. We are preparing recommendation for an enhanced remediation strategy to present once more to our client, CBS." Will review mon rpt. - JK08/09/11: Reviewed May 2011 Semi-Annual Mon Rpt by Ambient Group dated 6/7/11. Rpt presents May 2011 well gauging & sampling data showing small amounts of product detected in basement wells B5 and B10 ("1 cm visible in 1/2-inch diameter bailer"), and for dissolved-phase, low concentrations of VOCs in several wells ranging up to 104 ug/L total VOCs in B8. Rpt states that basement wells continue to show oil impacts, and based on data, Ambient Grp recommends continued semi-annual monitoring, removal of product as needed by well purging, and they will present to CBS an enhanced remedial strategy involving bioremediation and soil washing to help make product recoverable and move spill toward closure in a timely manner. - J. Kolleeny03/07/12: Reviewed November 2011 Semi-Annual Mon Rpt by Ambient Group, dated 12/27/11 (in eDocs). Nov. 2011 well gauging & sampling data showed product detected in one basement well, B10 (amount not specified); dissolved-phase GW sampling showed low levels of total VOCs, ranging up to 85 ug/L tVOCs in well B5. Rpt states that basement wells continue to show oil impacts, and based on data, Ambient Grp recommends continued semi-annual monitoring, removal of product as needed by well purging, and that Ambient Grp will present to CBS two options to enhance remediation at site: (1) soil washing to help move residual product from soil to water table where it can be more readily recovered, and (2) bioremediation to degrade residual impacts in soil and GW. - J. Kolleeny06/05/12: Met with Sean Wallace of Ambient Group, Chris Tomasello of Reliant Consulting, and CBS reps - Tom Guzzi, Ching Li and Greg Marcy, to discuss potential remedial approach of using surfactant/soil washing to desorb product trapped in soil to expedite product recovery and bioremediation solutions with facultative bacteria to degrade residual hydrocarbons in soil and GW. CBS asked if DEC could guarantee spill closure if they proceed with this approach, Vadim Brevdo and I said we could not give a guarantee, however, we believe that this approach is likely to bring spill to closure more quickly than continuing with present approach of semi-annual monitoring and vacuuming of wells with product. I noted that any remedial work plan proposing soil washing & bioremediation would have to show that sufficient numbers

and locations of injection points can be installed at site to adequately target area(s) of concern, and plan would have to show that there are sufficient numbers and distribution of potential product collection points to control and prevent any migration of mobilized product off-site. Tomasello indicated both conditions can be satisfied. Sean Wallace mentioned that another semi-annual sampling event was recently performed and a rpt will be coming soon. - JK06/22/12: Reviewed May 2012 Semi-Annual Mon Rpt by Ambient Grp, dated 6/10/12 (in eDocs). Rpt presents results of May 2012 gauging and sampling event. Prior to pumping with vac truck, basement well MW-10 had 0.05 ft of free product; after pumping, basement wells B5 and B10 had traces of free product (0.01 and 0.02 ft, resp.). Several wells continued to have low levels of dissolved VOCs: B11 had 92 ug/L total VOCs, B8 had 89 ug/L tVOCs, B9 had 47 ug/L tVOCs. VOC levels have generally decreased over time. Rpt recommends continuing bi-annual monitoring of wells, with removal of free product via well purging as needed, and states that Ambient Grp will present to CBS two options to enhance site remediation: (1) soil washing to help move residual product from soil to water table where it can be more readily recovered, and (2) bioremediation to degrade residual impacts in soil and GW. - J. Kolleeny

DEC Region: 2  
DER Facility ID: 180615  
DEC Memo: 6/7/07-Matthew Klaas-Called the NYNJ Port Authority at the listed number 212-246-5451. This is no longer their number. However, was able to find a current number of 212-435-7000, after explaining the situation, I was connected to their pier division at 212-246-5450 and was told they could not help me in this matter.-Attempted to dial contact Mike Prund of Chemical Waste Mgt., the listed contact number is no longer in service, and was unable to obtain a new contact number for him.6/11/07-Matthew Klaas (Albany DER)-Drafted a letter to the NY/NJ port authority requesting information about 2 spill files that remain open.7/12/07 - Matthew Klaas (Albany DER)-Recieved a telephone call from Bernice Malione from the Port Authority regarding two spills mentioned in the letter I wrote on 6/11. She was just touching base to let me know she was working on getting the necessary information and would get back to me. She said she could be contacted any time in the future for assistance at 212-435-4454.3/31/09 - Austin - Transferred from Needs Reassignment to Rahman for further work to remeidate and close - end04/24/09 Called Ms. Bernice Malione's Office @(212)435-4454 to discuss the two open spill cases.Left messege to her secretary.(sr) 01/15/10 Spoke with Ms Malione today.Current status of the tank will be sent to DEC.Previous records lost on 9/11.(sr)06/15/10 Spoke with Ms. Bernice. Spill has been open for almost 20 years.She indicated that after such longtime she could not find any info on the spill.Again,address could be wrong.(sr)

DEC Region: 2  
DER Facility ID: 402345  
DEC Memo: "Modified" TTF letter e-mailed to HPD property manager -Derek Parsons.Director, Environmental Compliance NYC HPD - Office of Development100 Gold St, Rm 9V-5, NY, NY 10038(p) 212-863-7172; (f) 212-863-7988, (C) 917-559-4337parsonsd@hpd.nyc.gov e-mail message sent:Attn: Derrick Parsons, HPD Property ManagerThe following spill cases refer to two Tank Test Failures that both occurred on April 11, 2011.Spill #1100355 - 500 West 52nd St, Manhattan Spill #1100365 - 400 Grand St, ManhattanBelow is the standard text sent out to all property owners/managers after a tank test failure:On April 11, 2011 the New York State Department of Environmental Conservation (the Department) received notification of a tank system integrity failure at the above mentioned facility. You have been identified as either the owner of this tank or the owner's representative. Because the tank system was found not to be tight, a petroleum release may have occurred at this property, which is a violation of the New York State Environmental Conservation and Navigation Laws. Therefore, the Department requires that you take immediate action to prevent and stop any additional release of petroleum, determine the cause of the failure, and investigate/remediate any soil and/or groundwater contamination, if a petroleum release has occurred. The following steps are required by the Department: 1. Determine if the "wet" portion of the tank system failed. If so or if it is inconclusive as to which part of the system failed, then the tank's contents must be emptied immediately to ensure that no further release occurs.2. Determine the cause of the tank system integrity failure. This process may include, but is not limited to, excavation of a part of the tank system, isolation of the tank from the piping and separate retesting, or tank and/or piping repair/replacement with subsequent system retesting.3. Remove any contaminated soil found during the excavation of the tank or piping to the extent feasible and properly disposed of it under applicable regulations for petroleum contaminated soil. 4. Submit a letter or report to this office no later than one month from the date of this letter. The report must be prepared by a qualified professional. The report must reference the spill case number and the site address. The report must specify the cause of the tank system failure and the actions taken to stop, minimize, or remove the petroleum release and must also include conclusions and recommendations for further action. Specific mention must be made if any contamination was found, and how it was dealt with.\*\*\*\*\*  
\*\*\*\*\*Mr. Parsons - As per our telephone conversation, it sounds as though your office is proceeding with the required isolation and retesting necessary to determine the location of the leaking problem. In terms of the NYSDEC, we are most concerned with the identification of any actual spill or soil contamination which may have resulted from a leak.Please get back in touch with our office as soon as this additional investigation is completed with any results you may be able to provide.Thank you,Steven SangeslandEnvironmental EngineerNYSDEC - Region 2 Spills Unit\*\*\*\*\*  
\*\*\*\*\*5/12/2011  
Sangesland spoke to Derrick Parsons at HPD. He had the environmental consultant in his office. He said the issue with 500 W 52nd St site was a dry leak from an old weld on the top of the tank. They tried to repair it, but it didn't work. (AST wrapped) Tank is being taken out

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "HARRINGTON" Reassigned from DEC Sigona on August 4, 2003, as per Letter from P. David Smith, Bureau Director, Remedial Bureau B. This spill has been consolidated under spill No. 8904939 DEC Sigona performed field inspections on 10/22/2002 and 10/23/2002 and observed 4,000 gallon steel tank removal activities. There were low levels of petroleum contamination on the tank top and overburden. When the tank was removed at approximately 11:30 A.M. on 10/23/2002 there was petroleum contamination and free product sheen on the water table visible in the tank excavation. The concrete pad was removed underneath the tank. The DEC Sigona requested that the excavation be backfilled with pea gravel to enhance the vapor recovery effort. The tank was located immediately adjacent to the foundation wall for the Bull McCabe Restaurant located downgradient of the site. GSC indicated that monitoring wells and pea gravel will be installed at the former 4K tank location. AJS 10/24/2002.

Remarks: Elevated Photo-ionization detector readings found in soil samples

DEC Region: 2  
DER Facility ID: 355500  
DEC Memo: This spill has been consolidated under Spill No. 89-04939. See also Spill Nos. 90-09654, 94-00944, 95-05594, 00-07323, 04-03447, 04-05537, 04-13534, 04-13552, and 05-01922.8/10/2003: Project transferred from Sigona to Harrington (central office) for management. (Sigona)10/12/2004: Consent order and Corrective Action Plan were executed by the Regional Director. (Harrington)3/29/2005: Building at 714 11th Avenue was evacuated by FDNY due to elevated levels of gasoline vapor in basement (~11% LEL). Vapor intrusion caused by air rotary drilling at Mobil site as part of station regrade activities. (Harrington)3/31/2005: Site visit conducted. Met with representatives of Exxon Mobil, Salomone Brothers, Trammell Crow, and the Bull McCabe restaurant. Contacted Chief John Belnavus (FDNY Battalion 9) to discuss the stop work order issued. He lifted the order after our conversation, as Exxon Mobil had presented a satisfactory plan to avoid any further vapor issues in the adjacent building. (Harrington)6/2/08- DEC Piper. SPill staff recieved notification that approx 5 gallons of gasoline was discovered in soil in an excavation adjacent to site. Spill 0802247. This spill has been closed and referred to this spill.4/4/2005: Approved RAP amendment during on-site meeting. (Harrington)4/7/2005: Approved RAP amendment #2 during on-site meeting. (Harrington)4/19/2005: Approved RAP amendment #3 during on-site meeting. (Harrington)5/2/2005: Approved CAMP amendment during on-site meeting. (Harrington)5/6/2005: Security guard was murdered on-site. NYPD believes the motive was robbery. (Harrington)9/19/2005: Upgrade activities are complete, and station is now operational. Sent letter to Exxon Mobil approving the monitoring well replacement work plan, as all on-site wells were destroyed during the station upgrade. SVE and GWPT systems are on-line. (Harrington)10/31/2005: Received station upgrade activity report. Sent Exxon Mobil a letter closing spill nos. 04-13534 and 05-01922. (Harrington)6/8/2006: Approved Well Replacement Report documenting installation of two new recovery wells and an additional SVE well. (Harrington)6/13/2006: Approved request to shutdown the groundwater recovery system in an e-mail to Exxon Mobil. Stipulated that the upgrade work to the electrical panel shall be completed so that the system can be re-started with minimal delay should the need arise. (Harrington)8/17/2006: Sent an e-mail to Exxon Mobil approving the hydraulic lift removal report. (Harrington)8/29/2006: Sent an e-mail to Exxon Mobil approving the sensitive receptor survey report. (Harrington)2/6/2007: Project transferred from Harrington to Smith (central office) for management. (Smith)4/19/2007: Approved the installation of two additional remedial wells to expand the Soil Vapor Extraction system. Performed site visit on April 18, 2007. (Smith)6/22/2007: Two additional wells installed to expand SVE system. (Smith)7/24/2007: Project transferred from Smith to Harrington (central office) for management. (Harrington)8/3/2007: PM visited the site with Kleinfelder Personnel (Mooney, Meyerhoefer). O

& M of SVE system is on-going. Kleinfelder will soon be proposing the abandonment of several off-site monitoring wells.  
(Harrington)2/18/2008: PM sent e-mail to Exxon Mobil regarding the SVE system expansion. Based on increased BTEX concentrations in groundwater (wells RW-2 and VP-MW-9), a revised groundwater remedial strategy shall be proposed by Exxon Mobil. (Harrington)12/4/08 - Haggerty: Assumed management from Dave Harrington3/2/09 - Haggerty: Approved Reporting Reduction Request. Sampling will remain quarterly, SVE/AS system maintenance will remain on 2 week schedule, reporting will now be bi-annually. System has been operating since 2001 and functioning well. 7500lbs of mass recovered at this point6/11/09 - Haggerty: Approved Hydraulic Lift Removal Report. Some SVOC detection above soil guidance but not high enough to warrant further excavation. Hydraulic fluid analyzed for the presence of PCB's, no detections. No spill # was called inMay 2010 - PM approved Subsurface Investigation and Biological Enhancement/ Chemical Oxidation Work Plan. New Spill (0909441) called in because of EM Phase II workJune 2010 - 70,000ppb dissolved BTEX in groundwater encountered along the western boundary of the site. PM required additional delineation including bedrock monitoring well August 2010 - approved SI workplan. Includes delineation of the uppermost aquifer and bedrock aquifer. Bedrock wells will be cored to inspect for fracturing and evidence of flowing groundwater such as oxidation (rust) of metals within the rock. Bedrock wells will isolate the bedrock aquifer - screened portion of PVC in bedrock with bentonite seal above and below bedrock interfaceNovember 2010 - EM has handed the project over to Liberty Petroleum Realty LLC. See 11/18/10 letter from Liberty. (sd)February 2011 - Supplemental SIR under reviewMarch 2011 - Reviewed SIR. Required additional delineation west of the site along West 51st Street also to provide report on the effectiveness of ISCO injectionsMay 2011 - approved work plan for additional off-site delineationAugust 2011 - the 2 additional wells couldn't be installed. They couldn't reach the Arcadis minimum pre-clear depth of 6.5ft plus utilities are very tight in that area. Arcadis will have to design an alternate way of providing the dataNovember 2011 - approved shutting down the system immediately to allow for the site to reach static conditions before the VTE events -Proceed with the VTE Pilot test as soon as possible (within 30 days). -The RAP is due is 75 days from today's date (10/26/11).December 2011 - VTE Pilot test could not be performed in December due to the DOT Holiday embargo. Moved to January 2012February 2012 - Based on the proposed geochemical sampling/ IRM results, the Remedial Action Work Plan is due by April 30, 2012May 2012 - Arcadis submitted a RAP which is approved contingent upon minor alterations. The issue now is getting the new RP, Liberty, to sign a CO with oversight costs. EM already has a site-specific CO for this property from 2005, but since they are switching remedial technology, we are justified in asking for additional oversight costsJune 2012 - Consent Order executed with Liberty PetroleumAugust 2012 - TPE wells and one delineation well will be installed in early Sept. I granted Arcadis a short extension. They inquired as to whether they need a Amtrak permit (the track was over 500ft away) and that slowed down the process.December 2012 - Dual-phase extraction wells have been installed and trenching completed. Sewer connection possibly completed (unable to speak with the Arcadis PM but it should be). Also, the SVE system was shutdown indefinitely

basement. Truck used to pump out SVE system had released vapors into fresh air injection system which then pumped vapors into above address. Dan Caravan took PID into above address and found non-detect levels. Caravan also installed a carbon filter at intake of fresh air injection sytem to prevent reoccurrence of problem. Spill closed by Vought,

**BROWNFIELDS:**

Program: BCP  
 Site Code: 57349

**Actual:**  
**31 ft.**

Site Description: The site consists of several parcels located on West 53rd Street between 10th Avenue and the Amtrak easement, on West 52nd Street adjacent to the east side of the Amtrak easement, and along the Amtrak easement between West 51st and 53rd Streets in the City of New York, Borough of Manhattan. Railroad tracks pass through the site. A former ExxonMobil gas station was present on this portion of the Site from approximately 1950 - 1992. By February 2006, all original buildings on-site were torn down and all on-site contaminated soil was excavated and removed off-site. The property is currently owned by Dermot Clinton Green LLC. The Site now consists of two residential towers, a mixed-use low-rise building, public park, and subsurface parking garage (all currently under construction). A Certificate of Completion was issued on October 20, 2006.

Env Problem: Past environmental investigations revealed that this BCP site had on-site and off-site petroleum impacted soil and groundwater as a result of petroleum spills from the former Exxon/Mobil Service Station at the corner of 53rd Street and 10th Avenue. Dissolved phase groundwater contamination (BTEX, lead and MTBE) has impacted the shallow groundwater table exceeding standards. An adjacent off-site building has experienced liquid petroleum in the basement. On-site and off-site remedial work occurred in early 2000. Although all on-site contamination has been removed through the BCP program in 2006, an off-site groundwater plume still exists and additional cleanup work is required to remediate the off-site contamination. The City of New York has accepted the responsibility for the off-site

**S106906459**

contamination and a final Site Investigation Work Plan was approved by NYSDEC on February 9, 2009. Field work will begin in the spring of 2009.

Health Problem: All on-site contamination has been remediated through remedial actions completed in 2005-2006. Remedial actions included demolition of all site buildings, removal of all soil to the top of bedrock, and associated dewatering of the site. No contamination is known to exist beneath the top of bedrock. Therefore, all on-site exposures have been mitigated. A shallow off-site petroleum-contaminated groundwater plume was documented in 1993 (NYSDEC Spill No. 93-08101). Migration of the plume has been limited due to the geology of the area. NYSDEC is currently pursuing the responsible party (Clinton Green OU#2) to investigate and remediate any off-site contamination.

Program: BCP

Site Code: 416811

Site Description: Location: The Off-site Clinton Green Development Project Site, defined by a shallow off-site petroleum-contaminated groundwater plume, involves the intersection of West 53rd Street and 10th Avenue in Manhattan, New York City. Site Features: This location is an urban area of commercial/light industrial and residential use including multi-story buildings, sidewalks and open city streets. A paved elementary school playground is located on the southeast corner of this intersection and the Hudson River is approximately two blocks west of the Site. Zoning/Historical Use: The Site is in an Environmental Zone which is part of the Clinton Green Urban Renewal Area. This is an off-site remedial project associated with the now-completed Clinton Green Development Brownfield Cleanup Project. Site Geology and Hydrogeology: The depth to groundwater ranges between 12 to 20 feet below the surface. The soil, below the urban fill, is fine to coarse-grained sand. Bedrock is encountered between 11 feet and 15 feet below the surface.

Env Problem: Nature and Extent of Contamination: The on-site source area (Clinton Green Development BCP Site) was cleaned up by Dermot Clinton Green in 2006, and this project includes the remediation of the off-site petroleum-contaminated plume. Contaminants: Based upon investigations conducted to date, the primary contaminants are petroleum-related volatile organic compounds (VOCs) in a shallow off-site groundwater plume. Concentrations: Concentrations of benzene in the groundwater ranged from non-detect to 330 parts per billion (ppb), exceeding the groundwater standard of 1 ppb. Ten other VOCs also exceeded the groundwater standard. Naphthalene (290 ppb) was the only semi-volatile organic compound detected and it exceeded the groundwater standard of 5 ppb. This very localized plume has migrated off-site approximately 100 feet down-gradient. Significant Threat: The BCP site presented a significant environmental threat due to the off-site release of contaminants from source areas.

Health Problem: Direct contact with contaminated groundwater is not expected since contamination is located at depth and below pavement. Ingestion of contaminated groundwater is not expected since the area is served with public water. An evaluation of the potential for vapor intrusion to occur is part of the approved Remedial Action Workplan currently underway.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT"7/1/02 TJDReceived work plan from Emteque (John Raguso). Expedited review at consultant's request. Unable to approve plan as report missing key information and site not complete deliniated. Consultant directed to provide a modified plan which includes installation of wells and contains missing report data. Missing data includes: boring logs, MTBE analysis, plume boundaries, scaled map which includes all tanks and relevant site features, groundwater flow direction etc..7/1/03 TJDStu Bassel (LMS 845 735 8300) contacted DeMeo to inform DEC that LMS had taken over project. A work plan will be submitted to remove tanks, excavate accessible soils, use bio-remediation to treat groundwater contamination and soil vapor extraction to remediate the soil contamination. LMS was also directed to provide any recent sampling data & all relevant information regarding the proposed bio-remediation application. In addition LMS was informed hydraulic control would be required if bio remediation is approved for the site.8/29/03 TJDReassigned to Vought9/18/03: Martin Motors submits Supplemental Conceptual Remedial Plan prepared by LMS. In cover letter, Martin Motors reports that approximatley 5 feet of product was found in well MW-2 on or around July 28. Manual

bailing program initiated - approx. 20 gallons product recovered through 8/21/03. Product thickness in well dropped to approx 2 feet as of 8/21. (JHO, 1/13/05)1/6/05-Vought-Vought spoke David Rubin (Con Ed 718-204-4219) who is looking to install a substation at this site. Con Ed looking to resolve open spill issue and have BCP pre-application meeting. Con Ed will notify current owner of meeting.1/10/05Spill reassigned to O'Connell. Con Ed will be attending pre-app meeting with DEC on 1/21/05. Con Ed apparently conducted preliminary off-site investigation, but no report was submitted to the Department. Will request copy at pre-app meeting. (JHO)5/10/07: On-site cleanup was completed by Con Edison under a Brownfield Cleanup Agreement (site no. C231047, Astor Substation). There is still off-site gasoline contamination that remains beneath the sidewalk and street on 11th Avenue. This spill number is being transferred to the Petroleum Remediation group for follow up with the responsible party. (JHO)

-----8/28/08: Reassigned from Vadim Brevdo to Kartik Chanda. (Chanda)9/3/08: Chanda updated this spill site and discussed with Mark Tibbe and Bryan (NYSDEC) regarding the off-site contamination originated from this site. It is concluded that a Stipulation Agreement (STIP) with a Corrective Action Plan (CAP) will be sent to RP (previous owner of this site).9/8/08: Chanda sent a STIP and CAP to RP (Anthony Chianese, vice president of Martin Motors) via certified mail. (see eDocs)9/19/08: The letter was undeliverable. Chanda made a phone call to David B. Rubin, Con Edison to get the previous property owner's name and address. Mr. David B. Rubin (Con Edison) sent the following contact information:The RP name is: Martin Schlanger Martin Motor Sales, Inc. 677 11th Avenue New York, NY 10019The RP's Attorney is: Mr. Joseph P. Baratta Baratta & Goldstein 597 Fifth Avenue New York, NY 10017 Ph. (212) 750-97009/22/08: Chanda discuss with Mark Tibbe(NYSDEC)and resent a STIP and CAP to RP (Martin Schlanger, Martin Motors) via certified mail and a copy to RP's Attorney via regular mail.10/09/08: The letter comes back to DEC. Chanda discussed with Mark Tibbe and John Urda regarding this site. John Urda search NYS Department of State database and find out the following information:\* Chairman or Chief Executive Officer:Janet Schlanger1281 Gulf of Mexico DR/#802Long Boat Key, Florida, 34228\* Principal Executive OfficeMartin Motors Sales Inc.677 11th AvenueNew York, New York 1001910/14/08: Chanda performed a site visit at 700 11th Avenue (Astor Substation) and across the street at 677 11th Avenue (Martin's Manhattan). The Martin Motor Business is still at 677 11th Avenue. Chanda has taken several photographs regarding the current location of Martin Motors.10/16/08: Chanda discussed with Mark Tibbe and John Urda (NYSDEC) and sent another letter to Ms. Janet Schlanger (Florida)via certified mail and Martin Motors via DEC's Conservation Officer.10/24/08: Chanda received a phone call from Andrew E. Skroback. he is the environmental attorney for this site. He request time extension to submit the signed STIP. Chanda received an extension request via the following email:" Dear Mr. Chanda:It was a pleasure speaking with you today. As discussed, I write onbehalf of Martin Motor Sales, Inc. to request an extension of ourdeadline to respond to your letter of September 22, 2008, such that ourresponse to your letter would now be due on or before Monday November24, 2008. Please confirm this extension by return email.Once we have time to review the past

technical reports, I propose that we arrange a meeting between NYDEC, myself and ERM to discuss the scope of what should be done at the site and the scope of the proposed corrective action plan, as well as other potential sources of area contamination. I look forward to working with you on this matter. Best regards, Andrew E. Skroback (Drew) Stroock & Stroock & Lavan LLP 180 Maiden Lane New York, NY 10038 (212) 806-6446 askroback@stroock.com " 10/28/08: Chanda discussed with Mark Tibbe (NYSDEC) and approved one month extension to submit the signed STIP. The signed STIP must be submitted to DEC by November 24, 2008. 12/08/08: Transferred from Chanda to Tibbe. STIP effective 12/05/08. 9/20/09 - Austin - closed and referred spill # 0609005 to this one, a report from Con Ed of finding gasoline contaminated soils in the immediate vicinity of this site. See report and eDocs - end 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/28/11 - Obligado - Spill re-assigned from O'Connell to Obligado site work found contaminated soil.

**ASTOR SUBSTATION PROJECT SITE (Continued)**

**S106906504**

used for gasoline filling station and automobile service garage. Prior to its acquisition by Con Edison on April 12, 2005, the site was owned and operated by Martin Motors Sales, Inc. (MMS) as a retail automobile sales and service facility. The area around the site is fully developed as commercial, residential and institutional uses to the east, north and south; with another Con Edison electrical substation located west of the site across 11th Avenue. The building on the site had been demolished in connection with Con Edisons redevelopment of the Site into an electrical substation that is needed to meet the increasing demand for power in midtown Manhattan. The site is currently being redevelop and the electrical substation construction is anticipated to be completed sometime in 2008. Investigations completed at the site include a Limited Phase II Environmental Site Assessment (January, 2005) and Remedial Investigation Report (November 2005). The volunteer has submitted and the Department has approved a Remedial Action Work Plan(RAWP) which involves excavation of soil at the entire site and the northern portion of 11th avenue sidewalk area along the western site property line down to top of bedrock surface. Contaminated media will be removal and properly disposed off-site. Implementation of the approved RAWP started on 4/25/06. Remedial construction was completed on February 2007. Remedial Action Report(RAR) date March 2007 and RAR addendums dated April 2007 and November 2007 respectively, collectively equivalent to a Final Engineering Report. FER was approved on 12/21/2007 and a Certificate of Completion was issued on 12/21/2007.

Env Problem: Site investigations conducted prior and after implementation of the BCP agreement revealed that the presence of underground storage Tanks (USTs) that were associated with the former gas station or automobile repair facility; petroleum contamination in the northwest corner of the site (both on-site and off-site) in soil and groundwater, including petroleum product on the groundwater surface(up to 5 feet of separate-phase product has been detected in an off-site well in the vicinity of the former gasoline filling station located in the north west portion of the site); soil and groundwater near the location of a former oil/water separator in the garage area which is located south east of the site had been impacted by the former site uses (automobile service garage); Soil Gas sampling indicates the presence of VOCs, including both gasoline related compounds and chlorinated solvents (PCE, and TCE) that are consistent with findings in soil, groundwater, and pass site use, The remedial investigation report also identify a NYSDEC spill site (spill # 8904939 petroleum origin) is located at the southeast corner of west 51st street and 11th avenue about one block north of Astor substation site, these off-site properties may be contributing to the soil vapor detections; Low level of PAHs and Metals were detected from on site soil; Sediment samples from the floor drain in the service garage indicated the presence of PCE, TCE and gasoline related compounds with concentration above the TAGM4046 recommended soil clean up objective. The applicant had implemented the approved Interim Remedial Measures (IRM) to recover petroleum product identify in the on and off site wells since September of 2005. The thickness of the petroleum product in groundwater monitoring wells show significant drop as the result of the IRM activities. The quality exposure assessment indicated the lack of exposure pathways at the site because of the current ground surface is covered with impervious surface. DEC has determined, in consultation with NYSDOH, that the

conditions at this site do not pose a significant threat to human health or the environment. The RAWP dated December 2005 was approved March 31, 2006 has been implemented. The FER has been approved and the COC issued in December 2007.

Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. The site is currently covered with buildings and pavement, preventing direct contact exposures.

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND" On August 15, 2001, DEC Sigona received spill closure report from AKRF dated August 14, 2001. See file for details and copy of report. 12/01 Spill re-assigned to Sangesland AKRF submitted a letter dated Dec 27, 2001 which included a second copy of the Aug 14, 2001 report and a series of photographs showing the complete excavation of the city block down to bedrock. There was a problem with the PBS registration on the site. Sangesland asked AKRF to re-submit the PBS forms with the correct address (old PBS had the wrong city block) along with info on ALL of the tanks found and removed from the site. From a technical/environmental point of view the site is clean and will be closed out as soon as all of the administrative paperwork has been submitted and reviewed. 2/4/2002 AKRF has submitted copies of all updated PBS registration forms (PBS # 2-604810). All tanks have been removed from the site. The whole site has been excavated down to bedrock. All petroleum related contamination on this site has been removed. Spill Closed.

Remarks: UNDERGROUND STORAGE TANK FAILED OVER TIME AND CAUSED SOIL CONTAMINATION - SOIL WILL BE STOCKPILED

DEC Memo: spill from boiler on floor. approx 500-1000 gallons down drain.  
Surface cleanup is relatively small. Drain is believed to go to  
Amtrak tracks below. I spoke with AMtrak rep who walked the tracks.  
they found no oil. DEP was informed and surface spill was taken care  
of. Followup for closure.Release to city sanitary system. Surface  
cleanup complete and repairs have been made. Spill closed.  
Remarks: Tommy reported to Castle Oil over 1000 gallons in basement down the  
drain - No cleanup noted as of yet - possibly from a boiler  
malfunction

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND/DO"6/7/06- DECP iper took lead from Sue LAsdin due to associated spill at same address.According to Environ, talks w/ employees revealed that there was a UST on site that has recently been abandoned in place. The Dept has no information on this tank and may be less than 1100 gal. Regardless, soil analytical and/or passing results before abandonment has not been received. Address currently using 2 manifolded 275 AST though used old fill line. This fill line has recently been replaced. If passing tank results cannot be provided, then boring will need to be performed.9/28/06= DEC Piper reviewed subsurface investigation report. Due to refusal at shallow depths<3 ft., soil samples were not able to be collected. No organic vapors detected in these borings around tank. Borings around fill line revealed soil contamiation. Further work is warranted. 6/19/07 DEC Piper spoke w. Drew Bonas w. Environ, He has been back and forth w. owner and will let me know outcome of upcoming meeting .12/12/07- DEC Piper reviewed case. Based on spill info and site consitions, spill to subsurface was minimal and poses no significant threat to health and env. Residual contamination exists. This spill will be consolidated into 0514611. 0209507 will be closed.

DEC Memo: need to send a TTF letter 11/7/05 - Raphael Ketani. I am sending a TTF letter today regarding the site. I will send one copy to Angela Donnolo, ATC Management, 1501 Broadway, NY, 10036, and one to 605 West 48 Street, LLC. Nov. 7, 2005A "Tank Test Failure Letter" was sent to: Joseph Dounolo Advanced Cout. Corporation 605 West 48th St. New York, NY 10036 12/1/05 - Raphael Ketani. Letter received from Thomas Leddy, President of Pro Test ((718) 815-6292. Piping is disconnected from the two tanks. Tanks are partially excavated. Studying feasibility of removing the tanks or bioremediation of soil around and under tanks. 12/21/05 - Raphael Ketani. I spoke to Mr. Leddy and he said that one tank was pumped out, but the other is still leaking into the sub-basement. Nothing has happened at the site, as far as he knows, and he doesn't know if another contractor was hired to cleanup the site. 1/4/06 - Raphael Ketani. I spoke to Mr. Joe Bernotas of ATC Management ((917) 337-1702). He is not the owner, but works for the owner. He said that the tanks are out of the ground and empty, but he is waiting for the environmental company to clean out the tanks and get rid of them. 2/8/06 - Raphael Ketani. Jerry Tiss of JLC ((212) 420-8119/ (917) 617-3894) called me to say that they removed the tanks. He said that the problem was a leaking fill line. I told him all of the contaminated soil has to be removed. He asked whether the soil under the sidewalk had to be removed. I told him "yes." He said he couldn't get too close to a neighboring building to get more contaminated soil as the wall is brick. I told him I would need an engineers letter telling me that he can't go any further. He said he would get it. Mr. Tiss said that he will take 2 end-point samples after removing the contaminated soil. I told him to send me the results. He said he would. 2/13/06 - Raphael Ketani. I received a FAX from Mr. Tiss. The letter discusses whether there is a need to remove more soil, but doesn't address safety, structural integrity issues. The letter states that the site has been satisfactorily remediated, pending the results of samples that were sent to the lab. 2/15/06 - Raphael Ketani. I received a revised 2/10/06 letter from Mr. Tiss of JLC. It states that they can't go any further without damage to the foundation and structural elements. 3/2/06 - Raphael Ketani. I tried to call Mr. Tiss, but could only leave a message. 3/15/06 - Raphael Ketani. I spoke to Mr. Tiss today. I asked him what is happening on the site. He said that they filled in the pit and have received the analytical soil results. I asked him to send the results. 3/16/06 - Raphael Ketani. I received the soil analytical results today. 3/17/06

- Raphael Ketani. I reviewed the soil analytical results and found them as either non-detect or a few SVOCs that were just above TAGM. In light of the received documentation and the engineer's letter, I am closing the case.3/29/06 - Raphael Ketani. Mr. Bernotas of ATC Management called to request an NFA letter. I told him I will send one out for the site.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"A.L. Eastmond was originally called out to the site. Smell in the resturant from the oil tank in the basement.Eastmond found an open flap on the top of a 275gal? tank in the basement. Eastmond Cleaned the tank and rewelded the patch. Eastmond also said

**S105058468**

that the area was clean.8/13/2001 Sangesland went to the site and met Bonnie Weiss from Ferrantino Fuel Oil (718-832-6700) and the property owner. The building is empty except for the restaurant. The upper floors are under renovation for new apartments.The tank had a cement case built around it. Upon inspection, an area of heavy black oil was coming out from under this enclosure. Sangesland said that the area must be opened up to look under the tank, if a leak existed, then the floor around the tank would need to be inspected and if cracks were found, the floor would need to be opened. Ms. Weiss suggested that the owner would probably install a new 275 gal tank elsewhere in the basement and totally remove the old tank and enclosure. Sangesland requested a reinspection when the area was cleaned. Sangesland will send a letter to Ms. Weiss with detail directions of what to do.9/6/2001 Sangesland re inspected the site today. Cement enclosure around the tank had been removed, tank was cleaned and free standing on the floor. 1" thick skim layer of cement floor had been chopped up under the tank. Cement floor under this 1" thick layer appeared to be solid and secure. Area was clean and no sign of further contamination.Spill Will Be ClosedNOTE: DEC will require follow up documentation within 3 months (by Dec. 6, 2001) that either a new oil tank was installed at this site, OR the existing tank was reinstalled and then pressure tested to confirm the tank's structural integrity. 11/19/2001 - Bonnie Weiss called to find specific details of what additional work the DEC required for the newly installed tank. DEC requested a notice from the tank company describing what work they did and that the tank was tested and passed(by what method?)Tank work is being done now, Bonnie will forward this information to the DEC when it is done.

Remarks: OIL TANK LEAKING IN THE BASEMENT. THERE IS A STRONG ODOR AND IT IS VERY UNHEALTHY.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|   | Data Release Frequency: Quarterly      |

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

|   | Data Release Frequency: Quarterly      |

## ***Federal CERCLIS list***

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

|   | Data Release Frequency: Varies          |

## ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ***Federal RCRA generators list***

### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013  
Date Data Arrived at EDR: 02/15/2013  
Date Made Active in Reports: 02/27/2013  
Number of Days to Update: 12

### **RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013  
Date Data Arrived at EDR: 02/15/2013

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

## ***State and tribal leaking storage tank lists***

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## NY LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Data Release Frequency: No Update Planned

## **State and tribal voluntary cleanup sites**

### NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 02/19/2013  
Date Data Arrived at EDR: 02/20/2013

## **State and tribal Brownfields sites**

### NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

## NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009  
Date Data Arrived at EDR: 04/16/2009  
Date Made Active in Reports: 05/11/2009  
Number of Days to Update: 25

Source: EPA/Office of Prevention, Pesticides and Toxic Substances  
Telephone: 202-566-1667  
Last EDR Contact: 02/25/2013

Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007  
Date Made Active in Reports: 04/10/2007

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

## NY SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

## NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

## Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

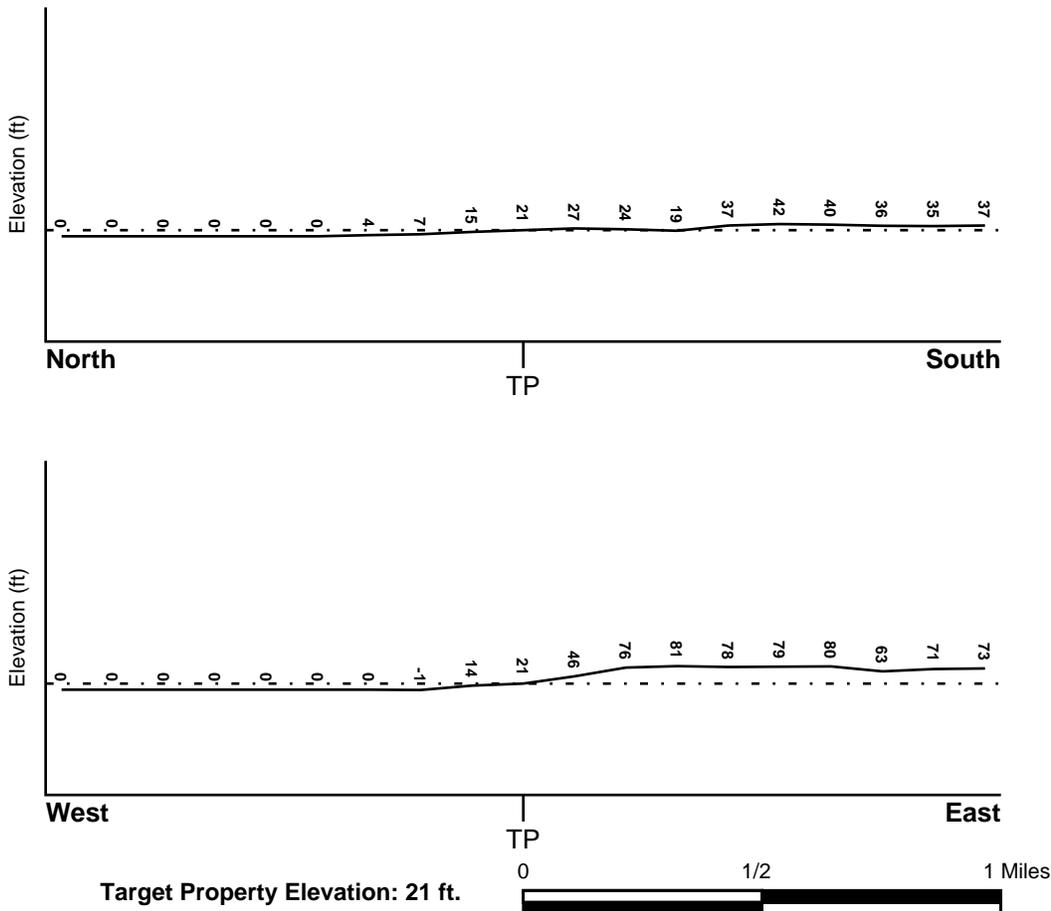

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

Target Property County

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius: 1.25 miles  
Status: Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| Not Reported  |                         |   |

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

Era: Paleozoic  
System: Ordovician  
Series: Lower Ordovician and Cambrian carbonate rocks  
Code: OC (*decoded above as Era, System & Series*)

#### **GEOLOGIC AGE IDENTIFICATION**

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

**OTHER SOIL TYPES IN AREA**

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

[www.edrnet.com](http://www.edrnet.com)

# EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.**

***Thank you for your business.***  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

## **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

## EDR Historical Topographic Map Report

# EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

## EDR Environmental Lien and AUL Search

## EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

***Thank you for your business.***

Please contact EDR at 1-800-352-0050  
with any questions or comments.

**BARGAIN AND SALE DEED  
WITH COVENANTS AGAINST GRANTOR'S ACTS**

**THIS INDENTURE**, made that 28 day of March 2008.

**BETWEEN**

JPMorgan Chase Bank, N.A. as trustee of that certain revocable trust made by Edgar T. Appleby and dated October 30, 1946, having an address c/o JPMorgan Chase Bank, N.A., 345 Park Avenue, 4<sup>th</sup> Floor (Real Estate Management Services), New York, New York 10154, as party of the first part, and

Fadling, LLC, Swallow, LLC, and Appleby North Holdings, LLC each having an address c/o JPMorgan Chase Bank, N.A., 345 Park Avenue, 4<sup>th</sup> Floor (Real Estate Management Services), New York, New York 10154, collectively, as party of the second part.

**WITNESSETH**, that the party of the first part, in consideration of ten (\$10.00) dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

**A 8.3333% TENANCY IN COMMON INTEREST TO FADLING, LLC, A 8.3333% TENANCY IN COMMON INTEREST TO SWALLOW, LLC, AND A 8.3333% TENANCY IN COMMON INTEREST TO APPLEBY NORTH HOLDINGS, LLC** IN that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the New York City, County of New York, and the State of New York, said premises are more particularly bounded and described as follows:

SEE SCHEDULE A ATTACHED HERETO

**TOGETHER** with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

**TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

**TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

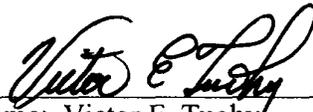

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

**IN WITNESS WHEREOF**, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

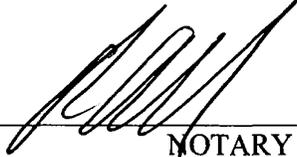

JPMORGAN CHASE BANK, N.A. AS

**Customer Registration Form for Water and Sewer Billing**

**Property and Owner Information:**

- (1) Property receiving service is located in the Borough of **MANHATTAN**  
 Block: **1105** Lot: **36**
- (2) Account Number (if applicable):  
 Meter Number (if available—include the letter):
- (3) Street Address of Property Receiving Service:  
 Street **847 11TH AVENUE** City **NY** State **NY** Zip **10019**
- (4) Full name, mailing address, home phone and business phone numbers of owner of property receiving service:  
 (please provide information on owner ONLY; do NOT give information on property manager or tenant):  
 Owner's Name Business: **FALDING, LLC**  
 or Individual:  
 (Last Name) (First Name) (MI)  
 Street **C/O JPMORGAN CHASE BANK, N.A. 345 PARK AVENUE, 4TH FLOOR (FOR MANAGEMENT SERVICES)** Zip **10154**  
 Home Phone(Numbers only): Business Phone(Numbers only):

**Customer Billing Information:**

**PLEASE NOTE:**

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.

(5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:

- Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

**Owner's Approval**

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

- (8) E-mail:
- (9) Name of Owner:

(10) Signature: *X Victor E Tuohy*  
 Name and Title of Person Signing for Owner, if applicable:  
 Date(mm/dd/yyyy): *3/18/08*

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

New York, NY 10007-1866

Re: Freedom of Information Request  
600-612 West 58<sup>th</sup> Street  
New York, NY 10019

Dear Ms. Calderon:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of any and all records pertaining to the real property located at 149 Kent Avenue, Brooklyn, NY 11211 (a.k.a 45-65 North 5<sup>th</sup> Street, 202 Wythe Avenue) (New York City Tax Block 2333, Lot 1). More specifically, I am interested in obtaining records from specific programs and records of action including the hazardous waste program, oil spill and hazardous substance release program, compliance inspections, violation issuances, and enforcement actions.

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed \$25. If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or at [jgavin@rouxinc.com](mailto:jgavin@rouxinc.com).

Sincerely,

ROUX ASSOCIATES, INC.

#### Spill Date/Time

**Spill Date:** 12/10/1990 **Spill Time:** 10:50:00 AM

**Call Received Date:** 12/10/1990 **Call Received Time:** 11:50:00 AM

#### Location

**Spill Name:** FORMER MOBIL #17-511

**Address:** 842 11TH AVE

**City:** NEW YORK **County:** NEW\_YORK

#### Spill Description

##### Material Spilled Amount Spilled Resource Affected

Gasoline UNKNOWN Soil , Groundwater

**Cause:** Tank Test Failure

**Source:** Gasoline Station

**Waterbody:**

**PBS #:** 2-479780

#### Record Close

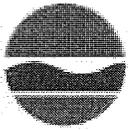

**Date Spill Closed:** 03/08/2013

"Date Spill Closed" means the date the spill case was closed by the case manager in the Department of Environmental Conservation (the Department). The spill case was closed because either; a) the records and data submitted indicate that the necessary cleanup and removal actions have been completed and no further remedial activities are necessary, or b) the case was closed for administrative reasons (e.g., multiple reports of a single spill consolidated into a single spill number). The Department however reserves the right to require additional remedial work in relation to the spill, if in the future it determines that further action is necessary.

If you have questions about this reported incident, please contact the Regional Office where the incident occurred.

Re: Freedom of Information Request  
**600-612 West 58<sup>th</sup> Street**  
**New York, New York 10019**  
Tax Block 1105 – Lot 36

Dear Mr. McIntyre:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of all records pertaining to the above-captioned parcel of real property located in the Borough, City and State of New York (Property). The Property is identified in the New York City Tax maps as Tax Block 1105, Lot No. 36 (600-612 West 58<sup>th</sup> Street, a.k.a. 847-853 11<sup>th</sup> Avenue). More specifically, I am interested in obtaining copies of Phase I ESAs, Phase II ESAs or other such environmental reports typically handled by your Office under the E-Designation and New York City Brownfield Program.

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed \$50. If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or at [jgavin@rouxinc.com](mailto:jgavin@rouxinc.com).

Sincerely,

ROUX ASSOCIATES, INC.

THIS INDENTURE, made the 9th day of March, nineteen hundred and seventy-eight  
BETWEEN WALDO HUTCHINS III, residing at Horseshoe Road,  
Mill Neck, N.Y.

FILE 527.1254

as executor of FRANCIS S. APPLEBY the last will and testament of  
McCoun's Lane, Glen Head, Nassau County, N.Y. , late of  
who died on the 19th day of August, nineteen hundred and seventy-five  
party of the first part, and

1107  
36

CHASE MANHATTAN BANK, N.A., incorporated under the laws of the United States, having its principal place of business at 1 Chase Manhattan Plaza, N.Y.C., N.Y., as Trustee under Article Sixth of the L/W/T of Francis S. Appleby, deceased party of the second part,

WITNESSETH, that whereas letters testamentary were issued to the party of the first part by the Surrogate's Court, Nassau County, New York, on August 27, 1975 and by virtue of the power and authority given in and by said last will and testament, and/or by Article 11 of the Estates, Powers and Trusts Law, and ~~the provisions of~~ pursuant to the provisions of Article Sixth of said Will

paid by the party of the second part, does hereby grant and release unto the party of the second part, the distributees or successors and assigns of the party of the second part forever, the decedent's 1/4 undivided interest in and to

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Manhattan, City of New York, which being taken together are bounded and described as follows, viz:

BEGINNING at a point formed by the intersection of the Southerly side of 58th Street with the Westerly side of Eleventh Avenue, running thence Westerly along the Southerly side of 58th Street, two hundred and fifty (250) feet; thence Southerly and parallel with Eleventh Avenue One hundred feet five inches (100.5) to the centre line of the block between 58th Street and 57th Street; thence Easterly along said centre line and parallel with 58th Street, Two hundred and fifty feet (250) to the Westerly side of Eleventh Avenue and thence Northerly along the Westerly side of Eleventh Avenue, one hundred feet and five inches (100.5) to the place of beginning.

Said premises being known as 600 West 58th Street, City, County and State of New York.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances, and also all the estate which the said decedent had at the time of decedent's death in said premises, and also the estate therein, which the party of the first part has or has power to convey or dispose of, whether individually, or by virtue of said will or otherwise; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the distributees or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been incumbered in any way whatever, except as aforesaid. Subject to the trust fund provisions of section thirteen of the Lien Law. The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

**BARGAIN AND SALE DEED  
WITH COVENANTS AGAINST GRANTOR'S ACTS**

**THIS INDENTURE**, made that 28 day of March 2008.

**BETWEEN**

JPMorgan Chase Bank, N.A., as Trustee of that certain Trust created under the will of Francis Appleby, deceased, having an address c/o JPMorgan Chase Bank, N.A., 345 Park Avenue, 4<sup>th</sup> Floor (Real Estate Management Services), New York, New York 10154, as party of the first part, and

EE 57<sup>th</sup> Street North Holdings, LLC, GE 57<sup>th</sup> Street North Holdings, LLC, Fadling, LLC, Swallow, L.L.C, and Appleby North Holdings, LLC each having an address c/o JPMorgan Chase Bank, N.A., 345 Park Avenue, 4<sup>th</sup> Floor (Real Estate Management Services), collectively, as party of the second part.

**WITNESSETH**, that the party of the first part, in consideration of ten (\$10.00) dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

**A 5% TENANCY IN COMMON INTEREST TO EE 57TH STREET NORTH HOLDINGS, LLC, A 5% TENANCY IN COMMON INTEREST TO GE 57TH STREET NORTH HOLDINGS, LLC, A 5% TENANCY IN COMMON INTEREST TO FADLING, LLC, A 5% TENANCY IN COMMON INTEREST TO SWALLOW, LLC, AND A 5% TENANCY IN COMMON INTEREST TO APPLEBY NORTH HOLDINGS, LLC** in that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the New York City, County of New York, and the State of New York, said premises are more particularly bounded and described as follows:

SEE SCHEDULE A ATTACHED HERETO

**TOGETHER** with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

**TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

**TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

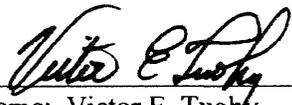

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

 Home Phone(Numbers only): Business Phone(Numbers only):

**Customer Billing Information:**

**PLEASE NOTE:**

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.
- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
 Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

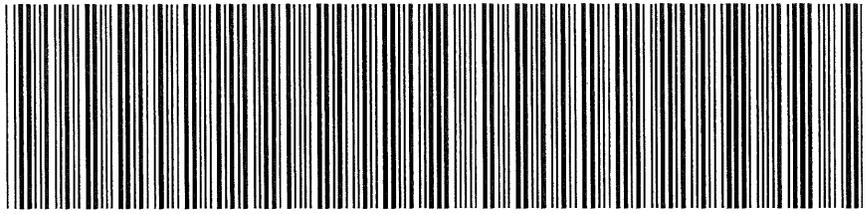

**Owner's Approval**

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

 (please provide information on owner ONLY; do NOT give information on property manager or tenant):  
 Owner's Name Business: **FALDING, LLC**  
 or Individual:  
 (Last Name) (First Name) (MI)  
 Street **C/O JPMORGAN CHASE BANK, N.A. 345 PARK AVENUE, 4TH FLOOR (FOR MANAGEMENT SERVICES)** Zip **10154**  
 Home Phone(Numbers only): Business Phone(Numbers only):

**Customer Billing Information:**

PLEASE NOTE:

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.
- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
 Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

**Owner's Approval**

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

- (8) E-mail:
- (9) Name of Owner:
- (10) Signature: *Victor E. Tuohy* **VICTOR E. TUOHY**  
**VICE PRESIDENT**

Fuel Oil installation approved by Fire Department September 12, 1955. Standpipe system and sprinkler system approved by Fire Department September 13, 1954.

*Joseph B. ...*  
 Borough Superintendent

**NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT**

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

## 1.0 EXECUTIVE SUMMARY

ATC Associates Inc. (ATC) has been retained by The Durst Organization, Inc. to investigate the extent of petroleum-contaminated groundwater and soils at the property located between West 57<sup>th</sup> Street and West 58<sup>th</sup> Street between 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue, in Manhattan, New York ("Site"). An annotated United States Geologic Survey 7.5-minute series quadrangle map (Central Park, N.Y) showing the Site location, topography, drainage and cultural patterns is provided in Figure 1.

The scope of this Remedial Investigation, which augments the data provided in ATC's Focused Subsurface Investigation (The ATC Report), dated December 10, 1998, was as follows: 1) to determine if soil in the vicinity of the remote underground storage tank (UST) fill locations had been impacted by petroleum releases; 2) to determine the impact of soil contamination associated with operation of former and active USTs on groundwater quality beneath the Site; 3) to evaluate the groundwater flow/gradient in the vicinity of the Site; and 4) to evaluate the potential for off-Site migration of groundwater petroleum contamination. The Remedial Investigation scope of work included the following activities: 1) Geoprobe investigation, 2) monitoring well installation, 3) monitoring well survey, 4) groundwater sampling and analysis, and 5) report preparation.

Fifteen borings were advanced as part of this investigation. Five monitoring wells were installed. Soil samples from each boring were collected from the interval exhibiting the greatest field evidence of petroleum contamination. Please refer to Figure 4 the boring locations. This approach to sample collection presents the "worst case" scenario in terms of soil contamination.

Volatile organic compounds (VOCs) were detected in subsurface soil above New York State Department of Environmental Conservation Spill Technology and Remediation Series Memo No. 1 – Petroleum-Contaminated Soil Guidance Policy (NYSDEC STARS Memo) Alternative Guidance Values in soil samples from six borings. These compounds included benzene, toluene, ethylbenzene, m&p xylenes, o-xylenes, isopropylbenzene, n-propylbenzene, 1,3,5-trimethylbenzene, tert-butylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene, p-isopropylbenzene, n-butylbenzene, and naphthalene. Semivolatile organic compounds (SVOCs) above NYSDEC STARS Memo Alternative Guidance Values were detected in soils collected from five borings. These compounds included a number of the polyaromatic hydrocarbons (PAHs) on the NYSDEC STARS Memo analyte list. The PAHs are a result of both fill material and petroleum.

One hydrogeologic zone of concern occurs beneath the Site, a shallow unconsolidated water table aquifer occurring above bedrock consisting of mica-schists and gneiss. The water table aquifer consists of unconsolidated fmc-SANDS and fmc-gravels. A discontinuous organic-rich silt-clay layer occurs at approximately 5-8' bgs on the southwest side of the Site. The water table occurs at approximately 13' bgs on the west side of the Site. Groundwater was

**REMEDIAL INVESTIGATION REPORT**  
**57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE**  
**NEW YORK, NEW YORK**

not encountered above the bedrock on the eastern side of the Site. Groundwater flows to the west towards the Hudson River. The hydraulic gradient west of MW-5 is 0.0048 feet/foot. East of MW-5 the hydraulic gradient is steeper. This is likely due to the occurrence of bedrock at shallower depths on the east side of the Site.

The laboratory results of the groundwater samples indicate dissolved benzene ethylbenzene, toluene, and xylenes (BTEX) concentrations in the five monitoring wells installed at the Site. The groundwater sampling results indicated that VOCs above New York State Ambient Groundwater Quality Criteria (GWQC) were detected in monitoring wells MW-1, MW-3, and MW-5. Benzene was detected in monitoring wells MW-1, MW-3 and MW-5 at one to three orders of magnitude above the GWQC for this compound. The remaining contaminant concentrations ranged from one to two orders of magnitude above their respective GWQC. In addition, the previous ATC Report indicated that groundwater contamination was greatest in the vicinity of the Potamkin Service Center. Minor concentrations of VOCs were detected beneath the Airborne Express and Artkraft Strauss Sign Company facilities.

It is apparent from the contaminant distribution that groundwater beneath the Airborne Express facility contains the greatest concentrations of BTEX. It does not appear that contaminated groundwater is migrating off-Site to any significant degree. The monitoring wells located on the sidewalks of 57<sup>th</sup> Street and 58<sup>th</sup> Street contain nondetectable to 180 ppb (MW-3) of dissolved BTEX. This data shows little or no lateral or cross gradient dispersion. In addition, the previous Report indicated that groundwater contamination was primarily confined to the Airborne Express and Potamkin facilities. Groundwater under the downgradient portion of the Airborne facility contained nondetectable concentrations of dissolved BTEX. Groundwater beneath the Artkraft Sign Company, the most downgradient extent of the Site, contained only 130 ppb of Xylenes. These previous groundwater samples were collected with Geoprobe, and thus likely contained suspended sediments.

Based on the results of this study, the estimated amount of petroleum-contaminated soil beneath the Site is approximately 21,000 tons. This estimate includes soil that has contaminant concentrations below regulatory clean-up guidance values, but exhibits petroleum odors necessitating special handling and disposal if removed during construction excavation work. The tenant areas that contain the largest amount of impacted soil are the Potamkin Service and Airborne Express facilities. ATC does not recommend that the petroleum contamination along the sidewalks be excavated. ATC believes that source removal from under the building slabs, together with capping, will reduce the contaminant load to groundwater so that the impact to groundwater will be minimized. ATC recommends monitoring of soil quality during excavation. On-site segregation of contaminated soil from unaffected material will be performed through field-screening techniques. The contaminated soils will be properly transported to an appropriate facility for proper disposal or recycling. During soil excavation activities, any underground storage tanks (USTs) that are encountered will be removed for proper off-site disposal.

**REMEDIAL INVESTIGATION REPORT**  
**57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE**  
**NEW YORK, NEW YORK**

---

Although the groundwater contamination is relatively minor and no significant off-Site migration has been documented, it is a remote possibility that construction dewatering may contain elevated hydrocarbons. Based upon the groundwater sample results this is unlikely. Therefore, prior to construction, monitoring well MW-5 will be sampled and analyzed for the following parameters: Total Petroleum Hydrocarbons, ignitability, corrosivity, cadmium, copper, cyanide, lead, mercury, nickel, and zinc (as per New York City Sewer Use Regulations, 15, RCNY 19-01 et seq.). The results of these analyses will determine if the dewatering effluent can be discharged to the New York City Sewer and Stormwater System. ATC has been informed that excavation open-hole construction for proposed Site development will be approximately three months in duration. ATC recommends that if necessary, any dewatering system that operates during that period be modified to treat contaminated groundwater as it is removed from the construction areas. Treatment can be performed using large carbon-filtration units during dewatering.

ATC recommends that the residual groundwater contamination be monitored on a quarterly basis beginning in March 2000. Following the removal of contaminated soils during construction, groundwater should be monitored for one year. If the results of the groundwater monitoring indicate a steady state plume or a decreasing plume, the contaminant load would be less than the attenuation rate and the active NYSDEC Spill Number should be closed. ATC recommends that a qualitative exposure assessment and contaminant fate transport modeling be undertaken to aid in Site closure decisions. All monitoring wells will then be properly abandoned in accordance with NYSDEC protocols.

## 2) INTRODUCTION

### 2.1 Objective

The objectives of the Remedial Investigation are as follows: 1) supplement the petroleum soil contamination data acquired during ATC's previous investigation; 2) to determine the impact of the source area contamination on groundwater beneath the Site; 3) determine if soils beneath the former remote fills have been impacted by petroleum releases, and 4) recommend the appropriate remedial option to address the absorbed-phase and dissolved-phase petroleum contamination at the Site.

### 2.2 Site Location and Description

The Site is located between 57<sup>th</sup> Street and 58<sup>th</sup> Street and between 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenues, in New York, New York. The Site is rectangular, approximately 160,000 square feet in size, and contains eleven (11) parcels leased to various tenants.

### 2.3 Site History

The Site contains eleven (11) parcels leased by various occupants as listed below:

**Artkraft Strauss Sign Company Facility**, 820-838 12<sup>th</sup> Avenue, designs, constructs, and repairs commercial signs. This facility is located at the west end of the Site. The first floor of the two-story concrete structure is used for parts storage, metalworking and woodworking equipment, painting, and storage of vehicles. This property was originally part of a large lumberyard until the existing structure was built in 1925, and originally contained the Brockway Motor Truck Company and Stutz (or State) Service Station. A private garage and repair shop occupied the building by 1951. Artkraft had occupied the building by 1976. A prior Phase I Environmental Site Assessment Report by GCI Environmental Advisory, Inc., dated June 1998 (the GCI Report) indicated that up to 14 gasoline USTs and a single fuel oil AST were historically present at this parcel.

**REMEDIAL INVESTIGATION REPORT**  
**57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE**  
**NEW YORK, NEW YORK**

**Airborne Express Facility**, 631-649 West 57<sup>th</sup> Street, is an L-shaped, two-story concrete building used for parcel receiving, routing and delivery. This facility is located in the central portion of the Site. The structure, built in 1916, originally housed the Colt Stewart Co./Chrysler Service Station. United Parcel Service, Inc. occupied the building by 1940. A gasoline leak was reported in 1948. The New York City Fire Department (NYCFD) ordered hydrostatic tightness testing on the USTs, the tests were performed, and the tanks passed to the NYCFD's satisfaction. The order also directed the occupant to "clean oil separator" and "repair floor drains and keep same clean." A notarized sworn statement, dated October 1963, from Gas Service Maintenance, on behalf of Don Allen Pontiac, states that the Gas Service Maintenance "discontinued use of 6 underground buried tanks; removed all gasoline and filled with water; and capped, and sealed and cemented all lines." A crankcase waste oil tank was reportedly installed in 1964, although its size and location are unknown.

**Airborne Express Facility**, 640-648 West 57<sup>th</sup> Street, is presently a paved parking area occupied by Airborne Express vehicles. The parking area is located on the north side of the Airborne Express Parcel. It was originally part of the S. E. Kellar Lumber Company. A 1926 Sanborn fire insurance map identifies a single story "Auto Repair Shop" at the location. In 1972, this lot, along with the Airborne building noted above, was occupied by New York Telephone, which, according to the GCI Report, installed two (2) USTs located in the area of the present Airborne parking area. One is reported to be a 1,080-gallon diesel fuel UST, the other a 2,500-gallon unleaded gasoline UST. The USTs are presently inactive and have been closed in place. The pumps have been removed. It has been reported that these two USTs were properly abandoned in place prior to ATC's Remedial Investigation.

**Potamkin Toyota Service Facility**, 622 West 58<sup>th</sup> Street, 623-629 West 57<sup>th</sup> Street, is a three-story building utilized for car service (ground floor) and auto storage. This facility is located in the central portion of the Site. The building occupies the former site of Lieberman and Sanford Iron Works, which was housed in a steel-framed skeleton shed built prior to 1907. By 1951, Bell Transportation System operated a garage and repair facility at the Site in a building constructed in 1928. The Sanborn maps of the early 1990s describe use of this site as a "Taxi Garage and Repair." The GCI Report states that there may be up to 13 USTs beneath the Potamkin Service Area floor, including a 4,000 gallon waste oil tank which was reportedly recently cleaned out and taken out of service. It is unknown whether these tanks are still present.

**The Copacabana Facility**, 615-621 West 57<sup>th</sup> Street, is a single-story building that traverses the block between 57<sup>th</sup> Street and 58<sup>th</sup> Street. This facility is located in the east-central portion of the Site. The Copacabana property was also part of the lumberyard in the early part of the century. The 58<sup>th</sup> Street side was a wooden storage building in 1926, while the 57<sup>th</sup> Street side was part of a garage. In 1980, both sections apparently were garages. The Copacabana is first identified in the 1995 Sanborn map and occupies the structures depicted as garages in the 1980 Sanborn map. Two 550-gallon gasoline tanks were identified as buried at the 58<sup>th</sup> Street side of the building as early as the 1926 Sanborn map. ATC was unable to access the building during the prior subsurface investigation or this study.

REMEDIAL INVESTIGATION REPORT  
57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE  
NEW YORK, NEW YORK

**The Goodyear Tire and Rubber Company Facility**, 607-613 West 57<sup>th</sup> Street, occupies a "single-story building" east of the Copacabana, although there is a second floor over the sales and office area on the west side of the structure. Originally part of the New York Lumber Yard, the 1926 Sanborn map indicates the presence of an auto service station with two buried 550-gallon gasoline tanks. The building was listed as a tire service and storage operation by 1951. Two to four former USTs were identified in the GCI Report, along with eight to ten hydraulic lifts and associated underground hydraulic oil tanks.

**Manhattan Mini Storage Facility**, 847-853 Eleventh Avenue, consists of a six story concrete framed structure at the corner of West 58<sup>th</sup> Street and 11<sup>th</sup> Avenue at the northeast side of the Site. The structure is presently utilized as rented storage lockers/rooms. The GCI Report indicates no USTs have been located on this parcel. There is an adjacent parking area on West 58<sup>th</sup> Street. The parcel originally was part of the New York Lumber & Storage Co. A railroad siding entered the parcel at the corner of West 57<sup>th</sup> Street and 11<sup>th</sup> Avenue and to the western side of the present parking area.

**Dynasty Auto Body Facility**, 616-618 West 58<sup>th</sup> Street, occupies a small two-story wood-framed building east of the Copacabana. This property was originally part of a "rented stalls and wagon yard" in 1907. An auto repair shop is shown on the 1926 Sanborn map, with notation of two buried 550-gallon gasoline tanks. This facility has reportedly been used as an auto body repair and painting facility since at least 1980. ATC was unable to access the building during the prior subsurface investigation or this current study.

**Potamkin Toyota Sales Facility**, 601 West 57<sup>th</sup> Street and 839-845 11<sup>th</sup> Avenue, consists of one three-story concrete building and one single-story building. These parcels were originally part of the Lilpatrick and Roynance Lumber Co. operation, and subsequently as the New York Lumber Yard Co. and W.H. Sidway Lumber Yard operations at the turn of the century. A General Motors Truck Co. parts and service operation occupied both parcels by 1926. The 1926 Sanborn Map noted two buried 550-gallon gasoline tanks in the area. Sanborn maps subsequent to 1951, identify the parcel only as "Auto Sales & Service." A heating oil tank is reportedly present as an aboveground storage tank (AST) placed on the basement concrete slab. The location of the two USTs are not known. ATC was unable to access the building during the initial subsurface investigation. The GCI report concludes that, beyond the few active USTs at the Site, little is known about the actual closure of the USTs reported in the early Sanborn Maps and other records. The locations of the USTs were not recorded in Site plans or NYFD documentation for the Site. ATC focused the 1998 subsurface investigation on known and suspected UST locations based on the presence of vent pipes, old fill ports, and recollections of on-site personnel. Soil boring locations were also controlled by space and access limitations. Due to access restrictions, ATC did not advance soil borings in the following tenant spaces: the Copacabana, Goodyear Sales Office, and Potamkin Toyota Sales. Parts of the Goodyear Service Area overlay a sub-basement with limited access.

## **2.4 Summary of Previous Environmental Investigations**

A total of two (2) environmental site assessments and investigations were conducted on the Site between June 1998 and December 1998. These assessments and investigations included the following: 1) Phase I Environmental Site Assessment of West 57<sup>th</sup> Street Property (GCI Report), prepared by GCI, on behalf of the Durst Organization, dated June 1998; and 2) Focused Subsurface Investigation, West 57<sup>th</sup> Street Property, prepared by ATC Associates Inc. (ATC Report), on behalf of GCI Environmental Advisory, Inc, dated December 10, 1998.

A summary of the results of each of the aforementioned assessments, investigations and reviews is given below.

### **2.4.1 GCI Environmental Advisory, Inc., Phase I Environmental Site Assessment, June 1998**

The GCI Report indicated a history of automotive and truck sales and service conducted at multiple locations on the Site. The regulatory agency database investigation, Site visits and historical records indicated the presence of multiple USTs at locations throughout the Site. Most of the USTs were reportedly not in use and were filled and abandoned in the 1960s. GCI recommended a subsurface soil and groundwater investigation program to determine if contamination is present in the vicinity of the USTs.

### **2.4.2 ATC Associates Inc., Focused Subsurface Site Investigation, December 1998**

The ATC Report revealed areas of soil and groundwater contamination at the Site. These conditions are the result of historical releases petroleum releases from multiple on-site existing and removed gasoline USTs, waste oil USTs, as well as historic fill. The ATC Report estimated that approximately 20,600 tons of petroleum-contaminated soils were present beneath the Site. This estimate included soil that has contaminant concentrations below regulatory clean-up guidance values, but exhibits petroleum odors necessitating special handling and disposal if removed during construction excavation work. The tenant areas that contain the largest amount of impacted soil are the Potamkin Service and Airborne Express facilities. An area of petroleum-contaminated groundwater is present primarily beneath the Airborne Express and Potamkin Service facilities at the Site. In addition, soil and groundwater was analyzed for RCRA Metals and chlorinated hydrocarbons. Localized, minor exceedances of lead, mercury, arsenic, cadmium, and trichloroethene were detected. However, the volume and magnitude of these contaminants was unlikely to cause the soils to be treated as a hazardous waste during disposal. The ATC Report recommended a Remedial Investigation to delineate the extent of soil and groundwater for remediation design purposes. Figure 3 provides the previous boring locations. Appendix E provides a summary of the laboratory results for soil and groundwater samples collected during the previous investigation.

## 3.0 ENVIRONMENTAL CHARACTERISTICS

### 3.1 Site Topography

According to the USGS Topographic Map, Central Park Quadrangle of dated 1969, the elevation of the Site is approximately 10'-30' above mean sea level. The Site slopes downward to the west and southwest towards the Hudson River. Figure 1 provides a copy of the USGS Topographic Map.

### 3.2 Site Geology

According to the information in the 1989 Geological Map of New York State, ATC's prior report, and this current study, the near-surface material was found to consist of fill with varying thicknesses beneath the Site. The fill material consisted of cmf-SANDS, some cmf-gravel, little silt, cinders, slag, ash and concrete. An organic-rich silty clay layer was encountered on the southwest side of the Site at depths of 5'-8' bgs. Beneath the organic-rich silt layer brown cmf SAND and cmf-GRAVEL with a trace of silt was encountered. Refusals on what is presumed to be bedrock were encountered at depths of 7' to 9' bgs on the east side of the Site (borings BD-3, GY-7, GY-6, and PSALES-1). Bedrock was encountered at 17' bgs at monitoring well MW-4. Bedrock consists of Precambrian age muscovite-biotite schists.

### 3.3 Site Hydrogeology

Groundwater at the Site occurs in the shallow unconsolidated material at depths of 7' to 13' bgs. The hydraulic conductivity is expected to be moderate to low given the subsurface geology. Groundwater was found above the bedrock aquifer. However, no groundwater was observed in boring PSALES-1 where refusal was encountered due to bedrock at 9' bgs.

Water is supplied to the Site by New York City. New York City receives its drinking water from surface reservoirs located in upstate New York.

## 4.0 REMEDIAL INVESTIGATION

### 4.1 Geoprobe Soil Boring Investigation

On November 8 and 9, 1999, ATC advanced thirteen (13) borings along the perimeter of the Site on the sidewalks. The borings were biased towards the former petroleum remote fill lines located on the sidewalks bordering the Site. The soil samples were screened in the field with a photoionization detector (PID) and for visual and olfactory evidence of petroleum contamination. The samples which exhibited the greatest evidence of petroleum contamination above the soil/groundwater interface were collected for laboratory analysis. This approach to sample collection presents the "worst case" scenario in terms of soil contamination. Two soil samples each were collected from borings PO-5 and AX-14 in an attempt to delineate the vertical extent of soil contamination at the Site. The soil samples were transferred into appropriate sample containers, packed on ice in a cooler, shipped under proper chain of custody to SciLab Albany Inc. (ELAP # 10358), located in Albany, New York, and analyzed for VOCs and SVOCs in accordance with EPA Methods 8021 and 8270, respectively. A total of fifteen (15) soil samples were collected and analyzed. Figure 4 provides the boring locations.

### 4.2 Monitoring Well Installation

On November 10, November 15, and December 7, 1999, ATC installed five (5) 2" inside diameter monitoring wells, using a truck mounted rotary drill rig, equipped with 4 1/4" ID continuous flight hollow stem augers, in order to determine if groundwater quality had been impacted by the documented petroleum-contaminated soils. Although the Remedial Investigation Work Plan indicated that continuous split spoon samples would be collected during monitoring well installation, ATC decided not to collect split spoon samples during well installation. This was due to the close proximity of the monitoring wells to Geoprobe sampling points, which provided adequate characterization of the subsurface soils. Monitoring wells MW-1, MW-2, and MW-3 were installed to 23' bgs respectively. Monitoring well MW-4 was installed to 18.5' bgs. MW-5 was installed to 25' bgs. The wells were constructed of 2" inside diameter schedule 40 PVC pipes. The screened portion of each well consisted of 10-20' of 0.02" slotted PVC pipe. The wells extended 10' into the water table. The screens and risers were connected using threaded couplings. The screened portion of each well was packed with #0 sand pack. A 1.5' thick bentonite seal was placed above the filter pack and the annulus was filled with drill cuttings that did not exhibit field evidence of contamination. The wells were protected with a 8" diameter, flush-mounted steel manhole set in a concrete pad. Watertight locking gripper plugs were placed at the top of the PVC casing to prevent unauthorized entry. Monitoring well installation details are provided in Appendix D. Figure 5 provides the monitoring well locations.

### 4.3 Groundwater Development and Sampling

On December 7 and 8, 1999, ATC developed groundwater monitoring wells MW-1, MW-2, MW-3, MW-4, and MW-5. During development at least 5 well volumes of groundwater were removed with peristaltic pump using dedicated high-density polyethylene tubing. The tubing was moved throughout the saturated zone during development. The wells were developed until the effluent was visibly clear of suspended sediments. On December 10, 1999, ATC collected groundwater samples from monitoring wells MW-1, MW-2, MW-3, and MW-5. On December 15, ATC collected a groundwater sample from MW-4. Four (4) well volumes of groundwater were purged from all of the sampled wells, using dedicated polyethylene tubing attached to a peristaltic pump, prior to sampling. All groundwater samples were placed in properly preserved, laboratory-supplied glassware, packed on ice in a cooler, and shipped under proper chain of custody to SciLab, Albany. All groundwater samples were analyzed for VOCs and SVOCs in accordance with EPA Methods 8021 and 8270.

### 4.4 Monitoring Well Survey and Groundwater Gradient

On January 11, 1999, ATC surveyed the five monitoring wells to determine their respective casing elevations. All units are on arbitrary datums. The elevations shown are referenced to an arbitrary bench mark having an assumed elevation of 100'. Prior to sampling, ATC measured the depth to groundwater using a sonic interface probe. The depth to water was then subtracted from the casing elevations to obtain the groundwater elevation at each monitoring well. The groundwater elevations were used to calculate the groundwater gradient and flow at the Site. Table 1 shows the depth to water, casing elevations and groundwater elevations of each monitoring well. The groundwater gradient is portrayed in Figure 6.

**Table 1. Groundwater Gauging Data**

| Well No. | Dept to Water (feet) | Relative Casing Elevation (feet) | Groundwater Elevation (feet) |
|----------|----------------------|----------------------------------|------------------------------|
| MW-1     | 14.12                | 101.57                           | 87.45                        |
| MW-2     | 7.72                 | 94.24                            | 86.52                        |
| MW-3     | 11.45                | 98.77                            | 87.32                        |
| MW-4     | 10.18                | 106.63                           | 96.45                        |
| MW-5     | 12.98                | 100.69                           | 87.71                        |

#### 4.5 Health and Safety

A Site-specific Health and Safety Plan was prepared for all investigative activities conducted at the Site. Environmental air monitoring was conducted during Site activities using a PID. All ATC personnel involved in field activities are Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response trained and certified. A copy of the Health and Safety Plan which fulfills the OSHA requirements under 29 CFR 1910.120 is presented in Appendix A.

## 5.0 REMEDIAL INVESTIGATION RESULTS

### 5.1 Soil Sampling Results

All soil samples were screened in the field using a Rae Instruments MiniRAE Plus photoionization detector (PID) as well as visual and olfactory means. The PID was calibrated in the field at the beginning of each working day. Soil samples were screened with the PID by cutting open the 4' macrocore acetate sleeve and placing the PID inlet adjacent to the soil column at one foot intervals. Field screening results are summarized below in Table 2.

**Table 2. Field Screening Results**

| Depth (ft) | PID Readings |         |      |       |      |      |       |           |       |       |      |      |       |
|------------|--------------|---------|------|-------|------|------|-------|-----------|-------|-------|------|------|-------|
|            | GY-6         | COP A-1 | GY-7 | AX-14 | PO-5 | BD-4 | AX-15 | PSAL ES-1 | AX-16 | AX-17 | AK-9 | BD-3 | AX-18 |

All concentrations in parts per million  
 NA: No PID Reading Obtained

The current investigation indicates PID readings in borings GY-6 and GY-7 decreased with depth. PID readings in borings BD-4, AX-15, PSALES-1, and BD-3 were either minor or nondetect. PID readings from borings AX-18 and COPA-1 indicate that contamination begins at depths of 8' and 7' respectively and continues to the water table. PID readings from AX-16, AX-17 and AK-9 indicate low concentrations of soil contamination in the shallow intervals increasing with depth. PID readings from AX-14 and PO-5 indicate elevated concentrations across the entire length of the borings.

**REMEDIAL INVESTIGATION REPORT**  
**57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE**  
**NEW YORK, NEW YORK**

A total of fifteen soil samples from thirteen borings were submitted for analysis of VOCs and SVOCs in accordance with the NYSDEC STARS Memo. Table 3 presents a summary of the results of the soil analysis. The complete laboratory report is presented in Appendix B. A number of individual VOCs were detected above NYSDEC STARS Memo Alternative Guidance Values in soil samples from borings GY-6, PO-5, COPA-1, AX-14, AX-16, and AX-18. These compounds included benzene, toluene, ethylbenzene, m&p xylenes, o-xylenes, isopropylbenzene, n-propylbenzene, 1,3,5-trimethylbenzene, tert-butylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene, p-isopropylbenzene, n-butylbenzene, and naphthalene. Less than half of the fifteen soil samples contained VOCs above NYSDEC STARS Memo Alternative Guidance Values.

SVOCs above NYSDEC STARS Memo Alternative Guidance Values were detected in borings GY-6, PO-5, AX-14, COPA-1, and AK-9. These compounds included a number of the polyaromatic hydrocarbons on the NYSDEC STARS Memo analyte list. Of the twelve soil samples submitted for analysis of SVOCs, only five contained SVOCs above the NYSDEC STARS Memo Alternative Guidance Values.

For those borings in which PID readings were elevated throughout the soil column, ATC collected 2 soil samples to determine the vertical distribution of soil contamination. ATC collected 2 soil samples from borings PO-5 and AX-14. The laboratory results indicated that VOCs above NYSDEC STARS Memo Alternative Guidance Values exist from 6' bgs to the water table. The laboratory results from boring AX-14 indicate that the contamination is found from 11-12' bgs. The second sample from each of borings PO-5 and AX-14 were analyzed only for VOCs in order to confirm the presence of contamination at multiple depths.

Figure 4 shows the boring locations with their respective total VOC concentrations. Boring locations were selected based upon the presence of former remote fills to former USTs. Boring numbers PO-5 COP-1, AX-14, AX-18 and GY-6 contained the concentrations of VOCs above their respective NYSDEC STARS Memo Alternative Guidance Values. Based on the contaminant distribution, soils in the vicinities of the former remote fills in front of the Airborne Express facility, the Copacabana, and the Goodyear tire and services have been impacted by petroleum releases.

ATC noted significant amounts of fill material beneath the Site. The fill contained asphalt, cinders, slag, wood, and ash. These materials likely contribute to the SVOC concentrations detected at the Site.

## **5.2 Groundwater Sampling Results**

The groundwater laboratory results are summarized in Table 4. The complete laboratory report is provided in Appendix C. The groundwater sampling results indicated that VOCs above NYSDEC GWQC were detected in monitoring wells MW-1, MW-3, and MW-5. Benzene was detected in monitoring wells MW-1, MW-3 and MW-5 at concentrations of 1, 58, and 800 ug/l. The remaining contaminant concentrations are less than two orders of

**REMEDIAL INVESTIGATION REPORT**  
**57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE**  
**NEW YORK, NEW YORK**

---

magnitude above their respective GWQC. Total BTEX concentrations in MW-1, MW-3, and MW-5 are 12, 180, and 982 ug/l, respectively.

Groundwater samples from MW-4 contained no VOCs above laboratory detection limits. Therefore, the contamination does not appear to be coming on site from the southeast direction.

No SVOCs were detected above laboratory detection limits.

Figure 5 shows the monitoring well locations and their respective BTEX concentrations. It is apparent from the contaminant distribution that groundwater beneath the Airborne Express facility contains the greatest concentrations of BTEX. It does not appear that contaminated groundwater is migrating off-Site to any significant degree. The monitoring wells located on the sidewalks of 57<sup>th</sup> Street and 58<sup>th</sup> Street contain nondetectable to 180 ppb (MW-3) of dissolved BTEX.

In addition, the previous ATC Report indicated that groundwater contamination was primarily confined to the Airborne Express and Potamkin facilities. Groundwater under the downgradient portion of the Airborne facility contained nondetectable concentrations of dissolved BTEX. Groundwater beneath the Arkraft Sign Company, the most downgradient extent of the Site, contained only 130 ppb of Xylenes. These previous groundwater samples were collected with Geoprobes, and thus likely contained suspended sediments, resulting in false positives.

### **5.3 Groundwater Gradient**

ATC prepared a Groundwater Gradient Map using groundwater elevation data measured on December 4, 1998. This map shows that groundwater flows to the west towards the Hudson River. The hydraulic gradient west of MW-5 is 0.0048 feet/feet. East of MW-5 the hydraulic gradient is steeper. This is likely due to the occurrence of bedrock at shallower depths on the east side of the Site. Groundwater Gradient Map is shown in Figure 6

## **6.0 Conclusions and Recommendations**

### **6.1 Hydrogeology**

One hydrogeologic zone of concern occurs beneath the Site, a shallow unconsolidated water table aquifer occurring above bedrock consisting of mica-schists and gneiss. The water table aquifer consists of unconsolidated fmc-SANDS and fmc-gravels. A discontinuous organic-rich silt-clay layer occurs at approximately 5-8' bgs on the southwest side of the Site. The water table occurs at approximately 13' bgs on the west side of the Site. Groundwater was not encountered above the bedrock on the eastern side of the Site. Groundwater flows to the west towards the Hudson River. The hydraulic gradient west of MW-5 is 0.0048 feet/foot. East of MW-5 the hydraulic gradient is steeper. This is likely due to the occurrence of bedrock at shallower depths on the east side of the Site.

### **6.2 Petroleum-contaminated Soils (Based Upon this Investigation and Previous Investigations)**

Petroleum-contaminated soils above NYSDEC STARS Memo Alternative Guidance Values was detected in soil samples from seven of the thirteen soil borings advanced during this investigation. The soil borings were biased towards former remote fills to petroleum USTs at the Site. The field screening and analytical results indicate that contamination in boring BD-4 is not significantly above background.

1. Soil samples from PSALES-1 indicate low concentrations (less than 1.1 ppm) across the entire boring. The analytical results from soil samples from PSALES-1 did not indicate any contaminants above NYSDEC STARS Memo Alternative Guidance Values.
2. PID readings from BD-3 indicate low concentrations across the entire boring. The analytical results from BD-3 did not indicate any contaminants above NYSDEC STARS Memo Alternative Guidance Values.
3. PID readings in borings GY-6 and GY-7 decreased with depth.
4. PID readings from borings AX-18 and COPA-1 indicate that contamination begins at depths of 8' and 7' respectively and continues to the water table. VOCs were detected above NYSDEC STARS Memo Alternative Guidance Values in these soil samples. The source of this contamination is unclear but may be a result of a former UST or subsurface transport vertically through heterogeneous soils.
5. PID readings from AX-16, AX-17 and AK-9 indicate low concentrations of soil contamination in the shallow intervals and increase with depth. Contaminants were detected above NYSDEC STARS Memo Alternative Guidance Values in these soil samples.
6. PID readings from AX-14 and PO-5 indicate elevated concentrations across the entire length of the borings. Contaminants were detected above NYSDEC STARS Memo Alternative Guidance Values in these soils samples.

REMEDIAL INVESTIGATION REPORT  
57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE  
NEW YORK, NEW YORK

---

Based upon the distribution of soil contamination as compared to groundwater contamination, it appears that the Site has reached a state of attenuation. This is evident by the presence of soil contamination above the water table (i.e. 2,700 ppb of benzene in AX-18) associated with much lower groundwater concentrations (benzene in MW-1 at 1 ppb).

The laboratory results from ATC's previous Focused Subsurface Site Investigation indicated the following conditions at each parcel:

### **6.2.1 *Artkraft Strauss Sign Company Facility***

Field observations and laboratory results indicate what appears to be limited petroleum contamination in soil in the vicinity of two borings advanced near two USTs on the south side of the facility. Elevated levels of petroleum constituent (VOCs) were detected in a thin soil layer in boring AKSS-3 at the 2.5 to 3.0-foot depth, and at the seven-foot depth in AKSS-1. VOC contamination originating from petroleum was found in borings advanced in the vicinity of two USTs at the north side of the facility. The VOC contamination was present in soils between seven and nine feet in AKSS-5, and in a thin layer between 7.7 and 8.0 feet in AKSS-7.

SVOCs were detected by the laboratory in seven soil samples at concentrations exceeding NYSDEC STARS Alternative Guidance Values.

Soil contamination beneath the Artkraft facility does not appear to be extensive. However, this material may require special handling and disposal if proposed development of the Site includes excavation in this area. Further, at least four USTs will require removal prior to construction excavation activities. On-site characterization will be required to isolate contaminated soil from unaffected soil for proper disposal.

### **6.2.2 *Airborne Express Facility***

The past investigation revealed the presence of VOC contamination in soils collected from five borings advanced near 12 gasoline USTs at the southeast quadrant of the facility. The investigation in the vicinity of the waste oil UST and the former hydraulic lifts in the center of the facility indicate that SVOC and VOC contaminants are present in the soil just above the water table. The SVOC contamination maybe the result of historic releases from the waste oil tank or hydraulic fluid system. Since the VOC contamination was found in soils directly above the water table, ATC concludes that this contamination is found within the capillary fringe.

Two of the soil samples collected from the vicinity of the two USTs in the Airborne parking area exhibited VOCs exceeded NYSDEC STARS Alternative Guidance Values by at least one order of magnitude. SVOCs were detected in these samples at concentrations were below NYSDEC STARS Alternative Guidance Values. Laboratory analysis of soil samples from AIRX-13 (southwest section, near the Artkraft facility, at a greater distance from the

USTs) exhibited undetected VOC concentrations, and SVOC levels below NYSDEC STARS Alternative Guidance Values.

In summary, significant areas of soil contamination from on-site USTs sources are present at this facility. This material may require special handling and disposal during Site development.

### **6.2.3 Potamkin Service Facility**

The past investigation revealed VOC contamination in each of the four borings installed within in the Potamkin Service facility, that were likely caused by petroleum releases from abandoned USTs. SVOC contamination in soil was also detected. This material may require special handling and during Site development.

### **6.2.4 Goodyear Service Facility**

The operating service area, the presence of a subbasement, and concrete rubble beneath the floor slab limited the investigation at the Goodyear facility. No VOCs were detected in the limited soil sampling conducted but samples collected in the vicinity of the waste oil UST (in the center of the facility) indicate SVOC contamination in the soil just above the water table.

### **6.2.5 Manhattan Mini Storage Parking/Dynasty Auto Body Facilities**

Soil samples from BODY-2 and MINI-1 contained SVOC concentrations above NYSDEC STARS Alternative Guidance Values, and lead concentrations above NYSDEC TAGM Eastern USA Background Levels. Laboratory analysis of soil samples found no VOC contamination.

## **6.3 Groundwater Contamination**

The groundwater sampling results indicated that VOCs above NYSDEC GWQC were detected in monitoring wells MW-1, MW-3, and MW-5. Benzene was detected in monitoring wells MW-1, MW-3 and MW-5 at one to three orders of magnitude above the GWQC for this compound. The remaining contaminant concentrations were up to two orders of magnitude above their respective GWQC.

It is apparent from the contaminant distribution that groundwater beneath the Airborne Express facility contains the greatest concentrations of BTEX. It does not appear that contaminated groundwater is migrating off-Site to any significant degree. The monitoring wells located on the sidewalks of 57<sup>th</sup> Street and 58<sup>th</sup> Street contain nondetectable to 180 ppb (MW-3) of dissolved BTEX. In addition, ATC's previous Report indicated that groundwater contamination was primarily confined to the Airborne Express and Potamkin facilities.

REMEDIAL INVESTIGATION REPORT  
57<sup>TH</sup> STREET TO 58<sup>TH</sup> STREET BETWEEN 11<sup>TH</sup> AVENUE AND 12<sup>TH</sup> AVENUE  
NEW YORK, NEW YORK

Groundwater under the downgradient portion of the Airborne facility contained nondetectable concentrations of dissolved BTEX. Groundwater beneath the Artkraft Sign Company, the most downgradient extent of the Site, contained only 130 ppb of Xylenes. These previous groundwater samples were collected with Geoprobes, and thus likely contained suspended sediments, resulting in false positives.

Based upon the presence of large chain VOC compounds such as toluene and 1,3,5-trimethylbenzene with the comparatively lower concentrations of the more biodegradable compounds such as benzene, it appears that the groundwater contamination is old and not related to any new releases.

Based upon these results ATC concludes that the documented soil contamination at the Site has had a limited impact on groundwater quality beneath the Site. It appears that the petroleum releases are old and that a steady state equilibrium has been reached between the contamination present in the soil and groundwater resulting in attenuation of the contaminants by the mechanisms of sorption and degradation. ATC has documented VOCs above NYSDEC STARS Alternative Guidance Values in what appears to be the capillary fringe. However, groundwater VOC concentrations are not severe and no separate-phase product was detected in the on-site monitoring wells. Minimal off-Site migration of VOCs has been observed.

**NEW YORK, NEW YORK**

---

#### **6.4 RECOMENDATIONS**

Based on the results of this study, petroleum-contaminated soil beneath the Site will need to be excavated during Site development. The current plans for the Site include demolition of the existing structures and excavation beneath the water table to construct a multi-story office building. The handling of contaminated soils and groundwater will be discussed in the future as part of the construction phase of this project. Prior to construction, a Soil Management Plan will be prepared and submitted to the NYSDEC for review and acceptance. ATC does not recommend that the petroleum contamination along the sidewalks be excavated. ATC believes that source removal from under the building slabs will be sufficient since the Site has reached a state of attenuation. ATC recommends monitoring of soil quality during excavation. On-site segregation of contaminated soil from unaffected material will be performed through field-screening techniques. The contaminated soils will be properly disposed of and will be discussed in a Soil Management Plan as part of the construction phase. During soil excavation activities, any underground storage tanks (USTs) that are encountered will be removed, properly cleaned, and disposed of.

Based upon the groundwater sampling results, it is unlikely that construction dewatering effluent treatment will be required. Dewatering issues will be discussed as part of the construction phase.

ATC recommends that the residual groundwater contamination be monitored on a quarterly basis for one year beginning with the December, 1999 sampling period. The results between the rounds should be compared using the Relative Percent Difference (RPD) method described in SW-846. If the results do not indicate a significant difference between sampling rounds then the groundwater monitoring should be suspended. All monitoring wells will then be properly abandoned in accordance with NYSDEC protocols.

**APPENDIX A: Health & Safety Plan**

---

**ATC ASSOCIATES INC.**

**ENVIRONMENTAL SITE SAFETY PLAN**

**Important: Please forward one copy of completed document to the reviewer three (3) working days prior to project start up and maintain a copy on site. Place signed copy in the project file. Items marked with " 1910.120..." are required by 29 CFR 1910.120 in the paragraph noted.**

**A. GENERAL INFORMATION (1910.120©(4))**

Project Name: West 57<sup>th</sup> St. Project Number: 18346-0001  
Location: W. 57<sup>th</sup> St. between 11<sup>th</sup> and 12<sup>th</sup> Aves., New York, NY  
Client: Durst  
Plan Prepared By: Matthew Millham Date: 10/15/99  
Plan Approved By: \_\_\_\_\_ Date: \_\_\_\_\_  
Project Start Date: 11/8/99

**B. SITE DESCRIPTION (1910.120©(4))**

Facility History: Presently there are multiple automobile service and sales facilities, overnight package delivery transfer facility, an auto body shop, a night club, and sign manufacturing company. Historically, there have been lumber yard and storage operations, an iron works operation, and auto and truck service operations.

Type of Hazard Anticipated On Site (i.e. tanks, drums, etc.): There are reportedly 40+ underground storage tanks, most of which are out of operation, or abandoned. They store, or had stored gasoline, heating oil, and waste oil. There may also be hydraulic oils remaining from lifts

Amount of Hazardous Materials Present: Unknown

**C. General Site Description: 2 to 3-story buildings made of steel and reinforced concrete. Some paved parking areas.**

**D. PROJECT OBJECTIVE(S) (1910.120(b)(3))**  
 (Description of work area activities planned)

Advanced approximately 40 soil borings in the vicinity of the reported USTs for the purpose of collecting soil and groundwater samples for analyses.

**E. PROJECT ORGANIZATION (1910.120(b)(2))**

| <u>Team Member</u> | <u>Responsibility</u> | <u>Type of Training</u>          | <u>Date of Training</u> |
|--------------------|-----------------------|----------------------------------|-------------------------|
| Curt Schmidt       | Geologist/Supervisor  | 40-Hr. OSHA<br>Latest 8-Hr. OSHA | 1/86<br>4/30/98         |
| Unknown at present | Driller               | 8-Hr. OHSA-                      | To be inspected on-site |
| Unknown at present | Assistant Driller     | 8-Hr. OHSA-                      | To be inspected         |

**E. CHEMICAL HAZARD ANALYSIS (1910.120(b)(4))**

| Contaminant     | IP  | PEL/TLV       | IDLH | LEL/UEL     | Flash Point | Routes of Exposure          |
|-----------------|-----|---------------|------|-------------|-------------|-----------------------------|
| Gasoline        | N/A | 300 ppm       | N/A  | 1.4% / 7.4% | -40°F       | Inhalation, skin ingestion. |
| Fuel Oil, No. 2 | N/A | None Reported | N/A  | 0.6% / 7.5% | 100°F       | Inhalation, Skin ingestion. |
|                 |     |               |      |             |             |                             |
|                 |     |               |      |             |             |                             |
|                 |     |               |      |             |             |                             |
|                 |     |               |      |             |             |                             |

NOTE: Material Safety Data Sheets attached for all substances identified above. Also see Section (M)(2).

**F. OTHER HAZARDS**

Heat Stress: \_\_\_\_ yes  X  no. If yes, please specify precautions to be taken.

\_\_\_\_\_

Cold Stress: \_\_\_\_ yes  X  no. If yes, please specify precautions to be taken.

\_\_\_\_\_

Excessive Noise:  X  yes \_\_\_\_ no. If yes, please specify precautions to be taken.

Ear plugs will be worn.

Confined Space Entry: \_\_\_\_ yes  X  no. If yes, please attach copy of Confined Space Entry permit

Open Excavations: \_\_\_\_ yes  X  no. If yes, is entry into excavation required?

\_\_\_\_ yes \_\_\_\_ no. If so, specify precautions to be taken:

\_\_\_\_\_

\_\_\_\_\_

Welding and/or Cutting: \_\_\_\_ yes  X  no. If yes, please specify precautions to be taken:

\_\_\_\_\_

Heavy Equipment Operation: \_\_\_\_ yes  X  no. If yes, specify type of equipment and precautions

taken:  Geoprobe Sampler. Proper handling of drill rig and equipment as per Section 23.5 of ATC

Employee Health & Safety Policy Manual.

\_\_\_\_\_

Slip, Trip, Fall Hazards: \_\_\_\_ yes  X  no. If yes, please specify type , location, and precautions to

be taken: \_\_\_\_\_

\_\_\_\_\_

Presence of Underground Utilities: \_\_\_ yes \_\_\_ no. (WILL BE CALLED IN ONE WEEK PRIOR TO START OF FIELD WORK)

Utility location service ID#: \_\_\_\_\_

Name of Contact: \_\_\_\_\_

Phone Number: 1-800-272-4480

Precautions to be taken: Look for markings on street and tie in to building.

Presence of Overhead Utilities : X yes \_\_\_ no.

Specify exact location: We are drilling inside of the buildings; therefore there will be overhead lights and heating units, pipes, and girders.

Precautions to be taken: We will use low clearance Geoprobe units

Other Hazards: (Specify) \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**G. SITE CONTROL (1910.120(d))**

**Work Zones** have been established as shown on the attached **Site Diagram**

Site Security: Security on site will be maintained by:

X  Temporary barricades and/or warning tape

\_\_\_\_\_ Security fence

\_\_\_\_\_ 24 hour security guard

\_\_\_\_\_ other (specify) \_\_\_\_\_

**H. PERSONAL PROTECTIVE EQUIPMENT (1910.120(b)(4))**

Based on evaluation of potential hazards, the following levels of personal protection have been designated for the applicable work zones:

| <u>Work Zone</u>             | <u>Level of Protection</u> | <u>Required Protective Equipment</u> (specify exact type, e.g. nitrile gloves)   |
|------------------------------|----------------------------|--|
| Exclusion Zone               | <u>D</u>                   | Respirator: <u>N/A</u><br>Filters/Cartridges: <u>N/A</u><br>Boots: <u>Steel Toe</u><br>Inner Gloves: <u>Latex</u><br>Outer Gloves: <u>Leather Work Gloves</u><br>Protective Coverall: <u>Cotton, if necessary-Tyvek</u><br>Hard Hat: <u>Yes</u><br>Eye Protection: <u>Safety Glasses</u><br>Other: _____ |
| Contamination Reduction Zone | <u>N/A</u>                 | Respirator: _____<br>Filters/Cartridges: _____<br>Boots: _____<br>Inner Gloves: _____<br>Outer Gloves: _____<br>Protective Coverall: _____<br>Hard Hat: _____<br>Eye Protection: _____<br>Other: _____   |

Exceptions and Modifications: \_\_\_\_\_  
 \_\_\_\_\_

I. **DECONTAMINATION** (1910.120(k))

Personnel Decontamination Procedures.

All personnel entering the Exclusion Zone will undergo decontamination prior to leaving the site. Personnel will proceed through the following decontamination stations:

Decontamination Solution: Soap and Water  
STATION 1: Glove Removal, Hand Wash

Equipment Required: 5 gallon buckets, Alconox, water, paper towel brush

\_\_\_\_\_

\_\_\_\_\_

STATION 2: N/A

Equipment Required: \_\_\_\_\_

\_\_\_\_\_

STATION 3 N/A

Equipment Required: \_\_\_\_\_

\_\_\_\_\_

STATION 4 N/A

Equipment Required: \_\_\_\_\_

\_\_\_\_\_

STATION 5 N/A

Equipment Required: \_\_\_\_\_

\_\_\_\_\_

Equipment Decontamination

Gross Removal By:

Hand scrubbing \_\_\_\_\_  
Cold high pressure wash \_\_\_\_\_  
Hot high pressure wash \_\_\_\_\_  
Steam cleaning  X   
Other (specify) \_\_\_\_\_

Clean rinse \_\_\_\_\_

Decon solution (specify) \_\_\_\_\_

Decontamination Waste Water

Collection (specify how)  On plastic pad

Direct Discharge (specify how and where)  If no contamination noted, will wash to storm sewer.

Pre-treatment (specify)  None required.

Disposal (specify how and where)  None required.

**J. AMBIENT AIR MONITORING (1910.120(b)(4))**

| <u>Activity</u>      | <u>Instruments</u> | <u>Action Level</u> | <u>Frequency</u>     |
|----------------------|--------------------|---------------------|----------------------|
| <u>Drilling</u>      | <u>HNU PID</u>     | <u>5 ppm</u>        | <u>20-30 minutes</u> |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
| <u>Soil Sampling</u> | <u>HNU PID</u>     | <u>5 ppm</u>        | <u>As Needed</u>     |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |
|                      |                    |                     |                      |

Comments: \_\_\_\_\_

**K. PERSONNEL AIR MONITORING (1910.120(h))**

| <u>Activity/Location</u> | <u>Contaminant(s)</u>     | <u>NIOSH/OSHA Protocol</u>     |
|--------------------------|---------------------------|--------------------------------|
| <u>Drilling</u>          | <u>No. 2 Fuel Oil</u>     | <u>Level D if &lt; ppm*</u>    |
|                          | <u>Gasoline (Unknown)</u> | <u>Level D if &lt; 30 ppm*</u> |
|                          |                           |                                |
|                          |                           |                                |
|                          |                           |                                |

(\* = 0.10 X TLV)

**L. CONTINGENCY PLAN (1910.120(1))**

Emergency Communication Signal(s) (specify): 3-long blasts on air-horn or vehicle horn

---

---

Emergency Escape Route(s) (specify and indicate on site diagram): To the up-wind  
direction of the exclusion zone.

---

Emergency Equipment On Site: (specify location):

First Aid Kit: Cab of drilling/Geoprobe vehicle

Fire Extinguishers: Geoprobe vehicle

Telephone: None

Eye Wash/Safety Shower: None

Others (specify): \_\_\_\_\_

---

Re-entry to the Exclusion Zone following an on-site emergency shall not be permitted until the following conditions are satisfied:

- (1) The conditions resulting in an emergency have been corrected.
- (2) The hazards have been re-evaluated.
- (3) The Site Safety Plan has been reviewed and determined adequate for the hazards encountered.
- (4) All site personnel have been instructed in any new hazards and changes to the Site Safety Plan.

**M. OTHER REQUIRED INFORMATION**

In order to comply with OSHA standards, the following documents **MUST** be maintained on site:

- 1) Hazard Community Manual (1910.1200).
- 2) Material Safety Data Sheets for all chemicals brought onto the site, or expected to be encountered (1910.1200)
- 3) Respirator fit test records for all employees who will be required to wear respirators (1910.134)
- 4) Copy of ATC's Respirator Program (1910.134).
- 5) Latest medical summary for all personnel (1910.120).
- 6) Copy of OSHA 200 Log during month of February only.

## Monitoring Well Development, Purging and Sampling Data Log

Project No.: 18346-0001  
 Project Name: West 57 St.  
 Project Manager: WRASLOW  
 Project Location:  
 Water Analyzer Used:

Monitoring Well: MW-4  
 Well Casing Diameter: 2 in.  
 Well Stick-up Height: NA ft.  
 Depth of Well from Top of Well Casing: ft.  
 Depth of Well from Top of Roadbox Casing: ft.

### WELL DEVELOPMENT DATA

| DATE: <u>12/8/99</u>  |             | Distance from Top of Well Casing to: |  | Height of Water Column (ft.) | Volume Factor <sup>1</sup> | Well Volume (gal.) |
|---|-------------|--------------------------------------|--|------------------------------|----------------------------|--------------------|
| Time  | Water (ft.) | Free Product (ft.)                   |  |                              |                            |                    |

\* These samples were analyzed under EPA8260 and EPA 8021.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality.

TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background

NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background  
NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

**STARS AGV -**

New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

**TAGM SCO -**

NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background

NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

**STARS AGV -** New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based SVOCs.

**TAGM SCO -** NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality.

TAGM SCOs are applied to non-petroleum SVOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold numbers indicate SVOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

**TAGM SCO -** NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046:  
Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended  
Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for  
PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

**SB -** Site Background

**NA -** Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

Durst-West 57<sup>th</sup> Street Project  
New York, New York  
ATC Project No. 16374-0002

Dear Mr. Grond:

Attached is the Draft copy of the Focused Subsurface Site Investigation Report for the subject property. This report includes the following an Executive Summary, Scope of Work Completed, Soil and Groundwater Sample Results, Conclusions and Recommendations, and cost estimates for additional investigation, and site remediation. This report also includes Summary Tables, Figures, Soil Boring Logs, and Laboratory Analysis Results as appendices.

If you have any questions regarding this report, please feel free to call our office.

Sincerely yours,  
**ATC ASSOCIATES INC.**

## EXECUTIVE SUMMARY

At the request of GCI Environmental Advisory, ATC Associates Inc. (ATC) has completed a Focused Subsurface Site Investigation of the entire block bordered by West 58<sup>th</sup> Street to the north, West 57<sup>th</sup> Street to the south, 11<sup>th</sup> Avenue to the east, and 12<sup>th</sup> Avenue to the west, in the Borough of Manhattan, New York, New York (the "Subject Property"). The Subject Property contains multiple attached buildings that are occupied by various commercial tenants. Previous Phase I Environmental Site Assessments conducted at the Subject Property reported the presence of numerous underground petroleum storage tanks (USTs), the majority of which have been abandoned in-place. This study was focused to the areas where USTs were known or suspected to be present. The purpose of the Focused Subsurface Site Investigation was to determine subsurface soil and groundwater quality in these areas through sample collection and laboratory analysis using "Geoprobe" drilling equipment.

This investigation has revealed significant areas of soil and groundwater contamination at the Subject Property. These conditions are the result of historical releases (primarily gasoline) from multiple on-site existing and removed USTs at several locations. The NYSDEC will require further investigation of the extent of both soil and groundwater contamination, as well as remediation to reduce contaminant levels. Soil contamination can be addressed through excavation, segregation, and proper disposal during site development. ATC recommends implementing groundwater remediation at site development by modifying planned construction dewatering systems to concurrently treat water through large-scale activated carbon filtration prior to discharge.

### *Additional Investigation*

ATC recommends UST and contaminated soil removal, and groundwater treatment during construction dewatering in the paragraphs below. Prior to this work, ATC recommends additional investigation to further define the extent of contamination, and to fill data voids where samples could not be collected during this Focused Subsurface Site Investigation. ATC proposes the installation of up to ten 2-inch monitoring wells, soil and groundwater sample collection from borings and wells, and analysis to more precisely determine the delineated extent of groundwater contamination. Sample analyses will also further define contaminant sources. The estimated cost of this task is \$72,750.

### *Petroleum-Contaminated Soil Removal*

Based on the results of this study, the estimated amount of petroleum-contaminated soil beneath the Subject Property is 20,600 tons. This estimate includes soil that has contaminant concentrations below regulatory clean-up guidance values, but exhibits petroleum odors necessitating special handling and disposal if removed during construction excavation work. The tenant areas that contain the largest amount of impacted soil are the Potamkin Service and Airborne Express facilities. ATC recommends that qualified professionals be retained to monitor soil quality as it is being excavated during construction. On-site segregation of contaminated soil from unaffected material will be performed through field-screening techniques. ATC has been informed that construction excavation at the Subject Property will be approximately 6 weeks in duration.

As requested, ATC has generated a cost estimate to conduct on-site field screening, UST removal, contaminated soil transportation and disposal, and post-excavation site assessments at the Subject Property. This estimate is based upon the following assumptions:

1. All structures will be removed to the floor slabs prior to UST removal;
2. A total of 34 USTs will be removed;
3. An environmental excavation contractor will be retained to remove petroleum-contaminated soil from the Subject Property (to eliminate potential regulatory or exposure issues with the general construction contractor); and
4. Excavation, stockpiling, and off-site transportation of the contaminated soil will be approximately 45 days in duration.

The estimated cost to complete tank removal, petroleum-contaminated soil excavation, transportation and disposal is \$1,600,000. This estimate is based on a unit cost of \$65/ton for transportation and disposal of nonhazardous petroleum-contaminated soil. The cost estimate also includes professional environmental consulting services.

### *Petroleum-Contaminated Groundwater Removal*

An extensive area of petroleum-contaminated groundwater is present primarily beneath the Airborne Express and Potamkin Service facilities at the Subject Property. ATC has been informed that excavation open-hole construction for proposed site development will be approximately three months in duration. ATC recommends that any dewatering system that operates during that period be modified to treat contaminated groundwater as it is removed from the construction areas. Treatment can be performed using large carbon-filtration units during dewatering. The estimated cost to install and operate carbon filtration tanks, perform weekly

removal and replacement of activated carbon, obtain permits, and monitor discharges for a period of three months is approximately \$220,000. This cost estimate could change significantly if hydrologic data indicates that a higher volume of water will need to be removed to adequately depress the water table.

Residual groundwater contamination will require in-situ remediation following site development (based on the directives of the NYSDEC). Long-term in-situ remediation costs could approach \$500,000.

---

### Limitations of Subsurface Site Investigation

ATC has prepared this Limited Subsurface Investigation in accordance with the contract scope of work, using reasonable efforts to attempt to identify areas of potential liability associated with soil and groundwater contamination at the Subject Property. Any survey for the presence of soil or ground water contamination in the Project Area was limited in nature. The survey may not be relied upon as a comprehensive investigation for the presence of such contamination in all areas of the Subject Property, or as meeting any standards established for conducting such surveys. Unless limited sampling or physical testing of materials was expressly provided for in the scope of work, the conclusions in this report were based solely on a visual inspection and on readily available records, interviews and other secondary sources. ATC has made no independent investigation of the accuracy of these secondary sources and has assumed them to be accurate and complete. ATC does not warrant the accuracy or completeness of information provided by secondary sources. ATC does not warrant that contamination that may exist on the Subject Property has been discovered, that the Subject Property is suitable for any particular purpose or that the Subject Property is clean or free of liability. Any cost estimates are based on general comparisons with past projects of similar scope and size, and actual costs or design-phase estimates may vary substantially from these estimates.

## 1.0 INTRODUCTION

### 1.1 Project Scope of Work

At the request of the GCI Environmental Advisory (GCI), ATC performed a Focused Subsurface Site Investigation of the Subject Property, which is the full city block bordered West 57<sup>th</sup> Street and West 58<sup>th</sup> Street, and 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue in the city of New York, borough of Manhattan (Figure 1). The Subject Property is rectangular, approximately 160,000 square feet in size, and contains eleven (11) parcels leased by various occupants. The purpose of the investigation was to assess possible adverse environmental impact due to the historical use of the Subject Property. A Phase 1 Environmental Site Assessment (ESA) performed by GCI in July 1998, indicated a history of automotive and truck sales and service conducted at multiple locations on the Subject Property. The database investigation, site visits and historical records indicated the presence of multiple underground storage tanks (USTs) at locations throughout the Subject Property. Most of the USTs were reportedly not in use and were reportedly filled and abandoned in the 1960s. GCI recommended a subsurface soil and groundwater investigation program to determine if contamination is present in the vicinity of the USTs.

### 1.2 Subject Property Description

The GCI ESA, and a 1991 report prepared for Gaston & Snow by Certified Engineering & Testing Company, Inc. (CETC) of New York provide information about historical occupancy and presence of USTs at each of the leased facilities at the Subject Property. Figure 2 is a schematic drawing of Subject Property buildings and existing tenants within those buildings. A brief summary of the information in the two reports is provided below on a tenant basis:

- **Artkraft Strauss Sign Company Facility**, 820-838 12<sup>th</sup> Avenue, designs, constructs, and repairs all types of signs. The first floor of the two-story concrete structure is used for parts storage, metalworking and woodworking equipment, painting, and storage of vehicles. The property, the westernmost portion of the Subject Property, was originally part of a large lumberyard until the existing structure was built in 1925, and originally contained the Brockway Motor Truck Company and Stutz (or State) Service Station. A private garage and repair shop occupied the building by 1951. Artkraft had occupied the building by 1976. GCI reports that up to 14 USTs and a single AST were historically present at the property.

Focused Subsurface Site Investigation  
Durst-West 57<sup>th</sup> Street Project  
New York, New York

- **Airborne Express Facility**, 631-649 West 57<sup>th</sup> Street, is an L-shaped, one-story concrete building used for parcel package receiving, routing and delivery. The structure, built in 1916, originally housed the Colt Stewart Co./Chrysler Service Station. United Parcel Service, Inc. occupied the building by 1940. A gasoline leak was reported in 1948. The New York City Fire Department (NYFD) ordered hydrostatic test tightness testing, the tests were performed, and the tanks passed to the NYFD's satisfaction. The order also directed the occupant to "clean oil separator" and "repair floor drains and keep same clean." A notarized sworn statement, dated October 1963, from Gas Service Maintenance, on behalf of Don Allen Pontiac, states that the former "discontinued use of 6 underground buried tanks; removed all gasoline and filled with water; and capped, and sealed and cemented all lines." A crankcase waste oil tank was reportedly installed in 1964, although its size and location are unknown.
- **Airborne Express Facility**, 640-648 West 57<sup>th</sup> Street, is presently a paved parking area occupied by Airborne Express vehicles. It was originally part of the S. E. Kellar Lumber Company. The 1926 Sanborn Map identifies a single story Auto Repair Shop at the location. In 1972, this lot, along with the Airborne building noted above, was occupied by New York Telephone, that, according to CETC, installed two (2) USTs present in the area of the present Airborne parking area. One is reported to be a 1,080-diesel fuel UST, the other a 2,500-gallon unleaded gasoline UST. The USTs are presently inactive. The pumps have been removed.
- **Potamkin Toyota Service Facility**, 622 West 58<sup>th</sup> Street, 623-629 West 57<sup>th</sup> Street, is a three-story building utilized for car service (ground floor) and auto storage. The building occupies the former site of Lieberman and Sanford Iron Works, which was housed in a steel-framed skeleton shed built prior to 1907. By 1951 Bell Transportation System operated a garage and repair facility at the site in a building built in 1928. The Sanborn Maps of the early 1990s describe site use as "Taxi Garage and Repair." The GCI ESA and CETC reports state that there may be up to 13 USTs beneath the Potamkin Service Area floor, including a 4,000 gallon waste oil tank which was reportedly recently cleaned out and taken out of service.
- **The Copacabana Facility**, 615-621 West 57<sup>th</sup> Street, is a single-story building that traverses the block between 57<sup>th</sup> Street and 58<sup>th</sup> Street. Present in the 57<sup>th</sup> Street end of the building is a second story office area. The Copacabana property was also part of the lumberyard in the early part of the century. The 58<sup>th</sup> Street side was a wooden storage building in 1926, while the 57<sup>th</sup> Street side was part of a garage. In 1980, both sections apparently were garages. The Copacabana is first identified in the 1995 Sanborn Map. Two 550-gallon gas tanks were identified as buried at the 58<sup>th</sup> Street side of the building as early as the 1926 Sanborn Map. ATC was unable to access to the building to assess evidence of UST locations, or to drill and collect samples.

- **The Goodyear Tire and Rubber Company Facility**, 607-613 West 57<sup>th</sup> Street, occupies a "single-story building" next to the Copacabana, although there is a second floor over the sales and office area on the west side of the structure. Originally part of the New York Lumber Yard, the 1926 Sanborn map indicates the presence of an auto service station with two buried 550-gallon gasoline tanks. The building was listed as a tire service and storage operation by 1951. Two to four USTs were identified in the GCI Report, along with eight to ten hydraulic lifts and associated underground hydraulic oil tanks.
- **Manhattan Mini Storage Facility**, 847-853 Eleventh Avenue, consists of a six story concrete framed structure at the corner of West 58<sup>th</sup> Street and 11<sup>th</sup> Avenue. The structure is presently utilized as rented storage lockers/rooms. The GCI Report indicates no USTs have been located on this parcel. There is an adjacent parking area on West 58<sup>th</sup> Street. The parcels originally were part of the New York Lumber & Storage Co. A railroad siding entered the parcel at the corner of West 57<sup>th</sup> Street and 11<sup>th</sup> Avenue and to the western side of the present parking area.
- **Dynasty Auto Body Facility**, 616-618 West 58<sup>th</sup> Street, occupies a small two-story wood-framed building next to the Copacabana. This property was originally part of a "rented stalls and wagon yard" in 1907. An auto repair shop is shown on the 1926 Sanborn map, with notation of two buried 550-gallon gasoline tanks. The site has reportedly been used as an auto body repair and painting facility since at least 1980.
- **Potamkin Toyota Sales Facility**, 601 West 57<sup>th</sup> Street and 839-845 11<sup>th</sup> Avenue, consists of one three-story concrete building and one single-story building. These parcels were originally part of the Lilpatrick and Roylance Lumber Co. operation, and subsequently as the New York Lumber Yard Co. and W.H. Sidway Lumber Yard operations at the turn of the century. A General Motors Truck Co. parts and service operation occupied both parcels by 1926. The 1926 Sanborn Map noted two buried 550-gallon gasoline tanks present on the site. Sanborn Maps subsequent to 1951, identify the parcel only as "Auto Sales & Service." A heating oil tank is reportedly present as an above ground storage tank (AGST) placed on the basement concrete slab. The location and deposition of the two USTs is not known. ATC was unable to access the building to assess evidence of UST locations, or to drill and collect samples.

The GCI and CETC reports conclude that, beyond the few active USTs at the Subject Property, little is known about the actual closure of the USTs reported in the early Sanborn Maps and other records. The locations of the USTs were not recorded in site plans or NYFD documentation for the Subject Property. ATC focused this investigation on known and suspected UST locations based on the presence of vent pipes, old fill ports, and recollections of on-site personnel. Soil boring locations were also controlled by space and access limitations. Due to access restrictions, ATC did not advance soil borings in the following tenant spaces: the Copacabana, Goodyear Sales Office, and Potamkin Toyota Sales. Parts of the Goodyear Service Area overlay a subbasement with limited access. Therefore this subsurface site investigation focused on the

New York, New York**

---

**DRAFT**

USTs reported at the Artkraft Strauss Sign Company, Airborne Express, Potamkin Toyota Service, Goodyear Tire & Rubber Service, and Dynasty Auto Body facilities.

## 2.0 LIMITED SUBSURFACE SITE INVESTIGATION

### 2.1 Soil Sample Collection and Field Observations

Vertical soil samples were obtained via Geoprobe technology utilizing a Macro Core (MC) open sampler to collect discrete soil cores. This equipment has the capability to penetrate unconsolidated sediments and allows the investigator to collect soil and ground water samples for laboratory analysis. The device does not generate drill cuttings and does not require the installation of any permanent tubing, well screens, filter sands or casings. Geoprobe equipment is small enough to be installed on a standard-sized pick-up truck or van, or a 4-wheel drive all-terrain vehicle. Disposable acetate sampling sleeves are inserted into the Geoprobe equipment in order to obtain soil samples from selected depths. These samplers utilize open tube design and are capable of retrieving a 1.5" diameter by 44" long soil sample. After each soil sample core was retrieved, the core was visually observed for staining, obvious odors, and screened with a portable photoionization detector (PID). The soil interval determined by field evaluation to be representative of soil contamination was collected for PID headspace analysis. Soil samples exhibiting the highest headspace readings were retained for laboratory analysis. If the PID exhibited no instrument response for the entire length of the boring, a sample was collected from the six inches above the first wet zone (groundwater or perched groundwater). The PID was also used to monitor the general ambient air quality of the work zone. A total of 135 soil samples were screened, with 46 samples being retained for laboratory analyses.

On October 28 through October 30, 1998, November 2 through 4, 1998, and November 14, 1998, Mr. Curt Schmidt, Senior Geologist with ATC and Zebra Environmental Corporation, an environmental drilling contractor, mobilized to the Subject Property. The field observations follows, arranged by the facility in which the borings were advanced.

#### 2.1.1 Artkraft Strauss Sign Company Facility

A preliminary site visit to the Artkraft facility by Messrs. David Spader, Frank Galdun, and Curt Schmidt of ATC, and Mr. Jim Grond of GCI on October 22, 1998 indicated the presence of four (4) USTs. Two fill ports and vent pipes were observed on the south side of the Artkraft shop area. Another pair fill ports and vent pipes belonging to abandoned USTs were observed on the north side of the Artkraft shop (Figure 2). No other evidence of USTs was observed.

On October 30, 1998, under the supervision of Mr. Schmidt of ATC, Zebra advanced three borings around the pair of USTs on the south side of the facility (Figure 3). Drilling in this area was hampered by refusals on cobbles or concrete. A faint petroleum/solvent/creosote odor was encountered between 2 and 5 feet below ground surface (bgs) in these three borings. Black

organic clay and silt was encountered starting at between four and five feet bgs in two of the three borings. The third encountered multiple refusals on concrete and brick at 5.5 feet. The organic clay and silt continued to the total depths of 16 to 20 feet. The clay and silt unit did not yield groundwater, so a groundwater sample was not collected from this area.

Four borings were advanced around the pair of abandoned 550-gallon USTs observed on the north side of the Artkraft facility. Another boring, AKSS-8, was installed near the garage door to the west of this area. Moderate PID readings and faint petroleum odors were noted between seven and eight feet bgs in AKSS-4, AKSS-5 and AKSS-7. Boring AKSS-6 exhibited elevated PID readings from two to six feet, eight to nine and a half feet, and twelve to thirteen feet bgs. A strong gasoline odor was noted at 3.5 feet bgs, with faint petroleum odors noted at the other depths. Soil samples were selected from zones with higher PID readings. Groundwater samples were collected from borings AKSS-5 and AKSS-8.

#### 2.1.2 Airborne Express Facility

A preliminary site visit to the Airborne Express facility by Messrs. Spader, Galdun, and Schmidt of ATC, and Mr. Grond of GCI on October 22, 1998 indicated the presence of three (3) USTs with fill ports. One UST was observed inside the parcel handling area, and was reported to be a 550-gallon UST last used for waste oil storage. The other two were observed at the building exterior in the parking area (Figure 2). One is a inactive 1,000-gallon gasoline UST that may have contained diesel fuel. The other UST is reportedly an inactive 2,400-gallon gasoline tank. These two tanks, although inactive, have not been filled and properly abandoned.

Twelve vent pipes were observed along the east wall of the interior of the parcel handling area. The concrete floor in the vicinity of the vent pipes had approximately 12 round patches, which may indicate the locations of the former fill ports for the abandoned 550-gallon gasoline USTs. Three sealed and abandoned hydraulic lifts were observed in the middle of the parcel handling area (see Figure 2).

On October 29, 1998, under the supervision of Mr. Schmidt, Zebra advanced five borings around the suspected area with twelve USTs on the east side of the package handling area inside the Airborne Express facility (Figure 3). The Geoprobe was allowed to operate only during periods in which the parcel handling area was in limited use and drilling operations were limited to late morning and early afternoon. Soil cores exhibited both gasoline odors and elevated PID readings starting at approximately five to ten feet bgs in AIRX-1, -2, and -3, and extending to the deepest sample of 20 feet. Groundwater was encountered at approximately 15 feet bgs. The soils encountered in AIRX-4 exhibited strong petroleum odors and elevated PID readings as shallow as three (3) feet bgs. AIRX-5 was moved from its planned location to a point farther away and to the north of the suspected location of the dozen USTs. Elevated PID readings and

gasoline odors were not encountered until 10 to 11 feet bgs. An odor of burnt rubber as noted at approximately four feet bgs. The soils in this area were consisted of sand, rubble and incinerator cinder.

Borings AIRX-6 and AIRX-7 were advanced on either end of the 550-gallon former waste oil UST in the middle of the parcel handling area. Petroleum odors and elevated PID readings were encountered at 14 and 15 feet in the two borings. Contamination was encountered within a foot of the saturated zone directly above the groundwater table.

On October 30, 1998, Zebra advanced two borings in the vicinity of existing sealed and abandoned hydraulic lifts the center of the package handling area inside the Airborne Express facility (Figure 3). Petroleum odors and elevated PID readings were encountered at 12 feet bgs in AIRX-8, and 13 feet bgs in AIRX-9. The contamination was encountered two to three feet above the groundwater table. Low to non-detected PID readings were noted above the nine-foot depth in both borings.

On November 2, 1998, Zebra returned to Airborne Express facility to advance AIRX-10 on the southwest side of the pair of USTs in the outside parking area. On November 4, 1998, Zebra returned to the same area to advance borings on the north and east sides of the pair of USTs (AIRX-11 and AIRX-12), and AIRX-13 in the parking area just east of the outside of the Artkraft Strauss facility (see Figure 3). AIRX-10 encountered petroleum/gasoline odors at six feet bgs. AIRX-11 encountered petroleum/gasoline odors below five feet bgs. AIRX-12, on the north side of the USTs did not have evidence of petroleum odors and elevated PID readings until approximately 14 to 16 feet bgs. The drillers reported a void, or very soft sediment between 12 and 16 feet bgs at this location. The soil from the pavement to 12 feet bgs yielded no PID response and no odors in AIRX-12. AIRX-13 was attempted several times in the west corner of the parking area, but encountered multiple refusals at 18 inches bgs. After moving farther from the building walls, the Geoprobe sampler advanced to groundwater. The soil from AIRX-13 yielded no odors and PID readings between zero and 1.0 ppm to total depth at 20 feet bgs. The organic clay and silt sediment encountered at the south side of Artkraft Strauss was encountered at 18 feet bgs in AIRX-13. Groundwater samples were collected from AIRX-1, AIRX-8, AIRX-10, and AIRX-13.

### 2.1.3 Potamkin Toyota Service Facility

A preliminary site visit to the Potamkin Service facility by Messrs. Spader, Galdun, and Schmidt of ATC, and Mr. Grond of GCI on October 22, 1998 indicated the presence of up to two USTs with fill ports. An existing UST just inside the entrance of the service area is reported to be a 5,000-gallon waste oil tank. The tank was reportedly recently pumped out and its use

discontinued. A metal fixture was observed on the floor to the south of the auto elevator, which may be the remains of a fill port to an UST. Five vent pipes were noted at the interior wall between the driveway entrance and exit (Figure 2). No other visual evidence of USTs was noted.

On Saturday, November 14, 1998, under the supervision of Mr. Schmidt of ATC, Zebra advanced four borings in the service area of Potamkin Toyota. POTK-1 was advanced just to the north of the waste oil UST at the West 58<sup>th</sup> Street entrance to the service area. The soil encountered was mostly cinder fill: incinerator ash, cinder, slag and coal mixed with sand. Petroleum odors and elevated PID readings were first encountered at 10 feet below the concrete floor. Groundwater was encountered at 16 feet below floor grade. The petroleum odors and elevated PID readings continued to 20 feet, the end of boring.

POTK-2 was advanced in the northwest quadrant of the service area to the northwest of the metal floor fixture. A Potamkin service employee indicated to Mr. Schmidt that the concrete floor in this area seemed to be "hollow" when tapped on with a heavy rod. The boring was completed to 16 feet bgs. The Geoprobe encountered petroleum odors and elevated PID readings immediately below the six-inch-thick concrete floor. Groundwater was encountered at 15.8 feet bgs. The third boring, POTK-3, was installed in the southwest quadrant of the service area, and to the west of an area where the five vent pipes were observed. No odors or high PID readings were noted in the upper six feet of the soil cores. A faint gasoline odor was noted from six to seven feet, then a stronger gasoline odor from seven to nine feet bgs. The odor and PID readings decreased from nine to approximately ten feet. The final core, from 12 to 16 feet exhibited a very strong gasoline odor. The fourth boring was advanced near the West 57<sup>th</sup> Street exit of the garage. No odors or elevated PID readings were encountered until approximately 17 feet bgs in POTK-4. From 17 to 19 feet bgs, a slight fuel oil odor and moderate PID readings were documented. The odors ceased at approximately 19 feet below floor grade. Groundwater samples were collected from POTK-1 and POTK-4. Additional borings could not be advanced due to site access restrictions.

#### 2.1.4 Goodyear Service Facility

A preliminary site visit to the Goodyear Service facility by Messrs. Spader, Galdun, and Schmidt of ATC and Mr. Grond of GCI on October 22, 1998 indicated the presence of two USTs in the center of the south side of the service area. The two USTs are reportedly used to store waste oil, and are reportedly 250-gallon tanks. (Figure 2). Two additional abandoned 550-gallon USTs may be present beneath the service area. No other visual evidence of USTs was noted. Several hydraulic lifts were noted and concrete patches were observed that indicate the presence of former subsurface lifts.

On November 3, 1998, under the supervision of Mr. Curt Schmidt of ATC, Zebra advanced five borings in the service area of Goodyear Tire & Rubber Company. The drilling was difficult with multiple refusals in the rear of the service area. GDYR-1 encountered two refusals at 1.5 feet below floor grade in the northwest corner of the service area. A third attempt reached eight feet before the Geoprobe core barrel sustained damage at the eight-foot depth after encountering multiple solid objects at different angles. No odors were noted emanating from the soil in the upper eight feet, and the PID readings were low. Because space constraints limited equipment maneuvering, the Geoprobe was relocated to the east corner of the rear of the service area to attempt GDYR-2. GDYR-2 encountered two refusals at six feet below floor grade. The soils in the upper six feet exhibited no odors and very low PID readings. Space constraints precluded additional borings attempts in this area.

The Geoprobe was moved to a point immediately north-northeast of a pair of reported 550-gallon USTs, one of which is used to store waste oil for Goodyear operation. GDYR-3 encountered refusals at 5.5 and 13 feet below floor grade. The third attempt also encountered refusal at 13 feet. PID readings were low in all three attempts. Creosote odors were noted in thin seams or layers containing wood at 3.0 feet and 10.5 feet below floor grade. Further borings were not attempted due to maneuvering limitations. GDYR-4 was attempted immediately to the southeast of the pair of USTs. The boring was advanced to 16 feet below floor grade when it encountered refusal at 16 feet. The saturated zone was not encountered. PID readings were very low, or zero, and no odors were noted during the examination of the soil cores. A second boring was not attempted due to the depth reached. The soils in this area consisted primarily of fine sands with wood, brick fragments, and deteriorated mica schist.

GDYR-5 was advanced just inside one of the entrances to the service area, and adjacent to the sidewalk. There was a refusal on a deeper concrete pad at one foot bgs. The second attempt encountered multiple layers of concrete in the upper two feet of the cores. The PID readings were zero from two feet to refusal at 16.2 feet below floor grade. No odors were detected. Saturated soil was encountered at approximately 11.5 feet. The soil observed was silty, mostly fine to medium sand, with schist fragments. Refusal was encountered at a cobble or boulder. A groundwater sample was collected from GDYR-5.

#### 2.1.5 Manhattan Mini Storage Parking/Dynasty Auto Body Facilities

On November 4, 1998, under the supervision of Mr. Schmidt of ATC, Zebra advanced three borings in the parking area of between Manhattan Mini Storage and Dynasty Auto Body on West 58<sup>th</sup> Street. Two USTs reportedly exist just inside the east corner of the body shop. This area was not accessible to the Geoprobe due to the presence of air compressor equipment permanently installed above the location of the suspected UST. Therefore, two borings were attempted in the parking lot immediately to the southeast of Dynasty Auto Body. A third boring

was planned for inside the body shop, but facility operations (auto body painting) precluded sampling at that location<sup>1</sup>. Two advanced borings at the body shop exterior encountered multiple refusals. BODY-1 encountered refusals at 1.0, 4.0, 2.0, 4.0, 9.0, 7.0, and 8.0 feet bgs. BODY-2 encountered refusals at 4.5, 4.5 and 4.1 feet. The Geoprobe was unable to penetrate what appeared to be concrete footings beneath that location. The PID detected zero VOCs in the upper eight feet cored in BODY-1 and the upper 4.5 feet cored in BODY-2. No odors were detected in any samples from these two locations. Additional borings were attempted along the north-facing exterior wall of the Goodyear Service Area. The Geoprobe was unable to penetrate beyond one foot bgs due to a solid concrete base. A boring was attempted in the center of the parking area (MINI-1). After three refusals at two feet bgs, the Geoprobe was able to penetrate to 18 feet bgs. No odors were noted, and the PID readings were zero to total depth. The soil consisted of cinder fill, deteriorated schist, silty sand and gravel, and an occasional cobble. A slight, unrecognizable odor was noted at approximately three feet bgs. The soil was not saturated, and a groundwater sample was not be collected.

## 2.2 Ground Water Sample Collection and Field Observations

Geoprobe equipment was used to install temporary groundwater-sampling devices within nine (9) of the soil borings. Zebra utilized an extendible, screened stainless steel water sampler attached to the Geoprobe boring rods to collect ground water samples. A dedicated flexible Teflon tube, to which a check valve was attached, was inserted through the hollow drilling rods into ground water in all borings. Water was then hand pumped to appropriate sample containers. All Geoprobe sampling equipment which contacts soil or ground water was decontaminated between soil borings using analconox wash, water rinse, secondalconox wash and water rinse.

Groundwater samples were collected from the following borings:

|         |         |
|---------|---------|
| AKSS-5  | AIRX-13 |
| AKSS-8  | GDYR-4  |
| AIRX-1  | POTK-1  |
| AIRX-8  | POTK-1  |
| AIRX-10 |         |

## 2.3 Sample Analysis Methods

All soil and groundwater samples were placed in appropriate containers supplied by the laboratory with necessary preservatives. ATC completed all chain of custody documents prior to sample shipment. The samples were cooled to 4 degrees centigrade (wet ice) during shipment to the laboratory. All soil samples collected (a total of 59 samples were collected for this investigation) were submitted for laboratory analysis for volatile organic compounds (VOCs)

<sup>1</sup> Elevated ambient concentrations of VOCs from painting operations would likely have contaminated any samples collected within the space.

using EPA Method 8260. In addition, 33 soil samples were selected for analysis for semi-volatile organic compounds (SVOCs) using EPA Method 8270. Thirteen of the soil samples were also analyzed for the Resource Conservation and Recovery (RCRA) list of eight (8) heavy metals (hereafter "RCRA metals"). A select number of samples with obvious gasoline contamination were also analyzed for total lead. All groundwater samples collected were submitted for VOC analysis under EPA SW-846 Method 8260 and SVOCs under EPA SW-846 Method 8270. In addition, water samples were analyzed for RCRA metals and polychlorinated biphenyls (PCBs). The metal samples were not filtered. The specific analyses were performed in accordance with methods described in EPA publication SW-846. All samples were submitted to Scilab Albany, Inc. in Latham, New York (New York State Department of Health Environmental Laboratory Approval Program ID No. 10356). Insufficient groundwater yield in boring AIRX-8 precluded analysis for SVOCs or PCBs.

## 3.0 RESULTS OF LABORATORY ANALYSES

Analytical reports of soil and groundwater samples (as submitted by Scilab Albany, Inc.) are attached as Appendix B. Appendix B is organized by day of submittal to the laboratory.

### 3.1 *Soil Sample Results*

Soil sample analytical results are discussed below. They are organized by facility, and then by analytical parameter (VOCs, SVOCs, PCBs and RCRA metals).

#### 3.1.1 Artkraft Strauss Sign Company Facility

Eight borings were advanced at the Artkraft Strauss Sign Company facility. Sixteen samples were collected and submitted for VOC analyses. The results are summarized in Table 1. Laboratory analysis indicates that VOCs were present at levels above the New York State guidelines (Spill Technology and Remediation Series (STARS) Memo #1 or Technical and Administrative Guidance Memorandum (TAGM) Memo HWR-94-4046) in AK1-10, AK3-2.5, AK5-7, AK6-3.5, and AK7-7.7. Elevated method detection limits (MDLs) due to matrix interference in AK4-7, AK5-7, and AK7-7.7, indicate organic contamination in those samples. AK3-2.5, AK5-7, and AK7-7.7 have compounds indicative of gasoline contamination. AK1-10 contains benzene equal to the NYSDEC STARS Memo Alternative Guidance Value (AGV). AK6-3.5 was collected from a thin layer with a solvent odor, and was found to contain trichloroethene, a common solvent and degreaser, above the NYSDEC TAGM Soil Cleanup Objective.

Table 1  
 Detected Volatile Organic Compounds in Soil  
 Artkraft Sign Company Facility

\* These samples were analyzed under EPA 8260 and EPA 8021.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Nine of the samples collected at the Artkraft facility were submitted to the lab for SVOC analysis. Table 2 summarizes the results of the analyses. All but two of the sample analyses indicate SVOC levels exceeding NYSDEC STARS AGVs. AK1-10 and AK8-11 were collected from the organic clayey silt found at depth beneath Artkraft facility. AK4-12 was collected from a silty fine to medium sand immediately above the saturated zone. No odors or elevated PID readings were associated with these samples. AK2-5 was collected from a layer containing wood with oil and/or creosote. AK1-3, AK3-2.5, and AK3-10 exhibited petroleum/solvent odors and high PID readings associated with the sample. The two "clean" samples exhibited elevated MDLs due to matrix interference. Please refer to Table 2 on the following page for SVOC results.

Table 2  
Detected Semi-Volatile Organic Compounds in Soil  
Artkraft Sign Company Facility

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series  
Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil  
Guidance values are applied to petroleum-based SVOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup  
Objective to Protect Groundwater Quality.  
TAGM SCOs are applied to non-petroleum SVOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate SVOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values,  
or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Five soil samples collected from the Artkraft facility were analyzed for PCBs. The results are summarized in Table 3. No PCBs were detected in any of the samples collected. RCRA metals were analyzed for in AK4-7 and AK8-11, and total lead was analyzed for in AK4-12. The NYSDEC TAGM Eastern USA Background level mercury was exceeded in both samples, and lead was exceeded in AK8-11.

**TAGM SCO -** NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

**SB -** Site Background

**NA -** Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

### 3.1.2 Airborne Express Facility

Thirteen borings were advanced at the Airborne Express facility. Eighteen samples were collected and submitted for VOC analyses. The results are summarized in Table 4. Laboratory analyses indicates that VOCs were present at levels above the NYSDEC STARS AGVs in AX1-15, AX3-14, AX4-14.5, AX5-11, AX10-7 and AX11-6.5. Detected compounds include benzene, ethylbenzene, and xylenes, are indicative of gasoline contamination. Elevated MDLs due to matrix interference in AX1-9, AX2-6, AX6-15, AX7-15, AX8-15, and AX9-14.5, indicate SVOC and/or VOC contamination in those samples.

Seven samples collected at Airborne Express were submitted to the lab for SVOC analysis. Table 5 summarizes the results of the analyses. Two of the sample analyses, AX6-15 and AX10-7, indicate SVOC levels exceeding NYSDEC STARS AGVs. AX6-15 was collected from soil adjacent to the former waste oil UST. AX10-7 was collected near a UST that may have stored diesel fuel at one time. AX13-11 contained detected SVOCs, but below the NYSDEC STARS AGVs.

PCBs were analyzed for in six samples at Airborne Express. As seen in Table 6, no PCB compounds were detected. Total lead analysis was performed on eight samples collected from the facility. None of the concentrations exceeded the NYSDEC TAGM Eastern USA Background levels for lead. RCRA metals were tested in three samples. Only mercury exceeded the NYSDEC TAGM Eastern USA Background levels in the sample AX12-18.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

STARS AGV -

New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based SVOCs.

TAGM SCO -

NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum SVOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate SVOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background

NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

### 3.1.3 Potamkin Toyota Service Facility

Four borings were advanced at the Potamkin Toyota Service facility. Eight samples were collected and submitted for VOC analyses. The results are summarized in Table 7. Laboratory analyses indicates that VOCs were present at levels well above the NYSDEC STARS AGVs in PO1-10, PO1-15, PO-2-3, PO2-15, PO3-15, and PO4-17. These samples all exhibited high to very high PID readings measured in the field. Laboratory analyses of samples PO3-5 and PO4-11 did not detect VOCs (other than acetone, a common lab contaminant).

SVOCs exceeded NYSDEC STARS AGVs in six of the eight samples collected and analyzed from the Potamkin facility. The results are summarized in Table 8. Naphthalene, a major compound found in fuel oils was present in PO1-10, PO1-15, PO2-3, PO2-15, and PO3-15. PO3-15 contained other SVOCs well above the NYSDEC STARS AGVs. PO4-11, which exhibited no petroleum odor, and contained cinder fill, contained three SVOCs slightly above the AGV. PO4-17 exhibited very high MDLs due to matrix interference due to high levels of contaminants.

PCB analysis was performed on five of the eight samples. The results as summarized in Table 9, indicate that no PCBs were detected. Six of the eight samples were analyzed for RCRA metals, and total lead was analyzed for in the remaining two samples. As illustrated in Table 9, arsenic was detected slightly above the NYSDEC TAGM Eastern USA Background levels in PO4-11. Mercury exceeded the NYSDEC TAGM Eastern USA Background levels in POTK1-10 and PO4-11. Lead concentrations exceeded the NYSDEC TAGM Eastern USA Background levels in PO4-11 and PO4-17. The samples were collected from soil containing incinerator ash, cinders and slag.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046:  
 Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended  
 Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for  
 PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background

NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

#### 3.1.4 Goodyear Service Facility

Five borings were advanced at the Goodyear Service facility. Five samples were collected and submitted for VOC analyses. The results are summarized in Table 10. The VOC analyses indicate that only acetone and 2-butanone (common lab contaminants) were detected in a single sample, and at levels well below NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

The SVOC results are summarized in Table 11. SVOCs above the NYSDEC STARS AGV were detected in both GY3-11 and GY5-11. These samples were collected close to the saturated zone in silty sand fill with brick and deteriorated schist gravel fill.

PCB and RCRA metals analyses were performed on two of the five soil samples. The results are summarized in Table 12. Cadmium was detected at levels slightly above the NYSDEC TAGM Eastern USA Background levels in sample: GY1-5. The soil at this location and depth consisted of cinders and slag.

### 3.1.5 Manhattan Mini Storage Parking Area/Dynasty Auto Body Facilities

Five samples were collected from three borings in the parking area between Dynasty Auto Body and Manhattan Mini Storage. VOCs were analyzed in four of the samples. The results are summarized in Table 13. No VOCs were detected.

SVOCs were analyzed in four of the five soil samples collected. The results are shown in Table 14. SVOCs exceeded, or equaled, the NYSDEC STARS AGV in all samples. The BD2-3.5 sample was collected from sand fill without visible cinders or slag. The other samples contained fill with cinders, incinerator slag, and coal. The MI1-3 sample, that exhibited the highest levels of SVOCs exhibited a slight unrecognizable odor.

MI1-3 and MI1-15.5 were analyzed for PCB content. The results (as indicated in Table 15) were below detection limits. RCRA metals were analyzed in three of the five samples collected. Mercury, cadmium and arsenic were detected above the NYSDEC TAGM Eastern USA Background levels in MI1-3. Laboratory analyses indicated that lead exceeded NYSDEC TAGM Eastern USA Background levels in MI1-3 and MI1-15.5. Likewise, chromium exceeded the NYSDEC TAGM Eastern USA Background levels in BD2-3.5.

### 3.2 *Groundwater Sample Analysis Results*

The summary of the results of the groundwater analyses is given in Table 16. VOCs were detected in the groundwater from borings AKSS-8, AIRX-1, AIRX-8, AIRX-10, POTK-1 and POTK-4 at levels exceeding the NYSDEC Ambient Groundwater Quality Standards and Guidance Values. The VOCs that exceeded this standard are compounds typically found in gasoline.

Naphthalene (an SVOC) was detected in AIRX-10 and POTK-1 at levels exceeding the NYSDEC Ambient Groundwater Quality Standards and Guidance Values. As indicated in Table 16, no other SVOCs were not detected in any of the groundwater samples.

PCBs were analyzed in eight of the nine water samples. The analyses indicated that all PCB compounds were below detection limits. RCRA metals were analyzed in seven of the nine water samples. Total Lead was analyzed in the remaining two samples. The lead concentrations in the groundwater samples from AIRX-8 and AIRX-10 were slightly above the NYSDEC Ambient Groundwater Quality Standards and Guidance Values. The PCB and RCRA metal groundwater analyses are summarized in Table 16.

## 4.0 DISCUSSION AND CONCLUSIONS

This investigation revealed areas of significant soil and groundwater contamination at the Subject Property. These conditions were primarily the result of gasoline releases from multiple abandoned USTs at several locations on the Subject Property. The NYSDEC will require further delineation of both the soil and groundwater contamination, as well as remediation to reduce contaminant levels. ATC recommends that soil contamination be addressed through excavation and proper disposal during site development. It may also be possible to remove the majority of contaminated groundwater by modifying planned construction dewatering systems to concurrently treat water through activated carbon filtration prior to discharge.

ATC did not access the interiors of two buildings at the eastern edge of the Subject Property (occupied by the Manhattan Mini Storage and Potamkin Toyota Sales facilities). Therefore, soil or groundwater quality data was not generated for these areas. ATC did not gain access into the Copacabana facility, and cannot speculate on soil or groundwater quality beneath this facility. Further, a limited amount of data was obtained from the Artkraft facility due to refusal at several attempted boring locations. Additional investigation is recommended for all of these areas prior to site development. Any subsequent study should include additional soil borings and installation of groundwater monitoring wells. Figure 4 provides the recommended number and locations of borings and wells to obtain additional data.

Below are summaries, discussions and conclusions for each facility investigated within the Subject Property.

### 4.1 Artkraft Strauss Sign Company Facility

Field observations and laboratory results indicate what appears to be limited gasoline contamination in soil in the vicinity of two borings advanced near two USTs on the south side of the facility. Elevated levels of gasoline constituents (VOCs) were detected in a thin soil layer in boring AKSS-3 at the 2.5 to 3.0-foot depth, and at the seven-foot depth in AKSS-1. VOC contamination originating from gasoline was found in borings advanced in the vicinity of two USTs at the north side of the facility. The VOC contamination was present in soils between seven and nine feet in AKSS-5, and in a thin layer between 7.7 and 8.0 feet in AKSS-7. Trichloroethene at a level exceeding the TAGM Recommended Soil Cleanup Level to Protect Ground Water was detected in the shallow sample from AKSS-6. Since laboratory analysis of a deeper sample collected from this boring did not detect trichloroethene, ATC concludes that this condition is localized in extent both laterally and vertically.

SVOCs were detected by the laboratory in seven soil samples at concentrations exceeding NYSDEC STARS AGVs. The remaining two samples exhibited high MDLs for SVOCs because

of matrix interference. This indicates that SVOC contamination is present above NYSDEC STARS AGVs, but below the laboratory MDL. ATC detected distinct petroleum odors in several of the soil samples collected from borings advanced at this facility. In addition, ATC detected a creosote-like odor in soils collected from AKSS-4.

Soil contamination beneath the Artkraft facility does not appear to be extensive. However, this material requires special handling and disposal if proposed development of the Subject Property includes excavation in this area. Further, at least four USTs will require removal prior to construction excavation activities. On-site characterization will be required to isolate contaminated soil from unaffected soil for proper disposal.

ATC found only a low level of VOC contamination in one of two groundwater samples collected from beneath Artkraft. ATC recommends additional investigation of groundwater quality by installing monitoring wells to confirm this finding, and to further delineate the extent and severity of contamination in the shallow aquifer in other areas of the Subject Property.

#### **4.2 Airborne Express Facility**

This investigation revealed the presence of severe VOC contamination in soils collected from five borings advanced near 12 gasoline USTs at the southeast quadrant of the facility. The investigation in the vicinity of the waste oil UST and the former hydraulic lifts in the center of the facility indicate that SVOC and VOC contaminants are present in the soil just above the water table. The SVOC contamination is indicative of a discharge from the waste oil tank. Since the VOC contamination was found in soils directly above the water table, ATC concludes that this condition was caused by migration of VOCs with groundwater flow from the 12 USTs to the west of this area. The data indicates an extensive plume of VOC contamination in groundwater that likely originates from the 12 abandoned gasoline USTs.

Two of the soil samples collected from the vicinity of the two USTs in the Airborne parking area exhibited VOCs exceeding NYSDEC STARS AGVs by at least one order of magnitude. SVOCs were detected in these samples at concentrations below NYSDEC STARS AGVs. Laboratory analysis of soil samples from AIRX-13 (southwest section, near the Artkraft facility, at a greater distance from the USTs) exhibited undetected VOC concentrations, and SVOC levels below NYSDEC STARS AGVs. Since soil samples with VOC contamination were collected near the USTs from relatively shallow depths (8 feet or less), it is likely that one or both of the USTs in the parking area have discharged gasoline to the environment. Because VOC contamination was well above the water table, ATC concludes that this condition was not caused by another source, such as the 12 USTs inside the Airborne building. In addition, groundwater data collected from near the two USTs in the parking lot shows that elevated VOC contamination is present and will require remediation.

In summary, significant areas of soil contamination from on-site USTs sources are present at this facility. This material will require special handling and disposal prior to site development. Groundwater contamination is also present and the NYSDEC will require remediation of this condition. However, if proposed site development includes construction excavation dewatering, the impacted groundwater can be treated as it is removed

#### **4.3 Potamkin Service Facility**

This investigation revealed severe VOC contamination in each of the four borings installed within in the Potamkin Service facility, that were likely caused by gasoline releases from abandoned USTs. SVOC contamination in soil was also found and indicates an unknown source of fuel oil or diesel fuel. The contamination near POTK-1 is likely from the known waste oil UST, but SVOCs found in POTK-3 and POTK-4 indicate another source. ATC recommends additional subsurface delineation in this area.

Significant areas of contaminated soil will require special handling and disposal in the Potamkin facility. In addition, the NYSDEC will require further investigation and remediation of the contaminated groundwater. ATC recommends additional groundwater monitoring using monitoring wells installed at locations indicated Figure 4. The impacted groundwater can be treated during construction dewatering.

#### **4.4 Goodyear Service Facility**

The operating service area, the presence of a subbasement, and concrete rubble beneath the floor slab limited the investigation at the Goodyear facility. No VOCs were detected in the limited soil sampling conducted but samples collected in the vicinity of the waste oil USTs (in the center of the facility) indicate SVOC contamination in the soil just above the water table. This contamination indicates possible leakage from the waste oil UST.

It is possible that special handling and disposal of contaminated soil will be necessary during proposed site development. Further investigation of both soil and groundwater quality should be performed at Goodyear to obtain additional data.

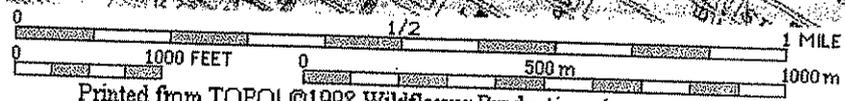

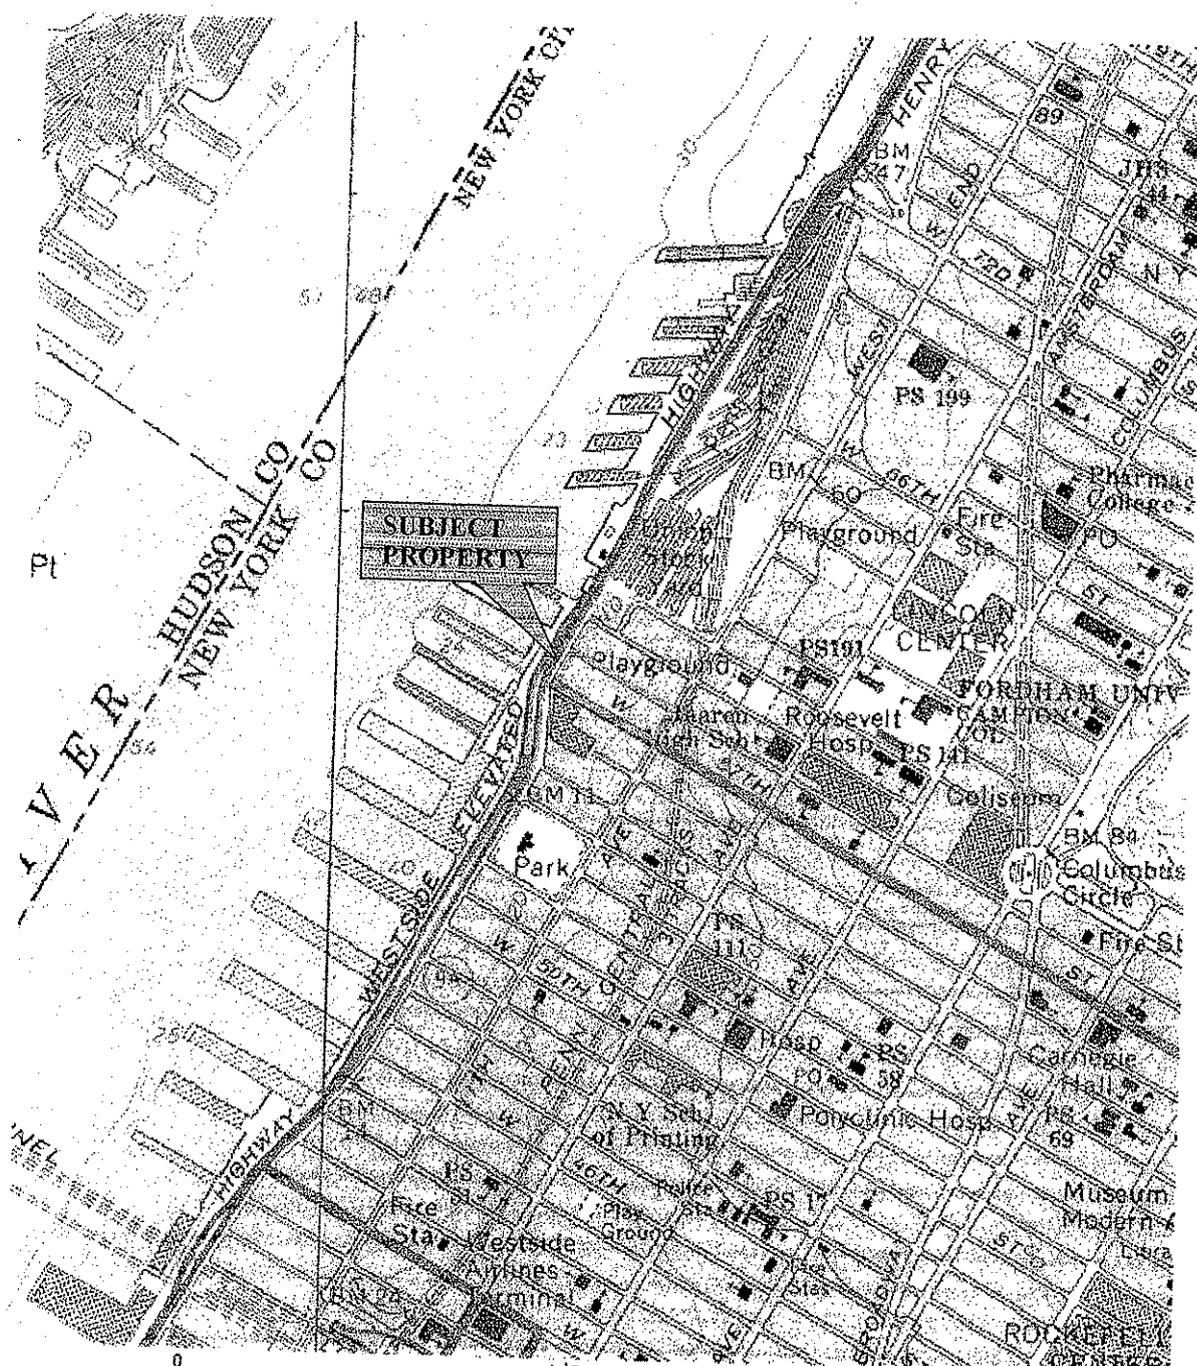

#### **4.5 Manhattan Mini Storage Parking/Dynasty Auto Body Facilities**

Soil samples from BODY-2 and MINI-1 contained SVOC concentrations above NYSDEC STARS AGVs, and heavy metal concentrations well above NYSDEC TAGM Eastern USA Background Levels. Laboratory analysis of soil samples found no VOC contamination. It appears that SVOCs and heavy metals detected reflects the composition of the fill material in this area, and was not caused by leaking USTs. However, ATC recommends field screening of soil be conducted to confirm that soil exhibiting petroleum odors or other evidence of contamination is not removed during site development.

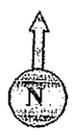

ATC has prepared and presented preliminary cost estimates for the following work:

- TASK 1: Additional Soil and Groundwater Investigation,
- TASK 2: UST/Soil Excavation and Disposal,
- TASK 3: Groundwater Treatment during Construction Site Dewatering.

The cost estimates and assumptions for the costs are presented in Section 1.0 herein. The conclusions and recommendations presented in this report are subject to change as additional data is collected.

Re: Third Supplemental Geotechnical Investigation  
Block 1105 - Residential Development  
New York, NY  

---

MRCE File No. 9347A

Gentlemen:

We have completed a supplemental boring program at the southeast corner of Block 1105. This report briefly describes the boring program and subsurface conditions encountered, and provides foundation design and construction recommendations. Based on the supplemental borings, we updated the boring location plan, the rock surface contour map, and the geologic sections originally included in our November 22, 2000, September 25, 2001, and February 14, 2002 geotechnical reports. In addition, we developed three additional geologic sections within the present investigation site.

Upon completion of the supplemental borings, we issued a draft report dated November 15, 2002. That report included sufficient information for the structural engineer to proceed with foundation design, but lacked issues pertaining to the Manhattan Mini Storage building. This report supersedes the draft report. This report includes newly provided project information, and addresses issues related to the Manhattan Mini Storage building based on our basement observation, as there are no foundation drawings available.

## PROJECT DESCRIPTION

Block 1105 encompasses the block bounded by W. 58<sup>th</sup> Street, W. 57<sup>th</sup> Street, 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue on Manhattan's west side. The proposed residential development utilizes the southeast portion of the block, extending about 250 feet along 57<sup>th</sup> Street and about 100 feet along 11<sup>th</sup> Avenue with a resulting area of about 25,000 square feet. We understand that a 36-story residential building is proposed. Based on drawings you provided, we estimate the footprint of the building at about 22,500 square feet. The building will include two levels of basement.

The site consists of a vacant lot on the west and one and three story brick buildings on the east. The vacant lot was occupied by a one-story brick building, which was demolished several months ago. The buildings on the east were used as a garage and automobile showrooms, and are both under demolition.

Our previous investigations indicate that the site grade varies from about Elev. +24 at 11<sup>th</sup> Avenue to about Elev. +20 at the west end of the present development. Top of rock varies between Elev. +15 at the northwest corner and Elev. -10 at the northeast corner of the site. Elevations in this report refer to Borough President of Manhattan Datum, in which Elev. 0.0 is 2.75 feet above 1929 National Geodetic Vertical Datum, Mean Sea Level at Sandy Hook, NJ.

### **AVAILABLE INFORMATION**

We used the following information in preparation of this report:

1. Conceptual Drawings, "11/57 Residential", Prepared by Fox & Fowle Architects, Dated September 20, 2002.
2. Phone Conversation with Severud Associates on December 23, 2002.
3. Geotechnical Investigation Report, Prepared by Mueser Rutledge Consulting Engineers, Dated November 22, 2000.
4. Supplemental Geotechnical Investigation Report, Prepared by Mueser Rutledge Consulting Engineers, Dated September 25, 2001.
5. Supplemental Geotechnical Investigation Report, Prepared by Mueser Rutledge Consulting Engineers, Dated February 14, 2002.

### **EXHIBITS**

The following exhibits are attached to this report:

| Appendix A             | Boring Logs.  |

## **SUBSURFACE INVESTIGATIONS**

**Previous Subsurface Investigations** - Between August 7 and October 6, 2000 we performed a preliminary boring program. That program consisted of sixteen borings (M-1 through M-16) which were laid out in the entire block bounded by 11<sup>th</sup> Avenue, 12<sup>th</sup> Avenue, W. 57 Street, and W. 58 Street. Due to limited access to the interiors of then existing buildings, most of the preliminary borings were drilled on the perimeter sidewalk. We summarized that investigation in our report dated November 22, 2000.

Between July 17 and August 9, 2001, we completed a supplemental boring program within the middle third of the block. The boring program consisted of 22 borings (B-1 through B-22), comprising 11 borings in the Airborne Express building, five borings in the Potamkin Services building, one boring in the Copacabana building, and five borings on the sidewalk. Subsequent to that investigation, we issued a geotechnical report dated September 25, 2001, which updated the November 22, 2000 report.

Between November 29 and December 21, 2001, a second supplemental boring program was performed within the westerly third of the block. The site had a footprint of about 51,000 square feet. A total of 16 borings (S-100 through S-115) were drilled which included three borings in the parking lot, nine borings in the Artkraft building, and four borings in the Airborne Express building. Subsequent to that investigation, we issued a geotechnical report dated February 14, 2002, which updated the September 25, 2001 report.

**Present Subsurface Investigation** - The present subsurface investigation was performed during the period from October 17 to October 22, 2002 within the southeast corner of the block. Borings performed in the past investigations indicate that the general excavation subgrade will be either in bedrock or near the rock surface. The New York City Building Code does not require borings where shallow foundations are used and bedrock can be inspected upon exposure. However, the interior of the present site was not previously explored, and additional top of rock information will be useful for design, cost estimating, and bidding purposes.

We performed five borings (R-200 through R-204) during the present investigation as shown on the attached Drawing B-1. The two borings in the vacant lot were drilled using a truck mounted drilling rig, while the three borings within the buildings were drilled using a track mounted drilling rig. The two rigs worked concurrently.

All borings were continuously inspected by our Resident Engineer, Mr. Andrew Klaetsch. All borings were made using rotary drilling techniques employing casing and mud as drilling fluid. The borings were made by Warren George Inc. Jersey Boring and Drilling, who performed the previous three boring programs, had visited the site and provided us with unit prices for the drilling. However, due to their inability to begin the work in a timely manner, you directed that MRCE engage Warren George Inc. to perform the drilling.

Soil samples were obtained with a standard, two inch O.D. split-spoon sampler, using a 140-pound drop hammer free falling 30 inches. The number of blows required to drive the

sampler through each of four six-inch increments of depth was recorded. The sum of the blows for the second and third six-inch intervals is defined as the Standard Penetration Test (SPT) Resistance, or N-value. The N-value is an index of the in-situ relative density of the material. Split-spoon samples were typically obtained continuously within the first ten feet and at five foot intervals of depth thereafter.

A minimum 10 feet of bedrock was cored in all borings to sample sound rock. Cores were taken with a double tube, N-size, diamond bit core barrel in runs up to five feet in length. Our Resident Engineer logged each core run, sketched the jointing patterns, measured recovery lengths and calculated Rock Quality Designation (RQD). RQD is the sum of the lengths of core pieces of intact rock over four inches in length between natural breaks expressed as a percentage of the total core run. Fractures which occurred as a result of drilling operations or extraction of the core samples (termed mechanical breaks) were not considered when measuring RQD.

All soil cuttings were contained to prevent cross contamination in the ground. At the completion of borings, all boreholes were backfilled with cement grout. As-drilled boring locations shown on the attached Drawing B-1 were surveyed by Montrose Surveying Co. under subcontract to Warren George Inc.

All soil and rock samples were sent to our laboratory where field classifications were verified. Split-spoon samples were removed from their containers and examined. Field sample descriptions were revised as needed. Individual sample descriptions are included on the typed logs given in Appendix A.

### **SUBSURFACE CONDITIONS**

All borings drilled for this investigation encountered fill over a sand/ till stratum, all underlain by decomposed rock/ bedrock. Individual soil and rock samples are described on the attached logs, and simplified logs are presented on the attached Geologic Sections A-A through I-I. The sections relevant to the present site are Section B-B, C-C, and G-G through I-I.

The Geologic Sections show the number and location of soil samples, their classification symbol using the Unified Soil Classification System (USCS), and SPT N-values. Rock core sample numbers, depth intervals, and lengths are shown, along with percent core recovery and RQD. Ground water levels are marked on the sections by inverted triangles. Soil and rock stratifications shown are necessary interpolations between borings and may not represent actual subsurface conditions.

**Subsurface Conditions** The soil strata encountered in the borings drilled in and around the residential development site are described below in their order of increasing depth:

**Fill (F) (NYC Class 11-65)** A 5 to 17 feet thick layer of sandy fill was encountered in Borings R-200 through R-204. Much of the fill is described as brown loose to medium compact fine to coarse sand, some silt, and silty fine to coarse sand, some to trace gravel and rock fragments. This stratum was identified as fill by the inclusion of concrete, glass and cinder. N-values within this stratum varied widely between four and 34 blows per

foot with most N-values between seven and 25 blows per foot. High N-values were likely the result of the presence of large gravel, decomposed rock or miscellaneous debris. The fill is unsuitable for support of new structures.

**Sand and Till (S/T) (NYC Class 7-65)** - A sandy natural deposit up to 20 feet thick was found beneath the fill. Stratum S/T generally consists of brown medium compact to compact silty fine to coarse sand, some to trace clay and gravel. The presence of cobbles was noted in Borings R-203 and R-204. The upper portion of this stratum appears to be a post-glacial deposit or reworked glacial till. The lower portion of the stratum is glacial till. Most N-values within this stratum varied between 19 and 78 blows per foot. High N-values were likely the result of the presence of large gravel or decomposed rock.

**Decomposed Rock (DR) (NYC Class 7-65)** - Stratum DR is the product of physical and chemical decomposition of the underlying bedrock. This stratum consists of very compact brown fine to coarse sand, some to trace silt, trace to some rock fragments. This material is more soil-like than rock-like. It retains vestiges of its parent rock fabric, but has the consistency of soil. Where present, Stratum DR is one to seven feet thick. This stratum was absent in Borings R-200 through R-204, but was encountered in the borings previously drilled around the site.

**Weathered Rock (WR) (NYC Class 4-65)** - Stratum WR is rock with a highly weathered fabric, which can be broken easily and crumbles with difficulty by hand. This material is more rock-like than soil-like. It retains vestiges of its parent rock fabric. This stratum was encountered in our previous M, B, and S series borings drilled in the westerly third of Block 1105, and was not encountered in the site of the proposed residential development. Where present, Stratum WR is two to ten feet thick except in Boring B-6, where this stratum continued in three consecutive five feet rock cores (a total 15 feet). The boundary between Stratum DR and Stratum WR is often indefinite. When boundary uncertainty occurs, consistency of the material was used to distinguish between the two strata.

**Bedrock (R) (NYC Classes 1-65, 2-65 and 3-65)** - Previous borings indicate that bedrock conditions at the entire block are complex. Gray, gray white, and black mica schist or gneissic schist were mostly encountered in borings made on the western half of the block, and gray and white gray granite were encountered in borings made on the eastern half of the block. Gray granitic gneiss and schistose gneiss were encountered in borings randomly throughout the block. Based on the previous boring data, the residential development site is within the gray and white gray granite zone, which was confirmed by the five borings drilled during the present investigation. The bedrock cored in the five borings consists of medium hard to hard slightly weathered, gray granite, jointed to broken, with iron stained to weathered joints.

Rock core recoveries in the five borings with an NX size double-tube core barrel ranged from 92 to 99 percent. Rock joint frequency varies as indicated by RQD (Rock Quality

Designation) ranging from 60 to 92 percent. The attached rock surface contour plan, Drawing No. R-1, shows the rock surface elevations at the site. The highly uneven surface of the bedrock is due to the effects of ancient streams and glacial scouring.

**Groundwater Conditions** - During this investigation one piezometer was installed. Previously, Piezometers M-11AP and M-15P were installed at the northwest corner and northeast corner of the residential development site, respectively, during the investigation performed in 2000. In addition, we located one of the monitoring wells, MW-4, that ATC installed in 1999 on the 57<sup>th</sup> Street sidewalk. Our Resident Engineer observed groundwater levels in those piezometers during and after the boring program. The water levels observed in the piezometers are shown as inverted triangles in the attached geologic sections. The data indicate that groundwater levels vary from Elev. +14.3 at the northwest corner to Elev. +6.5 at the northeast corner of the site.

### **FOUNDATION RECOMMENDATIONS**

You provided conceptual drawings dated September 17, 2002, which show the proposed residential building. The drawings indicate a 36-story building with two levels of basement for the entire footprint of the building. We were informed by Severud Associates that the floor to floor heights for the upper and lower basements will be about 14 feet and 12 feet, respectively. The bottom of the lowest basement slab will be at about Elev. -8.

Boring data indicate that the bedrock surface within the site is highly uneven with elevations ranging from Elev. +15 at the northwest corner to Elev. -10 at the northeast corner. With the lowest basement floor at Elev. -8, we expect that there will be substantial rock excavation to reach the subgrade level particularly in the westerly two thirds of the site. At the west end, the excavation will be about 12 to 25 feet into rock. At the middle of the site, excavation will be made about 18 to 25 feet into rock. At the east end of the site, rock dips down to 11<sup>th</sup> Avenue and excavation will be made primarily through soil with the rock surface near the general subgrade.

We recommend that all structural loads be directly supported on sound rock. Rock subgrade in the westerly two thirds of the site will be good quality due to the substantial amount of rock excavation. An allowable bearing value of 40 tons per square foot may be used in that area. Rock excavation in the easterly third will be substantially less. Our coring data indicate that bedrock near the surface may include rock of lesser quality due to weathering. Where rock excavation to reach quality rock becomes impractical, footings may be sized for an allowable bearing value of 20 tons per square foot. All bearing values must be verified by an experienced geotechnical engineer upon rock exposure.

**Basement Slab** - The lowest basement slab will be 14 to 22 feet below the water levels observed in the piezometers. Therefore, the proposed basement slab must be designed to deal with the hydrostatic pressure. The water pressure beneath the basement slab may be dealt with either as a pressure slab to resist the uplift, or by under-draining the slab to remove the pressures.

A pressure slab utilizes the column weight and/or weight of slab as a reaction against the upward pressure of groundwater. Between columns, tie down anchors can be used to resist the hydrostatic pressures and reduce slab thickness and reinforcement. Some leaks could occur through construction joints and cracks in the pressure slab. Basement leaks of this nature are commonly handled by providing a thin drainage course above the pressure slab, capped with a working floor slab. The drainage course would be gravity drained to a sump or ejector pit. However, we recommend that you carry a small budgetary contingency for repair to obvious leaks.

An under-drained slab reduces hydrostatic uplift by removal of groundwater. In this case, a permeable drainage course could be located below the full basement area to eliminate the water pressure on the slab. Drainage pipes and a properly filtered discharge zone would need to be designed. If this method is used, local sumps should be included in the under-slab drainage system. Such systems have been used in the past in the New York City, but to our knowledge, permits for permanent pumping of groundwater to combined sewers are not presently being issued.

In the westerly two thirds of the site, the basement will be mostly in rock. With the foundation wall keyed in rock, an under-slab drainage system will produce very small flows. Therefore, an under-slab drainage system will be practical for that portion of the site. At the easterly end of the site, the foundation wall may not reach rock or may bear on lesser quality rock with possible water bearing joints. The pumping quantity may be substantial so that a pressure slab would be a better alternative at the easterly third of the site. We understand that a decision has been made to use a pressure slab for the entire slab.

**Foundation Walls** - Foundation walls should be designed for lateral pressures due to earth, water and surcharge.

Soil design parameters are provided in the attached Table No. 1. A coefficient of horizontal pressure equal to the at-rest condition,  $K_0 = 0.5$ , may be used for walls braced by floor slabs. A coefficient of active earth pressure,  $K_a = 0.3$ , may be used where wall rotation is permitted. These values assume that backfill against the walls will be compacted with light walk-behind compactors such as a "jumping jack" to a minimum 90% modified Proctor maximum dry density. Heavy dynamic compaction equipment should not be operated within 5 feet of the basement wall to avoid high lateral stresses to the wall. If the foundation wall is cast directly against rock, lateral rock pressure may be estimated as 10 percent of effective overburden pressure. Water pressure and surcharge pressure will be additive.

Observed groundwater levels vary between Elev. +6.5 at the northwest corner and Elev. +14 at the northeast of the site. Groundwater at Elev. +14 may represent perched water with a limited recharge source. Therefore, design groundwater may be taken at Elev. +10 for the entire wall, provided that a drainage layer is installed between the foundation wall and rock. The drainage layer is designed to gravity drain high groundwater at the northwest corner to lower levels toward 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue. The drainage layer may consist of a geotextile drainage product

such as Miradrain or thin coarse gravel backfill placed behind the wall. The walls should be designed to withstand temporary water levels to Elev. +14 with an allowable overstress.

We recommend that all construction joints in foundation walls and basement slabs below grade be furnished with waterstops. Joints in basement slabs or walls below grade should have redundant systems such as PVC type waterstops with a bentonite strip. We recommend that membrane water proofing be applied to the pressure side of basement walls below grade.

**Adjacent Underground Structures** - Our November 22, 2000 report includes a set of drawings from the NYCDEP for the Pollution Control Intercepting Sewer that runs beneath 11<sup>th</sup> Avenue. The sewer line consists of a 14' outside diameter reinforced concrete tunnel with exterior "circular rib steel sets" at a spacing of about four feet. The reinforced concrete tunnel has a horse shoe-shaped interior. The sewer line slopes gently down toward the south with the invert at about Elev. -26.0 and the crown at Elev. -12.0 on the W. 58<sup>th</sup> Street side of 11<sup>th</sup> Avenue. At W. 57<sup>th</sup> Street, the sewer crown is shown near the top of bedrock. The attached Geologic Sections show approximate locations of the sewer line. A hypothetical line connecting the proposed building envelope to the invert of the circular rib steel sets is approximately at a 2.7 (H) to 1.0 (V) slope. Hence, new building loads will not adversely affect the interceptor sewer.

**Earthquake Factors** - The building design must comply with earthquake provisions in the New York City Building Code. We recommend using a Site Coefficient  $S_o = 0.67$  for all foundations bearing on bedrock.

## **CONSTRUCTION RECOMMENDATIONS**

**Excavation** - A substantial amount of rock excavation will be required at this site. Rock consists of sound granite, which will likely require blasting. All rock excavation next to the existing Manhattan Mini Storage building and along the building line should be line drilled with holes at close centers prior to blasting. Blasting should be carried out with light charges to limit vibrations that may damage adjacent structures and their foundations, dislodge rock supporting temporary excavation supports, or reduce the bearing capacity of bedrock at foundation level. A buffer zone of about three feet minimum width along the adjacent building would be prudent, where rock cannot be blasted, or only permitted to be pre-split with light charges. Hoe rams can cause harmful vibrations and should not be permitted within 25 feet of the adjacent building. Blasting vibrations may disturb occupants in the adjacent buildings. We recommend that specifications include limits on blasting vibrations. A pre-construction survey of nearby buildings will be necessary to set appropriate vibration limits.

Some of the rock excavation may require rock bolts depending on the local rock jointing. We recommend that the contractor retain an experienced professional engineer to inspect the rock excavation as it is exposed during construction and make recommendations on rock surface stabilization, if necessary. The specifications should also include an allowance for rock bolting and/or other stabilizing work.

**Underpinning** - A six story concrete structure, the Manhattan Mini Storage building, is located immediately north of the proposed building. The building has plan dimensions of about 160 feet in the east-west direction and about 100 feet in the north-south direction. The 160 foot side of the building will abut the proposed building. We reviewed Manhattan Land Books dating back to 1885. As the building is first shown in the 1927 Land Book and not shown in the 1916 Land Book, we believe that the building was built between 1916 and 1927. We attempted to obtain foundation drawings of the building at the Building Department, but none were available. On January 14, 2003, our Mr. Jong Choi visited the building to observe the basement. His observation indicates that the building has a basement below ground floor. The top of the ground floor was about four feet above the sidewalk grade at 11<sup>th</sup> Avenue and about 6.8 feet above the sidewalk grade at the west end of the building, as the sidewalk slopes down toward the west. The basement's slab to ceiling height was about 9.4 feet. Using the sidewalk grade at 11<sup>th</sup> Avenue at about Elev. 23, we estimate that the top of the basement slab is at about Elev. 16.5, which will be about 25 feet above the proposed excavation subgrade. No information is available as to support of the structure. As a portion of the slab subgrade is within the fill stratum, it is likely that the building is in part supported on or within the fill stratum. Therefore, the building may require underpinning prior to excavation below foundations of the building.

Rock surface in the southwest quadrant of the building is highest at Elev. +15.5, and drops off to Elev.-17 at the southeast corner of the building. The southwest portion of the building may be directly bearing on rock, while portion toward the southeast may be bearing on soil or may be supported by piles. In the absence of foundation drawings, we recommend that you carry a contingency budget for underpinning the entire south side of the building. The Contractor may be required to perform test pits to expose foundations prior to subgrade excavation. The extent to which underpinning is required may be determined based on the test pit investigation. The portion of the building bearing on rock may require rock bolts stabilizing the vertical rock surface below footings. All underpinning piers should be supported on rock.

Small movements are to be expected for any underpinning. The amount of movement is a function of the workmanship of the underpinning including the method of load transfer to the structure. If conventional pit underpinning is performed, dry pack should be rammed in place between the underpinning pier and the underside of the existing structure to minimize post construction settlement. Underpinning is conventionally designed by the contractor's engineer and submitted to the Owner for review prior to implementation.

**Temporary Excavation System** - Soil around the perimeter of the excavation should be retained by temporary excavation supports. The support system selected should be stiff and prevent migration of sand fines due to seepage. If soldier pile and lagging or sheet piling is selected by the excavation contractor, the installation should include rock pins at the toes of the support system where they bear on bedrock. The support system should be braced or tied back, and be relatively stiff so that lateral soil movements will not lead to subsidence of sidewalks or damage to buried utilities. If a portion of the Manhattan Mini Storage building is supported by piles, that portion of the excavation support may require internal bracing to protect the piles from damage which may be caused by tiebacks. We recommend the system proposed by the contractor be

## **EXHIBITS**

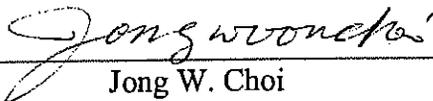

designed by a professional engineer licensed in the State of New York, and submitted to the Owner for review prior to installation.

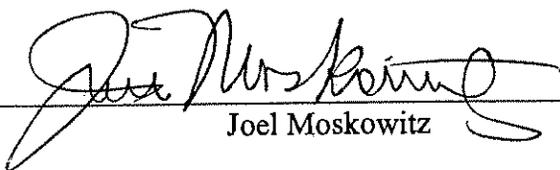

**Construction Dewatering** - Excavation subgrade will be about nine to 17 feet below the water levels observed in the piezometers. Groundwater will seep into the excavation through joints in the rock and flow through the soil above rock. As the rock subgrade will not be disturbed by water, the contractor can be permitted to dewater the rock excavation areas by pumping from local sumps at the base of the excavation. However, water flow into the excavation through the soil must be controlled to prevent the migration of soil fines that could lead to subsidence of ground beyond the excavation. Hence, we recommend that louvres between lagging boards be packed with straw.

We trust this report provides information you requested for the project. If you have any questions or if we can be of further assistance, please contact us.

Very truly yours,

(DEC ROCK)<br>ADDED TO DESCRIPTION. |

NOTES:

- ROCK CORE DESCRIPTIONS REPRESENT ONLY THE MATERIAL RECOVERED IN THE CORING OPERATIONS.
- GENERAL MINIMUM CORING CHARACTERISTICS ASSUME ROCK CORING WITH A DOUBLE TUBE SERIES "M" OR EQUIVALENT CORE BARREL USING GOOD CORING TECHNIQUES AND EQUIPMENT.
- REC - RECOVERY IS THE LENGTH OF CORE RECOVERED, EXPRESSED AS A PERCENTAGE OF THE LENGTH OF CORE RUN.
- RQD - ROCK QUALITY DESIGNATION IS THE SUM OF THE LENGTHS OF CORE PIECES FOUR INCHES OR LONGER EXPRESSED AS A PERCENTAGE OF THE TOTAL LENGTH OF CORE RUN. LENGTHS ARE MEASURED BETWEEN IN-SITU SEPARATIONS; MECHANICAL BREAKS RESULTING FROM CORING AND VERTICAL JOINTS ARE IGNORED.

TABLE R-2 WEATHERING AND JOINTING DEFINITIONS

DEGREE OF FABRIC WEATHERING

| FABRIC WEATHERING    | CHARACTERISTIC | CHARACTERISTIC                                      |
|----------------------|----------------|---|
| Unweathered          | UnW            | No decomposition or discoloration rings when struck |
| Slightly Weathered   | SW             | Iron Stained Rings when struck                      |
| Moderately Weathered | MdW            | Deteriorated fabric Thuds when struck               |
| Highly Weathered     | HW             | Friable, easily broken by hand                      |
| Decomposed           | Dec            | Soil-like   |

DEGREE OF JOINT WEATHERING

| JOINT WEATHERING    | CHARACTERISTIC | CHARACTERISTIC  |
|---------------------|----------------|---|
| Iron stained joints | FeJS           | Indicates movement of water along joints                          |
| Weathered joints    | WJts           | Joints are not tight and do not match. Joints have friable edges. |

DEGREE OF JOINTING

| JOINTING           | JOINT FREQUENCY | CHARACTERISTIC               |
|--------------------|-----------------|------------------------------|
| Massive            | Mssv            | Less than 1 joint in 4 feet  |
| Blocky             | Bky             | 1 joint every 2 to 4 feet    |
| Moderately Jointed | MdJtd           | 1 joint every foot to 2 feet |
| Jointed            | Jtd             | 1 to 2 joints per foot       |
| Closely Jointed    | CJtd            | 2 to 4 joints per foot       |
| Broken             | Bkn             | More than 4 joints per foot  |

Vertical joints are ignored in RQD and joint frequency evaluations, but are noted in written descriptions and on core sketches.

TABLE R-3 ABBREVIATIONS FOR ROCK CORE CLASSIFICATION

|                          |        |                          |       |

ROCK CORE  
CLASSIFICATION CRITERIA

DRAWING NO.

RC-1

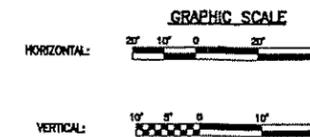

SECTION A-A

GENERAL STRATA DESCRIPTIONS:

- (F) FILL: BROWN MEDIUM COMPACT TO LOOSE FINE TO COARSE SAND, SOME SILT, AND SILTY FINE TO COARSE SAND, SOME TO TRACE GRAVEL, ROCK FRAGMENTS AND MISCELLANEOUS MATERIALS.
- (O) ORGANIC SILTY CLAY: SOFT BLACK AND DARK GRAY ORGANIC SILTY CLAY, TRACE FINE SAND, SHELL AND WOODS.
- (S/T) SAND AND TILL: BROWN COMPACT AND VERY COMPACT SILTY FINE TO MEDIUM SAND, SOME TO TRACE COARSE SAND, TRACE GRAVEL.
- (DR) DECOMPOSED ROCK: VERY COMPACT BROWN FINE TO COARSE SAND, SOME TO TRACE SILT, TRACE TO SOME ROCK FRAGMENTS.
- (WR) WEATHERED ROCK: WEATHERED GRAY MICA SCHIST TO MICA SCHISTOSE GNEISS.
- (R) BEDROCK: MEDIUM HARD TO HARD SLIGHTLY WEATHERED TO MODERATELY WEATHERED, GRAY MICA SCHIST, GRANITE, AND GNEISS, JOINTED TO BROKEN, IRON STAINED TO WEATHERED JOINTS.

GEOLOGIC SECTION NOTES:

1. FOR BORING LOCATION PLAN AND NOTES, SEE DRAWING NO. B-1.
2. SOIL SAMPLE DESCRIPTIONS AND GROUND WATER OBSERVATIONS ARE GIVEN ON THE BORING LOGS IN APPENDIX A. SEE DRAWING GS-R FOR BORING LEGEND AND A SUMMARY OF THE UNIFIED SOIL CLASSIFICATION SYSTEM USED TO DESCRIBE THE SAMPLES.
3. BORINGS ILLUSTRATED ON THE GEOLOGIC SECTIONS ARE IN SOME CASES PROJECTED TO THE SECTION AND/OR OFFSET FOR CLARITY. STRATIFICATIONS SHOWN BETWEEN SOIL SAMPLES AND BEYOND BORINGS ARE NECESSARY INTERPOLATIONS BETWEEN BORINGS AND MAY NOT REPRESENT ACTUAL SUBSURFACE CONDITIONS.
4. WATER LEVELS SHOWN BY OPEN SYMBOLS WERE MEASURED IN WELL-POINT PIEZOMETERS.
5. THE POLLUTION CONTROL INTERCEPTING SEWER'S LOCATION IS APPROXIMATE. THE CROWN AND INVERT ELEVATIONS INDICATED REFER TO DIMENSIONS OF EXTERIOR "RIB STEEL SETS" THAT THE ORIGINAL DRAWINGS SHOW AT 4' SPACING.

**ROCK CORE SKETCH LEGEND**

**JOINTING**

- J - Joint
- MB - Mechanical Break
- ∠ - Angle w/ Horizontal
- // - Parallel
- X - Crossing
- F - Foliation
- S - Stratification
- U - Unfoliated or Unstratified

**SURFACE**

- C - Curved
- I - Irregular
- S - Straight

**CONDITION**

- 1 - Slick
- 2 - Smooth
- 3 - Rough

**SKETCH SYMBOLS**

- (diagonal lines) - Joint
- (cross-hatch) - Healed Joint
- (stippled) - Broken
- (diagonal lines) - Part of Core Not Recovered
- (circle with dot) - Cavities or Vugs in Core
- (horizontal lines) - Clay
- (stippled) - Sand
- (X) - Empty Space

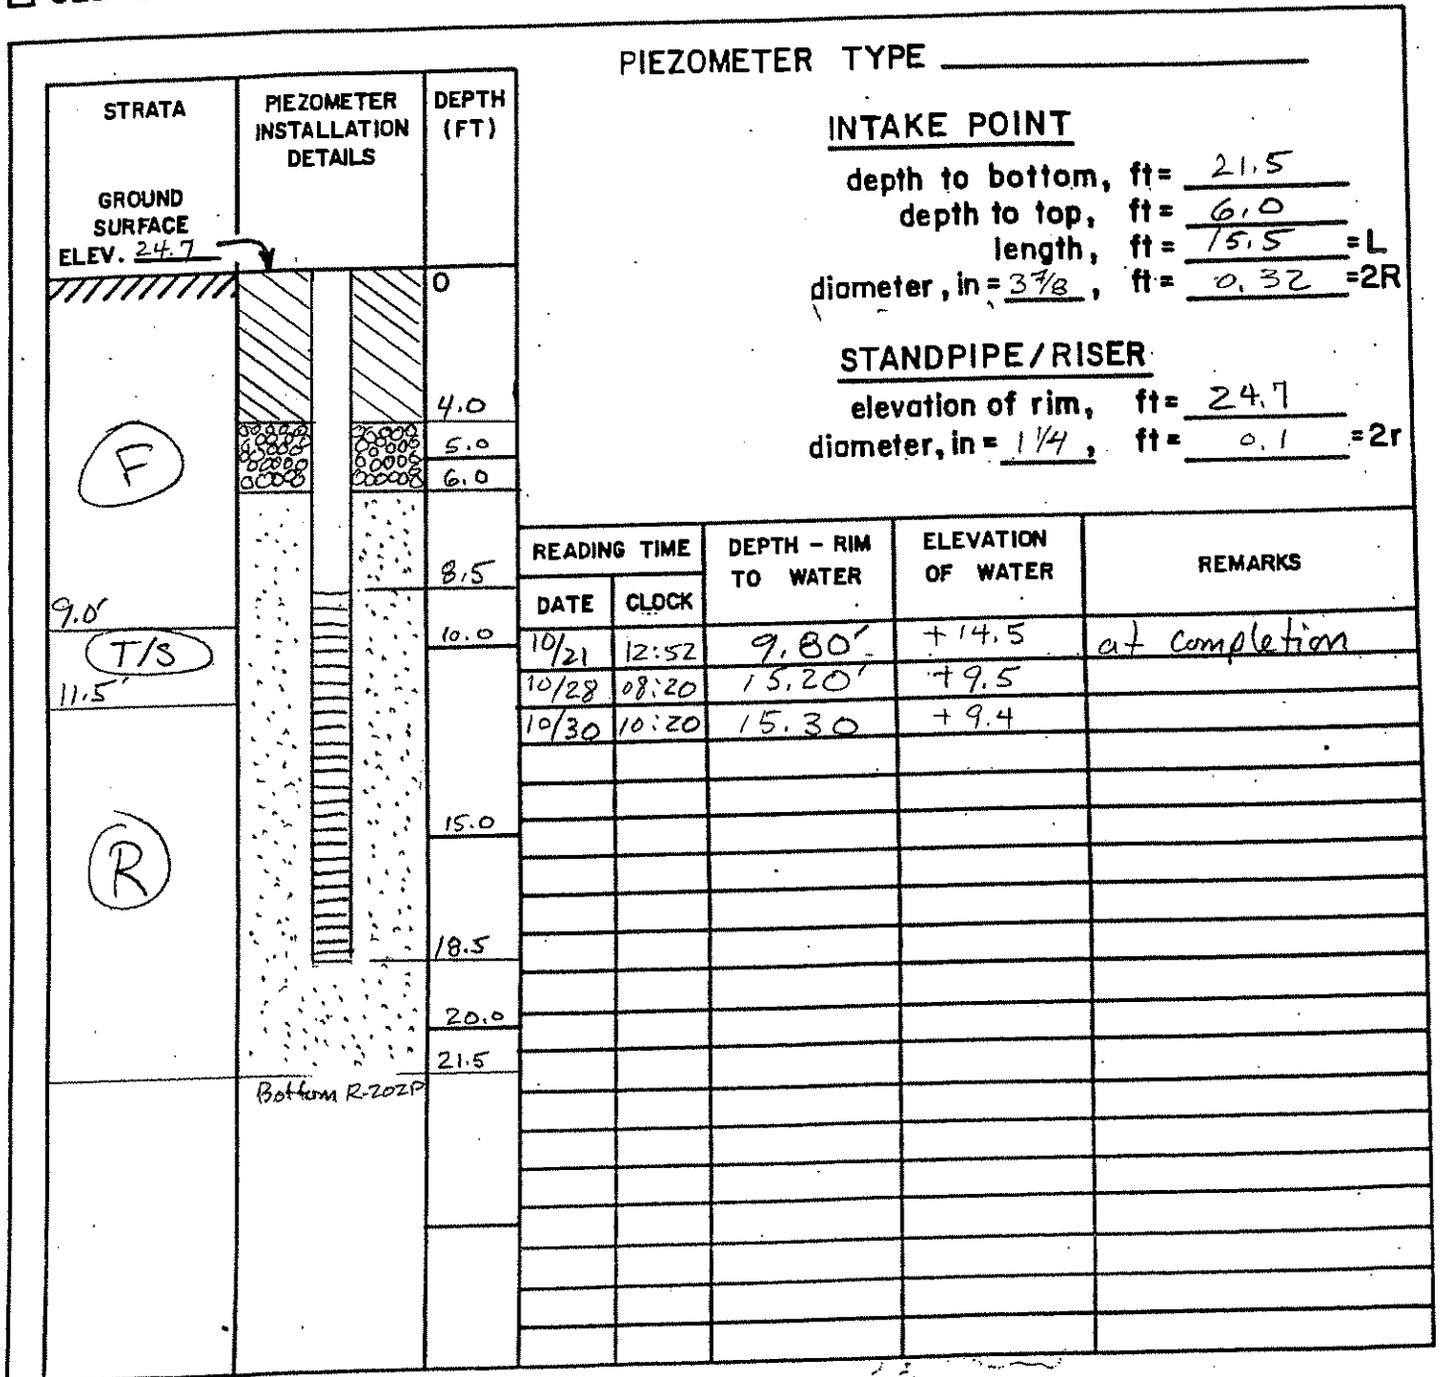

SCALE: 1 division = 0.1 feet

## QUARTERLY GROUNDWATER MONITORING REPORT

**Mid Block #57 Project**  
**a.k.a. West 57<sup>th</sup> Street Project**  
**615-649 West 57<sup>th</sup> Street**  
**New York, New York**  
**Off-Site BCP Site No. C231062A**  
**NYSDEC Spill No.: 9810172**

---

**Period:** April 1, 2013 through June 30, 2013

**Report Date:** August 12, 2013

**Site Phase:** Quarterly groundwater gauging and sampling

**Regulatory Contact:** Dana Kaplan  
New York State Department of Environmental Conservation  
Region 2-Division of Environmental Remediation  
47-40 21<sup>st</sup> Street  
Long Island City, New York 11101

**Site Description and History:** The following is a brief discussion of the history of 615-649 West 57<sup>th</sup> Street, New York, New York (the "Site"). A site location map is provided as Figure 1.

The western portion of the Site formerly contained the Artkraft Strauss Company Building (830 12<sup>th</sup> Avenue). This portion of the Site is a vacant lot that contained a two-story warehouse where signs and billboards were once manufactured for Times Square. The Artkraft building was demolished in February 2011.

The mid-block property is an approximately 70,000 square foot vacant lot. The mid-block property formerly contained an Airborne Express parcel warehouse and vehicular maintenance building (631-649 West 57<sup>th</sup> Street), Potamkin Toyota auto service repair facility (623-629 West 57<sup>th</sup> Street), Copacabana Night Club (615-621 West 57<sup>th</sup> Street), Goodyear Tire and Rubber Facility (607-613 West 57<sup>th</sup> Street), and Dynasty Auto Body (616-618 West 58<sup>th</sup> Street).

Remediation of the Mid Block #57 Project commenced on July 23, 2012 in accordance with the Mid Block #57 Project Remedial Action Work Plan. Remediation has consisted of excavation with off-site disposal of petroleum impacted soil, site dewatering and ongoing community air monitoring.

Site wide dewatering for the Mid Block #57 Project commenced on October 5, 2012 and was ongoing throughout the 1<sup>st</sup> Quarter 2013. Since October 5, 2012, a wellpoint dewatering and treatment system installed by Moretrench on behalf of the excavation contractor, Laquila, has removed and treated approximately 100,000 gallons/day from the wellpoints located inside the excavation's sheeting limits along the 57<sup>th</sup> Street and 58<sup>th</sup> Street sidewalks.

**Investigations Completed:** Roux Associates submitted a Mid Block School #57 Project Remedial Investigation Summary Report ("Roux RI") to the NYSDEC on December 3, 2007 and a Spill Closure Work Plan ("SCWP") to the NYSDEC on March 14, 2008, which proposed excavation to close out the existing Spill Number 9810172. The NYSDEC provided a SCWP approval letter dated March 27, 2008.

The NYSDEC approved the Brownfields Cleanup Program ("BCP") application for the Mid Block #57 Project on December 2, 2008. The Brownfield Cleanup Agreement was executed by the NYSDEC on April 27, 2009. A Remedial Action Work Plan ("RAWP") was submitted to the NYSDEC on July 31, 2009 and was approved by NYSDEC on March 5, 2010. The approved Mid Block #57 Project RAWP replaces the prior SCWP.

A Site Characterization investigation was conducted for the western portion of the Site known as the West Block #57 Project in October and November 2010 in accordance with Order on Consent Index R2-5000-10-08 for Site Number 231071.

Quarterly groundwater monitoring for benzene, toluene, ethylbenzene, xylene ("BTEX"), and methyl tert-butyl ether ("MTBE") have occurred at the Site since October 2000. Concentrations have varied but overall remain relatively stable since the onset of monitoring.

The groundwater analytical parameter list was modified to include the complete USEPA 8260 list of VOCs for select monitoring wells per NYSDEC request during an August 11, 2010 investigation scoping meeting for the West Block #57 Project.

**Field Activities Performed:** The groundwater monitoring activities conducted between April 1, 2013 through June 30, 2013 (the "Second Quarter 2013") included gauging and sampling from monitoring wells MW-3, MW-7, MW-8, MW-9, MW-10, and MW-11. Monitoring wells MW-2 and MW-2D were inaccessible as they were blocked by

construction related equipment and were not gauged or sampled during the Second Quarter 2013.

As noted above in the Site Description and History section, a groundwater dewatering and treatment system has been extracting groundwater at approximately 100,000 gallons/day since October 5, 2012 from wellpoints located inside the excavation's sheeting limits along the 57<sup>th</sup> Street and 58<sup>th</sup> Street sidewalks. Extracted groundwater is treated onsite through a temporary groundwater treatment system and then discharged to the NY City Sewer on 57<sup>th</sup> Street in accordance with a sewer discharge permit. Site wide dewatering has changed the groundwater flow direction and lowered the groundwater table as noted below.

*In situ* chemical oxidation (ISCO) groundwater injections were performed in the vicinity of MW-8 along the 58<sup>th</sup> Street sidewalk in accordance with the NYSDEC-approved *In Situ* Chemical Oxidation Work Plan, dated May 20, 2013. This remedial work will be summarized separately in a summary report to be provided to NYSDEC in accordance with the Off-Site BCP Site No. C231062A and NYSDEC Spill No.: 9810172.

Groundwater Gauging and Flow Direction: The elevation of the Site is between 6 and 20 feet above Manhattan Datum. The nearest surface water body is the Hudson River, which is located approximately 200 feet west of the Site. Groundwater beneath the Site is approximately 12 to 17 feet below land surface ("bls"). Water table elevations in the 57<sup>th</sup> Street monitoring wells were four to six feet lower than normal non-pumping water levels as a result of the continuing operation of the dewatering system mentioned above. Free product was not observed in any of the monitoring wells. Table 1 provides the groundwater gauging and elevation data from June 11, 2013.

The June 11, 2013 groundwater gauging data was used to calculate groundwater elevations and generate a groundwater contour map provided as Figure 2. As shown in Figure 2, groundwater east of the Site generally flows northwest with exception to the mid block where the water table is lowered due to active groundwater pumping associated with onsite construction dewatering.

Groundwater Quality: The following wells were sampled on June 11, 2013: MW-3, MW-7, MW-8, MW-9, MW-10, and MW-11. Groundwater samples were analyzed for Full List VOCs by USEPA Method 8260B.

Table 2 and Figure 3 display exceedances of the NYSDEC Ambient Water Quality Standards and Guidance Values (“AWQSGVs”) for Class GA groundwater presented in the Division of Water Technical and Operational Guidance Series (1.1.1) “Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations” (NYSDEC, 1998), as amended in April 2000.

VOCs were detected at concentrations exceeding the AWQSGVs in MW-3, MW-8, MW-9, and MW-11 (Table 2 and Figure 3). There were no concentrations of petroleum related VOCs detected in the upgradient monitoring wells MW-7 and MW-11 exceeding NYSDEC AWQSGVs. MW-8 and MW-11 contained detections of acetone above the AWQSGVs, but this is attributed to the laboratory and is not indicative of groundwater quality. Downgradient monitoring wells MW-2 and MW-2D were not accessible for sampling. A summary of historic concentrations of the sum of BTEX and MTBE compounds is presented as Table 3.

**Upcoming Tasks:**

The following activities are scheduled for the next reporting period:

- perform quarterly gauging of wells; and
- perform quarterly groundwater sampling.

**Discussion:**

A comparison of historic groundwater analytical results for the sum of BTEX and MTBE compounds from October 2000 through June 2013 is provided in Table 3. Concentrations of VOCs in MW-3 and MW-8 have decreased significantly (>50% reduction) since September 2012 due to construction dewatering in the vicinity of the well.

The sum of BTEX and MTBE concentrations in MW-9 and MW-10 are generally similar between the June 2013 sampling event and previous sampling events.

Based upon the data collected and described herein, Roux Associates proposes to collect and analyze Third Quarter 2013 groundwater samples for the full list of VOCs and MTBE via USEPA method 8260. Samples will be collected from MW-3, MW-7, MW-8, MW-9, MW-10, and MW-11.

NYSDEC - New York State Department of Environmental Conservation

AWQSGVs - Ambient Water-Quality Standards and Guidance Values

µg/L -Micrograms per liter

J - Estimated Value

U - Compound was analyzed for but not detected

DUP - Duplicate

-- No NYSDEC AWQSGV available

Bold data indicates that parameter was detected above the NYSDEC AWQSGVs

**Notes:**

1. Sum of Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) and Methyl Tertiary Butyl Ether (MTBE) concentrations provided in micrograms per liter (µg/L).
2. ND = Not Detected
3. NS = Not Sampled (well destroyed or inaccessible)
4. NA = Not Available (well not installed)
5. Data from October 2000 through October 2006 collected by ATC Associates and GZA GeoEnvironmental as reported in GZA Quarterly Groundwater Monitoring Report #26, dated December 2006.
6. MW-10 and MW-11 were installed in November 2009. MW-2D installed in October 2010.

## BLOCK 1105

### LEGEND

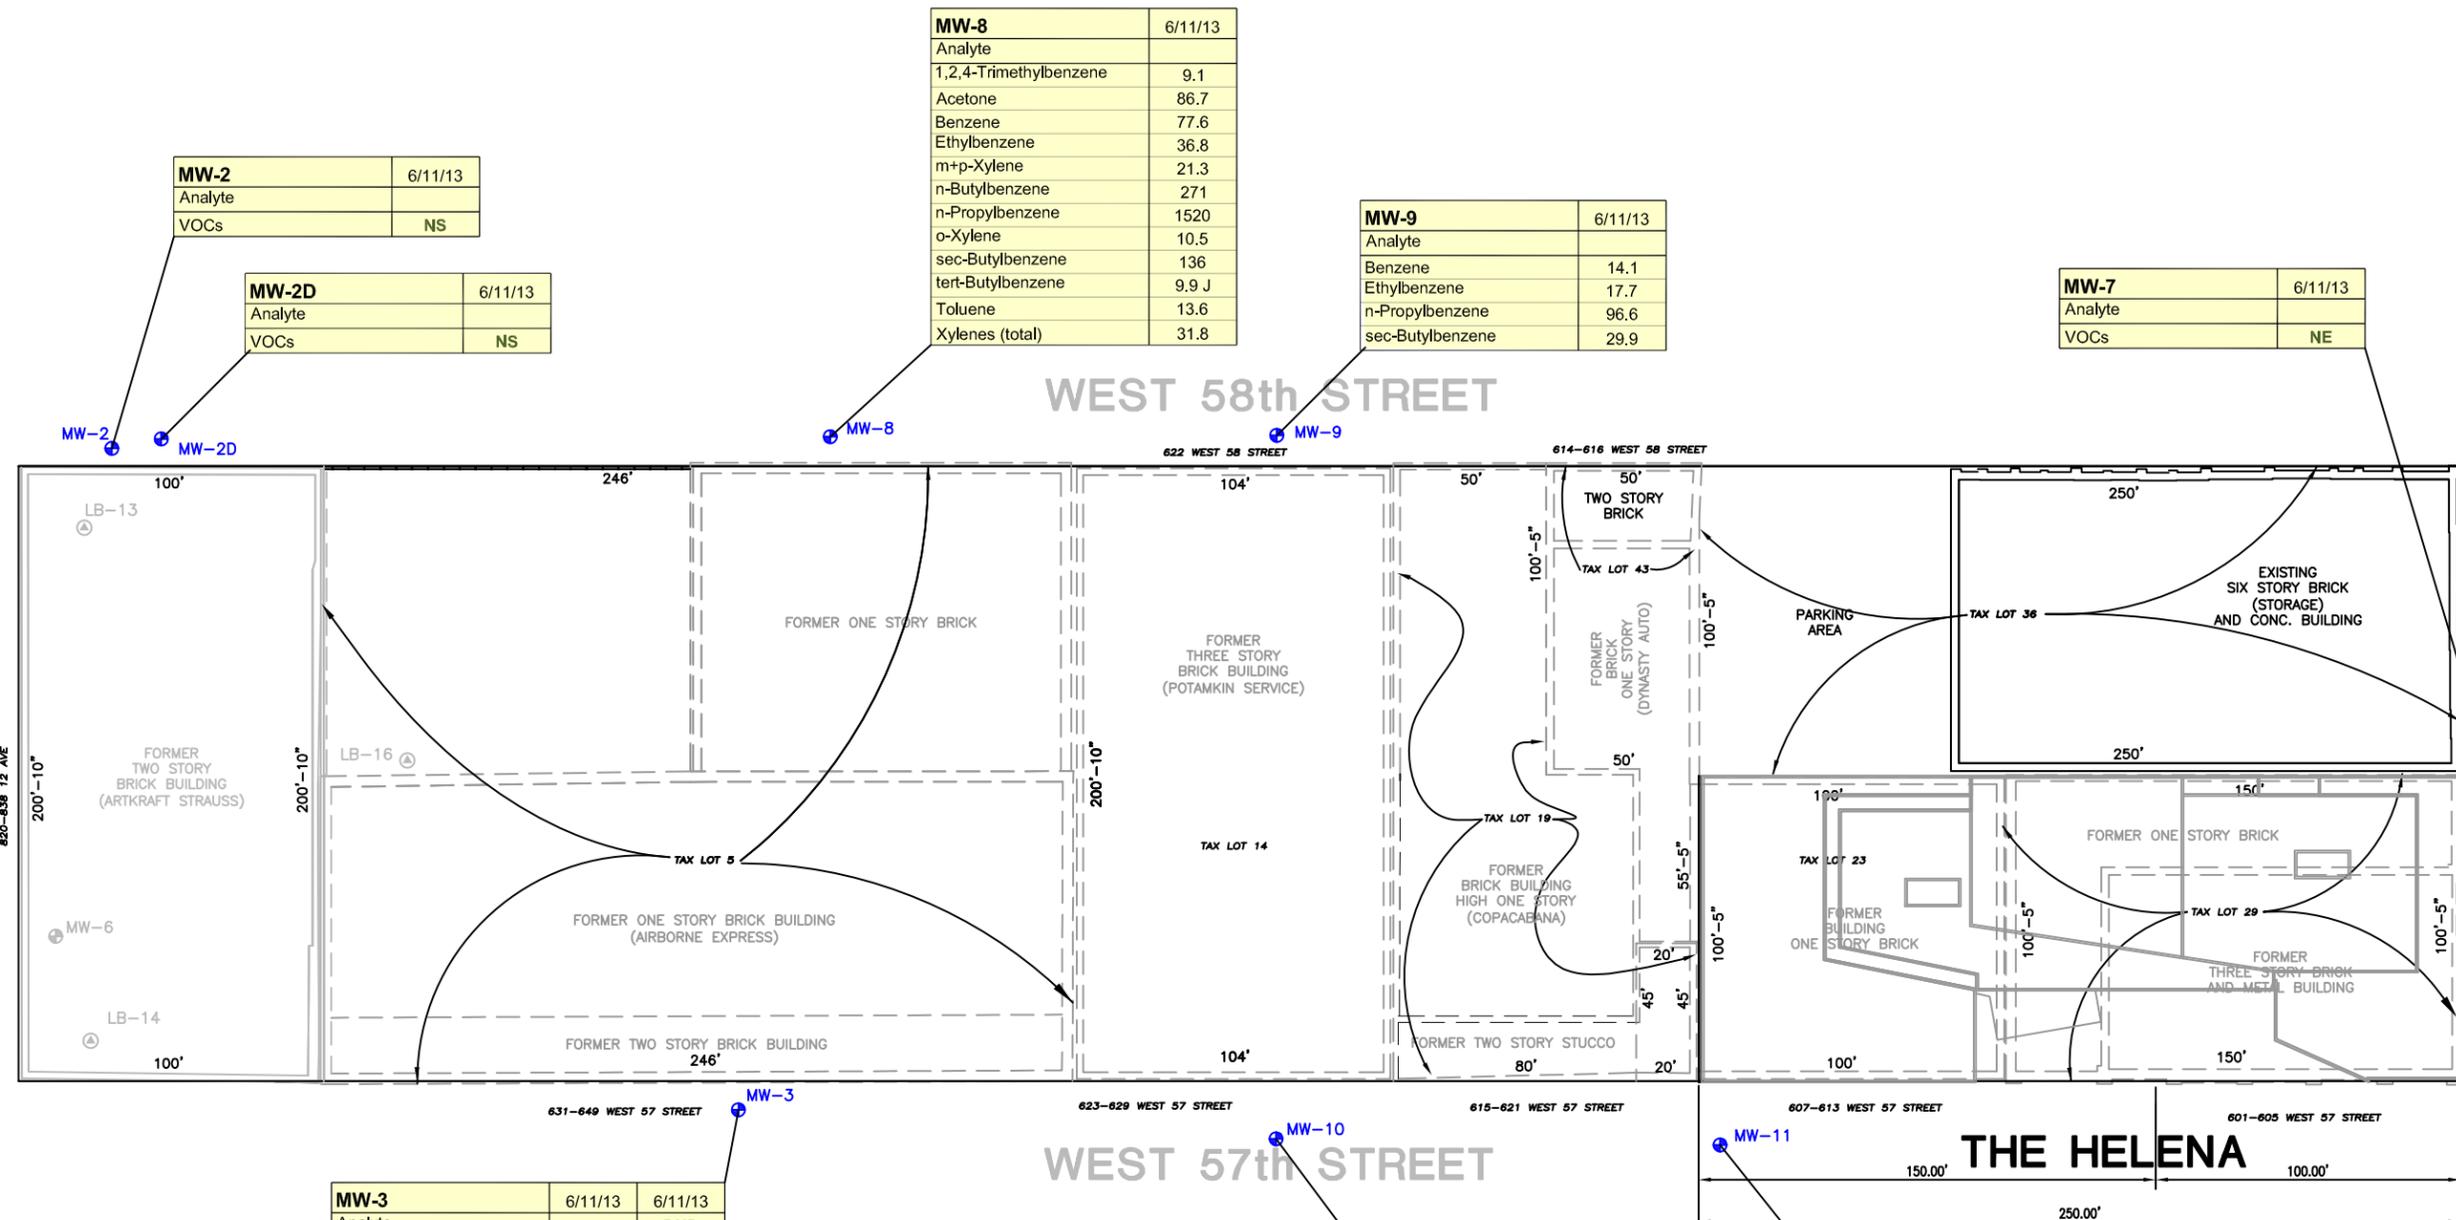

- LIMITS OF MID BLOCK #57 PROJECT
- LB-13 LOCATION AND DESIGNATION OF MONITORING WELL INSTALLED IN JULY 2010
- MW-3 LOCATION AND DESIGNATION OF EXISTING MONITORING WELL
- MW-6 LOCATION AND DESIGNATION OF FORMER MONITORING WELL (DESTROYED DURING FEBRUARY 2011 ARTKRAFT DEMOLITION).
- 2.94 WATER-LEVEL ELEVATION (FEET RELATIVE TO MANHATTAN DATUM)
- NM NOT MEASURED
- 6 LINE OF EQUAL WATER-LEVEL ELEVATION. DASHED WHERE INFERRED (FEET RELATIVE TO MANHATTAN DATUM)

### NOTES

1. MANHATTAN DATUM IS 2.75 FEET ABOVE NATIONAL GEODETIC VERTICAL DATUM.
2. MONITORING POINT ELEVATIONS WERE SURVEYED ON AUGUST 10, 2010 BY MONTROSE SURVEYING LLP.
3. LB-16 GROUNDWATER ELEVATION NOT USED FOR CONTOURING BECAUSE MEASURING POINT ELEVATION COULD NOT BE FIELD VERIFIED.
4. MW-2 AND MW-2D WAS INACCESSIBLE AND COULD NOT BE GAUGED.
5. JUNE 2013 GROUNDWATER CONTOURS REFLECT ACTIVE PUMPING CONDITIONS DURING CONSTRUCTION DEWATERING FROM PERIMETER WELLPOINTS LOCATED MIDBLOCK ALONG 57TH STREET AND 58TH STREET SIDEWALKS.

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

B - The analyte was found in an associated blank as well as in the sample

\* - LCS or LCSP exceeds the control limits

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

PCBs - Polychlorinated Biphenyls

Summary of Pesticides in Soil Cutting Sample, 600 West 58th Street, New York, New York

Soil Vapor Sampling Form

Date: 6/26/13 Time: 9:40  
 Weather: M. Sunny  
 Temperature: 80°F Humidity: 80%  
 Wind Magnitude: \_\_\_\_\_ Wind Direction: SW 12  
 Barometric Pressure: 29.56 Precipitation: \_\_\_\_\_

Summa  
A1043  
FL056 Reg  
SV-1

Sampling Team: Ron Lombino  
 Sampling Location: Parking lot

Site Condition (i.e. any adjacent questionable facilities, vent pipes, tanks, etc. and what type of basements are present)

Prior to commencing the sampling activity, remove the brass cap from the end of the sample tubing and fit a new brass hose barb fitting onto the sample tubing.

Calibrate the Helium detection meter  
 Utility Clearance Completed: Yes  
 Sampling Depth: 5' feet below land surface (If ambient air sample, elevate can to approx. 3 ft - 5 ft above land surface)  
 Sealed with bentonite: Yes  
 Apparent Moisture Content: N/A  
 Purge Rate: 0.136 Must be less than 0.2 L/min  
 Purge Time: 1 min  
 Helium Rate at enclosure: 19760 PPM  
 Helium Rate from sample tubing: 0 PPM Is this rate <10% of the rate at the enclosure Yes / No

If the Helium readings have a greater ratio than 10% the seals should be rechecked and the tracer gas should be reapplied.

Once the tracer gas screening procedures are completed and no short-circuiting is determined to be present at the location the soil vapor sample can be collected in a lab certified clean summa canister at a rate less than 0.2 L/min.

Finishing pressure should be within 0.5 - 4 " of Hg

Is the Summa Canister Certified Clean and within the proper holding time? Yes

Starting Pressure: 29.5 in. of Hg  
 Starting Time: 10:30  
 Ending Time: 12:53  
 Ending Pressure: 5 in. of Hg

Summa Canister Identification #: A1043  
 Flow Regulator ID #: FL056  
 Sample ID #: SV-1  
 Time: 9:40

Analysis: Methane (EPA-18) and VOCs (TO-15)  
 Laboratory: Lancaster Laboratories PA

After the sample is collected in the summa canister, remove the summa canister and screen the sample tubing with redundant multi-gas meters. Calibrate the multi-gas meters prior to screening and record parameters.

 Barometric Pressure: 29.96 Precipitation: \_\_\_\_\_

Sampling Team: Ron Lombino  
 Sampling Location: Basement

Site Condition (i.e. any adjacent questionable facilities, vent pipes, tanks, etc. and what type of basements are present)

Prior to commencing the sampling activity, remove the brass cap from the end of the sample tubing and fit a new brass hose barb fitting onto the sample tubing.

Calibrate the Helium detection meter

Utility Clearance Completed: Yes

Sampling Depth: 51 feet below land surface (If ambient air sample, elevate can to approx. 3 ft - 5 ft above land surface)

Sealed with bentonite: Yes

Apparent Moisture Content: N/A

Purge Rate: 0.126 Must be less than 0.2 L/min

Purge Time: 1 min

Helium Rate at enclosure: 4.690

Helium Rate from sample tubing: 0 ppm Is this rate <10% of the rate at the enclosure Yes / No

If the Helium readings have a greater ratio than 10% the seals should be rechecked and the tracer gas should be reapplied.

Once the tracer gas screening procedures are completed and no short-circuiting is determined to be present at the location the soil vapor sample can be collected in a lab certified clean summa canister at a rate less than 0.2 L/min.

Finishing pressure should be within 0.5 - 4 " of Hg

Is the Summa Canister Certified Clean and within the proper holding time? Yes

Starting Pressure: 3.2 in. of Hg  
 Starting Time: 10:31  
 Ending Time: 12:47  
 Ending Pressure: 2.1 in. of Hg

Summa Canister Identification #: A8912  
 Flow Regulator ID #: FCB29  
 Sample ID #: SV-2  
 Time: 10/9  
 Analysis: Methane (EPA-18) and VOCs (TC-15)  
 Laboratory: Lancaster Laboratories, PA

After the sample is collected in the summa canister, remove the summa canister and screen the sample tubing with redundant multi-gas meters. Calibrate the multi-gas meters prior to screening and record parameters.

| 79-00-5    | 1,1,2-Trichloroethane      | ND     | 1.0 | 0.29 | ug/l  |   |

ND = Not detected MDL - Method Detection Limit

RL = Reporting Limit

E = Indicates value exceeds calibration range

J = Indicates an estimated value

B = Indicates analyte found in associated method blank

N = Indicates presumptive evidence of a compound

**JB41251: Chain of Custody**

**Page 1 of 2**

## Accutest Laboratories Sample Receipt Summary

**Accutest Job Number:** JB41251      **Client:** \_\_\_\_\_      **Project:** \_\_\_\_\_  
**Date / Time Received:** 7/2/2013      **Delivery Method:** \_\_\_\_\_      **Airbill #'s:** \_\_\_\_\_

**Cooler Temps (Initial/Adjusted):**

| <u>Cooler Security</u>    | <u>Y</u>                            | <u>or</u> | <u>N</u>                 |                       | <u>Y</u>                            | <u>or</u> | <u>N</u>                 |
|---------------------------|-------------------------------------|-----------|--------------------------|-----------------------|-------------------------------------|-----------|--------------------------|
| 1. Custody Seals Present: | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> | 3. COC Present:       | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |
| 2. Custody Seals Intact:  | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> | 4. Smpl Dates/Time OK | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |

| <u>Cooler Temperature</u>    | <u>Y</u>                            | <u>or</u> | <u>N</u>                 |
|------------------------------|-------------------------------------|-----------|--------------------------|
| 1. Temp criteria achieved:   | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |
| 2. Cooler temp verification: | _____                               |           |                          |
| 3. Cooler media:             | _____                               |           |                          |
| 4. No. Coolers:              | 0                                   |           |                          |

| <u>Quality Control Preservation</u> | <u>Y</u>                            | <u>or</u> | <u>N</u>                 | <u>N/A</u>                          |
|-------------------------------------|-------------------------------------|-----------|--------------------------|-------------------------------------|
| 1. Trip Blank present / cooler:     | <input type="checkbox"/>            |           | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 2. Trip Blank listed on COC:        | <input type="checkbox"/>            |           | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 3. Samples preserved properly:      | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |                                     |
| 4. VOCs headspace free:             | <input type="checkbox"/>            |           | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

| <u>Sample Integrity - Documentation</u> | <u>Y</u>                            | <u>or</u> | <u>N</u>                 |
|---|-------------------------------------|-----------|--------------------------|
| 1. Sample labels present on bottles:    | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |
| 2. Container labeling complete:         | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |
| 3. Sample container label / COC agree:  | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |

| <u>Sample Integrity - Condition</u> | <u>Y</u>                            | <u>or</u> | <u>N</u>                 |
|-------------------------------------|-------------------------------------|-----------|--------------------------|
| 1. Sample recvd within HT:          | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |
| 2. All containers accounted for:    | <input checked="" type="checkbox"/> |           | <input type="checkbox"/> |
| 3. Condition of sample:             | Intact                              |           |                          |

| <u>Sample Integrity - Instructions</u>    | <u>Y</u>                            | <u>or</u> | <u>N</u>                            | <u>N/A</u>                          |
|---|-------------------------------------|-----------|-------------------------------------|-------------------------------------|
| 1. Analysis requested is clear:           | <input checked="" type="checkbox"/> |           | <input type="checkbox"/>            |                                     |
| 2. Bottles received for unspecified tests | <input type="checkbox"/>            |           | <input checked="" type="checkbox"/> |                                     |
| 3. Sufficient volume recvd for analysis:  | <input checked="" type="checkbox"/> |           | <input type="checkbox"/>            |                                     |
| 4. Compositing instructions clear:        | <input type="checkbox"/>            |           | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 5. Filtering instructions clear:          | <input type="checkbox"/>            |           | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
