# CERTIFICATION

I, Stephanie O. Davis, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the East 126<sup>th</sup> Street Site. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

# EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

## **Site Location and Current Usage**

The Site is located in Manhattan, New York and is identified as Block 1774 and p/o Lot 30. It should be noted that the lot number was identified as Lot 48 prior to December 2014 on the New York City Tax Map. Figure 1.1.1 is a Site location map. The Site is 22,500-square feet and is bounded by East 126<sup>th</sup> Street to the north, a commercial building containing various stores and a New York State Department of Motor Vehicles (DMV) office to the south, the Salvation Army Community Center to the east, and a residential building with various stores, restaurants, and a laundromat on the first floor to the west. Currently, the Site is used for parking and is asphalt-paved. Figure 1.1.2 is a Site plan showing the current layout of the Site.

## **Summary of Proposed Redevelopment Plan**

The proposed use of the Site will be commercial and residential. Redevelopment will include the construction of an eleven-story building with a basement below ground to a total depth of 10 feet below grade (fbg). An elevator pit will also be present in the center of the building to an estimated depth of 19 fbg.

The layout of the proposed site development is presented in Figure 1.2.1. The current zoning designation is C4-4D, which permits commercial and residential use.

The redevelopment plan includes demolishing the current Site asphalt-pavement, with removal and proper offsite disposal of all demolition debris. No sub-grade demolition is anticipated or planned.

The new building footprint will be approximately 20,161 square feet for a total of approximately 260,000 square feet and will occupy the entire lot. A portion of floors 6 through 11 will extend over the commercial building on the adjoining property to the south. The basement will contain a parking garage and mechanical rooms. The first floor will contain a residential apartment lobby, commercial space, a loading dock, and maintenance rooms. The

second floor will contain commercial space and maintenance rooms. The third floor will contain residential apartments, a bar, a fitness center, a lounge, several common rooms for entertainment, and maintenance rooms. The fourth floor will contain residential apartments, a communal kitchen and dining room, a fitness center, a lounge, conference rooms, and maintenance rooms. Floor five will contain residential apartments, a laundry room, and maintenance rooms. Floors 6 through 11 will contain residential apartments and maintenance rooms. The roof will be used as a terrace and will contain a pool. The building will contain 233 apartments and three elevators; the total gross area of the building will be approximately 260,000 square feet.

Redevelopment will include excavation across the entire Site to a depth of 13 fbg. Approximately 9,244 cubic yards of soil will be excavated. Depth to groundwater is ranges from approximately 12 to 14 fbg.

### **Summary of Past Uses of Site and Areas of Concern**

The Site was developed prior to 1896 with approximately four buildings occupied by the 29<sup>th</sup> Police Precinct on the western portion of the property and approximately 13 buildings ranging in size from one to five stories on the remainder of the property. In 1911 the subject property included the police precinct building, a two-story furniture storage building, a five-story dwelling, a five story dwelling with a printing store, a five-story store building, and a theater building. Between 1951 and 1968 the theatre stopped operating. In 1965 a pharmaceutical manufacturer occupied the first floor of one of the buildings. Between 1969 and 1979 several buildings were removed from the subject property, leaving only the furniture storage building and the theatre. Between 1996 and 2001 the remaining buildings were removed from the subject property and between 2002 and 2003 the property was redeveloped with a parking lot. The property is currently owned by Gotham Plaza Associates, LLC, which has owned the property since November 14, 2000. The property was previously owned by various private and commercial entities. No industrial ownership is apparent.

A Phase II Investigation Work Plan was developed in accordance with the requirements of the OER. The Phase II Investigation Work Plan included provisions for assessing the potential presence and nature of historic fill, and assessing soil vapor and groundwater quality.

## Summary of the Work Performed under the Remedial Investigation

The following scope of work was performed as part of the RI:

- Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
- Conducted a geophysical survey of the Site to investigate for the existence of potential USTs and other subsurface infrastructure;
- Installed 10 soil borings across the entire project Site, and collected 20 soil samples for chemical analysis from the soil borings to evaluate soil quality;
- Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected four groundwater samples for chemical analysis to evaluate groundwater quality;
- Installed six soil vapor probes around Site perimeter and collected six samples for chemical analysis.

## Summary of Environmental Findings

1. Elevation of the property ranges from 15 to 20 feet above mean sea level.
2. Depth to groundwater ranges from 12.08 to 14.68 feet at the Site.
3. Groundwater flow is generally from north- to south beneath the Site.
4. Depth to bedrock is approximately 32 to 50 feet at the Site.
5. The stratigraphy of the site, from the surface down, consists of historic fill composed of a brown medium to fine-grained sand with angular gravel and containing pieces of brick, asphalt, concrete, and glass.
6. Soil/fill samples results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Table 375-6.8 Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs). Fill samples collected during the RI showed no exceedances for VOCs above the Unrestricted Use Track 1 SCOs, with the exception of acetone in the deep sample (blank sample). Several SVOC were detected exceeding Restricted Residential Use SCOs in three shallow and three deeper soil samples and included benzo(a)anthracene (3,400 µg/kg), benzo(a)pyrene (3,200 µg/kg), benzo(b)fluoranthene (3,700 µg/kg), dibenzo(a,h)anthracene (800 µg/kg), and/or

indeno(1,2,3-cd)pyrene (3,500 µg/kg). Chrysene (3,600 µg/kg) also exceeded the Unrestricted Use SCOs in 5 of the 20 soil samples collected. The metals including barium (621 mg/Kg) and lead (1,230 mg/Kg) exceeded the Restricted Residential Use SCOs in 2 of the 20 soil samples collected. Mercury and zinc also exceeded the Unrestricted Use SCOs. The pesticides 4,4'-DDD (27 µg/kg), 4,4'-DDE (10 µg/kg), and/or 4,4'-DDT (40 µg/kg) exceeded the Unrestricted Use SCOs in 9 of the 20 soil samples collected, but did not exceed the Restricted Residential Use SCOs. No PCBs were detected in any of the soil samples. Overall, the soil chemistry is unremarkable and does not indicate any disposal.

7. Groundwater samples results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Groundwater results showed three VOCs including cis-1,2-dichloroethene (at 6.2 µg/L) in one sample, PCE (ranging from 20 µg/kg to 660 µg/kg) in three samples, and TCE (at 19 µg/kg) in one sample exceeding their respective GQS. The SVOCs benzo(a)pyrene and hexachlorobenzene exceeded their GQS in two of the four samples collected. Several metals were identified but only magnesium, manganese, and sodium exceeded their GQS in both the unfiltered and dissolved-phase samples. No PCBs or pesticides were detected in any of the groundwater samples. Groundwater use is not contemplated at this Site
8. Soil vapor results collected during the RI were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006. Soil vapor results showed several classes of VOCs consistent with the Site's location in an urban area. Petroleum-related VOCs (BTEX) were detected at a maximum concentration of 115 micrograms per cubic meter (µg/m<sup>3</sup>). Most compounds were detected at concentrations less than 20 µg/m<sup>3</sup>, except for acetone detected in all samples at maximum concentrations of µg/m<sup>3</sup> and hexane at maximum concentration of 290 µg/m<sup>3</sup>. Chlorinated VOCs including cis-1,2-dichloroethene (1.3 µg/m<sup>3</sup>), PCE (maximum of 36 µg/m<sup>3</sup>), TCA (at 3.4 µg/m<sup>3</sup>) and TCE (maximum of 10 µg/m<sup>3</sup>) were detected in four of the six soil vapor samples. Concentrations of TCE were detected at a level for which the NYSDOH recommends monitoring or mitigation.

# REMEDIAL INVESTIGATION REPORT

## 1.0 SITE BACKGROUND

This RIR has been developed for the property located at East 126<sup>th</sup> Street in Manhattan, New York (the Site). This project has been assigned OER Project number 15EHAN264M by the New York City Office of Environmental Remediation (OER). Residential and commercial use is proposed for the property. This RI report summarizes the investigation findings based on the November 2014 Phase II ESI Work Plan report prepared by FPM Group, Ltd. in coordination with OER. The RI work was performed on January 31, 2015 and February 10, 2015. An E-Designation for Hazardous Materials (E-201) was placed on the Site by the New York City Department of City Planning (DCP) as part of the April 30, 2008, 125th Street Corridor Rezoning and Related Actions (CEQR 07DCP030M). This RIR summarizes the nature and extent of contamination at the Site and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

### 1.1 Site Location and Current Usage

The Site is located in Manhattan, New York and is identified as Block 1774 and p/o Lot 30. It should be noted that the lot number was identified as Lot 48 prior to December 2014 on the New York City Tax Map. Figure 1.1.1 is a Site location map. The Site is 22,500-square feet and is bounded by East 126<sup>th</sup> Street to the north, a commercial building containing various stores and a New York State Department of Motor Vehicles (DMV) office to the south, the Salvation Army Community Center to the east, and a residential building with various stores, restaurants, and a laundromat on the first floor to the west. Currently, the Site is used for parking and is asphalt-paved. Figure 1.1.2 is a Site plan showing the current layout of the Site.

### 1.2 Proposed Redevelopment Plan

The proposed use of the Site will be commercial and residential. Redevelopment will include the construction of a one- to eleven-story building with a basement below ground to a total depth of 10 feet below grade (fbg). An elevator pit will also be present in the center of the building to an estimated depth of 19 fbg.

The layout of the proposed site development is presented in Figure 1.2.1. The current zoning designation is C4-4D, which permits commercial and residential use.

The redevelopment plan includes demolishing the current Site asphalt-pavement, with removal and proper offsite disposal of all demolition debris. No sub-grade demolition is anticipated or planned.

The new building footprint will be approximately 20,161 square feet for a total of approximately 260,000 square feet and will occupy the entire lot. A portion of floors 6 through 11 will extend over the commercial building on the adjoining property to the south. The basement will contain a parking garage and mechanical rooms. The first floor will contain a residential apartment lobby, commercial space, a loading dock, and maintenance rooms. The second floor will contain commercial space and maintenance rooms. The third floor will contain residential apartments, a bar, a fitness center, a lounge, several common rooms for entertainment, and maintenance rooms. The fourth floor will contain residential apartments, a communal kitchen and dining room, a fitness center, a lounge, conference rooms, and maintenance rooms. Floor five will contain residential apartments, a laundry room, and maintenance rooms. Floors 6 through 11 will contain residential apartments and maintenance rooms. The roof will be used as a terrace and will contain a pool. The building will contain 233 apartments and three elevators; the total gross area of the building will be approximately 260,000 square feet.

Redevelopment will include excavation across the entire Site to a depth of 13 fbg. Approximately 9,244 cubic yards of soil will be excavated. Depth to groundwater is present at 12 to 14 fbg.

### **1.3 Description of Surrounding Property**

The Site is located in a neighborhood with commercial buildings, residential buildings, public facilities and institutions, and light industrial and manufacturing buildings. The properties in this area are typically zoned C4-4D, C1-4, C6-3, and C2-4. The Site is adjoined to the south by a commercial building occupied by various stores and a DMV office. The Site is adjoined to the north by residential buildings. The Site is adjoined to the west by a residential building occupied by various stores, restaurants, and a laundromat on the first floor. The Site is adjoined to the east by the Salvation Army Community Center.

## **2.0 SITE HISTORY**

### **2.1 Past Uses and Ownership**

The Site was developed prior to 1896 with approximately four buildings occupied by the 29<sup>th</sup> Police Precinct on the western portion of the property and approximately 13 buildings ranging in size from one to five stories on the remainder of the property. In 1911 the subject property included the police precinct building, a two-story furniture storage building, a five-story dwelling, a five story dwelling with a printing store, a five-story store building, and a theater building. Between 1951 and 1968 the theatre stopped operating. In 1965 a pharmaceutical manufacturer occupied the first floor of one of the buildings. Between 1969 and 1979 several buildings were removed from the subject property, leaving only the furniture storage building and the theatre. Between 1996 and 2001 the remaining buildings were removed from the subject property and between 2002 and 2003 the property was redeveloped with a parking lot. The property is currently owned by Gotham Plaza Associates, LLC, which has owned the property since November 14, 2000. The property was previously owned by various private and commercial entities. No industrial ownership is apparent.

### **2.2 Previous Investigations**

The *Draft Phase I Environmental Site Assessment for the Property at 149-169 East 125<sup>th</sup> Street and 148-160 East 126<sup>th</sup> Street, New York, New York* was prepared by FPM Group dated January 1999. Pertinent information obtained from the Phase I ESA is summarized as follows:

- Elevation of the property above mean sea level ranges from 15 to 20 feet.
- Groundwater flow estimated to be from southwest to northeast beneath the Site based upon a topographic analysis.
- The Site was identified as 163-169 East 125<sup>th</sup> Street and 148-160 East 126<sup>th</sup> Street, and was referenced by the following New York City Tax Map numbers: Manhattan, Block 1774 and part of Lots 30 (163 East 125<sup>th</sup> Street) and 31 (165-169 East 125<sup>th</sup> Street), and Lots 44 (160 East 126<sup>th</sup> Street), 45 (156-158 East 126<sup>th</sup> Street), 47 (154 East 126<sup>th</sup> Street), and 49 (148 East 126<sup>th</sup> Street). The Site contained the rear portion of a four-story building formerly occupied by a theater, a vacant three-story building, a guard house, a shed, storage containers, and gravel parking areas.

- A 1,500-gallon abandoned AST was present below the floor joists of the building on Lot 47. A 2,000-gallon #4 fuel oil AST was reported to be present in the basement of the building formerly present on Lot 45. A hydraulic lift elevator (previously removed) was used in the Lot 47 building. It was not known whether the AST associated with the elevator was removed. It was recommended that it should be determined whether this AST had been removed or properly abandoned in place. It was also recommended that all of the ASTs no longer in service be removed and properly disposed.
- An open five-gallon container labeled dipropylene dimethyl ether was noted among debris inside the building on Lot 47. It was recommended that the five-gallon container and the debris inside of the building be disposed properly.
- Suspect asbestos containing materials (ACMs) were identified at the property, including roofing materials, wall and ceiling materials, ceiling tiles, vinyl floor tiles and mastic, pipe insulation, and furnace insulation. It was recommended that an asbestos survey be conducted, and if any ACMs were identified, they should be removed prior to any renovation or demolition.
- It was noted that lead-based paint could be present based upon the age of the buildings. It was recommended that a lead-based paint survey be conducted prior to demolition of the buildings.

The *Asbestos Survey Report, Block 1744, 125<sup>th</sup> Street, New York, New York* was prepared by Hygenix, Inc. (Hygenix) dated February 29, 2000. The *Asbestos Abatement Project, Project Monitor's Final Report, Gotham Plaza, 149-169 East 125<sup>th</sup> Street, Harlem, New York* was prepared by Hygenix, Inc. dated November 22, 2000 – March 17, 2001. Pertinent information obtained from these two reports is summarized as follows:

- An asbestos survey conducted by Hygenix identified various ACMs in the property buildings, including floor tiles, roofing materials, insulation board, pipe insulation, plaster debris, and sheetrock/joint compound.
- Asbestos abatement was conducted in 2000 and 2001 during the demolition of the Site buildings. Air monitoring conducted, including post-abatement clearance

samples, indicated that post-abatement criteria were met, as specified by New York City and State regulations. Visual inspection of each abated area together with post-abatement soil sampling results indicated that all of the identified ACMs and asbestos-contaminated soil had been removed from the Site.

The *Tank Decommissioning and Environmental Restoration Report* was prepared by FPM Group dated May 21, 2001. Pertinent information obtained from this report is summarized as follows:

- RND Services, Inc. (RND) was subcontracted to decommission the tanks identified at the Site during the previous Phase I ESA prior to and during the planned demolition of the property buildings. Prior to decommissioning, the tanks were registered with the NYSDEC.
- Each tank was decommissioned by accessing the tank and removing and properly disposing the contents. Each emptied tank was then cut open and cleaned of any remaining adhering petroleum. The associated piping was also accessed and disconnected from the tanks. The wastes from the cleaning process were containerized, removed from the property, and properly disposed. The decommissioned tanks and piping were left at the property to be disposed during the demolition process as scrap metal.
- After tank decommissioning was completed, RND filed Affidavits of Closure for each of the ASTs with the FDNY.
- Following the removal of all of the known tanks from the property, a geophysical survey was performed for the purpose of identifying potential buried tanks that may have remained. The survey resulted in the identification of one magnetic anomaly located on the northwest side of Lot 31. This anomaly was screened with the GPR and no subsurface voids were identified. An FPM representative excavated the anomaly and identified a 1-inch thick, 4-foot by 8-foot steel plate, which appeared to be associated with the base of a former elevator. Below the steel plate was a 1-foot thick, 5-foot by 8-foot concrete slab. No indications of a tank were noted in association with this anomaly. No geophysical anomalies were identified on the remainder of the Site.

The *Geotechnical Engineering Study for Gotham Plaza New York, New York* was prepared by Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) dated August 21, 2014. Pertinent information obtained from the Geotechnical Engineering Study is summarized as follows:

- Depth to groundwater ranges from 13 to 14 fbg at the Site.
- Depth to bedrock ranges from 32 to 50 fbg at the Site.
- The stratigraphy of the site, from the surface down, consists of 10 to 12 feet of historic fill, generally consisting of a brown to black sand with varying amounts of gravel, asphalt, brick, and construction materials, underlain by 20 to 40 feet of brown sand with varying amounts of silt and gravel, underlain by weathered bedrock.

The Phase I report was prepared by FPM Group for Rigano LLC dated October 2014. This Phase I ESA did not identify any recognized environmental conditions (RECs). Pertinent information obtained from the Phase I ESA is summarized as follows:

- The Site was identified on the PBS database. A 2,000-gallon steel #2 fuel oil tank was removed from the site in March 2001; no spills were identified in association with this tank. A previous investigation report identified a 1,500-gallon fuel oil AST located in the basement of a former building, as well as a former hydraulic lift elevator that was previously removed from a former building. The tank was decommissioned and removed in 2001 in association with the demolition of the property buildings. A geophysical survey was performed following the demolition of the property buildings, and the survey did not identify any remaining tanks at the Site. No evidence of any ASTs/USTs was observed at the Site during the inspection.
- The Site was identified on the RCRA NLR database. Con Edison service box #20848 (EPA ID #NYP004298006) was identified as a conditionally-exempt small-quantity generator of unspecified hazardous waste in April 2013. No RCRA violations or enforcement actions were noted and the location was a non-generator at the time the report was prepared.

- The property is presently e-designated as E-201 for air quality (#2 fuel oil or natural gas heat and hot water), exhaust stack location limitations, underground gasoline storage tanks testing protocol, and window wall attenuation & alternate ventilation.

### **2.3 Site Inspection**

A Site inspection was performed on August 14, 2014 by FPM Group. The current layout of the Site is shown in Figure 1.1.2. No areas of concern were noted during the inspection.

### **2.4 Areas of Concern**

Although no AOCs were identified for the Site, the Site was identified as e-designated and a RI was required. A Phase II Investigation Work Plan was developed in accordance with the requirements of the OER and Department of Planning's Special 125<sup>th</sup> Street Rezoning. The Phase II Investigation Work Plan included provisions for assessing the potential presence and nature of historic fill, and assessing soil vapor and groundwater quality. Phase 1 Report is presented in Appendix A.

## **3.0 PROJECT MANAGEMENT**

### **3.1 Project Organization**

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Ben T. Cancemi, CPG.

### **3.2 Health and Safety**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. A site-specific HASP was prepared and is included in Appendix 2 to address potential hazards, contaminants of concern based on past use, and safety requirements associated with investigation activities

### **3.3 Materials Management**

All material encountered during the RI was managed in accordance with applicable laws and regulations. Cuttings were disposed at the Site within the boreholes that generated them to within 24 inches of the surface. The remainder of the boreholes was sealed by filling with bentonite chips and hydrating the chips. Disposable sampling equipment including spoons, gloves, bags, paper towels, etc. that contacted environmental media were double-bagged and disposed as municipal solid waste as non-hazardous trash.

## **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

The following scope of work was performed as part of the RI:

- Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
- Conducted a geophysical survey of the Site to investigate for the existence of potential USTs and other subsurface infrastructure;
- Installed 10 soil borings across the entire project Site, and collected 20 soil samples for chemical analysis from the soil borings to evaluate soil quality;
- Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected four groundwater samples for chemical analysis to evaluate groundwater quality;
- Installed six soil vapor probes around Site perimeter and collected six samples for chemical analysis.

### **4.1 Geophysical Investigation**

The geophysical survey was performed on January 31, 2015 prior to conducting investigative borings. The survey was overseen by an FPM geologist/civil engineer under the direction of the QEP, who received a verbal report of the findings. The geophysical survey used ground-penetrating radar (GPR) and magnetic detection equipment across the entire Site. See Figure 4.1.1 for the geophysical survey area. The geophysical survey did not identify any anomalies suggestive of USTs or other subsurface infrastructure.

### **4.2 Borings and Monitoring Wells**

#### **Drilling and Soil Logging**

A qualified environmental driller advanced 10 investigative borings (SB-1 through SB-10) at the locations shown on Figure 4.1.1. The soil boring work was performed on January 31, 2015 and was overseen by a geologist. The geologist, under the direction of a QEP was present to supervise the sampling work, screen the soil samples for environmental impacts, log the screening results, and collect environmental samples for laboratory analysis.

The investigative borings were advanced to 15 feet below grade, which is below the development depth, using a direct-push drill rig. Construction information for the soil borings is included in Table 4.2.1. Soils were collected continuously to the boring termination depth using a Geoprobe dual-tube sampler with disposable acetate sleeves advanced in five-foot increments. Each sample was screened for organic vapors with a calibrated photoionization detector (PID) and evaluated for visual and olfactory indications of potential environmental impacts. Boring logs were prepared and are included in Appendix 3.

The soil generally consisted of historic fill composed of a brown medium to fine-grained sand with angular gravel and containing pieces of brick, asphalt, concrete, and glass. No PID responses, odors, or staining were noted in the borings.

**Table 4.2.1: Construction Details for Soil Borings and Monitoring Wells**

	Identification Number	Date of construction	Total Depth (feet)	Diameter (inches)	Top of casing relative elevation	Screened interval (Elevation Range)	Construction Material (PVC, steel, etc)
Soil Borings	SB-1 through SB-10	1/31/2015	15	2	NA	NA	NA
Monitoring Wells	MW-1	1/31/2015	18	1	20.00	0.00 - 10.00	PVC
	MW-2				20.98	0.98 - 10.98	
	MW-3				19.50	-0.50 - 9.50	
	MW-4				20.56	0.56 - 10.56	

### Groundwater Monitoring Well Construction

Four temporary groundwater monitoring wells were installed on January 31, 2015 by inserting one-inch diameter PVC casing and 0.02-inch machine slotted screen an estimated five feet into the groundwater via the open boreholes. Monitoring well locations are shown in Figure 4.1.1. Construction information for the monitoring wells is included in Table 4.2.1. Groundwater was encountered at approximately 13 feet below grade and the wells were screened from 8 to 18 feet below grade. The annuli were backfilled with Morie #1 well gravel from approximately one foot below to approximately one foot above each screen. The sand pack above each screen was sealed with an overlying two-foot bentonite seal, and the balance of each annulus in the vadose zone was backfilled with sand to near grade. The top of each well was

capped with an expansion-fit locking well cap. The wells were then developed to allow for proper communication between the wells and shallow groundwater. The wells were then surveyed to a common datum to determine the groundwater flow direction.

### **Survey**

The locations of the soil borings and monitoring wells were identified by measuring the locations to the nearest foot relative to fixed Site features, including the Site boundaries and walls. The locations were then plotted on a scaled Site plan, as shown in Figure 4.1.1.

The relative elevation of the top of each well casing was determined by surveying the top of each casing to the nearest 0.01 foot relative to a fixed reference datum at the Site. The top of the MW-1 well casing was selected as the fixed reference datum and the reference elevation was assumed to be 20.00 feet. All of the other well casings were surveyed relative to this reference datum. These relative elevations were integrated with the measured depths to groundwater to determine the relative elevation of the water table surface, as discussed below

### **Water Level Measurement**

The groundwater level in each well was measured to the nearest 0.01 foot using a decontaminated groundwater interface probe. The depth to water was measured from the top of each well casing and the measurements were integrated with the top of casing relative elevations to determine the relative elevation of the water table surface at each well. Groundwater level data are included in Table 4.2.2. No non-aqueous-phase liquids were noted in any of the wells.

**Table 4.2.2: Groundwater Level Data**

<b>Monitoring Well ID No.</b>	<b>Date</b>	<b>Groundwater Relative Elevation</b>
MW-1	2/10/2015	6.23
MW-2		6.30
MW-3		7.42
MW-4		8.21

### **4.3 Sample Collection and Chemical Analysis**

Sampling performed as part of the field investigation was conducted based on professional judgment, area history, discolored soil, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

#### **Soil Sampling**

Two soil samples were collected from each borehole, including one sample from the zero to two-foot interval and a deeper sample from the 11 to 13-foot interval, which is directly above groundwater. Samples were not composite samples but were discrete grab samples. Twenty soil samples were collected for chemical analysis during this RI. Disposable sampling equipment, including acetate sleeves and latex gloves, were used to minimize cross-contamination between samples. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 4.3.1. Figure 4.1.1 shows the location of samples collected in this investigation.

The samples retained for analysis were placed into laboratory-supplied sample containers, sealed, labeled, and placed in coolers with ice to depress the sample temperature. A chain of custody form was completed and kept with the coolers and shipping containers to document the sequence of sample possession.

Field-collected QA/QC samples included a blind duplicate sample to evaluate field sampling precision or reproducibility of measurements of the same parameter under the given set of conditions, and a trip blank (TB) sample to ensure that outside contamination of the samples for volatile organic compound (VOC) analysis did not occur. In addition, the laboratory utilized internal QA/QC procedures and samples (including laboratory control samples or LCSs, method blanks or MBs, surrogates, and MS/MSDs) to confirm that the laboratory data are of sufficient accuracy and precision.

The soil samples were submitted for analysis to TestAmerica Laboratories, Inc. (TA), a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory. All soil samples were analyzed for VOCs by EPA Method 8260C, semivolatile organic compounds (SVOCs) by EPA Method 8270D, pesticides and PCBs by EPA Method 8081B/8082A, and Target Analyte List (TAL) metals by EPA Method 6010C and EPA Method 7473 (mercury).

### **Groundwater Sampling**

The monitoring wells were sampled by an environmental professional using low-flow sampling techniques on February 10, 2015. Sampling was conducted in accordance with NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (May 2010) and Sampling Guidelines and Protocols, dated March 1991. One representative groundwater sample was collected from each of the four wells using a decontaminated peristaltic pump and dedicated polyethylene tubing. Disposable sampling equipment, including latex gloves and sample tubing, were used to minimize cross-contamination between samples and the peristaltic pump was decontaminated between wells. Sampling logs with information on purging and sampling of groundwater monitoring wells are included in Appendix 3. Figure 4.1.1 shows the location of groundwater monitoring wells.

The samples retained for analysis were placed into laboratory-supplied sample containers, sealed, labeled, and placed in coolers with ice to depress the sample temperature. A chain of custody form was completed and kept with the coolers and shipping containers to document the sequence of sample possession.

Field-collected QA/QC samples included a blind duplicate sample and a TB sample. In addition, the laboratory utilized internal QA/QC procedures and samples, including LCSs, MBs, surrogates, and MS/MSDs.

The groundwater samples were submitted for analysis to TA, a NYSDOH ELAP-certified laboratory. The groundwater samples were analyzed for VOCs by EPA Method 8260C, SVOCs by EPA Method 8270D, pesticides and PCBs by EPA Method 8081B/8082A, and dissolved and total TAL metals by EPA Method 6010C and EPA Method 7473 (mercury). Groundwater sample collection data are reported in Table 4.3.2.

## Soil Vapor Sampling

Soil vapor samples were collected from implants which were installed with direct-push sampling equipment to depth of approximately 10 to 11 feet below grade. The annulus around each implant was backfilled with fine glass beads. A bentonite seal was placed from just above the implant to the surface to seal the vapor implant from the surrounding atmosphere. Each implant was purged prior to sampling at a rate of less than 0.2 L/min. Six soil vapor implants were installed and six soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 4.1.1. Soil vapor sample collection data are reported in Table 4.3.3. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Soil vapor samples were collected in one-liter Summa canisters that were certified clean by the laboratory. The flow rate for sampling did not exceed 0.2 L/min. Sampling occurred for approximately eight hours, since the Site is currently used as an active parking lot. A sample log sheet was maintained summarizing the sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples were collected, and chain of custody protocols. The soil vapor sampling logs are included in Appendix 3. A chain of custody form was completed and kept with the shipping containers to document the sequence of sample possession. Disposable sampling equipment, including latex gloves and sample tubing, were used to minimize cross-contamination between samples.

Field-collected QA/QC samples included a TB sample to confirm that cross-contamination of the samples did not occur. In addition, the laboratory utilized internal QA/QC procedures and samples (including LCSs, MBs, and surrogates) to confirm that the laboratory data are of sufficient accuracy and precision. The samples were submitted to Centek Laboratories, LLC (Centek), a NYSDOH ELAP-certified laboratory, for analysis of VOCs using the TO-15 Method.

As part of the vapor intrusion evaluation, a tracer gas was used in accordance with NYSDOH protocols to verify the integrity of the soil vapor probe seals. Helium was used as the tracer gas and a sealed enclosure was used to keep the helium in contact with the probe during testing. A portable monitoring device was used to analyze a sample of the soil vapor for helium prior to

sampling. Tracer monitoring was performed a second time to confirm the integrity of the probe seals at the conclusion of the sampling round. The helium tracer testing results confirmed the integrity of the vapor implant seal at each of the vapor sampling locations.

### Chemical Analysis

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 4.3.1 through 4.3.3, respectively. Laboratory data deliverables for all samples evaluated in this RI report are provided in digital form in Appendices 4 through 6:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance for this RI was overseen by Ben T. Cancemi , CPG
Chemical Analytical Laboratory	Chemical analytical laboratories used in the RI NYS ELAP certified and were: <ul style="list-style-type: none"> <li>• TestAmerica Laboratories, Inc. (soil and groundwater)</li> <li>• Centek Laboratories, LLC (soil vapor)</li> </ul>
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> Groundwater analytical methods: <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> Soil vapor analytical methods: <ul style="list-style-type: none"> <li>• VOCs by TO-15 VOC parameters.</li> </ul>

#### 4.4 Analytical Quality Assurance/Quality Control

Quality assurance/Quality control (QA/QC) samples were collected during the sampling process to assess the accuracy and precision of the resulting analytical data. QA/QC samples were collected in accordance with the Phase II ESI Work Plan and included one duplicate sample and one trip blank sample for the soil and groundwater sample delivery groups and one trip blank sample for the soil vapor sample delivery group.

The duplicate samples were collected at the same time and the same manner as the primary environmental samples and were managed and tested together with the primary environmental samples. The results of the duplicate sample analyses are shown on Tables 4.3.1 through 4.3.2 next to the associated primary environmental samples. The data from the duplicate samples are nearly identical to the data for the associated primary environmental samples, indicating a high degree of analytical precision. The duplicate sample results do not suggest any concerns for sample quality.

The trip blank (TB) samples consisted of aliquots of laboratory-supplied water that were transmitted with the sample coolers and were managed and analyzed for VOCs together with the primary environmental samples. The TB samples associated with the soil, groundwater, and soil vapor samples did not exhibit any VOC detections. These TB sample results do not suggest any concerns for VOC cross-contamination between the samples.

The laboratory also performed QA/QC sample analyses, including analyses of method blanks (MBs), laboratory control samples (LCSs), and matrix spike/matrix spike duplicates (MS/MSDs). The results of the laboratory QA/QC samples are summarized as follows:

- The MB samples did not show any detections, with the exceptions of low concentrations of up to two VOCs in the MBs associated with the soil samples. Acetone and methylene chloride were noted in several of the primary environmental soil samples and were flagged with a B qualifier. The detection of acetone in the SB-7 11 to 13-foot interval sample was slightly above the Track 1 SCO. None of the other detections of acetone or methylene chloride in the primary environmental soil samples exceeded their respective Track 1 SCOs and, therefore, these detections do not present a concern.

- The LCS percent recoveries (%Rs) and relative percent differences (RPDs) were within limits, with the exception of %Rs outside of criteria for several VOCs and SVOCs in the LCSs and/or LCSDs for the soils and groundwater. Several of the SVOCs were also detected in the primary soil and groundwater samples that exceeded the Track 2 SCOs and Standards, respectively, and therefore, it is possible that the data is biased slightly high.
- The MS/MDS %Rs and RPDs were within criteria, with the exception of %Rs and/or RPDs outside of criteria for several VOCs, SVOCs, metals, pesticides, and PCBs in the MS and/or MSDs for select soil and/or groundwater samples. Several of the SVOCs and metals were also detected in the primary soil and groundwater samples that exceeded the Track 2 SCOs and Standards, respectively, and therefore, it is possible that the data are affected by matrix related effects.

Based on the results from the laboratory QA/QC samples, there does not appear to have been any significant bias introduced by either interfering compounds in the sample matrix or by laboratory techniques that could have introduced systematic or random errors in the analytical process. The data appear to be of adequate quality for their intended use.

## **5.0 ENVIRONMENTAL EVALUATION**

### **5.1 Geological and Hydrogeological Conditions**

#### **Stratigraphy**

The stratigraphy was generally consistent across the Site. The soil generally consisted of historic fill composed of a brown medium to fine-grained sand with angular gravel and contained pieces of brick, asphalt, concrete, and glass. No PID responses, odors, or staining were noted in the borings. Groundwater was encountered at approximately 13 feet below grade. No confining units were encountered.

Bedrock was not encountered during the RI. Bedrock is present at an elevation of approximately 32 to 50 fbg based upon the results of a prior geotechnical investigation conducted at the Site.

#### **Hydrogeology**

A table of water level data for all monitoring wells is included in Table 4.2.2. The average depth to groundwater is approximately 13.22 fbg and the range in depth is approximately 12.08 to 14.68 fbg. A map of groundwater relative elevations with groundwater contours and inferred flow lines is shown in Figure 5.1.1. Groundwater flow is from north to south and is generally consistent with the regional groundwater flow direction inferred from the local topography.

### **5.2 Soil Chemistry**

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 4.3.1. Figure 5.2.1 shows the location and posts the values for fill that exceed the 6NYCRR Part 375-6.8 Track 2 Soil Cleanup Objectives (Track 2 SCOs). Observations regarding each of the contaminant classes observed in the fill are as follows:

- Low levels of VOCs were detected in some of the samples, but none of the detections exceeds the 6NYCRR Part 375-6.8 Track 1 Soil Cleanup Objectives (Track 1 SCOs), with the exception of acetone (78 B ug/kg) in the deep sample from boring SB-7. The detection was B-qualified, indicating it was also detected in the MB sample and, therefore, does not present a concern. Low concentrations of tetrachloroethene (PCE) (maximum 24 ug/kg), below the Track 1 SCOs, was detected in 16 of 20 soil samples collected. Trichloroethene (TCE) (0.52 J ug/kg), below the Track 1 SCOs, was detected

in the deep soil sample from boring SB-7. Carbon tetrachloride (CT) or 1,1,1-trichloroethane (TCA) was not detected in any of the soil samples collected on the Site.

- SVOCs exceeded the Track 2 SCOs in 6 of the 20 soil samples collected, with concentrations of benzo(a)anthracene (maximum 3,400 ug/kg), benzo(a)pyrene (maximum 3,200 ug/kg), benzo(b)fluoranthene (maximum 3,700 ug/kg), dibenzo(a,h)anthracene (maximum 800 ug/kg), and/or indeno(1,2,3-cd)pyrene (maximum 3,500 ug/kg) exceeding the Track 2 SCOs. Chrysene exceeded the Track 1 SCOs but did not exceed the Track 2 SCOs in 5 of the 20 soil samples collected.
- Metals exceeded the Track 2 SCOs in 2 of the 20 soil samples collected, with concentrations of barium (621 mg/kg) and lead (maximum 1,230 mg/kg) exceeding the Track 2 SCOs. Lead, zinc, and/or mercury exceeded the Track 1 SCOs but did not exceed the Track 2 SCOs in 11 of the 20 soil samples collected.
- Low levels of pesticides were detected in several of the soil samples collected, but the concentrations did not exceed the Track 2 SCOs. 4,4'-DDD, 4,4'-DDE, and/or 4,4'-DDT exceeded the Track 1 SCOs but did not exceed the Track 2 SCOs in 9 of the 20 soil samples collected.
- PCBs were not detected in any of the soil samples.

The SVOC and metal exceedances are generally minor and are not suggestive of an onsite source. This observation is consistent with the visual, olfactory, and PID observations of the soil borings, none of which suggested an onsite source.

### **5.3 Groundwater Chemistry**

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 4.3.2. Figure 5.3.1 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards (Standards). Observations regarding each of the contaminant classes observed in the groundwater are as follows:

- VOCs exceeded the Standards in three of the four groundwater samples collected, MW-2 through MW-4, with concentrations of cis-1,2-dichloroethene (6.3 ug/l), PCE (maximum

660 ug/l), and/or TCE (19 ug/l). TCA and carbon tetrachloride were not detected in any groundwater samples collected on the Site.

- Benzo(a)pyrene (maximum 0.42 J ug/l) and/or hexachlorobenzene (0.42 J ug/l) were the only SVOCs that exceeded Standards in two of the four samples, MW-3 and MW-4. These detections were at very low estimated concentrations.
- Iron, lead, magnesium, manganese, and/or sodium were the only metals that exceeded Standards in all four of the groundwater samples collected. Magnesium, manganese, and sodium exceedances were noted for both the unfiltered and dissolved-phase samples. The iron and lead exceedances were only noted in the unfiltered samples.
- PCBs and pesticides were not detected in any of the groundwater samples.

The distributions of VOC exceedances are not indicative of an onsite source. The highest detection occurred in wells MW-4 in proximity to the northwestern corner of the Site. Therefore, based on the distribution, lack of VOC detections in the soil boring samples, and the groundwater flow direction (south-southeast), it appears that the contaminants migrated onsite from an offsite source. The SVOC detections were found in wells MW-3 and MW-4 along the northern boundary of the Site and their distribution is not indicative of an onsite source. The metal detections were generally evenly spaced across the Site and their distribution does not suggest an onsite source. These detections do not present a particular concern as iron, magnesium, and manganese are often elevated in Long Island groundwater and sodium is often elevated due to recharge of stormwater runoff containing road deicing materials. The iron and lead detections only exceeded Standards in the unfiltered samples, suggesting that the elevated concentrations were due to suspended sediment in the groundwater. Groundwater use is not contemplated at this Site.

#### **5.4 Soil Vapor Chemistry**

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 4.3.3. Figure 5.4.1 shows the location and posts the values for soil vapor samples with detected concentrations.

Several VOCs were detected in the soil vapor samples. The classes of VOCs detected include petroleum-related compounds (benzene, ethylbenzene, etc.), non-chlorinated solvents

(acetone, ethyl acetate, etc.), refrigerants (Freon 11 and Freon 12), and chlorinated solvents (PCE, TCE, etc.). The constituents detected are typical of those found in soil vapor in urbanized areas.

In accordance with NYSDOH protocol, the soil vapor sample results are compared to Matrix 1 and Matrix 2 of the October 2006 NYSDOH Soil Vapor Intrusion (SVI) Guidance document. Four VOCs for which the NYSDOH provides guidance, cis-1,2-dichloroethene (1.3ug/m<sup>3</sup>), PCE (maximum 36 ug/m<sup>3</sup>), TCA (maximum 3.4 ug/m<sup>3</sup>), and/or TCE (maximum 10 ug/m<sup>3</sup>) were detected in four of the six soil vapor samples. Cis-1,2-dichloroethene, PCE, and TCA were found at low levels for which the NYSDOH would require either no further action or reasonable and practical actions to be undertaken to identify sources and reduce exposures (depending on the associated indoor air concentration of cis-1,2-dichloroethene, PCE, and TCA). TCE was found at a level for which the NYSDOH would require no further action, monitoring, or mitigation (depending on the associated indoor air concentration of TCE). CT was not detected in soil vapor samples collected on the Site.

Based upon the soil vapor sampling results there are no conditions suggestive of an onsite source of VOCs. The soil vapor results are consistent with the soil and groundwater sampling results for the Site.

### **5.5 Prior Activity**

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

### **5.6 Impediments to Remedial Action**

There are no known impediments to remedial action at this property.

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

### Conducted on

Address: East 126<sup>th</sup> Street (Manhattan Block 1774, Lot 48)  
New York, New York 10035

FPM File No: 492-14-136

### Prepared for

Client Name: Rigano LLC

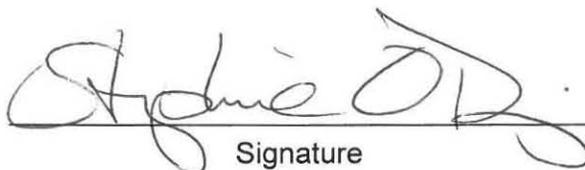

Location: 425 Broad Hollow Road  
Suite 217  
Melville, NY 11747

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The qualifications of the undersigned Environmental Professional and environmental staff contributing to this report are included in Appendix D.

Stephanie O. Davis

## **SECTION 1.0 INTRODUCTION**

### **1.1 Purpose of the Phase I Environmental Site Assessment**

The primary purpose of this Phase I Environmental Site Assessment (ESA) is to identify recognized environmental conditions at the subject property. Recognized environmental conditions (RECs) refers to the presence or likely presence of hazardous substances or petroleum products in, on, or at the property due to any release to the environment, under conditions indicative of a release to the environment, and/or under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs.

Historic RECs (HRECS) include past releases of hazardous substances or petroleum products that occurred in connection with the property and have been addressed to the satisfaction of the applicable regulatory authority to meet established unrestricted use criteria without subjecting the property to any required controls. HRECs that do not meet the definition of RECs at the time this report was prepared are not listed in the Findings and Conclusions section of this report as RECs.

Controlled RECs (CRECs) include RECs resulting from a past release of petroleum products or hazardous substances that have been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. CRECs, if present, are listed in the Findings and Conclusions section of this report.

This Phase I ESA has been prepared for compliance with the American Society for Testing and Materials (ASTM) Standard Practice E 1527-13 for Phase I ESAs (2013). A Phase I ESA prepared following this Standard is intended to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) liability by having performed all appropriate inquiry into previous ownership and uses of the property consistent with good commercial or customary practice. A Phase I ESA also assesses business environmental risk in association with the current or planned commercial use of the property. Additional objectives of the Phase I ESA include the identification of environmental conditions that are in noncompliance with applicable local, state, or federal laws or regulations and recognition of property conditions or practices that may lead to future environmental liability.

### **1.2 Scope of Services**

FPM Group (FPM) was retained by Rigano LLC on behalf of the User to perform a Phase I ESA for the property located at Manhattan Block 1774 and Lot 48 on East 126<sup>th</sup> Street, New York, New York (subject property). The scope of services includes those items detailed in the ASTM Standard Practice E 1527-13 and focused on the property history with regard to past land use and development, underground storage tanks (USTs), aboveground storage tanks (ASTs), chemical or hazardous substances spills, storage, use, or generation, and any other pertinent information that would indicate a potential source and/or pathway of contamination at the property. Included in this report, where applicable, is information obtained from interviews with knowledgeable individuals regarding the current and/or past usage of the subject property.

---

Significant assumptions, if any, are described in the applicable portions of the following sections of this report. Limitations and exceptions, if any, are described in Section 5.2 of this report. Special terms and conditions, if any, affecting the scope of services are described in the applicable portions of the following sections of this report.

### **1.3 Reliance**

FPM understands that the User may rely on this report to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability. The User may also rely on this report to assess business environmental risk in association with the current or planned commercial use of the property, to identify environmental conditions that are in noncompliance with applicable local, state, or federal laws or regulations, and/or to recognize property conditions or practices that may lead to future environmental liability. Reliance on this report by a different User than the User for which this report was prepared is subject to satisfying the User's Responsibilities in Section 6 of ASTM Standard Practice E 1527-13.

It should be noted that portions of this report were prepared using information provided by others. The environmental professional is not required to independently verify the provided information but may rely on this information unless he/she has actual knowledge that certain information is incorrect, or unless it is obvious that certain information is incorrect based on other information obtained in the Phase I ESA or otherwise actually known to the environmental professional.

---

## **SECTION 2.0 SUBJECT PROPERTY DESCRIPTION**

### **2.1 Property Location and Legal Description**

The subject property is identified as East 126<sup>th</sup> Street, New York, New York, and is located on the south side of East 126<sup>th</sup> Street between Lexington Avenue and 3<sup>rd</sup> Avenue in the borough of Manhattan. The subject property is referenced by the following New York City Tax Map number: Manhattan, Block 1774 and Lot 48. The subject property comprises approximately 22,500 square feet and includes an asphalt-paved parking lot.

### **2.2 Property Environmental Setting**

Groundwater in the vicinity of the property is derived from infiltration of precipitation through the ground surface and surficial deposits to the water table. The original surficial deposits likely consisted primarily of sand and gravel; however, the ground surface has been significantly modified due to previous development. Precipitation that may infiltrate the ground surface will enter the groundwater system. The water table is the upper limit of the groundwater reservoir and is bounded beneath by impervious bedrock which is located approximately 150 feet below mean sea level, or MSL (USGS, 1990).

The regional groundwater flow direction in the property vicinity is generally controlled by the slope of the bedrock surface, which is reflected by the surface topography. Information regarding the surface topography of the subject property and vicinity was obtained from the USGS Central Park, New York-New Jersey Quadrangle (1966, photorevised 1979). The topographic elevation of the subject property ranges from approximately 15 to 20 feet above MSL and slopes gently to the northeast. Therefore, it is anticipated that the groundwater flow in the vicinity of the subject property is generally to the northeast toward the Harlem River, which is located approximately one-quarter mile to the northeast and is the only natural surface water body within one mile of the subject property.

### **2.3 Property Description and Usage**

The subject property is asphalt-paved and used as a parking lot.

### **2.4 Adjoining Property Usage**

The subject property is surrounded by parcels utilized for residential and commercial purposes. A commercial building containing various stores and a New York State Department of Motor Vehicles (DMV) office adjoins the subject property to the south. A residential building with a Saenid Laundromat and various stores and restaurants on the first floor adjoins the subject property to the west. A Salvation Army Community Center adjoins the subject property to the east. Residential buildings adjoin the subject property to the north.

---

## SECTION 3.0 RECORDS REVIEW

Records reviews were conducted during this portion of the study to evaluate the property history, potential environmental concerns on the property, and potential environmental concerns in proximity to the property. Records were obtained from several sources, within reasonable time and cost constraints (within 20 calendar days of our written request and at a nominal cost), as more fully described below.

### 3.1 Historical Information

#### ➤ Historic Reference Documents

The objective of this portion of the study is to reconstruct the property history as it pertains to land use and development. For this purpose, information was sought from the following sources and is summarized below:

- Sanborn Fire Insurance maps
- Historic aerial photographs

Historic information concerning the property was also obtained from a property representative, User-provided documents, and other sources. This information is summarized in later sections of this report.

Sanborn Fire Insurance Maps of the subject property vicinity were provided by Environmental Data Resources (EDR) for the years 1896, 1911, 1939, 1951, 1968, 1969, 1979, 1980, 1982, 1986, 1989, 1991-1996, 2001-2005. Copies of the maps are included in Appendix A. Information obtained from the fire insurance map review is as follows:

1896: The western portion of the subject property is developed with approximately four buildings occupied by the 29<sup>th</sup> Police Precinct. The remainder of the property is developed with approximately 13 buildings ranging in size from one to five stories. The uses of these buildings are not shown. The adjoining properties to the north are developed with approximately 11 buildings ranging in size from one to five stories. One of the buildings is labeled a Piano Factory, but the uses of the remaining buildings are not shown. The adjoining properties to the east are developed with four three-story buildings. The adjoining property to the west is developed with a two-story building and a one-story building. The adjoining properties to the south are developed with approximately 11 buildings ranging in size from one to four stories. The uses of these buildings are not shown.

1911: The police station on the western portion of the subject property is now occupied by the 43<sup>rd</sup> Precinct. The subject property also includes a two-story furniture storage building with a basement and an elevator, a five-story dwelling with a basement, a five-story dwelling with a basement and a store labeled Carriage No. 1 Printing, a five-story store building with a basement and an elevator, and a building labeled Gotham Theatre. The adjoining property to the north contains approximately 11 buildings ranging in size from one to five stories, four of which contain elevators. The buildings include a NY Bill Posting Co., storage of furniture, a livery, a wood shed, stores, and dwellings. The adjoining property to the south contains approximately nine buildings ranging in size from three to four stories, one of which contains an

---

elevator. The buildings include auctions rooms, a hotel, stores, and dwellings. The adjoining property to the west has been redeveloped with a six-story building with a basement and an elevator and is occupied by a store and dwellings. No significant changes are noted for the adjoining property to the east.

1939: No significant changes are noted for the subject property, with the exception of an additional one-story store building, the police station is now occupied by the 25<sup>th</sup> Precinct, and the theater is now labeled Tri-Boro Theatre. No significant changes are noted for the adjoining properties to the north, with the exception of a two-story NY Post Office Station. No significant changes are noted for the remaining adjoining properties.

1951: No significant changes are noted for the subject property or the adjoining properties to the south and west. No significant changes are noted for the adjoining properties to the north, with the exception of a building labeled chemicals another building labeled cleaners and dyers that contains two solvent tanks. No significant changes are noted for the adjoining properties to the east, with the exception of one of the buildings labeled paints.

1968: No significant changes are noted for the subject property, with the exception of the Tri-Boro Theatre not being in operation. The post office station on the adjoining property to the north is now a furniture warehouse. No significant changes are noted for the remaining adjoining properties.

1969: No significant changes are noted for the subject property or the adjoining properties to the north, south, and west. The building on the adjoining property to the east is no longer labeled paints.

1979: Several buildings have been removed from the subject property. The two remaining buildings are the furniture storage building and the Tri-Boro Theatre. The adjoining properties to the north have been redeveloped and include a two-story building with an elevator labeled Urban Renewal Office, a parking lot, a five-story warehouse building with an elevator, and a five-story building labeled East Harlem Triangle Community Center. No significant changes are noted for the adjoining properties to the south, with the exception of the removal of two buildings. The buildings on the adjoining properties to the east have been removed. No significant changes are noted for the adjoining property to the west.

1980-1989: No significant changes are noted for the subject property or the adjoining properties.

1991: No significant changes are noted for the subject property or the adjoining properties to the east, south, and west. The Urban Renewal Office building on the adjoining property to the north has been redeveloped into a six-story building with a basement labeled housing for the disabled.

1992-1996: No significant changes are noted for the subject property or the adjoining properties.

2001: The buildings have been removed from the subject property and the adjoining properties to the south and these properties are undeveloped and vacant. No significant changes are noted for the remaining adjoining properties.

2002: No significant changes are noted for the subject property or the adjoining properties to the north, east, and west. The adjoining property to the south has been developed with a three-story commercial building with a basement and contains stores and offices.

---

2003: The subject property is labeled parking. The building on the adjoining property to the south has parking in the basement. No significant changes are noted for the remaining adjoining properties.

2004-2005: No significant changes are noted for the subject property or the adjoining properties.

A June 2011 aerial photograph of the subject property vicinity was obtained through the Google Earth website; a copy is included in Appendix A. The subject property and adjoining properties generally appear in their current configurations.

In summary, the western portion of the subject property was developed with approximately four buildings occupied by the 29<sup>th</sup> Police Precinct prior to 1896 and the remainder of the property had been developed with approximately 13 buildings ranging in size from one to five stories. The uses of these buildings were not shown. In 1911 the police station on the western portion of the subject property was occupied by the 43<sup>rd</sup> Precinct. The subject property also included a two-story furniture storage building, a five-story dwelling, a five story dwelling with a basement and a store labeled Carriage No. 1 Printing, a five-story store building, and the Gotham Theatre building. Between 1911 and 1939 an additional one-story store building was developed onsite and between 1951 and 1968 the Theatre stopped operating. Between 1969 and 1979 several buildings were removed from the subject property, leaving the furniture storage building and the theatre building. Between 1996 and 2001 the remaining buildings were removed from the subject property and by 2003 the subject property was redeveloped with a parking lot. The adjoining properties were developed for commercial and residential uses prior to 1896. Between 1939 and 1951 one of the buildings on the adjoining property to the north appeared to have been used for the manufacture or sale of chemicals and another building was a cleaners and dyers and contained two solvent tanks. A building on the adjoining property to the east was used for the manufacture or sale of paints.

➤ Historic Agency Records

Historic records for the subject property were sought from several local agencies during this study. Factors such as chemical spills or storage, USTs, and other information that would indicate a potential source of contamination at or in the vicinity of the property were investigated using these records. Information requests were made by FPM during this Phase I ESA from the following sources:

- New York City Department of Finance, New York County Office of the City Register
- City of New York, Department of City Planning website
- New York City Department of Buildings (DOB) website
- City of New York Fire Department (FDNY)
- Environmental Data Resources Inc. (EDR)
- Google Earth website
- New York City Department of Environmental Protection (NYCDEP)
- New York City Department of Health (NYCDOH)

- 
- New York State Department of Environmental Conservation (NYSDEC)
  - United States Environmental Protection Agency (USEPA)

Information pertaining to property ownership was obtained from the New York City Department of Finance, New York County Office of the City Register. A summary of the property ownership information is included in Table 3.1.1. The current owner of the subject property is Gotham Plaza Associates, LLC, which has owned the property since November 2000. Previously, the subject property was identified as Lots 44, 45, 47, and 49 and part of Lots 30 and 31, and was owned by various private and commercial entities. No industrial ownership is apparent.

Information obtained from the City of New York, Department of City Planning website indicates that the subject property is zoned for commercial use, including stores, theater, and retail, as C4-4D. The property is currently e-designated as E-201 on the current zoning map (copy in Appendix A) for hazardous materials, air, and noise.

The New York City DOB website was accessed on August 20, 2014 to review complaints, violations, Certificates of Occupancy (COs), and permits regarding the subject property. CO #42667 was issued on May 21, 1954 for a five-story multi dwelling at 158 East 126<sup>th</sup> Street (part of former Lot 45). The cellar (ground floor) was used as a showroom and storage, the first floor was for an office and manufacturing, the second floor was for apartments and a showroom, and the remaining floors were apartments. A complaint was received on March 22, 2014 after a car struck a wall. Two active violations were issued on March 22, 2014 regarding this incident. A violation was issued on January 16, 2009 regarding an elevator and was resolved on July 31, 2013. A new building permit was issued in 1982. Alteration permits (unspecified alterations) were issued in 1932, 1951, 1965, and 1976. A demolition permit was issued in 1975. An oil burner application was submitted in 1969, suggesting that a fuel oil tank may have been present on the property; the records are not clear regarding the portion of the subject property that this application pertained to. Copies of the information obtained during review of the online DOB records are included in Appendix A.

The FDNY was contacted on August 5, 2014 and information pertaining to fuel oil tanks, tank removals, tank leaks and violations was requested. A response had not yet been received at the time this report was prepared. If any files are made available, they will be reviewed and any pertinent information will be forwarded. A copy of the FDNY request is included in Appendix A. FDNY records were obtained during previous investigations of the property (discussed in Section 3.3). These records did not show any tanks to be registered for the property with the exception of a 2,000-gallon storage tank (unknown contents) associated with former Lot 30. This tank has been removed, as discussed in Section 3.3.

The NYCDEP was contacted on August 5, 2014 and information regarding the use, storage and disposal of hazardous waste, USTs, ASTs, environmental inspections, reviews, violations and remediation was requested. An initial response was received on August 8, 2014 acknowledging the request. The Division of Air/Noise responded on August 11, 2014 that they do not maintain any such files. If any files are made available, they will be reviewed and any pertinent information will be forwarded. Copies of the NYCDEP request and response are included in Appendix A. NYCDEP records were requested during previous investigations of the property (discussed in Section 3.3); there were no records reported for the subject property.

\*Lot 48 was formerly listed as Lots 44, 45, 47, and 49 and part of Lots 30 and 31.

\*\* The City of New York has owned this lot since at least this date. The exact date of transfer was not found.

Source: New York County Office of the City Register

The NYCDOH was contacted on August 5, 2014 and information regarding chemical or hazardous material storage and/or disposal, USTs, ASTs, sampling, inspections, violations, remediation and industrial files was requested. A response had not yet been received at the time this report was prepared. If any files are made available, they will be reviewed and any pertinent information will be forwarded. A copy of the NYCDOH request is included in Appendix A. NYCDOH records were requested during previous investigations of the property (discussed in Section 3.3); there were no records reported for the subject property.

The NYSDEC was contacted on August 5, 2014 and information regarding hazardous waste substance regulation, sampling, remediation, violations, waste disposal, discharge monitoring, non-compliance, inspections, monitoring, environmental permits and engineering was requested. A response had not yet been received at the time this report was prepared. If any files are made available, they will be reviewed and any pertinent information will be forwarded. A copy of the NYSDEC request is included in Appendix A. NYSDEC records were requested during previous investigations of the property (discussed in Section 3.3); there were no records reported for the subject property in 2002.

The USEPA Region II database was accessed on August 5, 2014 ([www.epa.gov/region02/](http://www.epa.gov/region02/)) and the subject property appeared on the Resource Conservation and Recovery Act (RCRA) database listed as Con Edison service box #20848 (EPA ID#NYP004298006). The facility is inactive and no RCRA violations or enforcement actions were noted. Additional information concerning this listing is provided

---

in Section 3.2. The subject property did not appear on the Comprehensive Environmental Resource Conservation and Liability Information System (CERCLIS) database or as a No Further Remedial Action Planned (NFRAP) site.

### **3.2 Federal and State Environmental Records Sources**

Standard federal and state databases were accessed by EDR to identify areas of potential concern in the vicinity of the subject property. The search distances were chosen in accordance with the ASTM Standard for Phase I ESAs (ASTM, E 1527-13, Section 8.2.1) as summarized in Table 3.2.1. Table 3.2.1 also includes the federal and state database information summary, the proximity of the properties of environmental concern to the subject property, and the hydrologic position of the properties of environmental concern with respect to the subject property. It should be noted that the locations of the properties of environmental concern were evaluated with respect to the estimated regional groundwater flow direction (northeast). Properties of environmental concern located downgradient and at a distance from the subject property were presumed not to present a concern because of their hydraulic location. Pertinent portions of the state and federal database search results are included in Appendix B.

The subject property was identified on the RCRA No Longer Registered (NLR) and Petroleum Bulk Storage (PBS) databases. A 2,000-gallon #2 fuel oil steel UST was removed from the property in March 2001; this removal is further discussed in Section 3.3. Con Edison service box #20848 (EPA ID #NYP004298006) was identified on the property as a conditionally-exempt small-quantity generator of hazardous waste (unspecified) in April 2013; it is presently listed as a non-generator as hazardous waste is not presently generated. No RCRA violations or enforcement actions were noted. The subject property is also identified as being e-designated (E-201) for air quality (#2 fuel oil or natural gas heat and hot water), exhaust stack location limitations, underground gasoline storage tanks testing protocol, and window wall attenuation & alternate ventilation. The subject property was not identified on any of the other environmental databases.

Harlem Park, located approximately 0.17 miles west-southwest (up/crossgradient) of the subject property at 1800-1808 Park Avenue, 71 East 124<sup>th</sup> Street, and 66-70 East 125<sup>th</sup> Street, was identified as a NYSDEC Brownfield site and on the NYSDEC Spills database. The site was historically used as a hotel and a parking lot. Soil and groundwater impacted with #6 fuel oil are present onsite. The NYSDEC and NYSDOH have concluded that site conditions do not pose a significant threat to human health or the environment. Spill number 04-02211 was assigned on May 28, 2004 following the discovery of groundwater contaminated with #2 fuel oil. The contamination is reportedly from an offsite source. The investigation and remediation are ongoing. Based on the available information, this site does not pose a concern for the subject property.

The Odyssey House, located approximately 0.24 miles south (up/crossgradient) of the subject property at 219 East 121<sup>st</sup> Street, was identified as a Hazardous Substances Waste Disposal Site. No further information was provided. Based on the available information and its distance from the subject property, this site does not pose an environmental concern for the subject property.

A Con Edison facility, adjoining the subject property to the south (upgradient) at 159 East 125<sup>th</sup> Street, was identified on the RCRA Generators database as a conditionally-exempt small-quantity generator of hazardous waste. NO RCRA violations or enforcement actions were noted and no spills are reported. Based on the available information, this site does not pose an environmental concern for the subject property.

Source: EDR

Two Con Edison service boxes, adjoining the subject property to the south (upgradient) at 165 and 167 East 125<sup>th</sup> Street, respectively, were identified on the RCRA NLR database. The service boxes were last listed as conditionally-exempt small-quantity generators of hazardous waste in 2013. No RCRA violations or enforcement actions were noted. Based on the available information, these sites do not pose an environmental concern for the subject property.

Two facilities adjoining the subject property to the south (upgradient) were identified on the NYSDEC Spills database. Spill number 06-09087 was assigned to 153 East 125<sup>th</sup> Street on November 8, 2006 following the discovery of a 55-gallon drum containing approximately 25 gallons of diesel fuel that had been left onsite. The drum was pumped out and removed and the spill was closed on December 1, 2006. Spill number 06-08906 was assigned to 151 East 125<sup>th</sup> Street on November 2, 2006 following the release of approximately five gallons of diesel fuel to the road surface by a commercial truck. The spill did not affect the sewers and was cleaned up by the FDNY. The spill was closed on November 3, 2006. A request was submitted to the NYSDEC on August 20, 2014 for any files related to the spills. A response had not yet been received at the time this report was prepared. If any files are made available, they will be reviewed and any pertinent information will be forwarded. A copy of the NYSDEC request is included in Appendix A. Based on the available information, which indicates that the spills were minor, cleaned up, and closed, these spills do not pose an environmental concern for the subject property.

A commercial building, located approximately 0.11 miles west-northwest (up/crossgradient) of the subject property at 103 East 125<sup>th</sup> Street, was identified on the NYSDEC Spills database. Spill number 12-06944 was assigned on October 15, 2012 following the release of approximately 10

---

gallons of #6 fuel oil to a paved area. A cleanup was reportedly underway but the spill remains active. As the spill was minor and confined to a paved area, this site does not pose an environmental concern for the subject property.

Five facilities were identified within the ASTM search radius on the Leaking Underground Storage Tank (LUST) database due to tank test failures on #2 fuel oil USTs. The NYSDEC spill numbers assigned to each facility remain active. Taino Tower Dry Cleaners, located approximately 0.16 miles south-southwest (crossgradient) of the subject property at 2253 3<sup>rd</sup> Avenue, was assigned spill number 00-00963 on April 22, 2000; the tank was reportedly being repaired and retested. An apartment building, located approximately 0.32 miles south (crossgradient) of the subject property at 120<sup>th</sup> Street and 2<sup>nd</sup> Avenue, was assigned spill number 98-08968 on October 19, 1998; no further information was provided. NYC Parks, located approximately 0.35 miles west (upgradient) of the subject property at 122<sup>nd</sup> Street and 5<sup>th</sup> Avenue, was assigned spill number 05-15023 on March 31, 2006; the affected tank was reportedly removed and replaced in 2009. The Pelham Fritz Recreation Center, located approximately 0.44 miles west (upgradient) of the subject property at 18 Mount Morris Park West, was assigned spill number 06-02813 on June 13, 2006; no further information was provided. Corsi House, located approximately 0.46 miles south (crossgradient) of the subject property at 306 East 117<sup>th</sup> Street, was assigned spill number 95-00828 on April 20, 1995 following a gross failure on the UST; the investigation and remediation is ongoing. Based on the available information, which indicates that these sites are located crossgradient or at a distance from the subject property, these sites do not pose an environmental concern.

Four facilities adjoining the subject property were identified on the PBS database. RBM Trading Corp., adjoining the subject property to the west (crossgradient) at 2085 Lexington Avenue, contains a steel 5,000-gallon gasoline AST installed in October 1992. Two facilities adjoining the subject property to the south (upgradient) at 155 and 157 East 125<sup>th</sup> Street, each contained a steel 1,500-gallon #2 fuel oil AST that was removed in November 2000. The facility adjoining the subject property to the northeast (downgradient) at 2322 3<sup>rd</sup> Avenue, contains a steel 7,500-gallon #2 fuel oil AST. No spills are associated with these tanks. Based on the available information, these sites do not pose an environmental concern for the subject property.

There were no other sites identified within the ASTM-designated search radii that appear to present an environmental concern for the subject property.

### **3.3 Previous Investigations and Remediation**

#### **➤ January 1999 Phase I ESA**

FPM performed a Phase I ESA in January 1999 for a larger property that included the subject property. At that time, the subject property was identified as 163-169 East 125<sup>th</sup> Street and 148-160 East 126<sup>th</sup> Street, and was referenced by the following New York City Tax Map numbers: Manhattan, Block 1774 and part of Lots 30 (163 East 125<sup>th</sup> Street) and 31 (165-169 East 125<sup>th</sup> Street), and Lots 44 (160 East 126<sup>th</sup> Street), 45 (156-158 East 126<sup>th</sup> Street), 47 (154 East 126<sup>th</sup> Street), and 49 (148 East 126<sup>th</sup> Street). The subject property contained the rear portion of a four-story building formerly occupied by a theater, a vacant three-story building, a guard house, a shed, storage containers, and gravel parking areas. Pertinent information and recommendations from the report are summarized as follows:

- New York City DOB records indicated that a two-story building was constructed on Lot 30 prior to 1906 and was occupied by a moving pictures theater and a club room. In 1958 the building was used as a furniture store. A two-story, four family Class "A" multi-dwelling was built on Lot

---

30 prior to 1938. A five-story 10-family multi-dwelling was constructed on Lot 45 on October 5, 1882. In 1965 the cellar of the building housed a boiler, a pharmaceutical manufacturer occupied the first floor, and the remaining floors were used for storage. A two-story building was constructed on Lot 47 on August 27, 1903. A CO from 1967 stated that the building was heated with a coal-fired furnace. A 162,500-square-foot police station was demolished on Lot 49 in 1972.

- A 2,000-gallon abandoned AST was present below the floor joists of the building on Lot 47. A 2,000-gallon #4 fuel oil AST was reported to be present in the basement of the building formerly present on Lot 45. A hydraulic lift elevator (previously removed) was used in the Lot 47 building. It was not known whether the AST associated with the elevator was removed. It was recommended that it should be determined whether this AST had been removed or properly abandoned in place. It was also recommended that all of the ASTs no longer in service be removed and properly disposed.
- An open five-gallon container labeled dipropylene dimethyl ether was noted among debris inside the building on Lot 47. It was recommended that the five-gallon container and the debris inside of the building be disposed properly.
- The subject property was not identified on the environmental database report.
- Suspect asbestos containing materials (ACMs) were identified at the property, including roofing materials, wall and ceiling materials, ceiling tiles, vinyl floor tiles and mastic, pipe insulation, and furnace insulation. It was recommended that an asbestos survey be conducted, and if any ACMs were identified, they should be removed prior to any renovation or demolition.
- It was noted that lead-based paint could be present based upon the age of the buildings. It was recommended that a lead-based paint survey be conducted prior to demolition of the buildings.

➤ May 21, 2001 Tank Decommissioning and Environmental Restoration Report

FPM prepared a Tank Decommissioning and Environmental Restoration Report on May 21, 2001 documenting the results of the tank decommissioning and subsurface investigations that occurred in 2001 in association with redevelopment of the property. FPM identified a 1,500-gallon fuel oil AST in the basement of the building on Lot 47 and a buried 2,000-gallon #4 fuel oil AST was present in the former basement of the building formerly present on Lot 45. RND Services, Inc. (RND) was subcontracted to decommission the tanks prior to and during the planned demolition of the property buildings. Prior to decommissioning, the tanks were registered with the NYSDEC. Each tank was decommissioned by accessing the tank and removing and properly disposing the contents. Each emptied tank was then cut open and cleaned of any remaining adhering petroleum. The associated piping was also accessed and disconnected from the tanks. The wastes from the cleaning process were containerized, removed from the property, and properly disposed. The decommissioned tanks and piping were left at the property to be disposed during the demolition process as scrap metal. After tank decommissioning was completed, RND filed Affidavits of Closure for each of the ASTs with the FDNY.

Following the removal of all of the known tanks from the property, a geophysical survey was performed for the purpose of identifying potential buried tanks that may have remained. The survey resulted in the identification of one magnetic anomaly located on the northwest side of Lot 31. This anomaly was screened with the GPR and no subsurface voids were identified. An FPM representative excavated the anomaly and identified a 1-inch thick, 4-foot by 8-foot steel plate, which appeared to be

---

associated with the base of a former elevator. Below the steel plate was a 1-foot thick, 5-foot by 8-foot concrete slab. No indications of a tank were noted in association with this anomaly. No geophysical anomalies were identified on the remainder of the subject property.

➤ Asbestos Survey and Abatement

Hygenix, Inc. (Hygenix) performed an asbestos survey of the subject property in 1999 and 2000; the results were documented in a February 29, 2000 report. The survey identified various ACMs in the property buildings, including floor tiles, roofing materials, insulation board, pipe insulation, plaster debris, and sheetrock/joint compound.

Asbestos abatement was conducted in 2000 and 2001 during the demolition of the subject property buildings. Monitoring of the abatement was performed by Hygenix and the results are documented in a project monitor's final report (Hygenix, November 22, 2000 – March 17, 2001). Asbestos abatement was performed by Seasons Industrial. Air monitoring conducted, including post-abatement clearance samples, indicated that post-abatement criteria were met, as specified by New York City and State regulations. Visual inspection of each abated area together with post-abatement soil sampling results indicated that all of the identified ACMs and asbestos-contaminated soil had been removed from the subject property.

➤ October 2002 Phase I ESA Update

FPM performed a Phase I ESA Update for the subject property in October 2002. At that time, the subject property was identified as 163-169 East 125<sup>th</sup> Street and 148-160 East 126<sup>th</sup> Street, and was referenced by the following New York City Tax Map numbers: Manhattan, Block 1774 and part of Lots 30 (163 East 125<sup>th</sup> Street) and 31 (165-169 East 125<sup>th</sup> Street), and Lots 44 (160 East 126<sup>th</sup> Street), 45 (156-158 East 126<sup>th</sup> Street), 47 (154 East 126<sup>th</sup> Street), and 49 (148 East 126<sup>th</sup> Street). The subject property contained an asphalt-paved parking lot. The subject property was identified on the PBS database for the 2,000-gallon steel fuel oil tank that was removed in March 2001 from the 156-158 East 126<sup>th</sup> Street (Lot 45) property. There were no recommendations for further investigation at the subject property.

### **3.4 User-Provided Information**

The previous investigations, discussed above, were provided by the User. FPM provided the User with a User Questionnaire to assist FPM in obtaining information about the subject property relevant to identifying RECs. Specialized knowledge or experience of the User with respect to the property and commonly known or reasonably ascertainable information about the property within the local community were specifically requested. FPM has not yet received the completed Questionnaire from the User.

The User informed FPM that no property purchase is contemplated. Therefore, information regarding the purchase price of the property relative to the fair market value of the property is irrelevant.

The User was requested to provide a copy of recorded land title records and judicial records concerning the property from which information could be obtained concerning environmental liens or activity and use limitations (AULs) that may be present. The User was also asked to provide any actual knowledge of environmental liens or AULs that may encumber the property. The User did not provide any of this information.

FPM understands that this Phase I ESA is being performed by the User in association with contemplated redevelopment of the property.

---

## SECTION 4.0 PROPERTY RECONNAISSANCE

FPM personnel inspected the subject property on August 14, 2014. All areas of the property were accessible at the time of the inspection. A property representative accompanied FPM during the reconnaissance and was interviewed to obtain information regarding uses and physical characteristics of the property. Information obtained during the interview is included in the appropriate sections below. A photolog documenting current property conditions is included in Appendix C.

The subject property comprises approximately 22,500 square feet and is presently developed with an asphalt-paved parking lot. An attendant's booth is present in the center of the parking lot and a ramp for a sub-grade parking structure on the adjoining property to the south is present in the southeast corner of the property. A site plan depicting the current property features is shown in Figure 4.1.

### Occupant/Operation:

The subject property is currently used as a parking lot.

### Prior Occupants/Use:

The subject property was initially developed prior to 1896 with approximately four buildings occupied by the 29<sup>th</sup> Police Precinct on the western portion of the property and approximately 13 buildings ranging in size from one to five stories. Previous occupants and/or uses have included furniture storage, a furniture store, a printing store, a theatre, pharmaceutical manufacturing, offices, and residences.

### Hazardous Substance/Petroleum Products Inventory:

No hazardous substances or petroleum products were noted on the subject property at the time of the inspection.

### ASTs/USTs Inventory:

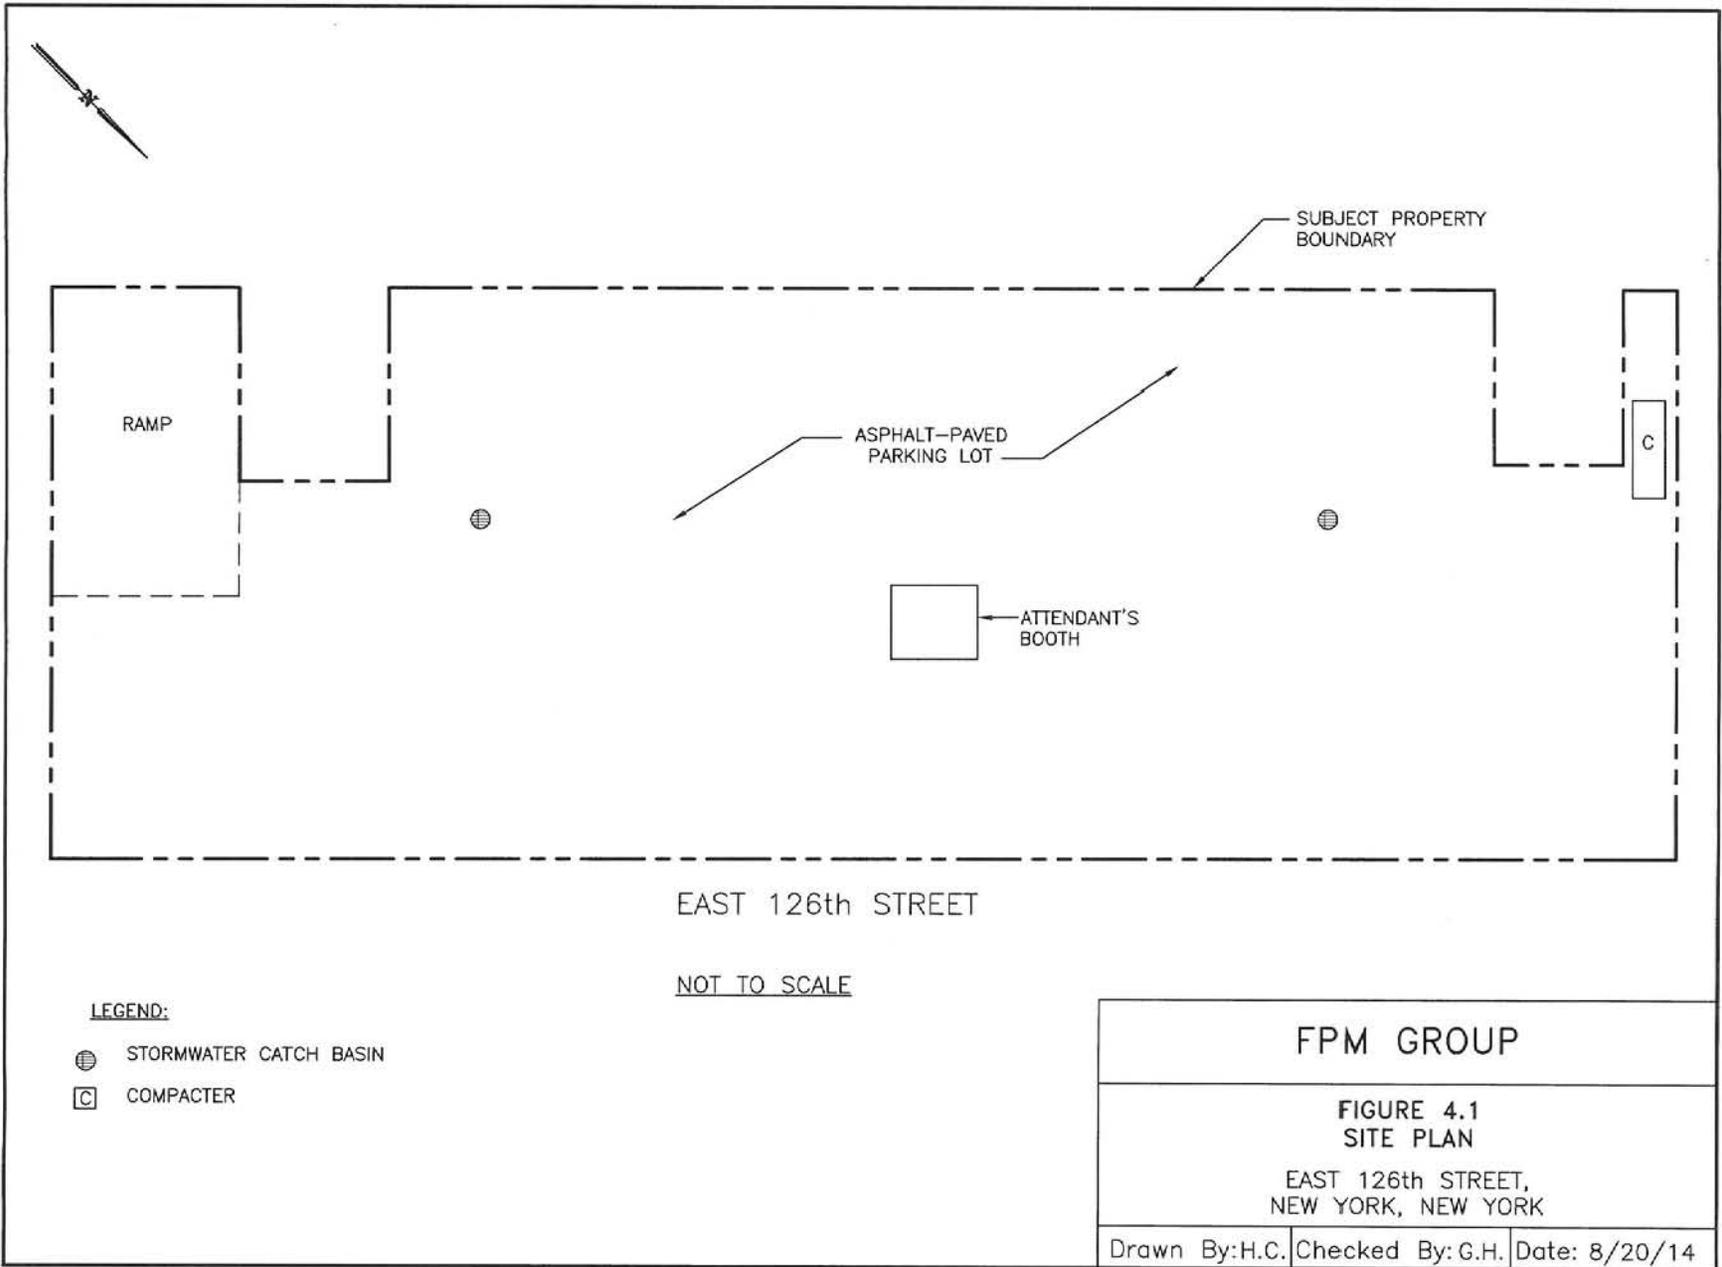

No visible evidence of any ASTs or USTs (fill pipes, vent pipes, supply lines) was noted during the site inspection. As noted in Section 3.3, the tanks associated with the previous property occupants have been removed and a geophysical survey did not find any anomalies associated with tanks.

### Sanitary Waste Management

No evidence of any current or former onsite sanitary waste disposal systems was noted during the site inspection. A municipal sewer is available in the property vicinity.

### Solid Waste Disposal:

No solid waste was noted during the site inspection. A cardboard compacter was noted in the southwest corner of the property. No staining, leakage, or other evidence of inappropriate disposal was noted in association with the compacter.

---

Drums/Unidentified Substance Containers:

No drums or unidentified substance containers were noted on the subject property at the time of the inspection.

Wells:

No wells were noted on the subject property at the time of the inspection. Public water supply is available in the subject property vicinity.

Heating, Ventilation and Cooling:

Presently there are no HVAC systems onsite.

PCB Electrical Components:

No potential PCB-containing electrical components were noted on the subject property at the time of the inspection.

Staining and Corrosion:

Minor staining associated with parked automobiles was noted on the asphalt-paved surface. This appears to be a de minimis condition.

Floor Drains and Sumps:

No floor drains or sumps were observed during the site inspection.

Stormwater Drainpools/Subsurface Drainage Structures:

Two solid-bottom stormwater catch basins were observed during the site inspection. No staining or other evidence of improper discharges was noted in association with these drains, which appear to be connected to the municipal sewer system.

Stressed Vegetation:

No stressed vegetation was observed at the subject property at the time of inspection. The subject property is fully paved.

Dumping:

No evidence of dumping was observed on the subject property at the time of inspection.

Disturbed Soil Mounding/Excavation:

No evidence of disturbed soil or excavation was observed at the subject property at the time of the inspection.

---

Radon:

Due to the depth to bedrock in the property area, radon does not appear to be a concern at the subject property. Based on the 1993 U.S. Geological Survey Open-file Report 93-292-B entitled "Geologic Radon Potential of EPA Region 2", the average indoor radon concentration in New York County is 1.4 picocuries per liter and is among the lowest concentrations in New York State. The USEPA recommends that action be taken to reduce radon concentrations if they exceed four picocuries per liter. Radon does not appear to be a concern at the subject property.

Radiation:

There was no indication that past or present property activities may have included the generation or storage of radiation sources at the subject property.

Adjoining Property Descriptions:

The subject property is surrounded by parcels utilized for residential and commercial purposes. A commercial building containing various stores and a New York State Department of Motor Vehicles (DMV) office adjoins the subject property to the south. A residential building with a Saenid Laundromat and various stores and restaurants on the first floor adjoins the subject property to the west. A Salvation Army Community Center adjoins the subject property to the east. Residential buildings adjoin the subject property to the north, across East 126<sup>th</sup> Street. Based on FPM's observations of the adjoining properties from the vantage point of the subject property and adjacent public roads, no visible environmental concerns were noted.

---

## SECTION 5.0 FINDINGS AND CONCLUSIONS

### 5.1 Findings and Opinions

FPM has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 for the property located at East 126<sup>th</sup> Street, New York, New York. Any exceptions to, or deletions from, this practice are described in Section 5.2 of this report.

This assessment was used to identify the potential presence of Recognized Environmental Conditions (RECs), historic RECs (HRECs), controlled RECs (CRECs), and de minimis conditions in connection with the property. Any RECs, HRECs, CRECs, and/or de minimis conditions identified for the property are described below.

- The subject property occupies approximately 22,500 square feet on the south side of East 126<sup>th</sup> Street between Lexington Avenue and 3<sup>rd</sup> Avenue in the borough of Manhattan, and is referenced by the following New York City Tax Map number: Manhattan, Block 1774, Lot 48. The property is currently developed with an asphalt-paved parking lot. An attendant's booth is present in the center of the parking lot and a ramp for a sub-grade parking structure on the adjoining property to the south is present in the southeast corner of the property. The property is currently owned by Gotham Plaza Associates, LLC, which has owned the property since November 14, 2000. The property was previously owned by various private and commercial entities. The subject property is zoned for commercial use, including stores, theater, and retail, as C4-4D. The property is currently e-designated as E-201 for hazardous materials, air, and noise.
- The subject property was developed prior to 1896 with approximately four buildings occupied by the 29<sup>th</sup> Police Precinct on the western portion of the property and approximately 13 buildings ranging in size from one to five stories on the remainder of the property. In 1911 the subject property included the police precinct building, a two-story furniture storage building, a five-story dwelling, a five story dwelling with a printing store, a five-story store building, and a theater building. Between 1951 and 1968 the theatre stopped operating. In 1965 a pharmaceutical manufacturer occupied the first floor of one of the buildings. Between 1969 and 1979 several buildings were removed from the subject property, leaving only the furniture storage building and the theatre. Between 1996 and 2001 the remaining buildings were removed from the subject property and between 2002 and 2003 the property was redeveloped with a parking lot.
- Groundwater is estimated to flow to the northeast toward the Harlem River, which is located approximately one-quarter mile to the northeast and is the only natural surface water body within one mile of the subject property.
- FPM performed a Phase I ESA for the subject property in January 1999 at which time the subject property was identified as 163-169 East 125<sup>th</sup> Street and 148-160 East 126<sup>th</sup> Street, and was referenced by the following New York City Tax Map numbers: Manhattan, Block 1774 and part of Lots 30 (163 East 125<sup>th</sup> Street) and 31 (165-169 East 125<sup>th</sup> Street), and Lots 44 (160 East 126<sup>th</sup> Street), 45 (156-158 East 126<sup>th</sup> Street), 47 (154 East 126<sup>th</sup> Street), and 49 (148 East 126<sup>th</sup> Street). The subject property contained a four-story building formerly occupied by a theater, a vacant three-story building, a guard house, a shed, storage containers, and gravel parking areas. A 2,000-gallon abandoned AST was present below the floor joists of the building on Lot 47. A 2,000-gallon #4 fuel oil AST was reported to be present in the basement of the building formerly present on Lot 45. A hydraulic lift elevator (previously removed) was used in the Lot 47 building.

---

It was not known whether the AST associated with the elevator was removed. An investigation of the tanks was recommended and removal of all ASTs no longer in service was also recommended. Suspect ACMs were identified in the remaining buildings and an asbestos survey and abatement were recommended.

- Tank decommissioning and subsurface investigations occurred in 2001, as documented in a Tank Decommissioning and Environmental Restoration Report (FPM, May 21, 2001). A 1,500-gallon fuel oil AST in the basement of the building on Lot 47 and a buried 2,000-gallon #4 fuel oil AST in the former basement of the building on Lot 45 were decommissioned and removed in association with demolition of the property buildings. Affidavits of Closure for each of the ASTs were filed with the FDNY. Following the removal of all of the known tanks, a geophysical survey was performed to identify potential tanks that may have remained. The survey did not identify any remaining tanks on the subject property.
- Asbestos abatement was conducted in 2000 and 2001 during the demolition of the subject property buildings. Air monitoring, including post-abatement clearance samples, indicated that post-abatement criteria were met, as specified by New York City and State regulations. Visual inspection of each abated area together with post-abatement soil sampling results indicated that all of the identified ACMs and asbestos-contaminated soil had been removed from the subject property.
- A Phase I ESA Update was performed for the subject property in October 2002. At that time the subject property contained an asphalt-paved parking lot. The subject property was identified on the PBS database for the 2,000-gallon steel fuel oil tank that was removed in March 2001 from the 156-158 East 126<sup>th</sup> Street (Lot 45) portion of the property. There were no recommendations for further investigation at the subject property.
- The subject property is identified on the RCRA NLR and PBS databases. A 2,000-gallon steel #2 fuel oil tank was removed from the site in March 2001; no spills were identified in association with this tank. Con Edison service box #20848 (EPA ID #NYP004298006) was identified as a conditionally-exempt small-quantity generator of unspecified hazardous waste in April 2013. No RCRA violations or enforcement actions were noted and this location is presently a non-generator. The subject property is also identified as being e-designated (E-201) for air quality (#2 fuel oil or natural gas heat and hot water), exhaust stack location limitations, underground gasoline storage tanks testing protocol, and window wall attenuation & alternate ventilation. The subject property was not identified on any of the other environmental databases and none of the identified environmental sites appears to pose a concern for the subject property.
- Two solid-bottom stormwater catch basins were observed during the site inspection. No staining or other evidence of improper discharges was noted in association with these drains, which appear to be connected to the municipal sewer system.
- Minor staining associated with parked automobiles was noted on the asphalt-paved surface. This appears to be a de minimis condition.
- A cardboard compacter was noted in the southwest corner of the property. No staining, leakage, or other evidence of inappropriate disposal was noted in association with the compacter.
- No indications of current or former onsite sanitary waste disposal systems were noted at the property. The municipal sewer system is available in the subject property vicinity.

- 
- No ASTs/USTs, HVAC systems, drums, unidentified containers, hazardous substances, floor drains, wells, PCB electrical components, corrosion, stressed vegetation, disturbed soil mounding, excavations, or evidence of potential radiation were observed at the subject property during the inspection.
  - The subject property is adjoined by properties utilized for residential and commercial purposes. No visible environmental concerns were noted.
  - The potential for hazardous substances or petroleum products to migrate at the property in any form (solid and liquid at the surface and in the subsurface, and vapor in the subsurface) was evaluated. Based on the available information, it does not appear that hazardous substances and/or petroleum products are present at the surface or subsurface of the subject property. As noted in Section 3.1, between 1939 and 1951 one of the buildings on the property to the north (across East 126<sup>th</sup> Street) was noted to be a cleaners and dyers and had two solvent tanks. No release was noted for this property, which is located downgradient and across the street from the subject property. Therefore, it is unlikely that hazardous substances could migrate onto the subject property.

## 5.2 Deviations and Data Gaps

The only identified deviations and/or data gaps that may affect our ability to identify RECs, HRECS, and/or CRECS are as follows:

- Records regarding the subject property were requested from the FDNY, NYCDEP, NYCDOH, and NYSDEC. Final responses have not yet been received from these agencies. Although some of these agencies may maintain pertinent information, much of the anticipated information has been provided from other sources, including past records searches at these agencies. Therefore, this data gap is not considered significant.
- The User has not reported a purchase price or provided an appraised value for the subject property. However, this information is not relevant as a property purchase is not contemplated. The User has also not provided any information regarding environmental liens for the property. However, none of the information obtained throughout the course of this Phase I ESA suggests that environmental liens may be present. Therefore, these data gaps are not considered significant.

## 5.3 Conclusions and Recommendations

Based on the findings and opinions, and considering the deviations, limitations, and data gaps, FPM has identified no RECs, HRECS, and/or CRECS for this property.

As the property is e-designated, a Phase II investigation will be necessary. It is recommended that a Phase II Investigation Work Plan be developed in accordance with the requirements of the NYC Office of Environmental Remediation and that the Phase II Work Plan be submitted to the NYC Office of Environmental Remediation, together with this Phase I ESA Report, for review and approval.

---

## SECTION 6.0 DISCLAIMER

Observations and conclusions in this report are limited to those areas addressed in the study and represent our best judgment using the practices set forth in the ASTM Standard with which this report complies, as well as our past experience. Our investigation has been scientific and thorough; however, it is possible that certain areas of this property may pose environmental concerns that are, as yet, undiscovered. The following considerations apply to this report:

- A Phase I ESA is a non-invasive evaluation. No sample collection or subsurface analysis was conducted at the subject property as part of this Phase I ESA unless expressly detailed in this report.
- This Phase I ESA is based on the version of the ASTM Standard for Phase I ESAs (E 1527) under which it was prepared, as specified in Section 1 of this report, and other current environmental regulations as detailed herein. Future changes in environmental regulations and/or regulatory agency guidance may affect the interpretations and conclusions in this report.
- Asbestos-containing building materials, lead-based paint, mold, and indoor air quality are considered non-scope issues under the ASTM Standard for Phase I ESAs. This report does not address these potential environmental issues except as expressly described herein.
- Information acquired and evaluated during this Phase I ESA was provided by others. In accordance with the ASTM Standard, FPM is not required to independently verify the accuracy of provided information but may rely on this information unless we have additional information that indicates that the provided information is incorrect.
- This Phase I ESA report is dated, and the findings contained herein are based on the visible conditions existing at the subject property on the date of the inspection and as indicated in the provided information. Alterations of the subject property that may occur subsequent to the date of this report are not addressed herein.
- This Phase I ESA report is subject to the Terms and Conditions of the contract under which it was prepared.

**SITE**

DEPARTMENT OF HOUSING AND BUILDINGS

BOROUGH OF MANHATTAN, CITY OF NEW YORK

No. 42667

Date May 21, 1954

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C.26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the ~~new~~ altered ~~existing~~ building premises located at

158 East 126th Street

Block 1774 Lot Part of 45

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

Permit No.— 327-1951

Construction classification— nonfireproof

Occupancy classification— Old Law Tenement  
Class "A" Mult. Dwell.

Height 5 stories, 55 feet

Date of completion— May 19, 1954

Located in Unrestricted Use District.

B Area 1 1/2

Height Zone at time of issuance of permit 136-1952; 2439-1951; 1464-1951

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED			USE
		MALE	FEMALE	TOTAL	
Cellar	on ground	5		5	Showroom and storage.
1st story	75	25		25	Office and manufacturing.
2nd story	75	10		10	Two (2) apartments and showroom.
3rd to 5th story, incl.					Two (2) apartments on each story.

**NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL  
BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT**

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction, in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

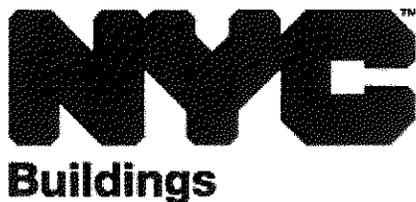

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

**Brenda Farren**  
Records Access Officer

We hereby acknowledge receipt of your **Freedom of Information Law** request dated August 5, 2014.

59-17 Junction Blvd.  
Flushing, NY 11373

Your request is important to us and will be handled as expeditiously as possible. You are advised, however, that because of the large increase in the volume of such requests, your response may be delayed.

Tel. (718) 595-3448  
Fax (718) 595-6543  
Foil2@dep.nyc.gov

If you have any questions, please call Brenda Farren, Records Access Officer, at (718) 595-3448. Please refer to the **FOIL log number(s)** listed below when calling.

Sincerely,

Brenda Farren  
FOIL Access Officer

Environmental Compliance

59-17 Junction Boulevard  
Flushing, NY 11373

Dear Mr. Holmes:

In response to your Freedom of Information Law information request of 8/5/2014, the Division of Air/Noise Enforcement and Policy has searched its files for records pertaining to East 126 Street and:

Has located and enclosed the requested documents.

A total of \_\_\_\_\_ pages of materials have been located, for which we are required to charge a fee of \$.25 per page. Please send your check, in the amount of \$ \_\_\_\_\_, to:

Records Access Officer  
NYC Department of Environmental Protection  
59-17 Junction Boulevard, 19<sup>th</sup> Floor  
Flushing, NY 11373

The check should be made payable to **The City of New York** and include the Log # noted below.

Upon receipt of the check, copies of these records will be sent to you.

Does not have the requested documents.

Sincerely,

Geraldine Kelpin  
Director, Air/Noise Enforcement &  
Policy

Re: **Phase I Environmental Site Assessment for a  
Property located in Manhattan, New York  
FPM File No. 492-14-136**

Dear Ms. Bryant:

In accordance with the Freedom of Information Act (FOIA), this is a written request to review all files at the NYCDOH for the following property located in **Manhattan**:

- South side of E 126<sup>th</sup> Street, 90 feet west of 3<sup>rd</sup> Avenue and 60 feet east of Lexington Avenue (Block 1774, Lot 48)

Specifically, I am requesting files pertaining to hazardous/toxic/chemical waste storage and disposal, violations, spills, under/above ground storage tanks, remediation, sampling, sanitation, or any other environmental concerns at this property.

Please confirm no other divisions maintain files for these properties and contact me as soon as this information becomes available for my review. Thank you for your prompt attention to this request.

Sincerely,

George Holmes  
Hydrogeologist

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 44 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/19/2014 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Class Code: Significant threat to the public health or environment - action required.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 04/01/2014 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

### State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 04/09/2014 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

### State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/19/2014 has revealed that there are 53 NY LTANKS sites within approximately 0.5 miles of the target property.

### State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 03/31/2014 has revealed that there is 1 NY TANKS site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

### Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/19/2014 has revealed that there are 339 NY Spills sites within approximately 0.5 miles of the target property.

✓ RESIDENTIAL Spill Number/Closed Date: 1011591 / 2/22/2011	420 EAST 119TH STREET	SSE 1/4 - 1/2 (0.497 mi.)	DC816	1646

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there is 1 NY SPILLS 90 site within approximately 0.5 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 89 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/01/2014 has revealed that there are 157 NY MANIFEST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - EAST 115TH ST. WO	EAST 114TH - EAST 116TH	SSE 1/2 - 1 (0.702 mi.)	821	1653
CON EDISON - EAST 111TH ST. WO	EAST 110TH - EAST 112TH	S 1/2 - 1 (0.801 mi.)	822	1653
CON EDISON - EAST 108TH ST. ST	108TH ST. WEST OF FIRST	S 1/2 - 1 (0.959 mi.)	824	1671

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 23 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 9 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

sorted for disposal. Once the excavation is complete, a determination will be made concerning which direction the contamination is coming from. 06/22/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Called to Mr. Michael Caridi (212)848-0253 and left message to call me back regarding information of spill. -QA07/19/06: Called Mr. Arnold Fleming at (212)675-3225 and left message to call me back. -QA11/14/06: Called Mr. Michael Caridi and left message to call me back. Called Mr. Arnold Fleming (Flemming -Lee Shue) he said that he will talk to client (Hospital) and he will fax me the information regarding spill. -QA 02/15/07: Called Fleming Lee Shue Company at (212)675-3225 and talk to Ms. Marry Nanso, Project Director of the Company. She said that her Company is going to do the Remediation at the site. They have not started yet the remediation work. She said Mr. Shawn Bollers (DEC) (718)482-4608, Project Manager, Brownfield Programme, DEC will take care of this spill. -QA 06/26/2008: This spill case was transferred to A. Doronova - AD11/04/2008: Called and left a message to M. Manto of FLS and to M. Caridi (phone: 212-935-3550) of Park Avenue LLC. AD05/07/2009: This case was transferred to S. Bollers - SB BCP Project Manager.

Remarks: looks like historical ground water contamination. they think it is coming from off site

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Extension: Not reported  
DEC Region: 2  
DER Facility ID: 209163  
DEC Memo: 03/08/06 Feroze, PBS case of this spill is # 2-240680. TTF is sent to: Robert Algrin 2253 Third Ave New York, NY 10035 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/21/06-Hiralkumar Patel. Spoke with John Laddy at Protest. this site has three 20,000 gal USTs on location and they were transferring oil from one tank to another. during this transfer, tank overfilled and spill happened on concrete side walk and asphalt street (possible from vent pipe). Protest has cleaned the site. John doesn't know about concrete condition but nothing went down to sewer/drain. DEP has visited site already. 03/23/06-Hiralkumar Patel. Spoke with John at Protest. John will go on site to replace faulty valve on tank. he will call me with updates. 03/24/06-Hiralkumar Patel. called for Manny Dias (212-369-3755 Ext 11), but he will be in office on Monday Mar 27 2006. 03/28/06-Hiralkumar Patel. Spoke with Mr. Dias. as per him, oil came out from vent pipe and spilled on concrete side walk and then ran on asphalt street. there are no cracks in concrete on sidewalk. no soil/sewer/drain affected. the tank had faulty pressure gauge on it. tank is currently empty and out of service. they are working on replacing this faulty gauge. all cleaned up. no complaints. Spoke with Mr. Melnick at Protest and asked him to send me copy of invoice once he done changing faulty gauge. He told me that they are going to replace it soon once they find out problem with gauge. 04/21/06-Hiralkumar Patel. Spoke with Mr. Melnick. they got permission to do repair work, but they haven't got chance to do it. they will probably go in next week. he will call once he done with repair work. 05/05/06-Hiralkumar Patel. Spoke to Mr. Melnick at Protest. they will start work probably on May 15. 06/22/06-Hiralkumar Patel. visited site on 06/20/2006. spoke to William, super of building & to Maria Cruz, executive director. tank was still empty on time of visit. no work done yet. spoke with Mr. Dias and asked to call back with updates. Maria Cruz Executive Director ARCO 2253 3rd Ave, 5th Floor New York, NY 10035 PH. (212) 369-3755 Fax (212) 369-6215 Email: taino@acromgt.com mcruz@arcomgt.com spoke with John at Protest. he explained that oil spill happened due to overfill of tank. they have tested all three tanks and tank system passed test. asked John to fax me test results. John suggest Mr. Dias to repair/replace valve to prevent further spill. spoke with Mr. Dias. he explained that due to air pressure inside "syphon", oil in one tank reached to top and overfilled. and piece of syphon was leaking and that why it created air pressure. Mr. Dias was planning to change that defected piece of pipe in September as winter season starts. asked him to submit work invoice once he done with such repair work. spoke with John at protest again. he explained that this site doesn't have syphon. instead these tanks are connected through valves in supply/return lines. so if they need, they can open/close valve to transfer oil from one tank to another. when John did test, he did test by isolating each tank system from another two. 06/26/06-Hiralkumar Patel. Left message for Mr. Dias. 06/29/06-Hiralkumar Patel. Spoke to John and asked to send tank test results for all three tanks. 07/05/06-Hiralkumar Patel. Spoke to John at Protest. he has misplaced tank test results, once he gets it, he will forward it to the Department. Left message for Mr. Dias. 07/10/06-Hiralkumar Patel. spoke with Mr. Dias and asked him to send tank test results for all

J02 - Dispenser - Suction Dispenser  
L09 - Piping Leak Detection - Exempt Suction Piping  
G00 - Tank Secondary Containment - None

Tank Number: 003  
Tank ID: 25185  
Tank Status: In Service  
Material Name: In Service  
Capacity Gallons: 20000  
Install Date: 01/01/1972  
Date Tank Closed: Not reported  
Registered: True  
Tank Location: Underground  
Tank Type: Steel/carbon steel  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: 21  
Date Test: 03/15/2006  
Next Test Date: 03/15/2011  
Pipe Model: Not reported  
Modified By: dxliving  
Last Modified: 04/23/2009

Equipment Records:

C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
I04 - Overfill - Product Level Gauge (A/G)  
H00 - Tank Leak Detection - None  
B00 - Tank External Protection - None  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
J02 - Dispenser - Suction Dispenser  
L09 - Piping Leak Detection - Exempt Suction Piping  
G00 - Tank Secondary Containment - None

**BROWNFIELDS:**  
 Program: BCP  
 Site Code: 59177  
 Site Description: Location: The Site is located in an urban area of New York County (Manhattan) on the west side of Park Avenue bounded by 124th and 125th Streets. The addresses for the site are 1800-1808 Park Avenue, 71 East 124th Street, and 66-70 East 125th Street. Site features: The site is paved and used as a parking lot. There are no on-site buildings. Current zoning/uses: Surrounding uses include residential buildings with first floor retail, and commercial buildings with office space to the north across 125th Street; the Metro-North Railroad tracks to the east along Park Avenue, residential buildings across Park Avenue; an asphalt-paved parking lot to the south across 124th Street; and a residential building with first floor retail and the New York College of Podiatric Medicine to the west. The Site is zoned C4-4 for commercial use. Historic use: The Site had been residential and had been the location of the former Harlem Central Hotel (later the Hotel Naomi) through the 1970s. It has been a parking lot since approximately 1980. These uses contributed to the contamination identified on-site. Site geology and hydrogeology: The Site is underlain by man-made fill to a depth of approximately 20 feet below grade, glacial lake deposits and till, and bedrock. Published geologic data indicate that the bedrock consists of Ordovician/Cambrian age metamorphic rock. In the vicinity of the Site, bedrock consists of Manhattan Formation (schist) surrounded by a larger area underlain by the Inwood Formation (marble). The groundwater table is found at approximately 14 to 16 feet below grade and the gradient is toward the southwest.  
 Env Problem: Nature and extent of contamination: The RI and subsequent supplemental investigations at the site included the collection of soil and groundwater samples the analyses of which identified the

**S108524799**

contamination of environmental media as follows. Soil: Historic fill is present on the site to a depth of approximately 20 feet below grade. A layer of petroleum contamination was identified at the water table across much of the site, varying in thickness up to approximately three feet. Fingerprint analysis of the petroleum layer identified it as #6 fuel oil. In addition to soil grossly contaminated by the petroleum layer, several hot spots were identified that exhibited exceedances of both Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use (RRUSCOs) as well as the Site Specific SCOs (SSSCOs). These included exceedances for lead including hazardous levels; 1,050 parts per million (ppm) compared to the UUSCO of 63 ppm and RRUSCO of 400 ppm; and SVOCs namely carcinogenic Polycyclic Aromatic Hydrocarbons (cPAHs) including; benzo(a)pyrene at 3.2 ppm, benzo(a)anthracene at 3.7 ppm and benzo(b)fluoranthene at 3.6 ppm compared to the UUSCO and RRUSCO of 1 ppm. Groundwater: No exceedance of groundwater standards by organic compounds was noted. Filtered groundwater samples showed exceedances of groundwater standards for aluminum, iron and manganese. In May 2011, a trace of free-phase petroleum was identified in one well and was not sampled at that time. The well was subsequently monitored in October 2011, and no trace of petroleum was identified at that time. The analytical results of the groundwater samples indicated no VOCs or SVOCs were detected above Class GA standards, and no dissolved lead was detected in the groundwater. Dissolved manganese was detected in five wells exceeding the Class GA standard of 300 parts per billion (300 ppb), but in only one area with a corresponding soil sample exceeding the Protection of Groundwater SCO. These results indicate a regional groundwater issue that is not Site related. Special resources impacted/threatened: There were no significant ecological resources identified at the site during the investigation. Significant threat: NYSDEC, in consultation with NYSDOH, has determined that the site conditions do not pose a significant threat to human health or the environment.

Health Problem: Since the site is fenced and covered by asphalt, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"6/19/98 e-mail from ERT Lukshides responding to previous spill update inquiry:Any cleanup measures? Oil source identified? when the Astoria tanker went to the location to conduct the clean up, originally reported as 2 pints unknown oil on 200 gallons of water, they found that a nearby fire hydrant was running and water from the hydrant was pouring in one side of the vault and back out the other side and that there was no oil in the vault. The tank truck pumped some of the water, but no oil found. A follow up on the 29th May (2 days later) reported still no oil in the hole. No source identified for original oil, but lab sequence is <1 ppm pcb.  
Remarks: caller states that on may 8th there was a 2 pint spill of unknown oil inside manhole. cleanup crew onsite today found that a hydrant was being flushed and flushed water out of manhole

DEC Memo: x236 need CSL to be sent LiRo documented the removal of one

5,000-gallon heating oil (#2 diesel) underground storage tank (UST) at the PelhamFritz Recreation Center. The removal was conducted by GemstarConstruction Corp. of Staten Island, NY. The Pelham Fritz RecreationCenter is located within the western portion of the Marcus Garvey Parkat 18 Mount Morris Park West in Manhattan, New York. The tank was beingreplaced as part of an ongoing New York City Department of Design andConstruction UST management and upgrade program. No problems had beenpreviously reported for the heating oil tank. A 5,000-gallon heating oil single-wall steel UST and associated pipingwere removed from the site. During the excavation of the tank, the topof the tank was encountered at approximately 3.5 feet below groundsurface and a concrete bottom slab was encountered at

Remarks: approximately 10.5feet below ground surface. Upon inspection, the exterior of the tankhad surficial rust. However, the interior and exterior of the UST werefree of any visual damage such as holes, pitting or degradation. Nostaining or discoloration was noted within the excavation. The bottoms slab was removed and six excavation bottom samples were collected at adepth of 12 feet bgs along the centerline of the excavation (seeattached figure). The laboratory results (also attached) showed relatively low VOCconcentrations. SVOC concentration for several PAHs exceeded TAGM 4046criteria and therefore I called in a spill report. No water wasobserved in the excavation. Based on surrounding locale (there arebedrock outcrops in the Park) we expect that the depth to rock andgroundwater is 25 feet or less. LiRo is preparing a UST Closure reportthat will be submitted to NYSDEC. Caller states they found trace lelements of petroleum compounds in soil results.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### *Federal NPL site list*

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### ***Federal Delisted NPL site list***

#### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

### ***Federal CERCLIS list***

#### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

#### **FEDERAL FACILITY: Federal Facility Site Information listing**

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2013	Telephone: 703-603-8704
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/08/2014
Number of Days to Update: 151	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

### ***Federal CERCLIS NFRAP site List***

#### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

### ***Federal RCRA CORRACTS facilities list***

#### **CORRACTS: Corrective Action Report**

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### ***Federal RCRA non-CORRACTS TSD facilities list***

#### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/11/2014

### ***Federal RCRA generators list***

#### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014  
Date Data Arrived at EDR: 03/13/2014

#### **RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014  
Date Data Arrived at EDR: 03/13/2014

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### *Federal institutional controls / engineering controls registries*

#### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

#### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

#### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2014	Source: Department of the Navy
Date Data Arrived at EDR: 05/30/2014	Telephone: 843-820-7326
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 05/19/2014
Number of Days to Update: 18	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

### *Federal ERNS list*

#### ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/03/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Annually

### *State- and tribal - equivalent CERCLIS*

#### SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/21/2014	Telephone: 518-402-9622
Date Made Active in Reports: 06/10/2014	Last EDR Contact: 07/17/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Annually

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 04/01/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/22/2014	Telephone: 518-402-9814
Date Made Active in Reports: 06/13/2014	Last EDR Contact: 05/22/2014
Number of Days to Update: 22	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

### *State and tribal landfill and/or solid waste disposal site lists*

#### SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 04/09/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/10/2014	Telephone: 518-457-2051

Number of Days to Update: 27	Next Scheduled EDR Contact: 10/08/2014
	Data Release Frequency: Semi-Annually

### *State and tribal leaking storage tank lists*

#### LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/22/2014	Telephone: 518-402-9549
Date Made Active in Reports: 06/11/2014	Last EDR Contact: 05/22/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

#### HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2005	Telephone: 518-402-9549
Date Made Active in Reports: 07/14/2005	Last EDR Contact: 07/07/2005
Number of Days to Update: 6	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

#### INDIAN LUST R10: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Alaska, Idaho, Oregon and Washington.

Date of Government Version: 11/06/2013	Source: EPA Region 10
Date Data Arrived at EDR: 11/07/2013	Telephone: 206-553-2857
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 04/28/2014
Number of Days to Update: 29	Next Scheduled EDR Contact: 11/10/2014
	Data Release Frequency: Quarterly

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### INDIAN LUST R5: Leaking Underground Storage Tanks on Indian Land

Leaking underground storage tanks located on Indian Land in Michigan, Minnesota and Wisconsin.

Date of Government Version: 05/12/2014	Source: EPA, Region 5
Date Data Arrived at EDR: 05/12/2014	Telephone: 312-886-7439

	Data Release Frequency: Varies

### INDIAN LUST R9: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Arizona, California, New Mexico and Nevada

Date of Government Version: 03/01/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2013	Telephone: 415-972-3372
Date Made Active in Reports: 04/12/2013	Last EDR Contact: 07/22/2014
Number of Days to Update: 42	Next Scheduled EDR Contact: 11/10/2014
	Data Release Frequency: Quarterly

### INDIAN LUST R8: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming.

Date of Government Version: 08/27/2012	Source: EPA Region 8
Date Data Arrived at EDR: 08/28/2012	Telephone: 303-312-6271
Date Made Active in Reports: 10/16/2012	Last EDR Contact: 07/22/2014
Number of Days to Update: 49	Next Scheduled EDR Contact: 11/10/2014
	Data Release Frequency: Quarterly

### INDIAN LUST R7: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Iowa, Kansas, and Nebraska

Date of Government Version: 04/28/2014	Source: EPA Region 7
Date Data Arrived at EDR: 05/01/2014	Telephone: 913-551-7003
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 04/28/2014
Number of Days to Update: 47	Next Scheduled EDR Contact: 11/10/2014
	Data Release Frequency: Varies

### INDIAN LUST R6: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in New Mexico and Oklahoma.

Date of Government Version: 05/14/2014	Source: EPA Region 6
Date Data Arrived at EDR: 05/15/2014	Telephone: 214-665-6597
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 07/22/2014
Number of Days to Update: 61	Next Scheduled EDR Contact: 11/20/2014
	Data Release Frequency: Varies

### INDIAN LUST R4: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Florida, Mississippi and North Carolina.

Date of Government Version: 04/24/2014	Source: EPA Region 4
Date Data Arrived at EDR: 04/25/2014	Telephone: 404-562-8677
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 04/22/2014
Number of Days to Update: 53	Next Scheduled EDR Contact: 08/11/2014
	Data Release Frequency: Semi-Annually

### INDIAN LUST R1: Leaking Underground Storage Tanks on Indian Land

A listing of leaking underground storage tank locations on Indian Land.

Date of Government Version: 02/01/2013	Source: EPA Region 1
Date Data Arrived at EDR: 05/01/2013	Telephone: 617-918-1313
Date Made Active in Reports: 11/01/2013	Last EDR Contact: 05/02/2014
Number of Days to Update: 184	Next Scheduled EDR Contact: 08/11/2014
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## *State and tribal registered storage tank lists*

### TANKS: Storage Tank Facility Listing

This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

Date of Government Version: 03/31/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/02/2014	Telephone: 518-402-9543
Date Made Active in Reports: 05/05/2014	Last EDR Contact: 07/02/2014
Number of Days to Update: 33	Next Scheduled EDR Contact: 10/13/2014
	Data Release Frequency: Quarterly

### UST: Petroleum Bulk Storage (PBS) Database

Facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons.

Date of Government Version: 03/31/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/02/2014	Telephone: 518-402-9549
Date Made Active in Reports: 05/01/2014	Last EDR Contact: 07/02/2014
Number of Days to Update: 29	Next Scheduled EDR Contact: 10/13/2014
	Data Release Frequency: No Update Planned

### CBS UST: Chemical Bulk Storage Database

Facilities that store regulated hazardous substances in underground tanks of any size

Date of Government Version: 01/01/2002	Source: NYSDEC
Date Data Arrived at EDR: 02/20/2002	Telephone: 518-402-9549
Date Made Active in Reports: 03/22/2002	Last EDR Contact: 10/24/2005
Number of Days to Update: 30	Next Scheduled EDR Contact: 01/23/2006
	Data Release Frequency: No Update Planned

### MOSF UST: Major Oil Storage Facilities Database

Facilities that may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater.

Date of Government Version: 01/01/2002	Source: NYSDEC
Date Data Arrived at EDR: 02/20/2002	Telephone: 518-402-9549
Date Made Active in Reports: 03/22/2002	Last EDR Contact: 07/25/2005
Number of Days to Update: 30	Next Scheduled EDR Contact: 10/24/2005
	Data Release Frequency: Varies

### AST: Petroleum Bulk Storage

Registered Aboveground Storage Tanks.

Date of Government Version: 03/31/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/02/2014	Telephone: 518-402-9549
Date Made Active in Reports: 05/01/2014	Last EDR Contact: 07/02/2014
Number of Days to Update: 29	Next Scheduled EDR Contact: 10/13/2014
	Data Release Frequency: No Update Planned

### CBS AST: Chemical Bulk Storage Database

Facilities that store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

Date of Government Version: 01/01/2002	Source: NYSDEC
Date Data Arrived at EDR: 02/20/2002	Telephone: 518-402-9549
Date Made Active in Reports: 03/22/2002	Last EDR Contact: 07/25/2005
Number of Days to Update: 30	Next Scheduled EDR Contact: 10/24/2005
	Data Release Frequency: No Update Planned

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

	Data Release Frequency: Quarterly

### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a 'D' on zoning maps.

Date of Government Version: 11/18/2010	Source: NYC Department of City Planning
Date Data Arrived at EDR: 06/30/2014	Telephone: 212-720-3401
Date Made Active in Reports: 07/21/2014	Last EDR Contact: 06/26/2014
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/06/2014
	Data Release Frequency: No Update Planned

## *State and tribal voluntary cleanup sites*

### INDIAN VCP R1: Voluntary Cleanup Priority Listing

A listing of voluntary cleanup priority sites located on Indian Land located in Region 1.

Date of Government Version: 03/20/2014	Source: EPA, Region 1
Date Data Arrived at EDR: 04/01/2014	Telephone: 617-918-1102
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 07/01/2014
Number of Days to Update: 77	Next Scheduled EDR Contact: 10/13/2014
	Data Release Frequency: Varies

### VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/21/2014	Telephone: 518-402-9711
Date Made Active in Reports: 06/10/2014	Last EDR Contact: 07/17/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Semi-Annually

### INDIAN VCP R7: Voluntary Cleanup Priority Listing

A listing of voluntary cleanup priority sites located on Indian Land located in Region 7.

Date of Government Version: 03/20/2008	Source: EPA, Region 7
Date Data Arrived at EDR: 04/22/2008	Telephone: 913-551-7365

Number of Days to Update: 27	Next Scheduled EDR Contact: 07/20/2009
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **State and tribal Brownfields sites**

### ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/21/2014	Telephone: 518-402-9622
Date Made Active in Reports: 06/10/2014	Last EDR Contact: 07/17/2014

	Data Release Frequency: Quarterly

### BROWNFIELDS: Brownfields Site List

A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/21/2014	Telephone: 518-402-9764
Date Made Active in Reports: 06/10/2014	Last EDR Contact: 07/17/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Semi-Annually

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/20/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/20/2014	Telephone: 202-566-2777

### **Local Land Records**

#### **LIENS 2: CERCLA Lien Information**

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

Date of Government Version: 05/19/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/22/2014	Telephone: 518-402-9549
Date Made Active in Reports: 06/11/2014	Last EDR Contact: 05/22/2014
Number of Days to Update: 20	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

### HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2005	Telephone: 518-402-9549
Date Made Active in Reports: 07/14/2005	Last EDR Contact: 07/07/2005
Number of Days to Update: 6	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

### SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 12/14/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/12/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 40	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

### SPILLS 80: SPILLS80 data from FirstSearch

Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

Date of Government Version: 11/02/2010	Source: FirstSearch

	Data Release Frequency: No Update Planned

### **Other Ascertainable Records**

#### RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 03/11/2014	Source: Environmental Protection Agency

Next Scheduled EDR Contact: 09/22/2014

Data Release Frequency: Annually

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 09/14/2010

Number of Days to Update: 44	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Annually

### TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2006	Source: EPA
Date Data Arrived at EDR: 09/29/2010	Telephone: 202-260-5521
Date Made Active in Reports: 12/02/2010	Last EDR Contact: 06/25/2014
Number of Days to Update: 64	Next Scheduled EDR Contact: 10/06/2014
	Data Release Frequency: Every 4 Years

### FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 05/22/2014
Number of Days to Update: 25	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

### FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act) A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 05/22/2014
Number of Days to Update: 25	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Quarterly

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 04/08/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/09/2014	Telephone: 202-343-9775
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 07/10/2014
Number of Days to Update: 69	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

### FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 11/18/2013	Source: EPA
Date Data Arrived at EDR: 02/27/2014	Telephone: (212) 637-3000
Date Made Active in Reports: 03/12/2014	Last EDR Contact: 06/13/2014
Number of Days to Update: 13	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Quarterly

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 11/01/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/12/2013	Telephone: 202-564-8600

### HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

Date of Government Version: 01/01/2003

Data Release Frequency: Varies

### SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

Date of Government Version: 05/29/2014

### E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

## US AIRS MINOR: Air Facility System Data

A listing of minor source facilities.

Date of Government Version: 10/23/2013	Source: EPA
Date Data Arrived at EDR: 11/06/2013	Telephone: 202-564-2496
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 06/25/2014
Number of Days to Update: 30	Next Scheduled EDR Contact: 10/13/2014
	Data Release Frequency: Annually

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/23/2013	Source: EPA
Date Data Arrived at EDR: 11/06/2013	Telephone: 202-564-2496
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 06/25/2014
Number of Days to Update: 30	Next Scheduled EDR Contact: 10/13/2014

	Data Release Frequency: N/A

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 05/16/2014

### COAL ASH: Coal Ash Disposal Site Listing

A listing of coal ash disposal site locations.

Date of Government Version: 04/09/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/11/2014	Telephone: 518-402-8660
Date Made Active in Reports: 05/07/2014	Last EDR Contact: 07/02/2014
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 11/11/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/18/2012	Telephone: 703-308-4044

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A	Source: EDR, Inc.
Date Data Arrived at EDR: N/A	Telephone: N/A
Date Made Active in Reports: N/A	Last EDR Contact: N/A

	Data Release Frequency: No Update Planned

#### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: N/A	Source: EDR, Inc.

#### EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013  
Date Data Arrived at EDR: 08/19/2013  
Date Made Active in Reports: 10/03/2013

Data Release Frequency: Annually

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

#### AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

#### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

#### Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

#### Public Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI: National Wetlands Inventory.** This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

**APPENDIX D**

**QUALIFICATIONS OF**

**ENVIRONMENTAL PROFESSIONAL**

Ms. Davis has diversified experience in geology and hydrogeology. Her professional technical experience includes groundwater, soil, and soil vapor investigations, design and management of soil and groundwater remediation projects, design and installation of groundwater containment systems, design and evaluation of soil vapor mitigation systems, groundwater flow modeling, aquifer testing and interpretation, evaluation of site compliance with environmental regulations, environmental permitting, and personnel training. Ms. Davis presently manages several large-scale investigation and remedial programs, including program scopes, budgets, staffing, and schedules.

Functional Role	Title	Years of Experience
Manager, Phase I ESA Program	Senior Project Manager, Vice President	30

## Detailed Experience

### Site Investigations

- **Program Manager** for ongoing investigation and remedial projects at several New York State Inactive Hazardous Waste Disposal sites, Voluntary Cleanup Program (VCP) sites, and Brownfield Cleanup Program (BCP) sites. Investigations have included site characterization, Remedial Investigations/Feasibility Studies (RI/FS), and

Resource Conservation and Recovery Act (RCRA) facility investigations and closures. Remedial services have included contaminated soil removal; ORC and HRC injections; design, installation, and operation of air sparge/soil vapor extraction (AS/SVE) systems and sub-slab depressurization systems (SSDS), capping, and other remedial services.

- **Program Manager, NYS BCP Site, Far Rockaway, NY.** Managed all aspects of pre-application investigation, BCP application, RI Work Plan development, and Citizen Participation Plan (CPP) for a chlorinated solvent site. Responsible for scope development, NYSDEC and NYSDOH coordination, budget, schedule, staffing, and report management.
- **Program Manager, Site Characterization (SC) for NYS Inactive Hazardous Waste Disposal Site, Flushing, NY.** Responsible for SC scope development, budget, schedule, SC Work Plan and report review, staffing, and agency negotiations for a chlorinated solvent site undergoing residential redevelopment.
- **Program Manager** for all Phase I ESA, Phase II investigations, and remediation projects for a major commercial developer on Long Island, New York. Projects have included environmental services associated for the purchase and redevelopment of office buildings, aerospace facilities, former research and development facilities, and large manufacturing plants. Remedial services have included RCRA closures, UIC closures, tank removals, and BCP projects.
- **Program Manager, Remedial Investigation/Feasibility Study (RI/FS), Levittown, NY.** Managed all aspects of RI/FS for a Class 2 Inactive Hazardous Waste Disposal (Superfund) site involving chlorinated solvents. Responsibilities included RI/FS scope, budget and schedule development, RI/FS work plan, HASP, CAMP, and QAPP, coordination with client, tenants, and regulatory agencies, report review, remedial approach development, and conceptual design.

- **Project Manager, RCRA Facilities Investigation (RFI), Barksdale AFB, LA, AFCEE.** Responsible for all aspects of field program planning, solicitation and selection of subcontractors, mobilization and establishment of a field office, supervising multiple field crews, installation and sampling of monitoring wells, collection and soil samples, data tracking and management and preparation of an RFI report. The scope of work included characterization of the nature and extent of groundwater and soil contamination at thirteen Solid Waste Management Units (SWMUs), performing a base-wide evaluation of background contaminant concentrations, and developing a long-term monitoring (LTM) program for the base.
- **Field Services Manager, UST Investigation, Plattsburgh AFB, NY, AFCEE.** Responsible for field crew training, coordination of sampling crews at multiple sites, sample labeling, handling, tracking, and shipping, field data management and remote field office management. The scope of work included collection of over 450 groundwater samples to characterize groundwater conditions in the vicinity of 150 USTs using a Geoprobe sampling rig, well points, and rapid turnaround-time analysis.
- **Project Manager** for site investigation activities, including soil vapor sampling, soil sampling and analysis, groundwater sampling and analysis, and geotechnical evaluation for numerous sites in Suffolk County, New York. The resulting data were utilized by a major supermarket company in the negotiations for the purchase of the properties and in the property remediation prior to development.
- **Project Manager, Site Investigation, Bronx, NY, NYCT.** Managed field sampling and data analysis activities, including soil vapor analysis, soil sample analysis, and groundwater sampling and analysis at an active commercial bus terminal. Made recommendations for site remediation, including UST removal, soil excavation and disposal, and free-phase product extraction.
- **Project Manager, RCRA Facilities Investigation, City of Richmond, CA.** Prepared RFI work plan, incorporating existing geologic, chemical, and historical data, evaluating newly-acquired site data, and developing recommendations for further investigation and remedial action at a former municipal landfill.
- **Project Manager, Site Investigation, Bay Shore, NY. Manufacturing facility.** Managed onsite and offsite soil and groundwater sampling program. Compiled and evaluated data and prepared a comprehensive report of the investigation results for the Suffolk County Department of Health Services (SCDHS) and NYS Department of Environmental Conservation (NYSDEC). Proposed remediation technologies for onsite soil contamination and onsite and offsite groundwater contamination.
- **Project Manager, Site Investigation, Newark Airport, NJ, FAA.** Managed and conducted a soil and groundwater sampling program adjacent to Runway 29. Analyzed chemical analytical data and developed recommendations.
- **Project Manager, Remedial Investigation, Richmond Refinery, CA.** Supervised and conducted drilling, soil sampling, cone penetrometer testing, and well installation at a refinery process water effluent treatment system and former municipal landfill.
- **Senior Hydrogeologist, multiple sites, NY metro area.** Supervised drilling, installation, development, and sampling of monitoring wells at numerous sites in the greater New York metro area. Utilized resulting stratigraphic, hydrologic, and chemical analytical data to evaluate site conditions.
- **Program Manager, multiple sites, major New York Metro area automobile dealer.** Managed all investigation and remedial activities for a major automobile retailer with multiple facilities. Sites included tanks, petroleum spills, underground injection control (UIC) systems, soil vapor intrusion issues, and hazardous waste management. Responsible for work scope and budget preparation, staffing and oversight, client and regulatory agency interactions, addressing insurance issues, reporting and certification, and project closeouts.
- **Program Manager, SWTP groundwater monitoring program, Town of East Hampton.** Managed groundwater sampling and reporting for the Scavenger Waste Treatment Plant (SWTP). Responsibilities included oversight of well installation, purging and sampling the SWTP groundwater monitoring wells, and providing data to the Town for reporting purposes.

#### Remediation

- **Program Manager, NYSDEC BCP site, NY City, major real estate developer.** In responsible charge of all investigation and remedial activities at a NYSDEC BCP site in New York City. Prepared the Remedial Investigation and Remedial Work Plan; coordinated with the owner, other contractors, and the NYSDEC; prepared for and conducted citizen participation activities; supervised all waste characterization, profile preparation, and waste management; developed the Final Engineering Report (FER) and Site Management Plan (SMP) for

NYSDEC approval; and ensured that all remedial requirements were met such that the Certificate of Completion (COC) was issued. Continuing activities include coordination of the ongoing site management, communications with the NYSDEC and NYSDOH, and preparation of the annual Certification Report.

- **Program Manager, Major Oil Storage Facility (MOSF) closure, Glen Harbor, NY. Real estate developer.** Responsibilities included coordination of the work scope with the NYSDEC and NCDOH, development of work plans for tanks, UIC, and petroleum spill closure, budget and schedule development, staffing and oversight, reporting and certification, and closeout of all environmental issues such that residential redevelopment could proceed.
- **Program Manager, Delineation and Remedial Services, NYS Spill Site, St. James, NY.** Responsible for client and agency coordination, budget, schedule, staffing, remedial design and reporting for a petroleum release at a Service Station property with offsite impacts.
- **Program Manager, RCRA Closure Site, Freeport, NY.** Managed all aspects of RCRA Closure of a former printing facility, including scope, budget and schedule development, Closure Plan, NYSDEC interactions, QAPP, and specifications for contractor services.
- **Program Manager, Sub-slab depressurization system (SSDS), Brooklyn, NY.** Managed all aspects of SSDS implementation, including delineation sampling, remedial design, budget and schedule, construction services testing, reporting, and O&M manual development for a former dry cleaner site in an active shopping center.
- **Program Manager, SSDS, Bronx, NY.** Responsible for all aspects of SSDS implementation for a former dry cleaner site in a mixed-use building, including delineation sampling, SSDS design, construction contractor services, testing, reporting, and O&M manual development.
- **Project Manager, Soil Remediation, Hauppauge, NY. Metal plating facility.** Planned remedial project and managed contractor support for soil remediation. Project was completed and approved by SCDHS.
- **Remedial Design, AS/SVE projects.** Developed pilot test plans, evaluated pilot test results, and prepared conceptual designs for several air sparge/soil vapor extraction (AS/SVE) systems to treat petroleum and/or chlorinated solvent VOCs. These systems were subsequently installed and Ms. Davis provides ongoing review of system operations and remedial monitoring results.
- **Program Manager, Waste soil management, Brooklyn, NY. Travelers Insurance.** In responsible charge of several task orders for waste characterization of a 90,000-cy construction soil stockpile at a municipal sewer facility. Responsibilities included development and implementation of Sampling and Analysis Plans (SAP), coordination of staffing, review of lab data, preparation of Field Sampling Summary Reports (FSSR), coordination with disposal facilities, and preparation of waste profiles.
- **Program Manager, NYS Inactive Hazardous Waste Disposal (Superfund) site, Hicksville, NY. Property owner.** Responsibilities included developing and implementing pre-demolition investigations, developing and implementing remedial actions (source removal) in conjunction with retail redevelopment, conceptual design and installation of sub-slab depressurization systems (SSDSs), maintaining ongoing OM&M programs.
- **Project Manager, Remedial projects, Patchogue, NY. US Tape.** Designed and performed indoor underground storage tank abandonment program, leaching pool remediation plan, and managed contractor support for closure activities at a manufacturing facility. SCDHS provided oversight and approval.
- **Senior Hydrogeologist, Remedial design for a landfill, Richmond, CA.** Contributed to the design of a groundwater containment and remediation system for a former municipal landfill, including subsurface groundwater barrier walls and extraction wells.
- **Project Manager, Soil remediation, Carle Place, NY, Kimco.** Designed remedial plan and supervised soil remediation activities at an active construction site involving excavation and disposal of 5,000 tons of PCB-, metal-, and petroleum-contaminated soil. NYSDEC oversaw and approved the completed remediation.
- **Project Manager, Groundwater containment system, Richmond, CA.** Coordinated technical aspects of groundwater barrier wall construction, including routing, permitting, design, material selection, and field activities.
- **Project Manager, Multiple UIC investigations and closures, Suffolk and Nassau Counties, NY** Responsible for investigation and remediation of contaminated cesspool and stormwater drain pool in systems. Fully conversant with SCDHS SOP 9-95 and USEPA UIC regulations for investigation and cleanup of leaching pool systems, including Action Levels and Cleanup Standards, groundwater monitoring criteria, and remedial requirements.

- **Project Coordinator, UIC Closure, Hempstead, NY.** Coordinated and supervised all aspects of waste management for a UIC closure, including disposal facility review, waste sampling and classification, manifesting, project closeout, and taxation issues.

#### **Miscellaneous Projects**

- **Phase I ESAs.** Performed numerous Phase I Site Assessments for residential and industrial sites in the metropolitan New York area.
- **Environmental Trainer.** Conducted aquifer pumping and soil vapor extraction test training. Instructed classes for site investigation methods, aquifer pumping test analysis, and risk assessment.
- **Project Management.** Performs a wide range of project management functions, including development and management of project budgets and schedules, coordination of field and office staffing, document preparation, review, editing, and interaction with clients, regulatory, legal, real estate, consultant, and compliance personnel.
- **Field Mapping Studies.** Organized, supervised, and conducted field mapping studies in Alaska.
- **Downhole Logging.** Directed petroleum well site geophysical logging operations and interpreted geophysical well logs.
- **Geophysical Data Interpretation.** Processed and interpreted seismic reflection data and constructed seismic velocity models.

- **Regulatory Evaluations.** Assisted and reviewed regulator's revision of proposed risk assessment-based UST cleanup guidelines. Reviewed proposed USEPA NPDES permits for remediation system effluent.
- **Geologic Mapping.** Constructed and interpreted structural and stratigraphic cross sections, and structure contour, fault surface, isochore, and isopach maps.

#### **Health and Safety**

- **Health and safety monitoring, multiple sites.** Implemented HASP monitoring at investigation and remediation sites during intrusive activities, including calibration and operation of photoionization detector (PID) and flame ionization detector (FID) for organic vapors and combustible gas indicator (CGI) for methane. Compared results to applicable action levels and implemented protective measures as necessary.
- **CAMP monitoring, multiple sites.** Performed community monitoring, including monitoring for noise, particulates (dust), and organic vapors. Recorded observations and compared to applicable action levels. Calibrated and operated noise meters, particulate monitors, and PID/FID.
- **Radiation screening, multiple sites.** Performed screening for radiation at select sites, including operating Geiger counter in different radiation modes and obtaining background readings.

Mr. Cancemi has diversified experience in geology and hydrogeology. His professional experience includes groundwater and soil investigations, design and management of soil remediation projects, installation and maintenance of groundwater containment and remediation systems, aquifer testing and interpretation, geotechnical studies, evaluation of site compliance with environmental regulations and environmental permitting.

 1998-2001 Burns & McDonnell Engineering Company  
 1997-1998 Groundwater and Environmental Services  
 1996-1997 Advanced Cleanup Technologies

**Detailed Experience**

**Phase I Environmental Site Assessments**

- Performed numerous Phase I Environmental Site Assessments (ESAs) for commercial and industrial properties throughout the Northeastern United States for various clients including trucking companies, major airlines, telecommunication companies, chemical/petroleum storage facilities, aerospace manufacturing facilities, machine shops, retail shopping centers, auto dealerships and service stations.

**Site Investigations/Groundwater Monitoring**

- Coordinated and performed an investigation at a vacant commercial property Far Rockaway, NY, including soil, groundwater and soil vapor sampling to assess onsite chlorinated solvent impacts from an adjoining offsite source.

- Coordinated and performed soil and groundwater sampling and soil vapor studies at several aerospace manufacturing facilities on Long Island, NY. Assessments included an evaluation of past manufacturing and facility operations, storage and use of solvents, petroleum and manufacturing-derived wastes, and impacts to soils, soil vapor, and groundwater. Areas of concern were identified for further evaluation and/or corrective action.
- Coordinated and performed long term groundwater monitoring at two closed Town of East Hampton, NY municipal landfills, including the sampling a multi-depth monitoring well network, analysis and interpretation of analytical and hydrogeologic data, and regulatory reporting in accordance with NYSDEC Part 360 requirements.
- Coordinated and performed soil and groundwater investigations at various agricultural and horticultural properties to evaluate impacts of past herbicide and pesticide usage on the underlying soil and groundwater.
- Managed and performed routine methane monitoring at two Town of East Hampton landfills for compliance with NYSDEC requirements and to evaluate potential offsite migration to the surrounding community. Monitored indoor air with a flame ionization detector (FID) to evaluate impacts to buildings.
- Assisted with groundwater flow modeling for the Springs-Fireplace Road Landfill to evaluate the nature and extent of the landfill plume, its likely downgradient extent, and its fate.
- Coordinated and performed onsite and offsite monitoring at petroleum release sites on Long Island, the New York metropolitan area, and in Westchester County in accordance with NYSDEC Spill program requirements. The monitoring programs generally included sampling multi-depth monitoring well networks utilizing low-flow sampling techniques, analysis/interpretation of analytical and hydrogeologic data, and regulatory reporting.

- Coordinated a soil and groundwater sampling program to evaluate environmental conditions at Terminal A, Logan International Airport, East Boston, Massachusetts. The program included an assessment of the current fuel hydrant system and other locations of potential environmental concern using non-destructive air vacuum extraction-clearing techniques combined with direct-push sampling.
- Managed and performed a soil and groundwater investigation, a remedial soil excavation, and groundwater monitoring at a pyrotechnics manufacturing facility in Suffolk County, NY. The work was performed under the direction of the Suffolk County Department of Health Services (SCDHS) to investigate and remediate contamination from historic use of perchlorate-containing materials at the facility.
- Coordinated and performed soil and groundwater investigations at several automobile dealerships in Westchester County, NY to evaluate potential impacts from petroleum and chemical solvent storage and usage and onsite waste water disposal systems.
- Designed and oversaw the installation of a sub-slab depressurization system (SSDS) in the Bronx, NY to mitigate chlorinated solvent impacts. SSDS monitoring was conducted to ensure proper operation and emissions compliance of with NYSDEC air discharge guidelines.
- Operated and maintained remediation systems, including SVE, groundwater pump and treat, AS, dual-phase extraction, SSDS and free-phase petroleum recovery systems.

#### **Health and Safety**

#### **Remediation**

- Performed health and safety monitoring at investigation and remediation sites during intrusive activities. Calibrated and operated photoionization detectors (PID) and flame-ionization detectors (FID) for organic vapors and combustible gas indicators (CGI) for methane. Compared results to applicable action levels and took preventative/protective measures as necessary.
- Performed community monitoring, including monitoring for noise, particulates (dust), and organic vapors. Recorded observations and compared to applicable action levels. Calibrated and operated noise meters, particulate monitors, and PID/FID.
- Prepared community air monitoring and health and safety plans for several NYSDEC inactive hazardous waste, brownfield cleanup program, volunteer cleanup program, petroleum spill, and NYC e-designation program sites.
- Performed screening for radiation at select sites. Operated Geiger counter in different radiation modes and obtained and evaluated background readings.
- Managed remedial activities at a NY State Environmental Restoration Program (ERP) Site situated at a former hospital landfill in Northport, NY. Responsibilities contractor management and oversight, soil disposal management, confirmatory testing, data review, and preparation of a final engineering report to document remedial activities.
- Performed pilot testing, design, installation and procurement of numerous multi-depth soil vapor extraction (SVE) and air sparge (AS) remediation systems on Long Island and in the NYC metropolitan area to remediate chlorinated solvents and petroleum. Conducted remediation system operation and maintenance, and evaluations of system performance.
- Performed numerous storm water and sanitary leaching structure (UIC) cleanouts utilizing excavation and/or vacuum assisted equipment to remove contaminated sediments and liquids. Conducted waste characterization and profiling, pipe camera surveys, and structure locating utilizing water-soluble dyes and electronic locating equipment.

#### **Other**

- Coordinated RCRA closure activities and performed confirmatory sampling at a former package manufacturing facility in Garden City, NY. Project duties included contractor procurement, rinsate and soil sampling, and regulatory agency reporting and coordination.
- Prepared a remedial design (RD) work plan for a former hospital landfill on Long Island. The RD work plan included a summary of past investigations, a materials management plan for the excavation and disposal of contaminated soils and debris, a post-excavation sampling plan, a

site restoration plan, community air monitoring plan (CAMP), health and safety plan (HASP) and a quality assurance and quality control (QA/QC) plan.

- Managed and performed monthly soil gas sampling and quarterly indoor air quality sampling at an elementary school in southwestern Nassau County, NY. The monitoring and related reporting were performed to ensure that a gasoline groundwater plume migrating through the school property was not impacting the school occupants.
- Performed compliance inspections to assess issues of potential environmental concern at manufacturing, aviation, trucking, retail and not-for-profit facilities.
- Managed and performed methane monitoring at two eastern Long Island landfills to evaluate potential offsite impacts, indoor air quality, and methane generation and migration.
- Managed and coordinated a petroleum spill investigation to evaluate the nature and extent of a fuel oil release at an office building in White Plains, NY. The investigation included excavation and removal of a 5,000-gallon situated over 20 feet below grade, tightness testing of the UST and associated piping, a soil and groundwater investigation, free product recovery utilizing vacuum-enhanced fluid recovery techniques, and coordination and reporting to the NYSDEC and Westchester County Department of Health.

Mr. Holmes has diversified experience in geology and hydrogeology. His professional experience includes groundwater and soil investigations, routine landfill gas monitoring, Phase I Environmental Site Assessments, soil remediation projects, soil vapor intrusion evaluation, maintenance of groundwater remediation systems, aquifer interpretation, and evaluation of site compliance with environmental regulations.

### Employment History

2011-Present FPM Group  
2007-2007 Suffolk County Water Authority

## Detailed Experience

### Site Investigation and Monitoring

- Performed soil, soil vapor, indoor air and groundwater monitoring and sampling at numerous commercial, industrial, and retail gasoline sites throughout Long Island, New York City, Westchester County and upstate New York. Monitoring and sampling activities have been conducted in accordance with NYSDEC-approved work plans, Phase II and other investigations.
- Assisted in a groundwater, soil, and soil vapor investigation at a Brownfield Cleanup Program (BCP) Site in Far Rockaway, NY involving chlorinated solvents. Responsibilities included groundwater, soil, and soil vapor sampling for characterization and delineation.
- Coordinated and managed subcontractors performing soil boring and well installation activities, excavation activities and utility mark-outs at numerous sites throughout Long Island, New York City, Westchester County and upstate New York.
- Conducted sampling of underground injection control (UIC) systems at several locations on Long Island and in New York City. Responsibilities included sample acquisition and management, field screening, equipment decontamination, data tabulation and evaluation, and reporting.

- Skilled in use and calibration of field equipment including photoionization detectors (PID), flame-ionization detectors (FID), Landtec Infrared Gas Analyzer, combustible gas indicator (CGI), water-level meters, interface probes, submersible pumps, groundwater quality instrumentation, and survey equipment.
- Prepared monitoring reports, investigation reports, site plans, contaminant concentration contour maps, groundwater flow direction maps, and NYSDEC EDD's.
- Conducted Phase I Environmental Site Assessments (ESAs) for numerous residential, commercial, industrial and vacant wooded sites in New York State in accordance with ASTM standards. Phase I ESA tasks included site inspections, interviews, evaluation of state and federal databases, record reviews at local and state government agencies, and report preparation.
- Performed project management tasks including budget analysis, project tracking, invoice approval, client interaction, and preparation of site-specific health and safety plans (HASPs) Community Air Monitoring Plans (CAMPs) and Quality Assurance Project Plans (QAPP)..

### Remediation

- Assisted in remedial activities at a New York State Environmental Restoration Program (ERP) brownfield site in Northport, NY. Responsibilities included collection of waste characterization samples, oversight and documentation of excavation and disposal activities, collection of endpoint samples to document the condition of the remaining soil, data tabulation and evaluation and report preparation.
- Assisted in remedial activities at a former fuel terminal site in Glenwood Landing, NY. Responsibilities included collection of waste characterization samples, oversight of excavation

and removal of impacted soils, and oversight of floating product removal.

- Provided oversight for the installation of a product recovery system at an industrial site in Flushing, NY. Responsibilities included monitoring product thickness and recovery, field coordination, and documentation.
- Assisted in a UST removal and the removal of impacted sediments from a leaching pool at a former dry-cleaning site in Levittown, NY. Responsibilities included waste characterization and endpoint sampling, subcontractor coordination and oversight, coordination with various Nassau County agencies and the NYSDEC, and report preparation.
- Managed the removal of impacted sediments and liquids from several leaching pools at a commercial site in Inwood, NY. Responsibilities included waste characterization and endpoint sampling, subcontractor coordination and oversight, data tabulation and evaluation and report preparation.
- Operated and maintained remediation systems including soil vapor extraction, groundwater pump and treat, air sparge systems, and sub-slab depressurization systems.

#### **Landfills**

- Participated in landfill gas monitoring projects at Town of Islip three landfills. Monitoring program included monthly collection of landfill gas data from onsite and offsite methane wells, methane collection systems (extraction wells), and flare systems, Volatile Organic Compound (VOC) monitoring, greenhouse gas monitoring, and report preparation. Responsibilities also included frequent correspondence with Town officials and regulatory personnel.

- Participated in field and reporting activities for the U.S. Environmental Protection Agency (EPA) Greenhouse Gas (GHG) Reporting Program at the Blydenburgh Landfill in the Town of Islip. Program included weekly GHG data collection, usage and maintenance of a dedicated data logging system, data management, and report preparation in accordance with EPA specifications.
- Conducts ongoing groundwater and methane monitoring programs for two Town of East Hampton landfills. Responsibilities include collection of routine and baseline groundwater samples, methane monitoring and operating, tabulation of analytical data, and report preparation.

#### **Health and Safety**

- Prepared community air monitoring (CAMP) and health and safety plans (HASP) for several NYSDEC inactive hazardous waste, brownfield cleanup program, and voluntary cleanup program sites, and petroleum sites.
- Performed health and safety monitoring at investigation and remediation sites during intrusive activities. Monitoring included calibration and operation of PID and FID for organic vapors and CGI for methane. Compared results to applicable action levels and took preventative/protective measures as necessary.
- Performed community monitoring, including monitoring for noise, particulates (dust), and organic vapors in accordance with NYSDEC-approved CAMPs. Recorded observations and compared to applicable action levels. Calibrated noise meters, particulate monitors, and PID/FID.

---

## **SECTION 1.0 INTRODUCTION**

This Health and Safety Plan (HASP) has been written for compliance with "OSHA Hazardous Waste Operations Standards (29 CFR 1910.120)", OSHA Construction Standard 29 CFR 1926, the guidance documents, "Standard Operating Safety Guidelines (Office of Solid Waste and Emergency Response, 1988)" and the "Occupational Safety and Health Guidance Manual for Hazardous Waste Activities" (U.S. Department of Health and Human Services, 1985).

### **1.1 Scope and Applicability of the HASP**

This HASP is designed to be applicable to locations where activities associated with the sampling of groundwater, soil, and soil vapor are performed at or in proximity to the Site. This HASP may also be modified or amended to meet specific needs of the work proposed. This HASP will detail the Site safety procedures, Site background, and safety monitoring. Contractors will be required to adopt this HASP in full.

The Health and Safety Officer (HSO) will be present at the Site to inspect the implementation of the HASP; however, it is the sole responsibility of the contractor(s) to comply with the HASP.

The HASP has been formulated as a guide to complement professional judgment and experience. The appropriateness of the information presented should always be evaluated with respect to unforeseen Site conditions which may arise.

### **1.2 Site Work Zone and Visitors**

The Site work zone (a.k.a. exclusion zone) during groundwater, soil, and soil vapor sampling activities will be a 30-foot radius about the work location. This work zone may be extended if, in the judgment of the health and safety officer (HSO), Site conditions warrant a larger work zone.

No visitors will be permitted within the work zone without the consent of the HSO. All visitors will be required to be familiar with, and comply with, the HASP. The HSO will deny access to those whose presence within the work zone is unnecessary or those who are deemed by the HSO to be in non-compliance with the HASP.

All Site workers including the contractors will be required to have 40-hour hazardous material training (eight-hour refresher courses annually), respirator fit test certification, and medical surveillance as stated in 29 CFR 1910.120.

The HSO will also give an on-Site health and safety discussion to all Site personnel, including the contractors, prior to initiating the Site work. Workers not in attendance during the health and safety talk will be required to have the discussion with the HSO prior to entering the work zone.

Emergency telephone numbers and directions to the nearest hospital are found in Table 1.2.1.

East 126<sup>th</sup> Street**

---

## **SECTION 2.0 KEY PERSONNEL AND RESPONSIBILITIES**

The project manager and field activities manager for this project will be Ben Cancemi. Mr. Cancemi will also be the primary HSO. The project field staff may include Stephanie Davis, John Bukoski, and/or George Holmes. Contractor personnel may also be on Site. In the event that Mr. Cancemi is not onsite, the senior FPM staff member onsite will act as HSO and will report to the project manager. Contractor personnel will be provided with health and safety information by the HSO.

---

**SECTION 3.0  
SITE BACKGROUND**

**3.1 Site History and Potential Chemical Constituents at the Site**

The Site is located at East 126<sup>th</sup> Street, New York, New York. There is an asphalt-paved parking lot covering the entire site. The site is e-designated for hazardous materials. Groundwater, soil, and/or soil vapor at the Site may be impacted with petroleum-related chemicals. See Table 3.1.1 below for a list of typical petroleum chemicals with threshold limit values.

**TABLE 3.1.1  
PRIMARY CHEMICALS WITH THRESHOLD LIMIT VALUES  
EAST 126<sup>th</sup> STREET  
NEW YORK, NEW YORK**

<b>Contaminant</b>	<b>Short Term Exposure Limit (STEL) 15 Minutes</b>	<b>Time-Weighted Average Eight-Hour Exposure Limit</b>
Benzene	5 ppm	1 ppm
Ethylbenzene	125 ppm	100 ppm
o-Xylene	150 ppm	100 ppm
m,p-Xylene	150 ppm	100 ppm
Toluene	150 ppm	100 ppm

---

## SECTION 4.0 TASK/OPERATION HEALTH AND SAFETY ANALYSIS

This section will present health and safety analyses for the groundwater, soil, and soil vapor sampling activities.

### 4.1 Safety Analysis

Sampling activities will generally be performed by FPM personnel, although contractors will be utilized to provide access to the subsurface with the use of heavy equipment such as direct-push rigs. Safety concerns will include risk of injury due to being struck by equipment, being trapped between moving equipment parts, being struck by dropped materials, and hearing damage due to equipment noise. Site personnel will take precautions against these risks when working in the vicinity of heavy equipment by being aware of equipment locations and movement, by wearing steel-toed boots and hard hats, and by using hearing protection, if necessary. Site personnel who have not previously worked in the vicinity of heavy equipment will be paired with an experienced person for at least one day to familiarize themselves with heavy equipment operations and safety procedures.

A calibrated photoionization detector (PID) will be used to monitor VOCs in the worker's breathing zone during performance of soil borings. Steady-state PID readings greater than 10 ppm in the worker's breathing zone will require upgrading to Level C personal protective equipment. The NYC OER will be notified if there is a need to upgrade to Level C protection. Steady-state readings, for this purpose, will be defined as readings between 10 and 20 parts per million (ppm) above background for a minimum of ten seconds. Readings will be obtained at points approximately one foot above and then around the borehole. These points will define the worker's breathing zone. Level C personal protection, if implemented, will include full-face air-purifying respirators with dust and organic vapor cartridges (personal protective equipment will be described in greater detail in Section 7.0). All FPM personnel and contractors must be properly trained and fit tested prior to donning respirators.

Upon encountering PID levels greater than 20 ppm above background in the worker's breathing zone, work will stop until the source of vapors is abated and readings are less than 20 ppm above background. If, at any time, PID readings exceed steady-state levels greater than 50 ppm above background, or any conditions exist which the HSO determines will require Level B personal protective equipment, all work at the Site will cease immediately and all personnel will evacuate the work zone. Evacuation will occur in the upwind direction if discernable. Level B conditions are not anticipated to be encountered; however, if level B conditions arise, no Site work will be performed by FPM or contractors and a complete evaluation of the operation will be performed and this HASP will be modified.

All personnel who may directly contact soil or groundwater will be required to wear chemical-resistant gloves (such as butyl or nitrile) when the potential for dermal contact with the soil or groundwater is possible. Dermal contact with Site soil or groundwater will be avoided.

Hard hats and steel-toe, steel-shank safety boots will be required when work is performed in the vicinity of heavy equipment.

## 4.2 Other Safety Considerations

### 4.2.1 Noise

During sampling activities, operation of a direct push rig, or any other operation which may generate potentially harmful levels of noise, the HSO will monitor noise levels with a Realistic™ hand-held sound level meter. Noise levels will be monitored in decibels (dBs) in the A-weighted, slow-response mode. Noise level readings that exceed the 29 CFR 1910.95 permissible noise exposure limits will require hearing protection (see Table 4.2.1.1 for permissible noise exposures).

Hearing protection will be available to all Site workers. The hearing protection will consist of foam, expansion-fit earplugs (or other approvable hearing protection) with an Environmental Protection Agency noise reduction rating of at least 29 dB. Hearing protection must alleviate worker exposure to noise to an eight-hour time-weighted average of 85 dB or below. In the event that the hearing protection is inadequate, work will cease until a higher level of hearing protection can be incorporated.

**TABLE 4.2.1.1  
PERMISSIBLE NOISE EXPOSURES\***

<u>Duration Per Day</u> <u>Hours</u>	<u>Sound Level dBA</u> <u>Slow Response</u>
8	90
6	92
4	95
3	97
2	100
1.5	102
1	105
0.5	110
0.25	115

Notes:

When the daily noise exposure is composed of two or more periods of noise exposure of different levels, their combined effect should be considered, rather than the individual effect of each. If the sum of the following fractions:  $C_1/T_1 + C_2/T_2 + C_6/T_6$  exceeds unity, then, the mixed exposure should be considered to exceed the limit value.  $C_n$  indicates the total time of exposure at a specified noise level, and  $T_n$  indicates the total time of exposure permitted at that level.

Exposure to impulsive or impact noise should not exceed 140 dB peak sound pressure level.

\*Standards derived from 29 CFR 1910.95

---

#### 4.2.2 Slip/Trip/Fall Preventative Measures

To reduce the potential for slipping, tripping, or falling, the work zone will be kept clear of unnecessary equipment. All Site workers will be required to wear work boots with adequate tread to reduce the potential for slipping (work boots must be leather or chemical-resistant and contain steel toes and steel shanks).

#### 4.2.3 Insects and Ticks

Insect and tick problems are expected to be minimal. Potential insect problems include, but are not limited to, bees, wasps, and hornets. Prior to commencement of work, each work area will be surveyed for nests and hives to reduce the possibility of disturbing these insects. In addition, each Site worker will be asked to disclose any allergies related to insect stings or bites. The worker will be requested to keep his or her anti-allergy medicine on Site.

Tick species native to Long Island consist of the pinhead-sized deer tick and the much-larger dog tick. Ticks are not anticipated at the Site due to the paucity of suitable habitat.

#### 4.2.4 Heat/Cold Stress

Heat stress may become a concern, especially if protective clothing is donned that will decrease natural ventilation. To assist in reducing heat stress the following measures will be taken:

- An adequate supply of water or other liquids will be brought on Site. To prevent dehydration, personnel will be encouraged to drink generous amounts of water even if not thirsty.
- A shady rest area will be designated to provide shelter during sunny days.
- In hot weather, workers wearing protective clothing may be rotated.

When the temperature is over 70 degrees Fahrenheit and personnel are wearing protective clothing, heat stress monitoring may be implemented as follows:

- Heart rate may be measured by counting the radial pulse for 30 seconds at the beginning of the rest period. The heart rate should not exceed 110 beats per minute. If the rate is higher, the next work period will be shortened by ten minutes (or 33%). If the pulse rate is 100 beats per minute at the beginning of the next rest period, the following work cycle will be shortened by 33%. The HSO will decide on the length of work periods and rest periods based on Site conditions.
- Body temperature may be measured, if deemed necessary, at the beginning of the rest period. Oral temperature should not exceed 99 degrees Fahrenheit. If it does, the next work period will be shortened by ten minutes (or 33%). However, if the oral temperature exceeds 99.7 degrees Fahrenheit at the beginning of the next period, the following work cycle will be further shortened by 33%. Work will not re-commence until by temperature has dropped below 99 degrees Fahrenheit.

Indications of heat stress range from mild (fatigue, irritability, anxiety, decreased concentration, dexterity or movement) to fatal. Medical help will be obtained for serious conditions. Heat-related problems are:

- 
- Heat rash: caused by continuous exposure to heat and humid air and aggravated by chafing clothes. Decreases ability to tolerate heat as well as being a nuisance.
  - Heat cramps: caused by profuse perspiration with inadequate fluid intake and chemical replacement (especially salts). Signs: muscle spasm and pain in the extremities and abdomen.
  - Heat exhaustion: caused by increased stress on various organs to meet increased demands to cool the body. Signs: shallow breathing; pale, cool, moist skin; profuse sweating; dizziness and lassitude.
  - Heat stroke: the most severe form of heat stress. Can be fatal. Medical help must be obtained immediately. Body must be cooled immediately to prevent severe injury and/or death. Signs: red, hot, dry skin; no perspiration; nausea; dizziness and confusion; strong, rapid pulse; coma.

Cold exposure is a concern if work is conducted during cold weather or marginally cold weather during precipitation periods or moderate to high wind velocity periods. To assist in reducing cold exposure the following measures will be taken:

- All personnel will be required to wear adequate and appropriate clothing. This will include head gear to prevent the high percentage loss of heat that occurs in this area (thermal liners for hard hats if hard hats are required).
- Provide a readily available warm shelter near each work zone.
- Carefully schedule work and rest periods to account for the current temperature and wind velocity conditions.
- Monitor work patterns and physical condition of workers and rotate personnel, as necessary.

Indications of cold exposure range from shivering, dizziness, numbness, confusion, weakness, impaired judgment, impaired vision to drowsiness. Medical help will be obtained for serious conditions if they occur. Cold exposure-related problems are:

- Frost bite: Ice crystal formation in body tissues. The restricted blood flow to the injured part results in local tissue destruction.
- Hypothermia: Severe exposure to cold temperature resulting in the body losing heat at a rate faster than the body can generate heat. The stages of hypothermia are shivering, apathy, loss of consciousness, decreasing pulse rate and breathing rate and death.

#### 4.2.5 Potential Electrical Hazards

Potential electric hazards consist primarily of underground and overhead power lines. Potential underground electrical hazards will be minimized by having a utility markout performed for both onsite and offsite activities. In addition, available as-built Site blueprints will be used to avoid contact with subsurface utility lines or structures. Overhead electrical hazards will be evaluated by visually observing the work location prior to performing operations which have the potential to contact overhead utilities. No work shall be performed in close proximity to overhead utilities.

---

#### 4.2.6 The Buddy System

All activities in contaminated or potentially contaminated areas will be conducted by pairing off the Site workers in groups of two (or three if necessary). Each person (buddy) will be able to:

- Provide his or her partner with assistance.
- Observe his or her partner for signs of chemical or heat exposure.
- Periodically check the integrity of his or her partner's protective clothing.
- Notify the HSO or others if emergency help is needed.

The buddy system will be instituted at the beginning of each workday. If new workers arrive on Site, a buddy will be chosen prior to the new worker entering the work zone.

#### 4.2.7 Site Communications

Two sets of communication systems will be established at the Site: internal communication among personnel on-Site, and external communication between on-Site and off-Site personnel.

Internal communication will be used to:

- Alert team members to emergencies.
- Pass along safety information such as heat stress check, protective clothing check, etc.
- Communicate changes in the work to be accomplished.
- Maintain Site control.

Due to ambient noise, verbal communications may be difficult at times. The HSO will carry a whistle (and compressed air horn if respirators are donned) to signal Site workers. A single whistle blast will be the signal to immediately evacuate the work zone through the access control point. This signal will be discussed with all Site workers prior to commencement of work.

An external communication system between on-Site and off-Site personnel will be established to:

- Coordinate emergency response
- Report to the Project Manager
- Maintain contact with essential off-Site personnel

A field telephone will be available at all times in the HSO's vehicle. In addition, the nearest alternate phone will be identified prior to the commencement of Site operations and this location will be relayed to all Site workers.

---

#### 4.2.8 General Safe Work Practices

Standing orders applicable during Site operations are as follows:

- No smoking, eating, drinking, or application of cosmetics in the work zone.
- No matches or lighters in the work zone.
- All Site workers will enter/exit work zone through the Site access point.
- Any signs of unusual conditions will require reporting the information to the HSO, who will take appropriate action.
- Loose fitting clothing or loose long hair will be prohibited in the work zone during direct push or concrete coring operations.
- A signal person will direct the backing of work vehicles.
- Equipment operators will be instructed to check equipment for abnormalities such as oozing liquids, frayed cables, unusual odors, etc.

## SECTION 5.0 PERSONNEL TRAINING REQUIREMENTS

All FPM personnel and contractor personnel will receive adequate training prior to entering the Site. FPM and contractor's personnel will, at a minimum, have completed OSHA-approved, 40-hour hazardous materials Site safety training and OSHA-approved, eight-hour safety refresher course within one year prior to commencing field work. The HSO will have received the OSHA-approved, eight-hour course on managing hazardous waste operations. In addition, each worker must have a minimum of three days field experience under the direct supervision of a trained, experienced supervisor.

Prior to Site fieldwork, the HSO will conduct an in-house review of the project with respect to health and safety with all FPM personnel who will be involved with fieldwork at the Site. The review will include discussions of signs and symptoms of chemical exposure and heat/cold stress that indicate potential medical emergencies presented in Table 5.1. In addition, review of personal protective equipment will be conducted to include the proper use of air-purifying respirators.

Persons receiving the project review/HASP training will sign the HASP acknowledgement form included at the end of this section. The completed form will serve as documentation of the project review/HASP training.

**TABLE 5.1  
SIGNS AND SYMPTOMS OF EXPOSURE TO CHEMICALS**

Type of Hazard	Signs and Symptoms	
Chemical Hazard	Behavioral changes Breathing difficulties Changes in complexion of skin color Confusion Coordination difficulties Coughing Depression Dermatitis Dilated Pupils Dizziness Euphoria Fatigue and/or weakness Flushed face and/or neck Insomnia Irregular heartbeat Irritability	Irritation of eyes, nose, respiratory tract, skin or throat Headache Lacrimation Light-Headedness Muscle Fatigue Nausea Nervousness Numbness in limbs Paresthesia Sleepiness Tingling Tremors Vertigo Visual disturbance Vomiting
Heat Exhaustion	Clammy skin Confusion Dizziness Fainting Fatigue Heat rash	Light-headedness Nausea Profuse sweating Slurred speech Weak pulse
Heat Stroke (may be fatal)	Confusion Convulsions Hot skin, high temperature (yet may feel chilled) Incoherent speech	Staggering gait Sweating stops (yet residual sweat may be present) Unconsciousness

---

**SITE WORKER  
HEALTH AND SAFETY TRAINING ACKNOWLEDGMENT**

I have read this Health and Safety Plan (HASP) and received training for the Phase II investigation at the East 126<sup>th</sup> Street, New York, NY Site (the Site) and I have reviewed and understand the potential hazards and the precautions/contingencies of each potential hazard.

I agree to abide by the stipulations of this HASP and further agree to hold FPM Group harmless from, and indemnify against, any accidents which may occur as a result of activities at the Site, regardless of whether or not they were covered in the HASP.

Name: \_\_\_\_\_ Representing: \_\_\_\_\_

Sign: \_\_\_\_\_ Date: \_\_\_\_\_

---

## **SECTION 6.0 MEDICAL SURVEILLANCE PROGRAM**

All workers at the Site must participate in a medical surveillance program in accordance with 29 CFR 1910.120. A medical examination and consultation must have been performed within the last twelve months to be eligible for fieldwork.

The content of the examination and consultation will include a medical and work history with special emphasis on symptoms related to the handling of hazardous substances, health hazards, and fitness for duty including the ability to wear required personal protective equipment under conditions (i.e., temperature extremes) that may be expected at the work Site. All medical examinations and procedures shall be performed by, or under the supervision of, a licensed physician.

The physician shall furnish a written opinion containing:

- The results of the medical examination and tests.
- The physician's opinion as to whether the employee has any detected medical conditions that would place the worker at increased risk of material impairment of the employee's health from work in hazardous waste operations.
- The physician's recommended limitations upon the worker assigned to the work.
- A statement that the worker has been informed by the physician of the results of the medical examination and any further examination or treatment.

An accurate record of the medical surveillance will be retained. The record will consist of at least the following information:

- The name and social security number of the employee.
- Physician's written opinions, recommended limitations, and results of examinations and tests.
- Any worker medical complaints related to exposure to hazardous substances.

---

## SECTION 7.0 PERSONAL PROTECTIVE EQUIPMENT

### 7.1 General Considerations

The two basic objectives of the personal protective equipment (PPE) are to protect the wearer from safety and health hazards, and to prevent the wearer from incorrect use and/or malfunction of the PPE.

Potential Site hazards were discussed previously in Section 4.0. The duration of Site activities is estimated to be approximately four weeks. All work is expected to be performed during daylight hours and workdays, in general, are expected to be eight hours in duration.

Personal protection levels for the Site activities, based on investigations of nearby properties, are anticipated to be Level D with the unlikely possibility of upgrading to Level C. The equipment included for each level of protection is provided as follows:

#### Level C Protection

Personnel protective equipment:

- Air-purifying respirator, full-face, equipped with dust and organic vapor cartridges.
- Chemical-resistant clothing includes: Tyvek<sup>tm</sup> (spunbonded olefin fibers) for particulate and limited splash protection or Saranex<sup>tm</sup> (plastic film-laminated Tyvek) for permeation resistance to solvents.
- Coveralls\*, or
- Long cotton underwear\*
- Gloves (outer), chemical-resistant
- Gloves (inner), chemical-resistant
- Boots (outer), leather or chemical-resistant, steel toe and shank.
- Boot covers (outer), chemical-resistant (disposable)\*
- Hard hat (face shield)\*
- Escape mask\*
- 2-way radio communications (intrinsically safe)\*

(\*) optional

---

### Criteria for Selection of Level C Protection

Meeting all of these criteria permits use of Level C Protection:

- Oxygen concentrations are not less than 19.5% by volume.
- Measured air concentrations of identified substances will be reduced by the respirator below the substance's threshold limit value (TLV).
- Atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect any body area left unprotected by chemical-resistant clothing.
- Job functions do not require self-contained breathing apparatus.
- Direct readings are below 50 ppm on the PID.

### Level D Protection

Personnel protective equipment:

- Coveralls
- Gloves\*
- Boots/shoes, leather or chemical-resistant, steel toe and shank.
- Safety glasses or chemical splash goggles\*
- Hard hat (face shield\*)
- Escape mask\*

(\*) optional

### Criteria for Selection of Level D Protection

Meeting any of these criteria allows use of Level D Protection:

- No contaminant levels above 5 ppm organic vapors or dusty conditions are present.
- Work functions preclude splashes, immersion, or the reasonable potential for unexpected inhalation of any chemicals above the TLV.

### Additional Considerations for Selecting Levels of Protection

Other factors which will be considered in selecting the appropriate level of protection are heat and physical stress. The use of protective clothing and respirators increases physical stress, in particular, heat stress on the wearer. Chemical protective clothing greatly reduces natural ventilation and diminishes the body's ability to regulate its temperature. Even in moderate ambient temperatures, the diminished capacity of the body to dissipate heat can result in one or more heat-related problems.

---

All chemical protective garments can be a contributing factor to heat stress. Greater susceptibility to heat stress occurs when protective clothing requires the use of a tightly fitted hood against the respirator face piece, or when gloves or boots are taped to the suit. As more body area is covered, less cooling takes place, increasing the probability of heat stress.

Wearing protective equipment also increases the risk of accidents. It is heavy, cumbersome, decreases dexterity, agility, interferes with vision, and is fatiguing to wear. These factors all increase physical stress and the potential for accidents. In particular, the necessity of selecting a level of protection will be balanced against the increased probability of heat stress and accidents.

## **7.2 Donning and Doffing Ensembles**

### Donning an Ensemble

A routine will be established and practiced periodically for donning a Level C ensemble. Assistance may be provided for donning and doffing since these operations are difficult to perform alone. Donning will be completed in the decontamination zone.

Table 7.2.1 lists sample procedures for donning a Level C ensemble. These procedures should be modified depending on the particular type of suit and/or when extra gloves and/or boots are used.

### Doffing an Ensemble

Exact procedures for removing Level C ensembles must be established and followed to prevent contaminant migration from the work area and transfer of contaminants to the wearer's body, the doffing assistant, and others. Doffing will be completed in the decontamination zone.

Doffing procedures are provided in Table 7.2.2. These procedures should be performed only after decontamination of the suited worker. They require a suitably attired assistant. Throughout the procedures, both worker and assistant should avoid any direct contact with the outside surface of the suit.

## **7.3 Respirator Fit Testing**

The fit or integrity of the facepiece-to-face seal of a respirator affects its performance. Most facepieces fit only a certain percentage of the population; thus each facepiece must be tested on the potential wearer in order to ensure a tight seal. Facial features such as scars, hollow temples, very prominent cheekbones, deep skin creases, dentures or missing teeth, and the chewing of gum and tobacco may interfere with the respirator-to-face seal. Facial hair in the seal area may also interfere with the respirator-to-face seal and should be removed prior to entry into the work zone. A respirator shall not be worn when such conditions prevent a good seal. The worker's diligence in observing these factors shall be evaluated by periodic checks. Fit testing will comply with 29 CFR 1910.1025 regulations.

---

**TABLE 7.2.1**  
**SAMPLE DONNING PROCEDURES**

---

1. Inspect the clothing and respiratory equipment before donning (see Inspection in subsection 7.4).
  2. Adjust hard hat or headpiece if worn, to fit user's head.
  3. Standing or sitting, step into the legs of the suit; ensure proper placement of the feet within the suit; then gather the suit around the waist.
  4. Put on chemical-resistant safety boots over the feet of the suit. Tape the leg cuff over the tops of the boots.
  5. Don the respirator and adjust it to be secure, but comfortable.
  6. Perform negative and positive respirator facepiece seal test procedures.
    - To conduct a negative-pressure test, close the inlet part with the palm of the hand or squeeze the breathing tube so it does not pass air, and gently inhale for about 10 seconds. Any inward rushing of air indicates a poor fit. Note that a leaking facepiece may be drawn tightly to the face to form a good seal, giving a false indication of adequate fit.
    - To conduct a positive-pressure test, gently exhale while covering the exhalation valve to ensure that a positive pressure can be built up. Failure to build a positive pressure indicates a poor fit.
  7. Depending on type of suit:
    - Put on inner gloves (surgical gloves).
    - Additional overgloves, worn over attached suit gloves, may be donned later.
  8. Put on hard hat
  9. Have assistant observe the wearer for a period of time to ensure that the wearer is comfortable, psychologically stable, and that the equipment is functioning properly.
-

---

**TABLE 7.2.2  
DOFFING PROCEDURES**

---

1. Remove any extraneous or disposable clothing, boot covers, outer gloves, and tape.
  2. Remove respirator by loosening straps and pulling straps over the top of the head and move mask away from head. Do not pull mask over the top of the head.
  3. Remove arms, one at a time, from suit, avoiding any contact between the outside surface of the suit and wearer's body and lay the suit out flat behind the wearer. Leave internal gloves on, if any.
  4. Sitting, if possible, remove both legs from the suit.
  5. After suit is removed, remove internal gloves by rolling them off the hand, inside out.
- 

#### **7.4 Inspection**

The PPE inspection program will entail five different inspections:

- Inspection and operational testing of equipment received from the factory or distributor.
- Inspection of equipment as it is issued to workers.
- Inspection after use.
- Periodic inspection of stored equipment.
- Periodic inspection when a question arises concerning the appropriateness of the selected equipment, or when problems with similar equipment arise.

The inspection checklist is provided in Table 7.4.1. Records will be kept of all inspection procedures. Individual identification numbers will be assigned to all reusable pieces of equipment and records should be maintained by that number. At a minimum, each inspection should record the ID number, date, inspector, and any unusual conditions or findings. Periodic review of these records may indicate an item or type of item with excessive maintenance costs or a particularly high level of down-time.

#### **7.5 Storage**

Clothing and respirators will be stored properly to prevent damage or malfunction due to exposure to dust, moisture, sunlight, damaging chemicals, extreme temperatures, and impact. Storage procedures are as follows:

---

**TABLE 7.4.1  
PPE INSPECTION CHECKLIST**

---

CLOTHING

Before use:

- Determine that the clothing material is correct for the specified task at hand.
- Visually inspect for:
  - imperfect seams
  - non-uniform coatings
  - tears
  - malfunctioning closures
- Hold up to light and check for pinholes.
- Flex product:
  - observe for cracks or other signs of shelf deterioration
- If the product has been used previously, inspect inside and out for signs of chemical attack:
  - discoloration, swelling, stiffness

During the work task, periodically inspect for:

- Evidence of chemical attack such as discoloration, swelling, stiffening, and softening. Keep in mind, however, that chemical permeation can occur without any visible effects.
- Closure failure
- Tears
- Punctures
- Seam discontinuities

GLOVES

Before use:

- Pressurize glove to check for pinholes. Either blow into glove, then roll gauntlet toward fingers or inflate glove and hold under water. In either case, no air should escape.

AIR-PURIFYING RESPIRATORS

- Inspect air-purifying respirators:
  - before each use to be sure they have been adequately cleaned
- Check material conditions for:
  - signs of pliability, deterioration, distortion
- Examine cartridges to ensure that:
  - they are the proper type for the intended use
  - the expiration date has not been passed
  - they have not been opened or used previously
- Check faceshields and lenses for:
  - cracks, crazing, fogginess
- Air purifying respirators will be stored individually in resealable plastic bags.

---

Clothing:

- Potentially contaminated clothing will be stored in an area separate from street clothing.
- Potentially contaminated clothing will be stored in a well-ventilated area, with good air flow around each item, if possible.
- Different types and material of clothing and gloves will be stored separately to prevent issuing the wrong material by mistake.
- Protective clothing will be folded or hung in accordance with manufacturer's recommendations.

Respirators:

- Air-purifying respirators should be dismantled, washed, and placed in sealed plastic bags.

## **7.6 Maintenance**

Specialized maintenance will be performed only by the factory or an authorized repair person. Routine maintenance, such as cleaning, will be performed by the personnel to whom the equipment is assigned. Respirators will be cleaned at the end of each day with alcohol pads or, preferably, by washing with warm soapy water.

## **7.7 Decontamination Methods**

All personnel, clothing, equipment, and samples leaving the (potentially) contaminated, or work zone, area of the Site must be decontaminated to remove any harmful chemicals or infectious organisms that may have adhered to them. Decontamination methods either (1) physically remove contaminants (2) inactivate contaminants by chemical detoxification or disinfection/sterilization, or (3) remove contaminants by a combination of both physical and chemical means. In many cases, gross contamination can be removed by physical means involving dislodging/displacement, rinsing, wiping off, and evaporation. Contaminants that can be removed by physical means include dust, vapors, and volatile liquids. All reusable equipment will be decontaminated by rinsing in a bath of detergent and water (respirators, gloves to be reused). Monitoring equipment will be decontaminated by wiping with paper towels and water.

The effectiveness of the decontamination will be evaluated near the beginning of Site activities and will be modified if determined to be ineffective. Visual observation will be used for this purpose. The HSO will inspect decontaminated materials for discoloration, stains, corrosive effects, visible dirt, or other signs of possible residual contamination.

All disposable PPE will be discarded following use. All used PPE to be discarded will be placed in an appropriate receptacle for disposal.

---

## SECTION 8.0 DECONTAMINATION PROCEDURES FOR SAMPLING EQUIPMENT

All non-dedicated sampling equipment shall be decontaminated prior to, and following, use at each sampling location. Decontamination procedures shall consist of the following:

1. Scrub equipment in a bath of low-phosphate detergent and potable water.
2. Potable water rinse.
3. Air dry.
4. Aluminum foil wrap, shiny side out, for transport.

Personal protective equipment decontamination has been discussed in Subsection 7.7.

All direct-push equipment and other equipment which has contacted Site soil, groundwater, or soil vapor will be decontaminated prior to leaving the Site. Decontamination of this equipment will consist of physically removing adhering soil using hand tools followed by rinsing the equipment with potable water. Decontamination will be performed in the immediate vicinity of the work area so that the removed soil and rinseate will be discharged in the area from which it originated.

---

## SECTION 9.0 CALIBRATION PROCEDURES, FREQUENCIES, AND MAINTENANCE

This section summarizes the calibration procedures, frequencies, and maintenance for the health and safety field monitoring instruments. The manufacturer's owner's manuals for all monitoring equipment to be used will be present at the Site and will be followed.

The monitoring equipment will include a photoionization detector (PID) which measures the concentration of airborne ionizable gases and vapors. The PID does not distinguish between individual compounds and will not read methane. The PID calibration will be performed using ambient air to "zero" the instrument and a 95 to 100 ppm cylinder of isobutylene to calibrate the span. The calibration will be performed in accordance with the manufacturer's instructions.

Additional monitoring instruments may include a dust monitor, a noise monitor, and other equipment, as necessary. All instruments will be calibrated prior to the commencement of each day's work in accordance with the manufacturer's instructions. The instruments will also be charged overnight prior to each day's work. Maintenance will be performed periodically as needed and in accordance with the manufacturer's instructions.

---

## SECTION 10.0 EMERGENCY RESPONSE PLAN

This section will present the Emergency Response Plan (ERP) for the Site. Pre-emergency planning will consist of reviewing the ERP with all workers at the Site prior to initiation of work.

### Personnel Roles

It is anticipated that during sampling activities at the Site several persons, including the HSO and contractor personnel, will be onsite. Should an emergency situation arise at the Site, the HSO will assume control and decision-making. The HSO will also resolve all disputes concerning health and safety requirements and precautions. The HSO will also:

- Be authorized to seek and purchase supplies as necessary.
- Have control over activities of everyone entering the Site.

The HSO will communicate, by field telephone or other, with off-Site personnel to include the Project Manager to evaluate data and assist in the decision-making process. Phone numbers for the fire department, police, ambulance, poison control center, NYS Spills Hotlines, are listed in Table 1.2.1 of this document. The hospital which will be utilized during an emergency will be Mount Sinai Hospital Queens in Long Island City. The directions to the hospital, along with the hospital's emergency room phone number are presented in Table 1.2.1. Copies of Table 1.2.1 will be available at the Site and will be placed in all vehicles of personnel involved in activities at the Site.

Internal communications will consist of a single whistle (or compressed air horn if Level C is donned) blast. This blast will signal all workers to evacuate the work zone by the nearest exit.

### Response Follow-Up

Following an emergency, or incident, a detailed report will be generated by the HSO. All equipment will be restored to pre-emergency conditions. The HASP will be reviewed following an emergency to determine if it provides adequate information to assist in dealing with the emergency. The HASP may be revised to incorporate additional information as needed.

### Emergency Recognition and Prevention

Before daily work assignments begin, each day a brief on-Site meeting will be held by the HSO which will address health and safety issues related to the day's work. Prior to initiation of work, a detailed on-Site health and safety meeting will be held to review all potential hazards, contingencies, and safety measures.

### Safe Distances and Places of Refuge

The main potential cause of work zone evacuation is a significant vapor release. Vapor release evacuation will be discussed prior to subsurface activities at the Site and in general will be in the upwind direction. Wind direction will be monitored at each work location and all workers will be notified of the direction of evacuation prior to commencement of work. Safe distances will be discussed at each location and determined by the HSO. The PID will be used to determine if workers have evacuated a

---

sufficient distance.

At all times, vehicles which may be utilized in an emergency for transport to the hospital (or other destination) will have clear access to leave the Site. The HSO will assure that an emergency vehicle does not become blocked-in by other vehicles.

#### Site Security and Control

The HSO will control entry of personnel into the work zone. No unnecessary persons shall be permitted in the work zone.

#### Decontamination Procedures During Emergencies

In the event of a medical emergency, decontamination will be performed if it does not interfere with essential treatment. Decontamination will be performed by washing, rinsing, and/or cutting off protective clothing and equipment.

If decontamination cannot be performed, the victim will be wrapped in plastic to reduce contamination to other personnel. Emergency and off-Site medical personnel will be alerted to the potential contamination.

#### Emergency Medical Treatment and First Aid

Medical emergencies will be treated, in general, by medical experts by transporting the victim to the nearby hospital. A first aid kit will be present on Site for minor medical treatment.

---

**APPENDIX A**

**MATERIAL SAFETY DATA SHEETS**

MATERIAL SAFETY DATA SHEET

Gasoline, All Grades

MSDS No. 9950

EMERGENCY OVERVIEW

DANGER!

EXTREMELY FLAMMABLE - EYE AND MUCOUS MEMBRANE IRRITANT
- EFFECTS CENTRAL NERVOUS SYSTEM - HARMFUL OR FATAL IF
SWALLOWED - ASPIRATION HAZARD

NFPA 704 (Section 16)

High fire hazard. Keep away from heat, spark, open flame, and other ignition sources.

If ingested, do NOT induce vomiting, as this may cause chemical pneumonia (fluid in the lungs). Contact may cause eye, skin and mucous membrane irritation. Harmful if absorbed through the skin. Avoid prolonged breathing of vapors or mists. Inhalation may cause irritation, anesthetic effects (dizziness, nausea, headache, intoxication), and respiratory system effects.

Long-term exposure may cause effects to specific organs, such as to the liver, kidneys, blood, nervous system, and skin. Contains benzene, which can cause blood disease, including anemia and leukemia.

1. CHEMICAL PRODUCT and COMPANY INFORMATION

Hess Corporation
1 Hess Plaza
Woodbridge, NJ 07095-0961

EMERGENCY TELEPHONE NUMBER (24 hrs):

CHEMTREC (800)424-9300

COMPANY CONTACT (business hours):

Corporate Safety (732)750-6000

MSDS (Environment, Health, Safety) Internet Website

www.hess.com

SYNONYMS: Hess Conventional (Oxygenated and Non-oxygenated) Gasoline; Reformulated Gasoline (RFG); Reformulated Gasoline Blendstock for Oxygenate Blending (RBOB); Unleaded Motor or Automotive Gasoline

See Section 16 for abbreviations and acronyms.

2. COMPOSITION and INFORMATION ON INGREDIENTS \*

Table with 2 columns: INGREDIENT NAME (CAS No.) and CONCENTRATION PERCENT BY WEIGHT. Rows include Gasoline, Benzene, n-Butane, Ethyl Alcohol, Ethyl benzene, n-Hexane, Methyl-tertiary butyl ether, Tertiary-amyl methyl ether, Toluene, 1,2,4-Trimethylbenzene, and Xylene.

A complex blend of petroleum-derived normal and branched-chain alkane, cycloalkane, alkene, and aromatic hydrocarbons. May contain antioxidant and multifunctional additives. Non-oxygenated Conventional Gasoline and RBOB do not have oxygenates (Ethanol or MTBE and/or TAME).

## MATERIAL SAFETY DATA SHEET

**Gasoline, All Grades**

**MSDS No. 9950**

Oxygenated Conventional and Reformulated Gasoline will have oxygenates for octane enhancement or as legally required.

### 3. HAZARDS IDENTIFICATION

#### **EYES**

Moderate irritant. Contact with liquid or vapor may cause irritation.

#### **SKIN**

Practically non-toxic if absorbed following acute (single) exposure. May cause skin irritation with prolonged or repeated contact. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are exposed repeatedly.

#### **INGESTION**

The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death.

Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

#### **INHALATION**

Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

**WARNING:** the burning of any hydrocarbon as a fuel in an area without adequate ventilation may result in hazardous levels of combustion products, including carbon monoxide, and inadequate oxygen levels, which may cause unconsciousness, suffocation, and death.

#### **CHRONIC EFFECTS and CARCINOGENICITY**

Contains benzene, a regulated human carcinogen. Benzene has the potential to cause anemia and other blood diseases, including leukemia, after repeated and prolonged exposure. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with systemic toxicity. See also Section 11 - Toxicological Information.

#### **MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE**

Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash). Chronic respiratory disease, liver or kidney dysfunction, or pre-existing central nervous system disorders may be aggravated by exposure.

### 4. FIRST AID MEASURES

#### **EYES**

In case of contact with eyes, immediately flush with clean, low-pressure water for at least 15 min. Hold eyelids open to ensure adequate flushing. Seek medical attention.

#### **SKIN**

Remove contaminated clothing. Wash contaminated areas thoroughly with soap and water or waterless hand cleanser. Obtain medical attention if irritation or redness develops.

#### **INGESTION**

## MATERIAL SAFETY DATA SHEET

**Gasoline, All Grades**

**MSDS No. 9950**

DO NOT INDUCE VOMITING. Do not give liquids. Obtain immediate medical attention. If spontaneous vomiting occurs, lean victim forward to reduce the risk of aspiration. Small amounts of material which enter the mouth should be rinsed out until the taste is dissipated.

### **INHALATION**

Remove person to fresh air. If person is not breathing, ensure an open airway and provide artificial respiration. If necessary, provide additional oxygen once breathing is restored if trained to do so. Seek medical attention immediately.

## **5. FIRE FIGHTING MEASURES**

### **FLAMMABLE PROPERTIES:**

FLASH POINT:	-45 °F (-43°C)
AUTOIGNITION TEMPERATURE:	highly variable; > 530 °F (>280 °C)
OSHA/NFPA FLAMMABILITY CLASS:	1A (flammable liquid)
LOWER EXPLOSIVE LIMIT (%):	1.4%
UPPER EXPLOSIVE LIMIT (%):	7.6%

### **FIRE AND EXPLOSION HAZARDS**

Vapors may be ignited rapidly when exposed to heat, spark, open flame or other source of ignition. Flowing product may be ignited by self-generated static electricity. When mixed with air and exposed to an ignition source, flammable vapors can burn in the open or explode in confined spaces. Being heavier than air, vapors may travel long distances to an ignition source and flash back. Runoff to sewer may cause fire or explosion hazard.

### **EXTINGUISHING MEDIA**

**SMALL FIRES:** Any extinguisher suitable for Class B fires, dry chemical, CO<sub>2</sub>, water spray, fire fighting foam, or Halon.

**LARGE FIRES:** Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers.

During certain times of the year and/or in certain geographical locations, gasoline may contain MTBE and/or TAME. Firefighting foam suitable for polar solvents is recommended for fuel with greater than 10% oxygenate concentration - refer to NFPA 11 "Low Expansion Foam - 1994 Edition."

### **FIRE FIGHTING INSTRUCTIONS**

Small fires in the incipient (beginning) stage may typically be extinguished using handheld portable fire extinguishers and other fire fighting equipment.

Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure-demand self-contained breathing apparatus with full facepiece and full protective clothing.

Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam.

See Section 16 for the NFPA 704 Hazard Rating.

## MATERIAL SAFETY DATA SHEET

Gasoline, All Grades

MSDS No. 9950

### 6. ACCIDENTAL RELEASE MEASURES

ACTIVATE FACILITY SPILL CONTINGENCY or EMERGENCY PLAN.

Evacuate nonessential personnel and remove or secure all ignition sources. Consider wind direction; stay upwind and uphill, if possible. Evaluate the direction of product travel, diking, sewers, etc. to confirm spill areas. Spills may infiltrate subsurface soil and groundwater; professional assistance may be necessary to determine the extent of subsurface impact.

Carefully contain and stop the source of the spill, if safe to do so. Protect bodies of water by diking, absorbents, or absorbent boom, if possible. Do not flush down sewer or drainage systems, unless system is designed and permitted to handle such material. The use of fire fighting foam may be useful in certain situations to reduce vapors. The proper use of water spray may effectively disperse product vapors or the liquid itself, preventing contact with ignition sources or areas/equipment that require protection.

Take up with sand or other oil absorbing materials. Carefully shovel, scoop or sweep up into a waste container for reclamation or disposal - caution, flammable vapors may accumulate in closed containers. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8).

### 7. HANDLING and STORAGE

#### HANDLING PRECAUTIONS

\*\*\*\*\*USE ONLY AS A MOTOR FUEL\*\*\*\*\*

\*\*\*\*\*DO NOT SIPHON BY MOUTH\*\*\*\*\*

Handle as a flammable liquid. Keep away from heat, sparks, and open flame! Electrical equipment should be approved for classified area. Bond and ground containers during product transfer to reduce the possibility of static-initiated fire or explosion.

Special slow load procedures for "switch loading" must be followed to avoid the static ignition hazard that can exist when higher flash point material (such as fuel oil) is loaded into tanks previously containing low flash point products (such as this product) - see API Publication 2003, "Protection Against Ignitions Arising Out Of Static, Lightning and Stray Currents.

#### STORAGE PRECAUTIONS

Keep away from flame, sparks, excessive temperatures and open flame. Use approved vented containers. Keep containers closed and clearly labeled. Empty product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose such containers to sources of ignition.

Store in a well-ventilated area. This storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". Avoid storage near incompatible materials. The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning Petroleum Storage Tanks".

#### WORK/HYGIENIC PRACTICES

Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Use good personal hygiene practices. Avoid repeated and/or prolonged skin exposure. Wash hands before eating, drinking, smoking, or using toilet facilities. Do not use as a cleaning solvent on the skin. Do not use solvents or harsh abrasive skin cleaners for washing this product from exposed skin areas. Waterless hand cleaners are effective. Promptly remove contaminated clothing and launder before reuse. Use care when laundering to prevent the formation of flammable vapors which could ignite via washer or dryer. Consider the need to discard contaminated leather shoes and gloves.

## MATERIAL SAFETY DATA SHEET

Gasoline, All Grades

MSDS No. 9950

### 8. EXPOSURE CONTROLS and PERSONAL PROTECTION

#### EXPOSURE LIMITS

Component (CAS No.)	Source	TWA (ppm)	STEL (ppm)	Exposure Limits	Note
Gasoline (86290-81-5)	ACGIH	300	500	A3	
Benzene (71-43-2)	OSHA	1	5	Carcinogen	
	ACGIH	0.5	2.5	A1, skin	
	USCG	1	5		
n-Butane (106-97-8)	ACGIH	1000	--	Aliphatic Hydrocarbon Gases Alkane (C1-C4)	
Ethyl Alcohol (ethanol) (64-17-5)	OSHA	1000	--		
	ACGIH	1000	--	A4	
Ethyl benzene (100-41-4)	OSHA	100	--		
	ACGIH	100	125	A3	
n-Hexane (110-54-3)	OSHA	500	--		
	ACGIH	50	--	Skin	
Methyl-tertiary butyl ether [MTBE] (1634-04-4)	ACGIH	50	--	A3	
Tertiary-amyl methyl ether [TAME] (994-05-8)				None established	
Toluene (108-88-3)	OSHA	200	--	Ceiling: 300 ppm; Peak: 500 ppm (10 min.)	
	ACGIH	20	--	A4	
1,2,4-Trimethylbenzene (95-63-6)	ACGIH	25	--		
Xylene, mixed isomers (1330-20-7)	OSHA	100	--		
	ACGIH	100	150	A4	

#### ENGINEERING CONTROLS

Use adequate ventilation to keep vapor concentrations of this product below occupational exposure and flammability limits, particularly in confined spaces.

#### EYE/FACE PROTECTION

Safety glasses or goggles are recommended where there is a possibility of splashing or spraying.

#### SKIN PROTECTION

Gloves constructed of nitrile or neoprene are recommended. Chemical protective clothing such as that made of of E.I. DuPont Tychem®, products or equivalent is recommended based on degree of exposure.

Note: The resistance of specific material may vary from product to product as well as with degree of exposure. Consult manufacturer specifications for further information.

#### RESPIRATORY PROTECTION

A NIOSH-approved air-purifying respirator with organic vapor cartridges or canister may be permissible under certain circumstances where airborne concentrations are or may be expected to exceed exposure limits or for odor or irritation. Protection provided by air-purifying respirators is limited. Refer to OSHA 29 CFR 1910.134, NIOSH Respirator Decision Logic, and the manufacturer for additional guidance on respiratory protection selection and limitations.

Use a positive pressure, air-supplied respirator if there is a potential for uncontrolled release, exposure levels are not known, in oxygen-deficient atmospheres, or any other circumstance where an air-purifying respirator may not provide adequate protection.

### 9. PHYSICAL and CHEMICAL PROPERTIES

#### APPEARANCE

A translucent, straw-colored or light yellow liquid

## MATERIAL SAFETY DATA SHEET

**Gasoline, All Grades**

**MSDS No. 9950**

### ODOR

A strong, characteristic aromatic hydrocarbon odor. Oxygenated gasoline with MTBE and/or TAME may have a sweet, ether-like odor and is detectable at a lower concentration than non-oxygenated gasoline.

### ODOR THRESHOLD

	<u>Odor Detection</u>	<u>Odor Recognition</u>
Non-oxygenated gasoline:	0.5 - 0.6 ppm	0.8 - 1.1 ppm
Gasoline with 15% MTBE:	0.2 - 0.3 ppm	0.4 - 0.7 ppm
Gasoline with 15% TAME:	0.1 ppm	0.2 ppm

### BASIC PHYSICAL PROPERTIES

BOILING RANGE:	85 to 437 °F (39 to 200 °C)
VAPOR PRESSURE:	6.4 - 15 RVP @ 100 °F (38 °C) (275-475 mm Hg @ 68 °F (20 °C)
VAPOR DENSITY (air = 1):	AP 3 to 4
SPECIFIC GRAVITY (H <sub>2</sub> O = 1):	0.70 - 0.78
EVAPORATION RATE:	10-11 (n-butyl acetate = 1)
PERCENT VOLATILES:	100 %
SOLUBILITY (H <sub>2</sub> O):	Non-oxygenated gasoline - negligible (< 0.1% @ 77 °F). Gasoline with 15% MTBE - slight (0.1 - 3% @ 77 °F); ethanol is readily soluble in water

## **10. STABILITY and REACTIVITY )**

**STABILITY:** Stable. Hazardous polymerization will not occur.

### CONDITIONS TO AVOID

Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources

### INCOMPATIBLE MATERIALS

Keep away from strong oxidizers.

### HAZARDOUS DECOMPOSITION PRODUCTS

Carbon monoxide, carbon dioxide and non-combusted hydrocarbons (smoke). Contact with nitric and sulfuric acids will form nitroresols that can decompose violently.

## **11. TOXICOLOGICAL PROPERTIES**

### ACUTE TOXICITY

Acute Dermal LD50 (rabbits): > 5 ml/kg	Acute Oral LD50 (rat): 18.75 ml/kg
Primary dermal irritation (rabbits): slightly irritating	Draize eye irritation (rabbits): non-irritating
Guinea pig sensitization: negative	

### CHRONIC EFFECTS AND CARCINOGENICITY

Carcinogenicity: OSHA: NO IARC: YES - 2B NTP: NO ACGIH: YES (A3)

IARC has determined that gasoline and gasoline exhaust are possibly carcinogenic in humans. Inhalation exposure to completely vaporized unleaded gasoline caused kidney cancers in male rats and liver tumors in female mice. The U.S. EPA has determined that the male kidney tumors are species-specific and are irrelevant for human health risk assessment. The significance of the tumors seen in female mice is not known. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with effects to the central and peripheral nervous systems, liver, and kidneys. The significance of these animal models to predict similar human response to gasoline is uncertain.

This product contains benzene. Human health studies indicate that prolonged and/or repeated overexposure to benzene may cause damage to the blood-forming system (particularly bone marrow), and serious blood disorders such as aplastic anemia and leukemia. Benzene is listed as a human carcinogen by the NTP, IARC, OSHA and ACGIH.

MATERIAL SAFETY DATA SHEET

Gasoline, All Grades

MSDS No. 9950

This product may contain methyl tertiary butyl ether (MTBE ): animal and human health effects studies indicate that MTBE may cause eye, skin, and respiratory tract irritation, central nervous system depression and neurotoxicity. MTBE is classified as an animal carcinogen (A3) by the ACGIH.

12. ECOLOGICAL INFORMATION

Keep out of sewers, drainage areas and waterways. Report spills and releases, as applicable, under Federal and State regulations. If released, oxygenates such as ethers and alcohols will be expected to exhibit fairly high mobility in soil, and therefore may leach into groundwater. The API (www.api.org) provides a number of useful references addressing petroleum and oxygenate contamination of groundwater.

13. DISPOSAL CONSIDERATIONS

Consult federal, state and local waste regulations to determine appropriate disposal options.

14. TRANSPORTATION INFORMATION

DOT PROPER SHIPPING NAME: Gasoline
DOT HAZARD CLASS and PACKING GROUP: 3, PG II
DOT IDENTIFICATION NUMBER: UN 1203
DOT SHIPPING LABEL: FLAMMABLE LIQUID

PLACARD:

15. REGULATORY INFORMATION

U.S. FEDERAL, STATE, and LOCAL REGULATORY INFORMATION

This product and its constituents listed herein are on the EPA TSCA Inventory. Any spill or uncontrolled release of this product, including any substantial threat of release, may be subject to federal, state and/or local reporting requirements. This product and/or its constituents may also be subject to other federal, state, or local regulations; consult those regulations applicable to your facility/operation.

CLEAN WATER ACT (OIL SPILLS)

Any spill or release of this product to "navigable waters" (essentially any surface water, including certain wetlands) or adjoining shorelines sufficient to cause a visible sheen or deposit of a sludge or emulsion must be reported immediately to the National Response Center (1-800-424-8802) as required by U.S. Federal Law. Also contact appropriate state and local regulatory agencies as required.

CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIRONMENT)

The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil, refined, and unrefined petroleum products and any indigenous components of such. However, other federal reporting requirements (e.g., SARA Section 304 as well as the Clean Water Act if the spill occurs on navigable waters) may still apply.

SARA SECTION 311/312 - HAZARD CLASSES

Table with 5 columns: ACUTE HEALTH, CHRONIC HEALTH, FIRE, SUDDEN RELEASE OF PRESSURE, REACTIVE. Values: X, X, X, --, --

SARA SECTION 313 - SUPPLIER NOTIFICATION

This product contains the following toxic chemicals subject to the reporting requirements of section 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986 and of 40 CFR 372:

Table with 2 columns: INGREDIENT NAME (CAS NUMBER), CONCENTRATION WT. PERCENT. Rows: Benzene (71-43-2) 0.1 to 4.9 (0.1 to 1.3 for reformulated gasoline), Ethyl benzene (100-41-4) < 3

MATERIAL SAFETY DATA SHEET

Gasoline, All Grades

MSDS No. 9950

n-Hexane (110-54-3)	0.5 to 4
Methyl-tertiary butyl ether (MTBE) (1634-04-4)	0 to 15.0
Toluene (108-88-3)	1 to 15
1,2,4- Trimethylbenzene (95-63-6)	< 6
Xylene, mixed isomers (1330-20-7)	1 to 15

US EPA guidance documents ([www.epa.gov/tri](http://www.epa.gov/tri)) for reporting Persistent Bioaccumulating Toxics (PBTs) indicate this product may contain the following deminimis levels of toxic chemicals subject to Section 313 reporting:

<u>INGREDIENT NAME (CAS NUMBER)</u>	<u>CONCENTRATION - Parts per million (ppm) by weight</u>
Polycyclic aromatic compounds (PACs)	17
Benzo (g,h,i) perylene (191-24-2)	2.55
Lead (7439-92-1)	0.079

**CALIFORNIA PROPOSITION 65 LIST OF CHEMICALS**

This product contains the following chemicals that are included on the Proposition 65 "List of Chemicals" required by the California Safe Drinking Water and Toxic Enforcement Act of 1986:

<u>INGREDIENT NAME (CAS NUMBER)</u>	<u>Date Listed</u>
Benzene	2/27/1987
Ethyl benzene	6/11/2004
Toluene	1/1/1991

**CANADIAN REGULATORY INFORMATION (WHMIS)**

#### Section 2: Composition and Information on Ingredients

**Composition:**

Name	CAS #	% by Weight
Lead	7439-92-1	100

**Toxicological Data on Ingredients:** Lead LD50: Not available. LC50: Not available.

#### Section 3: Hazards Identification

**Potential Acute Health Effects:** Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

**Potential Chronic Health Effects:**

Slightly hazardous in case of skin contact (permeator). **CARCINOGENIC EFFECTS:** Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. **MUTAGENIC EFFECTS:** Not available. **TERATOGENIC EFFECTS:** Not available. **DEVELOPMENTAL TOXICITY:** Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

#### Section 4: First Aid Measures

**Eye Contact:**

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

**Skin Contact:** Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

**Serious Skin Contact:** Not available.

**Inhalation:**

If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Serious Inhalation:** Not available.

**Ingestion:**

Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

**Serious Ingestion:** Not available.

## Section 5: Fire and Explosion Data

**Flammability of the Product:** May be combustible at high temperature.

**Auto-Ignition Temperature:** Not available.

**Flash Points:** Not available.

**Flammable Limits:** Not available.

**Products of Combustion:** Some metallic oxides.

**Fire Hazards in Presence of Various Substances:** Non-flammable in presence of open flames and sparks, of shocks, of heat.

**Explosion Hazards in Presence of Various Substances:**

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

**Fire Fighting Media and Instructions:**

SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

**Special Remarks on Fire Hazards:** When heated to decomposition it emits highly toxic fumes of lead.

**Special Remarks on Explosion Hazards:** Not available.

## Section 6: Accidental Release Measures

**Small Spill:**

Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

**Large Spill:**

Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

## Section 7: Handling and Storage

**Precautions:**

Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

**Storage:** Keep container tightly closed. Keep container in a cool, well-ventilated area.

## Section 8: Exposure Controls/Personal Protection

### Engineering Controls:

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

**Personal Protection:** Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

### Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

### Exposure Limits:

TWA: 0.05 (mg/m<sup>3</sup>) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m<sup>3</sup>) from OSHA (PEL) [United States] TWA: 0.03 (mg/m<sup>3</sup>) from NIOSH [United States] TWA: 0.05 (mg/m<sup>3</sup>) [Canada] Consult local authorities for acceptable exposure limits.

## Section 9: Physical and Chemical Properties

**Physical state and appearance:** Solid. (Metal solid.)

**Odor:** Not available.

**Taste:** Not available.

**Molecular Weight:** 207.21 g/mole

**Color:** Bluish-white. Silvery. Gray

**pH (1% soln/water):** Not applicable.

**Boiling Point:** 1740°C (3164°F)

**Melting Point:** 327.43°C (621.4°F)

**Critical Temperature:** Not available.

**Specific Gravity:** 11.3 (Water = 1)

**Vapor Pressure:** Not applicable.

**Vapor Density:** Not available.

**Volatility:** Not available.

**Odor Threshold:** Not available.

**Water/Oil Dist. Coeff.:** Not available.

**Ionicity (in Water):** Not available.

**Dispersion Properties:** Not available.

**Solubility:** Insoluble in cold water.

## Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Incompatible materials, excess heat

**Incompatibility with various substances:** Reactive with oxidizing agents.

**Corrosivity:** Non-corrosive in presence of glass.

**Special Remarks on Reactivity:**

Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

**Special Remarks on Corrosivity:** Not available.

**Polymerization:** Will not occur.

## Section 11: Toxicological Information

**Routes of Entry:** Absorbed through skin. Inhalation. Ingestion.

**Toxicity to Animals:**

LD50: Not available. LC50: Not available.

**Chronic Effects on Humans:**

CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

**Other Toxic Effects on Humans:** Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

**Special Remarks on Toxicity to Animals:** Not available.

**Special Remarks on Chronic Effects on Humans:** Not available.

**Special Remarks on other Toxic Effects on Humans:**

Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungs by mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually absorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, delirium, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead colic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

## Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are less toxic than the product itself.

**Special Remarks on the Products of Biodegradation:** Not available.

**Section 13: Disposal Considerations****Waste Disposal:**

Waste must be disposed of in accordance with federal, state and local environmental control regulations.

**Section 14: Transport Information**

**DOT Classification:** Not a DOT controlled material (United States).

**Identification:** Not applicable.

**Special Provisions for Transport:** Not applicable.

**Section 15: Other Regulatory Information****Federal and State Regulations:**

California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

**Other Regulations:**

OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

**Other Classifications:**

**WHMIS (Canada):** CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

**DSCL (EEC):**

R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

**HMIS (U.S.A.):**

**Health Hazard:** 1

**Fire Hazard:** 0

**Reactivity:** 0

**Personal Protection:** E

**National Fire Protection Association (U.S.A.):**

**Health:** 1

**Flammability:** 0

**Reactivity:** 0

**Specific hazard:**

**Protective Equipment:**

Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

## Section 16: Other Information

**References:** Not available.

**Other Special Considerations:** Not available.

# Polycyclic Aromatic Hydrocarbons (PAHs)

## What are PAHs?

Short for polycyclic aromatic hydrocarbons, PAHs describe chemicals that are often found together in groups of two or more. PAHs are found naturally in the environment but they can also be man-made. In their purest form, PAHs are solid and range in appearance from colorless to white or pale yellow-green. PAHs are created when products like coal, oil, gas, and garbage are burned but the burning process is not complete. Although PAHs can exist in over 100 different combinations, the National Waste Minimization Program defines this group using the Toxic Release Inventory reporting category for polycyclic aromatic compounds.

Chemicals included in this category, by name and CAS number, are:

1. Benzo(a)anthracene, 56-55-3
2. Benzo(a)phenanthrene (chrysene), 218-01-9
3. Benzo(a)pyrene, 50-32-8
4. Benzo(b)fluoranthene, 205-99-2
5. Benzo(j)fluoranthene, 205-82-3
6. Benzo(k)fluoranthene, 207-08-9
7. Benzo(j,k)fluorene (fluoranthene), 206-44-0
8. Benzo(r,s,t)pentaphene, 189-55-9
9. Dibenz(a,h)acridine, 226-36-8
10. Dibenz(a,j)acridine, 224-42-0
11. Dibenzo(a,h)anthracene, 53-70-3
12. Dibenzo(a,e)fluoranthene, 5385-75-1
13. Dibenzo(a,e)pyrene, 192-65-4
14. Dibenzo(a,h)pyrene, 189-64-0
15. Dibenzo(a,l)pyrene, 191-30-0
16. 7H-Dibenzo(c,g)carbazole, 194-59-2
17. 7,12-Dimethylbenz(a)anthracene, 57-97-6
18. Indeno(1,2,3-cd)pyrene 193-39-5
19. 3-Methylcholanthrene, 56-49-5
20. 5-Methylchrysene, 3697-24-3

21. 1-Nitropyrene, 5522-43-0

It should be noted that some PAHs are listed individually on EPA's Priority Chemical list. They are:

1. Acenaphthene, 83-32-9
2. Acenaphthylene, 208-96-8
3. Anthracene, 120-12-7
4. Benzo(g,h,i)perylene, 191-24-2
5. Fluorene, 86-73-7
6. Phenanthrene, 85-01-8
7. Pyrene, 129-00-0

## Why are PAHs bad actors?

PAHs are a concern because they are persistent. Because they do not burn very easily, they can stay in the environment for long periods of time. Individual PAHs vary in behavior. Some can turn into a vapor in the air very easily. Most do not break down easily in the water.

## What are PAHs used for?

Most PAHs are used to conduct research. However, some PAHs are used to make dyes, plastics, and pesticides. Some are even used in medicines.

## How can PAHs enter and leave your body?

One of the most common ways PAHs can enter the body is through breathing contaminated air. PAHs get into your lungs when you breathe them. If you live near a hazardous waste site where PAHs are disposed, you are likely to breathe PAHs. If you eat or drink food and water contaminated with PAHs, you could be

exposed. Exposure to PAHs can also occur if your skin contacts PAH-contaminated soil or products like heavy oils, coal tar, roofing tar, or creosote. Creosote is an oily liquid found in coal tar and is used to preserve wood. Once in your body, PAHs can spread and target fat tissues. Target organs include the kidneys and liver. However, PAHs will leave your body through urine and feces in a matter of days.

### **How can you be exposed to PAHs?**

You can be exposed to PAHs in the environment, in your home, and in the workplace. Because PAHs exist naturally in the environment and are man-made, you can be exposed in a number of ways. Fumes from vehicle exhaust, coal, coal tar, asphalt, wildfires, agricultural burning and hazardous waste sites are all sources of exposure.

You could be exposed to PAHs by breathing cigarette and tobacco smoke, eating foods grown in contaminated soil, or by eating meat or other food that you grilled. Grilling and charring food actually increases the amount of PAHs in the food.

If you work in a plant that makes coal tar, asphalt and aluminum, or that burns trash, you can be exposed to PAHs. You can also be exposed if you work in a facility that uses petroleum or coal, or where wood, corn, and oil are burned.

### **How can PAHs affect your health?**

A number of PAHs have caused tumors in laboratory animals that were exposed to PAHs through their food, from breathing contaminated air, and when it was applied to their skin. When pregnant mice ate high doses of a PAH (benzo(a)pyrene) they experienced reproductive problems. In addition, the offspring of the pregnant mice showed birth defects and a decrease in their body weight. Other effects include damage to the skin, body fluids, and the immune system. However, these effects have not been seen in humans.

### **Is there a medical test to determine if you have been exposed to PAHs?**

There is a test that can measure the presence of PAH in your urine. This test can only tell you if you have been exposed; but it can't reveal how harmful the effects of the exposure will be. This test would have to be performed in a laboratory that has special equipment to detect the PAHs. Another test currently being developed will be able to measure PAHs in your body tissue and blood.

### **What are the medical treatments in cases of exposure?**

Most exposures to PAHs happen every day at very low levels in the air we breathe and the foods we eat. Treatment for a short-term exposure is unlikely. Contact your doctor if you experience symptoms of PAHs poisoning.

### **What levels of exposure have resulted in harmful health effects?**

There is no information available from studies on humans to tell what effects can result from being exposed to individual PAHs at certain levels. However, breathing PAHs and skin contact seem to be associated with cancer in humans. Animal studies showed that mice exposed to 308 parts per million (ppm) of PAHs (specifically benzo (a) pyrene) in food for 10 days (short term exposure) caused birth defects. Mice exposed to 923 ppm of benzo (a) pyrene in food for months caused problems in the liver and blood.

### **Where can I get more information?**

Contact your state health or environmental department, or:

Agency for Toxic Substances and Disease Registry  
Division of Toxicology  
1600 Clifton Road, N.E., E-29  
Atlanta, Georgia 30333

Melissa Haas

## CASE NARRATIVE

**Client: FPM Group Limited**

**Project: 126th Street**

**Report Number: 460-89956-1**

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### RECEIPT

The samples were received on 2/2/2015 3:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.5° C and 3.9° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

### VOLATILE ORGANICS

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for Volatile organics in accordance with EPA SW-846 Methods 8260C. The samples were prepared on 02/02/2015 and analyzed on 02/05/2015 and 02/06/2015.

Acetone was detected in method blank MB 460-279814/19 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Acetone was detected in method blanks MB 460-280001/7 and MB 460-280031/14 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank MB 460-279814/19 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Acetone and Methylene Chloride were detected in method blank MB 460-280118/7 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for batch 279814 recovered outside control limits for the following analyte: 2-Hexanone. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample duplicate (LCSD) for batch 279814 recovered outside control limits for the following analytes: Chlorodibromomethane, cis-1,3-Dichloropropene and trans-1,3-Dichloropropene. These analytes were not detected in the associated samples; therefore, the data have been reported.

The following sample was analyzed 18 min out of clock: SB-10(0-2) (460-89956-9). The second aliquot was analyzed, but could not be reported due to the low internal standard recovery.

Surrogate recovery (Dibromofluoromethane) for the following sample was outside control limits: SB-8(0-2) (460-89956-18). Surrogate recoveries for the other three system monitoring compounds were within control limits; therefore, re-analysis was not performed.

Surrogate recoveries (1,2-Dichloroethane-d4, 4-Bromofluorobenzene, Dibromofluoromethane, Toluene-d8) for the following sample were outside of acceptance limits: SB-6(11-13) (460-89956-21). There was insufficient sample to perform a re-analysis; therefore, the data have been reported. The second aliquot was analyzed, but could not be reported due to the low internal standard recovery.

The continuing calibration verification (CCV) associated with batch 280001 recovered outside control limits for the following analyte: 1,2-Dichloropropane (biased low). A reporting limit (RL) standard was analyzed, and the target analyte was detected. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

Refer to the QC report for details.

No other difficulties were encountered during the Volatile organics analysis.

All other quality control parameters were within the acceptance limits.

#### **VOLATILE ORGANICS**

Sample TB0131 (460-89956-22) was analyzed for Volatile organics in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 02/04/2015.

The continuing calibration verification (CCV) associated with batch 279569 recovered above the upper control limit for the following analyte: 1,1,2-Trichloro-1,2,2-trifluoroethane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

Refer to the QC report for details.

No other difficulties were encountered during the Volatile organics analysis.

All other quality control parameters were within the acceptance limits.

#### **PESTICIDES**

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for Pesticides in accordance with EPA SW-846 Methods 8081B. The samples were prepared on 02/04/2015 and analyzed on 02/04/2015 and 02/05/2015.

The continuing and closing calibration verification (CCV) associated with batch 279670 recovered above the upper control limit for the following analyte on the primary column: gamma-BHC. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

The closing calibration verification (CCV) associated with batch 279670 recovered above the upper control limits for the following analytes on the secondary column: delta-BHC, gamma-BHC, Endrin aldehyde, Endrin ketone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 279868 recovered above the upper control limit for the following analyte on the primary column: gamma-BHC. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

The closing calibration verification (CVC) associated with batch 279931 recovered above the upper control limit for the following analyte on the secondary column: Endrin ketone. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

Refer to the QC report for details.

No other difficulties were encountered during the Pesticides analysis.

All other quality control parameters were within the acceptance limits.

#### **POLYCHLORINATED BIPHENYLS**

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for polychlorinated biphenyls in accordance with EPA SW-846 Method 8082A. The samples were prepared on 02/04/2015 and analyzed on 02/04/2015 and 02/05/2015.

Surrogate recovery (DCB Decachlorobiphenyl) for the following samples was outside the upper control limit: SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6),

SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14). These samples did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Refer to the QC report for details.

No other difficulties were encountered during the PCBs analysis.

All other quality control parameters were within the acceptance limits.

#### **SEMIVOLATILE ORGANIC COMPOUNDS**

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for Semivolatile organic compounds in accordance with EPA SW-846 Method 8270D. The samples were prepared on 02/03/2015 and 02/04/2015 and analyzed on 02/04/2015 and 02/05/2015.

A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for five analytes to recover outside criteria for this method when a full list spike is utilized.

The LCS associated with batch 279405 had one analyte (Benzo(a)pyrene) outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

The LCS associated with batch 279647 had five analytes (Hexachlorobenzene, Benzo(b)fluoranthene, 4-Bromophenyl phenyl ether, N-Nitrosodiphenylamine, Benzo(a)pyrene) outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Several analytes failed the recovery criteria low for the MS and MSD of sample 460-89956-11 in batch 460-279740.

2,3,4,6-Tetrachlorophenol failed the recovery criteria low for the MS and MSD of sample 460-89956-5 in batch 460-279462.

Acid extractable surrogate and/or spike std recoveries (2-Fluorophenol, Phenol-d5) are biased low for the following samples: SB-3(0-2) (460-89956-11), 460-89956-11 MS, 460-89956-11 MSD. Samples high pH is causing low A/E surrogate/spike std recoveries.

Internal standard responses were outside of acceptance limits for the following samples: 460-89956-11 MS, 460-89956-11 MSD. The samples shows evidence of matrix interference.

Refer to the QC report for details.

Samples SB-1(0-2) (460-89956-1)[2X], SB-2(0-2) (460-89956-7)[2X], SB-3(0-2) (460-89956-11)[2X], SB-4(0-2) (460-89956-13)[2X] and SB-7(0-2) (460-89956-16)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

#### **METALS**

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for Metals in accordance with EPA SW-846 6010C. The samples were prepared on 02/04/2015 and 02/05/2015 and analyzed on 02/04/2015, 02/05/2015 and 02/06/2015.

Aluminum and Calcium failed the recovery criteria high for the MS of sample 460-89956-14 in batch 460-279664.

Antimony and Calcium failed the recovery criteria low for the MS of sample 460-89956-15 in batch 460-279947. Aluminum, Iron and Manganese failed the recovery criteria high.

Refer to the QC report for details.

Samples SB-1(0-2) (460-89956-1)[4X], SB-1(11-13) (460-89956-2)[4X], SB-5(0-2) (460-89956-3)[4X], SB-5(11-13) (460-89956-4)[4X], SB-9(0-2) (460-89956-5)[4X], SB-9(11-13) (460-89956-6)[20X], SB-2(0-2) (460-89956-7)[4X], SB-2(11-13) (460-89956-8)[4X], SB-10(0-2) (460-89956-9)[4X], SB-10(11-13) (460-89956-10)[10X], SB-10(11-13) (460-89956-10)[4X], SB-3(0-2) (460-89956-11)[4X], SB-3(11-13) (460-89956-12)[4X], SB-4(0-2) (460-89956-13)[4X], SB-4(11-13) (460-89956-14)[4X], SB-4D(11-13) (460-89956-15)[4X], SB-7(0-2)

(460-89956-16)[4X], SB-7(11-13) (460-89956-17)[4X], SB-8(0-2) (460-89956-18)[4X], SB-8(11-13) (460-89956-19)[4X], SB-6(0-2) (460-89956-20)[4X], SB-6(11-13) (460-89956-21)[20X] and SB-6(11-13) (460-89956-21)[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample was diluted due to the nature of the sample matrix (high Calcium, Magnesium): SB-9(11-13) (460-89956-6). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the Metals analysis.

All other quality control parameters were within the acceptance limits.

#### **TOTAL MERCURY**

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for total mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared and analyzed on 02/03/2015 and 02/05/2015.

No difficulties were encountered during the Hg analysis.

All quality control parameters were within the acceptance limits.

#### **PERCENT SOLIDS/PERCENT MOISTURE**

Samples SB-1(0-2) (460-89956-1), SB-1(11-13) (460-89956-2), SB-5(0-2) (460-89956-3), SB-5(11-13) (460-89956-4), SB-9(0-2) (460-89956-5), SB-9(11-13) (460-89956-6), SB-2(0-2) (460-89956-7), SB-2(11-13) (460-89956-8), SB-10(0-2) (460-89956-9), SB-10(11-13) (460-89956-10), SB-3(0-2) (460-89956-11), SB-3(11-13) (460-89956-12), SB-4(0-2) (460-89956-13), SB-4(11-13) (460-89956-14), SB-4D(11-13) (460-89956-15), SB-7(0-2) (460-89956-16), SB-7(11-13) (460-89956-17), SB-8(0-2) (460-89956-18), SB-8(11-13) (460-89956-19), SB-6(0-2) (460-89956-20) and SB-6(11-13) (460-89956-21) were analyzed for percent solids/percent moisture in accordance with EPA Method CLPISM01.2 (Exhibit D) Modified. The samples were analyzed on 02/03/2015.

The sample duplicate precision for the following sample associated with batch 279345 was outside control limits: 460-89956-12 DU.

Refer to the QC report for details.

No other difficulties were encountered during the %solids/moisture analysis.

All other quality control parameters were within the acceptance limits.

## DATA REPORTING QUALIFIERS

Client: FPM Group Limited

Job Number: 460-89956-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	LCS or LCSD exceeds the control limits
	*	Surrogate exceeds the control limit
	B	The analyte was found in an associated blank, as well as in the sample.
	N	This flag indicates the presumptive evidence of a compound.
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	ISTD response or retention time outside acceptable limits
	*	LCS or LCSD exceeds the control limits
	*	MS or MSD exceeds the control limits
	*	Surrogate exceeds the control limit
	A	The tentatively identified compound is a suspected aldol-condensation product.
	N	This flag indicates the presumptive evidence of a compound.
GC Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	MS or MSD exceeds the control limits
	*	Surrogate exceeds the control limit
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

## DATA REPORTING QUALIFIERS

Client: FPM Group Limited

Job Number: 460-89956-1

Lab Section	Qualifier	Description
Metals	U	Indicates analyzed for but not detected.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	J	Sample result is greater than the MDL but below the CRDL
	N	Spiked sample recovery is not within control limits.
General Chemistry	*	Duplicate analysis not within control limits.

## Login Sample Receipt Checklist

Client: FPM Group Limited

Job Number: 460-89956-1

**Login Number: 89956**  
**List Number: 1**  
**Creator: Rivera, Kenneth**

**List Source: TestAmerica Edison**

Question	Answer	Comment
Radioactivity wasn't checked or is <= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.5°C, 3.9°C, IR #5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

## ANALYTICAL REPORT

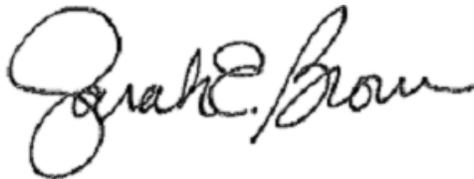

Job Number: 460-90455-1

Job Description: 126th Street

For:

FPM Group Limited  
909 Marconi Avenue  
Ronkonkoma, NY 11779

Attention: George Holmes

Approved for release.  
Sarah E Brown  
Project Management Assistant II  
2/25/2015 4:03 PM

---

Designee for  
Melissa Haas, Project Manager I  
777 New Durham Road, Edison, NJ, 08817  
(203)944-1310  
melissa.haas@testamericainc.com  
02/25/2015

The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Edison Project Manager.

TestAmerica Edison Certifications and Approvals: Connecticut: CTDOH #PH-0200, New Jersey: NJDEP (NELAP) #12028, New York: NYDOH (NELAP) #11452, NYDOH (ELAP) #11452, Pennsylvania: PADEP (NELAP) 68-00522 and Rhode Island: RIDOH LAO00132

Melissa Haas

## CASE NARRATIVE

**Client: FPM Group Limited**

**Project: 126th Street**

**Report Number: 460-90455-1**

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 2/11/2015 5:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.1° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

### **VOLATILE ORGANICS**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4), MW-4 (460-90455-5) and TB0210 (460-90455-6) were analyzed for Volatile organics in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 02/17/2015 and 02/18/2015.

The laboratory control sample (LCS) for batches 281717 and 281872 recovered outside control limits for the following analyte: 1,2,3-Trichlorobenzene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

1,2,3-Trichlorobenzene failed the recovery criteria high for the MSD of sample 460-90417-2 in batch 460-281717. 1,2,3-Trichlorobenzene exceeded the RPD limit.

1,2,3-Trichlorobenzene exceeded the RPD limit for the MSD of sample 460-90272-1 in batch 460-281872.

The continuing calibration verification (CCV) associated with batch 281872 recovered outside control limits for the following analytes: Methyl acetate (biased low), 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene. The low level CCV was analyzed at RL and affected analytes was detected. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 281717 recovered outside control limits for the following analytes: Chloroethane (biased low), 1,2,3-Trichlorobenzene, Dichlorodifluoromethane, Methyl acetate (biased low). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Refer to the QC report for details.

Sample MW-3 (460-90455-4)[2X] required dilution prior to analysis to bring the concentration of target analytes within the calibration range. Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the Volatile organics analysis.

All other quality control parameters were within the acceptance limits.

### **SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for semivolatile organic compounds (GC/MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on

02/13/2015 and analyzed on 02/18/2015.

The laboratory control sample (LCS) for batch 281469 recovered outside control limits for the following analytes: Hexachlorobenzene, Caprolactam. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

3,3'-Dichlorobenzidine failed the recovery criteria low for the MS and MSD of sample 460-90460-1 in batch 460-281851. Several analytes failed the recovery criteria high for the MS and MSD.

Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained two surrogate compounds (2,4,6-Tribromophenol, Terphenyl-d14) outside limits: MW-1 (460-90455-1). The following samples contained one surrogate compound (2,4,6-Tribromophenol) outside limits: MW-3 (460-90455-4), MW-4 (460-90455-5). The following sample contained one surrogate compound (Terphenyl-d14) outside limits: 460-90460-1 MSD. These results have been reported and qualified.

The continuing calibration verification (CCV) analyzed in batch 281851 was outside the method criteria for the following analytes: 2,2'-oxybis[1-chloropropane], 2,4,6-Tribromophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 281963 was outside the method criteria for the following analytes: N-Nitrosodi-n-propylamine, 2-Nitroaniline, 2,4,6-Tribromophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

#### **PESTICIDES**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for Pesticides in accordance with EPA SW-846 Methods 8081B. The samples were prepared on 02/13/2015 and analyzed on 02/14/2015.

No difficulties were encountered during the pesticides analysis.

All quality control parameters were within the acceptance limits.

#### **POLYCHLORINATED BIPHENYLS (PCBS)**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 02/13/2015 and analyzed on 02/14/2015.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

#### **METALS**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for Metals in accordance with EPA SW-846 6010C. The samples were prepared on 02/15/2015 and analyzed on 02/17/2015.

No difficulties were encountered during the Metals analysis.

All quality control parameters were within the acceptance limits.

#### **METALS**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for Metals in accordance with EPA SW-846 6010C. The samples were prepared on 02/13/2015 and analyzed on 02/15/2015 and 02/17/2015.

Samples MW-1 (460-90455-1)[5X], MW-1D (460-90455-2)[5X], MW-2 (460-90455-3)[5X], MW-3 (460-90455-4)[5X] and MW-4 (460-90455-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the Metals analysis.

All quality control parameters were within the acceptance limits.

**DISSOLVED MERCURY**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for dissolved mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 02/17/2015.

No difficulties were encountered during the dissolved mercury analysis.

All quality control parameters were within the acceptance limits.

**TOTAL MERCURY**

Samples MW-1 (460-90455-1), MW-1D (460-90455-2), MW-2 (460-90455-3), MW-3 (460-90455-4) and MW-4 (460-90455-5) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 02/13/2015.

No difficulties were encountered during the Hg analysis.

All quality control parameters were within the acceptance limits.

## DATA REPORTING QUALIFIERS

Client: FPM Group Limited

Job Number: 460-90455-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	*	Duplicate RPD exceeds control limits
	J	Indicates an estimated value.
	*	LCS or LCSD exceeds the control limits
	*	MS or MSD exceeds the control limits
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	LCS or LCSD exceeds the control limits
	*	MS or MSD exceeds the control limits
	*	Surrogate exceeds the control limit
GC Semi VOA		
	U	Analyzed for but not detected.
	*	MS or MSD exceeds the control limits
Metals		
	U	Indicates analyzed for but not detected.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	J	Sample result is greater than the MDL but below the CRDL

Order No.: C1502009

TEL: (631) 737-6200

FAX

RE: 126th Street

Dear George Holmes:

Centek Laboratories, LLC received 7 sample(s) on 2/3/2015 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Centek Laboratories performs all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services. Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

William Dobbins  
Lead Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable

for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages. ELAP does not offer certification for the following parameters by this method at present time, they are: 4-ethyltoluene, ethyl acetate, propylene, 4-PCH, sulfur derived and silicon series compounds.

## Centek Laboratories, LLC Terms and Conditions

### Sample Submission

All samples sent to Centek Laboratories should be accompanied by our Request for Analysis Form or Chain of Custody Form. A Chain of Custody will be provided with each order shipped for all sampling events, or if needed, one is available at our website [www.CentekLabs.com](http://www.CentekLabs.com). Samples received after 3:00pm are considered to be a part of the next day's business.

### Sample Media

Samples can be collected in an canister or a Tedlar bag. Depending on your analytical needs, Centek Laboratories may receive a bulk, liquid, soil or other matrix sample for headspace analysis.

### Blanks

Every sample is run with a surrogate or tracer compound at a pre-established concentration. The surrogate compound run with each sample is used as a standard to measure the performance of each run of the instrument. If required, a Minican can be provided containing nitrogen to be run as a trip blank with your samples.

### Sampling Equipment

Centek Laboratories will be happy to provide the canisters to carry-out your sampling event at no charge. The necessary accessories, such as regulators, tubing or personal sampling belts, are also provided to meet your sampling needs. The customer is responsible for all shipping charges to the client's destination and return shipping to the laboratory. Client assumes all responsibility for lost, stolen and any damages of equipment.

### Turn Around time (TAT)

Centek Laboratories will provide results to its clients in one business-week by 6:00pm EST after receipt of samples. For example, if samples are received on a Monday they are due on the following Monday by 6:00pm EST. Results are faxed or emailed to the requested location indicated on the Chain of Custody. Non-routine analysis may require more than the one business-week turnaround time. Please confirm non-routine sample turnaround times.

### Reporting

Results are emailed or faxed at no additional charge. A hard copy of the result report is mailed within 24 hours of the faxing or emailing of your results. Cat "B" like packages are within 3-4 weeks from time of analysis. Standard Electronic Disk Deliverables (EDD) is also available at no additional charge.

### Payment Terms

Payment for all purchases shall be due within 30 days from date of invoice. The client agrees to pay a finance charge of 1.5% per month on the overdue balance and cost of collection, including attorney fees, if collection proceedings are necessary. You must have a completed credit application on file to extend credit. Purchase orders or checks information must be submitted

for us to release results

#### Rush Turnaround Samples

Expedited turn around times is available. Please confirm rush turnaround times with Client Services before submitting samples.

#### Applicable Surcharges for Rush Turnaround Samples:

Same day TAT = 200%

Next business day TAT by Noon = 150%

Next business day TAT by 6:00pm = 100%

Second business day TAT by 6:00pm = 75%

Third business day TAT by 6:00pm = 50%

Fourth business day TAT by 6:00pm = 35%

Fifth business day = Standard

#### Statement of Confidentiality

Centek Laboratories, LLC is aware of the importance of the confidentiality of results to many of our clients. Your name and data will be held in the strictest of confidence. We will not accept business that may constitute a conflict of interest. We commonly sign Confidential Nondisclosure Agreements with clients prior to beginning work. All research, results and reports will be kept strictly confidential. Secrecy Agreements and Disclosure Statements will be signed for the client if so specified. Results will be provided only to the addressee specified on the Chain of Custody Form submitted with the samples unless law requires release. Written permission is required from the addressee to release results to any other party.

#### Limitation on Liability

Centek Laboratories, LLC warrants the test results to be accurate to the methodology and sample type for each sample submitted to Centek Laboratories, LLC. In no event shall Centek Laboratories, LLC be liable for direct, indirect, special, punitive, incidental, exemplary or consequential damages, or any damages whatsoever, even if Centek Laboratories, LLC has been previously advised of the possibility of such damages whether in an action under contract, negligence, or any other theory, arising out of or in connection with the use, inability to use or performance of the information, services, products and materials available from the laboratory or this site. These limitations shall apply notwithstanding any failure of essential purpose of any limited remedy. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, the above limitations may not apply to you. This is a comprehensive limitation of liability that applies to all damages of any kind, including (without limitation) compensatory, direct, indirect or consequential damages, loss of data, income or profit and or loss of or damage to property and claims of third parties.

**Lab Order:** C1502009

**CASE NARRATIVE**

---

Samples were analyzed using the methods outlined in the following references:

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999 and Centek Laboratories, LLC SOP TS-80:

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the corrective action report(s). All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

**NYSDEC ASP samples:**

Canisters should be evacuated to a reading of less than or equal to 50 millitorr prior to shipment to sampling personnel. The vacuum in the canister will be field checked prior to sampling, and must read 28" of Hg ( $\pm 2''$ , vacuum, absolute) before a sample can be collected. After the sample has been collected, the pressure of the canister will be read and recorded again, and must be 5" of Hg ( $\pm 1''$ , vacuum, absolute) for the sample to be valid. Once received at the laboratory, the canister vacuum should be confirmed to be 5" of Hg,  $\pm 1''$ . Please record and report the pressure/vacuum of received canisters on the sample receipt paperwork. A pressure/vacuum reading should also be taken just prior to the withdrawal of sample from the canister, and recorded on the sample preparation log sheet. All regulators are calibrated to meet these requirements before they leave the laboratory. However, due to environmental conditions and use of the equipment Centek can not guarantee that this criteria can always be achieved.
