# CERTIFICATION

I, Joshua B. Levine am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 600 West 58<sup>th</sup> Street Site. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge, and contains all available environmental information and data regarding the property.

Joshua B. Levine, P.E.

# EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

## **Site Location and Current Usage**

The Site is located at 600 West 58<sup>th</sup> Street in the Clinton section of Manhattan, New York and is identified as Block 1105 and Lot 36 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 25,105-square feet and is bounded by West 58<sup>th</sup> Street to the north, The Helena, an active rental residential tower with market and affordable housing to the south (601 West 57<sup>th</sup> Street), 11th Avenue to the east, and the Durst Pyramid LLC residential tower construction site to the west. A map of the site boundary and surrounding land use is shown in Figure 2. Currently, the Site is a vacant 6-story building.

## **Summary of Proposed Redevelopment Plan**

The Site redevelopment consists of the demolition of the existing building, excavation to a depths ranging from 3 to 13 feet below land surface (ft bls) in the area of the proposed future basement (to an elevation of approximately 10 feet above Manhattan datum), and excavation to approximately 3 feet below proposed slab on grade and the construction of an 11-story mixed-use building with a cellar and ground floor commercial space. Residential properties will be on floors 3 through 11 and commercial properties with a community facility (museum annex, doctor's office or day care facility to be determined) will be located on the ground and second floors. The cellar will contain mechanical equipment/utility rooms and storage space. Groundwater elevation beneath the Site is identified at approximately 16 ft bls (equivalent to an elevation of 7 feet above Manhattan datum). Based on the proposed redevelopment plans, groundwater may be encountered during excavation. The current zoning designation is C4-7. In addition, several mixed commercial/residential use buildings exist in the surrounding area. The proposed use is consistent with existing zoning for the property.

## **Summary of Past Uses of Site and Areas of Concern**

Based upon review of Sanborn fire insurance maps, Roux Associates identified the Site as being formerly utilized by a lumber yard and various garage / repair shop identities until sometime prior to 1926; and as a tire warehouse until sometime prior to 1976. The most recent use of the Site building was a warehouse for storage with a flat utilized for deliveries. The current Site building was constructed in 1925. The Site is currently vacant.

A Site Inspection was conducted by Roux Associates Inc. on April 9, 2013. A six-story building with a basement and a parking lot exists on the property. The building was operating as a storage unit facility at the time of the Site inspection. Based upon visual examination of the building and basement slab, no indication of contamination or surficial staining was encountered during the Site inspection.

## **Summary of the Work Performed under the Remedial Investigation**

1. Roux Associates conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.) on April 9, 2013.
2. Roux Associates directed the installation of nine soil borings across the entire project Site between June 12 and June 17, 2013. The soil boring investigation included the collection of 15 subsurface soil samples for chemical analysis to evaluate the soil quality beneath the Site. In addition, eight soil samples were analyzed to determine whether hazardous levels of metals existed in the subsurface soil via toxicity characteristic leaching procedure (TCLP).
3. Roux Associates directed the installation of two groundwater monitoring wells (MW-2 and MW-3) between June 12 and June 13 2013. In order to evaluate water quality beneath the Site, groundwater samples were collected from both newly installed wells and an existing monitoring well (MW-7) on June 28, 2013. Water level measurements and ground elevation at each monitoring well were also recorded to establish groundwater flow direction.
4. Roux Associates directed the installation of four soil vapor points within the Site between June 12 and June 14, 2013. Four soil vapor samples were collected on June 28, 2013 and submitted for chemical analysis.

## Summary of Environmental Findings

- Elevation of the property ranges from 17.19 to 23.68 feet.
- Depth to groundwater ranges from 10.49 to 16.33 feet at the Site. The 10.49 feet depth to water reading was measured from the basement slab inside the building, which is located approximately 6 feet below the sidewalk elevation. Groundwater beneath the Site is identified at approximately 16 feet bls (equivalent to an elevation of 7 feet above Manhattan datum).
- Groundwater flow is generally from southeast to northwest beneath the Site.
- Depth to bedrock ranges from 4 to 15 feet at the Site.
- The stratigraphy of the Site, from the surface down, consists of historic fill underlain by a sand/till stratum, decomposed rock and bedrock.
- Soil/fill samples collected during the RI showed three volatile organic compounds (VOCs) detected at trace concentrations, well below the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). Several semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs) were detected in four (4) of the fifteen (15) soil samples analyzed above the Unrestricted Use SCOs. SVOCs of concern including benzo[a]anthracene (max. of 3,280 µg/kg), benzo[a]pyrene (max. of 3,690 µg/kg), benzo[b]fluoranthene (max. of 4,320 µg/kg), chrysene (max. of 4,060 µg/kg), dibenzo[a,h]anthracene (max. of 632 µg/kg), and indeno[1,2,3-c,d]pyrene (max. of 2,400 µg/kg) exceeded Restricted Residential SCOs in shallow soils. Several metals, including hexavalent chromium (max. of 2.7 mg/kg), trivalent chromium (at 47 mg/kg), copper (max. of 173 mg/kg), lead (max. of 865 mg/kg), manganese (at 2,530 mg/kg), mercury (max. of 12.1 mg/kg), nickel (max. of 243 mg/kg) and zinc (max. of 541 mg/kg) were identified at concentrations above Unrestricted Use SCOs in most of the soil samples collected beneath the Site. Of these metals, lead, manganese and mercury also exceeded Restricted Residential SCOs. One pesticide 4,4'-DDT at concentration of 5.1 parts per billion (ppb) was detected above Unrestricted Use SCOs in one shallow soil sample. No

PCBs or hazardous concentrations of metals were detected in any of the soil samples collected beneath the Site.

- Groundwater samples collected during the RI indicated that VOCs were either not detected or present at concentrations below the NYSDEC 6 NYCRR Part 703.5 Class GA ambient water quality standards and guidance values (AWQSGVs) in all groundwater samples collected except for the detection of chloroform (15.4 µg/L) in one sample. The detection of chloroform is likely a laboratory artifact in that it is a commonly used laboratory extraction solvent. Several metals including iron, manganese, selenium and sodium were detected at concentrations above AWQSGVs in groundwater samples. No SVOCs, pesticides or polychlorinated biphenyls (PCBs) were detected at concentrations above their respective AWQSGVs.
- Soil vapor samples collected during the RI detected petroleum related and chlorinated VOCs at low concentrations. Petroleum-related compounds included 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-ethyltoluene, benzene, ethylbenzene, toluene and xylenes. In addition, 2-butanone, acetone, carbon disulfide, chloroform, chloromethane, cyclohexane, dichlorodifluoromethane, ethanol, heptane, hexane, isooctane, isopropanol, methylene chloride, propene, t-butyl alcohol, tetrachloroethene, trichloroethene, and trichlorofluoromethane were also detected in the Soil Vapor Samples. Overall the highest reported concentrations were for 1,2,4-trimethylbenzene (max. of 317 µg/m<sup>3</sup>), acetone (max. of 117 µg/m<sup>3</sup>), toluene (max. of 110 µg/m<sup>3</sup>), and xylene (max of 337 µg/m<sup>3</sup>). Most other compounds were detected at concentrations below 50 µg/m<sup>3</sup>. Chlorinated compounds including tetrachloroethene (PCE) was identified in all soil vapor samples at a maximum concentration of 41 µg/m<sup>3</sup>, and trichloroethylene (TCE) was detected at 1.1 µg/m<sup>3</sup> in one sample. 1,1,1-Trichloroethane (TCA) and carbon tetrachloride were not detected in soil vapor. The PCE and TCE concentrations are below the monitoring level ranges established within the State DOH soil vapor Final Guidance on Soil Vapor Intrusion.

# **REMEDIAL INVESTIGATION REPORT**

## **1.0 SITE BACKGROUND**

Durst Development L.L.C. has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.58-acre (25,105 square feet) site located at 600 West 58<sup>th</sup> Street in the Clinton section of Manhattan, New York. Mixed commercial/residential use is proposed for the property. The RI work was performed between June 12, 2013 and June 28, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

### **1.1 Site Location and Current Usage**

The Site is located at 600 West 58<sup>th</sup> Street in the Clinton section of Manhattan, New York and is identified as Block 1105 and Lot 36 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 25,105-square feet and is bounded by West 58<sup>th</sup> Street to the north, The Helena located at 601 West 57<sup>th</sup> Street to the south, 11th Avenue to the east, and the Durst Pyramid LLC residential tower construction site to the west. The Durst Pyramid LLC construction site is currently enrolled in the New York State Brownfields Cleanup Program (BCP). A map of the Site boundary and surrounding land use is shown in Figure 2. Currently, the Site is a vacant 6-story building.

### **1.2 Proposed Redevelopment Plan**

The Site redevelopment consists of the demolition of the existing building, excavation to a depths ranging from 3 to 13 feet below land surface (ft bls) in the area of the proposed future basement (to an elevation of approximately 10 feet above Manhattan datum), and excavation to approximately 3 feet below proposed slab on grade and the construction of an 11-story mixed-use building with a cellar and ground floor commercial space. Residential properties will be on floors 3 through 11 and commercial properties with a community facility (museum annex, doctor's office or day care facility to be determined) will be located on the ground and second floors. The cellar will contain mechanical equipment/utility rooms and storage space. Groundwater elevation beneath the Site is identified at approximately 16 ft bls (equivalent to an elevation of 7 feet above Manhattan datum). Based on the proposed redevelopment plans,

groundwater may be encountered during excavation. The current zoning designation is C4-7. In addition, several mixed commercial/residential use buildings exist in the surrounding area. The proposed use is consistent with existing zoning for the property.

### **1.3 Description of Surrounding Property**

The area surrounding the Site is urban and comprised of predominantly commercial properties (i.e. retail stores and offices). The table below provides details on surrounding property usage adjacent to the Site. Figure 2 shows the surrounding land usage.

|       |  |
|-------|--|
| North | West 58 <sup>th</sup> Street; Consolidated Edison (ConEd) Powerhouse further north.  |
| South | 38-story residential tower with commercial businesses (The Helena); West 57 <sup>th</sup> Street further south.  |
| East  | 11 <sup>th</sup> Avenue; 19-story office building with commercial business on the ground level (including BMW Car Dealership under-construction) further east. |
| West  | Durst Pyramid LLC Construction site; 12 <sup>th</sup> Avenue and Joe DiMaggio Highway further west.  |

## **2.0 SITE HISTORY**

### **2.1 Past Uses and Ownership**

Based upon review of Sanborn fire insurance maps, Roux Associates identified the Site as being formerly occupied by a lumber yard and various garage / repair shop until sometime prior to 1926; and as a tire warehouse until sometime prior to 1976. The most recent use of the Site building as a warehouse for storage with a flat utilized for deliveries. The current Site building was constructed in 1925. The Site is currently vacant.

### **2.2 Previous Investigations**

The following environmental reports included work performed on the Site:

- ATC Associates, Inc. (ATC) performed a focused subsurface site investigation on tax lots 1, 5, 14, 19, 23 and 36 in Block 1105 in October – November 1998. The results of the ATC investigation are presented in a Focused Subsurface Site Investigation Report, dated December 10, 1998 (ATC FSI).
- Mueser Rutledge Consulting Engineers (Mueser Rutledge) performed a Geotechnical Investigation of on tax lots 1, 5, 14, 19, 23 and 36 in Block 1105 for residential development, dated November 15, 2002 (revised January 16, 2003).
- Roux Associates' Second Quarter 2013 Groundwater Monitoring Report, August 12, 2013
- Roux Associates Phase I ESA, May 2013

Copies of all four reports are provided in Appendix A.

#### **2.2.1 ATC Focused Subsurface Site Investigation Report, December 1998**

Four soil borings were advanced on Site via Geoprobe® during the ATC FSI. Shallow bedrock was encountered at depths ranging from 4 to 15 feet below land surface (ft bls). The soil was characterized as cinder fill, deteriorated schist, silty sand and gravel and an occasional cobble.

VOC contamination was not identified in any of the four soil samples collected on Site; however, several SVOCs and metals were discovered above the historic NYSDEC technical and

administrative guidance memorandum (TAGM) 4046 regulatory limits that were applicable at the time of the ATC FSI. PCBs were not detected in the two samples collected. When compared to the current NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives, both SVOCs and metals concentrations exceed current regulatory limits for soil borings Body-2 (metals only) and Mini-1 (SVOCs and metals). ATC inferred that the SVOC and metal detections reflect the composition of fill material on Site and were not a result of leaking USTs.

### **2.2.2 Mueser Rutledge Geotechnical Investigation, January 2003**

Geotechnical investigations conducted by Mueser Rutledge Consulting Engineers included the installation of a total of 59 soil borings from August 2000 to October 2002 across the entire Block 1105 (between 11<sup>th</sup> – 12<sup>th</sup> Avenues and West 57<sup>th</sup> – West 58<sup>th</sup> Streets) for geotechnical purposes (no soil samples collected for environmental analysis). Of this total, two borings were drilled on the subject Site and five soil borings were drilled on the 58<sup>th</sup> Street and 11<sup>th</sup> Avenue sidewalks adjacent to the Site.

The borings drilled encountered fill material above a sand/ till stratum; decomposed bedrock and bedrock underlying these stratum. Bedrock elevations vary from elevation +17.4 (~6 ft bls) in the southeast corner of the Site to elevation. -17 (~41 ft bls) in the northeast corner of the Site.

### **2.2.3 Roux Associates Quarterly Groundwater Report**

Roux Associates has conducted quarterly groundwater gauging and sampling of multiple monitoring wells located on the perimeter sidewalks of Block 1105 since December 2007 in accordance with the NYSDEC requirements for Spill No. 9810172. The resulting analytical data for VOCs is provided to the NYSDEC in quarterly monitoring reports. Prior to Roux Associates' involvement in 2007, groundwater sampling and reporting occurred since October 2000.

No exceedances of the NYSDEC AWQSGVs for Class GA groundwater have been detected in MW-7 over this ten year monitoring span, indicating that upgradient groundwater flowing onto the Site is clean and meets NYSDEC groundwater standards. No monitoring wells are located directly downgradient of and adjacent to the Site. There are two monitoring wells located approximately 290 feet (MW-8) and 140 feet (MW-9) west of the Site on the 58<sup>th</sup> Street sidewalk

that have historically contained detections of dissolved petroleum-related VOCs in excess of the AWQSGVs, but these detections are attributed to previously identified petroleum contamination on the adjacent properties (tax lots 5 and 14) and sidewalks west of the Site and are not believed to be associated with the subject Site.

#### **2.2.4 Roux Associates Phase I ESA**

Roux Associates prepared a Phase I Environmental Site Assessment (ESA) in May, 2013. Based on the Site inspection and review of the Phase I ESA, the following Recognized Environmental Conditions (RECs) were identified:

1. There are properties immediately surrounding the Site (west, east and south) with activities, conditions or incidents that may have caused or contributed to releases or threatened releases of hazardous substances and petroleum products. The potential exists for hazardous substances and petroleum products to migrate from this property to the Site, particularly through groundwater migration.
2. A vent line was noted exiting the Site building on the northwest corner of the building. Customer spaces are located on the interior of the Site building where the vent was located. Although no fill port or other underground storage tank (UST) access man-ways were noted in the vicinity of the vent line, confirmation is required to determine if the vent is associated with a UST or if an unknown UST is present at the Site. According to a C/O from 1955, fuel oil was utilized at the Site for heating purposes. An undocumented UST may be present on Site associated with historic heating operations.
3. A sump was noted in the electrical control room, but the sump's contents could not be accessed due to the poor condition of the lid and frame. Confirmation is required to determine the internal condition and use of the sump.

#### **2.3 Site Inspection**

A Site Inspection was conducted by Roux Associates Inc. on April 9, 2013 during the Phase I ESA. A six-story building with a basement and a parking lot exists on the property. The building was operating as a storage unit facility at the time of the Site inspection. Based upon

visual examination of the building and basement slab, no indication of contamination or surficial staining was encountered during the Site inspection.

#### **2.4 Areas of Concern**

There were no Areas of Concern identified based on the results of the previous investigations. The Site is underlain by historical urban fill of undocumented origin and is impacted by elevated concentrations of SVOCs and metals.

RECs were previously identified in the Phase I ESA and are noted above. The Remedial Investigation did not identify the presence of contamination emanating from adjacent properties, nor were USTs identified under the building. The contents of the sump were not verified but a soil boring was advanced in the vicinity (SB-8) and no impacts were identified.

### **3.0 PROJECT MANAGEMENT**

#### **3.1 Project Organization**

The Qualified Environmental Professional (QEP) responsible for preparation of this RIR is Joshua B. Levine, P.E.

#### **3.2 Health and Safety**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

#### **3.3 Materials Management**

All material encountered during the RI was managed in accordance with applicable laws and regulations. Five drums of soil cuttings were generated as a result of the RI and were disposed as non-hazardous waste at Republic Environmental Systems facility in Hatfield, PA. A copy of the waste manifests, profile and waste characterization analytical data tables are provided in Appendix B.

## **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

The RI consisted of the following components:

1. Roux Associates conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.) on April 9, 2013.
2. Roux Associates directed the installation of nine soil borings across the entire project Site between June 12, 2013 and June 17, 2013. The soil boring investigation included the collection of 15 subsurface soil samples for chemical analysis to evaluate the soil quality beneath the Site.
3. Roux Associates directed the installation of two groundwater monitoring wells (MW-2 and MW-3) between June 12, 2013 and June 13, 2013. In order to evaluate water quality beneath the Site, groundwater samples were collected from both newly installed wells and an existing monitoring well (MW-7) on June 28, 2013. The measurement of groundwater levels in each well and a survey were also conducted in order to establish groundwater flow direction.
4. Roux Associates directed the installation of four soil vapor points within the Site between June 12, 2013 and June 14, 2013. Four soil vapor samples were collected on June 28, 2013 and submitted for chemical analysis.

### **4.1 Borings and Monitoring Wells**

#### **Drilling and Soil Logging**

A total of nine soil borings were advanced throughout the Site; seven interior borings and two exterior borings. All soil borings were advanced via Geoprobe® direct push mobile drilling unit. Interior soil boring depths ranged between 4-15 feet below the basement slab until bedrock refusal was encountered. The basement slab is located approximately 6 feet below the adjacent parking lot and sidewalk elevations. The only interior soil boring that did not encounter bedrock was SB-7. The two exterior borings were advanced to depths ranging from 7-12 ft bls prior to bedrock refusal. Soil borings were continuously screened with a photoionization detector (PID) and visual observation of lithology was used to prepare soil boring logs attached as Appendix C. A map with the soil boring locations is depicted in Figure 3.

## **Groundwater Monitoring Well Construction**

A two-inch diameter groundwater monitoring well was installed within SB-2 (MW-2) and SB-8 (MW-3) between June 12 and June 13, 2013. MW-2 was installed within bedrock using a Sonic® drill rig and constructed with 25 feet of two-inch 20-Slot screen to a depth of approximately 35 feet below Site grade. MW-3 was installed to a depth of approximately 14 ft bgs with approximately 10 feet of two-inch 20-Slot screen. Monitor well locations are shown in Figure 3.

## **Survey**

The monitoring well measuring point elevations were surveyed by Angle of Attack via rod and level on June 28, 2013.

## **Water Level Measurement**

Each groundwater monitoring well was gauged with a water level meter. Water level measurements are included on Table 3.

## **4.2 SAMPLE COLLECTION AND CHEMICAL ANALYSIS**

Sampling performed as part of the field investigation was based on professional judgment, area history, discolored soil, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

## **Soil Sampling**

Fifteen soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 5 through 10. Figure 3 shows the location of samples collected in this investigation. Laboratories and analytical methods are detailed below.

## Groundwater Sampling

Three groundwater samples were collected for chemical analysis during this RI. Groundwater sample collection data is reported in Tables 11 through 15. Field sampling logs are included in Appendix D. Figure 3 shows the groundwater sampling locations. Laboratories and analytical methods are detailed below.

## Soil Vapor Sampling

Four soil vapor probes were installed between June 12, 2013 and June 14, 2013 throughout the Site. Four soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 3. Soil vapor sample collection data is reported in Table 16. Soil vapor sampling logs are included in Appendix E. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

## Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

| Factor                         | Description  |
|--------------------------------|--|
| Quality Assurance Officer      | The chemical analytical quality assurance is directed by Accutest Laboratories, Inc.   |
| Chemical Analytical Laboratory | Chemical analytical laboratory used in the RI is NYS ELAP certified and was Accutest Laboratories of Dayton, NJ.   |
| Chemical Analytical Methods    | Soil analytical methods: <ul data-bbox="646 1354 1318 1690" style="list-style-type: none"><li>• TAL Metals by EPA Method 6010C (rev. 2007);</li><li>• VOCs by EPA Method 8260C (rev. 2006);</li><li>• SVOCs by EPA Method 8270D (rev. 2007);</li><li>• Pesticides by EPA Method 8081B (rev. 2000);</li><li>• PCBs by EPA Method 8082A (rev. 2000);</li><li>• TCLP Metals by EPA Method 1311</li></ul> Groundwater analytical methods: <ul data-bbox="646 1780 1318 1879" style="list-style-type: none"><li>• TAL Metals by EPA Method 6010C (rev. 2007);</li><li>• VOCs by EPA Method 8260C (rev. 2006);</li></ul> |

| <b>Factor</b> | <b>Description</b>   |

### **Results of Chemical Analyses**

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 5 through 16, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix F.

## **5.0 ENVIRONMENTAL EVALUATION**

### **5.1 Geological and Hydrogeological Conditions**

Provided below is a description of the geological and hydrogeologic conditions identified during the Remedial Investigation.

#### **Stratigraphy**

The Site is generally characterized by historic fill from ground surface to bedrock. The historic fill is comprised of fine to medium sand and silt with cobble and brick. Bedrock was encountered at depths of 5 to 12 ft bls in the parking lot.

Under the building, historic fill materials comprised of medium to fine sand with some silt and cobble extend from the basement slab until bedrock refusal was encountered (4 to 15 feet below the slab). The only soil boring in which bedrock was not encountered was SB-7. In addition, the following geotechnical investigation was conducted on the Site and summarizes the subsurface stratigraphy:

- Third Supplemental Geotechnical Investigation, Block 1105-Residential Development, New York New York prepared by Mueser Rutledge Consulting Engineers, November 15, 2002 .

The Mueser Rutledge Geotechnical Investigation is included in Appendix A.

#### **Hydrogeology**

A table of water level data for all monitoring wells is included in Table 3. The average depth to groundwater is 16.21 feet bls and the range in depth is 16.09 to 16.33 feet bls measured from the outdoor monitoring wells. A 10.49-foot depth to water reading was measured from the basement slab inside the building, which is located approximately 6 feet below the sidewalk elevation. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 4. Groundwater flow is from southeast to northwest.

### **5.2 Soil Chemistry**

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed

on soil samples is included in Tables 5 through 10. Figure 5 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use SCOs.

### **VOCs**

Three volatile organic compounds (VOCs) were detected at trace concentrations, well below the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and included ethylbenzene, xylene and methylene chloride.

### **SVOCs**

Several semi-volatile organic compounds (SVOCs), specifically polyaromatic hydrocarbons (PAHs) were detected in four (4) of the fifteen (15) soil samples analyzed above their respective Unrestricted Use SCOs. SVOC contamination was detected only in the samples collected from the shallow intervals of SB-1 (0-5 ft bls), SB-6 (0-3 feet bls), SB-7 (0-3 feet bls) and SB-9 (0-3 ft bls). SVOCs of concern include the following:

- benzo[a]anthracene (maximum of 3,280 µg/kg in SB-2 (0-5’);
- benzo[a]pyrene (maximum of 3,690 µg/kg in SB-2 (0-5’);
- benzo[b]fluoranthene (maximum of 4,320 µg/kg in SB-2 (0-5’);
- benzo[k]fluoranthene (maximum of 1,590 µg/kg in SB-2 (0-5’);
- chrysene (maximum of 4,060 µg/kg in SB-2 (0-5’);
- dibenzo[a,h]anthracene (maximum of 632 µg/kg in SB-2 (0-5’); and
- indeno[1,2,3-c,d]pyrene (maximum of 2,400 µg/kg in SB-2 (0-5’).

The detection of PAHs is typical of historical fill in urban and industrialized areas and reflective of area background levels.

### **Metals**

Several metals were identified at concentrations above Unrestricted Use SCOs in soil samples collected beneath the Site, as summarized below:

- Hexavalent chromium in SB-7 (0-3’); 33 milligrams per kilogram (mg/kg), SB-9 (0-3’) 1.2 mg/kg
- Trivalent chromium in SB-7 (0-3’); 47.5 mg/kg

- Copper in SB-2 (0-5'; 114 mg/kg), SB-4 (0-3'; 78 mg/kg), SB-6 (0-3'; 71.9 mg/kg), SB-6 (9-10'; 173 mg/kg), SB-7 (0-3'; 93.2 mg/kg) and SB-9 (0-3'; 79.5 mg/kg).
- Lead in SB-2 (0-5'; 343 mg/kg), SB-3 (0-3'; 96.6 mg/kg), SB-4 (0-3'; 170 mg/kg), SB-6 (0-3'; 255 mg/kg), SB-6 (9-10'; 342 mg/kg), SB-7 (0-3'; 865 mg/kg), and SB-9 (0-3'; 671 mg/kg).
- Manganese in SB-5 (9-10'; 2,530 mg/kg).
- Mercury in SB-1 (5-10'; 0.47 mg/kg), SB-2 (0-5'; 0.74 mg/kg), SB-3 (0-3'; 0.74 mg/kg), SB-3 (11-13'; 0.27 mg/kg), SB-4 (0-3'; 0.51 mg/kg), SB-5 (0-3'; 4.9 mg/kg), SB-5 (9-10'; 0.19 mg/kg), SB-6 (0-3'; 12.1 mg/kg), SB-7 (0-3'; 2.6 mg/kg) and SB-9 (0-3'; 1.9 mg/kg).
- Nickel in SB-1 (5-10'; 243 mg/kg), SB-6 (9-10'; 34.4 mg/kg) and SB-7 (0-3'; 46.6 mg/kg).
- Zinc in SB-2 (0-5'; 541 mg/kg), SB-3 (0-3'; 159 mg/kg), SB-4 (0-3'; 579 mg/kg), SB-6 (0-3'; 204 mg/kg), SB-6 (9-10'; 167 mg/kg), SB-7 (0-3'; 252 mg/kg), SB-9 (0-3'; 354 mg/kg).

The detection of metals in the subsurface soil is typical of historical fill in urban and industrialized areas and is reflective of area background levels.

In addition, SB-2 (0-5'), SB-3 (0-3'), SB-4 (0-3'), SB-5 (0-3'), SB-6 (0-3'), SB-7 (0-3'), SB-8 (0-3') and SB-9 (0-3') were also analyzed to determine whether hazardous levels of metals existed in the subsurface soil via toxicity characteristic leaching procedure (TCLP). Analytical results indicated that hazardous metals concentrations do not exist in the subsurface soil.

### **Pesticides and PCBs**

Pesticides and PCBs were either not detected or detected at concentrations below the Unrestricted Use SCOs for all soil samples collected.

### **5.3 Groundwater Chemistry**

Two groundwater samples were collected from newly installed monitoring wells MW-2 and MW-3. In addition, a groundwater sample was collected from an existing monitoring well MW-7, located on the west side of 11<sup>th</sup> Avenue between 57<sup>th</sup> and 58<sup>th</sup> Street. Analytical results were compared to the AWQSGVs. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 11 through 15. Laboratory results are summarized

below. Figure 6 shows the location and concentrations for groundwater samples that exceed the AWQSGVs.

### **VOCs**

VOCs were either not detected or present at concentrations below AWQSGVs in all groundwater samples collected except for the detection of chloroform (15.4 µg/L) in MW-2. The detection of chloroform is likely a laboratory artifact as it's a commonly used laboratory extraction solvent and is not indicative of an on-site source of contamination.

### **Metals**

Several metals including iron, manganese, selenium, and sodium were detected at concentrations above AWQSGVs in both filtered and unfiltered groundwater samples collected from MW-2, MW-3, and MW-7.

### **SVOCs, Pesticides and PCBs**

SVOCs, pesticides, and PCBs were either not detected or detected at concentrations below their respective AWQSGVs.

## **5.4 Soil Vapor Chemistry**

A total of four soil vapor points were installed throughout the Site; three soil vapor points in the basement of the existing building (SV-2, SV-3 and SV-4) and one in the parking lot (SV-1). All four soil vapor points were installed to a depth of approximately five feet bls. Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 16. Figure 7 shows the location and posts the values for soil vapor samples with detected concentrations. Soil vapor results were compared to New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion, October 2006. Several petroleum-related compounds (e.g. 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-ethyltoluene, ethylbenzene, toluene and xylenes) were detected in the soil vapor samples. The following VOCs were detected in soil vapor samples collected beneath the Site:

- 1,2,4-Trimethylbenzene (maximum of 317 µg/m<sup>3</sup> in SV-2)
- 1,3,5-Trimethylbenzene (maximum of 73.7 µg/m<sup>3</sup> in SV-2)
- 2-Butanone (maximum of 5.6 µg/m<sup>3</sup> in SV-1)
- 4-Ethyltoluene (maximum of 55.6 µg/m<sup>3</sup> in SV-2)

- Acetone (maximum of 117  $\mu\text{g}/\text{m}^3$  in SV-1)
- Benzene (maximum of 5.4  $\mu\text{g}/\text{m}^3$ )
- Carbon disulfide ( maximum of 30  $\mu\text{g}/\text{m}^3$  in SV-1)
- Chloroform (maximum of 27  $\mu\text{g}/\text{m}^3$  in SV-4)
- Chloromethane (maximum of 2.7  $\mu\text{g}/\text{m}^3$  in SV-2)
- Cyclohexane (maximum of 10  $\mu\text{g}/\text{m}^3$  in SV-1)
- Dichlorodifluoromethane (maximum of 3.8  $\mu\text{g}/\text{m}^3$  in SV-1)
- Ethanol (maximum of 10  $\mu\text{g}/\text{m}^3$  in SV-2)
- Ethylbenzene (maximum of 48.6  $\mu\text{g}/\text{m}^3$  in SV-2)
- Heptane (maximum of 31  $\mu\text{g}/\text{m}^3$  in SV-1)
- Hexane (maximum of 23  $\mu\text{g}/\text{m}^3$  in SV-1)
- Isooctane (maximum of 23  $\mu\text{g}/\text{m}^3$  in SV-1)
- Isopropanol (maximum of 5.2  $\mu\text{g}/\text{m}^3$  in SV-1)
- Methylene chloride (maximum of 3.5  $\mu\text{g}/\text{m}^3$  in SV-1)
- Propene (maximum of 5.3 $\mu\text{g}/\text{m}^3$  in SV-2)
- T-Butyl Alcohol (maximum of 12  $\mu\text{g}/\text{m}^3$  in SV-1)
- Tetrachloroethene (maximum of 41  $\mu\text{g}/\text{m}^3$  in SV-1)
- Toluene (maximum of 110  $\mu\text{g}/\text{m}^3$  in SV-1)
- Trichloroethene (maximum of 1.1  $\mu\text{g}/\text{m}^3$  in SV-1)
- Trichlorofluoromethane (maximum of 3.7  $\mu\text{g}/\text{m}^3$  in SV-1)
- Xylenes (maximum of 337  $\mu\text{g}/\text{m}^3$  in SV-2)

Based on the analytical results, no VOCs were detected in exceedance of the soil vapor guidance values presented in the NYSDOH Final Guidance on Soil Vapor Intrusion.

### **5.5 Prior Activity**

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

### **5.6 Impediments to Remedial Action**

There are no known impediments to remedial action at this property.

## **Site-Specific Standards, Criteria, and Guidance**

- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites
- 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998)
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- NYSDOH Indoor Air Sampling & Analysis Guidance (August 8, 2001 or subsequent update)
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (draft October 2004 or subsequent final draft)

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

B - The analyte was found in an associated blank as well as in the sample

\* - LCS or LCSP exceeds the control limits

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

B - The analyte was found in an associated blank as well as in the sample

\* - LCS or LCSP exceeds the control limits

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

B - The analyte was found in an associated blank as well as in the sample

\* - LCS or LCSP exceeds the control limits

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

J - Estimated value

E - Indicates value exceeded calibration range

U - Indicates that the compound was analyzed for but not detected

HF - Field parameter with a holding time of 15 minutes

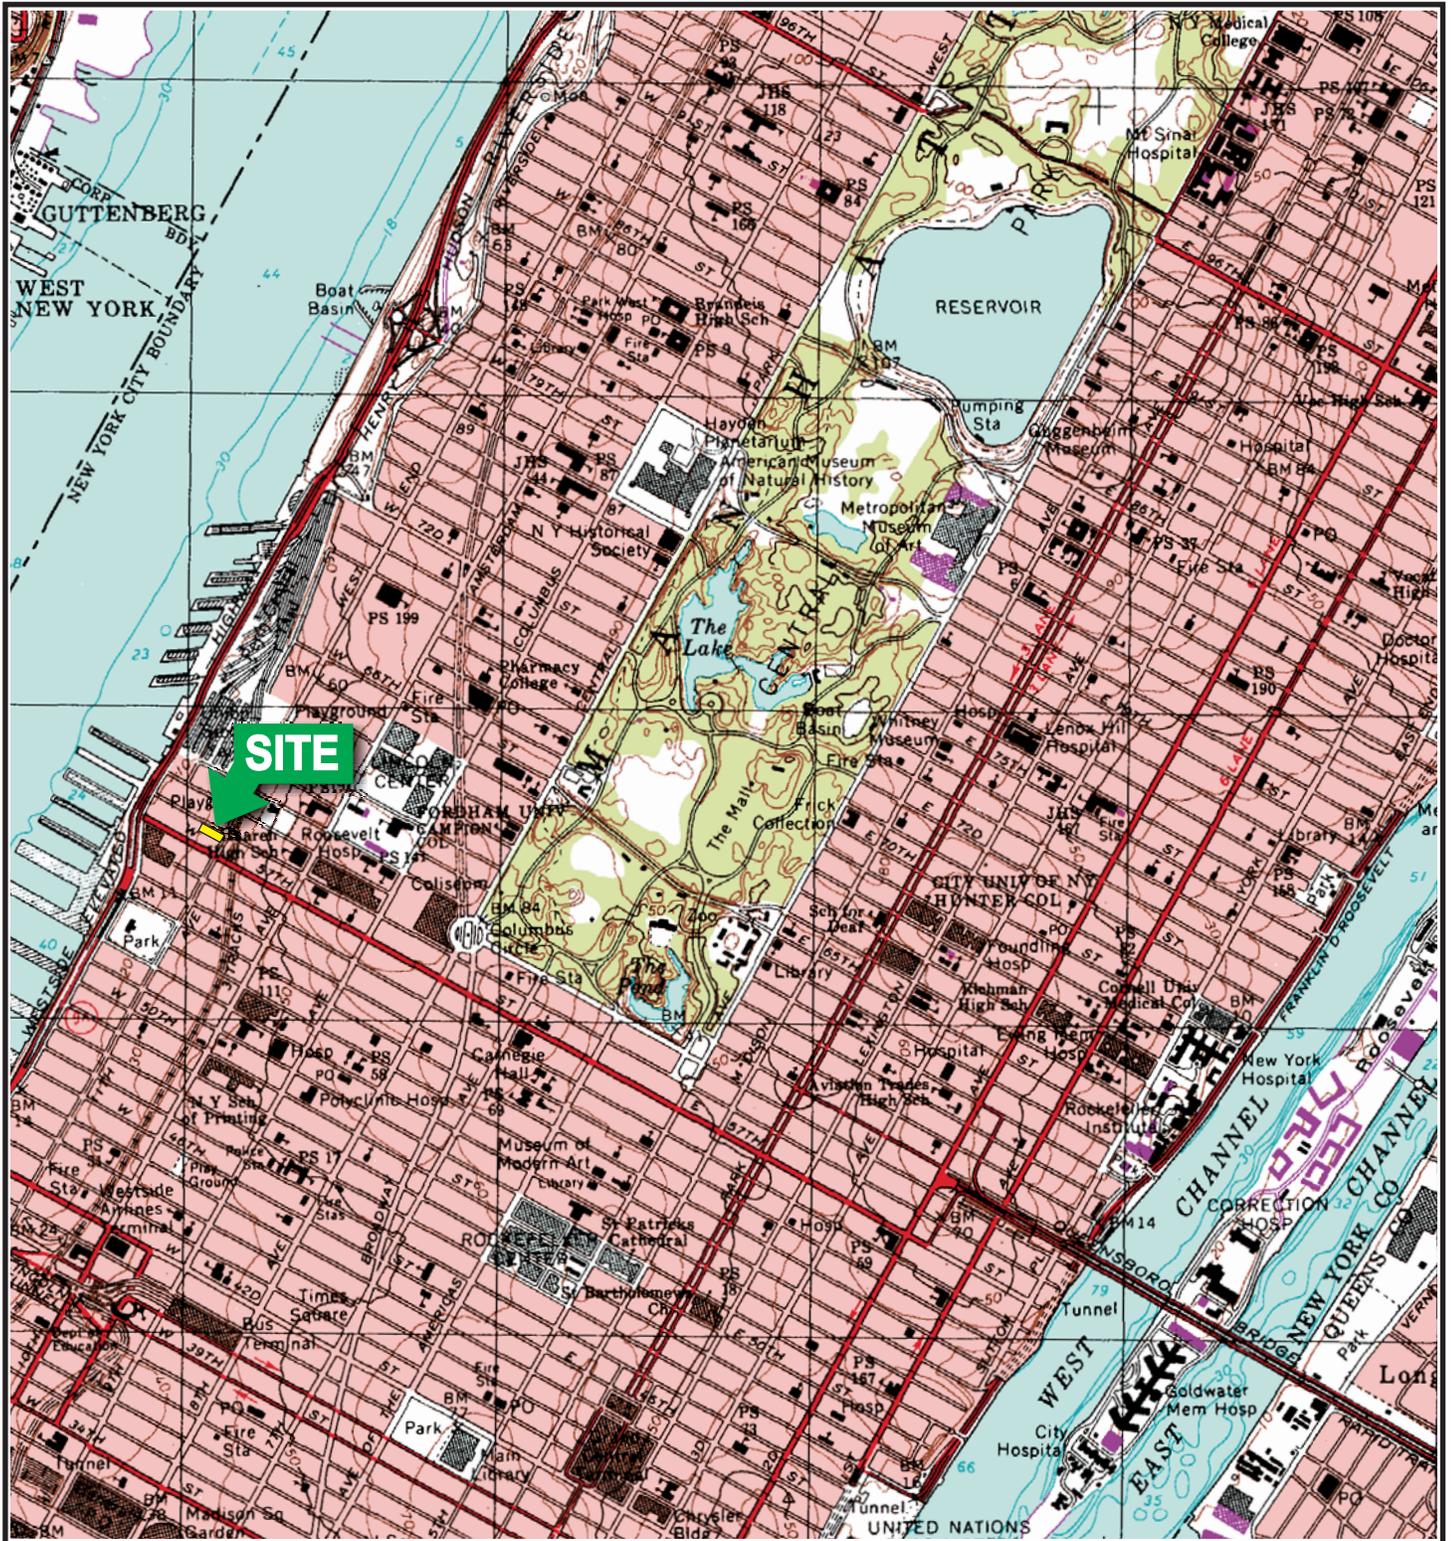

DUP - Duplicate sample

ug/m<sup>3</sup> - Micrograms per cubic meter

Bold data indicates that parameter was detected

Subject: Focused Subsurface Site Investigation  
Durst-West 57<sup>th</sup> Street Project  
New York, New York  
ATC Project No. 16374-0002

Dear Mr. Grond:

Attached is the Draft copy of the Focused Subsurface Site Investigation Report for the subject property. This report includes the following an Executive Summary, Scope of Work Completed, Soil and Groundwater Sample Results, Conclusions and Recommendations, and cost estimates for additional investigation, and site remediation. This report also includes Summary Tables, Figures, Soil Boring Logs, and Laboratory Analysis Results as appendices.

If you have any questions regarding this report, please feel free to call our office.

Sincerely yours,  
**ATC ASSOCIATES INC.**

## EXECUTIVE SUMMARY

At the request of GCI Environmental Advisory, ATC Associates Inc. (ATC) has completed a Focused Subsurface Site Investigation of the entire block bordered by West 58<sup>th</sup> Street to the north, West 57<sup>th</sup> Street to the south, 11<sup>th</sup> Avenue to the east, and 12<sup>th</sup> Avenue to the west, in the Borough of Manhattan, New York, New York (the "Subject Property"). The Subject Property contains multiple attached buildings that are occupied by various commercial tenants. Previous Phase I Environmental Site Assessments conducted at the Subject Property reported the presence of numerous underground petroleum storage tanks (USTs), the majority of which have been abandoned in-place. This study was focused to the areas where USTs were known or suspected to be present. The purpose of the Focused Subsurface Site Investigation was to determine subsurface soil and groundwater quality in these areas through sample collection and laboratory analysis using "Geoprobe" drilling equipment.

This investigation has revealed significant areas of soil and groundwater contamination at the Subject Property. These conditions are the result of historical releases (primarily gasoline) from multiple on-site existing and removed USTs at several locations. The NYSDEC will require further investigation of the extent of both soil and groundwater contamination, as well as remediation to reduce contaminant levels. Soil contamination can be addressed through excavation, segregation, and proper disposal during site development. ATC recommends implementing groundwater remediation at site development by modifying planned construction dewatering systems to concurrently treat water through large-scale activated carbon filtration prior to discharge.

### *Additional Investigation*

ATC recommends UST and contaminated soil removal, and groundwater treatment during construction dewatering in the paragraphs below. Prior to this work, ATC recommends additional investigation to further define the extent of contamination, and to fill data voids where samples could not be collected during this Focused Subsurface Site Investigation. ATC proposes the installation of up to ten 2-inch monitoring wells, soil and groundwater sample collection from borings and wells, and analysis to more precisely determine the delineated extent of groundwater contamination. Sample analyses will also further define contaminant sources. The estimated cost of this task is \$72,750.

### *Petroleum-Contaminated Soil Removal*

Based on the results of this study, the estimated amount of petroleum-contaminated soil beneath the Subject Property is 20,600 tons. This estimate includes soil that has contaminant concentrations below regulatory clean-up guidance values, but exhibits petroleum odors necessitating special handling and disposal if removed during construction excavation work. The tenant areas that contain the largest amount of impacted soil are the Potamkin Service and Airborne Express facilities. ATC recommends that qualified professionals be retained to monitor soil quality as it is being excavated during construction. On-site segregation of contaminated soil from unaffected material will be performed through field-screening techniques. ATC has been informed that construction excavation at the Subject Property will be approximately 6 weeks in duration.

As requested, ATC has generated a cost estimate to conduct on-site field screening, UST removal, contaminated soil transportation and disposal, and post-excavation site assessments at the Subject Property. This estimate is based upon the following assumptions:

1. All structures will be removed to the floor slabs prior to UST removal;
2. A total of 34 USTs will be removed;
3. An environmental excavation contractor will be retained to remove petroleum-contaminated soil from the Subject Property (to eliminate potential regulatory or exposure issues with the general construction contractor); and
4. Excavation, stockpiling, and off-site transportation of the contaminated soil will be approximately 45 days in duration.

The estimated cost to complete tank removal, petroleum-contaminated soil excavation, transportation and disposal is \$1,600,000. This estimate is based on a unit cost of \$65/ton for transportation and disposal of nonhazardous petroleum-contaminated soil. The cost estimate also includes professional environmental consulting services.

### *Petroleum-Contaminated Groundwater Removal*

An extensive area of petroleum-contaminated groundwater is present primarily beneath the Airborne Express and Potamkin Service facilities at the Subject Property. ATC has been informed that excavation open-hole construction for proposed site development will be approximately three months in duration. ATC recommends that any dewatering system that operates during that period be modified to treat contaminated groundwater as it is removed from the construction areas. Treatment can be performed using large carbon-filtration units during dewatering. The estimated cost to install and operate carbon filtration tanks, perform weekly

Focused Subsurface Site Investigation  
Durst-West 57<sup>TH</sup> Street Project  
New York, New York

---

DRAFT

removal and replacement of activated carbon, obtain permits, and monitor discharges for a period of three months is approximately \$220,000. This cost estimate could change significantly if hydrologic data indicates that a higher volume of water will need to be removed to adequately depress the water table.

Residual groundwater contamination will require in-situ remediation following site development (based on the directives of the NYSDEC). Long-term in-situ remediation costs could approach \$500,000.

---

### Limitations of Subsurface Site Investigation

ATC has prepared this Limited Subsurface Investigation in accordance with the contract scope of work, using reasonable efforts to attempt to identify areas of potential liability associated with soil and groundwater contamination at the Subject Property. Any survey for the presence of soil or ground water contamination in the Project Area was limited in nature. The survey may not be relied upon as a comprehensive investigation for the presence of such contamination in all areas of the Subject Property, or as meeting any standards established for conducting such surveys. Unless limited sampling or physical testing of materials was expressly provided for in the scope of work, the conclusions in this report were based solely on a visual inspection and on readily available records, interviews and other secondary sources. ATC has made no independent investigation of the accuracy of these secondary sources and has assumed them to be accurate and complete. ATC does not warrant the accuracy or completeness of information provided by secondary sources. ATC does not warrant that contamination that may exist on the Subject Property has been discovered, that the Subject Property is suitable for any particular purpose or that the Subject Property is clean or free of liability. Any cost estimates are based on general comparisons with past projects of similar scope and size, and actual costs or design-phase estimates may vary substantially from these estimates.

## 1.0 INTRODUCTION

### 1.1 Project Scope of Work

At the request of the GCI Environmental Advisory (GCI), ATC performed a Focused Subsurface Site Investigation of the Subject Property, which is the full city block bordered West 57<sup>th</sup> Street and West 58<sup>th</sup> Street, and 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue in the city of New York, borough of Manhattan (Figure 1). The Subject Property is rectangular, approximately 160,000 square feet in size, and contains eleven (11) parcels leased by various occupants. The purpose of the investigation was to assess possible adverse environmental impact due to the historical use of the Subject Property. A Phase 1 Environmental Site Assessment (ESA) performed by GCI in July 1998, indicated a history of automotive and truck sales and service conducted at multiple locations on the Subject Property. The database investigation, site visits and historical records indicated the presence of multiple underground storage tanks (USTs) at locations throughout the Subject Property. Most of the USTs were reportedly not in use and were reportedly filled and abandoned in the 1960s. GCI recommended a subsurface soil and groundwater investigation program to determine if contamination is present in the vicinity of the USTs.

### 1.2 Subject Property Description

The GCI ESA, and a 1991 report prepared for Gaston & Snow by Certified Engineering & Testing Company, Inc. (CETC) of New York provide information about historical occupancy and presence of USTs at each of the leased facilities at the Subject Property. Figure 2 is a schematic drawing of Subject Property buildings and existing tenants within those buildings. A brief summary of the information in the two reports is provided below on a tenant basis:

- **Artkraft Strauss Sign Company Facility**, 820-838 12<sup>th</sup> Avenue, designs, constructs, and repairs all types of signs. The first floor of the two-story concrete structure is used for parts storage, metalworking and woodworking equipment, painting, and storage of vehicles. The property, the westernmost portion of the Subject Property, was originally part of a large lumberyard until the existing structure was built in 1925, and originally contained the Brockway Motor Truck Company and Stutz (or State) Service Station. A private garage and repair shop occupied the building by 1951. Artkraft had occupied the building by 1976. GCI reports that up to 14 USTs and a single AST were historically present at the property.

- **Airborne Express Facility**, 631-649 West 57<sup>th</sup> Street, is an L-shaped, one-story concrete building used for parcel package receiving, routing and delivery. The structure, built in 1916, originally housed the Colt Stewart Co./Chrysler Service Station. United Parcel Service, Inc. occupied the building by 1940. A gasoline leak was reported in 1948. The New York City Fire Department (NYFD) ordered hydrostatic test tightness testing, the tests were performed, and the tanks passed to the NYFD's satisfaction. The order also directed the occupant to "clean oil separator" and "repair floor drains and keep same clean." A notarized sworn statement, dated October 1963, from Gas Service Maintenance, on behalf of Don Allen Pontiac, states that the former "discontinued use of 6 underground buried tanks; removed all gasoline and filled with water; and capped, and sealed and cemented all lines." A crankcase waste oil tank was reportedly installed in 1964, although its size and location are unknown.
- **Airborne Express Facility**, 640-648 West 57<sup>th</sup> Street, is presently a paved parking area occupied by Airborne Express vehicles. It was originally part of the S. E. Kellar Lumber Company. The 1926 Sanborn Map identifies a single story Auto Repair Shop at the location. In 1972, this lot, along with the Airborne building noted above, was occupied by New York Telephone, that, according to CETC, installed two (2) USTs present in the area of the present Airborne parking area. One is reported to be a 1,080-diesel fuel UST, the other a 2,500-gallon unleaded gasoline UST. The USTs are presently inactive. The pumps have been removed.
- **Potamkin Toyota Service Facility**, 622 West 58<sup>th</sup> Street, 623-629 West 57<sup>th</sup> Street, is a three-story building utilized for car service (ground floor) and auto storage. The building occupies the former site of Lieberman and Sanford Iron Works, which was housed in a steel-framed skeleton shed built prior to 1907. By 1951 Bell Transportation System operated a garage and repair facility at the site in a building built in 1928. The Sanborn Maps of the early 1990s describe site use as "Taxi Garage and Repair." The GCI ESA and CETC reports state that there may be up to 13 USTs beneath the Potamkin Service Area floor, including a 4,000 gallon waste oil tank which was reportedly recently cleaned out and taken out of service.
- **The Copacabana Facility**, 615-621 West 57<sup>th</sup> Street, is a single-story building that traverses the block between 57<sup>th</sup> Street and 58<sup>th</sup> Street. Present in the 57<sup>th</sup> Street end of the building is a second story office area. The Copacabana property was also part of the lumberyard in the early part of the century. The 58<sup>th</sup> Street side was a wooden storage building in 1926, while the 57<sup>th</sup> Street side was part of a garage. In 1980, both sections apparently were garages. The Copacabana is first identified in the 1995 Sanborn Map. Two 550-gallon gas tanks were identified as buried at the 58<sup>th</sup> Street side of the building as early as the 1926 Sanborn Map. ATC was unable to access to the building to assess evidence of UST locations, or to drill and collect samples.

- **The Goodyear Tire and Rubber Company Facility**, 607-613 West 57<sup>th</sup> Street, occupies a "single-story building" next to the Copacabana, although there is a second floor over the sales and office area on the west side of the structure. Originally part of the New York Lumber Yard, the 1926 Sanborn map indicates the presence of an auto service station with two buried 550-gallon gasoline tanks. The building was listed as a tire service and storage operation by 1951. Two to four USTs were identified in the GCI Report, along with eight to ten hydraulic lifts and associated underground hydraulic oil tanks.
- **Manhattan Mini Storage Facility**, 847-853 Eleventh Avenue, consists of a six story concrete framed structure at the corner of West 58<sup>th</sup> Street and 11<sup>th</sup> Avenue. The structure is presently utilized as rented storage lockers/rooms. The GCI Report indicates no USTs have been located on this parcel. There is an adjacent parking area on West 58<sup>th</sup> Street. The parcels originally were part of the New York Lumber & Storage Co. A railroad siding entered the parcel at the corner of West 57<sup>th</sup> Street and 11<sup>th</sup> Avenue and to the western side of the present parking area.
- **Dynasty Auto Body Facility**, 616-618 West 58<sup>th</sup> Street, occupies a small two-story wood-framed building next to the Copacabana. This property was originally part of a "rented stalls and wagon yard" in 1907. An auto repair shop is shown on the 1926 Sanborn map, with notation of two buried 550-gallon gasoline tanks. The site has reportedly been used as an auto body repair and painting facility since at least 1980.
- **Potamkin Toyota Sales Facility**, 601 West 57<sup>th</sup> Street and 839-845 11<sup>th</sup> Avenue, consists of one three-story concrete building and one single-story building. These parcels were originally part of the Lilpatrick and Roylance Lumber Co. operation, and subsequently as the New York Lumber Yard Co. and W.H. Sidway Lumber Yard operations at the turn of the century. A General Motors Truck Co. parts and service operation occupied both parcels by 1926. The 1926 Sanborn Map noted two buried 550-gallon gasoline tanks present on the site. Sanborn Maps subsequent to 1951, identify the parcel only as "Auto Sales & Service." A heating oil tank is reportedly present as an above ground storage tank (AGST) placed on the basement concrete slab. The location and deposition of the two USTs is not known. ATC was unable to access the building to assess evidence of UST locations, or to drill and collect samples.

The GCI and CETC reports conclude that, beyond the few active USTs at the Subject Property, little is known about the actual closure of the USTs reported in the early Sanborn Maps and other records. The locations of the USTs were not recorded in site plans or NYFD documentation for the Subject Property. ATC focused this investigation on known and suspected UST locations based on the presence of vent pipes, old fill ports, and recollections of on-site personnel. Soil boring locations were also controlled by space and access limitations. Due to access restrictions, ATC did not advance soil borings in the following tenant spaces: the Copacabana, Goodyear Sales Office, and Potamkin Toyota Sales. Parts of the Goodyear Service Area overlay a subbasement with limited access. Therefore this subsurface site investigation focused on the

**DRAFT**

USTs reported at the Artkraft Strauss Sign Company, Airborne Express, Potamkin Toyota Service, Goodyear Tire & Rubber Service, and Dynasty Auto Body facilities.

## 2.0 LIMITED SUBSURFACE SITE INVESTIGATION

### 2.1 Soil Sample Collection and Field Observations

Vertical soil samples were obtained via Geoprobe technology utilizing a Macro Core (MC) open sampler to collect discrete soil cores. This equipment has the capability to penetrate unconsolidated sediments and allows the investigator to collect soil and ground water samples for laboratory analysis. The device does not generate drill cuttings and does not require the installation of any permanent tubing, well screens, filter sands or casings. Geoprobe equipment is small enough to be installed on a standard-sized pick-up truck or van, or a 4-wheel drive all-terrain vehicle. Disposable acetate sampling sleeves are inserted into the Geoprobe equipment in order to obtain soil samples from selected depths. These samplers utilize open tube design and are capable of retrieving a 1.5" diameter by 44" long soil sample. After each soil sample core was retrieved, the core was visually observed for staining, obvious odors, and screened with a portable photoionization detector (PID). The soil interval determined by field evaluation to be representative of soil contamination was collected for PID headspace analysis. Soil samples exhibiting the highest headspace readings were retained for laboratory analysis. If the PID exhibited no instrument response for the entire length of the boring, a sample was collected from the six inches above the first wet zone (groundwater or perched groundwater). The PID was also used to monitor the general ambient air quality of the work zone. A total of 135 soil samples were screened, with 46 samples being retained for laboratory analyses.

On October 28 through October 30, 1998, November 2 through 4, 1998, and November 14, 1998, Mr. Curt Schmidt, Senior Geologist with ATC and Zebra Environmental Corporation, an environmental drilling contractor, mobilized to the Subject Property. The field observations follows, arranged by the facility in which the borings were advanced.

#### 2.1.1 Artkraft Strauss Sign Company Facility

A preliminary site visit to the Artkraft facility by Messrs. David Spader, Frank Galdun, and Curt Schmidt of ATC, and Mr. Jim Grond of GCI on October 22, 1998 indicated the presence of four (4) USTs. Two fill ports and vent pipes were observed on the south side of the Artkraft shop area. Another pair fill ports and vent pipes belonging to abandoned USTs were observed on the north side of the Artkraft shop (Figure 2). No other evidence of USTs was observed.

On October 30, 1998, under the supervision of Mr. Schmidt of ATC, Zebra advanced three borings around the pair of USTs on the south side of the facility (Figure 3). Drilling in this area was hampered by refusals on cobbles or concrete. A faint petroleum/solvent/creosote odor was encountered between 2 and 5 feet below ground surface (bgs) in these three borings. Black

organic clay and silt was encountered starting at between four and five feet bgs in two of the three borings. The third encountered multiple refusals on concrete and brick at 5.5 feet. The organic clay and silt continued to the total depths of 16 to 20 feet. The clay and silt unit did not yield groundwater, so a groundwater sample was not collected from this area.

Four borings were advanced around the pair of abandoned 550-gallon USTs observed on the north side of the Artkraft facility. Another boring, AKSS-8, was installed near the garage door to the west of this area. Moderate PID readings and faint petroleum odors were noted between seven and eight feet bgs in AKSS-4, AKSS-5 and AKSS-7. Boring AKSS-6 exhibited elevated PID readings from two to six feet, eight to nine and a half feet, and twelve to thirteen feet bgs. A strong gasoline odor was noted at 3.5 feet bgs, with faint petroleum odors noted at the other depths. Soil samples were selected from zones with higher PID readings. Groundwater samples were collected from borings AKSS-5 and AKSS-8.

#### 2.1.2 Airborne Express Facility

A preliminary site visit to the Airborne Express facility by Messrs. Spader, Galdun, and Schmidt of ATC, and Mr. Grond of GCI on October 22, 1998 indicated the presence of three (3) USTs with fill ports. One UST was observed inside the parcel handling area, and was reported to be a 550-gallon UST last used for waste oil storage. The other two were observed at the building exterior in the parking area (Figure 2). One is a inactive 1,000-gallon gasoline UST that may have contained diesel fuel. The other UST is reportedly an inactive 2,400-gallon gasoline tank. These two tanks, although inactive, have not been filled and properly abandoned.

Twelve vent pipes were observed along the east wall of the interior of the parcel handling area. The concrete floor in the vicinity of the vent pipes had approximately 12 round patches, which may indicate the locations of the former fill ports for the abandoned 550-gallon gasoline USTs. Three sealed and abandoned hydraulic lifts were observed in the middle of the parcel handling area (see Figure 2).

On October 29, 1998, under the supervision of Mr. Schmidt, Zebra advanced five borings around the suspected area with twelve USTs on the east side of the package handling area inside the Airborne Express facility (Figure 3). The Geoprobe was allowed to operate only during periods in which the parcel handling area was in limited use and drilling operations were limited to late morning and early afternoon. Soil cores exhibited both gasoline odors and elevated PID readings starting at approximately five to ten feet bgs in AIRX-1, -2, and -3, and extending to the deepest sample of 20 feet. Groundwater was encountered at approximately 15 feet bgs. The soils encountered in AIRX-4 exhibited strong petroleum odors and elevated PID readings as shallow as three (3) feet bgs. AIRX-5 was moved from its planned location to a point farther away and to the north of the suspected location of the dozen USTs. Elevated PID readings and

gasoline odors were not encountered until 10 to 11 feet bgs. An odor of burnt rubber as noted at approximately four feet bgs. The soils in this area were consisted of sand, rubble and incinerator cinder.

Borings AIRX-6 and AIRX-7 were advanced on either end of the 550-gallon former waste oil UST in the middle of the parcel handling area. Petroleum odors and elevated PID readings were encountered at 14 and 15 feet in the two borings. Contamination was encountered within a foot of the saturated zone directly above the groundwater table.

On October 30, 1998, Zebra advanced two borings in the vicinity of existing sealed and abandoned hydraulic lifts the center of the package handling area inside the Airborne Express facility (Figure 3). Petroleum odors and elevated PID readings were encountered at 12 feet bgs in AIRX-8, and 13 feet bgs in AIRX-9. The contamination was encountered two to three feet above the groundwater table. Low to non-detected PID readings were noted above the nine-foot depth in both borings.

On November 2, 1998, Zebra returned to Airborne Express facility to advance AIRX-10 on the southwest side of the pair of USTs in the outside parking area. On November 4, 1998, Zebra returned to the same area to advance borings on the north and east sides of the pair of USTs (AIRX-11 and AIRX-12), and AIRX-13 in the parking area just east of the outside of the Artkraft Strauss facility (see Figure 3). AIRX-10 encountered petroleum/gasoline odors at six feet bgs. AIRX-11 encountered petroleum/gasoline odors below five feet bgs. AIRX-12, on the north side of the USTs did not have evidence of petroleum odors and elevated PID readings until approximately 14 to 16 feet bgs. The drillers reported a void, or very soft sediment between 12 and 16 feet bgs at this location. The soil from the pavement to 12 feet bgs yielded no PID response and no odors in AIRX-12. AIRX-13 was attempted several times in the west corner of the parking area, but encountered multiple refusals at 18 inches bgs. After moving farther from the building walls, the Geoprobe sampler advanced to groundwater. The soil from AIRX-13 yielded no odors and PID readings between zero and 1.0 ppm to total depth at 20 feet bgs. The organic clay and silt sediment encountered at the south side of Artkraft Strauss was encountered at 18 feet bgs in AIRX-13. Groundwater samples were collected from AIRX-1, AIRX-8, AIRX-10, and AIRX-13.

### 2.1.3 Potamkin Toyota Service Facility

A preliminary site visit to the Potamkin Service facility by Messrs. Spader, Galdun, and Schmidt of ATC, and Mr. Grond of GCI on October 22, 1998 indicated the presence of up to two USTs with fill ports. An existing UST just inside the entrance of the service area is reported to be a 5,000-gallon waste oil tank. The tank was reportedly recently pumped out and its use

discontinued. A metal fixture was observed on the floor to the south of the auto elevator, which may be the remains of a fill port to an UST. Five vent pipes were noted at the interior wall between the driveway entrance and exit (Figure 2). No other visual evidence of USTs was noted.

On Saturday, November 14, 1998, under the supervision of Mr. Schmidt of ATC, Zebra advanced four borings in the service area of Potamkin Toyota. POTK-1 was advanced just to the north of the waste oil UST at the West 58<sup>th</sup> Street entrance to the service area. The soil encountered was mostly cinder fill: incinerator ash, cinder, slag and coal mixed with sand. Petroleum odors and elevated PID readings were first encountered at 10 feet below the concrete floor. Groundwater was encountered at 16 feet below floor grade. The petroleum odors and elevated PID readings continued to 20 feet, the end of boring.

POTK-2 was advanced in the northwest quadrant of the service area to the northwest of the metal floor fixture. A Potamkin service employee indicated to Mr. Schmidt that the concrete floor in this area seemed to be "hollow" when tapped on with a heavy rod. The boring was completed to 16 feet bgs. The Geoprobe encountered petroleum odors and elevated PID readings immediately below the six-inch-thick concrete floor. Groundwater was encountered at 15.8 feet bgs. The third boring, POTK-3, was installed in the southwest quadrant of the service area, and to the west of an area where the five vent pipes were observed. No odors or high PID readings were noted in the upper six feet of the soil cores. A faint gasoline odor was noted from six to seven feet, then a stronger gasoline odor from seven to nine feet bgs. The odor and PID readings decreased from nine to approximately ten feet. The final core, from 12 to 16 feet exhibited a very strong gasoline odor. The fourth boring was advanced near the West 57<sup>th</sup> Street exit of the garage. No odors or elevated PID readings were encountered until approximately 17 feet bgs in POTK-4. From 17 to 19 feet bgs, a slight fuel oil odor and moderate PID readings were documented. The odors ceased at approximately 19 feet below floor grade. Groundwater samples were collected from POTK-1 and POTK-4. Additional borings could not be advanced due to site access restrictions.

#### 2.1.4 Goodyear Service Facility

A preliminary site visit to the Goodyear Service facility by Messrs. Spader, Galdun, and Schmidt of ATC and Mr. Grond of GCI on October 22, 1998 indicated the presence of two USTs in the center of the south side of the service area. The two USTs are reportedly used to store waste oil, and are reportedly 250-gallon tanks. (Figure 2). Two additional abandoned 550-gallon USTs may be present beneath the service area. No other visual evidence of USTs was noted. Several hydraulic lifts were noted and concrete patches were observed that indicate the presence of former subsurface lifts.

On November 3, 1998, under the supervision of Mr. Curt Schmidt of ATC, Zebra advanced five borings in the service area of Goodyear Tire & Rubber Company. The drilling was difficult with multiple refusals in the rear of the service area. GDYR-1 encountered two refusals at 1.5 feet below floor grade in the northwest corner of the service area. A third attempt reached eight feet before the Geoprobe core barrel sustained damage at the eight-foot depth after encountering multiple solid objects at different angles. No odors were noted emanating from the soil in the upper eight feet, and the PID readings were low. Because space constraints limited equipment maneuvering, the Geoprobe was relocated to the east corner of the rear of the service area to attempt GDYR-2. GDYR-2 encountered two refusals at six feet below floor grade. The soils in the upper six feet exhibited no odors and very low PID readings. Space constraints precluded additional borings attempts in this area.

The Geoprobe was moved to a point immediately north-northeast of a pair of reported 550-gallon USTs, one of which is used to store waste oil for Goodyear operation. GDYR-3 encountered refusals at 5.5 and 13 feet below floor grade. The third attempt also encountered refusal at 13 feet. PID readings were low in all three attempts. Creosote odors were noted in thin seams or layers containing wood at 3.0 feet and 10.5 feet below floor grade. Further borings were not attempted due to maneuvering limitations. GDYR-4 was attempted immediately to the southeast of the pair of USTs. The boring was advanced to 16 feet below floor grade when it encountered refusal at 16 feet. The saturated zone was not encountered. PID readings were very low, or zero, and no odors were noted during the examination of the soil cores. A second boring was not attempted due to the depth reached. The soils in this area consisted primarily of fine sands with wood, brick fragments, and deteriorated mica schist.

GDYR-5 was advanced just inside one of the entrances to the service area, and adjacent to the sidewalk. There was a refusal on a deeper concrete pad at one foot bgs. The second attempt encountered multiple layers of concrete in the upper two feet of the cores. The PID readings were zero from two feet to refusal at 16.2 feet below floor grade. No odors were detected. Saturated soil was encountered at approximately 11.5 feet. The soil observed was silty, mostly fine to medium sand, with schist fragments. Refusal was encountered at a cobble or boulder. A groundwater sample was collected from GDYR-5.

#### 2.1.5 Manhattan Mini Storage Parking/Dynasty Auto Body Facilities

On November 4, 1998, under the supervision of Mr. Schmidt of ATC, Zebra advanced three borings in the parking area of between Manhattan Mini Storage and Dynasty Auto Body on West 58<sup>th</sup> Street. Two USTs reportedly exist just inside the east corner of the body shop. This area was not accessible to the Geoprobe due to the presence of air compressor equipment permanently installed above the location of the suspected UST. Therefore, two borings were attempted in the parking lot immediately to the southeast of Dynasty Auto Body. A third boring

was planned for inside the body shop, but facility operations (auto body painting) precluded sampling at that location<sup>1</sup>. Two advanced borings at the body shop exterior encountered multiple refusals. BODY-1 encountered refusals at 1.0, 4.0, 2.0, 4.0, 9.0, 7.0, and 8.0 feet bgs. BODY-2 encountered refusals at 4.5, 4.5 and 4.1 feet. The Geoprobe was unable to penetrate what appeared to be concrete footings beneath that location. The PID detected zero VOCs in the upper eight feet cored in BODY-1 and the upper 4.5 feet cored in BODY-2. No odors were detected in any samples from these two locations. Additional borings were attempted along the north-facing exterior wall of the Goodyear Service Area. The Geoprobe was unable to penetrate beyond one foot bgs due to a solid concrete base. A boring was attempted in the center of the parking area (MINI-1). After three refusals at two feet bgs, the Geoprobe was able to penetrate to 18 feet bgs. No odors were noted, and the PID readings were zero to total depth. The soil consisted of cinder fill, deteriorated schist, silty sand and gravel, and an occasional cobble. A slight, unrecognizable odor was noted at approximately three feet bgs. The soil was not saturated, and a groundwater sample was not be collected.

## 2.2 Ground Water Sample Collection and Field Observations

Geoprobe equipment was used to install temporary groundwater-sampling devices within nine (9) of the soil borings. Zebra utilized an extendible, screened stainless steel water sampler attached to the Geoprobe boring rods to collect ground water samples. A dedicated flexible Teflon tube, to which a check valve was attached, was inserted through the hollow drilling rods into ground water in all borings. Water was then hand pumped to appropriate sample containers. All Geoprobe sampling equipment which contacts soil or ground water was decontaminated between soil borings using analconox wash, water rinse, secondalconox wash and water rinse.

Groundwater samples were collected from the following borings:

|         |         |
|---------|---------|
| AKSS-5  | AIRX-13 |
| AKSS-8  | GDYR-4  |
| AIRX-1  | POTK-1  |
| AIRX-8  | POTK-1  |
| AIRX-10 |         |

## 2.3 Sample Analysis Methods

All soil and groundwater samples were placed in appropriate containers supplied by the laboratory with necessary preservatives. ATC completed all chain of custody documents prior to sample shipment. The samples were cooled to 4 degrees centigrade (wet ice) during shipment to the laboratory. All soil samples collected (a total of 59 samples were collected for this investigation) were submitted for laboratory analysis for volatile organic compounds (VOCs)

<sup>1</sup> Elevated ambient concentrations of VOCs from painting operations would likely have contaminated any samples collected within the space.

using EPA Method 8260. In addition, 33 soil samples were selected for analysis for semi-volatile organic compounds (SVOCs) using EPA Method 8270. Thirteen of the soil samples were also analyzed for the Resource Conservation and Recovery (RCRA) list of eight (8) heavy metals (hereafter "RCRA metals"). A select number of samples with obvious gasoline contamination were also analyzed for total lead. All groundwater samples collected were submitted for VOC analysis under EPA SW-846 Method 8260 and SVOCs under EPA SW-846 Method 8270. In addition, water samples were analyzed for RCRA metals and polychlorinated biphenyls (PCBs). The metal samples were not filtered. The specific analyses were performed in accordance with methods described in EPA publication SW-846. All samples were submitted to Scilab Albany, Inc. in Latham, New York (New York State Department of Health Environmental Laboratory Approval Program ID No. 10356). Insufficient groundwater yield in boring AIRX-8 precluded analysis for SVOCs or PCBs.

## 3.0 RESULTS OF LABORATORY ANALYSES

Analytical reports of soil and groundwater samples (as submitted by Scilab Albany, Inc.) are attached as Appendix B. Appendix B is organized by day of submittal to the laboratory.

### 3.1 *Soil Sample Results*

Soil sample analytical results are discussed below. They are organized by facility, and then by analytical parameter (VOCs, SVOCs, PCBs and RCRA metals).

#### 3.1.1 Artkraft Strauss Sign Company Facility

Eight borings were advanced at the Artkraft Strauss Sign Company facility. Sixteen samples were collected and submitted for VOC analyses. The results are summarized in Table 1. Laboratory analysis indicates that VOCs were present at levels above the New York State guidelines (Spill Technology and Remediation Series (STARS) Memo #1 or Technical and Administrative Guidance Memorandum (TAGM) Memo HWR-94-4046) in AK1-10, AK3-2.5, AK5-7, AK6-3.5, and AK7-7.7. Elevated method detection limits (MDLs) due to matrix interference in AK4-7, AK5-7, and AK7-7.7, indicate organic contamination in those samples. AK3-2.5, AK5-7, and AK7-7.7 have compounds indicative of gasoline contamination. AK1-10 contains benzene equal to the NYSDEC STARS Memo Alternative Guidance Value (AGV). AK6-3.5 was collected from a thin layer with a solvent odor, and was found to contain trichloroethene, a common solvent and degreaser, above the NYSDEC TAGM Soil Cleanup Objective.

Table 1  
 Detected Volatile Organic Compounds in Soil

\* These samples were analyzed under EPA 8260 and EPA 8021.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based VOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum VOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate VOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Nine of the samples collected at the Artkraft facility were submitted to the lab for SVOC analysis. Table 2 summarizes the results of the analyses. All but two of the sample analyses indicate SVOC levels exceeding NYSDEC STARS AGVs. AK1-10 and AK8-11 were collected from the organic clayey silt found at depth beneath Artkraft facility. AK4-12 was collected from a silty fine to medium sand immediately above the saturated zone. No odors or elevated PID readings were associated with these samples. AK2-5 was collected from a layer containing wood with oil and/or creosote. AK1-3, AK3-2.5, and AK3-10 exhibited petroleum/solvent odors and high PID readings associated with the sample. The two "clean" samples exhibited elevated MDLs due to matrix interference. Please refer to Table 2 on the following page for SVOC results.

STARS AGV - New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based SVOCs.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality.  
 TAGM SCOs are applied to non-petroleum SVOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate SVOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Five soil samples collected from the Artkraft facility were analyzed for PCBs. The results are summarized in Table 3. No PCBs were detected in any of the samples collected. RCRA metals were analyzed for in AK4-7 and AK8-11, and total lead was analyzed for in AK4-12. The NYSDEC TAGM Eastern USA Background level mercury was exceeded in both samples, and lead was exceeded in AK8-11.

**Table 3**  
**PCB and RCRA Heavy Metal Compounds in Soil**  
**Artkraft Sign Company Facility**

**TAGM SCO -** NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

**SB -** Site Background

**NA -** Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

### 3.1.2 Airborne Express Facility

Thirteen borings were advanced at the Airborne Express facility. Eighteen samples were collected and submitted for VOC analyses. The results are summarized in Table 4. Laboratory analyses indicates that VOCs were present at levels above the NYSDEC STARS AGVs in AX1-15, AX3-14, AX4-14.5, AX5-11, AX10-7 and AX11-6.5. Detected compounds include benzene, ethylbenzene, and xylenes, are indicative of gasoline contamination. Elevated MDLs due to matrix interference in AX1-9, AX2-6, AX6-15, AX7-15, AX8-15, and AX9-14.5, indicate SVOC and/or VOC contamination in those samples.

Seven samples collected at Airborne Express were submitted to the lab for SVOC analysis. Table 5 summarizes the results of the analyses. Two of the sample analyses, AX6-15 and AX10-7, indicate SVOC levels exceeding NYSDEC STARS AGVs. AX6-15 was collected from soil adjacent to the former waste oil UST. AX10-7 was collected near a UST that may have stored diesel fuel at one time. AX13-11 contained detected SVOCs, but below the NYSDEC STARS AGVs.

PCBs were analyzed for in six samples at Airborne Express. As seen in Table 6, no PCB compounds were detected. Total lead analysis was performed on eight samples collected from the facility. None of the concentrations exceeded the NYSDEC TAGM Eastern USA Background levels for lead. RCRA metals were tested in three samples. Only mercury exceeded the NYSDEC TAGM Eastern USA Background levels in the sample AX12-18.

STARS AGV -

New York State Department of Environmental Conservation (NYSDEC) Spill Technology and Remediation Series Memo #1: Petroleum-Contaminated Soil Guidance Policy - Alternative Soil Guidance Values. The Alternative Soil Guidance values are applied to petroleum-based SVOCs.

TAGM SCO -

NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objective to Protect Groundwater Quality. TAGM SCOs are applied to non-petroleum SVOCs not listed under the NYSDEC STARS Memo.

NA - Not Analyzed

Shaded boxes with bold results indicate SVOC concentrations above NYSDEC STARS Memo Alternative Soil Guidance Values, or NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background

NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

### 3.1.3 Potamkin Toyota Service Facility

Four borings were advanced at the Potamkin Toyota Service facility. Eight samples were collected and submitted for VOC analyses. The results are summarized in Table 7. Laboratory analyses indicates that VOCs were present at levels well above the NYSDEC STARS AGVs in PO1-10, PO1-15, PO-2-3, PO2-15, PO3-15, and PO4-17. These samples all exhibited high to very high PID readings measured in the field. Laboratory analyses of samples PO3-5 and PO4-11 did not detect VOCs (other than acetone, a common lab contaminant).

SVOCs exceeded NYSDEC STARS AGVs in six of the eight samples collected and analyzed from the Potamkin facility. The results are summarized in Table 8. Naphthalene, a major compound found in fuel oils was present in PO1-10, PO1-15, PO2-3, PO2-15, and PO3-15. PO3-15 contained other SVOCs well above the NYSDEC STARS AGVs. PO4-11, which exhibited no petroleum odor, and contained cinder fill, contained three SVOCs slightly above the AGV. PO4-17 exhibited very high MDLs due to matrix interference due to high levels of contaminants.

PCB analysis was performed on five of the eight samples. The results as summarized in Table 9, indicate that no PCBs were detected. Six of the eight samples were analyzed for RCRA metals, and total lead was analyzed for in the remaining two samples. As illustrated in Table 9, arsenic was detected slightly above the NYSDEC TAGM Eastern USA Background levels in PO4-11. Mercury exceeded the NYSDEC TAGM Eastern USA Background levels in POTK1-10 and PO4-11. Lead concentrations exceeded the NYSDEC TAGM Eastern USA Background levels in PO4-11 and PO4-17. The samples were collected from soil containing incinerator ash, cinders and slag.

TAGM SCO -

NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046:  
 Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended  
 Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for  
 PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background

NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

#### 3.1.4 Goodyear Service Facility

Five borings were advanced at the Goodyear Service facility. Five samples were collected and submitted for VOC analyses. The results are summarized in Table 10. The VOC analyses indicate that only acetone and 2-butanone (common lab contaminants) were detected in a single sample, and at levels well below NYSDEC TAGM Soil Cleanup Objectives to Protect Groundwater Quality.

The SVOC results are summarized in Table 11. SVOCs above the NYSDEC STARS AGV were detected in both GY3-11 and GY5-11. These samples were collected close to the saturated zone in silty sand fill with brick and deteriorated schist gravel fill.

PCB and RCRA metals analyses were performed on two of the five soil samples. The results are summarized in Table 12. Cadmium was detected at levels slightly above the NYSDEC TAGM Eastern USA Background levels in sample: GY1-5. The soil at this location and depth consisted of cinders and slag.

### 3.1.5 Manhattan Mini Storage Parking Area/Dynasty Auto Body Facilities

Five samples were collected from three borings in the parking area between Dynasty Auto Body and Manhattan Mini Storage. VOCs were analyzed in four of the samples. The results are summarized in Table 13. No VOCs were detected.

SVOCs were analyzed in four of the five soil samples collected. The results are shown in Table 14. SVOCs exceeded, or equaled, the NYSDEC STARS AGV in all samples. The BD2-3.5 sample was collected from sand fill without visible cinders or slag. The other samples contained fill with cinders, incinerator slag, and coal. The MI1-3 sample, that exhibited the highest levels of SVOCs exhibited a slight unrecognizable odor.

MI1-3 and MI1-15.5 were analyzed for PCB content. The results (as indicated in Table 15) were below detection limits. RCRA metals were analyzed in three of the five samples collected. Mercury, cadmium and arsenic were detected above the NYSDEC TAGM Eastern USA Background levels in MI1-3. Laboratory analyses indicated that lead exceeded NYSDEC TAGM Eastern USA Background levels in MI1-3 and MI1-15.5. Likewise, chromium exceeded the NYSDEC TAGM Eastern USA Background levels in BD2-3.5.

TAGM SCO - NYSDEC Technical and Administrative Guidance Memorandum #HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels; Recommended Soil Cleanup Objectives. ATC used the TAGM SCO to protect groundwater for PCBs. ATC used Eastern USA Background Levels listed in TAGM for heavy metals.

SB - Site Background  
 NA - Not Analyzed

Any numerical result with a "less than" symbol indicates a concentration below the laboratory detection limit.

Shaded boxes with bold results indicate PCB or heavy metal concentrations above NYSDEC TAGM Eastern USA Background Levels for metals or the TAGM Soil Cleanup Objective to protect groundwater for PCBs.

### 3.2 *Groundwater Sample Analysis Results*

The summary of the results of the groundwater analyses is given in Table 16. VOCs were detected in the groundwater from borings AKSS-8, AIRX-1, AIRX-8, AIRX-10, POTK-1 and POTK-4 at levels exceeding the NYSDEC Ambient Groundwater Quality Standards and Guidance Values. The VOCs that exceeded this standard are compounds typically found in gasoline.

Naphthalene (an SVOC) was detected in AIRX-10 and POTK-1 at levels exceeding the NYSDEC Ambient Groundwater Quality Standards and Guidance Values. As indicated in Table 16, no other SVOCs were not detected in any of the groundwater samples.

PCBs were analyzed in eight of the nine water samples. The analyses indicated that all PCB compounds were below detection limits. RCRA metals were analyzed in seven of the nine water samples. Total Lead was analyzed in the remaining two samples. The lead concentrations in the groundwater samples from AIRX-8 and AIRX-10 were slightly above the NYSDEC Ambient Groundwater Quality Standards and Guidance Values. The PCB and RCRA metal groundwater analyses are summarized in Table 16.

\* NYSDEC (1993) Ambient Water Quality Standards and Guidance Values

## 4.0 DISCUSSION AND CONCLUSIONS

This investigation revealed areas of significant soil and groundwater contamination at the Subject Property. These conditions were primarily the result of gasoline releases from multiple abandoned USTs at several locations on the Subject Property. The NYSDEC will require further delineation of both the soil and groundwater contamination, as well as remediation to reduce contaminant levels. ATC recommends that soil contamination be addressed through excavation and proper disposal during site development. It may also be possible to remove the majority of contaminated groundwater by modifying planned construction dewatering systems to concurrently treat water through activated carbon filtration prior to discharge.

ATC did not access the interiors of two buildings at the eastern edge of the Subject Property (occupied by the Manhattan Mini Storage and Potamkin Toyota Sales facilities). Therefore, soil or groundwater quality data was not generated for these areas. ATC did not gain access into the Copacabana facility, and cannot speculate on soil or groundwater quality beneath this facility. Further, a limited amount of data was obtained from the Artkraft facility due to refusal at several attempted boring locations. Additional investigation is recommended for all of these areas prior to site development. Any subsequent study should include additional soil borings and installation of groundwater monitoring wells. Figure 4 provides the recommended number and locations of borings and wells to obtain additional data.

Below are summaries, discussions and conclusions for each facility investigated within the Subject Property.

### 4.1 Artkraft Strauss Sign Company Facility

Field observations and laboratory results indicate what appears to be limited gasoline contamination in soil in the vicinity of two borings advanced near two USTs on the south side of the facility. Elevated levels of gasoline constituents (VOCs) were detected in a thin soil layer in boring AKSS-3 at the 2.5 to 3.0-foot depth, and at the seven-foot depth in AKSS-1. VOC contamination originating from gasoline was found in borings advanced in the vicinity of two USTs at the north side of the facility. The VOC contamination was present in soils between seven and nine feet in AKSS-5, and in a thin layer between 7.7 and 8.0 feet in AKSS-7. Trichloroethene at a level exceeding the TAGM Recommended Soil Cleanup Level to Protect Ground Water was detected in the shallow sample from AKSS-6. Since laboratory analysis of a deeper sample collected from this boring did not detect trichloroethene, ATC concludes that this condition is localized in extent both laterally and vertically.

SVOCs were detected by the laboratory in seven soil samples at concentrations exceeding NYSDEC STARS AGVs. The remaining two samples exhibited high MDLs for SVOCs because

of matrix interference. This indicates that SVOC contamination is present above NYSDEC STARS AGVs, but below the laboratory MDL. ATC detected distinct petroleum odors in several of the soil samples collected from borings advanced at this facility. In addition, ATC detected a creosote-like odor in soils collected from AKSS-4.

Soil contamination beneath the Artkraft facility does not appear to be extensive. However, this material requires special handling and disposal if proposed development of the Subject Property includes excavation in this area. Further, at least four USTs will require removal prior to construction excavation activities. On-site characterization will be required to isolate contaminated soil from unaffected soil for proper disposal.

ATC found only a low level of VOC contamination in one of two groundwater samples collected from beneath Artkraft. ATC recommends additional investigation of groundwater quality by installing monitoring wells to confirm this finding, and to further delineate the extent and severity of contamination in the shallow aquifer in other areas of the Subject Property.

#### **4.2 Airborne Express Facility**

This investigation revealed the presence of severe VOC contamination in soils collected from five borings advanced near 12 gasoline USTs at the southeast quadrant of the facility. The investigation in the vicinity of the waste oil UST and the former hydraulic lifts in the center of the facility indicate that SVOC and VOC contaminants are present in the soil just above the water table. The SVOC contamination is indicative of a discharge from the waste oil tank. Since the VOC contamination was found in soils directly above the water table, ATC concludes that this condition was caused by migration of VOCs with groundwater flow from the 12 USTs to the west of this area. The data indicates an extensive plume of VOC contamination in groundwater that likely originates from the 12 abandoned gasoline USTs.

Two of the soil samples collected from the vicinity of the two USTs in the Airborne parking area exhibited VOCs exceeding NYSDEC STARS AGVs by at least one order of magnitude. SVOCs were detected in these samples at concentrations below NYSDEC STARS AGVs. Laboratory analysis of soil samples from AIRX-13 (southwest section, near the Artkraft facility, at a greater distance from the USTs) exhibited undetected VOC concentrations, and SVOC levels below NYSDEC STARS AGVs. Since soil samples with VOC contamination were collected near the USTs from relatively shallow depths (8 feet or less), it is likely that one or both of the USTs in the parking area have discharged gasoline to the environment. Because VOC contamination was well above the water table, ATC concludes that this condition was not caused by another source, such as the 12 USTs inside the Airborne building. In addition, groundwater data collected from near the two USTs in the parking lot shows that elevated VOC contamination is present and will require remediation.

In summary, significant areas of soil contamination from on-site USTs sources are present at this facility. This material will require special handling and disposal prior to site development. Groundwater contamination is also present and the NYSDEC will require remediation of this condition. However, if proposed site development includes construction excavation dewatering, the impacted groundwater can be treated as it is removed

#### **4.3 Potamkin Service Facility**

This investigation revealed severe VOC contamination in each of the four borings installed within in the Potamkin Service facility, that were likely caused by gasoline releases from abandoned USTs. SVOC contamination in soil was also found and indicates an unknown source of fuel oil or diesel fuel. The contamination near POTK-1 is likely from the known waste oil UST, but SVOCs found in POTK-3 and POTK-4 indicate another source. ATC recommends additional subsurface delineation in this area.

Significant areas of contaminated soil will require special handling and disposal in the Potamkin facility. In addition, the NYSDEC will require further investigation and remediation of the contaminated groundwater. ATC recommends additional groundwater monitoring using monitoring wells installed at locations indicated Figure 4. The impacted groundwater can be treated during construction dewatering.

#### **4.4 Goodyear Service Facility**

The operating service area, the presence of a subbasement, and concrete rubble beneath the floor slab limited the investigation at the Goodyear facility. No VOCs were detected in the limited soil sampling conducted but samples collected in the vicinity of the waste oil USTs (in the center of the facility) indicate SVOC contamination in the soil just above the water table. This contamination indicates possible leakage from the waste oil UST.

It is possible that special handling and disposal of contaminated soil will be necessary during proposed site development. Further investigation of both soil and groundwater quality should be performed at Goodyear to obtain additional data.

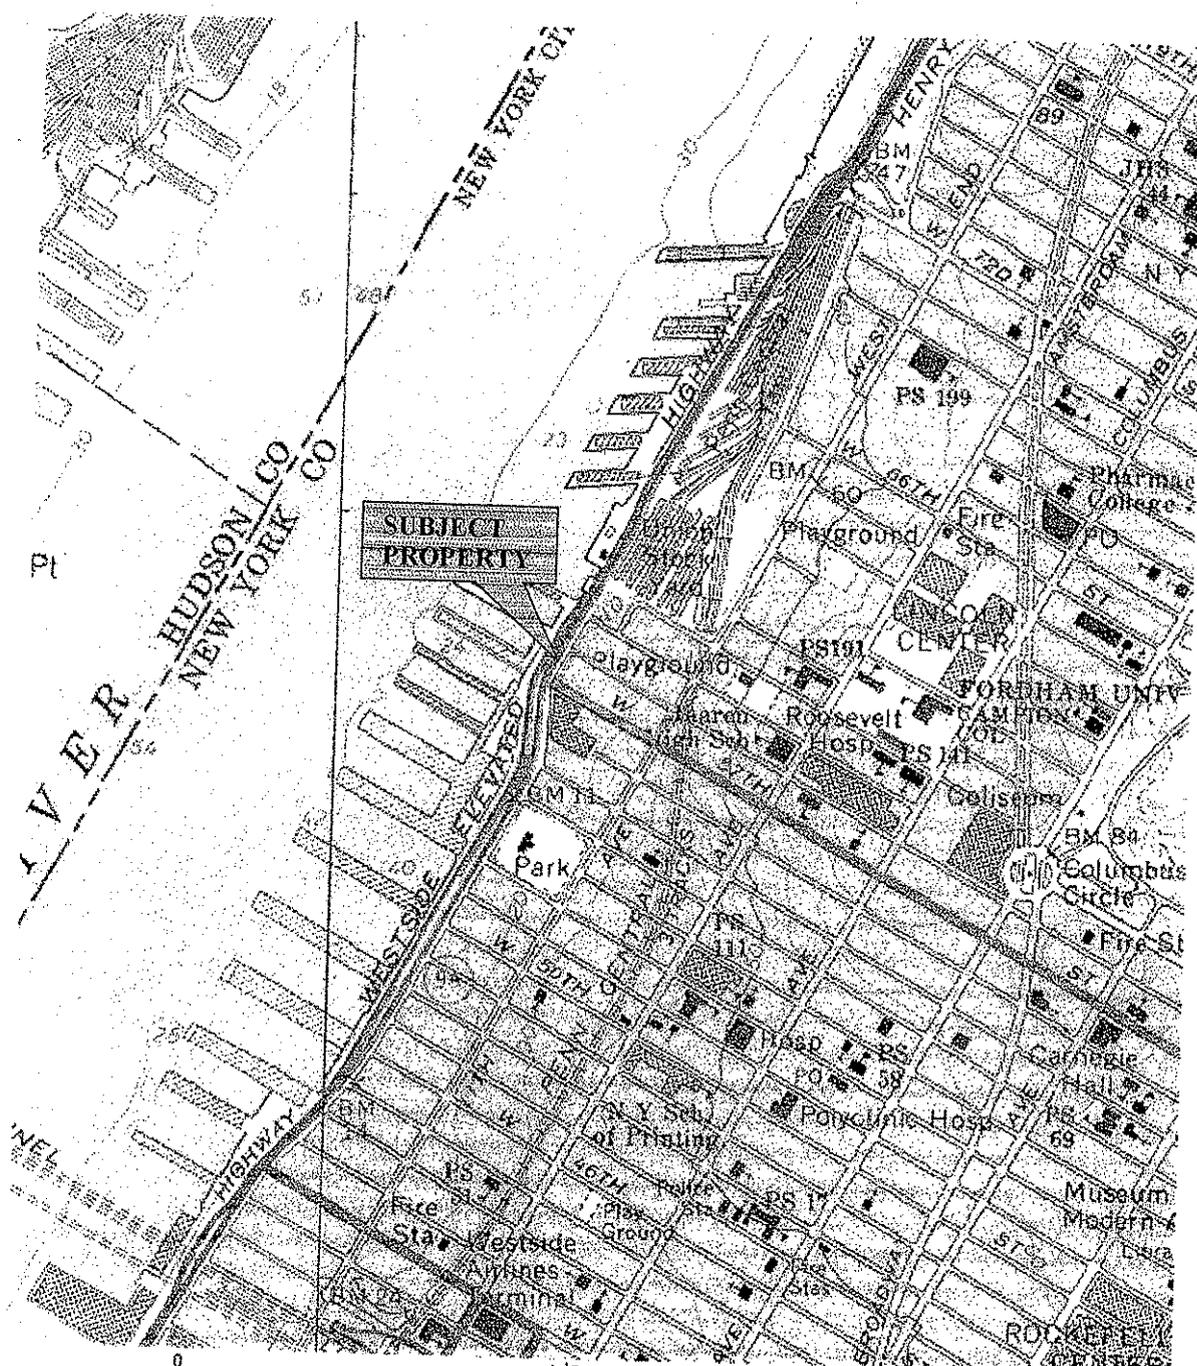

#### **4.5 Manhattan Mini Storage Parking/Dynasty Auto Body Facilities**

Soil samples from BODY-2 and MINI-1 contained SVOC concentrations above NYSDEC STARS AGVs, and heavy metal concentrations well above NYSDEC TAGM Eastern USA Background Levels. Laboratory analysis of soil samples found no VOC contamination. It appears that SVOCs and heavy metals detected reflects the composition of the fill material in this area, and was not caused by leaking USTs. However, ATC recommends field screening of soil be conducted to confirm that soil exhibiting petroleum odors or other evidence of contamination is not removed during site development.

ATC has prepared and presented preliminary cost estimates for the following work:

- TASK 1: Additional Soil and Groundwater Investigation,
- TASK 2: UST/Soil Excavation and Disposal,
- TASK 3: Groundwater Treatment during Construction Site Dewatering.

The cost estimates and assumptions for the costs are presented in Section 1.0 herein. The conclusions and recommendations presented in this report are subject to change as additional data is collected.

Re: Third Supplemental Geotechnical Investigation  
Block 1105 - Residential Development  
New York, NY  

---

MRCE File No. 9347A

Gentlemen:

We have completed a supplemental boring program at the southeast corner of Block 1105. This report briefly describes the boring program and subsurface conditions encountered, and provides foundation design and construction recommendations. Based on the supplemental borings, we updated the boring location plan, the rock surface contour map, and the geologic sections originally included in our November 22, 2000, September 25, 2001, and February 14, 2002 geotechnical reports. In addition, we developed three additional geologic sections within the present investigation site.

Upon completion of the supplemental borings, we issued a draft report dated November 15, 2002. That report included sufficient information for the structural engineer to proceed with foundation design, but lacked issues pertaining to the Manhattan Mini Storage building. This report supersedes the draft report. This report includes newly provided project information, and addresses issues related to the Manhattan Mini Storage building based on our basement observation, as there are no foundation drawings available.

## PROJECT DESCRIPTION

Block 1105 encompasses the block bounded by W. 58<sup>th</sup> Street, W. 57<sup>th</sup> Street, 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue on Manhattan's west side. The proposed residential development utilizes the southeast portion of the block, extending about 250 feet along 57<sup>th</sup> Street and about 100 feet along 11<sup>th</sup> Avenue with a resulting area of about 25,000 square feet. We understand that a 36-story residential building is proposed. Based on drawings you provided, we estimate the footprint of the building at about 22,500 square feet. The building will include two levels of basement.

The site consists of a vacant lot on the west and one and three story brick buildings on the east. The vacant lot was occupied by a one-story brick building, which was demolished several months ago. The buildings on the east were used as a garage and automobile showrooms, and are both under demolition.

Our previous investigations indicate that the site grade varies from about Elev. +24 at 11<sup>th</sup> Avenue to about Elev. +20 at the west end of the present development. Top of rock varies between Elev. +15 at the northwest corner and Elev. -10 at the northeast corner of the site. Elevations in this report refer to Borough President of Manhattan Datum, in which Elev. 0.0 is 2.75 feet above 1929 National Geodetic Vertical Datum, Mean Sea Level at Sandy Hook, NJ.

### **AVAILABLE INFORMATION**

We used the following information in preparation of this report:

1. Conceptual Drawings, "11/57 Residential", Prepared by Fox & Fowle Architects, Dated September 20, 2002.
2. Phone Conversation with Severud Associates on December 23, 2002.
3. Geotechnical Investigation Report, Prepared by Mueser Rutledge Consulting Engineers, Dated November 22, 2000.
4. Supplemental Geotechnical Investigation Report, Prepared by Mueser Rutledge Consulting Engineers, Dated September 25, 2001.
5. Supplemental Geotechnical Investigation Report, Prepared by Mueser Rutledge Consulting Engineers, Dated February 14, 2002.

### **EXHIBITS**

The following exhibits are attached to this report:

## **SUBSURFACE INVESTIGATIONS**

**Previous Subsurface Investigations** - Between August 7 and October 6, 2000 we performed a preliminary boring program. That program consisted of sixteen borings (M-1 through M-16) which were laid out in the entire block bounded by 11<sup>th</sup> Avenue, 12<sup>th</sup> Avenue, W. 57 Street, and W. 58 Street. Due to limited access to the interiors of then existing buildings, most of the preliminary borings were drilled on the perimeter sidewalk. We summarized that investigation in our report dated November 22, 2000.

Between July 17 and August 9, 2001, we completed a supplemental boring program within the middle third of the block. The boring program consisted of 22 borings (B-1 through B-22), comprising 11 borings in the Airborne Express building, five borings in the Potamkin Services building, one boring in the Copacabana building, and five borings on the sidewalk. Subsequent to that investigation, we issued a geotechnical report dated September 25, 2001, which updated the November 22, 2000 report.

Between November 29 and December 21, 2001, a second supplemental boring program was performed within the westerly third of the block. The site had a footprint of about 51,000 square feet. A total of 16 borings (S-100 through S-115) were drilled which included three borings in the parking lot, nine borings in the Artkraft building, and four borings in the Airborne Express building. Subsequent to that investigation, we issued a geotechnical report dated February 14, 2002, which updated the September 25, 2001 report.

**Present Subsurface Investigation** - The present subsurface investigation was performed during the period from October 17 to October 22, 2002 within the southeast corner of the block. Borings performed in the past investigations indicate that the general excavation subgrade will be either in bedrock or near the rock surface. The New York City Building Code does not require borings where shallow foundations are used and bedrock can be inspected upon exposure. However, the interior of the present site was not previously explored, and additional top of rock information will be useful for design, cost estimating, and bidding purposes.

We performed five borings (R-200 through R-204) during the present investigation as shown on the attached Drawing B-1. The two borings in the vacant lot were drilled using a truck mounted drilling rig, while the three borings within the buildings were drilled using a track mounted drilling rig. The two rigs worked concurrently.

All borings were continuously inspected by our Resident Engineer, Mr. Andrew Klaetsch. All borings were made using rotary drilling techniques employing casing and mud as drilling fluid. The borings were made by Warren George Inc. Jersey Boring and Drilling, who performed the previous three boring programs, had visited the site and provided us with unit prices for the drilling. However, due to their inability to begin the work in a timely manner, you directed that MRCE engage Warren George Inc. to perform the drilling.

Soil samples were obtained with a standard, two inch O.D. split-spoon sampler, using a 140-pound drop hammer free falling 30 inches. The number of blows required to drive the

sampler through each of four six-inch increments of depth was recorded. The sum of the blows for the second and third six-inch intervals is defined as the Standard Penetration Test (SPT) Resistance, or N-value. The N-value is an index of the in-situ relative density of the material. Split-spoon samples were typically obtained continuously within the first ten feet and at five foot intervals of depth thereafter.

A minimum 10 feet of bedrock was cored in all borings to sample sound rock. Cores were taken with a double tube, N-size, diamond bit core barrel in runs up to five feet in length. Our Resident Engineer logged each core run, sketched the jointing patterns, measured recovery lengths and calculated Rock Quality Designation (RQD). RQD is the sum of the lengths of core pieces of intact rock over four inches in length between natural breaks expressed as a percentage of the total core run. Fractures which occurred as a result of drilling operations or extraction of the core samples (termed mechanical breaks) were not considered when measuring RQD.

All soil cuttings were contained to prevent cross contamination in the ground. At the completion of borings, all boreholes were backfilled with cement grout. As-drilled boring locations shown on the attached Drawing B-1 were surveyed by Montrose Surveying Co. under subcontract to Warren George Inc.

All soil and rock samples were sent to our laboratory where field classifications were verified. Split-spoon samples were removed from their containers and examined. Field sample descriptions were revised as needed. Individual sample descriptions are included on the typed logs given in Appendix A.

### **SUBSURFACE CONDITIONS**

All borings drilled for this investigation encountered fill over a sand/ till stratum, all underlain by decomposed rock/ bedrock. Individual soil and rock samples are described on the attached logs, and simplified logs are presented on the attached Geologic Sections A-A through I-I. The sections relevant to the present site are Section B-B, C-C, and G-G through I-I.

The Geologic Sections show the number and location of soil samples, their classification symbol using the Unified Soil Classification System (USCS), and SPT N-values. Rock core sample numbers, depth intervals, and lengths are shown, along with percent core recovery and RQD. Ground water levels are marked on the sections by inverted triangles. Soil and rock stratifications shown are necessary interpolations between borings and may not represent actual subsurface conditions.

**Subsurface Conditions** The soil strata encountered in the borings drilled in and around the residential development site are described below in their order of increasing depth:

**Fill (F) (NYC Class 11-65)** A 5 to 17 feet thick layer of sandy fill was encountered in Borings R-200 through R-204. Much of the fill is described as brown loose to medium compact fine to coarse sand, some silt, and silty fine to coarse sand, some to trace gravel and rock fragments. This stratum was identified as fill by the inclusion of concrete, glass and cinder. N-values within this stratum varied widely between four and 34 blows per

foot with most N-values between seven and 25 blows per foot. High N-values were likely the result of the presence of large gravel, decomposed rock or miscellaneous debris. The fill is unsuitable for support of new structures.

**Sand and Till (S/T) (NYC Class 7-65)** - A sandy natural deposit up to 20 feet thick was found beneath the fill. Stratum S/T generally consists of brown medium compact to compact silty fine to coarse sand, some to trace clay and gravel. The presence of cobbles was noted in Borings R-203 and R-204. The upper portion of this stratum appears to be a post-glacial deposit or reworked glacial till. The lower portion of the stratum is glacial till. Most N-values within this stratum varied between 19 and 78 blows per foot. High N-values were likely the result of the presence of large gravel or decomposed rock.

**Decomposed Rock (DR) (NYC Class 7-65)** - Stratum DR is the product of physical and chemical decomposition of the underlying bedrock. This stratum consists of very compact brown fine to coarse sand, some to trace silt, trace to some rock fragments. This material is more soil-like than rock-like. It retains vestiges of its parent rock fabric, but has the consistency of soil. Where present, Stratum DR is one to seven feet thick. This stratum was absent in Borings R-200 through R-204, but was encountered in the borings previously drilled around the site.

**Weathered Rock (WR) (NYC Class 4-65)** - Stratum WR is rock with a highly weathered fabric, which can be broken easily and crumbles with difficulty by hand. This material is more rock-like than soil-like. It retains vestiges of its parent rock fabric. This stratum was encountered in our previous M, B, and S series borings drilled in the westerly third of Block 1105, and was not encountered in the site of the proposed residential development. Where present, Stratum WR is two to ten feet thick except in Boring B-6, where this stratum continued in three consecutive five feet rock cores (a total 15 feet). The boundary between Stratum DR and Stratum WR is often indefinite. When boundary uncertainty occurs, consistency of the material was used to distinguish between the two strata.

**Bedrock (R) (NYC Classes 1-65, 2-65 and 3-65)** - Previous borings indicate that bedrock conditions at the entire block are complex. Gray, gray white, and black mica schist or gneissic schist were mostly encountered in borings made on the western half of the block, and gray and white gray granite were encountered in borings made on the eastern half of the block. Gray granitic gneiss and schistose gneiss were encountered in borings randomly throughout the block. Based on the previous boring data, the residential development site is within the gray and white gray granite zone, which was confirmed by the five borings drilled during the present investigation. The bedrock cored in the five borings consists of medium hard to hard slightly weathered, gray granite, jointed to broken, with iron stained to weathered joints.

Rock core recoveries in the five borings with an NX size double-tube core barrel ranged from 92 to 99 percent. Rock joint frequency varies as indicated by RQD (Rock Quality

Designation) ranging from 60 to 92 percent. The attached rock surface contour plan, Drawing No. R-1, shows the rock surface elevations at the site. The highly uneven surface of the bedrock is due to the effects of ancient streams and glacial scouring.

**Groundwater Conditions** - During this investigation one piezometer was installed. Previously, Piezometers M-11AP and M-15P were installed at the northwest corner and northeast corner of the residential development site, respectively, during the investigation performed in 2000. In addition, we located one of the monitoring wells, MW-4, that ATC installed in 1999 on the 57<sup>th</sup> Street sidewalk. Our Resident Engineer observed groundwater levels in those piezometers during and after the boring program. The water levels observed in the piezometers are shown as inverted triangles in the attached geologic sections. The data indicate that groundwater levels vary from Elev. +14.3 at the northwest corner to Elev. +6.5 at the northeast corner of the site.

### **FOUNDATION RECOMMENDATIONS**

You provided conceptual drawings dated September 17, 2002, which show the proposed residential building. The drawings indicate a 36-story building with two levels of basement for the entire footprint of the building. We were informed by Severud Associates that the floor to floor heights for the upper and lower basements will be about 14 feet and 12 feet, respectively. The bottom of the lowest basement slab will be at about Elev. -8.

Boring data indicate that the bedrock surface within the site is highly uneven with elevations ranging from Elev. +15 at the northwest corner to Elev. -10 at the northeast corner. With the lowest basement floor at Elev. -8, we expect that there will be substantial rock excavation to reach the subgrade level particularly in the westerly two thirds of the site. At the west end, the excavation will be about 12 to 25 feet into rock. At the middle of the site, excavation will be made about 18 to 25 feet into rock. At the east end of the site, rock dips down to 11<sup>th</sup> Avenue and excavation will be made primarily through soil with the rock surface near the general subgrade.

We recommend that all structural loads be directly supported on sound rock. Rock subgrade in the westerly two thirds of the site will be good quality due to the substantial amount of rock excavation. An allowable bearing value of 40 tons per square foot may be used in that area. Rock excavation in the easterly third will be substantially less. Our coring data indicate that bedrock near the surface may include rock of lesser quality due to weathering. Where rock excavation to reach quality rock becomes impractical, footings may be sized for an allowable bearing value of 20 tons per square foot. All bearing values must be verified by an experienced geotechnical engineer upon rock exposure.

**Basement Slab** - The lowest basement slab will be 14 to 22 feet below the water levels observed in the piezometers. Therefore, the proposed basement slab must be designed to deal with the hydrostatic pressure. The water pressure beneath the basement slab may be dealt with either as a pressure slab to resist the uplift, or by under-draining the slab to remove the pressures.

A pressure slab utilizes the column weight and/or weight of slab as a reaction against the upward pressure of groundwater. Between columns, tie down anchors can be used to resist the hydrostatic pressures and reduce slab thickness and reinforcement. Some leaks could occur through construction joints and cracks in the pressure slab. Basement leaks of this nature are commonly handled by providing a thin drainage course above the pressure slab, capped with a working floor slab. The drainage course would be gravity drained to a sump or ejector pit. However, we recommend that you carry a small budgetary contingency for repair to obvious leaks.

An under-drained slab reduces hydrostatic uplift by removal of groundwater. In this case, a permeable drainage course could be located below the full basement area to eliminate the water pressure on the slab. Drainage pipes and a properly filtered discharge zone would need to be designed. If this method is used, local sumps should be included in the under-slab drainage system. Such systems have been used in the past in the New York City, but to our knowledge, permits for permanent pumping of groundwater to combined sewers are not presently being issued.

In the westerly two thirds of the site, the basement will be mostly in rock. With the foundation wall keyed in rock, an under-slab drainage system will produce very small flows. Therefore, an under-slab drainage system will be practical for that portion of the site. At the easterly end of the site, the foundation wall may not reach rock or may bear on lesser quality rock with possible water bearing joints. The pumping quantity may be substantial so that a pressure slab would be a better alternative at the easterly third of the site. We understand that a decision has been made to use a pressure slab for the entire slab.

**Foundation Walls** - Foundation walls should be designed for lateral pressures due to earth, water and surcharge.

Soil design parameters are provided in the attached Table No. 1. A coefficient of horizontal pressure equal to the at-rest condition,  $K_0 = 0.5$ , may be used for walls braced by floor slabs. A coefficient of active earth pressure,  $K_a = 0.3$ , may be used where wall rotation is permitted. These values assume that backfill against the walls will be compacted with light walk-behind compactors such as a "jumping jack" to a minimum 90% modified Proctor maximum dry density. Heavy dynamic compaction equipment should not be operated within 5 feet of the basement wall to avoid high lateral stresses to the wall. If the foundation wall is cast directly against rock, lateral rock pressure may be estimated as 10 percent of effective overburden pressure. Water pressure and surcharge pressure will be additive.

Observed groundwater levels vary between Elev. +6.5 at the northwest corner and Elev. +14 at the northeast of the site. Groundwater at Elev. +14 may represent perched water with a limited recharge source. Therefore, design groundwater may be taken at Elev. +10 for the entire wall, provided that a drainage layer is installed between the foundation wall and rock. The drainage layer is designed to gravity drain high groundwater at the northwest corner to lower levels toward 11<sup>th</sup> Avenue and 12<sup>th</sup> Avenue. The drainage layer may consist of a geotextile drainage product

such as Miradrain or thin coarse gravel backfill placed behind the wall. The walls should be designed to withstand temporary water levels to Elev. +14 with an allowable overstress.

We recommend that all construction joints in foundation walls and basement slabs below grade be furnished with waterstops. Joints in basement slabs or walls below grade should have redundant systems such as PVC type waterstops with a bentonite strip. We recommend that membrane water proofing be applied to the pressure side of basement walls below grade.

**Adjacent Underground Structures** - Our November 22, 2000 report includes a set of drawings from the NYCDEP for the Pollution Control Intercepting Sewer that runs beneath 11<sup>th</sup> Avenue. The sewer line consists of a 14' outside diameter reinforced concrete tunnel with exterior "circular rib steel sets" at a spacing of about four feet. The reinforced concrete tunnel has a horse shoe-shaped interior. The sewer line slopes gently down toward the south with the invert at about Elev. -26.0 and the crown at Elev. -12.0 on the W. 58<sup>th</sup> Street side of 11<sup>th</sup> Avenue. At W. 57<sup>th</sup> Street, the sewer crown is shown near the top of bedrock. The attached Geologic Sections show approximate locations of the sewer line. A hypothetical line connecting the proposed building envelope to the invert of the circular rib steel sets is approximately at a 2.7 (H) to 1.0 (V) slope. Hence, new building loads will not adversely affect the interceptor sewer.

**Earthquake Factors** - The building design must comply with earthquake provisions in the New York City Building Code. We recommend using a Site Coefficient  $S_o = 0.67$  for all foundations bearing on bedrock.

## **CONSTRUCTION RECOMMENDATIONS**

**Excavation** - A substantial amount of rock excavation will be required at this site. Rock consists of sound granite, which will likely require blasting. All rock excavation next to the existing Manhattan Mini Storage building and along the building line should be line drilled with holes at close centers prior to blasting. Blasting should be carried out with light charges to limit vibrations that may damage adjacent structures and their foundations, dislodge rock supporting temporary excavation supports, or reduce the bearing capacity of bedrock at foundation level. A buffer zone of about three feet minimum width along the adjacent building would be prudent, where rock cannot be blasted, or only permitted to be pre-split with light charges. Hoe rams can cause harmful vibrations and should not be permitted within 25 feet of the adjacent building. Blasting vibrations may disturb occupants in the adjacent buildings. We recommend that specifications include limits on blasting vibrations. A pre-construction survey of nearby buildings will be necessary to set appropriate vibration limits.

Some of the rock excavation may require rock bolts depending on the local rock jointing. We recommend that the contractor retain an experienced professional engineer to inspect the rock excavation as it is exposed during construction and make recommendations on rock surface stabilization, if necessary. The specifications should also include an allowance for rock bolting and/or other stabilizing work.

**Underpinning** - A six story concrete structure, the Manhattan Mini Storage building, is located immediately north of the proposed building. The building has plan dimensions of about 160 feet in the east-west direction and about 100 feet in the north-south direction. The 160 foot side of the building will abut the proposed building. We reviewed Manhattan Land Books dating back to 1885. As the building is first shown in the 1927 Land Book and not shown in the 1916 Land Book, we believe that the building was built between 1916 and 1927. We attempted to obtain foundation drawings of the building at the Building Department, but none were available. On January 14, 2003, our Mr. Jong Choi visited the building to observe the basement. His observation indicates that the building has a basement below ground floor. The top of the ground floor was about four feet above the sidewalk grade at 11<sup>th</sup> Avenue and about 6.8 feet above the sidewalk grade at the west end of the building, as the sidewalk slopes down toward the west. The basement's slab to ceiling height was about 9.4 feet. Using the sidewalk grade at 11<sup>th</sup> Avenue at about Elev. 23, we estimate that the top of the basement slab is at about Elev. 16.5, which will be about 25 feet above the proposed excavation subgrade. No information is available as to support of the structure. As a portion of the slab subgrade is within the fill stratum, it is likely that the building is in part supported on or within the fill stratum. Therefore, the building may require underpinning prior to excavation below foundations of the building.

Rock surface in the southwest quadrant of the building is highest at Elev. +15.5, and drops off to Elev. -17 at the southeast corner of the building. The southwest portion of the building may be directly bearing on rock, while portion toward the southeast may be bearing on soil or may be supported by piles. In the absence of foundation drawings, we recommend that you carry a contingency budget for underpinning the entire south side of the building. The Contractor may be required to perform test pits to expose foundations prior to subgrade excavation. The extent to which underpinning is required may be determined based on the test pit investigation. The portion of the building bearing on rock may require rock bolts stabilizing the vertical rock surface below footings. All underpinning piers should be supported on rock.

Small movements are to be expected for any underpinning. The amount of movement is a function of the workmanship of the underpinning including the method of load transfer to the structure. If conventional pit underpinning is performed, dry pack should be rammed in place between the underpinning pier and the underside of the existing structure to minimize post construction settlement. Underpinning is conventionally designed by the contractor's engineer and submitted to the Owner for review prior to implementation.

**Temporary Excavation System** - Soil around the perimeter of the excavation should be retained by temporary excavation supports. The support system selected should be stiff and prevent migration of sand fines due to seepage. If soldier pile and lagging or sheet piling is selected by the excavation contractor, the installation should include rock pins at the toes of the support system where they bear on bedrock. The support system should be braced or tied back, and be relatively stiff so that lateral soil movements will not lead to subsidence of sidewalks or damage to buried utilities. If a portion of the Manhattan Mini Storage building is supported by piles, that portion of the excavation support may require internal bracing to protect the piles from damage which may be caused by tiebacks. We recommend the system proposed by the contractor be

## **EXHIBITS**

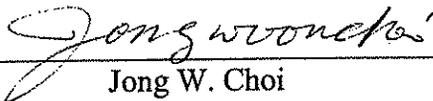

designed by a professional engineer licensed in the State of New York, and submitted to the Owner for review prior to installation.

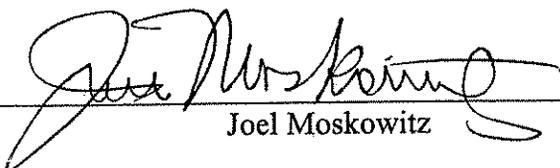

**Construction Dewatering** - Excavation subgrade will be about nine to 17 feet below the water levels observed in the piezometers. Groundwater will seep into the excavation through joints in the rock and flow through the soil above rock. As the rock subgrade will not be disturbed by water, the contractor can be permitted to dewater the rock excavation areas by pumping from local sumps at the base of the excavation. However, water flow into the excavation through the soil must be controlled to prevent the migration of soil fines that could lead to subsidence of ground beyond the excavation. Hence, we recommend that louvres between lagging boards be packed with straw.

We trust this report provides information you requested for the project. If you have any questions or if we can be of further assistance, please contact us.

Very truly yours,

- BORINGS PERFORMED DURING THE PERIOD FROM JULY 17 TO AUGUST 9, 2001 UNDER THE INSPECTION OF MUESER RUTLEDGE CONSULTING ENGINEERS.
- BORINGS PERFORMED DURING THE PERIOD FROM NOVEMBER 29 TO DECEMBER 21, 2001 UNDER THE INSPECTION OF MUESER RUTLEDGE CONSULTING ENGINEERS.
- BORINGS PERFORMED DURING THE PERIOD FROM OCTOBER 17 TO OCTOBER 22, 2002 UNDER THE INSPECTION OF MUESER RUTLEDGE CONSULTING ENGINEERS.
- BORINGS INDICATED BY AND WERE DRILLED BY JERSEY BORING AND DRILLING CO. BASED ON THE BORING LOCATION PLAN PREPARED BY MUESER RUTLEDGE CONSULTING ENGINEERS.
- BORINGS INDICATED BY WERE DRILLED BY WARREN GEORGE INC. BASED ON THE BORING LOCATION PLAN PREPARED BY MUESER RUTLEDGE CONSULTING ENGINEERS.
- ALL ELEVATIONS REFER TO THE BOROUGH OF MANHATTAN TOPOGRAPHICAL BUREAU DATUM WHICH IS 2.75 FEET ABOVE MEAN SEA LEVEL AT SANDY HOOK, 1929.
- IN 2000, PIEZOMETERS WERE INSTALLED IN BORINGS M-3P, M-4P, M-11AP AND M-15P TO ELEVATIONS -46.5, -44.3, +7.3 AND -13.7, RESPECTIVELY.
- IN 2001, PIEZOMETERS WERE INSTALLED IN BORINGS B-3P, B-13P, AND B-21P TO ELEVATIONS -32.3, -24.6, +7.3 AND +1.5, RESPECTIVELY.
- IN 2002, PIEZOMETER WAS INSTALLED IN BORING R-202P TO ELEVATION +6.2.
- JERSEY BORING AND DRILLING CO. IS LOCATED AT: 150 WRIGHT STREET, NEWARK, NJ 07114 (973-242-3800).
- WARREN GEORGE INC. IS LOCATED AT: P. O. BOX 413, JERSEY CITY, NJ 07303 (201-433-9797).
- BOTH BASE PLAN AND MRCE BORING LOCATIONS WERE SURVEYED BY MONTROSE SURVEYING CO. INC.

(DEC ROCK)<br>ADDED TO DESCRIPTION. |

NOTES:

- ROCK CORE DESCRIPTIONS REPRESENT ONLY THE MATERIAL RECOVERED IN THE CORING OPERATIONS.
- GENERAL MINIMUM CORING CHARACTERISTICS ASSUME ROCK CORING WITH A DOUBLE TUBE SERIES "M" OR EQUIVALENT CORE BARREL USING GOOD CORING TECHNIQUES AND EQUIPMENT.
- REC - RECOVERY IS THE LENGTH OF CORE RECOVERED, EXPRESSED AS A PERCENTAGE OF THE LENGTH OF CORE RUN.
- RQD - ROCK QUALITY DESIGNATION IS THE SUM OF THE LENGTHS OF CORE PIECES FOUR INCHES OR LONGER EXPRESSED AS A PERCENTAGE OF THE TOTAL LENGTH OF CORE RUN. LENGTHS ARE MEASURED BETWEEN IN-SITU SEPARATIONS; MECHANICAL BREAKS RESULTING FROM CORING AND VERTICAL JOINTS ARE IGNORED.

TABLE R-2 WEATHERING AND JOINTING DEFINITIONS

DEGREE OF FABRIC WEATHERING

| FABRIC WEATHERING    | CHARACTERISTIC  |
|----------------------|---|
| Unweathered          | UnW No decomposition or discoloration rings when struck |
| Slightly Weathered   | SW Iron Stained Rings when struck                       |
| Moderately Weathered | MdW Deteriorated fabric Thuds when struck               |
| Highly Weathered     | HW Friable, easily broken by hand                       |
| Decomposed           | Dec Soil-like   |

DEGREE OF JOINT WEATHERING

| JOINT WEATHERING    | CHARACTERISTIC   |
|---------------------|--|
| Iron stained joints | FeJS Indicates movement of water along joints                          |
| Weathered joints    | WJts Joints are not tight and do not match. Joints have friable edges. |

DEGREE OF JOINTING

| JOINTING           | JOINT FREQUENCY                    |
|--------------------|------------------------------------|
| Massive            | Mssv Less than 1 joint in 4 feet   |
| Blocky             | Biky 1 joint every 2 to 4 feet     |
| Moderately Jointed | MdJtd 1 joint every foot to 2 feet |
| Jointed            | Jtd 1 to 2 joints per foot         |
| Closely Jointed    | CJtd 2 to 4 joints per foot        |
| Broken             | Bkn More than 4 joints per foot    |

Vertical joints are ignored in RQD and joint frequency evaluations, but are noted in written descriptions and on core sketches.

TABLE R-3 ABBREVIATIONS FOR ROCK CORE CLASSIFICATION

|                          |        |                          |       |

MUESER RUTLEDGE CONSULTING ENGINEERS  
225 WEST 34TH STREET - 14 PENN PLAZA  
NEW YORK, NY 10122

ROCK CORE  
CLASSIFICATION CRITERIA

DRAWING NO.

RC-1

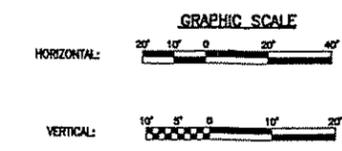

SECTION A-A

GENERAL STRATA DESCRIPTIONS:

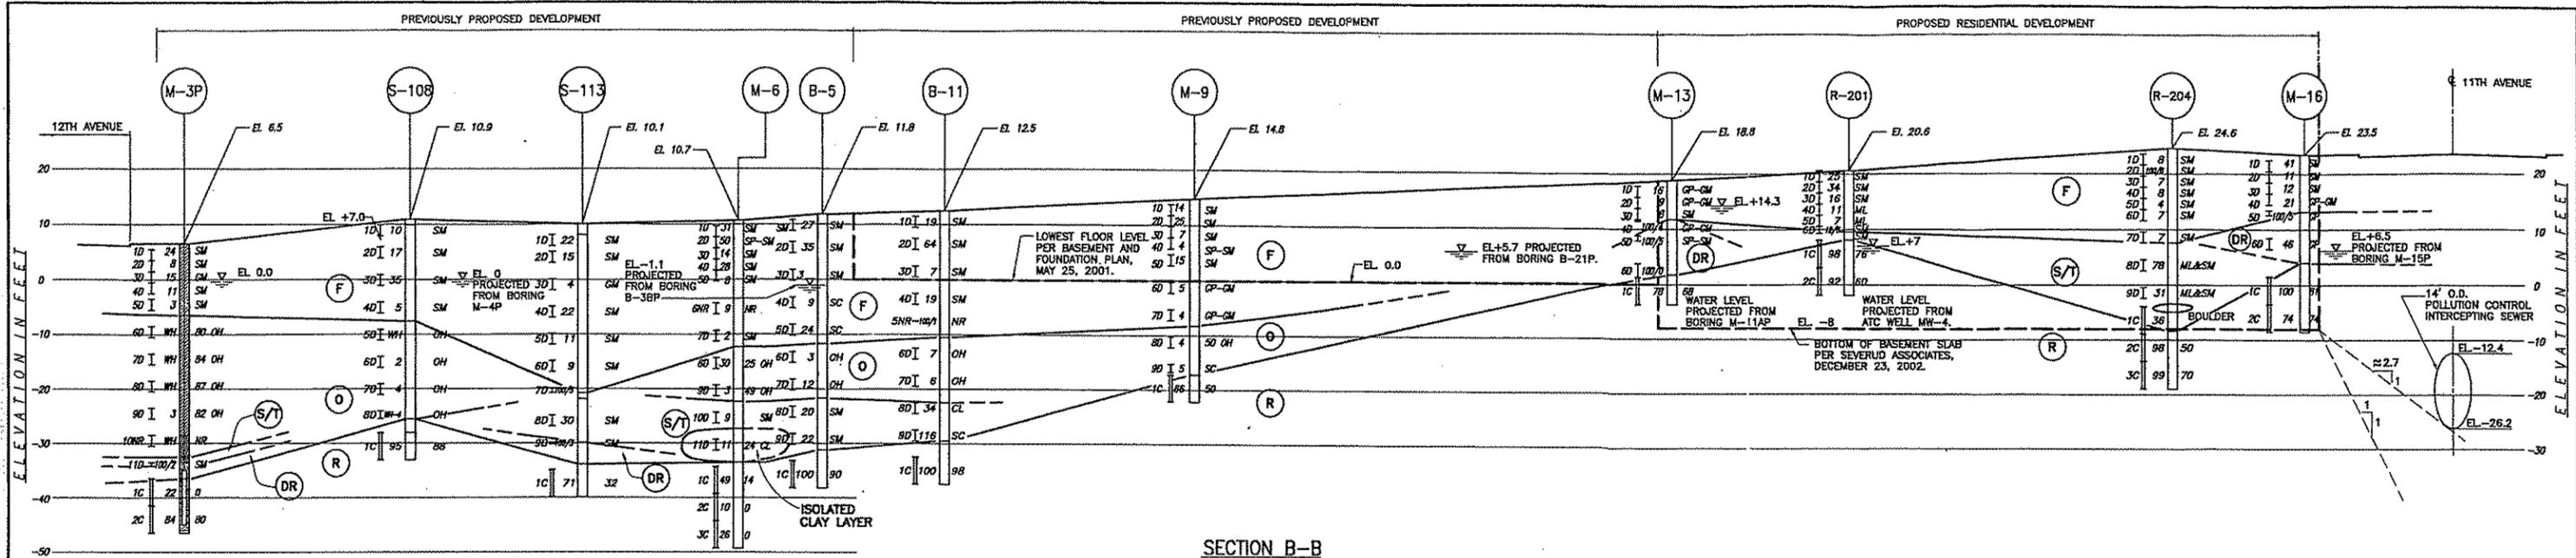

- (F) FILL: BROWN MEDIUM COMPACT TO LOOSE FINE TO COARSE SAND, SOME SILT, AND SILTY FINE TO COARSE SAND, SOME TO TRACE GRAVEL, ROCK FRAGMENTS AND MISCELLANEOUS MATERIALS.
- (O) ORGANIC SILTY CLAY: SOFT BLACK AND DARK GRAY ORGANIC SILTY CLAY, TRACE FINE SAND, SHELL AND WOODS.
- (S/T) SAND AND TILL: BROWN COMPACT AND VERY COMPACT SILTY FINE TO MEDIUM SAND, SOME TO TRACE COARSE SAND, TRACE GRAVEL.
- (DR) DECOMPOSED ROCK: VERY COMPACT BROWN FINE TO COARSE SAND, SOME TO TRACE SILT, TRACE TO SOME ROCK FRAGMENTS.
- (WH) WEATHERED ROCK: WEATHERED GRAY MICA SCHIST TO MICA SCHISTOSE GNEISS.
- (R) BEDROCK: MEDIUM HARD TO HARD SLIGHTLY WEATHERED TO MODERATELY WEATHERED, GRAY MICA SCHIST, GRANITE, AND GNEISS, JOINTED TO BROKEN, IRON STAINED TO WEATHERED JOINTS.

GEOLOGIC SECTION NOTES:

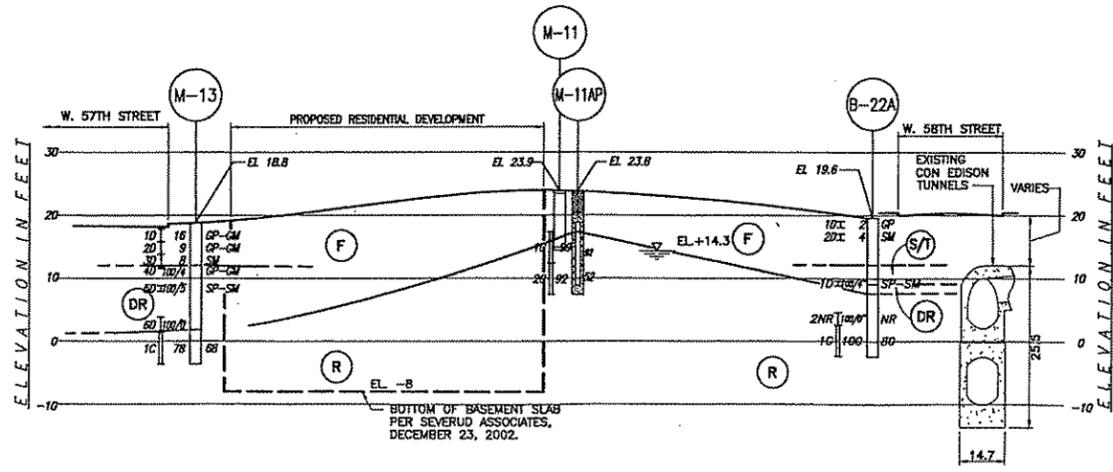

1. FOR BORING LOCATION PLAN AND NOTES, SEE DRAWING NO. B-1.
2. SOIL SAMPLE DESCRIPTIONS AND GROUND WATER OBSERVATIONS ARE GIVEN ON THE BORING LOGS IN APPENDIX A. SEE DRAWING GS-R FOR BORING LEGEND AND A SUMMARY OF THE UNIFIED SOIL CLASSIFICATION SYSTEM USED TO DESCRIBE THE SAMPLES.
3. BORINGS ILLUSTRATED ON THE GEOLOGIC SECTIONS ARE IN SOME CASES PROJECTED TO THE SECTION AND/OR OFFSET FOR CLARITY. STRATIFICATIONS SHOWN BETWEEN SOIL SAMPLES AND BEYOND BORINGS ARE NECESSARY INTERPOLATIONS BETWEEN BORINGS AND MAY NOT REPRESENT ACTUAL SUBSURFACE CONDITIONS.
4. WATER LEVELS SHOWN BY OPEN SYMBOLS WERE MEASURED IN WELL-POINT PIEZOMETERS.
5. THE POLLUTION CONTROL INTERCEPTING SEWER'S LOCATION IS APPROXIMATE. THE CROWN AND INVERT ELEVATIONS INDICATED REFER TO DIMENSIONS OF EXTERIOR "RIB STEEL SETS" THAT THE ORIGINAL DRAWINGS SHOW AT 4'± SPACING.

SECTION B-B

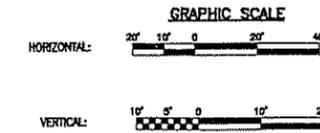

SECTION C-C

GENERAL STRATA DESCRIPTIONS:

- (F) FILL:  
BROWN MEDIUM COMPACT TO LOOSE FINE TO COARSE SAND, SOME SILT, AND SILTY FINE TO COARSE SAND, SOME TO TRACE GRAVEL AND ROCK FRAGMENTS.
- (O) ORGANIC SILTY CLAY:  
SOFT BLACK AND DARK GRAY ORGANIC SILTY CLAY, TRACE FINE SAND, SHELL AND WOODS.
- (S/T) SAND AND SILT:  
BROWN COMPACT AND VERY COMPACT SILTY FINE TO MEDIUM SAND, SOME TO TRACE COARSE SAND, TRACE GRAVEL.
- (DR) DECOMPOSED ROCK:  
VERY COMPACT BROWN FINE TO COARSE SAND, SOME TO TRACE SILT, TRACE TO SOME ROCK FRAGMENTS.
- (WR) WEATHERED ROCK:  
WEATHERED GRAY MICHA SCHIST TO MICHA SCHISTOSE GNEISS.
- (R) BEDROCK:  
MEDIUM HARD TO HARD SLIGHTLY WEATHERED TO MODERATELY WEATHERED, GRAY MICHA SCHIST, GRANITE, AND GNEISS, JOINTED TO BROKEN, IRON STAINED TO WEATHERED JOINTS.

**ROCK CORE SKETCH LEGEND**

**JOINTING**

- J - Joint
- MB - Mechanical Break
- ∟ - Angle w/ Horizontal
- // - Parallel
- X - Crossing
- F - Folliation
- S - Stratification
- U - Unfoliated or Unstratified

**SURFACE**

- C - Curved
- I - Irregular
- S - Straight

**CONDITION**

- 1 - Slick
- 2 - Smooth
- 3 - Rough

**SKETCH SYMBOLS**

- (diagonal lines) - Joint
- (cross-hatch) - Healed Joint
- (stippled) - Broken
- (diagonal lines) - Part of Core Not Recovered
- (circle with vertical lines) - Cavities or Vugs in Core
- (horizontal lines) - Clay
- (stippled) - Sand
- (empty) - Empty Space

SCALE: 1 division = 0.1 feet

## **EXECUTIVE SUMMARY**

At the request of The Durst Organization, Inc. (The Durst Organization), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of the real property with the street address of 600-612 West 58<sup>th</sup> Street in the Borough, City, and State of New York (Site). The Site is identified on New York City tax maps as Tax Block 1105, Lot 36 (Figure 1). The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and The Durst Organization dated August 7, 2007 and Roux Associates' Phase I Proposal dated March 21, 2013 and in general accordance with the American Society of Testing and Materials' (ASTM) standard practice for Environmental Site Assessments for Commercial Real Estate (ASTM E 1527-05, 2005), and the All Appropriate Inquiry (AAI) Rule as promulgated in 40 Code of Federal Regulations (CFR) Part 312.

Roux Associates utilized a variety of information sources to perform the Phase I ESA, including radial information searches from state and federal regulatory agency databases, freedom of information law (FOIL) requests submitted to federal, state and local regulatory agencies, a review of readily available information including: historical aerial photographs, historical Sanborn fire insurance maps, historical topographic maps, City Directory search, liens, interviews with site representatives, and observations made during Site reconnaissance.

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following Recognized Environmental Conditions (RECs) in connection with the Site.

- The following E-Designations (i.e., environmental requirements) are currently assigned to the Site, identified as LOT 36, TAXBLOCK 1105: E-103 for Window Wall Attenuation & Alternate Ventilation (Noise & Air), E-286 for Air Quality - Natural Gas Heat and Hot Water, Exhaust Stack Location Limitations, and Hazardous Materials. These environmental requirements must be satisfied under the administration of the New York City Office of Environmental Remediation (NYCOER) in order to obtain a building permit.
- A vent line was noted exiting the Site building on the northwest corner of the building. Customer spaces are located on the interior of the Site building where the vent was located. Although no fill port or other underground storage tank (UST) access man-ways were noted in the vicinity of the vent line, the vent may be associated with a UST.
- According to a certificate of occupancy from 1955, fuel oil was utilized at the Site for heating purposes. An undocumented UST may be present on Site associated with historic

heating operations. No documentation of UST removal was identified in historic records and one prior investigation noted that no USTs were present on Site.

Historic RECs (HRECs) are environmental conditions which in the past would have been considered RECs, but which may or may not be considered a REC currently. The following HREC has been identified, but is not considered an REC due to its location downgradient of the subject Site and the remediation and source removal that have already occurred.

- The property immediately to the west of the subject Site is currently enrolled in the New York State BCP and soil excavation source removal and groundwater treatment have already occurred on the adjacent BCP property. The adjacent BCP property is downgradient of the subject Site, therefore known groundwater contamination at the BCP property is not expected to have impacted groundwater quality on Site. The BCP property's current remediation status and downgradient location qualifies it as a HREC.

Although not technically defined as RECs, the following is a list of potential environmental concerns at the Site that could potentially impact subsurface conditions at the Site:

- The Site is underlain by historic/urban fill material whose origin and environmental quality is unknown.
- A sump was noted in the electrical control room, but the sump's contents were inaccessible at the time of the Site reconnaissance.
- An open NYSDEC spill number 0708204 was identified at the Lexus Dealership located at 835 11<sup>th</sup> Avenue on October 26, 2007. This dealership is located south of the subject Site and may have impacted water quality under the southern border of the Site.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Pending response regarding the User Questionnaire.
- Pending response to FOIL requests from the United States Environmental Protection Agency (USEPA), the New York State Department of Environmental Conservation (NYSDEC), the New York City Department of Environmental Protection (NYCDEP), and the New York City Department of Health (NYCDOH). If any additional pertinent information is obtained from responses to outstanding FOIL requests, Roux Associates will prepare a letter addendum summarizing these findings.

Please note that although lack of record sources listed above is considered a data gap, it is not considered a material limitation for the completion of this Phase I ESA report.

A Phase II environmental site investigation is recommended to comply with the NYCOER's environmental requirements for the current E-designation for hazardous materials and to identify if a potential UST, or related subsurface impacts, are present on the Site.

## 1.0 INTRODUCTION

At the request of The Durst Organization, Inc. (The Durst Organization), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of the real property with the street address of 600-612 West 58<sup>th</sup> Street in the Borough, City, and State of New York (Site). The Site is identified in New York City tax maps as Tax Block 1105, Lot 36 (Figure 1).

The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and The Durst Organization dated August 7, 2007 and Roux Associates' Phase I Proposal dated March 21, 2013 and in general accordance with the American Society of Testing and Materials' (ASTM) standard practice for Environmental Site Assessments for Commercial Real Estate (ASTM E 1527-05, 2005), and the All Appropriate Inquiry (AAI) Rule as promulgated in 40 Code of Federal Regulations (CFR) Part 312.

This Phase I ESA is not intended to serve as a rigorous environmental compliance audit; rather, the purpose of this investigation is to identify "recognized environmental conditions" (RECs) at the Site. ASTM E 1527-05 defines an REC as:

*"...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not represent a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions... or*

*"...an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. The final decision rests with the environmental professional and will be influenced by the current impact of the historical recognized environmental condition on the property through reviewing and gathering information relating to the following at the Site:*

- (1) Current and past property uses and occupancies;*
- (2) Current and past uses of hazardous substances and petroleum products;*
- (3) Waste management and disposal activities;*
- (4) Current and past corrective actions and response activities;*

*(5) The presence of any engineering controls;*

*(6) The presence of any institutional controls; and*

*(7) Information relating to properties adjoining or located within a quarter mile of the Site.”*

In order to assess the potential for RECs associated with the Site, Roux Associates utilized a variety of information sources, including radial information searches from state and federal regulatory environmental databases, Freedom of Information Law (FOIL) requests submitted to federal, state and local regulatory agencies, a review of readily available information including historical aerial photographs, historical Sanborn fire insurance maps, historical topographic maps, interviews with site representatives, and observations made during a site inspection. The qualifications of key personnel assigned to manage and conduct the Phase I ESA are provided in Appendix A.

## **2.0 METHODS OF INVESTIGATION**

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

### **2.1 General**

The activities performed in conjunction with the Phase I ESA of the Site included:

- Review of state and federal environmental regulatory agency databases provided by Environmental Data Resources, Inc. of Milford, Connecticut (EDR), indicating sites of environmental concern within specified radii from the Site (Appendix B);
- Submission of FOIL requests to federal, state, and local regulatory agencies;
- Review of historical information for the Site and surrounding area;
- Interview conducted with Mr. Dimitrios Papiris, Key Site Owner Representative; and
- Reconnaissance of the Site and surrounding area.

### **2.2 Review of Readily Available Information**

The resources compiled and reviewed by Roux Associates to date include the following:

- EDR Radius Map with GeoCheck, dated April 10, 2013 (EDR database report) (Appendix B);
- Historical Sanborn fire insurance maps dated 1892, 1907, 1922, 1926, 1928, 1951, 1976, 1978, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005. (Appendix C);
- Historical aerial photographs dated 1924, 1943, 1954, 1966, 1975, 1984, 1994, 1995, 2006, 2008, 2009, 2010 and 2011 (Appendix D);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Harlem Quadrangle dated 1897; and 7.5 Minute Topographic Maps, Central Park Quadrangle dated 1947, 1956, 1966, 1979 (revised 1966) and 1995 (Appendix E);
- Lien Search Report (Appendix F); and
- A search of the historical City Directories conducted by EDR (Appendix G).

The agencies contacted during the records review are provided below. The Freedom of Information Law requests for information and responses are provided in Appendix H.

| <b>Agency</b>   | <b>Status</b>  |
|---|--|
| United States Environmental Protection Agency (USEPA)   | Request for information filed with agency, response pending. |
| New York State Department of Environmental Conservation (NYSDEC)                              | Request for information filed with agency, response pending. |
| New York City Department of Environmental Protection (NYCDEP)                                 | Request for information filed with agency, response pending. |
| New York City Department of Health (NYCDOH)   | Request for information filed with agency, response pending. |
| New York City Office of Environmental Remediation (NYCOER)                                    | Response received; discussed in report.                      |
| New York City Fire Department (FDNY)  | Response received; discussed in report.                      |
| New York City Landmarks Preservation Commission (NYCLPC)                                      | Response received; discussed in report.                      |
| New York City Department of Buildings Building Information System (NYCDOB BIS)                | Records accessed; discussed in report.                       |
| New York City Department of Finance Automated City Register Information System (NYCDOF ACRIS) | Records accessed; discussed in report.                       |

### **2.3 Site and Surrounding Area Reconnaissance**

On April 9, 2013, Roux Associates performed a Site visit and surrounding area reconnaissance that included a review of the following:

- Site and local topography;
- Visible drainage pathways;
- Stressed vegetation, excavations, mounded soil;
- Drywells, floor drains, and sumps;
- Locations and types of utilities;
- Storage areas;

- Presence of electrical transformers; and
- Current use of adjacent properties.

The site visit on April 9, 2013 also included a review if any evidence of the following were present:

- Stained soil, stained concrete/pavement;
- Hazardous materials;
- Ponded liquids
- Hazardous materials;
- Hazardous wastes;
- Presence of aboveground storage tanks (ASTs) and/or USTs;

This Phase I ESA does not include a review of, or discussions regarding, asbestos-containing material (ACM), lead based paint (LBP), or radon surveys as they are considered “out-of-scope” under ASTM E 1527-05.

Photographs from the Site reconnaissance are included in Appendix I.

Roux Associates has provided environmental consulting services for the investigation and remediation of multiple properties adjacent to and west of the subject Site since 2007. These properties are the subject of soil and groundwater remediation under supervision of the NYSDEC. Excavation of petroleum impacted soils, UST removal, and dewatering groundwater treatment have already occurred on Tax lots 43, 19, 14, 5 and 1 and construction of a residential building west of the subject Site is currently ongoing.

## **2.4 Previous Environmental Investigations**

The following environmental reports included work performed on the Site:

- ATC Associates, Inc. (ATC) performed a focused subsurface site investigation on tax lots 1, 5, 14, 19, 23, and 36 in Block 1105 in October – November 1998. The results of the ATC investigation are presented in a Focused Subsurface Site Investigation Report, dated December 10, 1998 (ATC FSI).

- Mueser Rutledge Consulting Engineers (Mueser Rutledge) performed a Geotechnical Investigation on tax lots 1, 5, 14, 19, 23 and 36 in Block 1105 for residential development, dated November 15, 2002 (revised January 16, 2003).
- Roux Associates Quarterly Groundwater Monitoring Reports, Spill 9810172 dating from December 2007 to December 2012.

Provided below is a summary of the work conducted on the subject Site (tax lot 36 only) during the prior investigations.

#### **2.4.1 ATC Focused Subsurface Site Investigation, 1998**

ATC performed a focused subsurface site investigation (ATC FSI) on various lots in Block 1105 in October – November 1998 (Appendix J). The purpose of the ATC FSI was to determine subsurface soil and groundwater quality in the areas of suspect or formerly reported underground storage tanks (USTs). The Site was utilized as rented storage lockers/rooms at the time of the ATC FSI and no USTs were identified at the Site. The Site was formerly part of New York Lumber & Storage Co; and a railroad siding (or spur) entered the parcel at the corner of West 57<sup>th</sup> Street and 11<sup>th</sup> Avenue and continued to the western side of the parking lot.

Three soil borings, identified as Body-1, Body-2, and Mini-1, were performed on Site via Geoprobe during the ATC FSI. Shallow bedrock resulted in multiple attempts and refusals with final soil boring depths of 8 feet below land surface (bls) at Body-1, 4.5 feet bls at Body-2 and 18 feet bls at Mini-1. The soil was characterized as cinder fill, deteriorated schist, silty sand, and gravel and an occasional cobble. No detections of volatile organic compounds (VOCs) were identified during field screening of the borings via photoionization detector (PID). Groundwater was not encountered in any of the borings. Five soil samples were collected from the three borings. Four of the five samples were analyzed for STARS list VOCs. STARS list semivolatile organic compounds (SVOCs) were analyzed in four of the five samples collected. Two samples were analyzed for polychlorinated biphenyls (PCBs) and three samples were analyzed for Resource Conservation and Recovery Act (RCRA) metals.

VOC contamination was not identified in any of the four soil samples collected on Site; however, several SVOCs and metals were discovered above the historic NYSDEC technical and administrative guidance memorandum (TAGM) 4046 regulatory limits that were applicable at the time of the ATC FSI. PCBs were not detected in the two samples collected. When compared to

the current NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives, both SVOCs and metals concentrations exceed current regulatory limits for soil borings Body-2 (metals only) and Mini-1 (SVOCs and metals). ATC inferred that the SVOC and metal detections reflect the composition of fill material on Site and were not a result of leaking USTs.

ATC recommended field screening for contamination during future site development. The results of the ATC investigation are presented in a Focused Subsurface Site Investigation Report, dated December 10, 1998, included in Appendix J.

#### **2.4.2 Mueser Rutledge Geotechnical Investigation**

Geotechnical investigations conducted by Mueser Rutledge Consulting Engineers included the installation of a total of 59 soil borings from August 2000 to October 2002 across the entire Block 1105 (between 11<sup>th</sup> – 12<sup>th</sup> Avenues and West 57<sup>th</sup> – West 58<sup>th</sup> Streets) for geotechnical purposes (no soil samples collected for environmental analysis). Of this total, two borings were drilled on the subject Site (M-11P and M-11AP) and five soil borings were drilled on the 58<sup>th</sup> Street and 11<sup>th</sup> Avenue sidewalks adjacent to the Site (B-22, B-22A, M-12, M-14 and M-15P).

The borings drilled encountered fill material above a till stratum; decomposed bedrock and bedrock underlying these stratum. Bedrock elevations vary from Elev. +17.4 (~6 feet below land surface) in the southwest corner of the Site (M-11AP) to Elev. -17 (~41 feet below land surface) in the southeast corner of the Site (M-15P).

#### **2.4.3 Roux Associates' Quarterly Monitoring Reports**

Roux Associates has conducted quarterly groundwater gauging and sampling of multiple monitoring wells located on the perimeter sidewalks of Block 1105 since December 2007 in accordance with the NYSDEC requirements for Spill 9810172. The resulting analytical data for VOCs is provided to the NYSDEC in quarterly monitoring reports (Appendix J). Prior to Roux Associates' involvement in 2007, groundwater sampling and reporting was conducted by others since October 2000.

Regional groundwater flows northwesterly across the Site towards the Hudson River and is identified at approximately 17 feet below land surface. One monitoring well, MW-7, is located

southeast of the Site on the 11<sup>th</sup> Avenue sidewalk adjacent to and hydraulically upgradient of the Site. MW-7 was installed in 2003 and has been included in the quarterly sampling rounds from February 2003 through February 2013 with a brief lapse in 2005. No VOC exceedances of the NYSDEC ambient water quality standards and guidance values (AWQSGVs) for Class GA groundwater have been detected in MW-7 over this ten year monitoring span, indicating that upgradient groundwater flowing onto the Site from 11<sup>th</sup> Avenue meets NYSDEC groundwater standards. No monitoring wells are located directly downgradient of and adjacent to the Site. There are two monitoring wells located approximately 290 feet (MW-8) and 140 feet (MW-9) west of the Site on the 58<sup>th</sup> Street sidewalk that have historically contained detections of dissolved petroleum-related VOCs in excess of the AWQSGVs, but these detections are attributed to previously identified petroleum contamination on the adjacent properties (tax lots 5 and 14) and sidewalks west of the Site and are not believed to be associated with the subject Site.

Groundwater flow direction west of the site has recently (Fourth Quarter 2012 and First Quarter 2013) been influenced by ongoing construction dewatering efforts but the flow across the subject Site has been relatively unaffected.

### **3.0 PROPERTY DESCRIPTION**

Descriptions of the Site and surrounding properties are included in the following sections. The location of the Site is presented in Figure 1. The Site and Surrounding properties are presented in Figure 2. A Site Plan depicting Block 1105 and the associated tax lots is provided as Figure 3.

#### **3.1 Property Location and Description**

The Site is located at 600-612 West 58<sup>th</sup> Street in New York City, New York, and is also identified as Block 1105, Lot 36. The Site is approximately 25,000 square feet, and is developed with a single six-story concrete block and brick building with a footprint of approximately 17,500 square feet. The remainder of the property is covered with an asphalt parking lot. The Site building was constructed in 1925 and is currently a warehouse for storage with a flat utilized for deliveries. The Site building was identified in the 1926 Sanborn map and no significant changes have occurred since that time (described in Section 4.2). Certificates of Occupancy were reviewed during a search of NYCDOB database records and are discussed in Section 5.29 and provided in Appendix H.

The Site is bordered by West 58<sup>th</sup> Street to the north; 11<sup>th</sup> Avenue to the east; a 38-story residential tower with commercial businesses to the south; and the Mid Block # 57 Project redevelopment site to the west. The Mid Block #57 Project is currently enrolled in the New York State BCP.

Manhattan Mini Storage currently occupies the building for use as self-storage rental facility. During the Site reconnaissance, it was reported that plants, food, chemicals, and oils are restricted from storage.

The first through six floors, including the basement are occupied by customer storage spaces. Management offices, customer lobby/packaging materials sales, an electrical control room, natural gas connections, the sprinkler main, two restrooms, and a utility closet are located on the first floor. A drain was noted in a utility closet; all drains and sinks were clean and free of stains and/residues. A sump was noted in the electrical control room, but could not be accessed due to the poor condition of the lid and frame. A passenger elevator services the first through sixth floors; and a freight elevator services the basement to the sixth floor. It was reported by

Mr. Papiris (Key Site Representative) that the elevators are serviced by an outside maintenance company and that no hydraulic oil is stored on premise. However, approximately eight one-gallon plastic containers of gear oil were noted in the passenger elevator maintenance room located on the roof. Several paint containers were noted in the freight elevator maintenance room. A staircase accessing the roof is located on the sixth floor. Roof drains run through the interior of the building and discharge directly to the municipal sewer system. The Site building contains a mechanical room and boiler room in the basement. The boiler room contains the hot water heater and a slop sink (which was clean and free of stains or residues). A structure indicative of a coal shoot was noted in the boiler room. Two loading docks are located on the west side of the building and are accessed via the 19 space parking lot on the west side of the Site. Overhead natural gas heating units and air conditioning units were noted in the site building. Based on the Site reconnaissance, wastewater generated at the Site is predominantly limited to sanitary wastewater and is discharged to the municipal sewer system.

### 3.2 Current Surrounding Property Usage

The Site is surrounded by a mix of residential and non-residential (residential, commercial, light-industrial) development. The table below details the adjacent property usage surrounding the Site.

|       |  |
|-------|--|
| North | West 58 <sup>th</sup> Street; Consolidated Edison (ConEd) Powerhouse further north.  |
| South | 38-story residential tower with commercial businesses; West 57 <sup>th</sup> Street further south.   |
| East  | 11 <sup>th</sup> Avenue; 19-story office building with commercial business on the ground level (including BMW Car Dealership under-construction) further east. |
| West  | Mid- and West-Block redevelopment site; 12 <sup>th</sup> Avenue and Joe DiMaggio Highway further west.   |

### 3.3 Topographic and Hydrogeologic Setting

The grade at the Site is generally level with a gradual sloping down to the west. Ground surface elevations provided in the Mueser Geotechnical Report (Appendix J) have identified the Site at approximately 20 to 24 feet above Manhattan Bureau Datum.

The general slope in the surrounding area dips gently in a westerly direction. The Site is located approximately one-sixth of a mile (approximately 800 feet) east of the Hudson River. The Site is

not located in the 100-year flood zone. The Site is not located in or adjacent to regulated wetlands.

The geology in the area of the Site and vicinity consists of Cambrian-Ordovician schistose rock known as the Manhattan Prong of the Hartland Formation, one of the three schistose units in New York City. Depth to bedrock varies across the site with shallow bedrock (4 to 6 feet bls) identified in the southwestern corner of the site and deeper bedrock (41 feet bls) encountered in the southeastern corner of the site (Mueser Geotechnical Report Appendix J). Outcrops of bedrock are common throughout the Borough of Manhattan; however, no areas of exposed bedrock were identified during the Site Reconnaissance.

The bedrock is overlain by an unconsolidated overburden consisting of an unsorted heterogeneous mix of Pleistocene and Recent glacial material (i.e., glacial till) including clay, silt, sands, gravel, cobbles, and boulders (Cadwell, 1989). This overburden is overlain by historic urban fill of undocumented origin that was used to reclaim land from the Hudson River (USGS – Baskerville, 1994).

According to previous subsurface investigations, groundwater was encountered at approximately 17 feet below land surface and regionally flows in a northwesterly direction and is discussed in Section 2.4.3.

## **4.0 SITE HISTORY**

The historical uses of the Site are discussed below.

### **4.1 Historical Site and Surrounding Property Usage**

The historical uses of the Site and surrounding properties were researched by examining historical Sanborn fire insurance maps dated 1892, 1907, 1922, 1926, 1928, 1951, 1976, 1978, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005 (Appendix C); historical aerial photographs dated 1924, 1943, 1954, 1966, 1975, 1984, 1994, 1995, 2006, 2008, 2009, 2010, and 2011 (Appendix D); historical USGS topographic maps, dated 1897, 1947, 1956, 1966, 1979 (revised 1966), and 1995 (Appendix E); Lien Search Report (Appendix F); and EDR city directory abstract (Appendix G); and documentation from NYCDOB BIS and NYCDOF and ACRIS.

From review of the Sanborn fire insurance maps, Roux Associates identified the Site as being formerly utilized by a lumber yard and various garage / repair shop identities until sometime prior to 1926; and as a tire warehouse until sometime prior to 1976. The current use of the Site building as a warehouse for storage with a flat utilized for deliveries was identified in the 1976 Sanborn map and no significant changes occurred to the Site since that time. The current Site building was constructed in 1925. The Sanborn fire insurance maps did not identify any petroleum or fuel tanks located on the Site although two water tanks identified as “25,000-gallon sprinkler and 5,000-gallon hose tanks” are shown on the historic Sanborn maps dating from 1926 to 2005.

The 1947 topographic map indicates an elevation of approximately 20 feet for the Site and surrounding area, consistent with current elevations.

The surrounding area consists of mixed residential and commercial properties. According to the Sanborn maps, past surrounding properties include garages / repair shops with tanks; the ConEd Power House with multiple tanks; filling stations, and iron works.

## 4.2 Historical Sanborn Fire Insurance Maps

Roux Associates reviewed historical Sanborn fire insurance maps for the Site (Appendix C). The following is a summary of the Site and surrounding area from 1892 to 2005, as determined from the historical Sanborn fire insurance maps:

| <b>Year</b> | <b>Observations</b>  |
|-------------|--|
| 1892        | <p>The eastern portion of the Site is improved as part of a lumber yard. The western portion of the Site is improved with four properties labeled garage.</p> <p>Surrounding properties include building materials yard with pump room (immediately west); slaughter house (north); vacant (east); stone yard and vacant properties (south across West 57<sup>th</sup> Street); 500,000 and 1,420,000-gallon gas holding tanks (northeast). The rail yard located on West 60<sup>th</sup> Street and 11<sup>th</sup> Avenue is depicted.</p> |
| 1907        | <p>The entire Site is depicted as a lumber yard.</p> <p>Surrounding properties include a lumber yard (west and south); iron works and wagon yard further west; Interborough Rapid Transit, Co. Power House; (north); dwellings and store fronts (east); stone yard (south across West 57<sup>th</sup> Street); mill construction (southeast).</p>  |
| 1922        | <p>No details are depicted for the Site and the surrounding properties.</p>  |
| 1926        | <p>The Site is depicted as a tire warehouse; automatic sprinkler system noted. Appears to be current Site building.</p> <p>The following changes noted for the surrounding areas: nine oil tanks identified for the Rapid Transit, Co. Power House (north); truck and car service / repair shops (west and south); lumber yard (south across West 57<sup>th</sup> Street); omission of the 500,000-gallon gas tank (northeast); auto houses with tanks (southeast).</p>  |
| 1928        | <p>No details are depicted for the Site and the surrounding properties.</p>  |
| 1951        | <p>No significant changes are noted for the Site.</p> <p>No significant changes noted for the surrounding properties except for the addition of a filling station with six tanks across 11<sup>th</sup> Avenue; the omission of the 1,420,000-gallon gas tank (northeast); that Rapid Transit, Co. Power House is titled NY City Transit System I.R.T Division; and addition of NY Central R.R. Improvement (subway).</p>  |

| <b>Year</b>  | <b>Observations</b>   |
|--|---|
| 1976, 1978, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002 | The Site is no longer labeled a tire warehouse. The Site building is identified as a warehouse with a flat utilized for deliveries (1976). No Site details were depicted on the 1978 Sanborn map.<br><br>No significant changes noted for the surrounding properties except that NY City Transit System I.R.T Division is titled Consolidated Edison (Con Ed) Co. of NY, Inc. (tank room identified but tank not listed); and that the filling station has been replaced with a 20 story residential tower with auto sales and service on the ground floor (current) (1976). A service station is depicted associated with the 20-story residential tower (1995). |
| 2003, 2004 and 2005  | No significant changes are noted for the Site.<br><br>The surrounding properties west and south of Site are not shown in 2003 (indicating that they were demolished); the residential tower, The Helena, is depicted south of the site in 2004.   |

From review of the Sanborn fire insurance maps, Roux Associates identified the Site as being formerly utilized by a lumber yard, a tire warehouse and a warehouse with a flat utilized for deliveries, which are not identified as Recognized Environmental Conditions at the Site.

The properties located west of the Site are identified as a Historic Recognized Environmental Condition (HREC) since they are located downgradient of the Site and have been subject to remediation and source removal. In addition, the documented spills on upgradient properties have been closed to the NYSDEC's satisfaction and groundwater quality directly upgradient of the Site on 11<sup>th</sup> Avenue (MW-7) currently meets NYSDEC groundwater standards.

An exception to this is the Lexus Dealership located south of 57<sup>th</sup> Street, which is upgradient/crossgradient and currently has an open NYSDEC spill number. This spill site is noted as a potential environmental condition and is described in Section 5.20.

### **4.3 Historical Aerial Photographs**

Aerial photographs were obtained from EDR for the years 1924, 1943, 1954, 1966, 1975, 1984, 1994, 1995, 2006, 2008, 2009, 2010, and 2011, and are presented in Appendix D. According to the historical aerial photographs, the Site and surrounding areas appear to be developed according to the Sanborn fire insurance maps.

Roux Associates did not identify Recognized Environmental Conditions at the Site and in the immediate area surrounding the Site from the review of historical aerial photographs.

#### **4.4 Historical Topographic Maps**

Historical topographic maps of the Site were obtained from EDR for the years 1897, 1947, 1956, 1966, 1979 (revised 1966), and 1995, and are presented in Appendix E. These maps corroborate the reported general development of the area around the Site, as documented in the aerial photographs and Sanborn maps.

According to the 1956 topographic map, the surrounding areas of the Site is approximately 20 feet in elevation, which is consistent with current elevations. There was no indication of radical elevation changes consistent with filling operations on the Site, although properties located west of the Site are known to have had historic fill operations to raise the ground surface prior to 1956.

#### **4.5 Lien Search and Activity Use Limitations**

EDR performed an environmental lien search and search for recorded activity use limitations (AULs). No recorded environmental liens or AULs were found (Appendix F). Information revealed in this search presents the deed document, dated March 28, 2008 for the transfer of the Site from Edgar T. Appleby Revocable Trust % JP Morgan Chase Bank, N.A. to Falding, LLC, Swallow, LLC and Appleby North Holdings, LLC all in c/o JP Morgan Chase Bank, N.A. The deed includes the DEP Customer Registration Form for Water and Sewer Billing and the Real Property Transfer Report between the two parties.

#### **4.6 City Directory Search**

A City Directory Abstract of the Site and adjoining properties was obtained from EDR and is presented in Appendix F. According the EDR report, the years 2012, 2007, 2006, 2000, 1998, 1996, 1993, 1988, 1983, 1978, 1973, 1968, 1963, 1958, 1956, 1950, 1947, 1942, 1938, 1934, 1931, 1927, 1923, and 1920 were researched.

##### **4.6.1 City Directory Search of the Site**

The Site addresses, or target property (600 West 58<sup>th</sup> Street) and also known as address 847 11<sup>th</sup> Avenue are not identified in the EDR City Directory Abstract (Appendix G).

#### **4.6.2 City Directory Search of Adjoining Properties**

Listings for adjoining properties were limited to the following street addresses: 614, 616, 618, and 620 West 58<sup>th</sup> Street. The following is a representative list of business listings in the searched directories for surrounding properties: NY Coach Automotive Repairs (614 West 58<sup>th</sup> Street-1978, 1973, 1968, 1963); Aluminum Reserve Corp Alloyed Metals (614 West 58<sup>th</sup> Street-1958, 1956, 1950, 1947); Alloyed Metals Co. (614 West 58<sup>th</sup> Street-1947); International Salvage (614 West 58<sup>th</sup> Street-1947); Metal Distributors, Co. (614 West 58<sup>th</sup> Street-1947); Herman Motor Truck Co. (616 West 58<sup>th</sup> Street-1927); and River Front Auto Repairs Inc Stanley (620 West 58<sup>th</sup> Street-1934).

The above-listed adjoining businesses had reason to handle hazardous substances or petroleum products as part of the conduct of business, with the associated potential for a release into the subsurface media of these properties. These businesses are located on properties west of the Site that currently are included in the Mid Block #57 Project BCP site. Soil excavation source removal has already occurred on the adjacent BCP property and these properties are downgradient of the subject Site, therefore known groundwater contamination at the BCP property is not expected to have impacted groundwater quality on Site. The BCP property's current remediation status and downgradient location qualifies it as a HREC.

## 5.0 RECORDS REVIEW

Roux Associates used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of known and suspected environmental concern within specific radii of the Site. A total of 56 environmental databases were reviewed as part of this Phase I ESA. Appendix B contains a complete copy of the environmental database and radius map report. The Site was identified in the following environmental databases:

1. FINDS: Facility Index System/Facility Registry System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: Permit Compliance System, Aerometric Information Retrieval System, Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes, Federal Underground Injection Control, Criminal Docket System used to track criminal enforcement actions for all environmental statutes), Federal Facilities Information System, State Environmental Laws and Statutes, and PCB Activity Data System.

Registry No. 001139594178 was assigned to the Site, identified as **CON EDISON**, 610 West 58<sup>th</sup> Street; no additional information given. However, this address appears to be an error as the Con Ed Power House has always been located across West 58<sup>th</sup> Street.

2. Conditionally Exempt Small Quantity Generators of Hazardous Waste: A CESQG of hazardous waste generates less than 100 kilograms (220 pounds) of hazardous waste, or less than 1 kilogram (2.2 pounds) of acutely hazardous waste per month.

EPA ID. NYP004164430 was assigned to the Site, identified as **CON EDISON**, 610 West 58<sup>th</sup> Street; no violation issued and no information regarding material generated listed. Again, this address appears to be an error as the Con Ed Power House has always been located across West 58<sup>th</sup> Street.

3. Restrictive Declarations Listing: A restrictive declaration (RES DECL) is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

No additional information is given in the EDR report regarding the specified conditions. Further review of the restrictive declaration D-145 is discussed in Section 5.18.

4. E-Designation: The E-Designation Environmental Review Program is administered by the NYC Office of Environmental Remediation (OER). An E-Designation is a NYC zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. An E-designation for hazardous materials would ensure that sampling and

remediation take place, if necessary, on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations.

The following E-Designations are assigned to the Site, identified as **LOT 36, TAXBLOCK 1105**: E-103 for Window Wall Attenuation & Alternate Ventilation (Noise & Air), E-286 for Air Quality - Natural Gas Heat and Hot Water, Exhaust Stack Location Limitations, and Hazardous Materials. These environmental requirements must be satisfied under the administration of the NYCOER in order to obtain a building permit. The remaining parcels of Block 1105 were identified with E-Designation E-103 and E-286 (excluding the hazardous materials E-Designation) and require environmental satisfaction in the event a building permit is warranted at the Site.

An E-Designation for hazardous materials does not automatically constitute an environmental concern, since such designation is allocated based on assessment tools that include a historic map review, and may indicate that only neighboring properties maintained USTs. Roux Associates identifies this designation as a Recognized Environmental Condition in connection with the Site since it is an environmental requirement that must be addressed with NYCOER prior to/concurrent with Site development.

Offsite properties identified in the state and federal databases within the searched radius include:

- One Federal National Priority List (NPL) site;
- One Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site;
- Seven listings of RCRA large quantity generators (LQGs) of hazardous waste;
- Three listings of RCRA small quantity generators (SQGs) of hazardous waste;
- 13 listings of conditionally exempt small quantity generators of hazardous waste (CESQGs);
- 50 facilities that currently no longer generate hazardous waste (RCRA-NonGen);
- One federal site identified on the Engineering Controls (EC) List;
- One federal site identified with Institutional Controls (IC);
- One state Solid Waste Facility/Landfill in New York (SWF/LF);
- 56 leaking storage tank incidents (LTANKS);
- 48 Historical LTANKS;
- Two listing of Storage Tank Facility Listing (TANKS);
- 35 properties with registered Underground Storage Tanks (USTs);

- 33 properties with Historical USTs;
- 49 properties with registered Aboveground Storage Tanks (ASTs);
- Four properties with registered Chemical Bulk Storage (CBS) USTs/ASTs;
- Two Major Oil Storage Facilities (MOSF);
- One state site identified on the registry for Engineering Controls (EC);
- One state site identified on the registry for Institutional Controls (IC);
- Eight Restrictive Declarations Listing (RES DECL);
- Five facilities in the New York Brownfield Cleanup Program (BCP);
- 81 NYSDEC spill sites;
- 64 Historical NYSDEC spill sites;
- One CERCLA site identified with Consent Decrees (CONSENT);
- One NPL site identified with Record of Decision (ROD) documents;
- 93 properties with Manifests;
- Seven properties with NJ Facility and Manifest Data (Manifests);
- One property listed as a Registered Dry Cleaner;
- 11 E-Designation site listings;
- Five Manufactured Gas Plant (MGP) site;
- 43 US Historical Auto Stations; and
- Eight US Historical Cleaners.

Offsite properties that meet the criteria presented below are discussed in this report:

- Facilities located immediately adjacent to the Site are examined due to their close proximity to the Site and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to enter the Subject Site or through the migration of groundwater.
- Facilities located topographically or hydraulically upgradient to the Site.

Properties located across the Hudson River, in neighboring New Jersey, were not included in this report due to the large distance to the Site and the presence of the Hudson River as a hydraulic barrier between these properties and the Site.

For the purposes of this assessment, groundwater has been assumed to flow northwesterly. Facilities that are located downgradient or cross-gradient to the Site but not immediately adjacent to the Site are considered to pose a low potential environmental concern to the Site. In addition, certain facilities that may be hydraulically upgradient but involve conditions that are considered *de minimis* (i.e., small quantities of releases, contained releases, or releases that are cleaned up in such a manner that does not pose a threat to human health or the environment) are not generally discussed in this report unless further clarification was warranted to rule out the potential for these properties to impact the Site.

#### Multiple Listed Property

A property listed as HUDSON RIVER PCBs has been identified in several databases (USEPA NPL; USEPA CERCLIS; RCRA LQGs of hazardous waste; Federal Engineering Controls EC List; Federal Institutional Controls IC; LTANKS; CERCLA CONSENT; and NPL ROD). Please note that the EDR report does not list an exact address and therefore does not properly identify the elevation in reference to the Site. According to the EDR report, this property includes the Hudson River and the coast of the river, which is located west and down-gradient of the Site. The identified listing encompasses a stretch of the Hudson River from as far north as Hudson Falls and south to the Battery in New York City. From the 1940's to 1977 the General Electric, Co. (GE) plants located in the Village of Hudson Falls and the Town of Fort Edward discharged an estimated 1.1 million pounds of PCBs into the Hudson River. The PCBs were carried downstream and PCBs adsorbed to river sediments and accumulated downstream. There appears to be several actions either still pending or simply not reported at the issuance of this EDR report. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site and downgradient location with respect to the Site), the site listed as HUDSON RIVER PCBs was not identified as an environmental concern in connection with the Site.

### **5.1 USEPA National Priority List**

The EDR report identified one National Priority List (NPL) site within the searched radius. The NPL is a subset of CERCLIS that identifies sites for priority cleanup under the Superfund Program. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, absence of or satisfied reported violations, and/or nature of generated waste), this NPL site was not identified as an environmental concern in connection with the Site.

### **5.2 USEPA Comprehensive Environmental Response, Compensation, and Liability Information System**

The EDR report identified one CERCLIS site within the searched radius. The CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private persons. Sites which are either proposed to or on the NPL and sites which are in the screening and assessment for possible inclusion on the NPL are on the CERCLIS. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, absence of or satisfied reported violations, and/or nature of generated waste), this CERCLIS site was not identified as an environmental concern in connection with the Site.

### **5.3 USEPA Large Quantity Generators of Hazardous Waste**

The EDR report identified seven facilities within the searched radius as a Large Quantity Generator (LQG) of hazardous waste. A LQG of hazardous waste generates more than 1,000 kilograms (2,200 pounds) of hazardous waste per month or more than one kilogram (2.2 pounds) of acutely hazardous waste per month. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, absence of or satisfied reported violations, and/or nature of generated waste) none of the LQG properties were identified as an environmental concern in connection with the Site.

### **5.4 USEPA Small Quantity Generators of Hazardous Waste**

The EDR report identified three facilities within the searched radius as a Small Quantity Generators (SQGs) of hazardous waste. A SQG of hazardous waste generates between 100 kilograms (220 pounds) and 1,000 kilograms (2,200 pounds) of hazardous waste per month.

Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, absence of or satisfied reported violations, and/or nature of generated waste), none of the SQG properties were identified as an environmental concern in connection with the Site.

### **5.5 Conditionally Exempt Small Quantity Generators of Hazardous Waste**

The EDR report identified 13 facilities within the searched radius as Conditionally Exempt Small Quantity Generators (CESQG) of hazardous waste. A CESQG of hazardous waste generates less than 100 kilograms (220 pounds) of hazardous waste, or less than 1 kilogram (2.2 pounds) of acutely hazardous waste per month. Based on the information contained in the EDR report (i.e., distance of less than 0.125 mile from the Site, hydraulic location with respect to the Site, and/or nature of generated waste), the following CESQGs properties were not identified as an environmental concern in connection with the Site since there is no indication that a release occurred and has the potential to impact the Site:

- The property listed as **GREEN WEST 57<sup>TH</sup> ST LLC**, located at West 57<sup>th</sup> Street was identified. According to manifest information non-listed corrosive wastes, halogenated solvents and non-listed ignitable wastes were generated in 2003.
- The property listed as **56<sup>th</sup> STREET INCINERATOR**, located at West 56<sup>th</sup> Street was identified. According to manifest information over Cadmium, non-listed ignitable wastes and lead, and halogenated solvents were generated in 2001.
- The property listed as **CBS BROADCAST CENTER**, located as 518-564 West 57<sup>th</sup> Street was identified. According to manifest information methyl ethyl ketone, non-listed ignitable wastes, non-listed corrosive wastes, mercury, and an unreported waste were generated from 1998 through 2012.

### **5.6 RCRA – Non-Generators**

The EDR report identified 50 facilities within the searched radius as RCRA non-generators of hazardous waste (RCRA NonGen). A RCRA NonGen does not presently generate hazardous waste, but generated hazardous waste at some point in the past. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site, reported violations, and/or nature of generated waste), the following RCRA NonGen facilities were noted but are not identified as environmental concerns in connection with the Site:

- The property listed as **MOBIL OIL CORP SS #511**, formerly located at 842 11<sup>th</sup> Avenue was identified. According to manifest information non-listed ignitable wastes were generated in 1991. No violations noted.

- The property listed as **GOODYEAR AUTO SERVICE CENTER**, located at 607 West 57<sup>th</sup> Street was identified. No manifest information given. No violations noted.
- The property listed as **GOODYEAR STORE #820**, located as 607 West 57<sup>th</sup> Street was identified. No manifest information given. No violations noted.
- The property listed as **MID BLOCK #57 PROJECT**, located as 625 West 57<sup>th</sup> Street was identified. During construction / redevelopment activities contaminated soils are transported off-site. No violations noted.
- The property listed as **POTAMKIN TOYOTA MAZDA & VOLKSWAGON**, located as 601 West 57<sup>th</sup> Street was identified. According to manifest information tetrachloroethylene and non-listed ignitable wastes were generated. A violation regarding generator's manifest was listed; no other information listed.
- The property listed as **POTAMKIN VOLKSWAGON**, located as 625 West 57<sup>th</sup> Street was identified. According to manifest information Cadmium, tetrachloroethylene and non-listed ignitable wastes were generated. No violations noted.

### **5.7 USEPA Engineering Controls List**

The EDR report identified one site on the USEPA Engineering Controls (EC) List within the searched radius. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter the environmental media of effect human health. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site and downgradient location with respect to the Site), the EC site was not identified as an environmental concern in connection with the Site.

### **5.8 USEPA Institutional Controls**

The EDR report identified one USEPA Institutional Controls (IC) site within the searched radius. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site and downgradient location with respect to the Site), the IC site was not identified as an environmental concern in connection with the Site.

## 5.9 Solid Waste Facilities/Landfill Facilities

The EDR report identified one solid waste facility/landfill (SWF/LF) facility within the searched radius. These records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, hydraulically cross-gradient location with respect to the Site, and inactive status), none of the SWF/LF facilities were identified as an environmental concern in connection with the Site.

## 5.10 Leaking Storage Tanks/Historical Leaking Storage Tanks

The EDR report identified 56 properties within the searched radius as having leaking storage tanks (LTANKS). In addition, the EDR report identified 48 properties in the Historical Leaking Storage Tanks database within the searched radius. In 2002, the NYSDEC stopped entering information into this historical database and transferred all records to the Leaking Storage Tank Database; therefore, all properties included in this database are included in the current Leaking Storage Tank Database. The EDR report includes the historical database, which includes additional information to complement information provided in the current Leaking Storage Tank Database. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site and/or quantity and nature of the release), the following LTANKS are noted but are not identified as environmental concerns in connection with the Site since the spills were closed to satisfaction of the NYSDEC and upgradient groundwater quality adjacent to the Site on 11<sup>th</sup> Avenue meets groundwater standards:

- The property identified as **FORMER MOBIL #17-511**, located at 842 11<sup>th</sup> Avenue was assigned NYSDEC Spill No. 9009804 on December 10, 1990 for a tank test failure. Several other spill numbers listed: 9105201, 9108084, 9108497, 9501523, and 0403370. An approved Remedial Action Plan (RAP) includes dual phase extraction. The remedial system was installed and operable December 2007; significant increase to groundwater quality within two years of operation. System temporary shutdown in 2009 and started again in 2010. As of May 2012, sampling results consistent with previous results. At the time of this Phase I ESA, the six above referenced spills have been declared closed by the NYSDEC.
- The property identified as **EXXON MOBIL**, located at 842 11<sup>th</sup> Avenue was assigned NYSDEC Spill No. 9501523 on May 5, 1995 for a tank test failure. This report references Spill No. 9009804; both spills were declared closed by the NYSDEC. This incident is also listed under **842 11<sup>th</sup> AVENUE**.

- The property identified as **GASTERIA OIL CORP**, located at 2-16 West End Avenue was assigned NYSDEC Spill No. 0212404 on March 17, 2003 for a tank test failure. Spill No. 0212324 was referenced in this report. Laboratory results from a Phase II investigation detected soil and groundwater contamination. Soil excavated and groundwater treated during site redevelopment. No further action granted and the spill was declared closed by the NYSDEC on December 7, 2005.

### **5.11 Storage Tank Facility Listing (TANKS)**

The EDR report identified two properties within the searched radius with registered USTs under provisions of the NYSDEC Petroleum Bulk Storage (PBS) program (TANKS). Based on the information contained in the database (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site and/or lack of reported spills/releases,), the TANKS sites listed were not identified as an environmental concern in connection with the Site.

### **5.12 Registered Underground Storage Tanks / Historical Underground Storage Tanks**

The database identified 35 properties within the searched radius with registered USTs under provisions of the NYSDEC Petroleum Bulk Storage (PBS) program. In addition, the EDR report identified 33 properties in the Historical Underground Storage Tanks database within the searched radius. In 2002, the NYSDEC stopped entering information into this historical UST database and transferred all records to the current Registered UST database; therefore, all properties included in the historical UST database are included in the current UST database. The EDR report includes the historical database, which contains additional information to complement information provided by the current UST database.

Based on the information contained in the database (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, quantities/nature of the UST contents, and/or lack of leaking tanks/spills/releases), the UST properties were not identified as an environmental concern in connection with the Site. However, note that several surrounding properties utilized or have utilized USTs, yet according to details in the EDR report, these properties are not considered environmental threats to the Site.

### **5.13 Registered Aboveground Storage Tank Database**

The database identified 49 properties within the searched radius with registered ASTs under provisions of the NYSDEC PBS program. Based on the information contained in the database

(i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, quantities/nature of the AST contents, and/or lack of leaking tanks/spills/releases), the AST properties were not identified as an environmental concern in connection with the Site.

#### **5.14 Chemical Bulk Storage Database**

The EDR report identified four properties within the searched radius with registered CBS tanks which includes facilities storing hazardous substances listed in 6 NYCRR Part 597 and registration data collected as required by 6 NYCRR Part 596, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, and/or hydraulic location with respect to the Site), the CBS facilities were not identified as an environmental concern in connection with the Site.

#### **5.15 Registered Major Oil Storage Facility (MOSF)**

The EDR report identified two properties within the searched radius with petroleum storage capacities of 400,000 gallons or greater. Based on the information contained in the database (i.e., hydraulic location with respect to the Site and status of the facilities), the MOSF properties were not identified as an environmental concern in connection with the Site.

#### **5.16 State Engineering Controls List**

The EDR report identified one site on the State Engineering Controls (EC) List within the searched radius. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter the environmental media of effect human health. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, and hydraulic location with respect to the Site), the EC site was not identified as an environmental concern in connection with the Site.

#### **5.17 State Institutional Controls**

The EDR report identified one State Institutional Controls (IC) site within the searched radius. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally

required as part of the institutional controls. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, and hydraulic location with respect to the Site), the IC site was not identified as an environmental concern in connection with the Site.

### **5.18 Restrictive Declarations Listing**

The EDR report identified eight Restrictive Declaration (RES DECL) sites within the searched radius. A RES DECL is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps and are listed in the New York City zoning map amendments. Based on the information contained in the EDR report (i.e., lack of specified information for each location, distance from the Site and hydraulic location with relation to the site), the RES DECL sites were not identified as an environmental concern in connection with the Site.

Limited information is given in the EDR report regarding the specified conditions; the properties are as follows:

- Lot 36, Block 1105 (Site, discussed above)
- Lot 29, Block 1105
- Lot 19, Block 1105
- Lot 14, Block 1105
- Lot 5, Block 1105
- Lot 1, Block 1105

Based on a review of the New York City Zoning Map Amendment of Restrictive Declarations (<http://www.nyc.gov/html/dcp/pdf/zone/appendixd.pdf>), the subject Site and adjacent sites on Block 1105 are listed with a “D-145” restrictive declaration. This restrictive declaration pertains to the zoning and land use of any proposed development and does not pose an environmental concern for the Site.

### 5.19 Brownfield Cleanup Program Sites

The EDR report identified five properties within a 0.5 mile radius currently enrolled in the New York State BCP. The BCP organizes the environmental cleanup and remediation for properties that have been deemed to be contaminated by petroleum products and/or hazardous substances. Certain limitations on liability and incentives are awarded to developers and/or owners of these sites in order to promote development and expedite remediation. The following BCP site was identified as a HREC in connection with the Site due to its current remediation status and downgradient location to the Site:

- The property identified as **MID-BLOCK #57 PROJECT**, located at 615-649 West 57<sup>th</sup> Street was assigned BCP Project: C231062. Petroleum related compounds found in soil, groundwater and soil vapor laboratory results. The NYSDEC and NYCDOH have determined the property represents a significant threat to human health and the environment. This decision is based on the nature of the existing contaminants identified at the BCP property; the potential for off-site migration of contaminants in the groundwater; and the potential for human exposure to site related contaminants via soil vapors. The BCP property is currently under construction and environmental concerns are being addressed during construction activities. Soil excavation source removal and groundwater dewatering and treatment have already occurred on the BCP property and it is downgradient of the subject Site, therefore known groundwater contamination at the BCP property is not expected to have impacted groundwater quality on Site. The proximity of the subject Site to the adjacent BCP property qualifies it as a HREC.

### 5.20 Spill Sites Database

The EDR report identified 81 properties within the searched radius with spill incidents that were reported to the NYSDEC (SPILLS). In addition, the EDR report identified 64 historical spill incidents within the searched radius. Please note that the same spill incidents are referenced in these searches. Based on the information contained in the database (i.e., distance from the Site, hydraulic location with respect to the Site, quantities/nature of the spills, and/or spill status), the following SPILLS property was identified as a potential environmental concern in connection with the Site due to its open spill status:

- The property identified as **LEXUS DEALERSHIP**, located at 835 11<sup>th</sup> Avenue was assigned NYSDEC Spill No. 0708204 on October 26, 2007; cause-listed as ‘other’. Numerous investigations yield VOC and SVOC contamination in soil and groundwater. According to the EDR report and the NYSDEC Spill Database, the spill is considered open/active. Remediation efforts are documented in Appendix B.

Open spill number 9810172 associated with properties west of the Site is discussed in Section 2.4.3 and does not pose an environmental concern for the Site.

### **5.21 CERCLA Consent Decrees**

The EDR report identified one property within the searched radius with Consent Decrees (CONSENT). Consent Decrees are major legal settlements that establish responsibility and standards for cleanup at the NPL (Superfund) sites. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site and downgradient location with respect to the Site), this CONSENT site was not identified as an environmental concern in connection with the Site.

### **5.22 NPL Record of Decision**

The EDR report identified one property within the searched radius with Records of Decision (ROD). ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site and downgradient location with respect to the Site), this ROD site was not identified as an environmental concern in connection with the Site.

### **5.23 Manifest Facilities**

The EDR report identified 93 properties within the searched radius with Facility and Manifest Data (MANIFEST). In addition, seven properties in New Jersey were identified; however are not included in this Phase I ESA due to their position on the other side of a natural hydraulic barrier, the Hudson River. This information lists and tracks hazardous waste from the generator through transporters to a Treatment, Storage, Disposal (TSD) facility. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site, reported violations, and/or nature of generated waste), the MANIFEST properties were not identified as an environmental concern in connection with the Site:

- The property listed as **CONSOLIDATED EDISON**, located as 610 West 58<sup>th</sup> Street was identified. According to manifest information an un-reported waste was generated in 2009. No violations noted. Several other properties listed as Consolidated Edison are noted and include generation of unreported wastes.

- The property listed as **MOBIL OIL CORP SS #511**, located as 842 11<sup>th</sup> Avenue was identified. According to manifest information non-listed ignitable wastes were generated in 1991. No violations noted.
- The property listed as **MID BLOCK #57 PROJECT**, located as 625 West 57<sup>th</sup> Street was identified. During construction / redevelopment activities contaminated soils are transported off-site. No violations noted.
- The property listed as **POTAMKIN TOYOTA MAZDA & VOLKSWAGON**, located as 601 West 57<sup>th</sup> Street was identified. According to manifest information tetrachloroethylene and non-listed ignitable wastes were generated. A violation regarding generator's manifest was listed; no other information listed.
- The property listed as **GREEN WEST 57<sup>TH</sup> ST LLC**, located as West 57<sup>th</sup> Street was identified. According to manifest information non-listed corrosive wastes, halogenated solvents and non-listed ignitable wastes were generated in 2003.
- The property listed as **56<sup>th</sup> STREET INCINERATOR**, located as West 56<sup>th</sup> Street was identified. According to manifest information over Cadmium, non-listed ignitable wastes and lead, and halogenated solvents were generated in 2001.
- The property listed as **CBS BROADCAST CENTER**, located as 518-564 West 57<sup>th</sup> Street was identified. According to manifest information methyl ethyl ketone, non-listed ignitable wastes, non-listed corrosive wastes, mercury, and an unreported waste were generated from 1998 through 2012.
- The property listed as **POTAMKIN TOYOTA INCORPORATED**, located as 622 West 58<sup>th</sup> Street was identified. According to manifest information non-listed ignitable wastes were generated. No violations noted.
- The property listed as **POTAMKIN VOLKSWAGON**, located as 625 West 57<sup>th</sup> Street was identified. According to manifest information Cadmium, tetrachloroethylene and non-listed ignitable wastes were generated. No violations noted.

#### 5.24 Drycleaner Facilities

The EDR report identified one registered drycleaner facility within the searched radius. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, hydraulic location with respect to the Site, and solvent/business type), the drycleaner facility was not identified as an environmental concern in connection with the Site.

#### 5.25 E-Designation Facilities

The EDR report identified 11 properties within the searched radius as an E-designation facility. The E-Designation Environmental Review Program is administered by the NYCOER; formerly by

the NYCDEP. An E-Designation is a NYC zoning map designation that indicates the presence of an environmental requirement pertaining to potential Hazardous Materials Contamination, Window/Wall Noise Attenuation, or Air Quality impacts on a particular tax lot. An E-designation listed specifically for hazardous materials would ensure that sampling and remediation, if necessary, take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. Based on the information contained in the EDR report and a review of New York City Environmental Quality Review (CEQR) online database as of April 30, 2013 (<http://www.nyc.gov/html/dcp/pdf/zone/appendixc.pdf>), the following E-designation facilities were identified at the Site and immediate surrounding properties: E-103 (Window/Wall Noise Attenuation) and E-286 (Air Quality - Natural Gas Heat and Hot Water, Exhaust Stack Location Limitations):

- **Lot 36, Block 1105**, 847 11<sup>th</sup> Avenue (Site, discussed above)
- **Lot 43, Block 1105**, 614 West 58<sup>th</sup> Street
- **Lot 29, Block 1105**, 839 11<sup>th</sup> Avenue
- **Lot 19, Block 1105**, 615 West 57<sup>th</sup> Street
- **Lot 14, Block 1105**, 623 West 57<sup>th</sup> Street
- **Lot 5, Block 1105**, 631 West 57<sup>th</sup> Street
- **Lot 1, Block 1105**, 830 Joe DiMaggio Highway

An E-designation for hazardous materials, requiring Phase I and Phase II environmental site assessment, is listed only for the subject Site, tax lot 36 on Block 1105.

## **5.26 Manufactured Gas Plant Facilities**

The EDR report identified five facilities within the searched radius as a Manufactured Gas Plant (MGP). Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially

hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination. Based on the information contained in the EDR report (i.e., distance from the Site, and hydraulic location with respect to the Site), the following MGP facility was not identified as an environmental concern in connection with the Site due to its location downgradient of the subject Site:

- The property listed as **CON EDISON-WEST 58<sup>th</sup> ST. STATION MGP** was identified. No additional information regarding the facility was included in the EDR report.

### **5.27 US Historical Auto Stations**

The EDR report identified 43 potential gas station/filling station/service station sites within the searched radius. EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records," or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site and/or lack of station information), these Historical Auto Station facilities were not identified as an environmental concern in connection with the Site.

### **5.28 US Historical Cleaners**

The EDR report identified eight potential dry cleaner sites were identified within the searched radius. EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records," or HRHR. EDR's HRHR effort

presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Based on the information contained in the EDR report (i.e., distance of more than 0.125 mile from the Site, and/or hydraulic location with respect to the Site), the Historical Cleaners sites were not identified as an environmental concern in connection with the Site.

### **5.29 Freedom of Information Law Letter Responses**

FOIL letters were submitted to the USEPA, the NYSDEC, the NYCDEP, the NYCDOH, the NYCOER, the FDNY, and the NYCLPC. In addition, the NYCDOB BIS and NYCDOF ACRIS Internet databases were consulted in reference to the Site. No responses have been received by the date of issuance of this Phase I ESA from the USEPA, the NYSDEC, the NYCDEP, and the NYSDOH. If any additional pertinent environmental information is received from any of these agencies following the issuance of this report, Roux Associates will provide a letter addendum to this report detailing this information. Information obtained from the Internet Databases and FOIL responses is included as Appendix H.

#### USEPA

A request for records has been submitted to the USEPA, to which a response is pending. In addition, Roux Associates conducted a search of the USEPA website, regarding Superfund Site Information; the Site address was not identified.

#### NYSDEC

A request for records has been submitted to the NYSDEC, to which a response is pending. In addition, Roux Associates accessed the Spills Database, Hazardous Waste Registry (HWR)/Environmental Remediation Database, Petroleum Bulk Storage (PBS) Database, and conducted a search for outstanding permits on the NYSDEC website. The Site was not included in searches of the above mentioned databases.

In addition to requesting information regarding the Site, the FOIL request includes a query regarding spills in the immediate area of the Site. Spill No. 9009804 was assigned to 842 11<sup>th</sup> Avenue (Former Mobil #17-511). The spill was declared closed by the NYSDEC on March 8, 2013 and is discussed in Section 5.0. Spill Nos. 9709955 and 0606660 were assigned to 850 12<sup>th</sup>

Avenue (Con Edison Power Plant); both spills were declared closed by the NYSDEC in 2009. Due to the closed nature of Spill Nos. 9709955 and 0906660 and downgradient location, these incidents are not considered an environmental concern.

#### NYCDEP

A request for records has been submitted to the NYCDEP, to which a response is pending.

#### NYCDOH

A request for records has been submitted to the NYCDOH, to which a response is pending.

#### NYCOER

The NYCOER responded that no records are found for the Site.

#### FDNY

The FDNY responded that no records are found for the Site.

#### NYCLPC

The NYCLPC responded that no records are found for the Site.

#### NYCDOB BIS and NYCDOF ACRIS

The NYCDOF ACRIS and NYCDOB BIS Internet databases were reviewed for the Site in reference to property transfers or other pertinent information regarding the Site.

Several deeds and satisfaction or mortgages, regarding transfer of the Site property were retained through review of the NYCDOF ACRIS. The Deed document, dated March 9, 1978, involves the transfer of the Site from Waldo Hutchins III, as executor of the last will and testament of Francis S. Appleby to Chase Manhattan Bank, N.A. as Trustee under Article Sixth of the L/W/T of Francis S. Appleby. The Deed document dated, March 28, 2008, involves the transfer of the Site from the Estate of Francis Appleby c/o JP Morgan Chase Bank, N.A. to EE 57<sup>th</sup> Street North Holdings, LLC, GE 57<sup>th</sup> Street North Holdings, LLC, Falding, LLC, Swallow, LLC and Appleby North Holdings, LLC all in c/o JP Morgan Chase Bank, N.A. The deed includes the DEP Customer Registration Form for Water and Sewer Billing and the Real Property Transfer Report between the two parties. The deed document, dated March 28, 2008, involves the transfer of the

Site from Edgar T. Appleby Revocable Trust c/o JP Morgan Chase Bank, N.A. to Falding, LLC, Swallow, LLC and Appleby North Holdings, LLC all in c/o JP Morgan Chase Bank, N.A. The deed includes the DEP Customer Registration Form for Water and Sewer Billing and the Real Property Transfer Report between the two parties.

No other satisfactions of mortgage, property transfers, and agreements referencing the Site were listed in the NYCDOF ACRIS Internet databases. In addition, the NYCDOF ACRIS reportedly lists federal liens, if any; no federal liens were listed for the Site.

According to the review of the NYCDOB BIS, two Certificates of Occupancy (C/Os) are recorded. The C/O issued October 5, 1955, C/O No. 44689 classifies the Site building as a commercial building and supersedes C/O No. 11104 (not found during search). Site use includes boiler room (cellar); and manufacturing, storage (cellar through sixth floor). The C/O indicates fuel oil installation was approved by the Fire Department on September 12, 1955; and standpipe / sprinkler system approval was granted by the Fire Department on September 13, 1955. The C/O issued January, 1980, C/O No. 79937, amends a previous C/O No. 44689 and Alteration No. 586/78. The change in use is confined to the first floor only. According to the January, 1980 C/O, the Site use includes manufacturing, storage, dead storage of motor vehicles and boiler room (cellar); storage, dead storage of motor vehicles, accessory offices and caretaker's apartment (first floor); and storage, dead storage of motor vehicles (second to sixth floors). None of these activities currently occur at the Site.

The 1955 C/O for fuel oil installation is identified as Recognized Environmental Condition since it indicates that a UST may have been installed at this time and no records exist documenting the closure or removal of an UST on the Site.

The NYCDOB BIS also contained information on past actions (i.e., jobs, permits, and violations) executed at the Site. Numerous violations exist for elevators, electric signage, oil burner applications, new building requirement, plumbing, permitting, and construction. Relative active violations include a boiler violation for failure to file annual inspection report. Boiler records indicate at least two boilers have been removed and replaced; one boiler is currently in use at the Site. There is no indication of boiler type (natural gas or fuel oil) in these records. No details are

given regarding the specifics of the elevator violations. No plumbing information was available for review. There were no past actions regarding gasoline tanks (typically labeled “GT”); or fuel oil burner/heating system application (labeled “FO”). The NYCDOB records indicate the E-designation for the Site for Hazardous Materials, Noise, and Air, as stated in Sections 5.0 and 5.25.

## **6.0 SITE RECONNAISSANCE**

The findings of the Site reconnaissance are discussed below. The Site is located in the Clinton section of the Borough of Manhattan, City of New York (New York County). The Site is located in an area of mixed property usage that includes residential apartments, warehouses, car dealerships and repair shops/garages.

At the time of Site reconnaissance on April 9, 2013, the Site was occupied by Manhattan Mini Storage. During the Site Reconnaissance it was reported that plants, food, chemicals and oils are restricted from storage.

### **6.1 Utilities**

Natural gas service is available to the entire Site from Con Edison Corporation of New York (Con Ed); gas meters noted on the first floor. Electrical service is supplied to the entire Site by Con Ed. Overhead electric heating and air conditioning units are located throughout the building; however, heating and cooling units are not located in customer spaces. Based on the Site reconnaissance, and according to Mr. Papiris, sanitary waste is discharged to the municipal sewer.

### **6.2 Hazardous Substances**

Small quantities of typical cleaning supplies were stored in a utility closet. A passenger elevator services the first through sixth floors; and a freight elevator services the basement to the sixth floor. Approximately eight one-gallon plastic containers of gear oil were noted in the passenger elevator maintenance room located on the roof. Several paint containers were noted in the freight elevator maintenance room. The elevators are serviced by an outside maintenance company. These *de minimis* quantity containers are not considered a REC. No other hazardous substances were noted during the Site reconnaissance.

### **6.3 Storage Tanks**

A vent line was noted exiting the Site building on the northwest corner of the building. According to Mr. Papiris, customer spaces are located on the interior of the Site building where the vent was located. No access to customer spaces was granted during the Site reconnaissance. No fill port or other tank access man-ways were noted in the vicinity of the vent line or through the Site.

NYSDEC and FDNY responses are pending to confirm or deny storage tank use at the Site.

#### **6.4 Polychlorinated Biphenyls**

No evidence of aboveground or subsurface electric utility transformers, vaults or manholes that may have PCB-containing equipment were observed. Portions of the building were lit by fluorescent lighting, which may have PCB-containing ballasts considering the age of the building. In accordance with ASTM E1527-05, Roux Associates did not inspect the ballasts for PCB content during the Site reconnaissance.

#### **6.5 Staining and Stressed Vegetation**

The entire Site is covered by the Site building or pavement and concrete. There is no vegetation currently at the Site. No *de minimis* staining was observed.

#### **6.6 Drains and Sumps**

Two restrooms are located on the first floor and a slop sink was noted in the boiler room. A drain was noted in a utility closet; all sinks and the drain were clean and free of stains and residues. A sump was noted in the electrical control room, but was inaccessible to confirm the contents.

#### **6.7 Solid Waste**

Solid waste generated at the Site appeared to be limited to conventional waste and cardboard, which is picked up by an outside contractor.

#### **6.8 Wastewater**

Based on the Site reconnaissance, wastewater generated at the Site is predominantly limited to sanitary wastewater and is discharged to the municipal sewer system. Roof drains were noted during the Site reconnaissance, and discharge to the municipal sewer system.

#### **6.9 Wells**

Potable water in the area of the Site is provided by the municipal water distribution system and obtained from upstate reservoirs.

Several monitoring wells were noted on the sidewalk surrounding the neighborhood of the Site. Previous investigations indicated that groundwater immediately upgradient of the Site is below regulatory guidance values.

## **7.0 INTERVIEWS AND USER-PROVIDED INFORMATION**

Roux Associates incorporated interviews and a completed questionnaire provided by the User (i.e., Owner Representative) to complete this Phase I ESA. Information obtained from this source was detailed throughout this report in various sections, as appropriate. Pertinent findings from these sources are summarized in the following sections.

### **7.1 Interviews**

Roux Associates contacted Mr. Dimitrios Papiris (Key Site Owner Representative) regarding the Site during the completion of this Phase I ESA.

Findings from the interview were summarized in appropriate sections of this document.

### **7.2 User Questionnaire**

Roux Associates provided a questionnaire to Mr. Papiris, regarding information for 600-612 West 58<sup>th</sup> Street; a response was not received at the time of the preparation of this Phase I ESA.

## 8.0 FINDINGS AND CONCLUSIONS

Roux Associates performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of 600-612 West 58<sup>th</sup> Street in the Borough, City and State of New York, New York City Tax Block 1105, Lot 36 (Site). Any exceptions to, or deletions from, this practice are described as data gaps, below.

Based on the information gathered as a result of the Phase I ESA process, Roux Associates identified the following RECs in connection with the Site.

- The following E-Designations (i.e., environmental requirements) are currently assigned to the Site, identified as LOT 36, TAXBLOCK 1105: E-103 for Window Wall Attenuation & Alternate Ventilation (Noise & Air), E-286 for Air Quality - Natural Gas Heat and Hot Water, Exhaust Stack Location Limitations, and Hazardous Materials. These environmental requirements must be satisfied under the administration of the NYCOER in order to obtain a building permit.
- A vent line was noted exiting the Site building on the northwest corner of the building. Customer spaces are located on the interior of the Site building where the vent was located. Although no fill port or other UST access man-ways were noted in the vicinity of the vent line, the vent may be associated with a UST.
- According to a certificate of occupancy from 1955, fuel oil was utilized at the Site for heating purposes. An undocumented UST may be present on Site associated with historic heating operations. No documentation of UST removal was identified in historic records and one prior investigation noted that no USTs were present on Site.

Historic RECs (HRECs) are environmental conditions which in the past would have been considered RECs, but which may or may not be considered a REC currently. The following HREC has been identified, but is not considered an REC due to its location downgradient of the subject Site and the remediation and source removal that have already occurred.

- The property immediately to the west of the subject Site is currently enrolled in the New York State BCP and soil excavation source removal and groundwater treatment have already occurred on the adjacent BCP property. The adjacent BCP property is downgradient of the subject Site, therefore known groundwater contamination at the BCP property is not expected to have impacted groundwater quality on Site. The BCP property's current remediation status and downgradient location qualifies it as a HREC.

Although not technically defined as RECs, the following is a list of potential environmental concerns at the Site that could potentially impact subsurface conditions at the Site:

- The Site is underlain by historic/urban fill material whose origin and environmental quality is unknown.
- A sump was noted in the electrical control room, but the sump's contents were inaccessible at the time of the Site reconnaissance.
- An open NYSDEC spill number 0708204 was identified at the Lexus Dealership located at 835 11<sup>th</sup> Avenue on October 26, 2007. This dealership is located south of the subject Site and may have impacted water quality under the southern border of the Site.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Pending response regarding the User Questionnaire.
- Pending response to FOIL requests from the USEPA, the NYSDEC, the NYCDEP, and the NYCDOH. If any additional pertinent information is obtained from responses to outstanding FOIL requests, Roux Associates will prepare a letter addendum summarizing these findings.

Please note that although lack of record sources listed above is considered a data gap, it is not considered a material limitation for the completion of this Phase I ESA report.

A Phase II environmental site investigation is recommended to comply with the NYCOER's environmental requirements for the current E-designation for hazardous materials and to identify if a potential UST, or related subsurface impacts, are present on the Site.

## 9.0 REPORT ASSUMPTIONS AND LIMITATIONS

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux Associates' initial investigation to identify the potential presence of RECs involving or affecting the Site in accordance with ASTM E1527-05. This Phase I ESA was conducted by Roux Associates in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

*“In today’s final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”) and recognizing the E1527-05 standard as consistent with today’s final rule. The Agency determined that this voluntary consensus standard is consistent with today’s final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today’s final rule<sup>1</sup>.”*

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter “Prospective Purchaser”) defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-05) prior to acquisition of the property. The Durst Organization has acknowledged that, under the AAI Rule, Roux Associates' performance of the Phase I ESA in accordance with ASTM E1527-05 will not alone result in The Durst Organization satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

The Durst Organization has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX ASSOCIATES MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, REGARDING THIS PHASE I ESA, INCLUDING WITHOUT LIMITATION, ANY WARRANTY THAT THIS PHASE I ESA WILL IN FACT QUALIFY CLIENT FOR A DEFENSE TO CERCLA LIABILITY.**

---

<sup>1</sup> Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.

Roux Associates has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux Associates.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

The Durst Organization has agreed that Roux Associates shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux Associates has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may not fully address the data gaps as the information obtained from execution of those recommendations may alter or modify the interpretation of the site conditions and conclusions regarding the data gaps.

It should be noted that Roux Associates has not conducted any intrusive activities on the Site and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux Associates does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

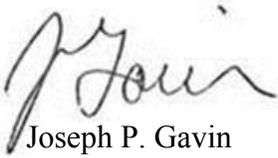

This Phase I ESA Report is not an appraisal or value judgment of the Site. The Durst Organization has agreed that Roux Associates shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Site.

The Phase I ESA Report has been prepared for the exclusive use of The Durst Organization for specific application to the Site covered by the Phase I ESA Report. The Durst Organization has agreed that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of The Durst Organization.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth on 40 CFR 312.

Respectfully submitted,

Joseph P. Gavin  
Project Hydrogeologist

Joshua Levine, P.E.  
Principal Engineer

**APPENDIX A**

**Qualifications of Key Project Personnel**

## Joshua B. Levine, P.E. Senior Engineer

### Technical Specialties:

Remedial engineering design, implementation, construction management and operations and maintenance of soil, soil vapor and groundwater remediation systems. Varied experience with the New York State Brownfields Cleanup Program, State Superfund Program, Spills Program, USEPA Class V injection well closure, constructed wetlands, subsurface piping design, free-product and groundwater recovery systems, sub-slab depressurization systems, landfill cap design and permitting.

### Experience Summary:

Twelve years experience: Senior Engineer, Project Engineer, Staff Engineer, and Staff-Assistant Engineer with Roux Associates; Temporary Staff with First Coastal Corporation; Research Assistant with Tulane University

### Credentials:

Professional Engineer, State of New York, 2007  
B.S.E., Environmental Engineering, Tulane University 1997.  
OSHA 40-hour Health & Safety Course, 2000.  
OSHA 8-hour Health & Safety Refresher Course, 2001 through 2011.

### Professional Affiliations:

American Society of Civil Engineers  
National Society of Professional Engineers  
International Council of Shopping Centers  
The Retail Network

### Key Projects:

- Senior Engineer responsible for management of investigation and remediation at a one-acre brownfield site containing chlorinated solvents, heavy metals and petroleum compounds in soil, soil vapor and groundwater over one city block in Manhattan, New York. This project included the implementation of a Remedial Investigation, New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Application and Remedial Action Work Plan. Mr. Levine managed a groundwater, soil and soil vapor investigation and documented this work in a Remedial Investigation Summary Report less than one month after the work was completed (and one week after receipt of the analytical data). In addition, Mr. Levine organized, prepared and submitted a BCP Application to NYSDEC within this same time frame which is expected to generate approximately 30 million dollars in tax credits for the site redevelopment. Due to careful attention to detail throughout the process and correspondence with NYSDEC, the BCP Application was deemed complete one day after it was submitted, expediting the process to conduct the investigation and remediation within the BCP.
- Senior Engineer responsible for the pilot testing, design and installation of a sub-slab depressurization system (SSDS) to mitigate chlorinated solvent soil vapor contamination beneath an existing occupied shopping mall in Clifton, New Jersey. This project was completed within strict New Jersey Department of Environmental Protection regulatory response timeframes due to the site's Immediate Environmental Concern (IEC) status.
- Senior Engineer responsible for the design of a vapor barrier and sub-membrane depressurization system to prevent vapor intrusion into a former factory building, which is being converted into a residential structure at a Superfund Site in Sag Harbor, NY. Mr. Levine prepared design drawings and a

description of proposed engineering controls for inclusion within the Site Management Plan that was submitted to NYSDEC. Mr. Levine developed engineering cost estimates for the construction of the vapor barrier and sub-membrane depressurization system. Net present value cost comparisons were performed for 30-year operation of an active depressurization system (with blowers for active vapor recovery) vs. 30-year operation of a passive depressurization system (piping network without blowers). The active depressurization system was proven most appropriate due to the greater level of protection provided by active blower operation when compared to the cost differential between the active and passive systems. In addition, Mr. Levine developed a vacuum enhanced product recovery program to expedite the closure of the site's open NYSDEC spill numbers.

- Senior Engineer responsible for managing the closure and abandonment of 53 Class V drywell structures at commercial warehouse facility in Syosset, New York. The drywell abandonment project was conducted in accordance with the USEPA Underground Injection Control Program as administered by Nassau County Department of Health (NCDOH). The project required coordination with the client and the facility operations, the client's onsite developer and his subcontractors, the NCDOH, the USEPA, the local union representatives, Nassau County Department of Public Works, and subcontractors in order to complete the job. Mr. Levine prepared all of the work plans, memoranda and summary reports in order to fulfill NCDOH and USEPA's requirements in order to obtain a No Further Action Letter, which was received in November 2007.
- Mr. Levine managed a Pre-Design Investigation and Treatability Study (PDI) Summary Report and a Focused Feasibility Study (FFS) to determine the proposed remedial action for a class 2 NY State Superfund Site. The PDI was integral in determining the suitability of various remedial treatment technologies prior to the evaluation of potential remedial alternatives in the FFS. Mr. Levine prepared multiple cost estimates prior to selecting the preferred remedy in the FFS to evaluate the cost-effectiveness of each remedial alternative assuming varying quantities of hazardous waste in the fill material. This value engineering exercise aided selection of the most cost effective remedy in the FFS and prepared the responsible party for potential full-scale remedial costs. In addition, Mr. Levine calculated the anticipated construction traffic volume attributed to each FFS remedial alternative to evaluate the potential short-term impacts to the community resulting from the remedial alternatives.
- Mr. Levine managed the remediation of eight drywell and catch basin structures at a major truck rental facility in Ronkonkoma, New York. The drywell remediation project was conducted in accordance with the Suffolk County Article XII requirements and entailed coordination with the client and the facility operations, the client's subcontractor, the client's laboratory, Suffolk County Department of Health (SCDOH), and Suffolk County Department of Public Works. This project was unique in that all of the drywell remediation pre-characterization and remediation work had to be completed within one month of receiving preliminary characterization data from SCDOH, with a threat of monetary penalty if this schedule was exceeded. Mr. Levine was able to achieve the project objective of completing the remediation in

## Joshua B. Levine, P.E. Senior Engineer

the timeframe specified by SCDOH. Mr. Levine prepared daily client updates prepared the Remediation Summary Report and follow up correspondence with SCDOH to make sure that they were satisfied with the project.

- Project Engineer and Project Manager responsible for conceptual design, final design, and construction management of a groundwater recovery and treatment system at an active petroleum terminal in New Windsor, New York. This project used the results of a comprehensive site specific soil and groundwater investigation to design the groundwater recovery and treatment system. The system design required piping head loss calculations per Darcy-Weisbach formula, Manning's formula and Hazen-Williams formula (with product specific information for valves and fittings), submersible groundwater extraction pump and explosion proof surface-mounted pump sizing, air stripping efficiency modeling, activated carbon isotherm calculations, air stripping vapor effluent calculations for stack effluent discharge compliance in accordance with New York State Department of Environmental Conservation (NYSDEC) Division of Air Resources (DAR-1), and implementation of an iron control system to prevent fouling of the treatment system conveyance piping and remedial equipment. Primarily responsible for the development and preparation of technical specifications (including Bid Documents (bid form and bid instructions) per Construction Specifications Institute (CSI) format and Engineers Joint Contract Document Committee (EJCDC) General Conditions for Division 0, piping material and valve schedule, major equipment list, instrumentation and control equipment list, technical operating system and control logic description, Health and Safety Plan, Community Air Monitoring Plan, Geosynthetic Clay Liner Repair Protocol), Contract design drawings, process and instrumentation diagram preparation, contractor bidding services and field supervision, construction submittal review, Remedial Action Summary Report including "As-Built" drawings and Operations, Maintenance, and Monitoring Plan per NYSDEC DER-10. This project required coordination with various subcontractors including electrical and mechanical subcontractors, a structural engineer, and remedial equipment vendors.
- Project Engineer and Project Manager responsible for design upgrades and overseeing remediation operations at five formerly active petroleum terminals and one active petroleum terminal in the New York region. These six sites required system optimizations to improve protection of public health and the environment and consistently maintain peak performance of two soil vapor extraction systems and two groundwater remediation systems, while concurrently fulfilling NYSDEC regulatory reporting requirements per New York Code of Rules and Regulations (6 NYCRR) Part 750. Each soil vapor extraction system contained multiple vapor extraction wells, a moisture separator, air dilution valve, in line filter screen, regenerative blower, and emissions stack. The groundwater remediation systems contained one shallow tray air stripping unit, one packed tower air stripping unit, bag filters, activated carbon adsorption units, recovery and transfer pumps, associated piping, and multiple safety, control, and isolation valves. Associated tasks include scheduling and management of staff and technical personnel, preparation of NYSDEC quarterly monitoring reports, discharge monitoring reports, system performance monitoring, groundwater sampling and water measurements, coordinating facility upgrades and routine equipment maintenance.

Ancillary tasks performed include the preparation of divestment summary evaluations and the management of soil and groundwater investigations at two sites slated for potential sale. Obtained closure of the existing NYSDEC spill numbers at two sites, resulting in no further remedial activity necessary.

- Project Engineer responsible for providing engineering design support for the installation of a dual-phase free product and groundwater recovery and treatment system at a former petroleum refinery and bulk storage terminal in Brooklyn, New York. Major tasks included the preparation of Technical Specifications per CSI format, hydraulic pipe headloss calculations, free product recovery pipe headloss calculations, development and coordination of subcontract work authorizations and scope, Contract Drawing detail contributions and quality review for three separate subcontracts (Subcontract A: site work, subsurface piping, well house and directional drilling installation; Subcontract B: treatment building interior remedial equipment and mechanical work; and Subcontract C: electrical power and control subcontract). Hydraulic headloss calculations were performed using Hazen-Williams formula for sizing multiple variable speed submersible groundwater recovery pumps. Enforced the contractors' adherence with the CSI format technical specifications, contract drawings, and client's extensive corporate health and safety policy. This project required quality review for high density polyethylene (HDPE) piping fabrication and installation, horizontal directional drilling for conduit and HDPE pipe installation, petroleum-impacted soil/abandoned pipe handling and site work, concrete structure preparation and installation, overhead pipe rack arc welding and modification, steel pipe and HDPE pipe pressure testing, electrical conduit installation, power cable and fiberoptic control signal wire installation, and solenoid valve operational troubleshooting.
- Project and Staff Engineer for the conceptual design, final design, and construction management of a groundwater conveyance system located at a Delaware Superfund Site. The project consists of converting 5 monitoring wells into pumping wells with subsurface vaults. The individual wells' discharge piping was connected to a common header pipe and traveled approximately 2,700 feet to tie in to an existing air stripper. Numerous utility crossings, telemetric pump control wiring installation, and a horizontal directional drilling operation underneath a private railroad spur were involved. Major tasks included preparation of Technical Specifications and Contract Drawings including piping plan and profile, process and instrumentation diagram, multiple construction details, groundwater conveyance piping head loss calculations via Manning's Equation and Hazen-Williams formulas, air stripper atmospheric mass loading calculations based on design influent concentration, flow rate and packed tower removal efficiencies, design of a subsurface piping railroad crossing, subsurface piping trench load calculations using Marston's Load Equation for active vehicular traffic areas, treatment equipment vendor research, preparation of final "As-Built" drawings, contractor supervision, construction submittal review, project progress reports, weekly USEPA briefings, preparation of the final remedial action report, and contractor bidding services.
- Project and Staff Engineer overseeing contamination delineation, remedial efforts, and site closure for a large Manhattan office building. This task involved remedial oversight of free product delineation and free product

## Joshua B. Levine, P.E. Senior Engineer

removal from the subsurface soils immediately surrounding a 12,000 gallon subsurface number 6 fuel oil storage tank. This project required the provision of engineering support services for the development of an interim remedial plan to remove free product from the tank's surrounding subsurface soil. A petition for site closure was developed and accepted by the NYSDEC, resulting in closure of the Site's spill number and no further remedial action necessary.

- Staff Engineer for construction management of a potable water main and residential service connection installation in Charlton, Massachusetts. The project responsibilities included field construction supervision, post-installation hydrostatic pressure test, coordinated system transfer of ownership from client to municipal water authority, coordinated field design changes, post-construction design review calculations (to confirm actual field conditions), prepared post-construction summary report, reviewed contractor invoices, responded to contractor change order requests, provided contractor health and safety recommendations and action items in accordance with Occupational Safety and Health Administration requirements for trench safety, prepared progress reports and punch lists, designed and prepared As-Built Construction Drawings, documented completion of punch list items, prepared residential potable service connection permit applications, and correspondence with residential recipients of potable water
- Staff Engineer for the design and contractor bidding support services for the addition of an extraction well and subsurface piping to an existing groundwater pump and treat system located in Dayton, New Jersey. The design was necessary to prevent off-site migration of a pesticide impacted groundwater plume and required proper integration of the new well to the existing telemetric remote monitoring system. An additional remedial task for this site included the design of an asphalt cap to cover pesticide impacted surficial soils.
- Project Engineer and Project Manager for the permitting and construction supervision of two separate high volume well redevelopment projects located at a major pharmaceutical manufacturing facility in Brooklyn, New York. These projects required obtaining wastewater quality control permits from the New York City Department of Environmental Protection (NYCDEP) and separate approvals from the Compliance Engineering Section and Division of Permitting and Connections to discharge greater than 10,000 gallons per day of redevelopment water into the City-owned combined sewer. Construction supervision required monitoring the well's specific yield and increase in capacity from 300 gpm to over 1000 gpm.
- Staff Engineer for the development of a free product recovery plan at a major oil terminal in Albany, New York. This project entailed developing a piping plan, trenching and subsurface well vault details and working with the client to develop pump locations and product recovery system configuration. In addition, an "in-well" product pump review and analysis was performed in conjunction with historic well gauging data, recovery rates and well depths to determine the most applicable product pump for this particular application.
- Staff and Staff-Assistant Engineer for the conceptual design, final design, and construction oversight of two constructed wetland units and a sedimentation basin for a stormwater treatment system along Cedar Swamp Creek for the City of

Glen Cove, New York. The constructed wetlands design included a forebay, high and low marsh cells, a micropool and stormwater bypass structures for removal of sediment, nitrogen, phosphorus, and trace metals during first flush events. Final design for the first 1.8 acre constructed wetlands unit and performance of construction management was completed in April 2001. Design activities include structural and hydraulic design tasks with specific emphasis on storm water bypass. The design was integrated into an inter module transportation project with the addition of bicycle and walking paths. NYSDEC and Army Corps permits were obtained for the project. Major tasks included field construction oversight, change order review, field design changes, contractor invoice review, progress report and punch list preparation, NYSDEC permit application preparation, review and comparative analysis of soil boring lab data vs. TAGM regulatory limits for Site Characterization, organizing a model sampling plan for the City of Glen Cove, and surveying support for delineating Site limits.

- Staff Engineer for the field construction supervision of multiple test pit excavations performed during a Site Investigation to delineate contamination at a former steel/airplane manufacturing facility in Nassau County, New York.
- Project and Staff Engineer for Vacuum Enhanced Product Recovery remediation efforts at one active and one former municipal transportation authority bus depot in Howell and Newark, New Jersey, respectively. These tasks involved field supervision of product recovery efforts and analysis of the resulting data. Free-phase product was recovered from these sites using vacuum applied to individual monitoring wells via a mobile vacuum truck and drop pipe apparatus.
- Staff Engineer for the conceptual design of an asphaltic landfill cap's associated drainage elements (subsurface drainage piping and recharge basin sizing) at a former municipal landfill in Brentwood, New York. Additional tasks included surface runoff calculations, storm event rainfall calculations and swale sizing via TR-55 runoff methods.
- Project Engineer and Staff Engineer for the field inspection and permitting services for two hazardous materials storage tanks at a metals plating facility in Freeport, New York. This project required the preparation, submission and procurement of a Toxic and Hazardous Materials Storage Facility Permit (Article XI) and Tank Registration from the Nassau County Department of Health (NCDOH). This Permit was obtained from NCDOH in accordance with NCDOH Article XI regulations and New York State's 6 NYCRR Part 596 and 599 requirements for hazard substance bulk storage and spill and overfill protection secondary containment for transfer areas. Designed the secondary containment and spill overfill protection for diked /transfer areas to satisfy Article XI and conducted the following tasks for this project: secondary containment capacity calculations; multiple site visits for development and submission of construction As-Built drawings; permit application correspondence with the NCDOH and client; and permit procurement to enable the client to increase profitability by putting the subject tanks into active service while fulfilling prerequisite safety controls.
- Staff and Staff-Assistant Engineer for the operations and maintenance of a 450-gpm, dual-phase free-product recovery system in Greenpoint, Brooklyn, New York. System components maintained include dual-phase groundwater and

## **Joshua B. Levine, P.E.**

### **Senior Engineer**

product recovery, low profile air strippers and a catalytic oxidation unit. Major tasks involved the compilation of free-product and water table elevation figures for quarterly progress reports, preparation of discharge monitoring reports, creation of permit log, field sampling and monitoring of free-product and water measurements, coordinating facility upgrades and routine equipment maintenance.

- Staff Engineer for the conceptual and final design of a constructed wetlands stormwater treatment system for a coal handling freight railroad facility in Norfolk, Virginia. The design consists of treatment of contaminated stormwater runoff generated from maintenance and fuel handling areas onsite. The design treatment performance objective is the reduction of total suspended solids, oil and grease, and selected metals to levels below the SPDES permit discharge standards established for two of the site's outfalls discharging to the Elizabeth River. The 3-acre system consists of a passively operated 200,000 gpd subsurface-type constructed wetlands with a low visual impact and specialized structural design to meet the needs of a busy railyard facility. Additional design components include stormwater bypass structures, jacking beneath tracks, a grit chamber, a lift station, and outfall modifications. Major tasks performed during this project included the development of technical specifications, review of contract drawings, review and processing of construction submittals, preparation of bid form, piping profiles, wetlands cell volume and piping head loss calculations and the submission of a wetlands modification permit application to the City of Norfolk.
- Staff Engineer aiding in the completion of a Remedial Action Work Plan (RAWP) for the closure and capping of an oil/water separator at an oil refinery in Rhode Island. Major tasks included report review, preparation of figures, surface water swale sizing, differential settlement and TR-55 runoff calculations.
- Staff Engineer providing litigation support research for an insurance claim at a paint manufacturing site in Joplin, Missouri. Research entailed reporting historical land use patterns at an isolated lagoon within the site and evaluating groundwater flow patterns and contaminant fate and transport.
- Staff Engineer aiding in the preparation of a Remedial Alternatives Report to identify remedial strategies for a former landfill located in Northport, New York. Major tasks included the preparation of alternative excavation and landfill capping extents and figures, tabulation and compilation of alternative cost estimates, and editing of the Remedial Alternatives Report.

## Joseph P. Gavin Project Hydrogeologist

### Technical Specialties:

Phase I / Phase II Environmental Site Assessments; Petroleum Bulk Storage (PBS) compliance programs; site investigations, underground storage tank (UST) assessments, and remedial oversight at residential properties, major chain retail stations and commercial / industrial facilities.

### Experience Summary:

Seven years of experience: Project Hydrogeologist with Roux Associates, Inc.; Geologist, PBS Compliance Manager, and Environmental Technician with C2G Environmental Consultants, LLC.

### Credentials:

M.S. in Geology; City University of New York, Brooklyn College, Brooklyn, New York; anticipated May 2013

B.A. in Environmental Science with Geology Concentration; City University of New York, Queens College, Flushing New York, 2003

OSHA 40-hour HAZWOPER Training

OSHA 8-HOUR Refresher Training

AMTRAK Contractor Safety and Security Training

### Key Projects

- PBS Compliance Audit responsible for managing and conducting a multi-million dollar PBS Compliance Audit Program, under supervision of the New York State Department of Environmental Conservation (NYSDEC), at over 400 facilities throughout New York State for Getty Petroleum Marketing, Inc. (GPMI), OK Petroleum, Prestige Petroleum, Bottini Fuels. Included all scheduling, site inspections, updates to PBS tank registrations to NYSDEC, Rockland County Department of Health (RCDOH), Westchester County Department of Health (WCDH), Nassau County Department of Health (NCDH), Suffolk County Department of Health Services (SCDHS), compliance issue tracking, and addressing regulatory and client inquiries.
- PBS Compliance Manager responsible for managing and conducting Major Oil Storage Facility (MOSF) Compliance Audits for GPMI locations in New York to acquire and/or maintain MOSF license registration.

- Provide PBS compliance training seminars and compliance issue review sessions for GPMI employees biannually.
- Managed and performed PBS Compliance Audits for over 50 non-retail properties (i.e., local municipalities, commercial and industrial properties) throughout New York.
- Performed Phase I Environmental Site Assessments and as part of due diligence in connection with property transfers for the Long Island and Hudson Valley, New York region. A majority of properties included MOSF Terminals, commercial properties, former retail gasoline stations, and office buildings.
- Field manager responsible for Phase II Site Assessment and preparation of investigation reports for soil boring installation, monitoring well installation and corresponding soil / groundwater sampling. Projects include field oversight for retail gasoline station UST replacement for multiple GPMI locations; quarterly well sampling programs.
- Staff Geologist responsible for managing field activities associated with site investigations and UST removal and closure at over 30 residential properties under the NYSDEC spills program. Responsibilities also included preparation of reports and regulatory agency / client correspondence.
- Managed performed environmental services to achieve and/or maintain SPDES permit requirements for multiple MOSF terminals in the Hudson Valley, New York area.
- Provide field oversight for Allstate Insurance Company policy holders during contractor UST removal and spill remediation projects for over 40 New York residential locations.
- Emergency spill remediation services for Central Hudson in the Hudson Valley, New York area following Hurricane Irene.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 02/01/2013 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

### ***Federal CERCLIS list***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 13 RCRA-CESQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal institutional controls / engineering controls registries***

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 12/19/2012 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

| <u>Equal/Higher Elevation</u> | <u>Address</u>              | <u>Direction / Distance</u>      | <u>Map ID</u> | <u>Page</u> |
|-------------------------------|-----------------------------|----------------------------------|---------------|-------------|

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/19/2012 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

### ***State and tribal landfill and/or solid waste disposal site lists***

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/07/2013 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

| <u>Lower Elevation</u>               | <u>Address</u>                     | <u>Direction / Distance</u>      | <u>Map ID</u> | <u>Page</u> |

### ***State and tribal leaking storage tank lists***

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/19/2013 has revealed that there are 56 NY LTANKS sites within approximately 0.5 miles of the target property.

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 48 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

### State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 01/02/2013 has revealed that there are 2 NY TANKS sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 11/18/2010 has revealed that there are 8 NY RES DECL sites within approximately 0.125 miles of the target property.

### Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/19/2013 has revealed that there are 81 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 64 NY Hist Spills sites within approximately 0.125 miles of the target property.

## EXECUTIVE SUMMARY

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 50 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 43 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 8 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the

**HUDSON RIVER PCBs (Continued)**

**1000384273**

Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs

discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a

population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

**Environmental Interest/Information System**

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**1000384273**

Material: DIESEL  
Class Type: DIESEL  
Times Material Entry In File: 10625  
CAS Number: Not reported  
Last Date: 19940728  
DEC Remarks: 02/18/88: COMPANY HIRED DOMERMUTH AFTER MCDONALD INITIATED CLEANUP.  
Spill Cause: 275 GAL TANK LEAKING INTO CEMENTON RIVER AT EDGE OF HUDSON. MCDONALD WILL INVESTIGATE

**SPILLS:**

Facility ID: 0308107  
DER Facility ID: 278391  
Facility Type: ER  
Site ID: 237813  
DEC Region: 3  
Spill Date: 10/31/2003  
Spill Number/Closed Date: 0308107 / 10/31/2003  
Spill Cause: Abandoned Drums  
Spill Class: Possible release with minimal potential for fire or hazard or Known release with no damage. DEC Response. Willing Responsible Party. Corrective action taken.

SWIS: 6000  
Investigator: rxamato  
Referred To: Not reported  
Reported to Dept: 10/31/2003

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
Used oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Violation Status: No violations found

**MANHOLE 60978 (Continued)**

**S106720770**

11/20/04 at 01:05hrs. to report he found approx. 8 gallons of an unknown oil and no water in M60978, which is located on the North side of W.58 ST 100' w/o 11Ave. H.Muniz#16825 was in M60978 to ID and mark phases on feeder 22M62 when he discovered the spill. There was no fire or smoke involved and no sewers or waterways were affected. H.Muniz#16825 says there is some oil in the sump. There were no injuries related to this spill and the weather conditions did not contribute to the hazard of this spill. There was no private property affected. The source and cause of the spill is unknown. There is oil filled equipment in M60978, the primary feeder cables. There is no water in M60978. There is a sump in M60978. There was a yellow environmental tag numbered #44969 hung in M60978. There were three samples taken from M60978, one for PCB's, one for oil ID and one for Flashpoint. The samples are marked priority E. The chain of custody form number is #DD20560. There was no initial cleanup action taken. The cleanup is pending crews and test results. 11/20/04 04:25UPDATE : The feeder number was incorrectly given as 22M62, it is really 23M62. H.muniz#16825 notified the control center to say that after taking samples he says that there is approx. 6 gallons of unknown oil and some water, not 8 gallons as he had earlier stated. A cleanup has been setup for 11/20/04 at 07:00hrs. Lab Sequence Number: 04-09657-001 - PCBs < 1 ppm Lab Sequence Number: 04-09657-002 - Flash Point, PMCC > 140 deg F Lab Sequence Number: 04-09660-001 - Analysis indicates the presence of a cable oil. 11/20/04 12:02 W. Dixon # 86121 Underground splicer/cleanup person called to report that at 11:30 the cleanup was completed. The structure was double washed with slix. 1 bag of ppe was generated as a result of this spill. The flush truck removed all liquid. The spill tag # 44969 was removed.  
Remarks: CLEAN UP PENDING TEST RESULTS. CON ED REF # 156323.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Region: 2  
DER Facility ID: 191667  
DEC Memo: Tracking of site remediation has been consolidated under spill no. 90-09804. See also spill nos. 91-05201, 91-08084, 91-08497, 95-01523, and 04-03370.7/28/1997: A stipulation agreement was executed between Mobil Oil Corporation and the Department. (Harrington)8/4/2003: This spill site has been transferred from Sigona to Harrington (central office) for management. (Sigona)7/8/2005: Sent a letter to Exxon Mobil approving the interim RAP. The interim RAP calls for the evaluation of high-vacuum dual-phase extraction. Also sent them the necessary NYCDOT road-opening permit letter for test well installation along the east side of 11th Avenue. (Harrington)2/2/2006: Sent an e-mail to Exxon Mobil approving the supplemental SI report. The high vacuum dual-phase extraction (HVDPE) feasibility study has been initiated. The FS report is due in the Spring of '06. (Harrington)4/5/2006: Sent an e-mail to Exxon Mobil approving the final RAP. The RAP calls for the installation of a HVDPE system, which is scheduled to be in place by late summer. (Harrington)6/5/2006: Approved modification to the IRMs being conducted on-site (EFR events reduced from monthly to quarterly @ wells MO-2, MO-3, MW-12, and MW-14; EFRs can be eliminated @ MW-12 if an absorbent sock is installed to recover free product). Approval sent to Exxon Mobil via e-mail. (Harrington)2/14/2007: Transferred from Harrington to Milack. (Milack)5/24/2007: Remedial system is in place but still has not received necessary electrical inspection and discharge permits. (Milack)12/07: System began operating and Kleinfelder will be submitting a startup report. May 2010 - The supplemental CAP, received January 29, 2007, outlines the operation of a High Vacuum Dual Phase Extraction (HVDPE) system, as well as continued quarterly enhanced fluid recovery (EFR) events, until the system begins operation. The supplemental CAP was approved April 12, 2007. A Site Status Update report was received on August 20, 2007. The remedial system began operating the week of November 26, 2007. A Site Status Update Report (SSUR) was received February 29, 2008. A HVDPE Remediation System Start-up Report was received on March 27, 2008 and a SSUR was received on May 22, 2008. A site visit was made on July 9, 2008, and the weekly OM&M is continuing. The HVDPE system continues to operate successfully with levels in the groundwater dropping from 20 ppm levels in several wells to ppb/low ppm levels in

twoyears. Based on this trend, the consultant is hopeful that the system can be shut down in 2010. The latest SSUR was issued March 25, 2010. The latest groundwater sampling was conducted in January 2010 and showed consistent results with previous rounds. Weekly OM&M of the HVDPE system continues. The HVDPE system was non-operational for much of May and early June 2010 due to access issues caused by a sidewalk replacement project. Operation was resumed 6/13/2010 and continues to date. (11/22/10)Nov. 2011 - A 9 month temporary shutdown of the on-site High Vacuum Dual Phase Extraction System (HVDPE) combined with initiating monthly Enhanced Fluid Recovery (EFR) events was approved in June 2011 and is ongoing. Dec. 2011 - DEC was informed that Groundwater and Environmental Services (GES) will be the new remedial consultant for this spill as of 1/1/12. Karen Bourque (866)839-5195 ext. 3833 is the contact person at GES. April 2012 - A reduction in the number of monitoring wells to be included in tri-annual sampling was approved. June 2012 - Results of May 2012 sampling were generally consistent with previous sampling results.

Remarks: LINE TEST ONLY, FAILED PETRO TITE, WITH A LEAK RATE OF -.26GPH, TYREE WILL EXCAVATE, ISOLATE & RETEST.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"e2mis no. 152358:approx. 3 gallons of transformer oil had leaked onto concrete floor Of vault. (Bottom Leak) He also reports that upon arrival to this location that sump pump was found not running and he has unplugged same. Also trap was opened and no oil was found. Historic sample states less than 25 PPM. Sample for PCB has been taken.Lab Sequence Number: 04-01646-001: TOTAL PCB 67 ppmA. Prazan #88744, I&A Oper. Supervisor, reported at 14:00 hrs. on 3/6/04 that a partial cleanup was performed in this vault. Two drums of solid debris consisting of PPE & debris was generated and removed. 392 gallons of oil & water was removed from the vault & transformer by the tanker. Engineering controls wereinstalled to contain the spill. The I&A crew performed a "drain & disconnect". They determined the source of the spill as the transformer and the cause is a bottom leak in the transformer.May 05-2004 @ 05:32hrsEmployee Mr. J Morgan # 14490 reported at 05:32 the clean-up was completed 3 drum soild waste. 150 gals oil/water mixed removed by tanker double washed with slix.UPDATE: 5/6/2004 Supervisor Lou Guglimenti reported the defective transformer was removed and a new transformer installed.

Remarks: FAULTY TRANSFORMER: NO FIRE,SMOKE WATERWAYS OR PRIVATE PROPERTY:

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "HARRINGTON" This spill site has been transferred from DEC Sigona to RemedialBureau B, on August 4, 2003. see spill #90-09804  
Remarks: TANK IS PROBABLY GOING TO BE REPLACED.

**Material:**

Site ID: 59315  
Operable Unit ID: 1012439  
Operable Unit: 01  
Material ID: 370130  
Material Code: 0009  
Material Name: Gasoline  
Case No.: Not reported  
Material FA: Petroleum  
Quantity: 0  
Units: Gallons  
Recovered: No  
Resource Affected: Not reported  
Oxygenate: False

**Tank Test:**

Site ID: 59315  
Spill Tank Test: 1543801  
Tank Number: Not reported  
Tank Size: 0  
Test Method: 00  
Leak Rate: 0  
Gross Fail: Not reported  
Modified By: Spills  
Last Modified: 10/1/2004  
Test Method: Unknown

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site Code: 390497

**Actual:**  
**23 ft.**

**Site Description:** Location:The Mid Block #57 Project site is located in Manhattan at 615-649 West 57th Street, between 11th and 12th Avenues. The site consists of Tax Block 1105, Lots 14, 19, 43, and part of Lot 5, in the Borough of Manhattan. The surrounding neighborhood is mixed residential and commercial.Site features:This site is approximately 1.36 acres in size. Former on-site buildings have been demolished and the site is currently vacant.Current zoning/uses:Remedial action began in March 2010 and as such is currently vacant. Remedial action is currently on hold until autumn of 2011 due to some changes in building design and associated permit requirements. East of the Site and bordering 11th Avenue is The Helena, an active rental residential tower with market and affordable housing, and Manhattan Mini Storage. The Helena is located at 601 West 57th Street (southeast corner of block) and Manhattan Mini Storage is located at 847-853 Eleventh Avenue (northeast corner of block). West of the Site at 830 12th Avenue is a vacant lot, which formerly contained an Airborne Express parcel warehouse and Artkraft Strauss Building (formerly manufactured signs and billboards). Potential contamination on this property to the west is being investigated as an off-site project (see C231062A).Historical use:The Site formerly contained an Airborne Express parcel warehouse and vehicular maintenance building (631-649 West 57th Street), a Potamkin Toyota auto service repair facility (623-629 West 57th Street), the Copacabana Night Club (615-621 West 57th Street), and Dynasty Auto Body Facility (616-618 West 58th Street). The site was originally proposed to be redeveloped as a school, but now is planned for residential use with ground level retail and a sub-grade parking level.Site geology and

MAP FINDINGS

**OFF-SITE MID-BLOCK #57 PROJECT (Continued)**

**S108984485**

hydrogeology: The topography of the site slopes gently to the west toward the Hudson River, which is situated approximately 250 feet west of the site. The site geology is characterized by fill material overlying sand and till, weathered rock, and bedrock. A Brownfield Cleanup Agreement (BCA) was executed in December 2008, and on February 17, 2009 an amendment to the BCA was signed by new volunteers. The Remedial Action Work Plan (RAWP) was approved in March 2010. The Volunteer intends to complete a Track 1 cleanup for Unrestricted Use.

Env Problem: Nature and extent of contamination: The Remedial Investigation (RI) found contamination in soil, groundwater, and soil vapor. Contaminants of concern at the Site are petroleum-related compounds. Contamination in each of these media is discussed below. Soil: Twenty three (23) soil samples were analyzed. Analytical results revealed volatile organic compounds (VOCs) in soil exceeding Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs). This includes ethylbenzene, detected at 275 parts per million (ppm) in comparison to the UUSCO of 1 ppm; 1,2,4-trimethylbenzene at 317 ppm compared to the UUSCO of 3.6 ppm; and total xylenes at 1,380 ppm compared to the UUSCO of 0.26 ppm. Semi-volatile organic compounds (SVOCs) were also identified in soil in multiple samples at concentrations above the UUSCOs. This includes chrysene which was detected at 5.5 ppm compared to the UUSCO of 1 ppm and naphthalene at 38 ppm compared to the UUSCO of 12 ppm. Metals identified in soil samples at concentration above the UUSCOs include mercury at 46 ppm compared to the UUSCO of 0.18 ppm; chromium at 65.8 ppm compared to the UUSCO of 30 ppm; lead at 4,420 ppm compared to the UUSCO of 63 ppm; and zinc at 1,250 ppm compared to the UUSCO of 109 ppm. Groundwater: Eleven (11) groundwater samples were analyzed. The analytical data revealed VOCs at concentrations exceeding NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards. Benzene was detected at 1,500 parts per billion (ppb) compared to the TOGS standard of 1 ppb; 1,2,4-trimethylebenzene at 2,400 ppb (TOGS standard is 5 ppb); and total xylenes at 4,900 ppb (TOGS standard is 5 ppb). A few SVOCs were detected at concentrations exceeding TOGS standards include naphthalene as high as 190 ppb (TOGS standard is 10 ppb); benzo(a)pyrene as high as 8.3 ppb (TOGS standard is non-detect); and chrysene as high as 10 ppb (TOGS standard is 0.002 ppb). Metals detected in groundwater at concentrations exceeding TOGS standards include: lead as high as 900 ppb in unfiltered samples compared to the TOGS standard of 25 ppb; mercury as high as 11.9 ppb (unfiltered) (TOGS standard is 0.7 ppb); chromium as high as 139 ppb (unfiltered) (TOGS standard is 50 ppb); and arsenic as high as 38 ppb (unfiltered) (TOGS standard is 25 ppb). None of these metals were detected in filtered groundwater samples. Manganese and sodium were the only metals detected in both unfiltered and filtered samples at concentrations above TOGS standards. Soil vapor: Twelve (12) soil vapor samples were analyzed. Analytical data revealed the presence of VOCs in these soil vapor samples, including benzene at a maximum concentration of 831 micrograms per cubic meter (ug/m3), 1,2,4-trimethylbenzene at 37,600 ug/m3, tetrachloroethane (PCE) at 240 ug/m3, and total xylenes at 21,400 ug/m3. Special resources impacted/threatened: There were no significant ecological resources identified at the site during the investigation. Significant threat: Based on the results of the Remedial Investigation, NYSDEC and NYSDOH have determined that the Site represents a significant threat to human health and the environment. This decision is based on the

MAP FINDINGS

**OFF-SITE MID-BLOCK #57 PROJECT (Continued)**

**S108984485**

nature of the existing contaminants identified at the Site; the potential for off-site migration of contaminants in the groundwater; and the potential for human exposure to site-related contaminants via soil vapors.

**Health Problem:** The site is vacant, therefore, contact with contaminated soil is unlikely. Drinking water with site-related contaminants is not expected as the area is served by public water. Since on-site soil vapor contains elevated levels of volatile organic compounds, inhalation of site-related contaminants via soil vapor intrusion in future on-site buildings may be possible. Vapor intrusion into off-site structures is a potential exposure pathway that needs to be investigated.

**Program:** BCP

**Site Code:** 419512

**Site Description:** This project was initiated to address off-site impacts from the Mid-Block #57 Brownfield Cleanup Program (BCP) project C231062. There is also a stipulation agreement for the Site, under Spill 9810172. **Location:** This Site is located at 615-649 West 57th Street and 830 12th Avenue in the Borough of Manhattan, Block 1105, Lot 1 and part of Lot 5. It is immediately west of BCP Site C231062. To the west is 12th Avenue and the Hudson River; north is 58th Street and the 59th Street Con Edison steam generating facility; and to the south is 57th Street and several businesses, including parking facilities, auto dealership service stations, and offices of NYC Sanitation Department. The surrounding neighborhood is mixed residential and commercial. **Site features:** The Site is a rectangular lot of 1.17 acres. Former on-site buildings have been demolished and the Site is currently vacant. **Current zoning/uses:** The site is currently vacant, following demolition of the on-site buildings. Construction on this site is planned to be performed in conjunction with work on the BCP site to the east. Proposed development is for residential and commercial use. **Historical use:** Prior to 1951, the western portion of the site formerly contained the Brockway Motor Truck Company and Stutz (or State) Service Station. By 1951 a private garage and repair shop occupied the 2-story building. By 1976 the building was used by the Artkraft Strauss Sign Company for the manufacturing of signs and billboards for Times Square. The first floor of the building was used at this time for parts storage, metalworking and woodworking equipment, painting, and storage of vehicles. After Artkraft Strauss left the building was subsequently served as studio space for artists. This building was demolished in early 2011. The eastern portion of the site formerly contained the Colt Stewart Co. Chrysler Service Station followed by United Parcel Service, Inc. who occupied the building by 1940. **Underground Storage Tank (UST) leaks** were reported to the Fire Department during that time. The building was subsequently used by New York Telephone, who installed 2 USTs, and later by Airborne Express as a parcel warehouse. The building was demolished in 2001 and subsequently used as a parking lot. **Site geology and hydrogeology:** The Site topography slopes west toward the Hudson River with an elevation ranging from 13 feet above Manhattan Bureau Datum on the eastern portion of the Site to 7 feet above Manhattan Bureau Datum on 12th Avenue. In general, regional topography slopes gently to the west. The nearest surface water body is the Hudson River located approximately 250 feet west of the Site. The Site geology is characterized by fill material of varying thickness overlying sand and till, decomposed rock, weathered

rock, and bedrock.

Env Problem: Nature and extent of contamination: Soil: Petroleum-related contaminants at levels exceeding unrestricted use soil cleanup objectives (UUSCOs) exist in discrete locations on the site. These areas were largely addressed via Interim Remedial Measures (including UST removal and excavation of surrounding impacted soil). Following the IRM work, end-point samples in the northern excavation show remaining contamination that requires further remedial action, including benzene at 0.21 ppm (UUSCO is 0.06 ppm); ethylbenzene at 8.5 ppm (UUSCO is 1 ppm); total xylenes at 8.1 ppm (UUSCO is 0.26 ppm); 1,2,4-trimethylbenzene at 33 ppm (UUSCO is 3.6 ppm); and 1,3,5-trimethylbenzene at 16 ppm (UUSCO is 8.4 ppm). In addition to this area, two other discrete areas on the site will be excavated to remove soil with elevated concentrations of benzene under the approved Remedial Action Work Plan (RAWP). Semi-volatile organic compounds (SVOCs) have also been found site-wide, at concentrations that indicate this is part of site background conditions. One area of elevated SVOCs (LB-17) requires remediation under the RAWP. SVOCs detected here include: benzo(a)anthracene at 12 ppm; benzo(a)pyrene at 10; benzo(b)fluoranthene at 12 ppm; and chrysene at 10 ppm (UUSCO for these contaminants is 1 ppm). Tetrachloroethylene (PCE) previously detected in one boring at 1.76 ppm was removed during the IRM work; chlorinated VOCs were not detected in any other borings. Groundwater: In on-site groundwater, VOCs detected in previous investigations have been largely reduced. In 2007 tetrachlorethene was detected in one groundwater sample and vinyl chloride in a separate groundwater sample; these have not been detected in any groundwater samples since. The only contaminants detected in on-site groundwater at concentrations exceeding the NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards, during the recent Remedial Investigation, include: 1,2,4-trimethylbenzene at 8.1 ppb and isopropylbenzene at 42 ppb. Off-site monitoring wells have detected (in historical sampling) benzene at 20.3 ppb (compared to the TOGS standard of 1 ppb); Ethylbenzene at 61 ppb (compared to the TOGS standard of 5 ppb); and total xylenes at 39.5 ppb (compared to the TOGS standard of 5 ppb). Groundwater contamination appears to be coming from the adjacent BCP site C231062 (Mid-Block 57 Site). Soil vapor: Historical soil vapor sampling (2007) and RI soil vapor sampling initially identified high concentrations of chlorinated VOCs in soil vapor in a few discrete locations including tetrachloroethylene (PCE) as high as 46,500 ug/m<sup>3</sup> and trichloroethene (TCE) as high as 1400 ug/m<sup>3</sup>. Following the IRM work, these concentrations were greatly reduced but are still present (post-IRM soil vapor samples identified PCE at a maximum of 125 micrograms per cubic meter (ug/m<sup>3</sup>) and TCE at a maximum of 67.2). Petroleum-related contaminants are also present in soil vapor, including benzene at 130 ug/m<sup>3</sup> and ethylbenzene as high as 82 ug/m<sup>3</sup>. The approved RAWP includes installation of a sub-slab depressurization system.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Historical Generators:

Date form received by agency: 07/20/2012

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

at app. 01:00 to place field grounds on the transformer that he found app. 3 to 6 oz. Of an unknown oil that ran across the roof of the vault and partially down the ladder which is bolted to the roof. There was no oil on the floor of the vault. this spill looks to be a third party spill awaiting lab results to confirm same. Update: Mon 2/18/2002 1:13 PMLab Sequence Number: 02-01398-001 < 1.0 ppm PBC. Analysis indicates the presence of a substance similar to a lubricating oil. On 02/18/02 at 18:18 P. Renzulli # 94786 reported to M. Gallagher that at app. 18:00 the cleanup was complete was complete. Vault was washed with citrus clean. Cleaned ceiling and ladder with citrus clean app. 10 gallons was removed by tanker and washed by flush truck. This vault is on the first floor in front of a Nissan dealership and the motor oil is leaking into vault from their waste oil system. P. Renzulli stated that the oil is coming in thru a crack in the roof of the vault and he believes that this is going to be a recurring problem until the dealership has their waste oil system repaired, employee spoke to a employee named Mark at the dealership who told him he would inform his general manger of the problem. 4/2/02: Referred to Rommel for follow up. (JHO)03/03/03-close spill.

Remarks:

believed to leaking from the waste oil at a nissan dealership - sample results indicated lube oil - non pcb - spill called in at req of dec - ref # 14108

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL." This spill site has been consolidated under Spill No. 9810172.NO SPILL. NO FREE PRODUCTS, NOT A NEW SPILL. THEY FOUND GAS SMELL IN SOILS AND SAMPLED IT. THE SITE WAS TAXI STATION BEFORE.DEC Sigona was assigned this case from DEC Mulqueen. This spill is part of Durst Organization development 601-657 West 57th Street project being managed by Dave Winslow at ATC Environmental (212)253-8280.Also, see spill nos. 9403727 and 9607862 for further information.10/28/05 - Spoke to Peter Kolodner. Informed him that case manager is Sue Lasdin. Will send report to sue today. - KST7/11/06 - GZA GeoEnvironmental submitted a GW monitoring report. Based on the monitoring report, only low level VOCs (17 ppb) in GW. Called Dave Winslow of GZA to request a site diagram indicating the location of the previously removed USTs and contaminated soil. He called back and inform DEC that there is still a large volume of gasoline contaminated soil on the site. Site owner is planning to develop the property and excavate the contaminated soil. Asked Mr. Winslow to send a copy of an updated site map indicating the location and approximate size of contaminated soil area. Also, asked him to send in a PDF version of the last GW Monitoring Report. - KST03/27/2007: This spill case was transferred to A. Doronova. - AD.04/17/2007: Spoke by phone with David Winslow of GZA regarding submittal of updated site map and any information about excavation of contaminated soil at the site. He promised to send via email all necessary information. AD04/19/2007: Received an email from David Winslow of GZA. He wrote, that GZA submitted some proposal to the site owner, and as soon as they get approval, GZA will send us all updated information for this site. AD05/04/2007: Received an email from D. Winslow. He asked if Stipulation Agreement was ever executed for this site. I did not find any information regarding it in the file. I sent a email to Koon Tang (previous case manager) but did not receive any answer. Because this site does not employ any remedial system with discharges to the environment which require DEC permit,

**S104506089**

probably Stipulation Agreement was not necessary for this site. I wrote email to D. Winslow with such explanation. AD 06/08/2007: Spoke to Dave Winslow of GZA regarding an update of the site status. He said that the owner still deciding what to do at the site. AD called few times and spoke to both D. Winslow of GZA and Louis Esposito of Durst Organization, Inc. No any following response. AD 09/18/2007: Sent a letter to L. Esposito (owner) with a request to perform groundwater monitoring round to characterize current situation at the site. Based on the findings, conduct and submit to DEC a summary report with conclusions and recommendations. AD 10/17/2007: Received an email from the vice-president - Alexander Durst. They did monitoring round and currently in a process of report preparation. They changed a consultant. Roux company is their new consultant now. AD 11/29/2007: Received a quarterly groundwater monitoring report prepared by Roux and dated October 31, 2007. Will review. AD 12/17/2007: Reviewed the report. Roux sampled five monitoring wells on August 15-16, 2007 (MW-2, MW-3, MW-5A, MW-6 and MW-7). Slightly elevated VOCs were detected in wells: MW-3(167.5ppb), MW-5A(37.9ppb) and MW-6(16.7ppb). Low concentrations of SVOCs were detected only in well MW-3. The concentrations of VOCs were consistently lower in comparison to previous GW monitoring rounds. In addition, Roux applied for Brownfield Cleanup Program (BCP) for this site. Roux performed additional site investigation including soil, groundwater and soil vapor investigation to aid in the development of a BCP application for this site. Results of this investigation will be provided in the monitoring report for forth quarter of 2007. Spoke with Josh Levine of Roux regarding BCP application. He told me that while there is no significant groundwater contamination at the site, high levels of soil contamination still present according to the results of additional investigation. Roux will continue quarterly GW monitoring and will wait for results of BCP application. AD 02/25/2008: Spoke with J. Levine. He said that they unsure about BCP application approval, so they are now in a process of RAP preparation, which will propose remedial excavation of the contaminated soil at the site. Excavation work is planned to start sometime in April 2008. Work plan will be submitted in mid March. AD 03/17/2008: Received an e-copy of RAP. Will review. AD 03/18/2008: Reviewed the RAP. Roux proposes to excavate central portion of the site for new construction (5-story building). On the east of the planned excavation area there is Heleha apartments and mini storage building. On the west - vacant area, which will be fenced. Based on analytical results, the contaminated soil is located at depth ranging from 4 till 18 feet bls. The remedial excavation will remove all soils from the central area of the site from the surface to the water table (appr 16 feet bls). In addition soils below the water table will be excavated to the practical limits of the site development (appr 20 feet bls). The volume of the soil to be excavated and removed offsite estimated at appr. 44,000 cubic yards. Dewatering will be required during soil excavation to facilitate work below the water table. Extracted groundwater will be disposed offsite or treated to meet DEC requirements and discharged to the sewer system. Excavation will be followed by collection of end-point samples. Roux proposes to sample every 50 liner feet. Work plan includes vapor, odor and dust control plan, Health and Safety and Community Air Monitoring plans. The western portion of the site, which consist of area of former parking lot and former one story building (Airborne Express) and existing two story building (Aircraft Strauss company)

**631-49 WEST 57TH STREET (Continued)**

**S104506089**

is not included in current re-development plans. It will be isolated.  
03/19/2008: Spoke with J. Levine of Roux. Asked him to submit the site plan with locations of the former USTs and soil analytical data for the western portion of the site, where no excavation is planned. Told him that frequency of the soil sampling in the excavation pit should be changed from proposed 50 linear feet to 25. AD03/24/2008: Received site plan with former USTs locations and site plan with location of soil and groundwater samples. Analytical data indicate medium levels of SVOCs in soil and low levels of SVOCs in groundwater on the western portion of the site. No VOCs were detected above required standards in this area. Asked J. Levine of Roux to submit UST closure report in PDF format (2003). Also told him that groundwater grab sample should be collected from the area of former 3,000-gallon UST (Airborne Express lot) and that few monitoring wells should be installed into the sidewalk along West 58th Street and into the sidewalk along West 57th Street to investigate GW in the area of most contaminated borings (SB-12, SB-22 and SB-27) and to monitor effectiveness of remediation. AD03/26/2008: Received UTS closure report (PDF) downloaded in eDocs. According to the report, soil and GW data for western portion of the site did not exhibit significant levels of SVOCs. VOC concentrations were detected below required standards levels. No GW data for the area of the former 3,000-gallon UST (Airborne Express lot). AD 03/27/2008: Issued an approval letter with the following modifications:Groundwater in the areas of the most contaminated borings (SB-12, SB-27 and SB-22) should be investigated by installation of at least four additional monitoring wells. Two wells should be located in the sidewalk along West 58th Street and two wells in the sidewalk along West 57th street. A brief work plan showing proposed locations for these wells should be submitted for our review;One groundwater grab sample should be collected from the area of the former 3,000-gallon UST, which is located on the former Airborne Express lot;End-point soil samples should be collected from excavation sidewalls every 25 linear feet, and from the excavation bottom on the grid with 25-foot spacings. (cc: J. Kolleen-DEC; J. Levine-Roux; file). AD04/25/2008: Spoke with Josh Levine of Roux. He said that they excavated three USTs. Two of them were registered before and were closed in place. They also found one additional 1000-gallon waste oil UST and removed it. They applied for PBS registration for newly found waste oil UST and changed registration for two former closed in place USTs. End-point soil samples were collected. USTs closure reports will be submitted together with 2nd quarter monitoring report. Mr. Levine said that work plan for additional wells installation was sent to the owner for review. General excavation was postponed till the end of this year. AD05/15/2008: Received a pdf copy of Monitoring Report for the first quarter of 2008. Downloaded it to eDocs. Will review. AD05/19/2008: Received a hard copy of QMP for the first quarter of 2008. AD05/22/2008: Reviewed the report. Four monitoring wells were gauged and sampled during January-March 2008 period. Free product was not observed in the wells. Elevated levels of VOCs were detected in wells: MW-3 (639ppb) and MW-6(141ppb). AD 05/29/2008: Received the requested brief work plan for additional investigation, which proposed installation of four permanent monitoring wells and one temporary well point. AD06/04/2008: Sent a letter with approval of the work plan with a comment to also sample soil during the wells installation. AD06/13/2008: Received a phone call from Rory Levy of DCAS. They also involved with this site. He asked what kind of

actions we had required from the site's owner in order to cleanup the site. I answered his questions and forwarded a copy of an approval letter for additional investigation. AD07/09/3008: Received a phone call from Daniel Cole of DEP regarding the approved RAP for the site. He was asking about RAP implementation, on what phase is it now. DEP involved with this site due to re-zoning issues. AD07/15/2008: Spoke with Josh Levine of Roux. He updated us on AIWP implementation. They will start monitoring wells installation along West 58th Street tomorrow. Some problems were encountered while screening West 57th Street; electric and gas lines were detected in the close vicinity of the proposed wells location at this street. Postponed installation of the wells on West 57th Street. Asked Josh Levine to send an email explaining these issues. AD07/17/2008: Received email from J. Levine saying:Ainura-This e-mail serves to confirm that monitoring wells MW-8 and MW-9 were installed yesterday, July 16, 2008 in accordance with the Spill Closure Work Plan Update, dated March 29, 2008 for the subject site. In addition, soil samples were collected during the well installation and a groundwater sample was collected from the vicinity of the former 3,000 gallon underground storage tank on-Site as requested in your approval letters. Groundwater from the two monitoring wells will be sampled and the analytical results will be submitted to NYSDEC in the 3rd Quarter 2008 Monitoring Report.As discussed in our phone conversation on July 15, 2008, proposed monitoring wells MW-10 and MW-11 were not installed due to the presence of a subsurface electric line and gas main in the proposed drill locations in the 57th Street north parking lane. MW-11 was originally scheduled for installation in the 57th Street sidewalk, but this well was relocated for proposed installation in the 57th Street north parking lane after identifying that a subsurface parking garage extends beneath the sidewalk. Once the electric and gas lines were identified per the one-call utility field markouts, Roux Associates decided to abandon installation of these wells due to the proximity of the drill locations to the subsurface utilities and the required safety envelope (2 feet for electric and 3 feet for gas on both sides of the field markout centerline). This effectively removed the entire parking lane since the electric line was identified parallel with and 1 foot offset from the curb and the gas line was identified 3 to 4 feet beyond the electric line markout. See attached photos which show the 57th Street north parking lane with the red electric and yellow gas field markouts. We can revisit the need for these two wells on 57th Street after field construction which is currently scheduled for January 2009. Please feel free to contact me if you have any questions.Sincerely-Joshua B. Levine, P.E.Senior EngineerRoux Associates, Inc.209 Shafter Street Islandia, NY 11749"08/15/2008: Received an email from J. Levine saying:"Ainura -Attached herein is an electronic copy of the Second Quarter 2008 Groundwater Monitoring Report for the West 57th Street Project. You will receive a hard copy via FedEx on Monday. A summary of the recent UST closure is included in the attached Second Quarter 2008 report. Please let me know if you have any questions.Sincerely-Joshua B. Levine, P.E.Senior EngineerRoux Associates, Inc.209 Shafter Street Islandia, NY 11749jlevine@rouxinc.com (631) 232-2600 (p)(631) 232-9898 (f)http://www.rouxinc.com" 08/18/2008: Received a QMR for April-June 2008 period. Will review. AD09/29/2008: Reviewed the report. Roux sampled four monitoring wells on May 28, 2008 (MW-2, MW-3, MW-6 and MW-7). Low concentrations of BTEX and MTBE were detected in wells: MW-2 (2.3 ppb), MW-3(57.1ppb) and MW-6(8.5ppb). The historical data

MAP FINDINGS

**631-49 WEST 57TH STREET (Continued)**

**S104506089**

of VOC concentrations in GW show fluctuating trend. Three UST were identified and closed with NYSDEC PBS Unit on April 21, 2008. The tanks were found while removing concrete foundation from previously demolished onsite building. Tank 001 (1000-gallon) and Tank 002 (2400-gallon) previously contained gasoline. The tanks were found to be filled with concrete, they were excavated and disposed offsite. Tank 003 was a 1000-gallon waste oil tank. Waste oil product was present when the tank was indentified. A total of 915 gallons of product were removed from the tank. There was no visual indication of soil contamination around of any of three tanks during their removal. The soil was screened with PID and post excavation end-point samples were collected. Soil sampling analytical data indicated that several SVOCs were in excess of the TAGM 4046 RSCOs. Off-site disposal of petroleum impacted soil will be addressed during implementation of the Spill Closure Work Plan, currently scheduled for 1st quarter of 2009. AD10/07/2008: Received a phone call from J. Levine of Roux. He said that construction project was postponed due to economical conditions, so planned excavation will not be implemented. They collected soil and groundwater samples in July 2008. A report will be submitted to us in November, 2008. Groundwater monitoring will continue at the site. AD11/03/2008: Received a QMR. Will review. AD12/10/2008: Reviewed the report. Two proposed downgradient wells (MW-8 and MW-9) were installed on July 16, 2008. Proposed upgradient wells MW-10 and MW-11 were not installed due to the presence of subsurface electric and gas lines in the proposed drill locations along West 57th Street. Roux sampled 6 monitoring wells on September 8, 2008 (MW-2, MW-3, MW-6, MW-7, MW-8 and MW-9). Groundwater was also sampled from soil boring SB-29 during its installation on July 16, 2008. Elevated concentrations of BTEX and MTBE were detected in wells: MW-3 (73.1ppb), MW-6(1.1ppb), MW-8 (740.9ppb) and MW-9 (677.7ppb), and also in boring SB-29. The historical data of VOC concentrations in GW show fluctuating trend. The recently installed wells MW-8 and MW-9 contain relatively higher concentrations of VOCs along the 58th Street property boundary. Soil quality: In addition to GW sampling, soil samples were also collected during new wells (MW-8 and MW-9) installation and from boring SB-29. VOCs were detected at concentrations exceeding TAGM 4046 in MW-8 (13-15') and MW-9 (16-18'). Off-site disposal of petroleum impacted soil will be addressed during implementation of the Spill Closure Work Plan, which was scheduled for 1st quarter of 2009, but the site redevelopment project has been postponed indefinitely. Quarterly GW monitoring will continue at the site until site-wide redevelopment occurs. No response is needed. AD02/18/2009: Received an email from J. Levine of Roux saying: "Ainura -Attached herein is an electronic copy of the Fourth Quarter 2008 Groundwater Monitoring Report for the West 57th Street Project. I will provide a hard copy of the report tomorrow. Please feel free to contact me if you have any questions. Sincerely-Joshua B. Levine, P.E." DL the report to eDocs. AD02/19/2009: Received hard copy of the Quarterly Groundwater Monitoring Report for period of October-December 2008. Will review. AD03/03/2009: Reviewed the 4th quarter monitoring report. Roux sampled 6 monitoring wells on November 14, 2008 (MW-2, MW-3, MW-6, MW-7, MW-8 and MW-9). GW beneath the site is approximately 6 to 8 feet bls. Free product was not detected in any of the site wells. GW flows in northwesterly direction. Elevated concentrations of BTEX and MTBE were detected in wells: MW-3 (210ppb), MW-6(8ppb), MW-8 (593.3ppb) and MW-9 (231.9ppb). The historical data of VOC

concentrations in GW show slight increasing trend in MW-3 and MW-6. The recently installed wells MW-8 and MW-9 contain lower concentrations of VOCs in comparison to the baseline GW samples collected following installation in July 2008. The report states that NYSDEC approved a Brownfields Cleanup Program application for the site on December 2, 2008. After a Brownfields Cleanup Agreement is executed, a Remedial Action Work Plan (RAWP) will be submitted for review and implemented under BCP. This RAWP will supersede the SCWP which was previously submitted for this project. AD05/15/2009: Received an e-mail from J. Levine:"Ms. Doronova-Attached herein is an electronic copy of the 1st Quarter 2009 Quarterly Groundwater Monitoring Report for the West 57th Street Project. I will send you a hard copy of this report via FedEx for receipt on Monday, May 18, 2009. Please let me know if you have any questions. Joshua B. Levine, P.E.Senior EngineerRoux Associates, Inc."DL pdf copy to eDocs.Spoke with J. levine. He said that Ioana Munteanu of DEC is BCP project manager for this site now. AD2/11/10: This site is being managed under the BCP program (site no. C231062). PM is Ioana Munteanu - spill is reassigned to her. (JHO)11/3/10: Reassigned to Dana Kaplan (DK) along with adjacent BCP site. A signed stipulation was received from Durst and signed by DEC on 10/29/10. A draft RIWP was received 10/14/10; final draft addressing DEC comments was received 10/19. The RIWP was approved 11/2/10. (DK)3/4/2011: The remedial investigation work is complete and the Remedial Investigation Report is expected to be submitted shortly. An IRM work plan for removal of 4 suspected USTs (2 in the northern end of site and 2 in the southern end) was submitted 2/25/2011. Some changes were requested and the work plan was re-submitted on 3/2/2011 and approved. The tanks were removed on 3/3/2011. The consultant called to notify that the work had been performed and that two additional USTs had been discovered (2 in the north end and 4 in the southern end of the site). Some petroleum-contaminated soil was observed around the tanks in the northern area of the site. The UST excavation was temporarily backfilled and I was told that the contractor was going to return the next day for final excavation and backfill. The tanks were unregistered, so a PBS registration/closure is required as well as IRM report. (DK)6/8/2011: IRM completion/UST closure report for the IRM work discussed above was submitted May 18 and approved June 8, 2011. The Remedial Investigation Report still needs to be submitted as well as a RAWP for the site. (DK)12/20/11: RIR was submitted - it is titled Site Characterization Summary Report since the RI under spills program was also a site characterization of hazardous materials under site 231071. RAWP was submitted in November, revised/resubmitted and approved 12/20/11. RAWP includes hot spot excavation of 3 discrete areas of elevated VOCs and one area of elevated SVOCs, as well as installation of a vapor barrier and SSDS.6/25/12: Approved RAWP will be implemented in conjunction with work on the Mid Block BCP Site, which is scheduled to begin mid-July 2012.NOTE - FOR COMPLETE FILE OF QUARTERLY GROUNDWATER MONITORING REPORTS PLEASE SEE EDOCS FOLDER FOR C231062 DISCOVERED DURING A PLAN DEVELOPMENT PROJECT AND SAMPLES CAME BACK CONTAMINATED

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Extention: Not reported  
DEC Region: 2  
DER Facility ID: 122611  
DEC Memo: 10-09-09 The spill report was previously assigned to Imdadul Islam. The spill was reassigned to Alex Zhitomirsky on 10/09/09 since AZ handles the other spill at the site. AZ contacted Jane Staten URS. The spill was caused by 10,000 gal tank which failed the tightness test. The tank number is either #15 or #29. The tank probably contained heating oil. Two 10,000 gal tanks were removed in 2003 by Edward Levinson Company. I requested that URS identifies the tank location and include the tank area in their investigative plan to be submitted to DEC. AZ7-20-2010 Received a letter from URS dated July, 2010. The letter states that during the site visit URS observed that the building is still under construction. It's not feasible to install any wells. Therefore, remedial work is on hold. AZ2-16-2012 Contacted K. Shenahan (URS). DEC approved excavation in May 1999. Excavation was performed. URS requested closure in June 2009. In October 2009 DEC rejected the request since no confirmation sampling has not been done. WP was submitted in March 2010. DEC requested to move wells where the product was previously detected. There is a new giant building at the site, so the wells are limited to the sidewalk. June 22, 2010, URS visited the site to adjust the well locations. Scaffolding was on the sidewalk and the sidewalk was not accessible. In October 2011 URS checked the status of the sidewalk and the scaffolding is gone. URS will submit a figure with the modified well locations within next two weeks. Product plume location will be indicated on the maps. AZ2-21-2012 Proposed well locations submitted to DEC and edoc'ed. AZ2-22-2012 K. Shenahan forwarded an updated version of proposed well locations. AZ3-1-2012 Reviewed and discussed a modified version of the the proposed well locations. It was decided that locations proposed in 3/10 will be actual well locations. Also,

an additional well will be installed opposite WB-1 near the former fill port, if feasible. An email was received from K. Shenhan:"Alex,Thanks you for discussing the proposed field investigation URS has proposed for this site. Based on our discussions this afternoon, URS will proceed with the original well locations indicated on the attached Figure as 3/10 and not the revised locations identified as 2/12. In addition, URS will include a fifth well in the sidewalk of 56th Street on the eastern end of the site near the label "oil fill". AZ4-26-2012 An e-mail was sent to K. Shenahan and V. Brevdo:"Kevin,I am sorry, but on the plan which you have sent me I do not see the "fifth well in the sidewalk of 56th Street on the eastern end of the site near the label "oil fill" which you have mentioned in your mail.Could you clarify?Thanks,Alex"5-1-2012 An e-mail from K. Shenahan:"Alex,You are correct, the fifth well is not on Figure 2. We will add the fifth well and re-issue the report to you with the current date.Kevin J. ShanahanProject Manager

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ZHITOMIRSKY"10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM. SOIL & G/W.TRANSFERRED FROM Y.KRIMGOLD.10/05/05 The facility was demolished and will undergo reconstruction. Sanitation will excavate for the basement and underground parking to about 20 feet depth. New spill was called in by Con Ed. They discovered soil heaily contaminated with gasoline in front of the facility. I notified S. Frank (LiRo). See also spill #0508045 AZ 1/17/2006 Excavation is pending. New consultants should submit their plan and timetable. AZ4/11/2006 I contacted Jane Staten (URS). The site was last time sampled in 2002. Groundwater contamination was found but not delineated. Free phase and dissolved phase up to 16, 000 ppb . Excavation is still pending. AZ9/26/2006 I contacted Jane Staten (URS). They demolished the

1000141017

existing facility, removed the tanks. Closure reports were never submitted by demolition contractors (EPM -environmental consultants), although heavy contamination was encountered. Jane Staten requested tank closure report from EPM. AZ1/24/2007 At the meeting with DDC/URS on January 10, 2007, the site was discussed. The facility construction is near completion. The tanks were removed. No end point samples were taken. No tank closure reports were issued. Bovis is the construction CM. URS will arrange a site visit with DOS. AZ9/25/2007 Received e-mail from Jane Staten (URS). There is no information about the area which was excavated for the construction purposes. The construction is still ongoing. I called Jane Staten. She notified me that no post-excavation samples were reported. The area is currently inaccessible. I requested that URS/DDC notify DEC when the construction ends. Excavation and end point sampling should be coordinated with NYC DOS. When the area is accessible URS should submit a sampling Plan based on the previous investigation. AZ3-17-2009 Inquired about the site status (J.Staten -URS) via e-mail. AZ10-09-09 Discussed the site with Jane Staten. Excavation was performed at the site by Bovis for solely construction purposes. No post-excavation samples were taken. Excavation was not coordinated with DDC. Environmental work/observations/sampling was not performed during the excavation. I informed Jane Staten that an investigation of soil and groundwater should be performed at the site. The investigation plan based on the results of the previous investigation and monitoring should be submitted to DEC. The area of the former free product plume and soil/groundwater contamination should be investigated. Request for closure was rejected. AZ 3-22-2010 An e-mail was sent to J. Staten (URS): "I am reviewing Field Investigation Work Plan for the above site. Unfortunately, the submitted Work Plan doesn't contain results of the previous investigations. Please submit soil and groundwater plume maps and tables which show results of the previous investigation(s). After review of these materials, DEC will finish reviewing the proposed work plan." AZ3-23-2010 An e-mail sent to J. Staten: "Thanks Jane. Your e-mail does help in terms of well placements. However, results of the previous investigations should be included in the work plans for future investigations. Please, resubmit the work plan for this site and include hard copies of the plume maps and tables. Contacted J. Staten." Contacted J. Staten. She informed me that according to Cal Gerson, the CM for the new construction, the interior of the building is off limits because a "pressure slab currently exists under the entire footprint of the former facility that is reflected on the LiRo drawing. A pressure slab does not exist outboard of the footprint of the former facility (that is to say - a pressure slab does not exist under the sidewalks and under a 10FT. +/- strip between the sidewalk and the new facility)." Specifically, "the area of the former UST's has currently become a Basement level, with 24" reinforced concrete pressure slab and a Bontonite Waterproofing membrane (both of which are several feet below the water table)" which should not be penetrated. AZ5-10-2010 Reviewed Revised Field Investigation Work Plan. Contacted Kevin Shanahan (URS). Requested submittal of groundwater and soil plume maps with the locations of proposed wells. AZ5-27-2010 Contacted Don McCall (URS). Upon DEC request, he sent DEC a plan with proposed well locations (4 wells). I asked Don if it's feasible to move wells closer to the former free phase plume area and to the wells MW-2 and MW-13 where most of the dissolved phase contamination was previously

encountered. AZ2-21-2012 Received the following email from K. Shenahan:"Alex,URS issued a report for this site on March 25, 2010, which discussed how the former facility was demolished and a new DOS facility was constructed. The report is attached. Also attached you will find a pdf of a memo from the construction manager indicating that the site was excavated to bedrock and that the material was transported off-site for disposal (see photograph illustrating 20 foot deep excavation). The March 2010 report contained a plan to install and sample four groundwater monitoring wells located along the sidewalk to provided sufficient data for DEC to evaluate closure of the open spill numbers. Access to the sidewalk had been blocked by scaffolding until October 2011. The attached pdf illustrates existing site conditions from Google maps.On March 27, 2010 you provided verbal comments regarding shifting one or two of the well locations closer to the area where product was detected by Liro (see attached Liro report Figure 4-3) and closer to wells MW-02 and MW-13 where high VOCs were detected prior to remedial excavation (see Liro report Figure 4-2). To address your request, we have shifted the locations as shown on the attached pdf identified as "Figure 2 - Proposed MW Locations". Also shown on this figure is the estimated groundwater flow direction to the southwest. As you will see, three of the four proposed wells are down gradient of the areas where product was detected and high VOCs in groundwater. We have evaluated the existing conditions and have located the wells at the best locations possible to facilitate drilling. Since artesian conditions exist at this site, we will install the wells in accordance with the March 25th work plan but will keep the wells relatively shallow. URS would like formal approval of the revised well locations so we can schedule the drilling and sampling." AZThanks,Kevin J. ShanahanProject Manager5-16-2012 The following e-mail was sent to K. Shenahan/M. Asbagh/V. Brevdo:"Dear Kevin, I have reviewed a Work Plan modified on May 2, 2012. The Work Plan calls for installation of five monitoring wells. The Work Plan is approved. If contamination is found in the proposed area of investigation, it should be delineated. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alexander ZhitomirskyEngineering Geologist 2NYSDEC Region 2Division of Environmental Remediation" AZ

Remarks:

WHILE INSTALLING MONITORING WELLS, CONTAMINATED SOIL & G/W WERE DISCOVERED. WILL EXCAVATE CONTAMINATED SOIL- CONTINUE INVESTIGATION FOR SOURCE.

DEC Memo: Sangesland left a voice message with Marc Godick AKRF, asking for additional information on the spill. - DEC Ketani was assigned the case.10/29/07 - Raphael Ketani. I spoke with Marc Godick of AKRF (914) 922-2356. He said a phase I and a phase II were already done. He said that his company is putting together the phase II right now for his client, Avalon Bay Communities, Inc. They are a long term leasee and are presently negotiating the lease. They have the intent to build residential and commercial space. The property will be rezoned and so the DEP will get involved and issue a restrictive declaration. Right now, there is a LEXUS Dealership on site. Soil borings were done next to an abandoned AST. Elevated vapor levels were found in the soil. Contaminated soil was sampled and the lab

**LEXUS DEALERSHIP (Continued)**

**S108956127**

results indicated elevated levels of VOCs and SVOCs. Mr. Godick wants to do a groundwater investigation before doing soil removal. He said that the plan is to do a deep foundation and dig out all of the soil down to 15 feet, anyway. However, his client wants to remove the soil when they are ready to construct the foundation. I asked Mr. Godick when this would be. He said in two years. I told him DEC will not wait anywhere near that long for the spill to be investigated and remediated. He said that the basement is tight to work in and you can't get the large equipment down there to scoop out the soil efficiently. He said that it would be much easier to remove the soil with the building down and gone. I told Mr. Godick that I understood the matter, but that the investigation and remediation has to take place. We then agreed to a deadline of 30 days to have AKRF submit the groundwater investigation work plan and another deadline of January 7, 2008 for the groundwater investigation to take place. 10/30/07 - Raphael Ketani. I sent out a CSL to the current owners of the property, Four Plus Corporation, with "c-c's" to Avalon Bay and AKRF. I checked the PBS database. I didn't find a registration for the site. 11/15/07 - Raphael Ketani. I received a letter dated 11/12/07 from Mr. Godick of AKRF stating that the Phase II report will be submitted 11/20/07, the groundwater investigation work plan will be submitted 11/29/07, and that the groundwater investigation will start 1/7/08. 11/21/07 - Raphael Ketani. Today I received the 11/20/07 dated Phase II report from AKRF. Seven (7) soil borings were performed at the site. These were B-11 to B-13 and B-16 to B-19. Of all the borings, B-11 and B-12 were the only ones done in the basement. Boring B-11 had 233 to 236 ppm of total volatiles via the PID meter at 4' to 7.5' below the basement. Boring B-19 had 8.9 ppm of total volatiles via the PID meter at 19' to 20' below grade. For the soil analyticals, there was one exceedence of VOCs (9400 ppb total xylenes) for B-11 from the 4' to 6' sample. For the SVOCs, there was one exceedence from a soil sample from 1' to 3' from B-12. For soil samples from 1' to 4' down for borings B-13, and B-16 to B-18, there were several low level SVOC exceedences of the same analytes. These analytes were benzo series analytes and their associated combustion products. Other borings had low levels of benzo series SVOCs. The only issues are that the following tanks are not registered: motor oil AST abandoned brick encased ASTI sent a letter to Mr. Godick approving the Subsurface (Phase II) Investigation report dated 11/20/07. However, there is no PBS registration for the site. So I also wrote that the tanks have to be registered and enclosed a registration form. 12/3/07 - Raphael Ketani. Today I received the 11/30/07 Groundwater Investigation Work Plan. I reviewed the plan and found it to be acceptable. My only question was the placement of the proposed monitoring wells in the vicinity of borings #11, #12, #18, and #19, and not in the vicinity of borings #13, #16, and #17. 12/4/07 - Raphael Ketani. I spoke to Mr. Godick (914) 922-2356 regarding the Work Plan. He said that the positions of the proposed wells was in regard to the location of the known contamination. Borings #11 and #19 were the ones with contamination. 1/9/08 - Raphael Ketani. I tried to reach Mr. Godick regarding the start of the groundwater investigation, but could only leave a voice mail. Mr. Godick called me back. He said that they have already installed 4 groundwater wells and are scheduled to install the fifth one today. After this, they will develop the wells. He said that DEC should get a report sometime in February. Mr. Godick called back. He said that they had a hard time installing the first well. They hit refusal many times. With the

MAP FINDINGS

**LEXUS DEALERSHIP (Continued)**

**S108956127**

second well, they kept hitting refusal and finally had to give up. Part of the problem is that they have utilities nearby and can't get close to them. However, he said they will keep on going with their 6" O.D. augers. 2/4/08 - Raphael Ketani. I spoke to Mr. Godick today. He said that they did a round of groundwater sampling. A well to the west had benzene at 12 ppb, toluene at 14 ppb, and naphthalene at 100 ppb, with other low hits. He said he will submit the raw data for the wells in an e-mail, along with some language that he would like to put in a cover letter or letter report to DEC. I asked him about the tank registrations. He said that he spoke to the PBS person here in Region 2 and he told him that only the waste oil tanks needed to be registered. So, he is working on getting them registered. 2/7/08 - Raphael Ketani. Mr. Godick (914) 922-2356 e-mailed me the soil and groundwater analytical results for borings B-101 to B-104 and wells MW-1 to MW-4. While there were low soil and groundwater hits in a number of instances, the only hit of concern was the 1100 ppb of naphthalene in the groundwater at MW-2, which is near suspected underground lifts. Previously, from the 11/20/07 Phase II report, there were only two hits of concern. These were from a soil sample that was taken at 4' to 6' down at boring B-11. They were 9400 ppb of total xylenes, and 18000 ppb of naphthalene. B-11 is next to a supposedly abandoned AST. I tried to contact Mr. Godick to discuss the contamination, but could only leave a message. 2/11/08 - Raphael Ketani. I spoke to Mr. Godick about contaminated groundwater at MW-2 and the contaminated soil at B-11. We discussed what the options for remediation were, soil treatment as opposed to digging it out. He mentioned that construction wouldn't start for at least 2 years. I told him that work of some kind has to start much sooner. He mentioned that the site is an active dealership with a narrow stairway leading down to the basement where the tank is. He said he didn't know how they could remove the tank or get equipment down there to do soil removal. We discussed soil solution injections. He said that was a possibility. Mr. Godick added that he will broach the subject with his client. 2/14/08 - Raphael Ketani. Mr. Godick (914) 922-2356 called. He said that his client is "on board" with the idea of soil treatment for the contamination at B-11. However, Mr. Godick said he needed another week to get the report to DEC. This would be 3/5/08. I told him that will be fine. 4/9/08 - Raphael Ketani. I spoke to Mr. Godick and asked him where the investigation report was. He said he was surprised that I didn't get it, but he will make sure I receive it very soon. 4/11/08 - Raphael Ketani. I received the March 2008 Groundwater Investigation Report from AKRF on 4/10/08. I reviewed the report. In the Recommendations section, it is stated that they will remove the abandoned AST, and remediate the soil and groundwater with treatment solutions. I had no comments regarding the report, except that they compared the analytical results to Part 375 standards. Spills still uses TAGM 4046. 4/30/08 - Raphael Ketani. I spoke to Mr. Godick today (cell (917) 991-4030). He said that the tank pull has been delayed and is now scheduled to start on 5/6/08. I told him that was fine. 5/15/08 - Raphael Ketani. I received the following e-mail today from Mr. Godick: Finally, after much delay, the contractor has received the permit from New York City Department of Transportation necessary to remove the tank. The work will start on this upcoming Monday (5/19) and is anticipated to take 2 to 3 days. The post-removal soil borings will be completed on the following Tuesday, 5/27. I will reach out to you if there are any unforeseen conditions encountered during these activities. 7/22/08 - Raphael

**LEXUS DEALERSHIP (Continued)**

**S108956127**

Ketani. Today I received the 7/18/08 tank removal and soil sampling report from AKRF. 7/23/08 - Raphael Ketani. I began my review of the tank removal and soil sampling report. The site is block and lot 1104 and 31. The fuel oil AST next to 11th Avenue was investigated. It was half full with #2 oil. The oil was vacuumed out. A 1/4" hole was found at the east end of the tank. They installed borings B-110 to B-114 in the vicinity of the former tank location. Samples from borings B-111 (west end of tank location) and B-113 had many high hits of VOCs up to 160,000 ppb of naphthalene and 130,000 ppb of 1,2,4-trimethylbenzene. Boring B-111 was higher than B-113, which is to the south. B-111 and B-113 had high hits of SVOCs up to 55,000 ppb of naphthalene. The other borings were largely non-detect. There was no mention of registering the waste oil AST. I checked the PBS and the tank is still not registered. They also didn't mention what they are going to do with the contaminated groundwater at MW-2. They will have 9 treatment solution injection sites in and around the former tank location, but this may not be enough. They should better define the limit of the heavy contamination by doing borings and then add injection points. I sent Mr. Godick a report review response letter stating that they need to define the limit of the heavy contamination, propose how they are going to deal with the contaminated groundwater at MW-2, and submit the PBS registration form for the waste oil AST. 7/30/08 - Raphael Ketani. Mr. Godick called me today in response to the 7/23/08 letter I had sent requesting that they do more borings to better define the extent of the contamination. Mr. Godick spoke to his client about the request from the DEC and his client retorted that it was unfair to request so much additional work when the whole site will be dug up in a couple of years. I told Mr. Godick that a well to the south had very high hits of VOCs and it was next to another property. I told him that meant that the contamination probably extended under the neighboring property. I added that the DEC was concerned. Mr. Godick stated that he would like to take another approach to this problem. I suggested seeing whether the product and contaminated groundwater can be collected through pumping. He said that he would like to try installing collection wells and see how much they collect. Mr. Godick added that if the first well collects a lot of oil and contaminated water, then he will install more collection wells and remediate the site this way. However, he said, if collection is not practical, then they will do the soil treatment as formerly proposed. I told him that sounded like a reasonable plan. Mr. Godick said that he will send a letter to DEC memorializing the new plan. 8/20/08 - Raphael Ketani. I spoke to Mr. Godick (914) 922-2356. He said that they are in the process of ordering the ORC and RegenOX from Regensis. He said that he plans to install the collection well first and see whether they can recover oil. They will inject the treatment solutions to treat both groundwater and soil. He said that the PBS registration is being worked on. Hopefully, he said, they will begin work in the next week or two. Mr. Godick e-mailed me the 8/8/08 letter regarding the plan to install a recovery well, treat the contaminated soil and groundwater with ORC and RegenOx, and monitor the environmental conditions. 9/15/08 - Raphael Ketani. I spoke to Mr. Godick. He said that they have figured out a way to put in the recovery well using a vac. truck. He also said that they ordered the soil treatment chemicals from Regensis. They expect to do the field work in about 2 weeks. They will keep me posted. 10/27/08 - Raphael Ketani. I spoke to Mr. Godick regarding progress at the site. He said that he is waiting for

**LEXUS DEALERSHIP (Continued)**

**S108956127**

EPA UIC approval for doing the solution treatment injection. He said there is a TAGM for solution injection. As soon as he gets the approval, he will let me know. 11/21/08 - Raphael Ketani. I spoke to Mr. Godick regarding the start of the treatment injections. He said that the EPA still hasn't given approval to do the work on this site and another site. He said that he will call the EPA and try to find out when they will give the approval. 12/2/08 - Raphael Ketani. I tried to contact Mr. Godick (914) 922-2356, but could only leave a message. 12/22/08 - Raphael Ketani. I spoke to Mr. Godick. He said that the TAGM requires a 30 day notice prior to doing the injection. However, more than 30 days have passed and he still hasn't heard anything from the EPA giving him the "go ahead" (a permit) to do the work. So he feels "enough is enough." He's going to do the injections during the first week in January 2009. He will keep the DEC posted. 1/16/09 - Raphael Ketani. Today I received the following e-mail message from Mr. Godick: Things are finally set to start next week. We will be starting with the Regenox/ORC injection work on the morning of Wed, 1/21. We are still coordinating with the driller for the recovery well, but the installation would be completed either concurrently or shortly thereafter. Have a good weekend. Regards, Marc S. Godick, LEPSr. Vice President AKRF, Inc. 1/26/09 - Raphael Ketani. I received the following e-mail on 1/24/09: Hi Raphael. I am working with Marc Godick on this project and am writing to update you on the progress. We successfully completed the Regenox/ORC injection today. We are still finalizing with the driller, but we expect the NAPL recovery well will be installed next week. I will keep you posted on the findings of the drilling and subsequent well gauging soon after the well is installed. Please feel free to contact me or Marc with any questions or concerns. Kathleen Brunner, Technical Director AKRF, Inc. 2/13/09 - Raphael Ketani. I tried to reach Mr. Godick (914) 922-2356 regarding progress at the site, but could only leave a message. Mr. Godick called and left a message. He said that the ORC and treatment chemical injections had been completed two weeks ago. The recovery well was installed, but no free product was seen. 3/2/09 - Raphael Ketani. I received the following e-mail from Kate Brunner of AKRF: Hi Raphael. I am working with Marc Godick of AKRF on toward the remediation and closure of a petroleum spill (Spill #0708204) reported at 835 11th Avenue (at West 57th Street) in New York, New York. In accordance with AKRF correspondence dated August 8, 2008, we installed a monitoring well for potential NAPL recovery and injected ORC and Regenox in the vicinity of the former aboveground storage tank in January 2008. We have been inspecting the well on a weekly basis for the past 4 weeks and have not identified any LNAPL. We will continue to monitor this well on a monthly basis for the next two months, at which time we'll perform the confirmatory soil and groundwater sampling outlined in our August 2008 correspondence. We anticipate this sampling will be performed by early May 2009. Upon receipt of the laboratory data, a Remedial Action Report will be prepared and submitted to NYSDEC. If you have any questions or concerns in the meantime, please feel free to contact me. Thanks, Kate 4/23/09 - Raphael Ketani. I spoke to Ms. Brunner (212) 696-0670 regarding the site. She said that confirmatory soil samples and groundwater samples will be taken on 4/29/09. She said that only 4 soil borings will be performed as access is tight in the basement. 4/24/09 - Raphael Ketani. I received the following e-mail today from Ms. Brunner: After we spoke on the phone yesterday I looked at the site data more closely. We are going to still perform

**LEXUS DEALERSHIP (Continued)**

**S108956127**

sampling on April 29th, but we are going to start with the groundwater sampling portion only, since groundwater remediation was the target for the Regenox/ORC injection. We'll evaluate the next steps based on the groundwater sample results and I'll keep you posted.6/19/09 - Raphael Ketani. I tried to reach Ms. Brunner, but she was out on vacation. So I left a voice mail message. She will be back on 6/22/09.6/24/09 - Raphael Ketani. Ms. Brunner called me back. She said that they received the groundwater analytical results for the confirmatory water samples, but the presence of naphthalene skewed the other SVOC results. She asked whether they still had to send the results. I told her to send the results with a cover letter explaining what the problem is. She said that the next round of samples will be taken about in July. I told her to send DEC these results when they get them.7/13/09 - Raphael Ketani. Ms. Brunner told me that the next round of groundwater sampling is scheduled for next week.9/11/09 - Raphael Ketani. I tried to contact Ms. Brunner (212) 696-0670, but could only leave a message regarding the latest analytical results from the July sampling and progress at the site.9/14/09 - Raphael Ketani. Ms. Brunner called me back. She said that the developer who was paying for the remediation is no longer involved. Off of the top of her head, she said that the developer told her to stop all work back in July or August. So, even though the treatment injections took place back January 2009, no groundwater samples have been taken. Ms. Brunner said that AKRF will meet with another developer very soon regarding the remediation. 9/17/09 - Raphael Ketani. Ms. Brunner left me a voice mail stating that AKRF met with the owner of the property. They are trying to work with the owner to continue the remediation project. She added that she needs one week to work out the details with the owner and to get them to agree to take over the project. She will call me in about a week to let me know what had transpired. 9/29/09 - Raphael Ketani. Today I received the groundwater sampling report dated 9/28/09 from AKRF. The report stated that the treatment solution was injected during January 2009 from 8 to 10 feet below the basement grade at 9 locations. Post injection sampling was conducted on 4/29/09. With the exception of a 530 ppb naphthalene hit from MW-2 and a below TAGM toluene hit from MW-1, all of the VOC results were non-detect. The SVOC results were almost entirely non-detect, with the exception of a naphthalene hit of 340 ppb from MW-2, followed by a number of low benzo series and combustion product hits. MW-1 had a few very low SVOC hits. It was not clear why MW-5 wasn't sampled. I tried to contact Mr. Godick (914) 922-2356 regarding why MW-5 wasn't sampled, but could only leave a message.10/1/09 - Raphael Ketani. Mr. Godick returned my call after work hours.10/2/09 - Raphael Ketani. I tried to return Mr. Godick's call, but could only leave a message. 10/9/09 - Raphael Ketani. Ms. Brunner called me back. She said that MW-5 wasn't sampled because it doesn't screen the entire water table and would probably not result in representative groundwater samples. She added that it is a narrow well and can not be used for groundwater/product extraction. 11/5/09 - Raphael Ketani. I tried to contact Ms. Brunner (212) 696-0670, but I could only leave a voice mail.11/6/09 - Raphael Ketani. I received the following e-mail from Ms. Brunner:Regarding the site on 11th Ave at 57th St in Manhattan (NYSDEC Spill #0708204), we are scheduled to collect the groundwater sample next week. We'll get lab data about 2 weeks later and will prepare a short letter report for submittal to DEC. The report preparation will be slowed a little because of the thanksgiving holiday, but I expect to have that

**LEXUS DEALERSHIP (Continued)**

**S108956127**

data report to you by mid-December.12/23/09 - Raphael Ketani. I tried to contact Ms. Brunner, but could only leave a message requesting the data report.1/8/10 - Raphael Ketani. I contacted Ms. Brunner. She said that they had "invoicing issues" with the client, but now everything is straightened out. She said that they have the data from the latest sampling round and the results are significantly improved. She said that Mr. Godick has to review the data, but he's out of town. So the data wont be reviewed for two weeks. DEC should receive a report sometime in February.4/1/10 - Raphael Ketani. I spoke to Ms. Brunner (212) 696-0670 regarding progress at the site. She said that she has made repeated calls to the client, Avalon Bay, but she has not been able to get a response. She said that she will try again now that the DEC is calling again. I told her that I will send an e-mail to her requesting that Avalon Bay continue with the remediation or else face legal action if no progress has been made by April 30.I looked up the correct name and address of Avalon Bay (leasee). It is:Avalon 57, LLC, c/o Avalon Bay Communities, Inc., 275 7th Avenue, 25th Floor, NY, 10001.The actual owner is: EE 57th Street South Holdings, LLC, c/o JP MorganChase Bank, N.A., 345 Park Avenue, 4th Floor, NY, 10154. The main property address is 827 11th Avenue. The alternate addresses are: 829 and 835 11th Avenue. The block and lot are 1104 and 31.4/23/10 - Raphael Ketani. Today I received the Closure Report from AKRF. The report contained the groundwater analytical results from the 11/12/09 round. I began my reievw.4/26/10 - Raphael Ketani. I finished my review of the Closure Report. The groundwater VOC results were all non-detect. The SVOC results were almost entirely non-detect with one 160 ppb hit for naphthalene. I was not concerned about the groundwater contamination as it appeared to have been addressed. However, I could not find any documentation in the case file showing that the concentrations of the VOCs and SVOCs in the vicinities of B-111 and B-113 had decreased.I contacted Ms. Brunner (212) 696-0670 and told her that the DEC had no proof that the contamination in the vicinities of B-111 and B-113 had been addressed to TAGM levels. She said that the soil was below the building with no pathways for the contamination to be affected. She added that the soil will be removed when the construction excavation takes place. I told her that, as far as the DEC knows, the contamination is still present in the soil where the tank used to be. I told her that all contamination needs to be addressed. I added that I understood that AKRF had the treatment solutions pumped through the soil, but we have no proof that the contaminant levels were reduced. She said that the solutions were pumped through the vadose zone. I told her that I trusted was she is saying, but, still, it needed to be confirmed that the soil contamination had been reduced. I suggested doing one soil boring each at the locations of B-111 and B-113. She said that she will talk to the client about this. I told her to do so as I can't close the case at this time. I sent an e-mail to this affect to Ms. Brunner.5/24/10 - Raphael Ketani. I tried to contact Ms. Brunner (212) 696-0670 regarding whether the client was willing to do the confirmatory borings at B-111 and B-113, but could only leave a message.5/26/10 - Raphael Ketani. I tried to contact Ms. Brunner (212) 696-0670 regarding whether the client was willing to do the confirmatory borings at B-111 and B-113, but could only leave a message.5/27/10 - Raphael Ketani. Ms. Brunner called me back. She said that the client (the renter of the space) is willing to do the confirmatory soil borings. Ms. Brunner and I agreed to confirmatory soil borings at B-111, B-113, and at two other step-out locations. I

**LEXUS DEALERSHIP (Continued)**

**S108956127**

told her that if the results are not at or below TAGM, then the contamination will need to be addressed. She said that they can't dig it out. I told her that more solution treatment may be the answer. She said that if the confirmatory sample results are still high, then that means the treatment solutions aren't doing the job. I asked her when the work will start. She said that they have to get a driller lined up. So they hope to start the work within a month. She said that she will keep me informed.6/17/10 - Raphael Ketani. Ms. Brunner sent me an e-mail that they have hired a contractor to perform the 4 requested soil borings in the vicinities of B-111 and B-113. The work will take place on June 25.7/14/10 - Raphael Ketani. I sent Ms. Brunner an e-mail as I haven't received any information regarding progress at the site.Ms. Brunner sent me the following e-mail:Yes, the soil borings were performed. We just got the lab results back and are still tabulating the data. We'll next prepare a report after we receive the final lab package and can compile all the findings (I expect it will take at least several weeks with our internal management and client reviews).9/23/10 - Raphael Ketani. I tried to contact Ms. Brunner (212) 696-0670, but I could only leave a message.9/30/10 - Raphael Ketani. I received the 9/28/10 soil sampling report from AKRF. I reviewed the report. The last round of RegenOx treatment and RegenOx ORC Advanced treatment reduced the SVOC concentrations around B-111 and B-113 to the point where almost all of the analytes were below the TAGM limits. However, the soil sample from confirmatory boring B-115 had 4 VOC analytes which exceeded the TAGM limits by two to ten times, and the soil sample from confirmatory boring B-116 had 6 VOCs which exceeded the TAGM limits by two to five times. The samples from B-117 and B-118 were entirely non-detect. I sent an e-mail to Mr. Godick and Ms. Brunner that further soil treatment was necessary at B-115 and B-116, and that this should be followed by further confirmatory soil sampling and downgradient well sampling.12/2/10 - Raphael Ketani. As I hadn't heard anything from AKRF regarding the further treatment of the areas around B-115 and B-116, I tried to call Ms. Brunner. However, I could only leave a message. I then sent her an e-mail requesting an update regarding the site activity. 12/9/10 - Raphael Ketani. I tried to reach Ms. Brunner, but I was only able to leave a voice mail.12/10/10 - Raphael Ketani. Ms. Brunner sent me an e-mail that she has reached out to her client, but she hasn't received a response yet. 1/7/11 - Raphael Ketani. Ms. Brunner sent me an e-mail stating that her client, EE 57th Street South Holdings, LLC, wanted to have a face to face meeting with the DEC in our office. The purpose of the meeting would be to discuss what the DEC wants in the way of further remediation. The client also wants to know the rationale behind any further work.1/10/11 - Raphael Ketani. I e-mailed Ms. Brunner that the only work that the DEC wants is additional soil treatment in the vicinity of B-115 and B-116. I added that this is the only work that is required and that the goal is to reduce the residual soil contamination to at or below TAGM concentration limits. I added that the client was very close to finishing this project and that maybe larger doses of treatment solution would do the job. I wrote that there is nothing else to discuss and so a meeting will not take place.1/14/11 - Raphael Ketani. Ms. Brunner (212) 696-0670/(646) 388-9525 called me and insisted on a meeting. She said that it would help move the project along if the owner could talk face to face and come to an understanding regarding what the DEC wanted and why. I told her that sometime next week would be alright. She said that she

**LEXUS DEALERSHIP (Continued)**

**S108956127**

will get back to me. 1/18/11 - Raphael Ketani. Ms. Brunner sent me an e-mail suggesting having a meeting on January 21 at 11:30AM. I wrote back that this date and time were fine. 1/21/11 - Raphael Ketani. The meeting with Mr. Godick and Ms. Brunner took place as scheduled. Towards the end of the meeting Randall Austin, Chief of the Spills Unit, attended the meeting. Mr. Godick was the primary presenter for his client. Ms. Brunner took notes and made a few comments. The premis presented by Mr. Godick was that AKRF had tried to eliminate the soil contamination, but that they had only a 50% positive result (only two locations showed complete contamination removal due to the ORC and RegenOx treatment). I told Mr. Godick and Ms. Brunner that the soil samples from borings B-115 and B-116 had very high exceedences after the first (only) round of treatment. I told them that through my experience with the use of these treatment solutions, I have never seen a situation where only one round of treatment was necessary to eliminate all oil contamination. I told them that at least one more round of treatment was necessary. Mr. Godick stated that his client didn't want to spend another \$20,000 for another round of treatment and get only a slight reduction in the analyte concentrations at B-115 and B-116. I told him that the DEC was very concerned about the concentrations that still remained. Mr. Godick said that the site was still an active Lexus dealership and service shop. He added that there were vapors from the vehicles in the showroom and in the shop. I asked Mr. Godick what the ceiling height was in the basement. Ms. Brunner said that it was 8 feet. I then asked whether there was small equipment available that could help to dig out the contamination, rather than treat it. Mr. Godick said that there was a wall nearby and that the area was tight. I responded that the DEC wants another round of soil treatment to take place, but that I will discuss this issue with Mr. Austin. Not long after this, Mr. Austin walked into the meeting room. Mr. Godick presented the groundwater and soil data to Mr. Austin. After some review, Mr. Austin stated that he will have a meeting with other staff to discuss the site and the analytical results. After this, he will come to a decision and notify AKRF. With this, the meeting adjourned. Subsequent to the meeting with representatives from AKRF, a meeting was held between Randall Austin, Jeff Vought (Spill responder), and myself to discuss the soil and groundwater analytical results. It was noticed that, according to the 4/23/10 report, the treatment solution injection depth was at 8 to 10 feet below the basement floor. The report stated that this was the level of the water table or below it. It was also noted from the 9/28/10 report that the soil boring from B-113 was taken at 9 to 10 feet below the floor, while the confirmatory soil sample for B-117 was taken at 4 to 6 feet below the floor. An initial soil sample was taken at 6 to 7 feet down at B-111. The confirmatory sample from soil boring B-115 was taken 5 feet away at a depth of 3 to 5 feet. Injection point RB-5 was depicted as being midway between B-111 and B-115. I contacted Mr. Godick and asked him why, if AKRF was trying to treat the soil contamination, they had injected the treatment solutions into the water table. I also asked him why the sample from boring B-117 was taken at a much shallower depth than the one from B-113. I commented that it was not surprising that the sample from B-117 would look so clean as to be almost entirely non-detect. Mr. Godick said that he will talk to Ms. Brunner about these questions and get back to me. 1/26/11 - Raphael Ketani. I spoke to Ms. Brunner (212) 696-0670/(646) 388-9525 regarding the discrepancy in the original boring sampling and the confirmatory

**S108956127**

sampling. She said that in both cases they sampled the interval that had the highest contamination. She claimed that this interval changed between the date of the original sampling and the date of the confirmatory sampling. According to Ms. Brunner, when the treatment solutions were injected, AKRF injected just above the water table (the dirtiest zone) and then at levels in the bore hole that were higher up. This way, they achieved greater coverage and greater treatment of the contamination. I told Ms. Brunner that I understood what she was saying and the conversation ended.6/2/11 - Raphael Ketani. I spoke to Ms. Brunner. I asked her why she hadn't contacted the DEC in many months regarding progress at the site. She said that AKRF was let go a week after we had last talked. She said that AKRF had worked for the tenant, the LEXUS dealership, and the developer, Avalon Bay, not the owner of the property. She added that she didn't know who the new consulting company was and who the owner was. I told her that I will find out who the owner is and send them a letter that the DEC wanted a report on the cleanup of the site.6/3/11 - Raphael Ketani. Ms. Brunner called and stated that the new consultants were ERM. Paul Levine at ERM (609) 895-0050 was the new contact. I looked up the owner information in ACRIS. The site is block and lot 1104 and 31. The latest deed is dated 1/31/08. The owner is listed as EE57th Street South Holdings, LLC, c/o JP Morgan Chase Bank N.A., 345 Park Avenue, 4th Floor, NY, 10154. I tried to contact Mr. Levine, but I could only leave a phone message. The PBS registration is #2-610921. A 550 gal. waste oil AST had been removed in 2002.6/6/11 - Raphael Ketani. I spoke to Mr. Levine (609) 895-0050. He said that the site is managed by the Appleby Trust. Avalon Bay had a lease. They took responsibility for development of the property. However, they have given notice that they will terminate their lease. The end of the lease is the end of July. Mr. Levine didn't know how this will all work out. He will go back to the Appelby Trust and tell them they need to send a work plan to the DEC, but he was not sure whether ERM will be the consultant on the project. He asked me not to send the letter just yet requesting a work plan as it may not get to the right person since things are in flux. Mr. Levine stated that he will get back to me in a couple of days to let me know who the responsible party is. I told him I will wait.6/8/11 - Raphael Ketani. Mr. Levine called and said that he did not have any answer yet regarding who is the responsible party. He said that Appelby Trust is trying to get all of the owners, the developer and the consultant together for a meeting. However, this may not happen till next week. Mr. Levine said that he will keep me posted regarding what will take place.6/23/11 - Raphael Ketani. I spoke to Mr. Levine (609) 895-0050. He wanted to have a meeting with DEC staff (Randall Austin and myself) and the owners and the developers. The meeting would be to discuss what the DEC wanted in the way of further remediation and why. I told Mr. Levine that I didn't see the need for a big meeting as the only requirements right now were that additional soil treatment and confirmatory sampling take place in the vicinity of B-115 and B-116. He said that the owners and the developer didn't want to spend \$30,000 on another round of treatment. I told Mr. Levine that I will talk to Randall Austin, Chief of the Spills Unit, and see whether he will agree to a meeting. Mr. Levine suggested July 21. I told him that this date was fine for me.6/28/11 - Raphael Ketani. I spoke to Mr. Austin regarding having a meeting with the owners of the property and their consultant. I told Mr. Austin that the owners wanted the meeting because they didn't want to do another round of soil

**LEXUS DEALERSHIP (Continued)**

**S108956127**

treatment. He responded by saying that the DEC will not have the meeting. I sent Mr. Levine (Paul.Levine@erm.com) an e-mail declining the request for a meeting. 7/11/11 - Raphael Ketani. Mr. Levine sent me the below e-mail: This is to let you know that ERM has been engaged by the Ownership to evaluate remedial alternatives at the above referenced site. Our objective is to consider treatment alternatives including the previously used ORC/Regenox as well as other alternatives that may be more advantageous including persulfate, thermal oxidation, bioventing and excavation. After review and recommending a preferred alternative to the Ownership, we will prepare a letter report to the NYSDEC noting preferred action and schedule. Consequently, we are rescinding our request for a meeting with you this month, but would like to reschedule that meeting once our alternatives analysis is complete. This will take several weeks. 9/13/11 - Raphael Ketani. I tried to contact Mr. Levine (609) 895-0050 regarding what ERM and the owners had decided to do to address the remaining soil contamination. However, I could only leave a voice message. I also sent an e-mail to him. In the e-mail I stated that the owners were still in violation of Section 173 and Section 176 of Article 12 of the Navigation Law. 9/14/11 - Raphael Ketani. Mr. Levine called me back. He said that ERM had sent a draft memo to the owners describing 5 soil treatment methods. Also, an engineer from ERM went to the site to see the work conditions. The engineer reported back that the ceiling height was about 2 and a half feet. Mr. Levine commented that these were very difficult conditions to work with. I told him the DEC agreed, but that the work must continue. Mr. Levine added that there were 5 parties involved with the site. So even if the memo has nothing much to think about, it will still take time for them to respond to ERM and agree on a work plan. Mr. Levine asked what the DEC wanted. I told him that the only areas that needed treatment were that of B-115 and B-116 (confirmatory boring locations). He said that he thought the DEC wanted more than that treated. I told him that we didn't. I told him that the issue was VOC analyte exceedences of the soil standards. The confirmatory boring samples had exceedences that were up to 10 times the limit for individual VOCs. I added that the first round of treatment had resulted in a good reduction in the concentrations of all of the analytes. However, at least one more round was needed just at these two locations, nowhere else. Mr. Levine asked, "That's all the DEC wants?" I told him it was. Then, he said that this new information put a different light on the project and that he will get back to me. I told him that would be fine. 10/19/11 - Raphael Ketani. I spoke to Mr. Levine (609) 895-0050 (Paul). He said that today he received approval from the fourth trustee for the treatment plan. He will send the work plan to the DEC sometime in the next two weeks. 11/16/11 - Raphael Ketani. Mr. Levine sent me the 11/16/11 ERM Preliminary Work Plan by e-mail. It dealt with performing a treatability study before conducting more treatment solution injections. The purpose of the study would be to determine what would be the best method for treating the remaining contamination in the vicinity of B-115 and B-116. I reviewed the work plan, but had no comments or objections. I responded to Mr. Levine by e-mail that ERM should proceed as soon as possible. 8/22/12 - Raphael Ketani. Mr. Godick (914) 922-2356 called me today. He said that the owners of the Lexus dealership have entered into a long term lease with T.F. Cornerstone (formerly Rockrose Development). T.F. has retained AKRF to conduct the remediation work. Mr. Godick said that he had reviewed the ERM plan

**S108956127**

to do a treatability study. A report will be sent to the DEC in the near future regarding this plan. Later, Mr. Godick sent me the 5/29/12 ERM Treatability Study Results report. 8/24/12 - Raphael Ketani. I reviewed the Treatability Study Results report. On 1/3/12, ERM started installing 4 soil borings through the basement floor to a planned depth of 9 feet. These were TB-1 to TB-4. Soil samples were taken from the 3 to 7 foot interval and from the 7 to 9 foot interval from TB-2 to TB-4. Groundwater was encountered at 7 feet below the floor. TB-1 had oil odors at 3 feet down and oil odors and staining at 6 feet down. Due to the low amount of groundwater recovered from the 4 borings, a fifth boring (TB-5) was performed 4 feet southeast of SB115. The samples were treated with Klozur and Klozur CR (a combination of sodium persulfate and calcium peroxide) over the course of 14 days. The treated soil sample from the unsaturated zone had a 50% total VOCs reduction. However, the control sample also had a reduction of certain VOC analytes and its results were sometimes greater than the treated sample for specific analytes. The total SVOC reduction was 70%. The saturated zone soil sample had a 65% to 90% total VOC reduction and a 28% to 63% total SVOC reduction. The control sample had a variable reduction in the individual VOC and SVOC analytes. The groundwater sample had a 24% reduction in the total VOCs, but the SVOC total increased - it was not known why. According to the report, had the soil pH been 10.5 or higher, then the sodium persulfate would have worked more efficiently. Regarding the samples that were taken for the usual laboratory analysis, the unsaturated soil analytical results for the 3 foot to 7 foot interval were mostly non-detect for the VOC analytes with 7 hits below CP-51 standards and 3 exceedences. The saturated soil sample from the 7 foot to 9 foot interval had many non-detects with a fair number of low to high exceedences. The groundwater sample from the 7 to 9 interval had many low to high exceedences. In all cases with the untreated and treated soil and groundwater samples, the trimethylbenzenes and naphthalene posed the highest concentrations and were the most difficult to treat. I found the report to be acceptable as regards the data content, but I didn't consider that the treatment of the soil and groundwater with Klozur or Klozur CR would be effective at the site. I drafted an approval letter for the review of Hassan Hussein, the supervisor of Unit C. 8/27/12 - Raphael Ketani. The letter was approved by Mr. Hussein and was sent out. 9/28/12 - Raphael Ketani. A meeting took place today at DEC to discuss the status of the site. In attendance were a representative from T.F. Cornerstone - Bruce Weill of TRC, Paul Levine from ERM, Marc Godick and Kate Brunner from AKRF, and Hassan Hussein and Raphael Ketani from the DEC. The discussion revolved around the results of the Treatability Study. I stated that the results were not good and showed that there still was high soil and groundwater contamination. Mr. Godick stated that AKRF had done the solution injections and he didn't believe that more injections would achieve a reduction in the contamination. However, he was willing to try again. Mr. Levine stated that the Klozur chemical cocktail injections worked, but the organics in the soil and the site geology were not conducive to a good result. Mr. Godick also stated that there was very little room to work in the basement of the active LEXUS showroom. Mr. Weill stated that the building will be knocked down in 1 1/2 to 2 years when development starts. There will be a car dealership and a rental apartment building above. The ground will be dug out from 15 to 30 feet below grade - thereby taking out all of

**LEXUS DEALERSHIP (Continued)**

**S108956127**

the contamination. Mr. Hussein asked me what I thought should happen at the site. I told everyone that more remedial measures should be taken. I then gave a verbal list of the different methods that might work to remediate the site. Mr. Godick indicated that none of these methods would work. Mr. Hussein said that the DEC will review the feasibility study and the Treatability Study and talk to our Albany technical staff to see what can be done at this site. With that, the meeting ended. Later, a meeting was held between staff at the DEC regarding the site. It was decided that a Stipulation agreement, with one condition in the CAP being that excavation take place no later than two years from now, be drafted and sent to the owners for their signature. 10/4/12 - Raphael Ketani. I made an unannounced site visit to the LEXUS dealership property. The site is an active dealership. I took pictures of the outside of the dealership. I had one of the dealership managers show me the basement where the AST used to be. We went down a flight of stairs that descends from the showroom. We entered the basement and then we entered a separate room. I took pictures inside the room. The room had a concrete floor in good conditions and items in it that looked to be haphazardly stored - old flat computer monitors, 50 pound bags of solid materials. The items in the room were dusty. I could see a small, old oil tank that had been pushed to one side and was now leaning against the right wall. It had rivets in it. There was a depression in the concrete floor in front of me. Judging from the size of the depression, I judged the former AST to have been large - maybe about 1200 gals. The person with me stated that it was a large tank. However, the PBS registration indicates that the tank was only 550 gals. This didn't make sense. I saw well MW-5 immediately in front of me. From the map that I had, I could tell that hot spot B-116 was just to my left and hot spot B-115 was between MW-5 and the depression. The floor in these areas did not have staining, but I did sense a very slight odor of oil. There was nothing else to see in the room. So I left the site. However, once back on the 11th Avenue sidewalk, I did see a grating with a door at the bottom. The door was large enough for a person to fit through. Judging from the location of this door, I would assume that it opened into the room I had just been in. 10/5/12 - Raphael Ketani. As a result of my site inspection yesterday, I determined that soil excavation through the floor of the basement room may be a reasonable alternative means of removing the contamination. I spoke at length to Mr. Weill of T.F. Cornerstone (212) 984-1774 about the possibility of hand excavation of the soil. He asked how deep the excavation may have to go. I told him maybe 8 to 10 feet to get the bulk of the contamination. He said that shoring would be needed. Then he asked how large an area I was talking about. I told him that a hole in the floor may need to be opened that is about 6 feet by 6 feet. I added that the two hot spots, B-115 and B-116, were close to each other and on opposite sides of well MW-5. Mr. Weill said that he didn't think this was feasible or even a good idea. However, he will talk to Mr. Godick and see what he thinks. I told Mr. Weill that they should discuss the matter thoroughly and send the DEC an official response in writing. He said that this will be done. Later, I drafted a letter to Mr. Weill stating that the DEC had again reviewed the 11/16/11 Preliminary Work Plan and the 5/29/12 Treatability Study Results Report. I also stated that a site inspection had been made and the DEC believed that soil removal through the access door below the grating in front was possible. A response letter was requested by November 2, 2012. Mr. Hussein

**LEXUS DEALERSHIP (Continued)**

**S108956127**

approved the letter and it was sent out. 10/26/12 - Raphael Ketani. Mr. Godick and Ms. Brunner sent the Department a letter dated 10/26/12. The letter was a response to the discussions which took place during a meeting on 9/28/12 regarding the remediation of the contamination at the site. The letter contained a summation of the remediation activities that had taken place to date. AKRF considered the idea of performing soil excavation to remove the remaining contamination. They had concerns about the stability of the field stone foundation walls on two sides of the room above the contamination and the limited space to work in the room. The room is 15 by 20 feet with a clearance as low as 6 feet 10 inches. Excavation would take place in an area of 8 feet by 12 feet and down to the water table at 8 feet below the floor. They stated that this would remove the contamination at B-115 and B-116. Shoring would be needed to do the work. The estimated total costs for the work would be about \$146,800. This is about \$5,000 per cubic yard, as opposed to \$150 to \$300 per cubic yard for a typical excavation (they don't describe how they arrived at this typical cost or what is typical). They claim that the costs for doing the excavation or further soil treatment are very high. Because of this, consideration should be given regarding what is feasible work as per CP-51. Also, they stated that the analytical results were not above the Commercial standards. They don't want to do the work because of the high costs. I drafted a Stip for the review of Mr. Hussein. I addressed the Stip to Mr. Weill. I added a paragraph at the end of the Stip cover letter which dealt with statements that were made in the 10/26/12 AKRF letter. In response, I stated the following: that the costs for the work were not a concern of the DEC; that the analytical results still must be compared to the unrestricted standards; that soil excavation must be performed once the car dealership has been demolished. I ended the letter by telling Mr. Weill that they have to have the excavation performed and I set a deadline of December 17, 2012 for returning the signed Stip. 11/8/12 - Raphael Ketani. Mr. Hussein approved the Stip package and it was sent out today. 12/7/12 - Raphael Ketani. Mr. Godick (914) 922-2356 called. He said that the various partners in the ownership of the site and the tenant were arguing back and forth regarding who should sign the Stipulation Agreement. Because of the this conflict, Mr. Godick asked for more time to return a signed Stip. I gave him until February 1, 2013. 12/14/12 - Raphael Ketani. Mr. Godick sent me an e-mail in which he requested an extension of the deadline for submitting the signed Stipulation Agreement to January 15, 2013. I granted the extension, but warned that failure to submit the signed Stip would be subject to legal action. 1/14/2013 - Raphael Ketani. Mr. Godick called me today. He said that both the ownership group and the LEXUS leasee group have refused to sign the Stipulation Agreement. With this, Mr. Godick proposed to them and to the Department that a way around this stalemate is for the dig out at B-115 and B-116 to take place very soon. I told Mr. Godick that this would solve the problem and that the Stipulation Agreement had been sent only because the Department was not getting the cooperation of either group. Mr. Godick said that he understood. He will submit a work plan to dig out the area using shoring. They will go into the water table, conditions allowing. End point samples will be taken in the bottom of the pit. I told Mr. Godick that this would be fine. 1/15/13 - Raphael Ketani. Mr. Godick sent an official AKRF letter stating that a work plan will be submitted by 2/28/13 in lieu of a signed Stipulation Agreement. As part of the work, the area

encompassing B-115 and B-116 will be dug out as a pit which will be 8 wide by 12 feet long and 8 feet deep. The excavation will involve shoring and will reach the water table at 8 feet below grade. Two end point samples will be taken in the base of the pit once the bottom is reached. I responded by e-mail that this would be fine.

DEC Memo: 06/14/06 - See e-docs for Con Ed report detailing cleanup and closure.163535. On 3/27/06 at 08:45, M&S Suprvr Tony Chyn found oil in trenches under the west side of 114 Boiler. He contacted EHS Engr. J. Burke who investigated and found oil contamination had traveled to #3 sump. It was estimated that there is approximately 1 gallon of oil in a sheen covering the trenches and the sump. The #3 sump was shutdown and OMA Dan Moffit went check the OWS for contamination - there was none. A vendor will be contracted for clean up. Sewer/waterway NO. Fire/Smoke NO. Substance Unknown oil. Source Unknown. Cause Unknown. Private property NO. entered by J. Burke for Fred Klettlinger 03/27/06 @ 09:07  
Remarks: still investigating: spill is contained : no to 5questions. 163535.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 159953. Ken Collazo Supervisor in code 753 reported to R. Slote of Transmission Operations that during a code 753 mark out, he discovered oil in an excavation at the corner of 59th St. and West End Ave. He reports that there may be Transmission Operations manhole in the area and that this oil may have come from thefeeder that impacted the sewer line indicated in e2mis report 159069. Trans Ops crew is being scheduled to go out to the location to inspect any manhole in the area to help determine if the oil is coming from a Transmission Feeder pipe. Ken was directed to contact EHS Remediation as well as this could be a historic spill.=====  
=====ERT P. Walsh was spoken to about this incident. P. Walsh has a call into B. Cohen of EHS remediation to notify him of what was found. Trans Ops crews will be inspecting MH 60137 at the corner of 59th St. and West End Ave. on the 3-11 shift. The transmission feeders running through the MH is 38M73 and 38M74. This spill report will be closed once the inspection is completed and the feeders,are determined, to the extent possible, not to be leaking.M. Pillig,  
86856,7/22/05=====  
=====2/7/2012 - changed Lead DEC from Joe O'Connell to JFeng. 7/20/12 - in 7/12/12 letter reviewing Con Edison Appendix B Site 28, requested this spill to be included in the site (JOC)  
Remarks: FOUND DURING EXCAVATION: UKNOWN WHERE IT IS COMING FROM: CONED # 159953. NO OT 5 QUESTIONS: STILL INVESTIGATING

DEC Memo:

159069 Gino Frabasile reported that while on site working on a Code 753 - observing third party contractor working close to Con Edison's oil-o-static line, the third party contractor, constructing a structure at 59th Street & West End Avenue, Manhattan, opened a New York City manhole and discovered approximately 50 gallons of oil. The contractor took a sample of the oil and the results indicate possible Feeder 51 oil. Con Edison's Chem Lab was contacted to take an additional sample to test for TPH, oil ID and PCB. There are no injuries or outside impact, no active fire or smoke and no sewer, waterways or private property affected. Lab Sequence Number: 05-05542-001 - Analysis indicates the presence of a cable oil. Lab Sequence Number: 05-05541-001 - PCBs < 1 ppm Tom Smith, Chem Lab, indicated that the GC of the sample is similar to feeder 51 oil. Tom Smith also indicated that there was no PFT signal detected in the dielectric fluid. Tom Smith indicated that residual PFT would be detected for at least several years. This indicates that the dielectric fluid is "old" oil. Review of Appendix B listing indicates that there was a reported 25,000 gal spill on 09/18/83 at West End Ave north of W 59th Street (site 28). There also was a 611 gal leak

on 03/01/03 on West End Ave about 50 ft north of 59th Street. Based upon this information, although the oil detected in the sewer was found to be similiar to feeder 51/52 dielectric fluid, it is from the Appendix B incident. 7/20/12 letter dated 7/12/12 requests addition to site 28 SIWP (JOC)

Remarks: NO TO FIVE QUESTION. CLEAN UP PENDING TEST RESULTS. CON ED159069.

 DEC Memo:

161354. 10-3-05 @ 22:20. S Callinan # 57798 reports that while digging an excavation on the e/s west end av 20' n/o w 59 st, he discovered that 1/2 gallon of transmission feeder fluid had leaked from a feeder ( either 38m73 or 38 m 74) into the soil of the excavation. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. There is a drip rate of 1/2 gallon per hour. No private property affected. Access anytime. S Callinan # 57798 has called Transmisiion Operations to respond to the leak and is utilizing a contractor on location to excavate the affected soil. J Moran # 01182.Update 10/24/05. A clamp was installed on the midnight shift and a repair barrel was installed on 10/4/05. All visibly contaminated soils were removed by All State Power vacunder the direction of CCI L. Crilley. DF fluid loss estimated between 1/2 and 1 gallon. All soil down to a series of concrete ducts and gas main was removed. No post samples were taken for this reason. This was confirmed by M&CS CCI John Terlecki. See email below.-----Original Message-----From: Terlecki, John CSent: Tuesday, October 25, 2005 6:38 AMTo: Pillig, Michael E.Cc: Schaefer, Vernon; Beccalori, Stephen; Browne, Joseph; Crilley, Lawrence

IIISubject: RE: W59th- 11th AvMike- as discussed all efforts listed below have been done , the ducts and 20"gas main prohibit sampling beneath the leak, the leak itself was barely visible.We will be restoring the area by Wednesday night. Thanks- JT-----Original Message-----From: Pillig, Michael E.Sent: Monday, October 24, 2005 7:11 AMTo: Terlecki, John CCc: Schaefer, Vernon; Beccalori, Stephen; Browne, Joseph; Crilley, Lawrence IIISubject: RE: W59th- 11th AvJohn,Please call me on my cell phone prior to restoration. My understanding is that the area below the leak location contained a series of concrete ducts that we would be unable extract soil samples. I know that we removed whatever contaminated soils there were and then powerwashed the ducts. If this is the case then we could restore. If not, we should arrange for some verification sampling. I'd like to talk to you in any event prior to restoration. Thanks. (347) 386 - 5506Entered by:M. Pillig, 86856, 10/24/05Closed. 12-1-05. see eDocs. GB

Remarks: 1/2 gal of dielectric fluid. drip rate of 1/2 gal per hour. spill source is feeder #38 mikes or 38 mikes 74 spilled onto soil. clean-up is in progress. con ed ref # 161354.

the run of feeder M-51. The leak detection system registered that there was a leak at 08:10 and the leak committee declared that there was a spill of approximately 200 gallons somewhere on the run of this feeder. The feeder goes from Sprainbrook to the W. 49 St substations. 2 PFT vans were sent out to 125th St, one to work south and one to work north. TO crews to check all manholes in Manhattan and CGO crews to check in Bronx and Westchester. At approx 12:30, PFT vans picked up signal in air at around 59th St and 11th Ave. At 13:10, area confirmed and barholes requested to be installed. Clean Harbors notified to respond. Bag samples taken. Excavation started to uncover leak at 1540hrs. Dielectric fluid was found in service box manhole next to leak. Contractor to clean manhole. At 1800hrs, leak was uncovered and temporary clamp installed and holding. Leak is on 5" pipe. Steel plates were sitting on top of pipe and damaged coating. Pipe is corroded for approx 3'. Pipe needed to be raised to install barrel. Excavation was extended to lift pipe for barrel. When pipe was lifted at 2040hrs, it started leaking again at the clamp. It was determined that a crack had formed at the clamp area because of a bedn in the pipe. Clamp was repositioned but coule not seal leak. At 0245hrs, 3/2/03, feeder was requested off cat#1 due to deteriorated condition of the 5" oil line. Feeder was placed on reduced pressure at 0840hrs. All fluid leaking is being captured by Con Ed vac truck. Excavation continues to lengthen trench for freeze pits. A 19' long section of pipe will be removed on the 5" oil line. Valves shut in diffusion chamber 61800 on West End and 90th St and in the W49th St cooling plant. Oil line isolated and feeder pressure raised to normal. Feeder returned to service 0345hrs on 3/3/03. Freezes started 0341hrs 3/3/03. On 3/2/03 Clean Harbors removed 20cu yrds of material, manifest CTF1112161. On 3/3/03, freezes were tested and pipe section drained. 19' section of 5" pipe was cut and removed. As of 0400hrs 3/4/03, welding and pressure testing was complete. On 3/3/03 Clean Harbors removed 20cu yrds of material under manifest CTF1124204 and 1 cu yrd under CTF1112092. On 3/5/03 Clean Harbors removed 25cu yrds of material under CTF1124203. Sampling was conducted on 3/7/03 by Jacques Whitford. Results received on 3/14/03. LSN 03-01892. Soil concentration samples were analyzed by EPA modified method 8100 and TCLP benzene. A sample of dielectric fluid was obtained from the feeder and used as a standard. 3/14/03 Dielectric fluid loss has been calculated as 611 gallons. 7/20/12 SIWP review comments sent in 7/12/12 letter (JOC)

Remarks: 345 kv transmission feeder that runs from manhattan to springbrook substation in yonkers, westchester - monitored by leak detection system - found to be low by 200 gallons - rate of 7.1 gal per hour - no ref # yet - nrc #638181

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD" // : PIN-4314.09/25/95: PIN-4314 - ASSIGNED TO CHRIS FOR TRACKING PURPOSES.Spill No. 89063705/06/2003 - Sigona assigned to DEC Rommel based on call from Josh (917)601-2723 who is project manager from RP who has been sending quarterly reports to Jennifer Rommel.5/20/2003-Vought-Received call from Josh (973-621-0777x134) requesting NFA. Vought returned call and spoke with Joshua. Josh claims that fingerprinting data (lubricating/hydraulic Oil) shows that product may be from off-site source. Joshua will be sending in NFA request by 7/1/2003.9/10/03-Vought-Received call from Josh who is submitting closure report and will be sending one copy to Rommel.10/6/03 - Reassigned from Rommel to Sun.01/21/2004-Sun-file review and update: Sun sent a letter to Joshua Ford of Golder Associates, Inc (Consultant to Ford Motor Corporation), dated 01/20/2004. The letter indicates that the Department has received and reviewed the request for No Further Action dated 9/12/2003 for the subject site, and based on the data of March 4, 2003 report, the request for closure has been denied. As shown on the 3/4/2003 report, 1.10 feet of lubricant or hydraulic oil was detected in Monitoring Well FN-2. In order to determine the extent of subsurface contamination, the Department requires by 3/19/2004 to perform the following: (1) Delineation of soil and groundwater contamination. The plume must be delineated northeast of FN-2, east of FN-2 between FN-2 and 3" tunnel weep hole, southeast of FN-2, and northwest of FN-2 between FN-2 and former 2000-gallon fresh motor oil UST, (2) Replace the existing passive skimmer with a more aggressive free product recovery system, (3) A surrounding property sketch including property layout and usage must be submitted. 1/21/2004 Sun called Joshua Ford

of Golder Associates to discuss the work required by the Department in the DEC's letter dated 1/20/2004. It was agreed that a conference call will be arranged between DEC (Joe Sun), Josh Ford (Golder Associates) and Ford Motor Representative early next week (week of 1/26/2004) to discuss the issues of this spill. A site visit by all three parties will be made after the conference call.01/27/2004 Transferred from Sun to Krimgold.03/16/04. J.Krimgold sent a letter to Golder Assoc. in response to their letter dated 2/24/04. He agrees to extend the deadline for completion of additional investigation. An additional investigation summary report with conclusions and recommendations, and if necessary a proposed amendment to the on-site remedial system should be submitted for the Departmental review no later than June 30, 2004.Furthermore, a proposed scope of work for an additional investigation should be submitted for Departmental review within one month from the date of this letter.However, operation, maintenance and monitoring of the existing remedial system should continue until the Department instructs otherwise.4/20/04. Golder Assoc. submitted a letter dated April16, 2004 with proposed scope of additional investigation. Anticipated date of Phase 1 submitting of this investigation is June 30, 2004. YK.11/29/2005: Spill file received from Dave Harrington. (Sadique)02/01/2006: Reviewed the 5 quarterly reports (July 04 to Sep 05) sent by Golder Associates. They were monitoring groundwater leves in 5 MW's and product thickness in FN-2 well. Per report there were no product found in other wells. Product recovery skimmer is in place. Talked to Jacob Krimgold. He is going to send records to central office. (Sadique)02/03/2006: Received a box of record from R2. (Sadique).04/25/2006: Quarterly status report yet not received which was due on April' 06. Talked to Mr. Christopher D. Hemmingway of Golder Associates. He informed, report already prepared and now rewiwing by the client and will be submitted to DEC very soon. There are 5 MW's in place out of which FN-2 always showing free product. Product recovery system is in place which are operated by Ford Motor Co. Since April 1997. (Sadique)05/09/2006: 1st Quarter Site Status report (Jan, Feb and Mar) dated May 04, 2006 received and reviewed. Monthly inspection and maintenance were done on free product recovery system. Measured water table depth and thickness of free product for 5 MW's. Free product found in FN-2 only as 0.12, 0.50 and 0.44 ft respectively. The skimmer recovery system operated throughout the 1st quarter. The recovered fluid was directed into an AST. Approximately 130 gal of product has been collected since Nov 21st, 2005. Same activities will continue for the 2nd quarter. (Sadique)08/04/2006: 2nd Quarter Site Status report (Apr, May and Jun) dated July 28, 2006 received and reviewed. The free product thickness found in FN-2 as 0.18, 0.22 and 0.52 ft. The reason of increased thickness due to the timing of the measurment relative to the stage that the pumping cycle is in whin the measurement is collected.A sheen and a gasolene odor was noted in MW-2 during the monitoring period. Per Golder Associates, Exxon's consultant indicates that a recovery system incorporating MW-2 is scheduled to be installed during 4th quarterof 2006. (Sadique)10/30/2006: 3rd quarter status report dated Oct 27, 2006 received and reviewed. The skimmmer recovery system was operated without any problem. Approximately 190 gallons of product (26.5 inches) recovered during 3rd quarter. A sheen of free product observed in MW-1. Product thickness in FN-2 were 0.23, 0.26 and 0.21 respectively. (Sadique)03/23/2007: 4th Quarter 2006 report received and reviewed. The skimmmer recovery system was operated without any

**FORD LINCOLN MERCURY (Continued)**

**S104495183**

problem. Approximately 172 gallons of product and water mixture (17 inches) recovered during 4th quarter. Thickness of free product in FN-2 and MW-1 was 0.09 ft and 0.04 ft respectively during December 2006. 1st quarter of 2007 report expecting by May 2007. (Sadique)05/01/2007: First quarter 2007 status report dated April 27, 2007 reviewed. Monthly inspection of recovery system and MW's gauging are ongoing. The skimmer recovery system operated throughout this quarter. Only 3 inches of oil/water mixture has been collected in the AST. Still free products observed in FN-2 (0.19 ft) and MW-1 (0.09 ft). MW-2 is being used by the adjacent ExxonMobil spill remediation system. (Sadique)7/30/2007: Second quarter 2007 status report dated July 20, 2007 reviewed. Monthly inspection and maintenance of the free product recovery system performed. A sheen of free product observed in MW-1. The skimmer recovery system was in operation throughout the 2nd quarter. Product thickness in the AST tank remained approxi. 3 and quarter inches, indicating little or no recovery. A viscous liquid was observed above the water table in FN-2. It is hypothesized that this liquid is emulsified LNAPL and has been reported in this well in historic events. Approx. 1.5 gallons of the emulsified liquid was removed from FN-2 during June. A gasoline odor was noted in MW-2. It was established before that the source was from former Exxon Mobil S/S and located at upgradient. The report is acceptable. (Sadique)10/12/2007: 3rd Quarter status Report received and under review. (Sadique)10/16/2007: Reviewed the October 11, 2007, 3rd Quarter 2007 Status Report. A sheen was observed in MW-1 (0.08 to 0.12 feet thickness). The skimmer recovery system was operating throughout the 3rd quarter. The product thickness in the AST indicates a little or no recovery during 3rd quarter. A layer of viscous liquid was observed above the water table in FN-2 (0.60 to 2.00 feet thick). It was hypothesized that this liquid was emulsified LNAPL. Approximately 2 gallons of emulsified liquid were removed during this quarter. The planned activities for the 4th quarter period of 2007 include continuing the monthly inspections of the monitoring wells, product recovery system, and associated components. Based on the review, I find the report to be acceptable as written. Requested to incorporate the followings from next quarterly status report: 1) In the groundwater contour map, please show the location of the AST, pump, and system pipings associated with recovery system. 2) Please, send me an email at least a week prior to scheduled monthly field inspection. Approval of the 3rd Quarter status Report sent via email today. (Sadique)11/26/2007: Jack Aversa and I visited the site on 11/13/2007. Met the consultants Mr. Christopher Hemingway and Tanya Sharko of Golder Associates. Free product was observed in FN-2 and MW-1 and thickness was 0.19 ft and sheen (less than 0.1 ft) respectively. Checked the product. It was dense blakish product, smell like used oil. Skimmer pump was installed inside the FN-2 and was in running condition. Per last quarter report the recovered product depth in AST was unchanged, indicating no recovery. During monthly maintenance, product was bailing out from those wells. An upgradient Exxon Mobil spill # 90 09804 is located adjucent to the site. Chris Milack from BURB is the PM. A SVE remeial system is being installed at the site and will be in operation soon. Proposed to consider conducting an ERI (Electrical Resistance Imaging) survey or similar type of survey to identify the present subsurface condition and location of the plume. Based on the survey results, if needed, location of the skimmer pump can be changed to enhance the remedy. (Sadique)03/07/2008: Reviewed January 31, 2008, 4th Quarter 2007

**FORD LINCOLN MERCURY (Continued)**

**S104495183**

Status Report. The skimmer recovery system was operated throughout the 4th quarter. Approximately 6 gallons of liquid has been collected during that quarter. The LNAPL thickness measured in FN-2 decreased from 0.44 to 0.06 feet. In MW-1, LNAPL thickness decreased from 0.19 to 0.06 feet. Gasoline like odor was noted in MW-2 which previously established that the source was former Exxon Mobil spill located adjacent to the southwest. Currently a high vacuum extraction system remediation system is operating at the adjacent Exxon Mobil site. The planned activities for the 1st quarter period of 2008 include continuing the monthly inspections of the monitoring wells, LNAPL recovery system, and associated components. Based on the review, I find the report to be acceptable as written. Approval email sent out today. (Sadique)05/07/2008: Reviewed the April 30, 2008, 1st Quarter 2008 Status Report. The skimmer recovery system was operated throughout the 1st quarter of 2008. During monthly monitoring, LNAPL was detected in FN-2 and MW-1. The thickness of LNPL ranged from 0.04 to 0.09 feet. Also, the probe was felt warm, when measuring the depth of water in MW-3. The planned activities for the 2nd quarter include continuing the monthly inspections of monitoring wells, LNAPL recovery system, and its associated components. Based on the review, I find the report to be acceptable contingent upon the following: 1. In the Monthly Inspection Activities section it is mentioned that during 1st quarter, two gallons of liquid has been collected (an increase of approximately 1 inch of liquid in the AST). But in the Attachment A, total recovery was only 0.125 inches into the AST. 2. Attachment B, groundwater contour map, did not include the location of the AST, pump, and system piping associated with the recovery system. Requested to provide the correct information regarding liquid recovery during the 1st quarter of 2008 and also provide comments on the warm probe in MW-3 in the next quarterly report. Also requested to include the location of the recovery system (AST and piping) on the groundwater contour maps. Approval email sent today. (Sadique)07/29/2008: Reviewed the July 16, 2008, 2nd Quarter 2008 Status Report. The skimmer recovery system was operated in FN-2 throughout the 2nd quarter. Approximately one-half gallon of liquid was collected during that quarter. The LNAPL thickness measured in FN-2 and MW-1 varied from 0.39 to 0.47 feet and 0.11 to 0.09 feet respectively. During monthly inspection, the LNAPL recovery system was found to be working in good condition. MW-2 is no longer accessible because it is being utilized as part of the high vacuum extraction system installed by adjacent Exxon Mobil spill site. The planned activities for the 3rd quarter of 2008 include continuing the monthly inspections of the monitoring wells, LNAPL recovery system, and associated components. Based on the review, I find the report to be acceptable as written. Approval email sent today. (Sadique)11/26/2008: Reviewed October 27, 2008, 3rd Quarter 2008 Status Report in regard to the above referenced site located at 555 west 57th Street, in Manhattan, NY. The skimmer recovery system was operated in FN-2 throughout the 3rd quarter. Approximately two gallons of liquid was collected during that quarter. The LNAPL thickness measured in FN-2 and MW-1 varied from 0.14 to 0.29 feet and 0.01 to 0.03 feet respectively. During monthly inspection, the LNAPL recovery system was found to be working in good condition. MW-2 is no longer accessible because it is being utilized as part of the high vacuum extraction system installed by adjacent Exxon Mobil spill site. The planned activities for the 4th quarter of 2008 include continuing the monthly inspections of the monitoring wells, LNAPL recovery system, and associated components.

**FORD LINCOLN MERCURY (Continued)**

**S104495183**

Based on the review, I find the report to be acceptable as written. Approval email sent out today. (Sadique)03/16/2009: Reviewed February 09, 2009, 4th Quarter 2008 Status Report. Monthly routine inspection and maintenance of the skimmer recovery system were performed in October, November and December of 2008. The recovery system was operated in FN-2 throughout the 4th quarter. Approximately two gallons of liquid was collected during that quarter. The LNAPL thickness in FN-2 varied from 0.07 to 0.05 feet and in MW-1 from 0.03 to 0.0 feet during last monitoring period. During monthly inspection, the LNAPL recovery system was found to be working in good condition. MW-2 was accessible and was not sampled. The planned activities for the 1st quarter of 2009 include continuing the monthly inspections of the monitoring wells, LNAPL recovery system, and associated components. The effect of the adjacent remedial system will also be monitored (MW-2 being utilized as part of the high vacuum extraction system installed by Exxon Mobil).Based on the review, I find the report to be acceptable as written. Approval email sent out today. (Sadique)10/13/2009: Reviewed the 9/25/09 notification of temporary system shutdown and 3rd Quarter Status Report. Monthly routine inspection and maintenance of the skimmer recovery system were performed during July through September of 2009. The recovery system was operated in FN-2 throughout the quarter. Approximately five gallons of liquid was collected during the 3rd quarter. The LNAPL thickness varied from 0.04 and 0.13 ft in FN-2. The LNAPL recovery system was found to be working in good condition. MW-2 was inaccessible and was not sampled. The planned activities for the 4th quarter of 2009 include removing the skimmer pump unit during the October 2009 site visit and monitoring LNAPL recovery for two months. The system will be re-started within three months of the date of shut-down. Results of these activities will be presented in the 4th quarter of 2009 status report. The report is acceptable. Approval letter sent out today. (Sadique)4/26/2010: Current status: Reviewed 3rd Quarter Status Report dated September 25, 2009. The product recovery system from FN-2 has been temporarily removed on 10/15/09 to monitor free product accumulation over a 2 months period. The system was re-started on 1/8/10. Next report is passed due. S.Ahmed5/26/2010: Current status: 4th Quarter of 2009 and 1st Quarter of 2010 Status report dated May 21, 2010 received and now under review. S.Ahmed6/28/2010: Current status: 4Q 2009 and 1Q 2010 Status report dated May 21, 2010 reviewed. Consultant evaluated use of ERI, MIP, SEPR, S-SICO and placement of absorbent socks. Proposed for EFR events followed by treatability study to evaluate viability of introducing surfactant during future EFR. S.Ahmed8/26/2010: Current status: 2nd Q 2010 Status report dated 8/6/10 reviewed. Still LNAPL is showing up in one well every month (0.05 to 0.13 ft). Proposed one time EFR events followed by treatability study to evaluate viability of introducing surfactant during future EFR. S.Ahmed10/26/2010: Current status: 3rd Q 2010 Status report dated 10/7/10 reviewed. Still LNAPL is showing up in one well every month (0.11 to 0.13 ft). Proposed one time EFR events followed by treatability study to evaluate viability of introducing surfactant during future EFR conducted this month. S.Ahmed3/29/2011: Current status: 4th Q 2010 Status report dated 2/24/11 reviewed. Still LNAPL is showing up in one well every month (0.07 to 0.48 ft). One time EFR events and LNAPL treatability study conducted. Proposed to remove the skimmer recovery system and deploy absorbent socks in recovery well. S.Ahmed04/12/2011: 4th Q 2010 Status report dated 2/24/11 reviewed. LNAPL is still

showing up in one well every month (0.07 to 0.48 ft). 1 time EFR and LNAPL treatability study conducted. Approved the skimmer recovery system shutdown and deployment of absorbent socks in recovery well. S.Ahmed05/25/2011: 1st Q 2011 Status report dated 5/10/11 reviewed. LNAPL is still showing up in FN-2 and MW-1 and are ranged from 0.12 to 0.16 ft and from 0.01 to 0.07 ft respectively. Absorbent socks in these 2 MWs and replacement of damaged AST activities will be conducted 2nd Qtr'11. S.Ahmed08/24/2011: 2nd Q 2011 Status report dated 8/15/11 reviewed. LNAPL is still showing up in FN-2 during monthly monitoring (0.03', 0.38' and 0.16'). Absorbent socks in MW-1 and in FN-2 have been installed in May 2011. Effectiveness of absorbent socks will be evaluated during 2nd Q, 2012. S.Ahmed10/25/2011: 3rd Q 2011 Status report dated 9/30/11 reviewed. The Skimmer recovery system that was installed in FN-2 is currently shutdown. Instead, absorbent socks have been installed in FN-2 and MW-1. Apparently, no free product was observed in FN-2 and MW-1 during last couple of months. S.Ahmed02/24/2012: 4th Q 2011 Status report dated 2/13/12 reviewed. During this quarter no measureable product found in any wells. Absorbent socks are remained inside the FN-2 and MW-1. Monthly inspections of the monitoring wells and absorbent soaks will continue. S.Ahmed05/29/2012: 1st Q 2012 Status report dated 5/21/12 reviewed. During this quarter no measureable product found in any wells. Absorbent socks were replaced in January 2012. Evaluation of effectiveness of absorbent socks will be conducted 2nd Q of 2012. S.Ahmed08/01/2012: 2nd Q 2012 Status report dated 7/11/12 reviewed. 0.03 ft of LPH detected in FN-2 one time. Absorbent socks were replaced. Absorbent socks found to be effective remedial measure for removing intermittent occurrence of LPH. Request for permanent shutdown of skimmer pump approved. S.Ahmed10/25/2012: 3rd Q 2012 Status report dated 10/22/12 reviewed. LPH was not detected in any MW's during this quarter. Absorbent socks found to be effective remedial measure for removing intermittent occurrence of LPH. This quarter socks were replaced from both MW-1 and FN-2. S.Ahmed AMTRAK

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Historical Generators:

Date form received by agency: 01/01/2006  
Facility name: 56TH STREET INCINERATOR  
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 06/17/2004  
Facility name: 56TH STREET INCINERATOR  
Classification: Large Quantity Generator

Date form received by agency: 11/18/2002  
Facility name: 56TH STREET INCINERATOR  
Site name: NYC DEPT OF SANITATION  
Classification: Large Quantity Generator

Date form received by agency: 11/04/1996  
Facility name: 56TH STREET INCINERATOR  
Site name: NYC DEPARTMENT OF SANITATION  
Classification: Large Quantity Generator

Date form received by agency: 01/27/1988  
Facility name: 56TH STREET INCINERATOR  
Site name: SANITATION WAREHOUSE  
Classification: Not a generator, verified

Facility Has Received Notices of Violations:

Regulation violated: Not reported  
Area of violation: Generators - Records/Reporting  
Date violation determined: 10/07/1996  
Date achieved compliance: 11/05/1996

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DER Facility ID: 272906  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT"3/17/2003 Zhao/DO: TTF letter sent.3/14/2003-Vought-Spill transferred from Rommel to Vought. Odors reported at adjacent residence located at 12 West End Avenue (see spill #0212324). FDNY on-site and issued citation. FDNY left site by time of NYSDEC call-back.4/24/2003-Vought-Site visit by Steve Muller (516-395-5957) on 3/17/2003. No detectable odors in adjacent residences found with PID in building directly adjacent to north. Steve spoke with Rommel and Rommel requested soil borings. Steve submitted proposal to Gaseteria and will send it to NYSDEC upon their approval.1/27/2004-Vought-File review by Vought:Tank Test Failure Letter from DEC(Zhao)-3/17/03.Email from Gannett Fleming(Manfred Bohms) to DEC(Rommel) 1/16/04. Gannett Fleming performed Phase II at 2-10 West End Avenue and wishes to submit results to DEC and discuss proposed remedial measures. Contact info for Bohms is (516)671-8440x1308 and fax 516-671-3349.Phone Conversation between DEC(Vought) and Bohms-1/23/04. Removal of three active USTs and ten more USTs suspected on-site. Gasoline contaminated soil and groundwater discovered. Gaseteria no longer owner of site. New owner is 2-10 West End Avenue Association, LLC. 419 Park Avenue South Nyny Mr. Terry Soskin 212-889-3500. Site will become apartment complex via excavation to bedrock or below groundwater (whichever is encountered first). Dewatering permits will be obtained if necessary.Phase II Report-Gannett Fleming-Manfred Bohms-1/21/03. Phase II conducted at 2-14 West End Ave. Gaseteria formerly located at 2-10 West End Ave and a former auto repair garage located at 14 West End Ave at the corner of W60th St. Naeva Geophysics conducted radar survey on 12/8/03 and found three (4000-gallon) gasoline USTs, three dispenser islands and "three areas that USTs were suspected to be located south of the northernmost in-service 4000-gallon UST". The three areas are suspected of housing nine USTs and one additional UST was discovered totalling thirteen USTs. The radar survey of 14 west end Ave did not detect the presence of USTs but two 275-gallon ASTs were observed the in the basement. Nine geoprobes were performed at 2-10 West End Ave and one boring was performed at 14 West End Ave. Four groundwater samples were also collected. Soil analyticals show 73ppb benzene(SB3), 2900ppb xylene(SB3), 3000ppb MTBE(SB3), 440ppb MTBE(SB5), 10000ppb xylene(SB5), 820ppb benzene(SB4), 21000ppb benzo(a)anthracene(SB1), 19000ppb benzo(a)pyrene(SB1), 14000ppb naphthalene(SB7). Soil analyticals also show minor SVOC TAGM 4046 exceedances attributable to fill material. Groundwater analyticals show 230ppb benzene(SB3GW), 190ppb benzene(SB4GW), 800ppb benzene(SB5GW) and 14ppb benzene(SB6GW), 17ppb naphthalene(SB3GW), 52000ppb MTBE(SB3GW), 38000ppb MTBE(SB4GW), 420ppb MTBE(SB5GW), 88ppb naphthalene(SB5GW) and 19ppb MTBE(SB6GW). NYSDEC requires:1)updated PBS registration 2)Stipulation Agreement due to scheduled construction of residential building 3)delineation across West End

Avenue, across 59th Street and on southwest corner of 59th Street and West End Ave 4)EPA Method 8260 and 8270 analysis due to naphthalene, benzo(a)anthracene and VOCs in groundwater. Vought called Bohms to explain requirements and left message to return call to DEC. Vought sent STIP with above requirements on 1/29/2004.

1/29/2003-Vought-Spoke with Steven Muller (516-395-5957). New owner is Cambridge Company. Money held in escrow for Gaseteria to clean up site. Gannett Fleming will prepare RAP. DEP also involved in site.

Gaseteria shutting down dispensers and fencing property today.

Gaseteria will perform standard tank pull and remove concrete and prepare Tank Closure Report and review RAP with respect to Gaseteria property. Gaseteria will remediate groundwater within discharge

limits. Amtrak tunnel adjacent to property. 2/3/04-Vought-Received call from Barbara Herr(Ten West End Development Corp. 212-453-3785)

that incorrect two different spill numbers are on STIP package sent 1/28/04. Vought corrected STIP, refaxed and remailed with 3/5/04

deadline.2/9/04-Vought-Received email from Bohms. "An Amtrack rail line passes diagonally across West End Avenue from north to south between W. 58th Street and W. 60th Street". DEC's requested well locations are positioned on top of rail line. "Additionally, Amtrack and IRT yards are located further to the

west".2/18/04-Vought-Received certified letter return as underliverable due to "attempted not known". Vought called Herr and left message to return call to DEC either confirming receipt or with correct address. 2/25/04-Vought-Spoke with Muller and Gannett Fleming

will be preparing a RAP which includes STIP requirements. Muller will confirm that wells cannot go across street due to location of the tunnel.2/27/2004-Vought-Received signed Stipulation Agreement from Cambridge Companies (Perry Soskin) executed on behalf of 10 West End Development Corp, LLC. Stipulation was implemented by DEC Kunkel on 3/11/04. Implemented Stipulation was not sent to 10 West End Development due to expected Stipulation Agreement from Gaseteria regarding 2-10 West End Avenue. Vought wanted to ensure that Gaseteria sign Stipulation due to the majority of contamination originating from Gaseteria property. Vought received Hazardous Waste Mitigation Plan from Gannett Fleming.3/18/04-Vought-Site meeting with Vought(DEC), Muller(Applied Geosolutions), Porcelli(Gaseteria), Madigan(Gannett Fleming), Bohms(Gannett Fleming) and Soskin(Cambridge). Stipulation Agreement signed by Gaseteria after assurance by DEC that Gaseteria would only be held for contamination emanating from 2-10 West End and not 14 West End. Gaseteria will perform test pits to identify areas of soil contamination and find stockpiling sites. If contaminated soil is found in test pits it will be excavated and endpoint samples will be collected. Construction of the residence scheduled to begin in July/August 2004. Standing water present in railroad tracks containing algae inferring that the water has been there for long time and is groundwater (depth corresponds approximately with expected depth to groundwater). No sheen or odor from water in railroad tracks. DEC will not require off site water samples from far side of tracks AS OF YET due to lack of hydraulic connection to site inferred by water in tracks. Meeting resulted in the following requirements: 1)EPA Method 8260/8270 due to gasoline, fuel oil, waste oil and hydrualic oil. 2)Regular intermittent (initial, during and final) sampling of dewatering water for 8260/8270 for study of groundwater contamination and remediation 3)Due to adjacent railroad tracks no offsite wells are required (dewatering samples will be used for groundwater

**GASETERIA OIL CORP (Continued)**

**S106866617**

investigation).3/25/04-Vought-Review of Hazardous Material Mitigation Plan (Gannett Fleming) dated February 2004. "This Mitigation Plan is required by the New York City Department of Planning and DEP for the redevelopment of the site". Plan included installation of monitoring wells (not feasible after reexamination of railroad tracks). Soil planned to be excavated to groundwater or bedrock (two story underground garage planned for new building). Plan also proposed installation of a foundation vapor barrier, removal of all onsite USTs, removal of contaminated soil, community air monitoring program and dewatering activities. In addition to above requirements, DEC approves workplan except for: 1)installation of monitoring wells 2)Method 8021 (DEC requires 8260). 3/25/04-Vought-Sent letter to Gaseteria and 10 West End Development approving of Mitigation Plan with additional requirements of: 1)EPA Method 8260/8270 on all samples due to gasoline, fuel oil, waste oil and hydraulic oil. 2)Regular intermittent (initial, during and final) sampling of dewatering water for 8260/8270 for study of groundwater contamination and remediation 3)Due to adjacent railroad tracks, no offsite wells are required (dewatering samples will be used for groundwater investigation) DEC requires removal from plan of: 3)installation of monitoring wells 4)Method 8021 (DEC requires 8260). Vought sent letter summarizing above on 3/25/04.4/5/04-Vought-Reviewed DRAFT mitigation plan incorporating above requirements as requested by Gannett Flemming prior to submission to DEC. Vought sent email to Bohms and Muller with edits.4/6/04-Vought-Received phone call and email from Bohms discussing edits and Mitigation Plan approved by DEC Vought. Vought sent letter to Bohms approving of plan.4/13/04-Vought-Received letter sent to Soskin returned to sender as "not deliverable as addressed". Letter was addressed as:Mr. Perry Soskin2-10 West End Associates, LLC.419 Park Avenue SouthNew York, NY 10016Fax: 212-889-5131Vought called Herr and requested call back to DEC with correct mailing address. 5/4/04-Vought-Spoke to Steve Muller and two additional USTs discovered (one 275-gallon) waste oil and one (2000-gallon) heating oil. Muller will update PBS registration. Excavation still continuing until clean soil detected. Site visit scheduled for 4/17/04. 5/13/04-Vought-Vought spoke to Muller and site visit arranged for 5/17/04 to examine limits of excavation and locations of endpoint samples.5/19/04-Vought-Performed site visit on 5/17/04. Approximately 1700 tons of impacted soil was removed. USTs removed included three (4000-gallon) gasoline USTs, fifteen (550-gallon) gasoline USTs, one (1000-gallon) fuel oil UST, one (550-gallon) waste oil UST, one (2000-gallon) fuel oil UST and one (275-gallon) waste oil UST. Building excavation will continue to sidewalk and to groundwater. Dewatering projected to begin in 9/03. UST closure report expected to be received by 7/1/04.9/16/04-Vought-Called Bohms for an update. Muller preparing draft UST Closure Report. Dewatering plan not drafted as excavation for foundation has not started. DEC will be notified upon beginning excavation.10/6/04-Vought-New file review by Vought:Split Spoon Sample Analysis (Gannett Fleming)-6/14/04. "As you are aware, Gannett Fleming split two post excavation soil samples..." There are some discrepancies between our results, mainly the xylenes concentrations in the northeast sample". Applied Geosolutions sample showed 1660ppb xylene and Gannett Fleming sample showed 10700ppb xylene.Additional Soil Sampling (Gannett Fleming)-6/14/04. "...we are submitting the analytical data from additional soil sampling performed by Gannett Fleming..." "This soil sampling was conducted to confirm our belief

**GASETERIA OIL CORP (Continued)**

**S106866617**

that soils in the eastern portion of the property were cross-contaminated during soil remediation activities". "Please note that these results do not represent post-excavation conditions. Additional excavation is planned at the site". Groundwater Sample Analysis (Gannett Fleming)-6/18/04. "...Gannett Fleming collected three groundwater samples from test pits excavated by Gaseteria on June 8 and 9, 2004". Groundwater analyticals show 170ppb MTBE(NWTPGW), 360ppb benzene(SWGW), 2500ppb toluene(SWGW), 1200ppb ethylbenzene(SWGW), 5800ppb xylene(SWGW), 7200ppb MTBW(SWGW), 16ppb benzene(WGW), 15ppb toluene(WGW), 44ppb xylene(WGW) and 1100ppb MTBE(WGW). DEC requires: 1) collection of endpoint soil samples at final terminus of excavation for foundation. Vought sent email to Muller and Bohms with above requirement and requesting status of further excavation for foundation and dewatering. 10/7/04-Vought-Received call from Bohms. Vought returned call and left message to return call. 10/8/04-Vought-Received message from Bohms and returned call and left message. 10/19/04-Vought-Site visit by Vought to witness collection of endpoint soil samples. Onsite were Gannett Fleming(Dennis), Applied Geosolutions(Muller) and Perry Soskin. Soskin requested letter from DEC stating that we were satisfied for cleanup for application for foundation permit. Soil still present in excavation (not excavated to bedrock yet) and fieldstone from former building foundations for sidewalls. Since further excavation is planned, these endpoints will not be considered. During collection of endpoint soil sample from under UST location, free product and heavy gasoline odors noted. Vought called Perry Soskin and left message in order to notify him that DEC would not produce the letter due to outstanding DEC requirements for remediation, non adherence to the CAP and possible H&S impacts to future residents. 11/23/04-Vought-Reviewed Underground Storage Tank Closure Report (Applied Geosolutions) dated 11/9/04. "The service station was comprised of three petroleum USTs in two tank cavities and three pump islands with seven dispensers". To the north of the site is an office building (to be razed for the new residential apartment tower), to the east is an automotive repair facility, to the south is a multi-level parking garage and to the southwest is an IRT building housing a power plant for the subway system, to the west is a parking lot". Sensitive receptor survey shows closest receptor as school located 500' to the north. Bedrock encountered 5" below grade in northeast corner of the site. Wood, coal ash and slag found in the southern portion of the site. Groundwater present at 15' below grade. Former site assessment by Gannett Fleming showed groundwater concentrations of groundwater concentrations up to 43ppb toluene, 1500ppb ethylbenzene, 9400ppb xylene and 6600ppb 1,2,4-trimethylbenzene. Tank removals included three (4000-gallon) gasoline USTs, one (550-gallon) waste oil UST, ten (550-gallon) gasoline USTs, one (1000-gallon) heating oil UST, one (275-gallon) motor oil UST, and one (2000-gallon) heating oil UST. Report contains many endpoint analyticals from various excavation pits that were created (some of which were filled back in) however the Department is only concerned with endpoint sampling from the final limits of excavation. Approximately 4042 tons of impacted soil were removed from the site. Community Air Monitoring as per DER-10 was performed during soil excavation and disposal. Report concluded that "based on the UST removal and site remediation activities, Gaseteria has adequately delineated the petroleum contamination in the onsite soils and conducted sufficient excavation to remove the petroleum

**GASETERIA OIL CORP (Continued)**

**S106866617**

contaminated soil from the site". No requirements issued as further excavation and dewatering will occur due to foundation construction.1/6/05-Vought-Spoke to Manfred and DOB will not issue permits until they receive regulatory letter. Manfred will draft a letter and send it to DEC for signature and revision.1/31/05-Vought-Reviewed manfreds draft letter and all points of letter approved by DEC in 4/7/04 approval letter of Plan. Vought called Manfred back who will call Cambridge to have them contact DEC.3/4/05-Vought-Received message from Manfred. Vought returned call and spoke to Manfred who is completing test pit report. Six test pits were installed (two on Gaseteria property). Test pits were dug to groundwater. Groundwater at 15' below grade across entire site. Bedrock at 11' on east side. Groundwater samples collected during test pit installation. In 3/04 or 4/04 general excavation will begin and contaminated soil will be segregated and disposed of accordingly. Letter referred to above on 1/6/05 will be cc'd and sent to NYCDEP.3/18/05-Vought-Received and reviewed Test Pit report (Gannett Fleming) dated 3/8/05 and received on 3/10/05. "As part of pre-construction work, Gotham Greenwich Construction (Gotham) excavated seven test pits at 2-16 West End Ave..." "During excavation petroleum contaminated soil was observed immediately above the groundwater interface and petroleum sheen on the groundwater surface in TP-1 and TP-3. Since TP-1 and TP-3 were not located on the former Gaseteria property and the contamination observed in these pits is not likely to be associated with NYSDEC Spill Number 0212404, Gannett Fleming notified NYSDEC and Spill number 0412188 was assigned to the property. Six groundwater samples were collected. Groundwater analyticals show 600ppb benzene(TP5), 700ppb toluene(TP5), 810ppb ethylbenzene(TP5), 2100ppb xylene(TP5), 3200ppb MTBE(TP5), 26ppb benzene(TP6), 16ppb toluene(TP6), 150ppb ethylbenzene(TP6), 310ppb xylene(TP6) and 510ppb MTBE(TP6). "Contaminated groundwater will be removed from the site as part of the dewatering system operated during foundation construction as indicated in the approved Hazardous Material Mitigation Plan".3/18/05-Letter from Gannett Fleming to NYCDEP Cabbagestalk dated 3/9/05. The remaining work to be completed is excavation of remaining contaminated soil, treatment and discharge of contaminated groundwater and installation of a vapor barrier. "Since these three items are an integral part of the construction phase of site development, a Department of Buildings permit for the construction of the building must be secured before the remaining remedial measures can be implemented. Therefore we request that you provide the necessary approval so the construction permit can be obtained".3/19/05-Vought-Received call from ASR Muller who was requesting concentration limitations for treatment. Vought gave Muller NYCDEP Nazaire to call for limits.6/3/05-Vought-Received message from Manfred Bohms (Gannett Flemming). Vought returned call and spoke to Bohms. In sidewalk in southwest corner of site a utility structure was found made of bricks extending to 30' below grade with oil at bottom. Sample collected for fingerprinting. No excavation performed as of yet as piling will be driven soon. Soil to begin being removed next week. Dewatering unit will be delivered and set up next week and will be running in a few weeks and predewatering sample will be collected. Bohms will contact DEC upon obtaining dewatering permit from DEP.6/9/05-Vought-Received call from Bohms that product in sidewalk vault is dielectric fluid with no PCB content. Vought returned call and calls were placed to ConEd and will be reporting spill to hotline and no product recovery as of yet.

6/16/05-Vought-Letter from ASR Muller to DEC Vought-6/10/05. "In a correspondence dated October 15, 2004 (attached) the requirement of a vapor barrier and/or passive venting system to prevent vapor migration was added to the Stipulation Agreement implemented by the NYSDEC on March 11, 2004. Based on the following information this additional requirement is no longer needed". Info provided:  
1)basement of building will be garage and "as part of construction a ventilation system will be installed in the basement to evacuate vehicle exhaust" 2)removal of 4042 tons of impacted soil 3)dewatering of site 4)removal of any new contaminated soil encountered during dewatering 4)installation of "structural waterproofing membrane" to prevent groundwater intrusion into the subfloors. "Therefore I kindly request that the added requirement of a Vapor Barrier of any kind be removed from the Stipulation Requirements". Vought sent letter no longer requiring installation of vapor barrier provided the installation of the vehicle exhaust system and the waterproofing membrane.6/16/05-Vought-Letter from Gannett Fleming (Bohms) to DEC Vought-6/10/05. "As requested we have prepared this letter to document the actions taken regarding the discovery of dielectric fluid in a utility vault under the sidewalk immediately southwest of 10 West End Avenue". Free product about 10" thick and new spill was called in by ConEd. Oil is "100% Feeder 51 dielectric fluid". Analytical fingerprint results included with letter.6/20/05-Vought-Received call from Steve Hicks (Gannett Fleming). Vought returned call and spoke to Hicks and WR Grace vapor barrier system is being installed. Vought faxed him copy of 6/16 letter and June 10, 2004 letter.7/19/05-Vought-Site visit by Vought with Gannett Fleming(Bohms and Hicks) and ASR Muller. Dewatering system started on 7/11/05 and initial water samples collected same date. Analyticals of groundwater still not back from lab. Sheen observed on groundwater (no free product). Dewatering system will be sampled monthly and will have 2-3 extraction points. Expected time of system operation is five months. Dewatering not taken place due to awaiting discharge permit from NYCDEP. Additional contaminated soil to be removed. No vapor complaints received to date and non-detected during site visit. DEC requires: 1)endpoint samples to be taken at terminus of excavation despite depth below groundwater. No dielectric fluid observed in excavation.9/12/05-Obligado- Spill transferred from Vought to Obligado.9/30/05- Obligado- Called Steve Muller at ASR to inquire about dewatering activities. Left message.10/3/05- Obligado - Spoke with Manfred Bohms (516) 671-8440. Said they took an soil endpoint sample, tried to call DEC Vought prior to sampling, but unable to reach him, so they took sample anyway. Site status - excavation, dewatering, gw sampling, is ongoing and should continue for about 2 months before foundation is laid. A letter report containing results of soil and gw sampling should be received by the department in about 3 weeks.10/4/05 - Obligado - Spoke with Steve Muller, site meeting scheduled for 10/6/05 at 1000. 10/5/05- Obligado - Phone conversation with Manfred Bohms, Fleming will be onsite on 10/6/05 to take soil samples from bottom of footing excavation. Agree to meet Dennis Matigan on site.10/6/05- Obligado - Site visit with DEC Sun, Dennis Mattigan (516)578-9415 (Ganette Fleming), Muller (ASR) and Tomasello (ASR). Excavation ongoing, down to approximately 30 ft bgs beneath former gaseteria portion of site (southern half). Excavation proceeded down into bedrock, and footings will be installed into bedrock so soil samples from footing excavation could not be taken. DEC requires: Since base of excavation is in bedrock,

1) no enpoint soil samples need to be collected. 2) Collect one ground water sample from sump pit dug down into bedrock. At time of site visit, sump pit dry due to dewatering, so Fleming and ASR will each collect 1 ground water sample the following morning, when sump pit has recharged. 10/24/05 - Obligado - Review closure request by ASR, based on ground water sample collected from sump pit in bedrock below limits and soil on Gaseteria half of property completely removed. Request NFA. Wait to get results from Gannete Fleming, who also collected samples and has been taking monthly ground water samples from dewatering system. 10/25/05 - Obligado - Dennis Mattigan (Gannet Fleming) called from Gannet Fleming. Said they had reached the extent of excavation (approximately 35 ft bgs) in northwestern portion of the site. Did not encounter bedrock at base of this area of excavation. Told Dennis to collect two soil endpoint samples. 10/26/05 - Obligado - Steve Muller called, said that they were installing a moisture barrier on the southern half of the site. 10/27/05 - Obligado - Call Dennis Matigan, inform him that DEC will visit site to see membrane installation. 11/16/05 - Obligado - Received call from Dennis Matigan, he will be collecting a soil sample from below a footing in the northern portion of the site. 11/29/05 - Obligado - Spoke to Manfred Bohms, said he will send GW results from dewatering tomorrow. Soil excavation almost complete. No more soil endpoint samples will be collected due to bedrock. 12/7/05 - Obligado - Meeting with Gaseteria. NFA granted. Sent letter 12/8/05

DEC Memo: 2/11/05-Vought-Received message from Manfred Bohms (Gannett Fleming 516-671-8440x1308) that sheen was detected on groundwater during excavation for new foundation. See also open spill #0212404 at same location. Vought called Bohms and seven test pits were dug for geotechnical investigation. Spill at 12 and 16 west end Avenue. Petroleum contaminated soil at interface and sheen on groundwater (at 16' below grade). Area going to be excavated and dewatered via remedial plan on 0212404. Soil samples and groundwater samples were collected. Report shall be received to DEC by 3/1/05.6/7/05-Vought-Spoke to Manfred Bohms and one (550-gallon) UST was discovered. Two drums of impacted soil was removed from underneath UST and endpoint samples were collected. No PBS registration required as site is under 1100 gallons for PBS requirements. All soil will be excavated down to groundwater.9/12/05-Obligado- Spill transferred from Vought to Obligado.5/11/06 - Obligado - Called Manfred Bohms, he said closure report is under review by client. Expects to receive it back within several days.5/25/06 - Obligado - Spoke to Manfred Bohms, he said closure report is complete and will be sent in next few days. 5/31/06 - Obligado - Sent NFA letter5/26/06 - Obligado - Received Closure Report. Requests closure based on 1000 gallon UST and contents removed, posed ex samples exhibit SVOC concentrations similar to "urban fill" material. 20 cubic yards of visually contaminated soil removed. 8,500 tons of soil removed as part of construction activities. All soil and bedrock removed down to 31 ft below original
