CERTIFICATION

I, Kris Almskog, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 69-28 Queens Blvd, Woodside, NY Site (OER Project No. 15EHAN415Q). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional

Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in the Woodside section of Queens, New York and is identified as Block 2432 and Lots 23, 26, 34, and 37 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 13,773-square feet and is bounded by Queens Blvd to the north; residential buildings, a day school, and warehouses to the south, 70th Street to the east, and a restaurant and gasoline service station with a car wash and auto repair center to the west. A map of the site boundary is shown in Figure 2.

Currently, the Site is vacant, but was most recently used for sign fabrication, a liquor store, an automotive detailing and modification service, and residential apartments and contains four buildings, three of which contain basements, and a small parking area.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a nine story mixed use commercial residential building. The cellar level will consist of commercial units with high ceilings that extend into the first floor. The first floor will contain two residential lobbies and the second floor will contain a parking garage. The third through ninth floors will contain 76 residential apartments. The cellar and first two floors will be a full build-out to the property boundaries and the residential units will be constructed across approximately 2/3 of the site closest to Queens Blvd. There will be no landscaped areas.

The construction of the cellar level will require excavation to approximately 10 feet below grade from the Queens Blvd sidewalk grade and 14 feet below sidewalk grade for the western elevator pit. Approximately 3,000 tons of soil will be excavated during the redevelopment. The water table is present at a depth of approximately 21 feet below grade, and therefore is not anticipated to be encountered during the redevelopment. Layout of the proposed cellar level site development is presented in Figure 3 and architectural design plans are included as Appendix A.

The current zoning designation is R7X with a C2-3 commercial overlay. The proposed use is consistent with existing zoning for the property.

The existing buildings are pending demolition. The concrete slabs will remain in place until implementation of the Remedial Action Work Plan (RAWP).

Summary of Past Uses of Site and Areas of Concern

A Phase I ESA was completed by PWG in 2015. The following Site history was established based on historic Sanborn maps:

The Site has been developed since at least 1902 with residential and commercial properties. Lots 23, 26, and 34 appear to have been demolished during the widening of Queens Blvd between 1914 and 1932. From 1932-1939 the Site was developed with auto painting and service, wood working, and commercial and residential buildings. From 1951-1980, Lot 23 was utilized for sheet metal manufacturing, Lot 26 for automotive purposes, Lot 34 for dining, and Lot 37 for upholstery and auto parts. Between 1981 and 1993, Lot 23 is identified as motorcycle sales and service while the remaining three lots were utilized for commercial purposes. From 1994-2011, the Site was identified as an auto wash, motorcycle repair shop, sign fabrication, carpet, liquor store, and residential buildings. This remains the current configuration of the vacant Site. The developer of the property purchased Lots 23, 26, and 34 in 2007 and Lot 37 in 2014.

The AOCs identified for this site include:

1. Historic use of the Site included sheet metal manufacturing and automotive repair. Improper handling of automotive chemicals could impact subsurface soils, groundwater, or soil vapor.
2. A floor drain and a sanitary sump were identified in Lots 37 and 26, respectively. Floor drains not connected to the municipal sewer system can act as a conduit to the subsurface. Improper discharges to such floor drains could impact subsurface soils, groundwater, or soil vapor.
3. An FDNY permit listing two tanks in Lot 26 did not identify the location of the tanks (ASTs or USTs) and there is no further documentation indicating the removal of these tanks. There was no other evidence of ASTs or USTs at the Site.

4. A gasoline filling station with Open Spill No. 93-04343 currently undergoing active groundwater remediation is located adjacent to the subject property in the down-gradient direction. Contamination in the form of groundwater or soil vapor could migrate onto the subject property. The gasoline filling station was closed in April 2015.
5. Up-gradient sites have reportedly been utilized for drycleaning and automotive repairs. Drycleaners use various solvents, including tetrachloroethene, and automotive repair shops use degreasers and petroleum based products. Improper handling or disposal of these products can impact soils, groundwater, and soil vapor beneath the site. As these sites are up-gradient of the subject site, groundwater or soil vapor beneath the subject property may be impacted if there are spills at the up-gradient sites.

Summary of the Work Performed under the Remedial Investigation

P.W. Grosser Consulting (PWGC) performed the following scope of work at the Site in March of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performed a geophysical investigation to identify the potential presence of USTs or other anomalies;
3. Installed 9 soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected four groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed seven soil vapor probes around Site perimeter and collected seven samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 39 to 43 feet.

2. Depth to groundwater ranges from 20.59 to 21.13 feet at the Site.
3. Groundwater flow is generally from the northwest to the southeast beneath the Site.
4. Depth to bedrock is greater than 100 feet beneath the Site.
5. The stratigraphy of the site, from the surface down, consists of 0 to 3 feet of historic urban fill underlain by native brown, silty sands. The historic urban fill thickness is approximately 9 feet thick in the area of Lot 23.
6. Soil/fill samples results were compared to New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill results showed trace concentrations of several VOCs and two PCBs, but none above Unrestricted Use SCOs. Several SVOCs consisting of Polycyclic Aromatic Hydrocarbons (PAHs) were detected with benz(a)anthracene (max. of 3,600 µg/kg), benzo(a)pyrene (max. of 3,600 µg/kg), benzo(b)fluoranthene (max. of 4,900 µg/kg), chrysene (max. of 3,400 µg/kg), dibenz(a,h)anthracene (max. of 570 µg/kg), and indeno(1,2,3-cd)pyrene (max. of 2,300 µg/kg) exceeding Restricted Residential Use SCOs within two soil borings in Lot 23. The Pesticides 4,4'-DDT (max. of 0.165 mg/kg), chlordane (max. of 10.6 mg/kg), cis-chlordane (max. of 2.2 mg/kg), and heptachlor (max. of 0.0912 mg/kg) were detected above Unrestricted Use SCOs with chlordane also exceeding Restricted Residential Use SCOs in one shallow sample. Several metals including arsenic (max of 19 mg/kg), copper (max. of 170 mg/kg), lead (max. of 1,000 mg/kg), mercury (max. of 31 mg/kg), and zinc (max. of 790 mg/kg) exceeded Unrestricted Use SCOs. Of these metals, arsenic, lead, and mercury also exceeded Restricted Residential Use SCOs in four of the eighteen soil samples. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.
7. Groundwater sample results from the RI were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Groundwater results showed no PCB in any sample. Trace concentrations of several VOCs and SVOCs were detected, but none exceeded their GQS. Four pesticides were detected in groundwater, but only chlordane (max. of 1.12 µg/L) exceeded its GQS. Several dissolved metals were identified in groundwater, but only manganese (0.989 mg/L), and sodium (max. of 138 mg/L) exceeded their respective GQS.

8. Soil vapor samples collected during the RI were compared to the compounds listed in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples collected during the RI showed low levels of petroleum-related VOCs and low levels of chlorinated VOCs. The total concentration of petroleum-related VOCs (BTEX) ranged from non-detectable concentrations to 68.62 $\mu\text{g}/\text{m}^3$. Highest concentrations were detected for acetone (max. of 118 $\mu\text{g}/\text{m}^3$). The chlorinated VOCs, 1,1,1-trichloroethane (TCA), trichloroethylene (TCE), and carbon tetrachloride were not detected in any of the soil gas samples. Tetrachloroethylene (PCE) was detected in three of the seven soil gas samples with a maximum concentration of 18.4 $\mu\text{g}/\text{m}^3$. Concentrations of the chlorinated VOCs were below the monitoring level ranges established within the NYSDOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

JJ Queens Development, LLC is proceeding through the New York City “E” Designation program to investigate and remediate a 13,773 square foot site located at 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in the Woodside section of Queens, New York. Mixed commercial residential use is proposed for the property. The RI work was performed between March 18, 2015 and March 23, 2015. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY § 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in the Woodside section of Queens, New York and is identified as Block 2432 and Lots 23, 26, 34, and 37 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 13,773-square feet and is bounded by Queens Blvd to the north; residential buildings, a day school, and warehouses to the south, 70th Street to the east, and a restaurant and gasoline service station with a car wash and auto repair center to the west. A map of the site boundary is shown in Figure 2.

Currently, the Site is vacant, but was most recently used for sign fabrication, a liquor store, an automotive detailing and modification service, and residential apartments and contains four buildings, three of which contain basements, and a small parking area.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a nine story mixed use commercial residential building. The cellar level will consist of commercial units with high ceilings that extend into the first floor. The first floor will contain two residential lobbies and the second floor will contain a parking garage. The third through ninth floors will contain 76 residential apartments. The cellar and first two floors will be a full build-out to the property boundaries and the residential units will be constructed across approximately 2/3 of the site closest to Queens Blvd. There will be no landscaped areas.

The construction of the cellar level will require excavation to approximately 10 feet below grade from the Queens Blvd sidewalk grade and 14 feet below sidewalk grade for the western elevator pit. Approximately 3,000 tons of soil will be excavated during the redevelopment. The water table is present at a depth of approximately 21 feet below grade, and therefore is not anticipated to be encountered during the redevelopment. Layout of the proposed cellar level site development is presented in Figure 3 and architectural design plans are included as Appendix A. The current zoning designation is R7X with a C2-3 commercial overlay. The proposed use is consistent with existing zoning for the property.

The existing buildings are pending demolition. The concrete slabs will remain in place until implementation of the Remedial Action Work Plan (RAWP).

1.3 Description of Surrounding Property

The adjoining properties consist of a restaurant and a gasoline service station with a car wash and service center to the west, commercial stores across Queens Blvd to the north, residential homes across 70th Street to the east; and residential buildings, a day school, and warehouses to the south. The general zoning and character of the neighborhood consists of mixed use commercial and residential buildings.

St. Illuminator's Armenian Day School is located adjacent to the southern side of the property and Blessed Virgin Mary Help of Christians School is located approximately 300 feet southeast of the Site. No hospitals, other schools or daycare facilities are located within a 500 foot radius of the Site.

The gasoline station west of the site is listed as a New York State Department of Environmental Conservation (NYSDEC) open spill site (Spill No. 93-04343) that is actively being investigated and remediated. Remediation has included light non-aqueous phase liquid recovery, air sparging and soil vapor extraction, surfactant flooding, chemical injections, and other remedial techniques.

Figure 4 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I ESA was completed by P.W. Grosser Consulting (PWGC) in 2015. The following Site history was established based on historic Sanborn maps: The Site has been developed since at least 1902 with residential and commercial properties. Lots 23, 26, and 34 appear to have been demolished during the widening of Queens Blvd between 1914 and 1932. From 1932-1939 the Site was developed with auto painting and service, wood working, and commercial and residential buildings. From 1951-1980, Lot 23 was utilized for sheet metal manufacturing, Lot 26 for automotive purposes, Lot 34 for dining, and Lot 37 for upholstery and auto parts. Between 1981 and 1993, Lot 23 is identified as motorcycle sales and service while the remaining three lots were utilized for commercial purposes. From 1994-2011, the Site was identified as an auto wash, motorcycle repair shop, sign fabrication, carpet, liquor store, and residential buildings. This remains the current configuration of the vacant Site. The developer of the property purchased Lots 23, 26, and 34 in 2007 and Lot 37 in 2014.

2.2 Previous Investigations

PWGC was provided with the text of a July 2007 Phase I ESA prepared by Advanced Cleanup Technologies for Lots 23, 26, and 34. According to the report, identified Recognized Environmental Conditions (RECs) consisted of suspect asbestos-containing material located at the Site, historic auto and motorcycle repair facilities listed at the Site, a hazardous materials “E” designation for the Site, and an active gasoline spill in the vicinity of the subject Site. The Phase I ESA recommended the collection of soil and groundwater samples to evaluate subsurface conditions due to the historical use of the site and the nearby gasoline spill.

A limited Phase II ESA was performed by Long Island Analytical Laboratories in August 2007. Four soil samples were collected from four soil borings conducted in Lots 23 and 26 and analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). One sample contained elevated concentrations of SVOCs.

2.3 Site Inspection

A site inspection was conducted by Miss Jennifer Lewis of PWGC on March 9, 2015. Weather conditions during the inspection were mostly sunny with a temperature of

approximately 45° Fahrenheit. Sidewalks and landscaped portions of the property were partially or completely covered with snow.

The site inspection consisted of an inspection of the interior of each of the buildings, the exterior sections of the four lots, and the exterior of the neighboring properties. Inaccessible portions of the lots include the following: residential apartments located on the second story of Lot 26, a residential apartment on the first floor of Lot 37, and a store front that appeared to be vacant on the first floor of Lot 37.

The inspection identified the following:

- Chemical storage at the site consisted of several cans of paints, cleaners, and other similar household/business supplies.
- Within the basement of the 69-30 Queens Blvd property (Lot 26), a FDNY permit dated 1964 indicated the presence of two 275 gallon tanks. The permit did not indicate if the tanks were aboveground or underground and there was no evidence that the tanks were currently present at the site.
- One floor drain was observed in the 46-04 70th Street building (Lot 37). It was not evident if the drain was connected to the municipal sewer system. A sanitary trap was also observed in the 69-30 Queens Blvd basement (Lot 26).

2.4 Areas of Concern

The AOCs identified for this site include:

1. Historic uses at the Site included sheet metal manufacturing and automotive repair. Improper handling of automotive chemicals could impact subsurface soils, groundwater, or soil vapor.
2. A floor drain and a sanitary sump were identified in Lots 37 and 26, respectively. Floor drains not connected to the municipal sewer system can act as a conduit to the subsurface. Improper discharges to such floor drains could impact subsurface soils, groundwater, or soil vapor.
3. An FDNY permit listing two tanks in lot 26 did not identify the location of the tanks (ASTs or USTs) and there is no further documentation indicating the

removal of these tanks. There was no other evidence of ASTs or USTs at the site.

4. A gasoline filling station with an Open Spill No. 93-04343 currently undergoing active groundwater remediation is located adjacent to the subject property in the down-gradient direction. Contamination in the form of groundwater or soil vapor could migrate onto the subject property. The gasoline filling station was closed in April 2015.
5. Up-gradient sites have reportedly been utilized for drycleaning and automotive repairs. Drycleaners use various solvents, including tetrachloroethene, and automotive repair shops use degreasers and petroleum based products. Improper handling or disposal of these products can impact soils, groundwater, and soil vapor beneath the site. As these sites are up-gradient of the subject site, groundwater or soil vapor beneath the subject property may be impacted if there are spills at the up-gradient sites.

The Phase 1 Report is presented in Appendix B.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kris Almskog.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

PWGC performed the following scope of work at the Site in March of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performed a geophysical investigation to identify the potential presence of USTs or other anomalies;
3. Installed 9 soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected four groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed seven soil vapor probes around Site perimeter and collected seven samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical survey was conducted on March 19, 2015. The survey was conducted with Geophysical Survey Systems, Inc. SIR-3000 cart-mounted ground penetrating radar unit with a 400 Mhz antenna, a Radiodetection RD7000 precision utility locator, and a Fisher M-Scope TW-6 pipe and cable locator. The geophysical survey identified a flat, long anomaly in Lot 23 near the street at a depth of approximately 8 feet. Based upon the size and layout of the anomaly, it may be a basement slab associated with the historic building demolished during the widening of Queens Blvd during the early 20th century.

Another anomaly was identified in the parking area of Lot 34. An electric utility line was traced from the shed in the southeast corner of the lot towards the center of the lot where a 2 foot diameter anomaly was identified 1 foot below grade surface as shown on Figure 5. This anomaly appeared to be consistent with a buried manhole cover or potentially a hydraulic lift. Soil boring and monitoring well SB005/GW002 were installed adjacent to this structure.

Other than the two anomalies identified above, no other significant observances were made during the geophysical. A copy of the geophysical report is included as Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of nine soil borings were installed throughout the site that were biased towards areas of concern identified in the Phase I ESA and the geophysical investigation. Borings were installed with a Geoprobe 420M or a Geoprobe 6610DT depending upon the location of the boring. Soil samples were collected continuously and screened with a photoionization detector (PID) for the presence of volatile organic compounds (VOCs). PID readings were less than 0.3 parts per million (ppm) in each of the soil borings and there was no visual or olfactory evidence of impact to the soil. Boring logs were prepared by a geologist and are attached in Appendix D. A map showing the location of soil borings and monitor wells is shown in Figure 5.

Soil samples were collected from the shallowest 2 foot interval from each boring and the deepest sample was collected from the following intervals: the 2 foot interval above the water table when collected in a basement, from 14 to 16 feet below sidewalk grade at SB008 in the vicinity of the proposed elevator pit, or from 10 to 12 feet in all other locations to represent soils that will be left in place following the redevelopment. Due to differences in boring location elevations throughout the property, two sets of depths are provided in the table below: the depth below the local grade and the depth below the sidewalk on Queens Blvd grade.

The details of the borings and monitoring wells are as described below (the first depth is the local grade and the second depth is the sidewalk grade):

Boring ID	Location	Rationale	Samples Collected
SB001 / GW001	Lot 37, basement	Near floor drain	(0-2' / 9-11') and (6-8' / 15-17')
SB002	Lot 37, basement	General soil characterization	(0-2' / 9-11') and (7-9' / 16-18')
SB003	Lot 34, basement	General soil characterization	(6-8' / 15-17') and (9-11' / 18-20')
SB004	Lot 37, unpaved backyard	General soil characterization	(0-2' / 5-7') and (9-11' / 18-20')
SB005 / GW002	Lot 34, parking area	Near metallic anomaly	(0-2' / 0-2') and (10-12' / 10-12')
SB006 / GW003	Lot 23, rear of warehouse	Near spray room	(0-2' / 0-2') and (10-12' / 10-12')
SB007	Lot 23, center of warehouse	General soil characterization	(0-2' / 0-2') and (10-12' / 10-12')
SB008 / GW004	Lot 23, office area	Near western elevator pit	(0-2' / 0-2') and (14-16' / 14-16')

Boring ID	Location	Rationale	Samples Collected
SB009	Lot 26, basement	Near sanitary trap	(0-2' / 7-9') and (9-11' / 16-18')

Groundwater Monitoring Well Construction

Groundwater was encountered at a depth of 20 feet below sidewalk level (from Queens Blvd). Four of the soil borings were converted to monitoring wells. Monitoring wells were constructed of 2 inch diameter PVC pipe with a 10 foot, 0.010 slot screened section and riser to grade. The screens were installed to a depth where there would be approximately 5 feet of screen submerged beneath the water table. Monitoring well construction logs are included as Appendix E.

Monitor well locations are shown in Figure 5.

Survey

The location of borings and monitoring wells were measured from the property lines. PWGC performed a survey of the elevation of the monitoring wells on March 23, 2015 relative to an arbitrary datum. The measuring point on each well was marked for future reference.

Water Level Measurement

Depth to water measurements were collected with a Solinst Interface Probe from each groundwater monitoring well prior to sampling. The depth to water readings were converted to groundwater elevations and the information was used to generate site specific groundwater contours. Free product was not observed in any of the monitoring wells.

Based upon the results of the well gauging and groundwater contour maps, groundwater beneath the site flows toward the southeast. Based on United States Geological Survey (USGS) groundwater elevation maps, the site specific groundwater flow direction is consistent with the regional groundwater flow direction.

Water level data is included in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area

history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Sampling location rationale is detailed in Section 4.2, Drilling and Logging. Grab samples were collected from each of the borings and placed in laboratory supplied bottleware and labeled with the appropriate boring ID and sample depth. Samples were then placed on ice in a cooler and delivered to Alpha Analytical Laboratories, a New York State Department of Health (NYSDOH) Environmental Laboratory Accredited Program (ELAP) certified laboratory, under proper chain of custody procedures.

Eighteen soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2 through 5. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below. A blind duplicate soil sample was collected from SB005 10 to 12 feet. All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals.

Groundwater Sampling

Four groundwater samples were collected for chemical analysis during this RI. Groundwater samples were collected from the monitoring wells utilizing dedicated polyethylene tubing and a peristaltic pump. The groundwater samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice, and submitted to Alpha Analytical for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 9. Sampling logs with information on purging and sampling of groundwater monitor wells are

included in Appendix F. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Seven soil vapor probes were installed and seven soil vapor samples were collected for chemical analysis during this RI. Six of the sampling locations were collected immediately beneath the concrete slab in the existing buildings. The remaining sample location, SV003, was collected 10 feet below local grade (approximately 12 feet below sidewalk grade on Queens Blvd). The soil vapor probes were installed using Geoprobe™ Model series, which are constructed of a 6-inch length of double woven stainless steel wire. Each probe was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the probe to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface. Sub-slab soil vapor locations were biased towards areas of competent concrete with little to no cracks.

Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, an enclosure was placed over each sampling location and sealed to the surface with hydrated bentonite. The seal was then tested by enriching the air space within the enclosure with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector); care was taken to not purge an excessive amount of air during the tracer gas testing. The tracer gas test procedure was employed at all soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 2.7-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the vapor implants. Prior to initiating sample collection, sample identification, canister number, date, and start time were recorded on tags attached to each canister and in a field note book. Sampling then proceeded by fully opening the flow

control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx. 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet. Samples were submitted to Alpha Analytical for laboratory analysis of VOCs EPA Method TO-15.

Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10. Soil vapor sampling logs are included in Appendix G. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Alpha Analytical Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Alpha Analytical Laboratories
Chemical Analytical Methods	Soil and groundwater analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 10, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the site consists of a historic fill material layer approximately 1 to 3 feet thick underlain by native soils consisting of brown, silty sands. In three borings located along the southern section of the site, historic fill was observed to approximately 10 feet below sidewalk grade. An anomaly consistent with a concrete slab was identified in Lot 23 at a depth of approximately 8 feet below sidewalk grade via soil borings and the geophysical survey. No confining units were encountered in the borings.

Hydrogeology

A table of water level data for all monitor wells is included in Table 1. The average depth to groundwater from sidewalk grade along Queens Blvd is 20.78 feet and the range in depth is 20.59 feet to 21.13 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 6. Groundwater flow is from the northwest to the southeast.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Figure 7 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use and Restricted Residential Soil Cleanup Objectives (SCOs).

No VOCs were identified at concentrations greater than Unrestricted Use SCOs. Chlorinated solvents were non-detect in each of the samples. Petroleum compounds were less than Unrestricted Use SCOs and consisted of minor detections of toluene and naphthalene (max concentration of 1.8 ppm).

SVOCs were identified at concentrations exceeding Unrestricted Use SCOs in two soil borings, both located in the southern section of Lot 23. The SVOCs exceeding SCOs consisted of the polycyclic aromatic hydrocarbons (PAHs), most of which also exceeded the Restricted Residential SCOs. The highest concentration of a PAH in exceedance of SCOs was 4.9 ppm and total SVOCs ranged from 0 ppm to 42.82 ppm (SB006 - 6 to 8 feet). PAH exceedances may be attributed to the historic fill observed in these two borings to approximately 10 feet below grade.

Metals were detected at concentrations exceeding Unrestricted Use SCOs in six of the eighteen soil samples. Exceedances were limited to the shallow samples in SB004, SB005, and SB008, in the shallow and deeper samples in SB006, and in the deeper sample in SB007. Arsenic exceeded Restricted Residential SCOs in three samples (max concentration of 19 ppm); one sample was the shallow sample collected from the landscaped area of Lot 37 and the other two were in deeper samples. Lead exceeded Restricted Residential in three of eighteen samples (max concentration of 1,000 ppm); two samples were shallow samples, including the landscaped area of Lot 37, and one sample was a deeper sample in the warehouse of Lot 23 (SB006) which contained the highest concentration. Mercury exceeded Restricted Residential SCOs in two samples (max concentration of 31 ppm); one sample was the shallow sample collected from the landscaped area of Lot 37 and the other was the deeper sample in the warehouse of Lot 23 (SB006). Historic fill in SB006 was observed up to 10 feet below grade. Copper, Lead, Mercury, and Zinc also exceeded Unrestricted Use SCOs, but did not exceed Restricted Residential SCOs, excepted as noted above.

No PCBs were identified at concentrations exceeding Unrestricted Use SCOs in any of the samples.

Pesticides were detected at concentrations exceeding Unrestricted Use SCOs in four of the eighteen soil samples. Three of the samples were shallow soil samples with the highest concentrations detected in SB004 which was the landscaped area in lot 37. The shallow sample in SB004 also contained chlordane at a concentration (10.6 ppm) greater than Restricted Residential SCOs. The deeper sample collected at these three borings, including SB004, was non-detect for each pesticide indicating that there has been little movement of the contaminants through the soil. The fourth sample (SB009 – 9 to 11 feet [16 to 18 feet below sidewalk grade]) contained a concentration of chlordane exceeding Unrestricted Use SCOs, but significantly lower than its Restricted Residential SCO.

Concentrations of metals and pesticides observed in the shallow sample of SB004 are likely attributable to general usage of landscaping chemicals and historic fill, but is not indicative of a source area. Concentrations of SVOCs and metals observed in the southern portion of the site are likely attributable to the presence of historic fill material. The widening of Queens Blvd in the early part of the 20th century, which resulted in the demolition of the properties on the northern part of the site, may attribute to the differences in soil quality observed in the north and south parts of the site.

The soil boring and groundwater monitoring well installed in the vicinity of the metallic anomaly identified in Lot 34 did not reveal subsurface impacts related to use of a hydraulic lift.

5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 5 through 9. Exceedence of applicable groundwater standards are shown.

Figure 8 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

There were no VOCs that exceeded GA groundwater standards. With the exception of acetone, the highest concentration observed of a VOC in the groundwater was 4.6 parts per billion (ppb). An estimated concentration of PCE (0.44 ppb) was identified in one groundwater sample well below its GA standard; other chlorinated compounds were either not detected or detected below GA groundwater standards.

There were also no SVOCs that exceeded GA groundwater standards indicating that the SVOCs observed in the soil are not significantly impacting the groundwater quality. The highest detected concentration of an SVOC in the groundwater was an estimated concentration of 1.9 ppb.

Trace metals sodium and manganese were identified in exceedence of GA groundwater standards in each of the dissolved groundwater samples. Detections of these trace metals is typical of the region. Toxic metals did not exceed GA groundwater standards. Mercury was non-detect in each of the dissolved groundwater samples. This indicates that elevated concentrations of mercury, lead, and arsenic identified in the soils does not appear to be significantly impacting groundwater quality beneath the site.

PCBs were non-detect in each of the groundwater samples.

One pesticide, chlordane, was detected at concentrations exceeding GA groundwater standards in two samples. Chlordane was also observed in shallow and deep soil samples in the landscaped area of the site and may be affecting the groundwater quality.

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 10.

Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

Several detectable concentrations of VOCs were identified at low concentrations in the seven soil vapor samples. Petroleum compounds, specifically BTEX, were identified in each of the soil vapor samples except for SV005 which is adjacent to the gasoline station. BTEX concentrations ranged from non-detect in SV005 to 68.62 $\mu\text{g}/\text{m}^3$ in SV003, which is the soil vapor sample collected 10 feet below local grade (14 feet below sidewalk grade along Queens Blvd). The three soil vapor samples collected in Lot 23 which is closest to the gasoline service station contained BTEX concentrations ranging between non-detect and 5.65 $\mu\text{g}/\text{m}^3$. Chlorinated solvents were also identified in several soil vapor samples. PCE ranged from non-detect to 18.4 $\mu\text{g}/\text{m}^3$, while TCE, DCE, VC, and carbon tetrachloride were non-detect. Based upon the contaminant concentrations observed in the soil vapor, there does not appear to be a significant soil vapor threat.

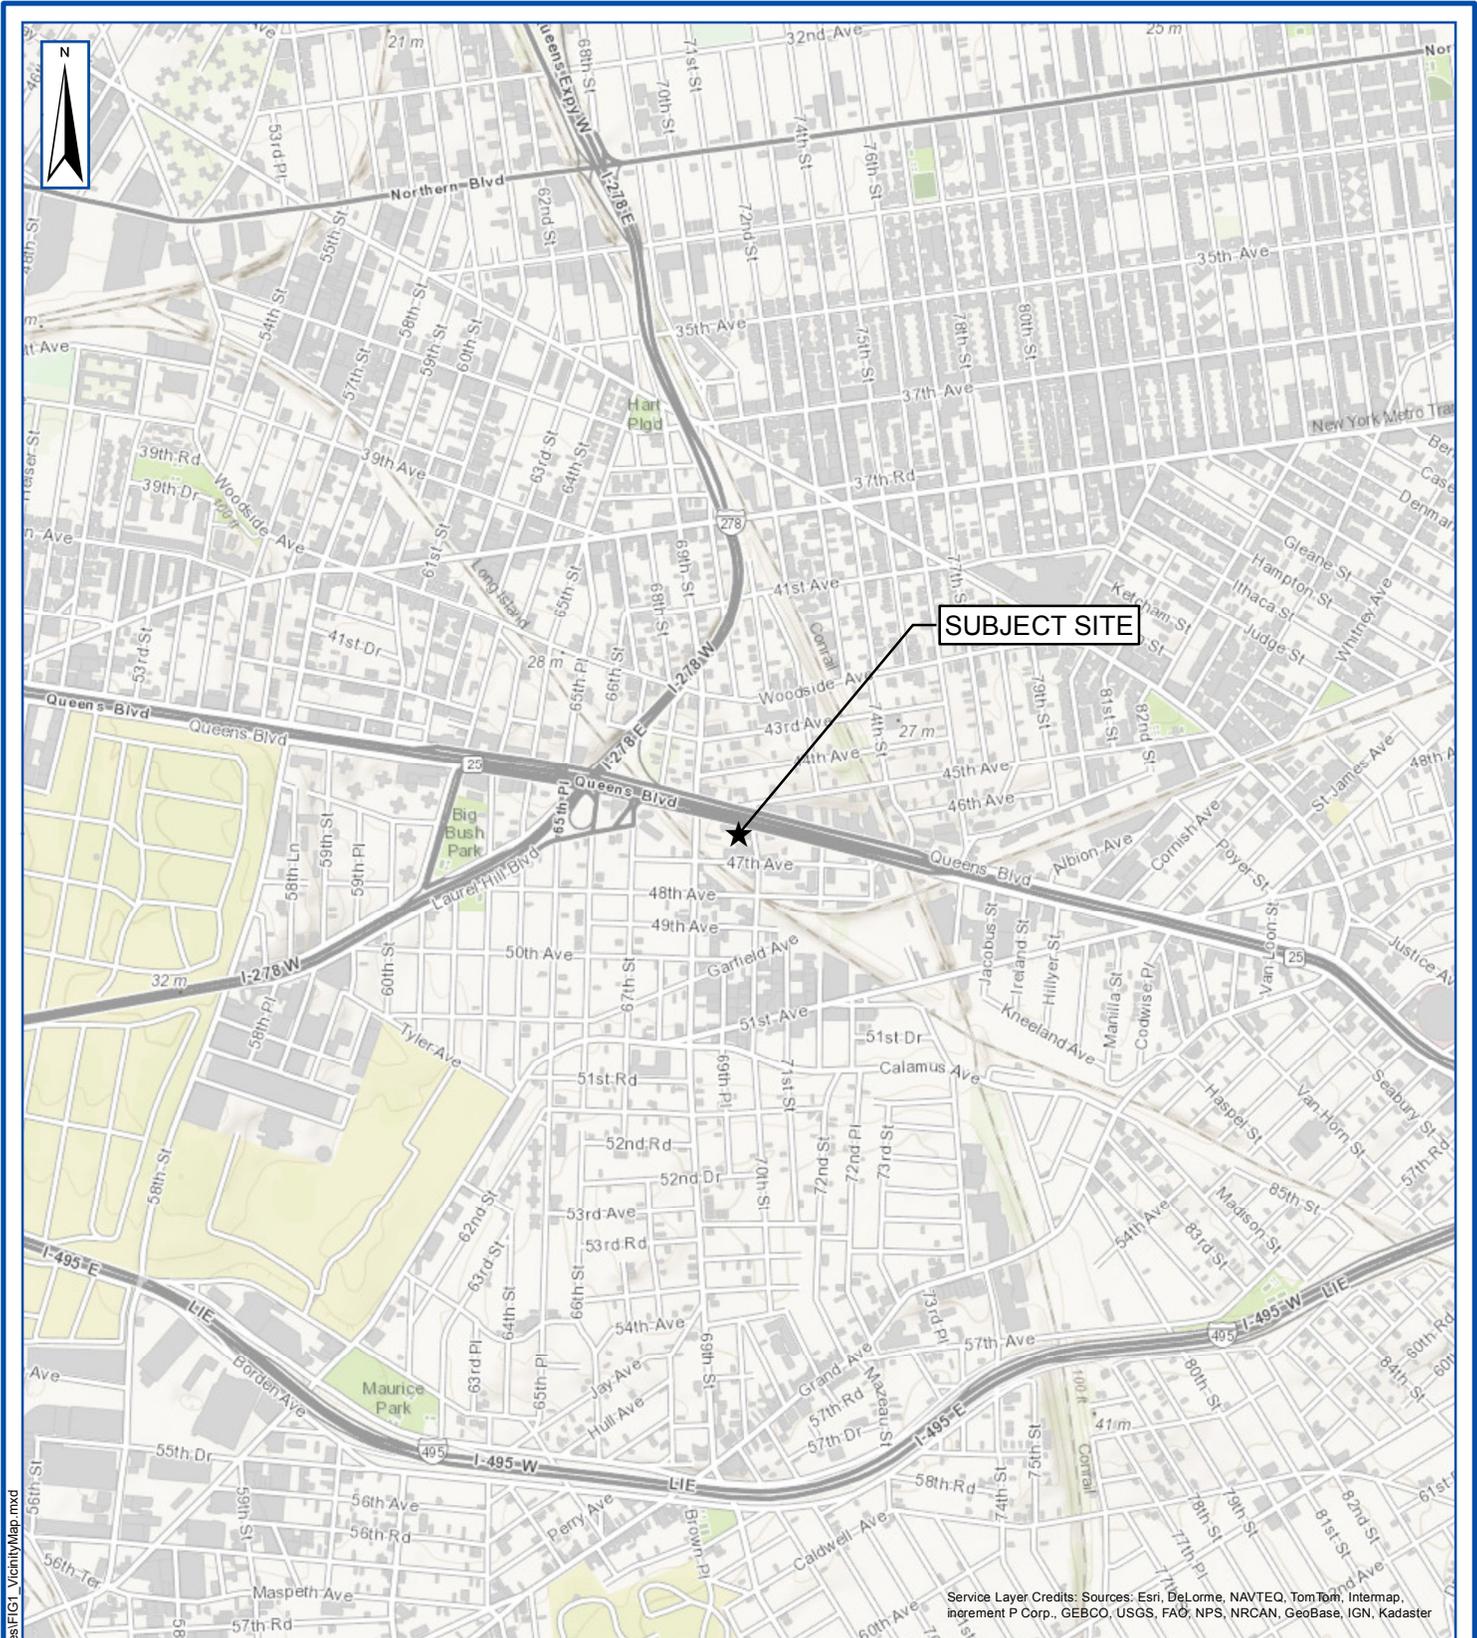

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Notes:

(1) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Unrestricted Use of Soil Cleanup Objective Table 375-6.8a 12/06

(2) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Restricted Residential Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.

* Sidewalk grade is taken from the sidewalk located on Queens Blvd adjacent to the buildings. Soil borings were collected from various local grades due to basements and sloping. The blind duplicate sample was split from SB005 10-12'.

SB006 (0-2') - The surrogate recoveries were below the acceptance criteria for 2-fluorophenol (13%) and 2,4,6-tribromophenol (9%); however, re-extraction achieved similar results: 2 a - The SCOs for unrestricted use were capped at a maximum value of 100 ppm. See Technical Support Document (TSD), Section 9.3.

b - For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the Track 1 SCO value.

c - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the department and department of health rural soil survey

e - For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the SCO value.

f - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the department and department of health rural soil survey.

NS - No Standard

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Restricted-Residential Use SCO

Notes:

(1) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Unrestricted Use of Soil Cleanup Objective Table 375-6.8a 12/06

(2) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Restricted Residential Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.

* Sidewalk grade is taken from the sidewalk located on Queens Blvd adjacent to the buildings. Soil borings were collected from various local grades due to basements and sloping of the property.

The blind duplicate sample was split from SB005 10-12'.

c - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the department and department of health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site.

d - The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

e - The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

f - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the department and department of health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

j - This SCO is the lower of the values for mercury (elemental) or mercury (inorganic salts). See TSD Table 5.6-1.

NS - No Standard

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Restricted Residential Use SCO

Notes:

(1) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Unrestricted Use of Soil Cleanup Objective Table 375-6.8a 12/06

(2) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Restricted Residential Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.

* Sidewalk grade is taken from the sidewalk located on Queens Blvd adjacent to the buildings. Soil borings were collected from various local grades due to basements and sloping of the property.

The blind duplicate sample was split from SB005 10-12'.

a - The SCOs for residential, restricted-residential and ecological resources use were capped at a maximum value of 100 ppm. See TSD section 9.3.

b - For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the Track 1 SCO value.

c - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the department and department of health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site.

d - SCO is the sum of endosulfan I, endosulfan II and endosulfan sulfate

f - protection of ecological resources SCOs were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the Department to calculate a protection of ecological resources SCO according to the TSD.

i - This SCO is for the sum of Endosulfan I, endosulfan II, and endosulfan sulfate.

NS - No Standard

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Restricted-Residential Use SCO

Notes:

(1) NYSDEC Ambient Water Quality Standards and Guidance Values 6/1998

NS - No Standard

J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL.

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit. The associated numerical value is the sample quantitation limit.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument

Highlighted values indicate exceedance of the NYSDEC AWQS

Notes:

(1) 6NYCRR Part 703.5 GA Groundwater Quality Standards (GQS) and Guidance Values (GV) 6/1998

* Guidance Value

Screened Interval is measured from sidewalk grade along Queens Blvd.

The blind duplicate sample is a duplicate of GW002.

NS - No Standard

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Highlighted values indicate exceedance of the NYSDEC GQS or GV.

1.0 EXECUTIVE SUMMARY

JJ Queens Development, LLC retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) of four adjoining lots located at 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in Flushing, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions (RECs) at the subject site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The property (approximately 13,773 square feet) is comprised of four lots (Block: 2432, Lots: 23, 26, 34, and 37). The buildings on each of the four lots are currently vacant.

- Lot 23 – 69-28 Queens Blvd – Metal sign shop
- Lot 26 – 69-30 Queens Blvd – Liquor store and residential
- Lot 34 – 46-02 70th St – Tire Shop and Infinity Auto Boutique
- Lot 37 – 46-04 70th St – Residential Apartments

The Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

Potential recognized environmental conditions identified at the subject property were evaluated to determine whether items initially suspected to be recognized environmental conditions are in fact recognized environmental conditions. Evaluation of the potential RECs is as follows:

- ◆ Historic uses at the site included automotive repairs. Improper handling of automotive chemicals could impact subsurface soils, groundwater, or soil vapor; therefore, the site's historic use constitutes a REC.
- ◆ Floor drains not connected to the municipal sewer system can act as a conduit to the

subsurface. Improper discharges to such floor drains could impact subsurface soils, groundwater, or soil vapor; therefore, the existence of floor drains constitutes a REC.

- ◆ An FDNY permit listing two tanks did not identify the location of the tanks (ASTs or USTs) and there is no further documentation indicating the removal of these tanks; therefore, the potential for the existence of USTs at the site constitutes a REC.
- ◆ A gasoline filling station with an active spill is located adjacent to the subject property in the down-gradient direction. Contamination in the form of groundwater or soil vapor could migrate onto the subject property; therefore, the existence of an adjacent gasoline station with an active spill is considered a REC.
- ◆ Up-gradient sites have reportedly been utilized for drycleaning and automotive repairs. Drycleaners use various solvents, including tetrachloroethene, and automotive repair shops use degreasers and petroleum based products. Improper handling or disposal of these products can impact soils, groundwater, and soil vapor beneath the site. As these sites are up-gradient of the subject site, groundwater or soil vapor beneath the subject property may be impacted if there are spills at the up-gradient sites; therefore, the existence of a drycleaner and automotive repair shops up-gradient of the subject site is a REC.

Based upon PWGC's evaluation of the recognized environmental conditions, PWGC recommends a Phase II be performed at this time. The Phase II ESA should consist of the following tasks:

- A geophysical survey should be conducted to determine if USTs exist at the site.
- In order to assess impacts from historic site uses and nearby sites, the existence of floor drains, and to satisfy the requirements of the hazardous materials "E" Designation, sampling of subsurface soils, groundwater, and soil vapor for volatile organic compounds, semi-volatile organic compounds, metals, pesticides, and PCBs should be performed.

2.0 INTRODUCTION

2.1 Purpose

JJ Queens Development, LLC retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) of four adjoining lots located at 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in Flushing, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions (RECs) at the subject site.

2.2 Scope of Services

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E1527-13 (Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and aerial photographs, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Shelton, Connecticut provided the following: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, historical aerial photograph search, historical telephone directory search, and historical topographic maps.

PWGC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject property or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). PWGC's review of the database has been incorporated into this report along with a copy of the EDR report.

2.2.1 Definitions

- 1. Recognized environmental conditions (RECs)** are the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property: (1) due to any release to the environment; (2) under the conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.
- 2. Historic RECs (HREC)** are identified as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity or use limitations (AULs), institutional controls, or engineering controls).
- 3. Controlled RECs (CREC)** are identified as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a No Further Action (NFA) letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

2.3 Significant Assumptions

PWGC has made the following significant assumptions in the preparation of this report:

- 1. Groundwater Flow Direction** – Based upon a review of USGS topographic maps of the subject area, groundwater flow direction at the subject is assumed to flow to the west towards the East River.
- 2. Regulatory Records Information** - PWGC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
- 3. Other** - PWGC assumes that all information provided through interviews is complete and

unbiased.

2.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. PWGC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. PWGC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to PWGC by third-party sources. While

efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

2.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between NAVA Companies and PWGC.

2.6 User Reliance

This report was prepared for the exclusive use of NAVA Companies. PWGC assumes no liability for use of this report by any person or entity other than those for which it was prepared.

2.7 Data Gaps

During the site inspection, access was not obtained to some of the residential apartments located above the commercial units; therefore, this is considered a data gap.

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 § 3.2.21, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the subject property and do not alter the conclusions of this report.

3.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 Location and Legal Description

The subject site is comprised of four adjoining lots, 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in Flushing, NY (Block 2432, Lots 23, 26, 34, and 37). The site is located in Queens. **Figure 1** illustrates the site location map and **Figure 2** illustrates a site plan for the property. Photos of the site are included in **Appendix A**.

3.2 Site Description and Improvements

The property (approximately 13,773 square feet) is comprised of four lots on block 2432:

- Lot 23 – 69-28 Queens Blvd – Metal sign shop
- Lot 26 – 69-30 Queens Blvd – Liquor store and residential with basement
- Lot 34 – 46-02 70th St – Tire Shop and Infinity Auto Boutique with basement
- Lot 37 – 46-04 70th St – Residential Apartments with basement

Each of the four buildings are currently vacant.

3.2.1 Municipal Services and Utilities

Utility services are provided to the property as follows:

- ◆ Heating/Cooling System – The buildings are heated via natural gas provided by National Grid.
- ◆ Water Supply – The buildings are provided water by the New York City Department of Environmental Protection.
- ◆ Sanitary System – The buildings utilize the municipal sewer system.
- ◆ Electric – The buildings have electric service provided by Con Edison.
- ◆ Emergency Electrical Power – Not Provided.

3.3 Physical Setting

The topography of the site and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, NY quadrangle. The property has an elevation of approximately 39 feet above the National Geodetic Vertical Datum (NGVD). In general, the subject site is flat and the surrounding area has minimal topographical sloping. Regional physiographic conditions are summarized below.

3.3.1 Regional Geology / Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is identified as solid and silty clay with: few lenses of sand and gravel; abundant lignite and pyrite; and gray, red or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow. Therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy and, therefore, is hydraulically connected to the Magothy Aquifer.

3.3.2 Local Hydrogeology

Based upon the site elevation and regional groundwater contour maps, the depth to groundwater beneath the site is estimated at approximately 15 feet below ground surface. Based upon information contained within the EDR report, there are no public water supply wells located within a one-mile radius of the subject property.

3.3.3 Flood Potential

PWGC reviewed the Flood Insurance Rate Map (FIRM) data provided in the EDR to determine if the subject property is located within a designated flood zone. Based upon the FIRM data, the subject property is not identified within a flood zone.

3.3.4 Direction and Distance to Nearest Surface Water

The closest surface water body is the Newtown Creek which is located almost 2 miles southwest of

the subject property. Although Newtown Creek is closer to the site than the East River, there are localized high points of the groundwater table both north and south of the subject property which would likely result in a flow direction towards the west and the East River.

4.0 PROPERTY USAGE

4.1 Current Property Usage

The subject site currently consists of a 13,773 square foot mixed use residential and commercial properties spanning four lots. The buildings are currently vacant.

4.2 Current Usage of Adjoining/Surrounding Properties

The surrounding area is mixed-use commercial / residential. A summary of the surrounding properties is as follows:

Table 4-2 - Surrounding Property Usage

Direction	Property Description
North	Bordered by Queens Blvd and mixed use buildings on the opposite side of Queens Blvd.
South	Bordered by residential buildings and a warehouse. Elevated LIRR train tracks extend over parts of the southern properties.
East	Bordered by 70 th Street and mixed-use commercial / residential buildings.
West	Bordered by a restaurant and a gas station with a car wash and service center.

4.3 Historical Usage of Subject Property and Surrounding Properties

Historical sources researched to determine past usage of the subject property and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Environmental Data Resources (EDR) was retained to provide historical Sanborn fire insurance maps of the subject and adjacent properties. Historical Sanborn maps for the subject property and surrounding area were reviewed for the years available between 1902 and 2006. Review of the maps is summarized in Table 4-3. Copies of historical Sanborn maps are included as **Appendix B**.

Historical Topographic Maps - Historical topographic maps for the subject property and surrounding area were reviewed for the years available between 1900 and 1995. Due to the scale of the topographic maps, they provide no additional data over the Sanborn maps and Aerial photographs which are available over the same time period; therefore, the review of the maps will not be included

in Table 4-3. Copies of historical topographic maps are included as **Appendix C**.

Historical Aerial Photographs - PWGC performed a review of readily available aerial photographs showing the subject property and surrounding area. Photographs were reviewed for the years available between 1954 and 2011. Review of the photos is summarized in Table 4-3. A copy of the aerial photograph search is included in **Appendix D**.

City Directory Abstract - EDR was retained to provide a directory of historical telephone listings at the subject property and surrounding properties. City directories were reviewed for the years available from 1934 through 2013. The property is listed in the City Directory as follows:

Lot 23:

Company Name	Years identified
Carpet stores	2013, 2008, 2005
Eagle Signs One Inc, YLC Stainless Steel Inc	2013
Central Station, Kays Uniform Centers	1991, 1983
EIDorado Motors, residence	1962
Harrys Auto Service	1939
Residence	1934

Lot 26:

Company Name	Years identified
Queens Blvd Wine & Liquor	2013
3 T World Decals, Inc, Venture Order Sales	2005
Daves Discount Wine & Liquor, June Health Club	1991
Osa Automotive Ltd	1983
Jacobs M. Trucking Co	1970
Woodside Auto Parts	1962
Residences	1934

Lot 34:

Company Name	Years identified
Infinity Auto Boutique, BPNL Roters Tire Shop	2013, 2008
Queens Car Stereo Ctr, Inc	2005
Friendly Pub	1983

Company Name	Years identified
Genes Café	1970, 1967
Winfield Tavern	1962
Residential	1934

Lot 37:

Company Name	Years identified
Insurance agencies, residences	2005, 2000
Frazer Real Estate, residences	1991
Highway Motor Parts, residence	1983, 1976
MP High Quality Upholstery, residence	1970, 1967, 1962
Residences	1945, 1934

A copy of the city directory report is included as **Appendix E**.

Table 4-3 - Subject Property Historical Usage

Date(s)	Source	Issues Noted	Description
1902 – 1914	SB	No	The subject site is developed with mixed use residential and commercial properties.
1932 - 1939	SB, CD	Yes	Queens Blvd has been widened resulting in the demolition of buildings on lots 23, 26, and 34. The subject site layout is now consistent with the current day layout. Lot 23 is utilized for auto painting and service and a residence and lot 26 is utilized for wood working and residences. Lots 34 and 37 are utilized for commercial and residential uses with a storage shed located in the backyard of lot 37.
1951 - 1980	SB, CD, AP	Yes	Lot 23 is utilized for sheet metal manufacturing. Lot 26 appears to be utilized for an unknown automotive purpose. Lot 34 is utilized for dining. Lot 37 is utilized for upholstery and auto parts.
1981 - 1993	SB, CD, AP	Yes	Lot 23 is now utilized for motorcycle sales and service. Lots 26, 34, and 37 are utilized for commercial purposes, including dining.
1994 - 2011	SB, CD, AP	Yes	Lot 34 is identified as an auto wash and other automotive purposes. Lot 23 is utilized as a motorcycle repair shop and commercial services such as sign fabrication and carpets. Lot 26 is utilized as a liquor store and lot 37 is utilized as a multi-family residence.
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Review of historical information for the subject property indicates that the site had been developed since at least 1902. Lots 23, 26, and 34 appear to have been demolished during the widening of Queens Blvd between 1914 and 1932. The site has been utilized for residential apartments, as well as automotive repair work and sales, sheet metal manufacturing, and retail sales.

Table 4-3.1 – Surrounding Area Historical Usage

Date(s)	Source	Issues Noted	Description
1902 - 1914	SB	No	The properties surrounding the subject site appear to be similar to the subject site, consisting of 1 to 2 story, mixed-use residential / commercial buildings. A spur of a former section of the Long Island Rail Road ended at the adjacent property to the west and was abandoned by 1914. Queens Blvd had not yet been widened at this time; therefore, there are additional mixed use buildings located north of the subject property.
1932 – 1934	SB, CD	Yes	Neighboring properties consist mainly of mixed-use residential and commercial buildings. Neighboring properties to the west include a restaurant and auto repair with an indication of gasoline tanks and paint spraying. Properties further east and north include wood working and paint spraying. Queens Blvd has been widened.
1951 - 1980	SB, CD, AP	Yes	The auto repair facility west of the subject site is now identified as a service station with three gasoline tanks and a paint spraying area. Another service station with four gasoline tanks is identified further west. A sheet metal shop / welding shop / plumber is located south of the subject property. A tool manufacturing facility is located to the northwest of the subject property. Remainder of neighboring properties are mixed-use.
1981 - 2011	SB,	Yes	Filling stations to the west are still present. The tool manufacturing facility in the northwest is now an automotive repair facility. The property to the south has been converted to an Armenian School.
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

The sites surrounding the subject property have been developed since at least 1902 and include mainly residential and commercial properties and gasoline filling stations. Several mixed-use buildings north of the subject property were demolished during the widening of Queens Blvd between 1914 and 1932.

5.0 USER PROVIDED INFORMATION

5.1 User Requirements

The user of a Phase I report, as per the EPA AAI Rule and ASTM E1527-13 has certain responsibilities which include providing information requested in the Client Questionnaire, if available, to PWGC to be included within the Phase I Report. PWGC forwarded a copy, via email, to the client on March 11, 2015. A completed copy of the Client Questionnaire is included in **Appendix F**.

5.2 Title Records

Title records for the site may contain information about past owners and uses of the subject property. The title report may also contain site information such as restrictive declarations which are limitations on site uses based upon known environmental conditions. As of the date of this report the user has not provided PWGC with a title search, nor has indicated to PWGC that one should be performed.

5.3 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

The user has not made PWGC aware of any environmental liens against the subject property. PWGC gave the user the option of having PWGC perform an environmental lien search, but PWGC was not instructed to perform such a search.

5.4 Specialized Knowledge

No specialized knowledge about the property was provided to PWGC.

5.5 Commonly Known or Reasonably Ascertainable Information

There is no commonly known information about the subject property.

5.6 Valuation Reduction for Environmental Issues

To the best of PWGC's knowledge, there have been no adjustments to the subject parcels value due to environmental issues.

5.7 Owner, Property Manager and Occupant Information

The property is currently owned by the client and consists of four vacant properties.

5.8 Reason for Performing Phase I ESA

The Phase I ESA was performed to evaluate site conditions in preparation of a redevelopment of the property in accordance with a NYCOER "E" Designation placed on the site.

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Shelton, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject site. A list of the databases searched and the search radius is shown on the summary table below. PWGC reviewed the database output to determine if the subject site appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix G**). A summary of standard environmental record sources researched is as follows:

In order to evaluate the potential for a site to have an adverse impact to the subject site with respect to soil, groundwater, and vapor intrusion, the migration pattern of contaminants is considered. Although Newtown Creek is closer to the site than the East River, there are localized high points of the groundwater table both north and south of the subject property which would likely result in a flow direction towards the west and the East River. Based upon the presumed groundwater flow direction towards the west, the following is assumed:

- Sites located east of the subject site have the highest potential to impact the subject site and are referred to as “up-gradient.”
- Sites located west of the subject site, which are not neighboring or adjacent to the subject site have the least potential to impact the subject site and are referred to as “down-gradient.”
- All other sites not adjacent to or neighboring the subject property are referred to as “cross-gradient” and have minimal potential to impact the subject site.

When considering the potential for vapor migration in New York City, the horizontal migration of vapor is limited by the presence of utility tunnels / trenches which can act as a vent and limit vapor migration onto the subject property. Such trenches / tunnels are nearly universally present beneath the streets and may limit vapor migration sources to sites located within the same block or sources of groundwater impact which migrates beneath the subject site’s city block. Such sources will be considered in PWGC’s evaluation of offsite locations which may pose a concern to the subject site.

A summary of standard environmental record sources researched is as follows:

6.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Table 6-1 - Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
USEPA	National Priority List	NPL	1.0 mile	No	0
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile	No	0
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile	No	0
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile	No	0
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile	No	1
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile	No	0
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Subject Property and Adjoining	No	4
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Subject Property	No	0
USEPA	Emergency Response Notification System	ERNS	Subject Property	No	0
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile	No	0
USEPA	Records of Decision	ROD	1.0 mile	No	0
USEPA	Mines Master Index	MINES	0.25 mile	No	0

The subject site was not identified in any of the Federal databases. Nearby properties identified in the federal databases are discussed below.

RCRA CORRACTS - The RCRA Corrective Actions (CORRACTS) database is the EPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

One property was identified as a RCRA CORRACTS site within the search radius. The site is located approximately $\frac{3}{4}$ of a mile down-gradient of the subject site. Based upon the down-gradient location and distance from the subject site, it is unlikely to affect the subject site.

RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A Small Quantity Generator (SQG) is a site which generate more than 100 and less than 1000 kg of hazardous waste during any one calendar month and accumulates less than 6000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1000 kg of hazardous waste at any time. Large Quantity Generators (LQG) generate more that 1000 kg of hazardous waste per month. A Conditionally Exempt SQG (CESQG) generates less than 100 kg of waste a month. A RCRA non generator (RCRA Non-Gen) no longer produces hazardous waste.

There is one RCRA-SQG site located within the search radius. The RCRA-SQG site is not adjacent to the subject site and is located cross-gradient of the subject site. Based upon the locations of the SQG site, it is unlikely to impact the subject site.

There were three RCRA-CESQG sites located within the search radius. One of the RCRA-CESQG sites is adjacent to the subject site and is the location of a gasoline service station. The facility has no listed violations. Based upon the lack of violations and the status of the site as a CESQG, it is unlikely to affect the subject site due to its status as a CESQG alone; however, the site is further discussed in the New York State Spills section. The other two CESQG sites are located down-gradient and cross-gradient of the subject site and are unlikely to affect the subject site.

6.1.2 New York State Databases

The table below summarizes the State databases that were searched.

Table 6-1.2 - New York State Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile	No	1
NYSDEC	Hazardous Substance Waste Disposal Site Study	HSWDS	0.5 mile	No	0
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile	No	5
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile	No	0
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile	No	0
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Subject Property	No	0
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile	No	0
NYSDEC	Brownfield sites	Brownfields	0.5 mile	No	0
NYSDEC	New York State Spills	NYSPILLS	0.125 mile	No	10
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile	No	30
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Subject Property and Adjoining	No	27
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Subject Property and Adjoining	No	1
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile	No	0
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile	No	2

The subject site was not identified in any of the State databases. Nearby properties that were identified in the State databases are discussed below.

New York State Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites.

There is one SHWS site, Dewalt Service Center, located within the search radius. This SHWS site is located over $\frac{3}{4}$ of a mile west-northwest of the subject site in a hydraulically down-gradient direction. Based upon the distance and direction of the site, it is unlikely to impact the subject site.

Solid Waste Facility Register - The NYSDEC Solid Waste Facility Register (SWF) records contain an inventory of solid waste disposal facilities or landfills in New York State.

There were five sites identified as SWF sites within the search radius. Three of the sites are located cross-gradient or down-gradient of the subject site and are unlikely to affect it. The other two sites, Woodside Yard and Alliance Auto Parts, are located up-gradient of the subject site approximately $\frac{1}{4}$ of a mile away. Woodside Yard is no longer an active site and was utilized for the processing of C&D debris. Alliance Auto Parts is still an active facility and is utilized for the dismantling of automobiles. Based upon the distance from the subject site and the activities performed, these SWF sites are unlikely to affect the subject site.

New York State Spills - The New York State Spills Information Database (NYSPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

There are 9 spill sites, with 16 NYSDEC spill files, within the search radius identified in the NYSPILLS database. Six of the spills occurred on an adjacent property at the gasoline service station to the west of the subject site. Of the six spills, one is still reported as open as the majority of the spills were consolidated under this active spill number, 93-04343. During the installation of new USTs,

petroleum contamination was uncovered. The site entered into a stipulation agreement and the corrective action plan called for UST closure, off-site investigation, and preparation of a remedial action plan. The USTs were closed to the NYSDECs satisfaction in 2004 and an air sparging / soil vapor extraction system was installed at the site. As of 2007, concentrations of BTEX and MTBE were as high as 28,000 parts per billion (ppb) and 110,000 ppb, respectively. The system had only recovered 2.43 pounds of mass up to 2007. A well installed near 69th Street contained 7 to 8 inches of free phase product and was recovered through manual bailing and enhanced fluid recovery efforts. Following a decrease in free phase product in this area, the NYSDEC required a remedial strategy to address dissolved phase contaminants in the southeast portion of the site. A surfactant flood pilot test was performed in 2010 and appeared to be ineffective at reducing dissolved contaminants. In 2012, injections of sodium persulfate began with a total of three injections through 2014. Additional groundwater sampling is planned and there is a potential for additional rounds of injections. The NYSDEC stated that no contamination is migrating off-site. Based upon the proximity of the site and the active status of the spill site, there is a potential for this site to affect the subject site's groundwater or soil vapor.

Of the remaining 10 spill files, 8 are located down-gradient or cross-gradient of the subject site. Based upon their locations, these 8 spills are unlikely to affect the subject property. The two spills located up-gradient of the subject site are both closed. One spill was located 0.06 miles east of the subject site and was the result of a discharge of approximately 50 gallons of petroleum to the sewer in front of an auto body shop; NYCDEP was on-site overseeing the remediation and the spill closed on the same day. The other up-gradient spill was located 0.11 miles up-gradient of the subject site and was opened as a result of approximately a quart of oil on 400 gallons of water within a manhole. The spill was remediated and closed within a week. Based upon the closed status of the up-gradient spill sites, they are unlikely to affect the subject site.

Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents

are tank test failures, tank failures, or tank overfills.

A total of 30 LTANK sites, with 34 NYSDEC spill files, are identified within the search radius, two of which are adjacent to the subject site. Two of the LTANK sites are identified as the gasoline service station adjacent to the subject property. The two spill numbers are listed as closed; however, there is an active spill number associated with the site discussed in further detail in the New York State Spills Section. Of the 34 NYSDEC Spill Files associated with the LTANK sites, 33 have been closed. Based on the closed status, it is unlikely that these 33 LTANK sites have impacted the subject site. The one open spill site is located greater than $\frac{1}{4}$ of a mile cross-gradient of the subject site. Based upon the distance and location of the site, it is unlikely to affect the subject site.

Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

There were 12 UST sites and 15 AST sites identified within the EDR Report search radius. One of the PBS sites is located on a neighboring property, the Cumberland Farm / Mobil Gas Station, located down-gradient of the subject site. Five 4,000 gallon gasoline USTs were removed from the site in 2004 and five 4,000 gallon USTs (four containing unleaded gasoline and one containing leaded gasoline) were removed prior to 1991. There are currently five 4,000 gallon gasoline USTs installed at the site. There is currently an active spill associated with the site as discussed in the New York State Spills section.

Of the remaining UST and AST sites, five sites are located up-gradient of the subject site. The presence of tanks alone on a property does not represent an environmental concern. Sites with spills are addressed in the appropriate section of this report.

Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that

store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

One property was identified as a CBS site within the search radius. The property is located cross-gradient of the subject site. The presence of tanks alone on a property does not represent an environmental concern. Sites with spills are addressed in the appropriate section of this report.

Drycleaners - The NYSDEC maintains registry of Registered Drycleaner (RDC) sites that were available to EDR researchers.

Two sites were identified as Drycleaners sites within the search radius. One of the sites is cross-gradient of the subject site and is unlikely to affect it. The other site is located almost ¼ of a mile up-gradient of the subject site and no violations have been identified with the site. Based upon the lack of violations and the distance from the subject site, this site is unlikely to affect the subject site.

6.1.3 EDR Databases

The table below summarizes the EDR databases that were searched.

Table 6-1.3 - Additional Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
EDR	Manufactured Gas Plants	MGP	1.0 mile	No	1
EDR	Historical Auto Stations	HAC	0.25 mile	Yes	59
EDR	Historical Drycleaners	HDC	0.25 mile	No	5

The subject property was not identified in any of the EDR databases. Nearby properties were identified in the EDR Databases and are discussed below.

Manufactured Gas Plants - The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas plants

(MGP) were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

One MGP site was identified within the search radius. The MGP site is located almost 1 mile cross-gradient from the subject site; therefore, it is unlikely to affect the subject site.

Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential Historical Auto Stations (HAC) sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. This list is provided as a guide only.

The subject site was identified as a historical auto station, specifically the property located at 46-02 70th Street (Lot 34). The information in the EDR report was limited to the name of the facility (Infinity Auto Boutique) which is consistent with the business most recently occupying that building. The site will be further discussed in the site reconnaissance section.

There were 58 other HAC sites identified within ¼ mile of the subject property. There were fifteen HAC sites located up-gradient of the subject property. There is no further pertinent information regarding the status of these HAC sites in the EDR database report. Sites with spills were addressed in the appropriate sections.

The remainder of the HAC sites are located cross-gradient or down-gradient of the subject property. Based upon their locations, they are unlikely to have impacted the subject property.

Historical Drycleaners - EDR has searched selected national collections of business directories and has collected listings of potential Historical Drycleaner (HDC) sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments.

There were 5 HDC sites identified within ¼ mile of the subject property. One of the sites, Elmhurst Laundry Center, is located up-gradient of the subject property approximately ¼ of a mile away. There is no further pertinent information regarding the status of these HDC sites in the EDR database report. Sites with spills were addressed in the appropriate sections.

The remaining HDC sites are located cross-gradient or down-gradient of the subject site. Based upon the location and distance of these HDC sites, they are unlikely to affect the subject property.

6.1.4 Orphan Sites

Orphan sites are properties, that due to an inadequate or incomplete address in government databases or in base map files, are not able to be geographically located (i.e. mapped or geocoded). This can occur for several reasons; no street number or street name in address given; the street address is given only as a P.O. Box; or when inconsistencies exist in the address (street number does not exist in the city / zip code given).

There were 9 orphan sites were identified in the EDR report. PWGC performed a cursory review of the addresses listed. Neither the subject site, nor any adjoining parcels appear to be identified in the orphan listings.

6.1.5 Freedom of Information Act Requests

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region II (USEPA), the New York State Department of Environmental Conservation, Region 2 (NYSDEC), and the New York City Office of Environmental Restoration (OER). As of the date of this report, no responses to FOIA requests have not been received. As responses were not provided within the allotted due diligence period from the other agencies, the records were deemed not to be

“reasonably ascertainable” at this time. Should records become available at a later date, pertinent information will be forwarded as an addendum upon receipt. Copies of FOIA requests are included in **Appendix I**.

PWGC also performed a review of available online databases. These include the NYC Department of Buildings, Zoning Resolution of the City of New York – Appendix C: City Environmental Quality Review (CEQR) Environmental Designation, and the NYC SPEED Database. The property is zoned as Mixed Residential and Commercial.

A 1954 Certificate of Occupancy (CO) for the 69-28 Queens Blvd property (Lot 23) indicated a use of auto sales and showroom and a 1964 CO also included a use for auto repairs.

Based upon information from these sources, a NYCDEP “E” designation is in place on three of the four lots. The “E” designation for the three lots is for hazardous materials, air, and noise. Sites with hazardous materials “E” designations are identified as by the NYCDEP as having environmental concerns which must be addressed before re-development of the site may proceed.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

Miss Jennifer Lewis of PWGC performed the site inspection on Monday, March 9, 2015. Weather conditions during the inspection were mostly sunny with a temperature of approximately 45° Fahrenheit. Sidewalks and landscaped portions of the property were partially or completely covered with snow.

The site inspection consisted of an inspection of the interior of each of the buildings, visible sections of the four lots, and the exterior of the neighboring properties. Inaccessible portions of the property include the following: residential apartments located on the second story of lot 26, a residential apartment on the first floor of lot 37, and a store front that appeared to be vacant on the first floor of lot 37.

7.2 Aboveground Storage Tanks (AST)

No evidence indicative of the presence of ASTs was identified at the site.

7.3 Underground Storage Tanks (UST)

No evidence indicative of the presence of USTs, such as vents or fill ports, was identified at the site.

7.4 Hazardous and Non-Hazardous Chemical Storage

Chemical storage at the site consisted of several cans of paints, cleaners, and other similar household/business supplies.

7.5 Waste Generation, Storage, and Disposal

Waste generated on the property is placed curbside for NYC Department of Sanitation retrieval.

7.6 Polychlorinated Biphenyls (PCBs)

No PCB containing equipment was observed at the subject site during the inspection.

7.7 Additional Site Conditions

Within the basement of the 69-30 Queens Blvd property (lot 26), a FDNY permit dated 1964 indicated the presence of two 275 gallon tanks. The permit did not indicate if the tanks were aboveground or underground and there was no evidence that the tanks were currently present at the site.

The following table is a summary of visual and/or physical observations made by PWGC at the subject property on the day of the inspection. Photographs of pertinent observations are included in **Appendix A**.

Table 7-7 - Additional Site Conditions

Condition	Identified
Interior drains, trenches or sumps.	Yes
Interior stains or corrosion	No
Unusual odors	No
Interior pools of liquid	Yes
Stained Soils or Pavement	No
Stressed Vegetation	No
Indications of solid waste disposal	No
Exterior ponds, pits, or lagoons	No
Wastewater or storm water discharge / disposal	No
Oil water separators / clarifiers	No
Septic Systems / Cesspools	No
Wells (Drinking water, monitoring wells, agricultural / irrigation wells, or process water wells)	No
Petroleum or natural gas pipelines or easements	No
Other	No

One floor drain was observed in the 46-04 70th Street building (Lot 37). It was not evident if the drain was connected to the municipal sewer system. A sanitary trap was also observed in the 69-30 Queens Blvd basement (Lot 26).

During the site inspection, a burst water supply pipe was observed in the 46-02 70th Street basement (Lot 34) which resulted in a pool of liquid on the basement floor. In the 69-30 Queens Blvd basement, water, presumed to be snow melt, was seen entering near the sidewalk level and pooling on the floor near a sump. There were no other pools of liquid identified in the other two lots.

7.8 Neighboring Properties

PWGC performed a cursory inspection of the neighboring properties from the subject site and public right of ways. This inspection revealed one environmental concern. A gasoline service station with a

car wash is located adjacent to the property to the west.

8.0 INTERVIEWS

8.1 Owner

PWGC provided the client with an Owner Questionnaire to prepare. A copy of the completed Owner Questionnaire is included as **Appendix F**.

8.2 Occupant

The property is currently vacant, but has most recently been utilized as mixed use residential and commercial, including sign fabrication, a liquor store, and an automotive detailing and modification store. PWGC provided the client with an Operator Questionnaire to prepare. A copy of the completed Operator Questionnaire is included as **Appendix F**.

8.3 Historic Environmental Report Review

PWGC was provided with the text of a July 2007 Phase I ESA prepared by Advanced Cleanup Technologies for Lots 23, 26, and 34. According to the report, identified RECs consisted of suspect asbestos-containing material located at the site, historic auto and motorcycle repair listed at the site, a hazardous materials “E” designation for the site, and an active gasoline spill in the vicinity of the subject site. The Phase I ESA recommended the collection of soil and groundwater samples to evaluate subsurface conditions due to the historical use of the site and the nearby gasoline spill.

A limited Phase II ESA was performed by Long Island Analytical Laboratories in August 2007. Four soil samples were collected from four soil borings conducted in Lots 23 and 26 and analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). One sample contained elevated concentrations of SVOCs. Copies of these reports have been included in **Appendix F**.

8.4 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region II (USEPA), the New York State Department of Environmental Conservation, Region 2 (NYSDEC), and the New York City Office of Environmental Restoration (NYCOER). FOIA requests and responses are addressed in Section 6.1.5. Copies of the FOIA requests are included in **Appendix H**. Based upon the site history, interviews with government officials to obtain additional information are

not warranted at this time.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM 1527-13

9.1 Wetland Delineation

A review of the EDR database search, which includes State and Federal wetlands, indicates that there are no wetlands located within a one mile radius of the subject property. Based upon this information, the property is not located within a wetland buffer zone.

9.2 Radon Risk Evaluation

Radon is a colorless, radioactive; inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate, and pitchblende. The USEPA's "Map of Radon Zones for New York State", September 1993 indicates that Queens County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that 97% of those sites tested in New York County were below the United States Environmental Protection Agency (USEPA) radon action level of 4 Pico curies per liter (pCi/L) in the living area.

9.3 Asbestos

PWGC observed vinyl floor tiles in each of the buildings. Such tiles, depending upon the date of manufacture may contain asbestos. The tiles appeared to be in poor condition. In addition, based upon the age of the buildings, asbestos may be present in the building materials, such as insulation and roofing materials.

9.4 Lead-Based Paint (LBP)

Based upon the age of the buildings, the presence of lead-based paint is likely.

9.5 Mold

Mold was not observed at the subject site.

9.6 Historic Urban Fill

Given the location of the site within the five boroughs of New York City, there is a potential for historic fill material to be present beneath the site. Such material, if excavated (for the purpose of constructing a building, installing new footings, and/or utilities in the construction of new buildings), will require special handling and disposal. A limited Phase II ESA performed at the site in 2007 indicated the presence of SVOCs in one soil sample which may be indicative of historic urban fill at the site.

10.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, the following potential recognized environmental conditions (RECs) have been identified:

- ◆ Historic uses at the site include automotive repairs.
- ◆ Floor drains were identified in Lot 26 and 37.
- ◆ An FDNY permit from 1964 located in the basement of Lot 26 indicated the presence of two 275 gallon tanks in Lot 26.
- ◆ A gasoline filling station with an active spill is located adjacent to the site.
- ◆ Sites up-gradient of the subject site have been utilized for automotive repairs and drycleaning.

Potential recognized environmental conditions identified at the subject property were evaluated to determine whether items initially suspected to be recognized environmental conditions are in fact recognized environmental conditions. Evaluation of the potential REC is as follows:

- ◆ Historic uses at the site included automotive repairs. Improper handling of automotive chemicals could impact subsurface soils, groundwater, or soil vapor; therefore, the site's historic use constitutes a REC.
- ◆ Floor drains not connected to the municipal sewer system can act as a conduit to the subsurface. Improper discharges to such floor drains could impact subsurface soils, groundwater, or soil vapor; therefore, the existence of floor drains constitutes a REC.
- ◆ An FDNY permit listing two tanks did not identify the location of the tanks (ASTs or USTs) and there is no further documentation indicating the removal of these tanks; therefore, the potential for the existence of USTs at the site constitutes a REC.
- ◆ A gasoline filling station with an active spill is located adjacent to the subject property in the down-gradient direction. Contamination in the form of groundwater or soil vapor could migrate onto the subject property; therefore, the existence of an adjacent gasoline station with an active spill is considered a REC.
- ◆ Up-gradient sites have reportedly been utilized for drycleaning and automotive repairs. Drycleaners use various solvents, including tetrachloroethene, and automotive repair shops

use degreasers and petroleum based products. Improper handling or disposal of these products can impact soils, groundwater, and soil vapor beneath the site. As these sites are up-gradient of the subject site, groundwater or soil vapor beneath the subject property may be impacted if there are spills at the up-gradient sites; therefore, the existence of a drycleaner and automotive repair shops up-gradient of the subject site is a REC.

PWGC identified the following potential conditions outside of ASTM 1527-13 in connection with the subject property:

- ◆ Based on the age of the buildings, there is the potential for asbestos containing material and for lead based paint to be present. Such issues should be properly assessed if the building is to be renovated or demolished.
- ◆ Given the location of the site within the five boroughs of New York City and the results of the limited Phase II ESA conducted in 2007, there is potential for historic fill material to be present beneath the current building. Such material, if excavated (for the purpose of installing a new basement or in the construction of a new building), may require special handling and disposal; therefore, the presence of historic fill material at the site constitutes a REC.

11.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon PWGC's evaluation of the recognized environmental conditions, noted in section 9.0, PWGC recommends a Phase II be performed at this time. The Phase II ESA should consist of the following tasks:

- A geophysical survey should be conducted to determine if USTs exist at the site.
- In order to assess impacts from historic site uses and nearby sites, the existence of floor drains, and to satisfy the requirements of the hazardous materials "E" Designation, sampling of subsurface soils, groundwater, and soil vapor for volatile organic compounds, semi-volatile organic compounds, metals, pesticides, and PCBs should be performed.

11.1 Deviations

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 9.0, there were no deviations or deletions from this practice.

All Appropriate Inquiry, Final Rule, 40 CFR Part 312.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

CERTIFICATION

Property Location: 69-28/30 Queens Boulevard/46-02 70th Street
Queens, New York 11377

Advanced Cleanup Technologies, Inc. performed a Phase I Environmental Site Assessment on the above-referenced property. The Assessment included a property inspection, research into the historical uses of the property and surrounding land, a review of regulatory agency files pertaining to the property and an interview with the landlord regarding past and present conditions at the property.

The Phase I Assessment was performed to meet the minimum requirements established by ASTM's Standard Practice for Environmental Site Assessments (E 1527-00). The Assessment has also considered other environmental issues such as asbestos, radon and lead which are not covered by the ASTM standard.

The results of the assessment are contained in this report. Based upon this assessment, Advanced Cleanup Technologies, Inc. makes the following conclusions and representations concerning the scope of the assessment and the environmental quality of the property. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Conditions at the subject property:

- Suspect asbestos-containing material located at the subject property (Section 3.1);
- Historical auto and motorcycle repair listed at the subject property (Section 4.0);
- Hazardous Materials E-163 listing for the subject property (Section 4.0, 5.0);
- Active gasoline spill in the vicinity of the subject property (Section 5.0).

We hereby certify that we have no interest, present or contemplated, in the properties inspected and that neither the employment to make the inspection nor the compensation is contingent on the value of the properties. The analyses, opinions and conclusions contained in this report are limited only by any reported assumptions or limiting conditions described herein, and are our personal unbiased professional opinions and conclusions.

We further certify that this inspection was performed in conformity with the ASTM Standard and the scope outlined in this report. This inspection report accurately reflects current federal, state and local guidelines.

1.0 INTRODUCTION AND SCOPE OF ASSESSMENT

Advanced Cleanup Technologies, Inc. (ACT) was retained to perform a Phase I Environmental Site Assessment of the property located at 69-28/30 Queens Boulevard/46-02 70th Street, Queens, New York 11377. The Assessment was performed to meet or surpass the industry standard established by ASTM's Standard Practice for Environmental Site Assessments (E 1527-00). The purpose of the Assessment was to identify any Recognized Environmental Conditions at the property. As defined by the ASTM, a Recognized Environmental Condition is the presence of any hazardous substances or petroleum products on real estate under conditions that indicate an existing release, a past release, or a material threat of a release.¹

The Assessment consisted of a visual inspection of the premises, interviews with property representatives regarding past and present conditions at the property, *research into historical uses* of the property and surrounding land and a review of regulatory agency files pertaining to the property. The Assessment also included an overview of the site's hydrogeologic setting and an evaluation of environmental risks associated with asbestos, radon and lead.

A site inspection was performed by Steven Walls of ACT on July 10, 2007. The real estate representative for the property, Charlie, provided access and information regarding the property. Charlie has been associated with the subject property for approximately three years. The owner of the property is Norstan Realty Corp. which has owned the property for the past 40 years. The inspection consisted of the following activities:

- A visual examination of the interior and exterior of the premises;
- An evaluation of land usage in the area surrounding the site;
- Photography of the site.

All relevant New York City agencies were contacted for information pertaining to this property, including:

- Department of Buildings;
- Department of Health;
- Department of Environmental Protection;
- Bureau of Fire Prevention.

Databases of environmental information maintained by Federal and State agencies were also searched for known sources of environmental contamination at the site and its vicinity.

¹ American Society for Testing and Materials Practice E 1527-00, Sec. 3.3.28.

2.0 PROPERTY DESCRIPTION

2.1 Site Vicinity

The subject property, 69-28/30 Queens Boulevard/46-02 70th Street (aka 69-34/40 Queens Boulevard), is located in a commercial and residential area in the northwest portion of the borough of the Queens in New York City. A Locational Diagram showing the site and its immediate vicinity is provided as Figure 1. The property is located along the south side of Queens Boulevard and the west side of 70th Street.

Two-story commercial buildings are located to the north and south of the subject property. A one-story commercial building is located to the west of the subject property. Two-story residential and commercial buildings are located to the east of the subject property.

The topography of the area is generally level. The vicinity of the site is approximately 39 feet above mean sea level². The ground surface in the vicinity of the property is covered with asphalt and concrete pavement.

The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 600 feet below ground surface. The major aquifer systems underneath the subject property, from ground surface down, are the unconsolidated glacial aquifer of the Pleistocene Series and the Magothy and Lloyds aquifers of the Cretaceous Series. Bedrock beneath the subject property is approximately 600 feet³. Regional ground water flow in the vicinity of the site is estimated toward the northwest.

2.2 Site Construction Details

The subject property consists of a one-story commercial building at 69-28 Queens Boulevard, a two-story commercial and residential building at 69-30 Queens Boulevard and a two-story commercial and residential building and used car lot at 46-02 70th Street/69-34/40 Queens Boulevard.

The building at 69-28 Queens Boulevard does not contain a basement. The building at 69-30 Queens Boulevard contains a full basement and the building at 46-02 70th Street also contains a full basement. The footprint of the combined buildings is approximately 4,500 square feet in area and the combined lots are approximately 10,023 square feet in area. A Site Diagram is provided as Figure 2. Site photographs are located in Appendix A.

² USGS 7.5 Minute Series Topographic Map, Brooklyn, New York Quadrangle.

³ From *Hydrogeologic Framework Of Long Island, New York* by Smolensky, D.A., Buxton, H.T., and Shernoff, P.K., 1989.

The electrical, natural gas and water services enter the buildings along the northern and western property boundaries. The utility meters are located in the basements and on the first floor of the buildings. The buildings are connected to the New York City municipal sewer system.

Overhead natural gas-fired heating equipment was identified at 69-28 Queens Boulevard. No hot water heating equipment was identified at 69-28 Queens Boulevard. An inactive natural gas-fired boiler was identified at 69-30 Queens Boulevard. No hot water heating equipment was identified at 69-30 Queens Boulevard.

The building at 46-02 70th Street is provided heat and hot water via natural gas fired-heating equipment located in the basement of the building. No stains, odors or evidence of spills were identified in the vicinity of the active or inactive heating equipment at the property.

2.3 Building Interior

The subject property consists of a one-story commercial building at 69-28 Queens Boulevard. The building contains a carpet store, Carpet 44. The two-story building at 69-30 Queens Boulevard contains a vacant commercial unit on the ground floor and a vacant apartment on the second floor. The two-story building and used car lot at 46-02 70th Street contains an auto boutique, Infinity Auto Boutique, which installs vehicle audio/video, alarm systems and window tinting. The second floor contains an apartment.

The carpet store contains an office area, showroom and storage areas for carpet and ceramic tile. The auto boutique contains a retail area and an installation area. The installation area is located in the western portion of the building at 46-02 70th Street. This area contains tools, parts and equipment for vehicle audio/video, alarm systems and window tinting installation. No auto repair operations were identified. The floor of this area consists of rubber tiles. No stains, odors or evidence of spills were identified throughout the installation area.

The interior of the buildings consist of tile, carpet and wood floors and painted plaster and drywall walls and ceilings. The basements contain the utility meters, heating equipment and storage areas. No floor drains were identified throughout the buildings. No stains, odors or evidence of spills were identified throughout the interiors of the buildings.

2.4 Building Exterior

The exterior of the building at 69-28 Queens Boulevard consists of concrete block, brick masonry and metal and glass storefront. The exterior of the building at 69-30 Queens Boulevard consists of wood siding and metal and glass storefront. The building at 46-02 70th Street consists of concrete block, brick masonry, vinyl siding and metal and glass storefront.

The used car lot, Century Auto Sales at 69-34/40 Queens Boulevard, contains a small office in the rear of the lot. The remainder of the lot contains used vehicles for sale. The ground surface of the lot is asphalt paved. No storm water drains were identified throughout the property. A small rear exterior yard area is located to the south of 69-30 Queens Boulevard. The yard area contains overgrown vegetation. No stains, odors or evidence of spills was observed throughout the exterior of the property.

3.0 FINDINGS AND RESULTS OF THE ASSESSMENT

3.1 Asbestos

A visual inspection of the property for suspect asbestos-containing materials (ACM) such as pipe and boiler insulation, ceiling tiles and floor tiles was conducted. Approximately 30 linear feet of suspect asbestos-containing pipe insulation was identified in the basement of the building at 69-30 Queens Boulevard. No additional suspect asbestos-containing materials were identified at the property.

The suspect asbestos-containing pipe insulation was identified in poor condition, found in low traffic areas and has a low potential for disturbance. Therefore, the suspect asbestos material has a low potential for discharge. These findings comprise only a preliminary inspection of the subject property for ACM and should not be interpreted as a formal asbestos survey. All Federal, State and local regulations should be followed with respect to asbestos-containing materials if renovations or demolition are to be performed at the property.

3.2 Hazardous Materials

A visual inspection of the property was conducted for evidence of potential hazardous material contamination. No areas of stained or discolored ground, stressed vegetation or excavated areas were observed anywhere on the property. No indication of previous environmental investigations, such as groundwater monitoring wells, was observed at the property or any adjoining properties. No pits, ponds, or lagoons indicative of hazardous waste disposal were identified at the property. No hazardous material storage was identified throughout the property. No 55 gallon drums were identified at the subject property.

3.3 Storage Tanks

No aboveground storage tanks were identified at the property. No evidence of underground storage tanks, such as additional fill pipes or vent pipes, was identified at the property. No evidence of former underground storage tanks, such as asphalt or concrete patches, was identified at the property.

The New York City Bureau of Fire Prevention (NYCBFP) tank and violation information has not been received at the time of this report. This information will be forwarded as soon as it has been received and evaluated.

3.4 Radon

The New York State Department of Health maintains records of average radon levels for New York State based upon a county. The average level for the county of Queens is 1.2 picoCuries per Liter (pCi/L). This level is considered to be within the normal background range. The United States Environmental Protection Agency (USEPA) standard for radon is 4.0 pCi/L.⁴

3.5 Drinking Water Quality

The subject property is supplied water by New York City. The city obtains its water supply from reservoirs located to the north and northwest of the city. The quality of this water is monitored by New York City for organics and inorganics, including lead, in accordance with Federal law. New York City must maintain lead concentrations at less than 15 micrograms per liter.⁵

3.6 Lead In Paint

An inspection of the property for chipped, peeling or cracking paint was performed. No areas of chipped, peeling or deteriorating paint were identified at the property. Therefore, a paint sample was not obtained. The building was recently constructed.

These findings comprise only a preliminary inspection for lead-based paint at the subject property and should not be interpreted as a formal lead-based paint inspection. All Federal, State and local regulations should be followed with respect to lead-based paint if renovations or demolition activities affecting painted surfaces are to be performed.

⁴ New York State Department of Health Basement Radon Screening Data. March 1999.

⁵ USEPA Safe Drinking Water Act, 42 USC 300, et. seq. (1982).

3.7 Polychlorinated Biphenyls (PCB's)

No electrical transformers containing substantial amounts of PCB-contaminated oil or hydraulic fluid were observed at the property. The building does not contain any hydraulic elevators or lifts. No other equipment which could contain substantial amounts of PCB-contaminated oil was identified at the property.

4.0 PRIOR USE INVESTIGATION

In order to determine the prior uses of the property, all available regulatory agency documents and Fire Insurance Maps covering the subject property were obtained and reviewed. No historical aerial maps were readily accessible in the time frame of this assessment. Appendix B contains copies of the regulatory agency documents.

The New York City Department of Buildings file contains a Property Profile Overview (PPO) of the subject property. The property address is listed as 69-28/30 Queens Boulevard, 46-02 70th Street/69-30/34 Queens Boulevard. The Building Department reports 42 actions and 20 violations for the subject property. These actions and violations should not impact the environmental quality of the subject property.

A C of O dated 1954 for 69-28 Queens Boulevard indicates a one-story building utilized for storage, display and sale of new and used motor vehicles is located at the site. A C of O dated 1965 for 69-28 Queens Boulevard indicates a one-story building utilized for auto sales, showroom and repair is located at the site. A demolition permit was issued to 69-30 Queens Boulevard in 1916. A demolition permit was issued to 46-02 70th Street in 1917. A C of O dated 1968 for 46-02 70th Street indicates a used car lot is located at the site.

The property is owned by Norstan Realty Corp. The Tax Map number for the property is Block 2432, Lots 23, 26 and 34. The property is classified as containing K-9 Store Buildings and a K-1 Store Building. The property is zoned in a R7X-Residential District. The Environmental Control Board reports one open construction violation for the subject property. This violation should not impact the environmental quality of the subject property.

The New York City Department of Health and the Department of Environmental Protection have not responded to our search requests at the time of this report. This information will be forwarded as soon as it has been received and evaluated.

Each of the three lots of the subject property is listed as containing a Hazardous Materials E listing with the New York City Department of Planning (Department of Planning). The Department of Planning indicates the subject property contains a zoning designation E-163 as part of the approved Maspeth/Woodside Rezoning process. The property is located on Zoning Map 9d. The property description is listed as "underground gasoline storage tank testing protocol." The E designation indicates that an environmental assessment must be performed to determine if contamination exists on-site and to determine and perform any appropriate remediation. These tasks must be undertaken by the applicant prior to any demolition or excavation of the site for development.

The E designation indicates that an environmental assessment must be performed in accordance with the New York City Department of Environmental Protection (NYCDEP) by the site owner prior to any site development work at the subject property.

Each of the lots also contain E Restricted Noise/Air listings with the Department of Planning. The listing is described as "Window wall attenuation & alternate ventilation." This listing is concerning building component specifications of future development of the site and is not associated with any issues concerning hazardous materials or petroleum products.

Fire Insurance Maps for the years 1932, 1951, 1982 and 1988 were obtained and evaluated by ACT at Cornell University Library, Ithaca, New York. The property to the east is not provided coverage on the Fire Insurance Maps. Appendix C contains copies of the Fire Insurance Maps.

The 1932 Map indicates the subject property as containing a one-story building listed as auto painting and storage at 69-28 Queens Boulevard, a two-story building listed as woodworking at 69-30 Queens Boulevard and a one/two/three-story building listed as a store at 46-02 70th Street. The property to the north contains Queens Boulevard. The property to the south contains a store building. The property to the west contains a store building. The surrounding areas contain commercial buildings.

The 1951 Map indicates the subject property as containing a one-story building listed as sheet metal works at 69-28 Queens Boulevard, a two-story building listed as carpenter at 69-30 Queens Boulevard and a one/two/three-story building listed as a store at 46-02 70th Street. The adjacent properties and surrounding areas are unchanged.

The 1982 Map indicates the subject property as containing a one-story building listed as motorcycle sales and service at 69-28 Queens Boulevard, a two-story store building at 69-30 Queens Boulevard and a one/two/three-story building listed as a store at 46-02 70th Street. The adjacent properties and surrounding areas are unchanged.

The 1988 Map indicates the subject property, adjacent properties and surrounding areas as unchanged.

The review of the regulatory agency documents and Fire Insurance Maps indicate that the property was first developed prior to 1916. The buildings at 69-30 Queens Boulevard/46-03 70th Street have been utilized for woodworking, carpentry, stores and a used car lot. The building at 69-28 Queens Boulevard has been utilized for auto painting, sheet metal works, auto repair and motorcycle repair. The historical auto and motorcycle repair operations may be impacting the environmental quality of the subject property.

The subject property contains a Hazardous Materials E-163 designation with the Department of Planning. The E designation indicates that an environmental assessment must be performed in accordance with the NYCDEP by the site owner prior to any site development work at the subject property. The E-163 Designation appears to have been assigned to the subject property due to the former auto and motorcycle repair and nearby gasoline station. The gasoline station located in the vicinity of the site will be further-discussed in Section 5.0 of this report.

5.0 NEIGHBORHOOD HAZARDOUS WASTE ACTIVITY REVIEW

In an effort to determine the potential impact from hazardous waste activities at the subject property and neighboring properties, a review of information on waste sites within one mile of the subject property was conducted. Appendix D contains the results of the database searches and radius map diagrams. The review included a search of the following Federal, United States Environmental Protection Agency (USEPA) and State New York State Department of Environmental Conservation (NYSDEC) databases:

- USEPA National Priorities List (NPL) and Delisted NPL Sites;
- USEPA Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) and CERLIS No Further Remedial Action Planned (NFRAP) Sites;
- NYSDEC listing of Inactive Hazardous Waste Disposal and Registry Qualifying Sites or State equivalent NPL and CERCLIS Sites;
- USEPA and NYSDEC Resource Conservation and Recovery Act Information System (RCRIS) Hazardous Waste Treatment Storage and Disposal (TSD) facilities, including RCRA violations and RCRIS corrective action activity (CORRACTS), and Hazardous Waste Generators;
- NYSDEC Brownfield and Voluntary Cleanup Sites;
- NYSDEC Solid Waste Management Facilities Database;
- NYSDEC listing of Leaking Underground Storage Tanks and Spills List (Toxic Spills);
- NYSDEC listing of Major Oil Storage Facilities;
- NYSDEC listing of Petroleum Bulk Storage Facilities;
- NYSDEC listing of Chemical Bulk Storage Facilities;
- USEPA and NYSDEC Historic Utility Facilities;
- USEPA Emergency Response and Notification System (ERNS);
- USEPA and NYSDEC Institutional Controls/Engineering Controls (IC/EC).

The NPL and CERCLIS databases are maintained by the United States Environmental Protection Agency (USEPA) and contain records for each of the hazardous waste facilities nominated or chosen for cleanup under Superfund. The NPL database was searched for sites within a radius of 1 mile from the subject property. The subject property is not identified on the NPL database. No NPL sites are identified within 1 mile of the subject property.

The Delisted NPL database was searched for sites within a radius of ½ mile from the subject property. The subject property is not identified on the NPL database. No Delisted NPL sites are identified within ½ mile of the subject property.

The NYSDEC publication of Inactive Hazardous Waste Disposal and Registry Qualifying Sites in New York State contains a listing of all properties and facilities in New York State that have been identified as containing toxic or hazardous wastes and/or contamination in various forms. The subject property is not identified in the database. One Inactive Hazardous Waste Disposal or Registry Qualifying site is identified in the database within 1 mile of the subject property. This site is located approximately 4,185 feet west-southwest of the subject property. This site should not impact upon the environmental quality of the subject property.

The CERCLIS database was searched for sites within a radius of ½ mile from the subject property. The subject property is not identified on the CERCLIS database. No CERCLIS sites are identified in the database within ½ mile of the subject property.

The CERCLIS-NFRAP database was searched for sites within a radius of ½ mile from the subject property. The subject property is not identified on the CERCLIS-NFRAP database. No CERCLIS-NFRAP sites are identified in the database within ½ mile of the subject property.

The RCRIS database includes listings of properties which are under going Corrective Action. The subject property is not listed in the Corrective Action database. One RCRIS Corrective Action site is identified within 1 mile of the subject property. This site is located approximately 4,195 feet west-southwest of the subject property. This site should not impact upon the environmental quality of the subject property.

The RCRIS database includes listings of properties which are considered Hazardous Waste Treatment, Storage or Disposal (TSD) facilities or Hazardous Waste Generators/Transporters. The subject property is not listed in the RCRIS TSD database. No RCRIS TSD sites are identified within ½ mile of the subject property.

The NYSDEC publication of Brownfield/Voluntary Cleanup Sites in New York State contains a listing of all properties and facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. The subject property is not identified in the database. No Brownfield/Voluntary Cleanup sites are identified in the database within ½ mile of the subject property.

The NYSDEC database of Hazardous Substance Waste Disposal Sites in New York State contains a listing of all suspected properties and facilities in New York State that have been identified as possibly containing toxic or hazardous wastes and/or contamination in various forms. The subject property is not identified in the listing. No Hazardous Substance Waste Disposal sites are identified in the database within ½ mile of the subject property.

The NYSDEC Solid Waste Landfill Facility database (SWLF) includes properties which are active solid waste disposal sites. The SWLF database was searched for sites within a radius of ½ mile of the subject property. The subject property is not identified on the SWLF database. Four SWLF sites are identified in the database within 1 mile of the subject property. The closest site is located approximately 1,234 feet south of the subject property. This site and the remaining sites should not impact upon the environmental quality of the subject property.

The NYSDEC Spills and Leaking Underground Storage Tank (LUST) lists were searched for all reported spills within ½ mile of the subject property. The subject property is not listed in the databases as containing a Spill or LUST. A total of 90 Spills or LUSTs have occurred within ½ mile of the property. The closest active site is a gasoline station located approximately 162 feet west of the subject property and has impacted soil and groundwater. Given the location and proximity to the subject property, and the fact that groundwater has been impacted, this active gasoline spill may be impacting upon the environmental quality of the subject property.

The NYSDEC listing of Major Oil Storage facilities was searched for any listings within ¼ mile of the subject property. The subject property is not identified as a Major Oil Storage facility. No Major Oil Storage facilities are identified within ¼ mile of the property.

The NYSDEC listing of Petroleum Bulk Storage (PBS) facilities was searched for any listings within ¼ mile of the subject property. The subject property is not identified in the database. A total of 10 PBS facilities are identified in the database within ¼ mile of the property. These sites should not impact upon the environmental quality of the subject property.

The subject property is not identified on the RCRIS Hazardous Waste Generator/Transporter search. A total of 9 RCRIS Hazardous Waste Generator/Transporter sites are identified within ¼ mile of the subject property. The closest site is located approximately 158 feet northeast of the subject property. These Hazardous Waste Generator/Transporter sites should not impact upon the environmental quality of the subject property.

The NYSDEC listing of Chemical Bulk Storage (CBS) facilities was searched for any listings within ¼ mile of the subject property. The subject property is not identified as a CBS facility. No CBS sites are identified within ¼ mile of the property.

The USEPA and NYSDEC Historic Utility facilities database was searched for any listings within ¼ mile of the subject property. The subject property is not identified as a Historic Utility facility. No Historic Utility sites are identified within ¼ mile of the property.

The ERNS database is a Federal listing of properties which emergency responses were made to in reference to hazardous waste. The ERNS database was searched for the subject property. The subject property is not listed in the ERNS database.

The USEPA and NYSDEC Institutional Controls/Engineering Controls (IC/EC) database was searched for the subject property. The subject property is listed as containing an Institutional Control, Hazardous Materials E-163 designation. The E designation indicates that an environmental assessment must be performed by the site owner prior to any demolition or excavation of the site for development. This listing has been previously-discussed in Section 4.0 of this report.

6.0 CONCLUSIONS

The results of the Phase I Environmental Site Assessment are contained in this report. Based upon this assessment, Advanced Cleanup Technologies, Inc. makes the following conclusions and representations concerning the scope of the assessment and the environmental quality of the property. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Conditions at the subject property:

- Suspect asbestos-containing material located at the subject property (Section 3.1);
- Historical auto and motorcycle repair listed at the subject property (Section 4.0);
- Hazardous Materials E-163 listing for the subject property (Section 4.0, 5.0);
- Active gasoline spill in the vicinity of the subject property (Section 5.0).

Except for these issues, no further assessment work is necessary in order to evaluate the environmental condition of the property.

7.0 RECOMMENDATIONS

Advanced Cleanup Technologies makes the following recommendation with respect to the above Recognized Environmental Conditions at the property:

Suspect Asbestos-Containing Material

An operation and maintenance (O & M) program should be instituted at 69-30 Queens Boulevard in order to monitor the suspect asbestos-containing pipe insulation for any future degradation. This O & M program can be performed by the maintenance staff of the building and can be instituted for approximately \$500.00. These findings comprise only a preliminary inspection of the subject property for asbestos-containing materials and should not be interpreted as a formal asbestos survey. All Federal, State and local regulations should be followed with respect to asbestos-containing materials if renovations or demolition are to be performed at the property.

***Historical Auto and Motorcycle Repair
Active Gasoline Spill in the Vicinity***

Due to the historical auto and motorcycle repair operations at 69-28 Queens Boulevard and the active gasoline spill impacting groundwater in the vicinity of the site, the soil and ground water quality at this portion of the property should be evaluated. This can be accomplished by the installation, sampling and analysis of soil borings and temporary ground water monitoring wells at the property. The results of the evaluation would be presented in a Phase II Environmental Site Assessment Report. These tasks can be accomplished for approximately \$10,000.00.

Hazardous Materials E-163 Listing

The historical auto and motorcycle repair operations and nearby gasoline station appear to be the basis for the E-163 designation of the subject property. In the event the property owners want the E-163 designation satisfied, a Phase II Subsurface Investigation must be performed in accordance with the requirements and approval of the NYCDEP. This investigation would be in lieu of the Phase II Environmental Site Assessment mentioned above. A NYCDEP approved Phase II Subsurface Investigation could cost approximately \$20,000.00.

8.0 EXCLUSIONS AND DISCLAIMER

The purpose of this investigation was to assess the potential environmental liabilities at the subject site with respect to data which Advanced Cleanup Technologies, Inc. has accumulated during the Phase I Environmental Site Assessment. The conclusions presented in this report are based solely on the observations of the site at the time of the investigation. Data provided, including information provided by others, was utilized in assessing the site conditions. The accuracy of this report is subject to the accuracy of the information provided. Advanced Cleanup Technologies, Inc. is not responsible for areas not seen or information not collected. This report is given without a warranty or guarantee of any kind, expressed or implied. Advanced Cleanup Technologies, Inc. assumes no responsibility for losses associated with the use of this report.

"TOMORROW'S ANALYTICAL SOLUTIONS TODAY"

Page 1 of 3

Introduction:

Long Island Analytical Laboratories, Inc. (LIAL) was retained by Crosstown Management Inc. to conduct a limited sub-surface site investigation report on the subject property known as 69-28, 69-30 Queens Blvd. & 46-02 70th Street Woodside, New York 11377.

The scope of work was based on a Phase I Environmental Assessment Report completed by ACT of Farmingdale, New York 11735 on or about July 2007. The Phase I report recommended that a limited sub-surface site investigation be conducted on the subject site in an attempt to determine if any negative impact has occurred to the subject property as a result of the adjacent gasoline service station and carwash. The Phase I did identified several petroleum spills and/or releases within a two (2) mile radius that could have a negative impact on the subject site.

The subject property is located in a commercial and residential area in the northwest portion of the borough of Queens in New York City. The property is located along the south side of Queens Boulevard and the west side of 70th Street.

Two-story commercial buildings are located to the north and south of the subject property. A one-story commercial building is located to the west of the subject property. Two-story residential and commercial buildings are located to the east of the subject property.

The topography of the area is generally level. The vicinity of the site is approximately 39 feet above mean sea level. The ground surface in the vicinity of the property is covered with asphalt and concrete pavement.

Page 2 of 3

Scope of work:

On or about August 15, 2007 LIAL advanced two (2) exterior soil borings on the subject site, and secured soil samples in an attempt to classify the sub-surface soil conditions on the subject site. A standard direct push Geoprobe device was used to advance all exterior soil borings. All soil borings were advanced on a continuous basis starting at grade level and continuing to the groundwater interface or refusal was encountered. Soil samples were collected at four (4) foot intervals and visually inspected for signs of petroleum impact, and screened with a portable Photoionization Meter (PID Meter) for organic vapors. One (1) soil sample exhibiting the highest PID level from each soil boring was secured for laboratory analysis. In the event that no elevated PID levels were encountered than a soil sample from the deepest point of the boring was collected for laboratory analysis.

All samples were collected and preserved in strict accordance with New York State Department of Health protocols. All soil samples were analyzed by a New York State Department of Health approved laboratory. All samples were analyzed for NYSTAGM 4046 volatile and semi-volatile compounds,

Two interior borings were advanced by core drilling through the existing cement slab and hand auguring down until refusal was encountered. Soil samples were collected at one (1) foot intervals and visually inspected for signs of petroleum impact, and screened with a portable Photoionization Meter (PID Meter) for organic vapors. One (1) soil sample exhibiting the highest PID level from each soil boring was secured for laboratory analysis. In the event that no elevated PID levels were encountered than a soil sample from the deepest point of the boring was collected for laboratory analysis.

The two exterior soil borings were advanced in the sidewalk area along Queens Boulevard directly in front of the 69-30 Queens Boulevard (see attached soil boring diagram). One interior soil boring was advanced inside the existing Carpet and Flooring tenant's location near the rear of the building. The second interior boring was located in the basement of the vacant building located at 69-28 Queens Boulevard (see soil boring diagram).

Page 3 of 3

Results:

All of the analytical results for the parameters tested were found to be at or below the minimum detectable limit (MDL) or well below the recommended soil cleanup objectives as set forth by the New York State Department of Environmental Conservation with the exception of soil boring identified as B-3. Soil boring B-3 was secured from rear of the building under the cement slab of the Carpet Retail store (see attached diagram).

Soil boring B-3 was found to have levels of semi-volatile organics that marginally exceed the NYSDECTAGM 4046 cleanup criteria for example:

Benzo-a-pyrene	2,994 ug/kg
Chrysene	3,318 ug/kg

The level of petroleum impact is minor and may be due to natural urban fill or possibly related to the activities of the service station and/or carwash located adjacent to the subject property.

Although the area impacted has not been thoroughly delineated it appears to be limited to the rear portion of the Carpet retail store. The elevated levels of petroleum would require that the impacted soil be properly removed and disposed of in strict accordance with all local, state, and federal regulations during any construction project that would involve disturbing the impacted soil. Due to the low levels of petroleum constituents found and given that fact the impacted soil is under the building footprint the NYSDEC would not require any remedial actions unless the material was disturbed due to construction.

The typical cost for proper transportation and disposal of petroleum impacted soil is approximately \$55.00 per ton. Based on an area 30 feet long by 30 feet wide, and 8 feet deep the approximate cost for transportation and disposal would range from \$15,000.00 to \$20,000.00.

Based on the Phase I Report and the above analytical data no further investigatory or remedial actions are recommended at this time. Further delineation of the impacted area may be required if demolition/construction is to occur on the subject property.

Re: Queens Blvd., Woodside, NY (69-28, 69-30 +46-02 70th St)

Dear Jarret Schochet:

Enclosed please find the Laboratory Analysis Report(s) for sample(s) received on August 15, 2007. Long Island Analytical Laboratories analyzed the samples on August 17, 2007 for the following:

CLIENT ID	ANALYSIS
B-1 @ 20' (Sidewalk)	TAGM Volatile and Semi-Volatile Analysis
B-2 @ 20' (Sidewalk)	TAGM Volatile and Semi-Volatile Analysis
B-3 @ 1' (Carpet 44)	TAGM Volatile and Semi-Volatile Analysis
B-4 @ 5' Below Basement Surface	TAGM Volatile and Semi-Volatile Analysis

Samples received at 3.6°C.

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories Inc. is a NELAP accredited laboratory. All reported results meet the requirements of the NELAP standards unless noted above. Report shall not be reproduced except in full, without the written approval of the laboratory. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.

Client Questionnaire

P.W. Grosser Consulting Inc. (PWGC) has been contracted to perform a Phase I Environmental Site Assessment (ESA) of the property listed below. The Phase I investigation will include site observations, interviews, and review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 1527-05 which documents certain user responsibilities, we are submitting this questionnaire to assist you in meeting those responsibilities. If you could please complete this questionnaire and return it via email or by fax to (631) 589-8705 within one business day of receipt it will allow us to complete the Phase I ESA in a timely and efficient manner.

Date: 3/12/15

Name of person completing questionnaire: XIAO WE TANG Phone #: 646-255-8960
 Company: JS QUEENS DEVELOPMENT LLC Length of association with property: 7 years
 Property Name/Address: JS QUEENS DEVELOPMENT LLC
 PWGC Project #: _____

Directions: Please read and answer all questions very carefully, to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Supplemental details necessary to explain any yes or unknown responses should be provided in the "Comments" column. Note: U/NR indicates "Unknown" or "No Response," and "N/A" indicates not applicable. If "Comment" box proves to be small to fit your comment please attach an additional form with your full response.

	Question	Y	N	U/NR	Comment
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?		X		
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		X		
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		X		
4	Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?		X		
5	Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?		X		

	Question	Y	N	U/NR	Comment
6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or previous occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		X		
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	X			
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?		X		
8(a)	Do you know past uses of the property?	X		X ^{No}	STORES
8(b)	Do you know of specific chemicals that are present or once were present at the property?		X		
8(c)	Do you know of any spills or other chemical releases that have taken place at the property?		X		
8(d)	Do you know of any environmental cleanups that have taken place at the site?		X		
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?		X		

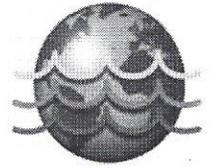

In addition, are you aware of any of the following documents, and if so, please forward copies of the document(s) to P.W. Grosser Consulting at 630 Johnson Ave, Ste 7, Bohemia, NY 11716-2618 (along with a copy of this form):

Helpful Documents to be forwarded to PWGC:

- Environmental site assessment reports (i.e. Phase I or II, tank testing results, radon, lead paint, or asbestos testing, etc.)
- Environmental compliance audit reports; risk assessments; and recorded Activity and Use Limitations (AULs)
- Environmental permits (i.e. solid waste disposal, hazardous waste disposal, wastewater, NPDES, etc.)
- Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs)
- Registrations for underground injection systems
- Material safety data sheets
- Community right to know plan
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure/control plans, etc.
- Reports regarding hydrogeological or geotechnical conditions on the property and surrounding area
- Notices/correspondence from any agency relating to past or current violations of environmental laws, or liens encumbering the property
- Hazardous waste generator notices or reports
- Other:

1A.	Is the property used for an industrial use?		X		
1B.	Are any adjoining properties used for an industrial use?		X		
2A.	To the best of your knowledge, has the property had an industrial use in the past?		X		
2B.	To the best of your knowledge, has the adjoining properties been used for an industrial use in the past?		X		
3A.	Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
3B.	Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	X			ONE ADJOINING PROPERTY IS COMMERCIAL, THE OTHER ONE IS RESIDENTIAL
4A.	To the best of your knowledge, has the property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	X			THERE IS A GAS STATION NEAR THE PROPERTY, BUT IT IS NOT ADJOINING.
4B.	To the best of your knowledge, has any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?			X	
5A.	Are there currently any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers greater than five gallons in volume or fifty		X		

	gallons in the aggregate, stored on or used at the subject property?			
5B.	To the best of your knowledge, have there been previously any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or 50 gallons in aggregate, stored or used at the subject property?		X	
6A.	Are there currently any industrial drums (typically 55 gallon) or sacks of chemicals located on the property?	X		
6B.	To the best of your knowledge, have there been previously any industrial drums (typically 55 gallon) or sacks of chemicals located at the property?		X	
7A.	Is there currently any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the property?	X		
7B.	To the best of your knowledge, have there been previously any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the property?		X	
8A.	Has fill dirt been brought onto the property which originated from a contaminated site?	X		
8B.	Has fill dirt been brought onto the property which is of an unknown origin?	X		
9A.	Are there currently any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?		X	
9B.	To the best of your knowledge, has there been previously any pit, ponds or lagoons located on the property in connection with waste treatment or waste disposal?		X	
10A.	Is there currently, any stained soil on the property?		X	
10B.	To the best of your knowledge, has there been previously any stained soil on the property?		X	
11A.	Are there currently any registered or unregistered storage tanks (above or underground) located on the property?	X		
11B.	To the best of your knowledge, have there been previously any registered or unregistered storage tanks (above or underground) located on the property?		X	
12A.	Are there currently any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	X		
12B.	To the best of your knowledge, have there been previously any vent pipes, fill pipes or access way indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?		X	
13A.	Are there currently any flooring, drains, or walls located at the property that are stained by substances other than	X		

	water or are emitting foul odors?			
13B.	To the best of your knowledge, have there been previously any flooring, drains, or walls located at the property that are stained by substances other than water or are emitting foul odors?		X	
14A.	If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system?	X	/	
14B.	If the property is served by a private well or non-public water system has the well been designated as contaminated by any government environmental/health agency?	X		
15A.	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?	X		
15B.	Have you been informed of the current existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?	X		
16A.	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the property or any facility located on the property?	X		
16B.	Have you been informed of the past existence of environmental violations with respect to the property or any facility located on the property?	X		
16C.	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property?		X	
16D.	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		X	
16E.	Are you aware of any notices from any governmental entity regarding any possible violation or environmental laws or possible liability relating to hazardous substances or petroleum products?		X	
17.	Have there been any environmental site assessments of the property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?	X		
18.	Does the property discharge waste water on or adjacent to the property, other than storm water, into a storm water sewer system?	X		
19.	Does the property discharge waste water on or adjacent to the property, other than storm water, or into a sanitary system?	X		

20.	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the property?		X		
21.	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		X		
22.	Is there now or has there ever been any asbestos-containing materials (ACM), in any application, on the property?		X		
23.	Has there ever been any ACM testing conducted on the property?			X	
24.	Is there any asbestos Operations and Maintenance (O&M) program in place at the property?		X		
25.	Is the now or has there ever been any lead-based paint (LBP) applications on the property?		X		
26.	Has there ever been LBP testing conducted on the property?		X		
27.	Is there a Lead Paint Operations and Maintenance (O&M) Program in place at the property?		X		
28.	Has the water at the property ever been tested for lead?		X		
29.	Has Radon testing ever been conducted at the property?		X		
30.	Are there any other Operations and Maintenance (O&M) programs in place that we should be made aware of?		X		
31.	Is the property or any portion of the property located or involved in any environmentally sensitive areas (i.e., wetlands, coastal barrier resource areas, coastal barrier improvement act areas, flood plains, endangered species, etc.)?		X		
32.	Do you know or suspect that mold was or is present in the building(s) or HVAC system?		X		
33.	Are there reliable procedures that specify the actions (i.e. operations and maintenance) to be taken to prevent and/or respond to mold or mold producing problems?			X	
34.	Is there a mold Operations and Maintenance (O&M) program in place at the property?		X		
35.	Is the HVAC system inspected at least annually?			X	
36.	Have identified HVAC problems been corrected in a timely manner?			X	
37.	Is there now, or has there ever been evidence of mold or mildew present at the building(s)? If so, when?			X	

38.	Is there now, or has there ever been any water damage in the building(s), whether from flooding, plumbing, roof leaks, or other sources? If so, when?	<input checked="" type="checkbox"/>		
39.	Has there ever been any sort of Indoor Air Quality (IAQ) or mold testing conducted in the building(s)?		<input checked="" type="checkbox"/>	
Summarize historical property use (when was the property developed with the current improvements, what modifications have taken place, what was the property used for prior to its' current use)		THE PROPERTY IS CURRENTLY EMPTY.		

Owner Questionnaire

P.W. Grosser Consulting Inc. (PWGC) has been contracted to perform a Phase I Environmental Site Assessment (ESA) of the property listed below. The Phase I investigation will include site observations, interviews, and review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 1527-05, we are required to ask the following question of the owner or opener's representative. If you could please complete this questionnaire and return it via email or by fax to (631) 589-8705 within one business day of receipt it will allow us to complete the Phase I ESA in a timely and efficient manner.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/16/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/06/2015 has revealed that there are 5 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/16/2015 has revealed that there are 30 NY LTANKS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

EXECUTIVE SUMMARY

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

NEWTOWN/ELMHURST FORMER GAS HO	78-01 57TH AVENUE	SE 1/2 - 1 (0.888 mi.)	184	513

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 59 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 5 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D018
Waste name: BENZENE

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

DEC Memo: Site remediation is being tracked under spill no. 93-04343. For additional information, see spill nos. 97-01296, 98-11087, 03-12172, 04-04766, and 04-04768.8/4/2003: Transferred from Sigona to Harrington as per Letter from P. David Smith, Bureau Director, Remedial Bureau B. (Harrington)1/15/2004: Approved UST closure plan in a letter to Cumberland Farms. (Harrington)3/30/2004: STIP executed with Cumberland Farms. CAP calls for UST closure, off-site investigation, and a RAP for both on-site and off-site contamination. (Harrington)5/7/2004: Sent letter to Cumberland Farms approving the UST closure report. (Harrington)5/14/2004: Sent letter to Cumberland Farms approving the off-site investigation work plan. (Harrington)7/7/2004: Sent letter to Cumberland Farms approving the RAP. RAP calls for installation of SVE/AS system, quarterly monitoring reports (SVE/AS system performance and groundwater sampling results), a remedial system evaluation report 6 months after start-up, and a post-remedial sampling plan with 3 years of remedy implementation. (Harrington)10/18/2004: Sent letter to Cumberland Farms approving the SVE/AS pilot test report. (Harrington)5/26/2005: Sent letter to Cumberland Farms approving the design report for the SVE/AS system. (Harrington)10/27/2005: SVE/AS system is operational. Minor piping issues to be addressed. (Harrington)11/14/2005: Sent comments on draft O & M plan to Cumberland Farms consultant (LBG). Final plan is due in January 2006. (Harrington)2/8/2006: Sent letter to Cumberland Farms approving O & M plan with modifications: requested monthly gauging of SVE-2 (due to history of free product in this well), and new monitoring well installations adjacent to SVE-2 and SVE-6 (due to history of free product and elevated BTEX concentrations respectively, and difficulty in sampling SVE wells with SVE/AS system operational). (Harrington)6/15/2006: PM conducted site visit with LBG personnel. Off-site well installation activities were underway. ADT was the driller. (Harrington)6/19/2006: Approved the SVE system start-up report in an e-mail to Cumberland Farms. AS will be started once free product is no longer observed beneath the site. (Harrington)8/21/2006: Sent e-mail to Cumberland Farms

approving the off-site SI report. Requested that a follow-up letter to be sent in one (1) month in order to document the weekly passive product recovery efforts to be conducted at newly-installed on-site well MW-7. (Harrington)6/18/2007 - Haggerty - Assumed project management from Dave Harrington7/20/07 - Haggerty - SVE/AS system has been running for 2 years with slow progress. PM requested all documents concerning the SVE/AS design and spoke with consultant concerning it's progress. Although the system has only recovered 2.43lbs of mass to date, consultant is satisfied. Groundwater still heavily contaminated. 110,000ppb MTBE, 28,000ppb BTEX although free product has not been encountered in last 2 quarters.11/9/07 - Haggerty - sent comment letter to Chris Johnson, PM for Cumberland Farms (letter in edocs). SVE/AS system is not sufficient to remediate groundwater. For the past 6 months, no mass has been recovered. Even if system was working well, MTBE 1/10 as volatile as Benzene once dissolved in water and may never achieve remedial goals with SVE/AS. Remedial alternatives must be accessed.2/27/08 - Aversa - tel call with Chris Johnson, Cumberland Farms. Told him Mike Haggerty had temporarily left the Dept, and to send correspondence to my attention. Also requested electronic copy of 4th quarter 2007 report, which has been received in hard copy. Confirmed via email.7/8/08 - Haggerty: spoke with Dave Morelli from LBG to discuss the most recent Quarterly and "Additional Subsurface Report" which was prepared in response to my comment letter dated 11/9/07. All SVE and AS legs shut down but SVE-2 and AS-2. System now recovering some mass although not much. Also, LBG installed a well on the 69th Street side (MW-12) per my instruction. This well had 7-8in of product. LBG has been bailing weekly but product thickness has not lower substantially. Mr. Morelli didn't have the most recent product thickness data on hand, but he will forward it ASAP. PM informed him more wells will have to be installed and depending on the amount of product, a product removal system may be needed. The additional wells would be installed to determine whether product is under the street.7/16/08 - Haggerty: required 3 wells surrounding MW-12 to delineate LPH3/26/09 - Haggerty: Sent email to LBG. LBG has been bailing product on a weekly to bi-weekly basis. Product thickness has decreased but still remains. Required EFR events for the next 3 consecutive months. At that point, we will evaluate whether EFR events should continue. If product is gone, PM will discuss extending the SVE/AS system to this area or whether an injection would be more beneficial.7/30/09 - Haggerty: spoke with Dave Morelli from LBG. He informed me that since the EFR event, LPH thickness down to .05ft. EFR will be discontinued from now on. Informed him that since the LPH is nearly gone, LBG and Cumberland must come up with a remedial strategy to address the dissolved phase contamination on the southeast portion of the site. Either the SVE/AS system must be expanded to this area or some form of injection (or both). LBG has until September to submit a workplanApril 2010 - Free product (.6 feet) discovered in the newly installed well. Consultant has been bailing product weekly with limited success (product thickness is not decreasing after 2 months of weekly bailing). Sent email requiring a minimum of 3 MW's be installed to determine extent of LPH. System now recovering some mass but very little. 3 wells installed, product found in 1 in sidewalk. Consultant performing monthly EFR events. LBG will submit a work plan for a Dual-Phase Extraction since Sparging doesn't appear to work. PM approved Dual-Phase Extraction Pilot test work plan. Reviewed Dual-Phase Extraction report and agreed that the technology isn't

monitoring wells, Enhanced Fluid Recovery (EFR). Remediation was partially successful in reducing thickness of free product and dissolved contaminant concentrations in the groundwater, however, in April 2010, the Department determined that further remedial efforts were warranted. RAWP proposing Surfactant Application was approved in August 2010. Surfactant application was conducted from September 2010 throughout September 2011. In May 2012 additional RAWP proposing sodium persulfate injections (a.k.a. ISCO - in-situ chemical oxidation) was approved by the Department. Seven (7) injection wells were installed in June 2012. Sodium Persulfate Injection remediation has been implemented at the site beginning Summer 2012 throughout August 2013, which further reduced dissolved contaminant concentrations. Four High Vacuum Extraction (HVE) events were conducted on wells where free-phase product was observed from February through April 2013. A total of 450 gallons of product-water mixture was removed during these HVE events. Free-phase petroleum product was not observed at the site during the second quarter 2014. The site is undergoing quarterly monitoring and groundwater sampling with the latest round conducted on May 27-28, 2014. Next round of groundwater sampling is scheduled for August 2014. LBG, consultant for Cumberland Farms, will evaluate and submit additional remedial alternatives at the time of third quarter 2014 monitoring report submittal. VB10/22/2014 - V BrevdoLBG submitted Quarterly Report dated October 22, 2014. VB10/24/2014Project Status Synopsis:Cumberland Farms/Gulf Service Station (Former Exxon Mobil), 69-02 Queens Blvd., Woodside (Spill No. 9304343)Remediation was partially successful in reducing thickness of free product and dissolved contaminant concentrations in the groundwater, however, in April 2010, the Department determined that further remedial efforts were warranted. RAWP proposing Surfactant Application was approved in August 2010. Surfactant application was conducted from September 2010 throughout September 2011. In May 2012 additional RAWP proposing sodium persulfate injections (a.k.a. ISCO - in-situ chemical oxidation) was approved by the Department. Seven (7) injection wells were installed in June 2012. Sodium Persulfate Injection remediation has been implemented at the site beginning Summer 2012 throughout August 2013, which further reduced dissolved contaminant concentrations. Four High Vacuum Extraction (HVE) events were conducted on wells where free-phase product was observed from February through April 2013. A total of 450 gallons of product-water mixture was removed during these HVE events. Free-phase petroleum product was not observed at the site during the second and third quarter 2014. The site is undergoing additional In-Situ Chemical Oxidation Injections and quarterly groundwater monitoring with the latest round conducted on August 26, 2014. LBG (Environmental Engineering Consultant for Cumberland Farms) intend to collect the fourth quarter groundwater samples in early December and conduct injections in the seven injection wells in mid-December 2014. The site continues to be an active gas filling station. There is no longer free product present on-site, no off-site migration, and no exposure potential as long as site remains gas station. VOCs concentrations in groundwater, however, remain at fairly high levels and need to be further reduced to accomplish closure of this spill case. The Department had a discussion with LBG on October 24, 2014 and requested that LBG be proactive in advancing the remedial approaches that will further reduce groundwater concentrations to the acceptable levels so that the spill case can be closed. - V. BrevdoCurrent Project StatusCumberland Farms/Gulf Service Station (Former Exxon Mobil), 69-02 Queens Blvd., Woodside (Spill No. 9304343)Remediation was partially successful in reducing thickness of free product and dissolved contaminant concentrations in the groundwater, however, in April 2010, the Department determined that further remedial efforts were warranted. RAWP proposing Surfactant Application was approved in August 2010. Surfactant application was conducted from September 2010 throughout September 2011. In May 2012 additional RAWP proposing sodium persulfate injections (a.k.a. ISCO - in-situ chemical oxidation) was approved by the Department. Seven (7) injection wells were installed in June 2012. Sodium Persulfate Injection remediation has been implemented at the site beginning Summer 2012 throughout August 2013, which further reduced dissolved contaminant concentrations. Four High Vacuum Extraction (HVE) events were conducted on wells where free-phase product was observed from February through April 2013. A total of 450 gallons of product-water mixture was removed during these HVE events. Free-phase petroleum product was not observed at the site during the fourth quarter of 2014. The site is undergoing additional In-Situ Chemical Oxidation Injections and quarterly groundwater monitoring with the latest round conducted on August 26, 2014. LBG (Environmental Engineering Consultant for Cumberland Farms) intend to collect the fourth quarter groundwater samples in early December and conduct injections in the seven injection wells in mid-December 2014. The site continues to be an active gas filling station. There is no longer free product present on-site, no off-site migration, and no exposure potential as long as site remains gas station. VOCs concentrations in groundwater, however, remain at fairly high levels and need to be reduced further to accomplish closure of this spill case. The Department communicated to LBG on January 9, 2015 and requested that LBG be proactive in advancing the remedial approaches that will further reduce groundwater concentrations to the acceptable levels, so that the remediation can be completed and the spill case can be closed. From January 12 to January 16, 2015, LBG is conducting a third round of previously planned In-Site Chemical Oxidation remediation program. Seven injection wells are believed to be located in the source zone of petroleum contamination. The plan going forward is to collect groundwater samples from all of the onsite wells in March and June 2015. After reviewing the March and June groundwater data, LBG will make a recommendation to either continue the ISCO program or to discontinue the program and determine an alternative remedial action.VB

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" CLOSEOUT REPORT SENT BY NATIONAL ENVIRONMENTAL MANAGEMENT ON MARCH 22, 1999 - This report is actually just a "Plan of Action" to say what work they would like to do. 7/27/99 Call placed to Bruce Beck at National Envir (516) 226-9080. Left message asking what work, if any, has been done at the site. 2/18/2000 Sangesland called Bruce Beck to ask what was going on? Bruce said he spoke with the owner 2 weeks ago and the owner said he is in the process of selling the site. Bruce said he would contact the owner again and get back to Sangesland by 2/22/2000 with a schedule of when remediation will be done. 9/12/2000 - Mark Turoff called to say there is a new owner of

the site and he would like the site problems resolved. cell phone # 917-750-1843 beeper # 917-525-3087 Mr. Turoff says there was contamination on the site. He will have the new owner install 3 wells on the site and test it. He will submit a report with the well results along with a copy of the completed "National" report which was completed by the former owner. Based on the results of this new well testing, Mr. Turoff will submit a plan of action for what additional work he proposes. 12/2/2003 Transferred from Sangesland to Rommel 11/2/2006 Reassigned from Rommel to Sun. (MS) 2/20/07: No files found regarding previous action at this site. MS to obtain current status. (JS/MS) 8/1/07: No indication that above mentioned report was submitted to DEC. Need to contact Mr. Turoff to obtain site status. (JS/MS) 10/18/07: Mr. Turoff is from Energy Tank and Environmental Services, Inc. Phone: (718)257-8470. MS spoke to him on 10/18/07 and he stated he has not been in contact with anyone near the area of this property. Will send letter to RP. (JS/MS) 12/3/07: Letter sent to RP identified on ACRIS, DTS Realty, c/o David Schinik 56-05 187th Street, Fresh Meadows, NY 11365, requiring that TCR/SIR be submitted to the DEC by 1/25/2008. (JS/MS) 1/25/08: Report is due today or to legal. (JS/MS) 3/11/08: Spoke to Turoff; he knows he needs to take soil/GW to close out. Waiting for RP to sign. (JS/MM) 4/30/08: Received lab analyticals from Turoff. Missing data, but shows GW contamination (MTBE greater than 10,000ppb @ B-6). Turoff plans to send his SIWP by the end of today (JS/MM) 5/21/08: SIR letter + diagram sent to Schinik, copy to Turoff. (JS/MM) 7/14/08: SIR received; SSI necessary (JS/MM) 08/11/08: Transferred to Kolleeny/Mandac (JK/MM) 9/12/08: Received SIWP from Turoff, rejected. Additional wells necessary (JK/MM) 01/15/09: Left message for Turoff requesting site update. (JK/KG) 02/03/09: Sent email to Turoff: "Mr. Mark Turoff, I will be managing NYSDEC Spill No. 9812536 located at 68-20 Queens Boulevard from now on, under the supervision of Jon Kolleeny. My contact information is provided below. Can you please provide me with an update on the status of this site. The latest correspondence I have is a work plan for additional wells that the Department received on August 8, 2008. Have these wells been installed and/or have any groundwater samples been collected since then? Please feel free to contact me if you have any questions." (JK/KG) 02/05/09: Rec'd email from Turoff: "Right now I am waiting to hear from the client. Unfortunately, he has Alzheimers and is not always able to communicate well. I have been in touch with his lawyer as well. Please bear with me. I don't know how this will be resolved. Mark Turoff" (JK/KG) 02/23/09: Rec'd letter on 02/20/09 dated 01/14/09 from Turoff requesting spill be closed due to financial and health problems of the owner. Need to respond. (JK/KG) 03/26/09: Spill cannot be closed; soil and groundwater have levels of VOCs exceeding regulatory standards. Spoke to John Urda on 3/19/09 and he suggested sending RP letter requiring site investigation to continue. If there is no response from the RP then this spill will need to be referred to legal. On 3/26/09 a letter was sent to Schinik requiring that groundwater samples be collected, wells surveyed and a summary report submitted by 5/1/09. In addition, the Well Installation Plan and Preliminary Site Assessment Plan prepared by Mark Turoff was not approved. (JK/KG) 05/04/09: On 5/1/09 rec'd hardcopy of groundwater sampling summary report from Turoff dated 4/28/09. Under review. (JK/KG) 05/05/09: VOCs in groundwater have declined at the site. GW samples collected April 3 and 4, 2009. MW-1: Total VOCs - 53.4 ug/L MW-2: Total VOCs - 110.2 ug/L MW-3: Total VOCs - 116.3 ug/L MW-4:

MTBE - 180 ug/LMW-5: Total VOCs - NDMW-6: Total VOCs - ND Letter sent to Schinik approving recommendation to collect an additional round of groundwater samples. Site conditions will be re-evaluated based on analytical results. A quarterly groundwater monitoring report is due 8/7/09. It should include recommendations for further investigation and/or remediation, as appropriate. (JK/KG)05/07/09: Rec'd email from Turoff on 5/5/09: "Mr. Schinik has no e-mail address. Unfortunately his Alzheimer's has gotten much worse recently. I spoke with his attorneys Alan Rothbard this morning and he let me know. I will be dealing with his daughter from now on. I will get her information for you as well. She lives in Portland, OR. I don't know if she'll be coming to NY to be with her father. I'll keep you up to date. Mark" (JK/KG)06/04/09: Letter sent on 5/5/09 was returned as "unclaimed". The letter was resent certified to the same address in Fresh Meadows, NY. White Pages lists Fresh Meadows as Mr. Schinik's address. Sent an email to Turoff requesting an alternate address or contact information for Mr. Schinik's daughter. (JK/KG)06/08/09: Turoff sent an email stating that he has also been unsuccessful at contacting Mr. Schinik. He did not provide any information for Mr. Schinik's daughter. He suggested sending letters to Mr. Schinik's attorney: Harrison and Rothbard, P.C. 105-15 Metropolitan Ave. Forest Hills, NY 11375 ATTN: Alan Rothbard 718-261-0600 (JK/KG)06/11/09: The letter resent on 6/4/09 was delivered on 6/5/09. I sent Turoff another email requesting a pdf of the 4/28/09 report. (JK/KG)08/11/09: Sent an email to Turoff inquiring about the past due report. (JK/KG)8/12/09: Rec'd an email from Turoff requesting an extension to November 2009 since he was just paid for the last sampling event. The extension was approved and the new deadline for the groundwater monitoring report is October 30, 2009. The email correspondence is in eDocs. (JK/KG)09/30/09: If the sampling is not performed and a report is not submitted, this spill should be referred to legal. (JK/KG)11/03/09: Received Well Re-Sampling Rpt - Round 3 prepared by M & D Turoff Env't'l Consulting, dated October 2009. Re-sampling of six on-site wells in Oct. 2009 showed well MW-4 had 1,618 ug/L total VOCs, up from 180 ug/L (all MTBE) in April 2009. Well MW-6 had 1.5 ug/L of benzene (was ND for VOCs in April 2009). Wells MW-1, MW-2, MW-3 were ND in Oct. 2009, down from detections of 53 ug/L, 110 ug/L and 116 ug/L resp. of total VOCs in April 2009; well MW-5 was ND in both April and October 2009. Data for MW-4 indicates need for further sampling. - JK02/07/12: Contacted consultant Mark Turoff about another round of GW sampling; he sent email reply: "Jonathan, I spoke to Mr. Schinik's daughter Tal. Mr. Schinik is in a nursing home in Oregon and has Alzheimer's Disease. His daughter is handling his affairs and also lives in Oregon. I will be mailing a proposal for this work tomorrow and will let you know what is happening as soon as I hear from her." - J. Kolleeny 04/23/12: On 4/19/12, contacted Mark Turoff re: add'l round of GW sampling. He sent email reply: "Jonathan, Right after I did this job I was having some health issues. I've been diagnosed with cancer. This is my second go around though it's in a different organ this time. I've undergone surgery and am presently being treated with a form of chemotherapy. Please forgive me for not having gotten rpt to you yet. If you can bear with me for a few weeks I'll work on it and get it to you. If lab analysis and a site sampling map will help in meantime, I'll get them right over to you. Thank you." On 4/23/14, I sent email: "Mr. Turoff, I'm truly sorry to hear about your health issues and surgery, and I hope chemo goes well and you have a full recovery."

No problem about not sending rpt yet, I can wait for it. It would be very helpful if you could send lab analyses and site plan showing well locations at your earliest convenience." Mr. Turoff sent reply: "I'll get it to you this week. Had a treatment today so I need a few days to recover. Thanks so much for your help." - JK07/02/12: Contacted Mark Turoff re: add'l GW data; he sent email reply: "Jonathan, Thank you so very much for time you've allowed me getting you rpt. I just completed my first round of Chemo treatments and I hope to feel up to getting you rpt in a few weeks. Treatments really are debilitating. Also, I found out that people exposed to certain VOC's and heavy metals are very prone to bladder cancer. Working around it for so many years may have contributed. It might be a good bit of info to get around to others in envt'l field. I will get rpt to you ASAP." - J. Kolleeny10/28/14: Visited site and was able to locate 5 of 6 monitoring wells shown on Turoff site plans. Site is occupied by "Pay-O-Matic" store; I got phone number of their corporate office on Long Island (516-496-4900) to try to obtain property owner contact info. Left phone message. See site visit photos in DecDocs. - J. Kolleeny10/29/14: Received call from Umparo Soros (spelling?) of Pay-O-Matic (516-496-4900, ext. 1367), returning my call. She stated that property is owned by DTS Realty Corp. (1122 North Cordova Street, Burbank, CA 91505), represented by Ms. Tal Schinik (917-656-1451). I contacted Ms. Schinik, she said former consultant Mark Turoff had told her that she no longer had problem, but now he won't take her calls. I asked for her email address (tally5@aol.com), and emailed her list of remediation contractors from 2009. I told her that unless Mr. Turoff sampled wells again after last sampling data I have (Oct. 2009), and data from that sampling shows decrease in VOC levels sufficient to warrant spill closure, she will have to have a consultant go to site and gauge and sample existing wells. I agreed to only require GW samples from wells MW-4 and MW-1 (which had VOCs above stds when last sampled). - J. Kolleeny10/30/14: Received call from Ms. Tal Schinick, she says she is coming to NY and asked if I could meet her at site on Nov. 18, 2014. I agreed to meet her at site at 2 pm that day. - JK11/18/14: On 11/13/14, I was contacted by Mr. Mark Turoff, envt'l consultant for RP Ms. Tal Schinik, who said he had found lab data for sampling he conducted in Feb. 2012; I asked that he fax data to me, which he did (in DecDocs). Data show all six on-site wells were sampled; well MW-1 had 2.5 ug/L isopropylbenzene, 3.6 ug/L n-propylbenzene (both below GW std of 5 ug/L), and 0.80 ("J" or estimated value) of sec-butylbenzene; well MW-2 had traces of 3 VOCs detected, all "J" values and all below 1 ug/L; well MW-3 had no detections; well MW-4 had 4.1 ug/L of MTBE (below GW std of 10 ug/L); well MW-5 was ND; well MW-6 had 1.6 ug/L MTBE. I contacted Tal Schinik, told her that based on results of Feb. 2012 sampling, I would not require further GW sampling, but would issue spill closure letter and require proper closure of on-site wells. On 11/18/14, met with Ms. Schinik at site with tech from Env't Assessments to discuss well abandonment. I said well heads and metal cylinders should be entirely removed and pavement restored. This was agreed to. Tech from EA located what may be well MW-6, paved over; they will cut thru asphalt to confirm and if it is MW-6, it will be abandoned with others. I closed spill, emailed closure letter (in DecDocs) to Ms. Schinik (tally5@aol.com), asking that she send confirmation when wells have been properly decommissioned. - J. Kolleeny

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

DEC Memo:	<p>This spill site has been consolidated under spill no. 90-07122. See also spill nos. 90-12777 and 05-09205.4/4/2002: STIP executed between Exxon Mobil and the Department. SVE/AS system was started shortly after STIP execution. (Sigona)4/5/2004: Project management was transferred from Sigona to Harrington (central office) for management. (Harrington)12/21/2004: Letter sent to Exxon Mobil indicating SRS was accepted by the Department. Letter also indicated that the post-remedial sampling plan was due by April 3, 2005 as required by the STIP. (Harrington)5/26/2005: Sent letter to Exxon Mobil approving work plan to expand the on-site SVE/AS system in order to address residual BTEX in groundwater. (Harrington)4/4/2006: Approved station upgrade activity report. No additional spill nos. were generated as a result of this work. (Harrington)6/15/2006: PM conducted a site visit with GSC Kleinfelder personnel. SVE/AS system expansion has been completed in order to progress the site to closure. Additional AS well installed in SE corner of the site where highest GW concentrations exist, and additional SVE and AS wells adjacent to the station building in order to deal with elevated concentrations in GW. System appears to be operating smoothly. (Harrington)2/1/2007 - ExxonMobil submitted a site status update report and there is no major change in the concentration and distribution of the contaminants at the site. (Perez)3/6/2007: Project management was transferred from Harrington to Perez (central office) for management. (Perez)05/31/2007: The SVE system had been running continuously. ExxonMobil continues to gauge and sample the on-site monitoring wells on a bi-annual (June/December) basis. (Perez)06/24/2007: The SVE/AS system shut-down. It appears that the breaker to the SVE motor overloaded and partially melted the breaker panel. ExxonMobil working on the repairs of the system. (Perez)07/17/2007: The SVE/AS system is up and running. The SVE motor breaker was replaced and the panel repaired on July 2, however, as the technician was leaving the Site on July 2, the contactor coil on the SVE motor started smoking. At that time the AS system was shut down pending evaluation and repairs. The SVE system has remained in operation since 7/2/2007. The AS system was repaired and restarted on July 13, 2007. (Perez)08/03/2007: ExxonMobil submitted a site status update report and there is no major change in the concentration and distribution of the contaminants at the site. (Perez)03/10/2008: The SVE/AS system is up and running. System optimization and evaluation is ongoing in an effort to address dissolved-phase hydrocarbon concentrations at the Site. ExxonMobil continues to gauge and sample the on-site monitoring wells on a biannual (June/December) basis.</p>

MOBIL # 11397 (Continued)

S107417167

(Perez) 10/29/2008 - The SVE/AS system is currently operational with the exception of three sparge points (SP-1, SP-5, and SP-7) which are off-line pending further repairs. ExxonMobil continues to gauge and sample the on-site monitoring wells on a biannual (June/December) basis. (Perez)01/29/2009 - Exxonmobil request to reduce quarterly sampling/reporting program. Proposal is currently under review. System repairs completed, optimization, and evaluation is ongoing in an effort to address dissolved-phase hydrocarbon concentrations at the Site. ExxonMobil continues to gauge and sample the on-site monitoring wells on a bi-annual basis. (Perez)02/26/2009 - ExxonMobil's proposal to reduce the sampling and reporting program was accepted. The new program will be effective on January 2010. ExxonMobil continues to gauge and sample the on-site monitoring wells on a bi-annual basis. (Perez)07/07/2009 - ExxonMobil continues to monitoring AS/SVE system, gauge and sample the on-sitemonitoring wells on a bi-annual basis. (Perez)10/19/2009 - Analytical data indicates that dissolved-phase hydrocarbon concentrations continue to generally show a decreasing trend. ExxonMobil continues to monitor the AS/SVE system and to gauge and sample the on-site monitoring wells on a bi-annual basis. (Perez)04/16/2010 - Quarterly monitoring report results are consistent with historical data. Analytical data indicates that dissolved phase continues to generally show a slow decrease. ExxonMobil is proposing to monitor the SVE results over the next two quarters (June and December), if groundwater data from the on-site monitoring wells indicates continued stable concentrations of BTEX/MTBE they will request to temporary terminate operations of the SVE/AS remediation system. PM will draft a letter with comments with regard to this request. (Perez)05/24/2010 - ExxonMobil is proposing to monitor the SVE results over the next two quarters (June and December), if groundwater data from the on-site monitoring wells indicates continued stable concentrations of BTEX/MTBE they will request to temporary terminate operations of the SVE/AS remediation system. (Perez)08/26/2010 - Phase II ESA Report submitted and is currently under review. SVE/AS system is operational and being monitored for effectiveness. ExxonMobil is proposing to monitor the SVE/AS results over the next two quarter (June and December), if groundwater data from the on-site monitoring wells indicates continued stable concentrations of BTEX/MTBE they will request to temporary terminate operations of the SVE/AS remediation system. Next quarterly report to be submitted by September 2010. (Perez)09/28/2010 - The Phase II ESA Report and the Quarterly Report reveals product in monitoring wells MW-A and MW-1, respectively. DEC will request further investigation to determine the nature and extent of the contamination. The request to close spill (09-11895) in connection with this matter is unacceptable at this time. (Perez)11/30/2010 - Site transfer to East River Petroleum Realty LLC(East River). East River will assume the remedial obligations of Exxonmobil for this spill. Awaiting for East River to discuss the project. (Perez)02/25/2011 - East River's consultant, Arcadis, will develop a plan to investigate products found in monitoring wells MW-A and MW-1. The SVE/AS system will be shutdown and then startup (pulse)again in an attempt to increase mass removal rates or corroborate that contaminant concentration rebound is not occurring. (Perez)07/26/2011 - An analysis of the AS system is being conducted by Arcadis and the ASsystem will be repaired and turned on with NYSDEC concurrence. It is expected that the mass recovery will increase with a operating AS system. Based on the most recent data, Arcadis recommended that the

S107417167

system optimization be conducted to focus recovery around MW-1 and MW-2. Next quarterly report to be submitted by the end of August 2011. (Perez)08/26/2011 - ARCADIS will propose to conduct surfactant injections to address soil/groundwater contamination in the area around MW-1 and MW-2. A RAP amendment will be submitted to the NYSDEC for review and approval. Next quarterly report to be submitted by the end of August 2011.(Perez)09/28/2011 - Quarterly monitoring report results are consistent with historical data. A Remedial Action Work Plan is being prepared and will be submitted to the Department. The plan will request to turn the current AS/SVE system off and conduct chemical oxidation injections at the site. Next semiannually report to be submitted by the end of February 2012.04/26/2012 - February 2012 - Site Update Report revealed dissolved-hydrocarbons concentrations are the lowest (max. 1356 ppb BTEX) since sampling was initiated in the site. ARCADIS will submit a revised Remedial Action Plan early May to address comments in regards proposed RAP reporting frequency requirements and future decommission of existing AS/SVE system. Also, ARCADIS will submit a Corrective Action Plan in order to implement proposed RAP under the existing STIP. Next semiannually report to be submitted by the end of August 2012.(Perez) 06/07/2012 - Remedial Action Plan (RAP) has been approved. The approved plan proposed injections of sodium persulfate solution to address soil/groundwater contamination. Fieldwork in connection with approved RAP is expected to commence no later than August 2012. Next semiannually report to be submitted by the end of August 2012.(Perez) 09/25/2012 - ARCADIS begin installing injection wells the week of August 27, 2012. The next groundwater sampling event is scheduled for December 2012 and the semiannually report due by the end of February 2013.(Perez) ARCADIS Staff installed two injection wells but were unable to find a suitable location to install the third proposed injection well because underground utilities. ARCADIS will install two new injection wells, in alternate locations, to address this portion of the site. However, delays are expected due to hurricane devastation in the area. (October 31, 2012)This site falls under the holiday embargo from November 16th through January 2nd. ARCADIS will not be able to get a sidewalk permit in place and a driller set up before the 16th. Therefore, they plan this field work for the first week in January once the embargo is lifted. (11-27-2012)ARCADIS completed the installation of two new injection wells early February 2013. Injection event to be scheduled in the following two months. The next semiannual groundwater sampling event is scheduled for June 2013 and the semiannually report due by the end of August 2013. (02-27-13) ARCADIS completed the installation of two new injection wells February 2013. Injections of sodium persulfate solution to be scheduled. The next semiannual groundwater sampling event is scheduled for June 2013 and the semiannually report due by the end of August 2013. (02-27-13) Injections of sodium persulfate commenced on the week of April 14 and it's expected to last at least two weeks. The next semiannual groundwater sampling event is scheduled for June 2013 and the semiannual report due by the end of August 2013. (04-28-13)Injections of sodium persulfate has been completed in accordance with approved work plan. The next semiannual report due by the end of August 2013. (07-25-13)August 2013 - Site Update report revealed increases of dissolved-hydrocarbons concentrations in monitoring wells adjacent to the sodium persulfate injection points. This is caused by the mobilization of the residual soil contamination into the dissolve phase, resulting in a spike in dissolve phase VOC's

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S100492461

of high VOCs in soil near the tank cavity in western part of site, the waste oil tank in the northern part and the eastern pump island in the SE part of site. Four MWs installed. LNAPL recurring in MW-1. 4/96-5/96 6.13-6.20' LPH In MW-1. Amoco will do EFR in MW-1. Will check to see if catch basin is a dry well or if it is connected to sewer. MW-1 is a perched water bearing zone and screened only in that interval. MW-2,3,4 is in a confined deeper aquifer. 7/96-10/96 0.05-0.16' LPH. 10/22/96 Baltec attempted to perform EFR on MW-1. Not effective due to lack of air flow. 11/96 Baltec intends to conduct EFR for a second time in MW-1 during 1997. Possibly proposing hydrogen peroxide if EFR ineffective. 2/24/03 Received notification that MW-2 and MW-3 are to be abandoned during next round of quarterly sampling. 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/4/03 Reassigned from Vought to Foley. 12/3/03 2Q2003 monitoring report received. LNAPL in MW-6 (0.5') and TMW-2 (0.03'). Max BTEX at 72360ppb(MW-6) and max MTBE at 100000ppb (MW-6). Contamination also extends across Queens Blvd. in MW-8. 12/29/03 Delta notified J. Vought of tank pull scheduled for week of 1/5/04. Specifically 5X4000gal gas USTs (installed 1982), 1X550gal fuel oil tank (installed 1992) and 1X550gal used oil tank (installed 1992). 1/12/04 B. Fisher of Delta notified me that tank pull is starting today and will probably be out of the ground by Wed, 1/14/04. 3/4/04 Delta submitted UST closure report. Spartan Petroleum received a copy. Contaminated soil over majority of property at 8-14' bgs. DTW 4-9' bgs. Soil samples from piping excavation (1.5-3' bgs) returned clean. 3/15/04 3Q(8/26/03) and 4Q(11/7/03) 2003 monitoring reports received. 0.57' and 0.41' LNAPL detected in MW-6, respectively. 4Q total BTEX ND(MW-3S, MW-7, MW-8, MW-9) to 121,750(MW-6). MTBE ND(MW-3S, MW-7, MW-8) to 80,900(MW-6). MTBE showing up in MW-9(downgradient), in median of Queens Blvd. 4/23/04 STIP mailed to C. Wein. Due 5/14/04. 5/7/04 During portfolio meeting, it was discussed that they are planning to get out of the lease. It will probably be used for non-petroleum use. DTW 4-8' bgs. RAP to be prepared after pilot for MPE. 5/19/04 1Q04 monitoring report received. BTEX from ND(MW-9) to 67,050ppb(MW-6). MTBE from 3.5 (MW-9) to 154,000ppb (MW-6). 0.34' LNAPL in MW-6. 6/30/04 Met with Spartan Petroleum and Impact Env. Selling property. Currently used car lot/repair shop.-----7/20/04 Received RAP and pilot testing data for use of MPE. Previous Investigations: 1/93 LNAPL was detected in a tank cavity MW and spill #9212087 was assigned. Delineation of soil and GW impacts continued from 1993 to 2002 with the installation of nine wells. The area of maximum VOC concentrations was identified in the area of the tank mat, along the southwestern edge of the site. LNAPL was periodically identified in wells MW-1 and MW-6. 4/99-12/01 11 EFR events were conducted and recovered approx 624lbs of hydrocarbon vapors and a negligible amount of LNAPL. 4/02 A soil gas survey was conducted which identified areas of concern around the tank mat and north of the kiosk. 7/02 LNAPL sample collected from a tank mat well identified as highly weathered regular grade gasoline. The gasoline was classified as a relatively recent release and was subject to rapid evaporation before or during its entrance to the subsurface. 1/12/04-2/10/04 Gasoline Installations excavated two 4000gal double walled steel gas USTs and three 4000gal single walled steel USTs from two concrete encasements as well as associated lines and dispensers. Nine abandoned 550gal USTs and associated vent lines discovered during the excavation were also excavated. A total of 2400 tons of petroleum

MAP FINDINGS

SPILL NUMBER 0108597 (Continued)

S100492461

impacted soil and 19070gal of petroleum impacted groundwater was removed from site. While effective in moving a majority of impacted material near the tank mat and northern portion of the site, the distance between the tank mat and the boundary limited the extent of excavation to the south. The area in the sidewalk around MW-6 could not be addressed. 6/21/04 MW-10, MW-11 and MW-12 were installed to delineate the area around MW-6, and to serve as vacuum influence and GW drawdown measuring points during the MPE pilot conducted on 6/22/04. 6/22/04 The MPE pilot test consisted of applying vacuum to the vadose and saturated zones and measuring extraction rates of each phase through the extraction wellhead(MW-6). The pilot test LRP(operating at 100% capacity) induced an average vacuum of approx 25" Hg vacuum at the extraction well, with an avg. airflow of 13scfm, and achieved an ROI of approx 9' from MW-6. Significant drawdown was observed in each of the wells, which ranged from 3.8 ft to 58 ft away from MW-6, successfully exposing significant areas of the previously saturated zone. There was minimal liquid recovery during the pilot (less than 20gal of GW and no LNAPL). The pilot removed more than 57lbs of hydrocarbon impacts in 25hrs. Data indicates MPE may be a viable option. A conservative estimate of contaminant mass in soil was derived at 224lbs of total VOCs. It is estimated that removal will take 288hrs of MPE operation.

-----9/3/
04 Received SHAR addendum for installation of three 1" monitoring wells (MW-10,11,12) completed on 6/21/04. Soil samples were collected in four foot intervals with a macro-core sampler from 4-16'bgs. DTW is approx 5-9'bgs. Wells were completed to 14'bgs. Contaminated soil was detected in MW-10(8-9.5'), MW-11(6-8') and MW-12(8-10'). Max BTEX was detected in soil at 88,640ppb in MW-10. Groundwater will be sampled in 3Q04. 12/28/04 Approved RAP, to be implemented by 2/11/05. 2/17/05 Received 2Q04, 3Q04, 4Q04 monitoring reports. 2Q04 - 0.29' LNAPL in MW-6. BTEX ranged from ND(MW-9) to 61140ppb(MW-6). MTBE from 1ppb(MW-9) to 14100ppb(MW-6). 3Q04 - BTEX from ND (MW-2,7,9) to 262500ppb(MW-6). MTBE from ND(MW-7,9,12) to 117000ppb(MW-11) 4Q04 - BTEX from ND (MW-2,7,9) to 71450ppb(MW-6). MTBE from ND (MW-7) to 82100ppb(MW-11). 2/18/05 Update from B. Fisher. Have already conducted 3 MPE events with our mobile system which occurred on October 11th, October 18th, and February 9th. Will be summarizing these results in future quarterly reports. 4/27/05 Portfolio meeting- former tank field is the source. Impacts remain in the sidewalk. 3 recovery wells(MW-6, EW-1, EW-2) drawing down watertable. Optimizing system. 7/27/05 Remedial Action Status Report for MPE events conducted 10/13/04 on MW-6, 10/18/04 on EW-1 and 2/9/05 on EW-2. ROI of 18', 32' and 34' respectively. 10/13/04 results indicate a decline in recovery rate of vapors. 10/18/04 and 2/9/05 results show recovery rate of vapors stable. Possibly due to limited airflow through the formation, limiting the number of pore volumes that can be recovered. Delta will continue to operate MPE and stagger extraction locations between MW-6, EW,1 & EW-2. 11/25/05 3Q05- DTW 5.5-8.8'bgs. No LNAPL present. BTEX from ND(MW-2S,7,9) to 49800ppb(MW-6). MTBE from ND(MW-7) to 23800ppb(EW-2). 12/6/05: Reviewed the 2Q05 monitoring report dated July 26, 2005. Ten MWs sampled on May 17, 2005. Max BTEX is 93,660ppb (MW6) and 39,500ppb (EW2). Fluctuating trends in some wells. 3/16/06 Met with BP and Delta. LNAPL identified in 1993; tanks pulled 2004. Now repair shop and used car lot. Impacts remain under sidewalk. Mobile MPE has operated for 58hrs and recovered 118lbs VOCs. 431lbs

total VOCs remain. Not enough vadose zone exposed. Chris will focus on all three wells to get drawdown (every 2 months, 6-10hrs/day). Seasonal gw fluctuation. Will look into possibility of excavating sidewalk if cost is less over life cycle. 3/28/06 4Q05- DTW 5.01-8.66' bgs. No LNAPL present. BTEX from ND(MW-9) to 79520ppb(MW-6). MTBE from 3ppb(MW-9) to 18800ppb(MW-6). 6/8/2006 - Feng - project reassigned to RJJFeng. (RJJF)9/25/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 8/4/2006, by Delta. Groundwater sampling and gauging on 2/9/2006. 10 of the 12 monitoring wells were sampled. MW-2s and MW-7 were sampled annually and were not included in this monitoring event. DTW 4.98' to 8.7' and flows to south. EW-1, 34,040 ppb BTEX, 2,660 ppb MTBE. EW-2, 21,240 ppb BTEX, 28,400 ppb MTBE. MW-4, 3,955 ppb BTEX, 283 ppb MTBE. MW-5, 37.3 ppb BTEX, 41.4 ppb MTBE. MW-6, 59,230 ppb BTEX, 20,100 ppb MTBE. MW-8, 0.45 ppb BTEX, 3.5 ppb MTBE. MW-9, ND. MW-10, 52,480 ppb BTEX, 7,430 ppb MTBE. MW-11, 29,870 ppb BTEX, 11,500 ppb MTBE. MW-12, 15.1 ppb BTEX, less than 1 ppb MTBE. (RJJF)12/28/2006 - Feng - MPE Operation and Maintenance Report, 2Q2006, 12/16/2006, by Delta. MPE events conducted on 5/1/2006 and 6/12/2006. 5/1/2006, 7 hours, 18.38" Hg, 54 gallons groundwater, 68.88 ACFM (Actual Cubic Feet per Minute), removal rate 0.505 lbs/hr BTEX, 0.00005 lbs/hr MTBE and 7.44 lbs/hr TPH. 6/12/2006, 5.5 hours, 20.77" Hg, 25 gallons groundwater, 54.33 ACFM, removal rate 0.202 lbs/hr BTEX, 0.00008 lbs/hr MTBE, 2.80 lbs/hr TPH. Total of 14.75 lbs BTEX and 0.173 lbs of MTBE, 207.46 lbs TPH removed since 6/2004. Delta will continue operating MPE events monthly. (RJJF)1/4/2007 - Feng - 2Q2006, 10/18/2006, By Delta. Groundwater sampled and gauged 5/24/2006. 10/12 monitoring wells. DTW 4.72' to 8.52' bg. Flows south-southwest. No LNAPL. EW-1, 41,200 ppb BTEX, 443 ppb MTBE. EW-2, 20,460 ppb BTEX, 18,700 ppb MTBE. MW-4, 6,457 ppb BTEX, 312 ppb MTBE. MW-5, 3.69 ppb BTEX, 54.1 ppb MTBE. MW-6, 48,510 ppb BTEX, 3,450 ppb MTBE. MW-8, ND BTEX, 0.82J ppb MTBE. MW-9, 2.25 ppb BTEX, 0.89J ppb MTBE. MW-10, 47,190 ppb BTEX, 7,080 ppb MTBE. MW-11, 25,370 ppb BTEX, 4,350 ppb MTBE. MW-12, 6.7 ppb BTEX, less than 1 ppb MTBE. (RJJF)2/5/2007 - Feng - 3Q2006, 11/14/2006, by Delta. Groundwater sampled 8/29/2006. 10/12 monitoring wells. DTW 2.16' to 7.66' bg. Flows south-southwest. No LNAPL. EW-1, 26,712 ppb BTEX, 159 ppb MTBE. EW-2, 16,259 ppb BTEX, 6,980 ppb MTBE. MW-4, 3,869 ppb BTEX, 229 ppb MTBE. MW-5, 7.9 ppb BTEX, 39.8 ppb MTBE. MW-6, 65,980 ppb BTEX, 5,630 ppb MTBE. MW-8, 433 ppb BTEX, 13.3 ppb MTBE. MW-9, 1.38 ppb BTEX, 1.5 ppb MTBE. MW-10, 59,990 ppb BTEX, 4,750 ppb MTBE. MW-11, 3,096 ppb BTEX, 151 ppb MTBE. MW-12, 0.9 ppb BTEX, less than 1 ppb MTBE. (RJJF)2/8/2007 - Feng - MPE Operation and Maintenance Report, 3Q2006, 12/12/2006. MPE events conducted 4-hour 7/19/2006, 6.25-hour 8/15/2006, and 5.5-hour 9/13/2006. As of 9/13/2006, 17.23 lbs of BTEX, 0.178 lbs of MTBE, and 260.1 lbs of TPH of extracted soil vapor, and 234 gallons of groundwater have been removed. Delta will continue monthly MPE events. (RJJF)7/25/2007 - Feng - 4Q2006, 4/30/2007. Groundwater sampled 11/13/2006. 10/12 monitoring wells were sampled. DTW 2.43' to 7.86' bg. Flows to south. No LNAPL. EW-1, 169,870 ppb BTEX, 70.7 ppb MTBE. EW-2, 21,210 ppb BTEX, 5,510 ppb MTBE. MW-4, 42.5 ppb BTEX, 8.9 ppb MTBE. MW-5, 5.4 ppb BTEX, 31.4 ppb MTBE. MW-6, 48,380 ppb BTEX, 553 ppb MTBE. S100492461

10/2/2009. (RJF)1/11/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated October 30, 2009, by Delta. On August 6 and 7, 2009, Envirotrac, on behalf of Atlantic richfield, attempted to advance two offsite soil borings (MW-13 and MW-14) using a Geoprobe 6620 unit equipped with hollow stem augers and a 5-foot macro core soil sampler. MW-13 hit refusal at 11.5 feet bgs and no monitoring well was installed at this location in August 2009. Soil samples were collected from this location though and refer to as SB-13A. Soil samples from SB-13A exhibited elevated levels of total VOCs and Delta decided to reinstall MW-13 in the area immediately adjacent to the original location using a hollow-stem auger drilling rig and use as an additional extraction well during MPE events. In addition, Delta also installed one additional well MW-15 on the northern sidewalk of Queens Blvd, to the northwest of SB-13A location in order to fully delineate gw contamination plume under the Queens Blvd sidewalk. On September 10, 2009, Envirotrac advanced two offsite soil borings (MW-13 and MW-15) using a hollow stem auger drilling rig. MW-13 to 18 feet and MW-15 to 13 feet due to refusal. No soil samples were collected from MW-13 because soil samples were collected from SB-13A. 5 soil samples were collected unit in ug/kg. SB-13A (6.5-7'), PID reading 79.4 ppm, VOCs ND, total SVOCs 34.5 us/kg. SB-13A (9.5-10'), PID 2,000 ppm, 2,200 benzene, 82,000 toluene, 19,000 ethylbenzene, 115,000 xylenes, 218,200 total BTEX, 2,500 isopropylbenzene, 9,100 n-propylbenzene, 66,000 1,2,4-trimethylbenzene, 19,000 1,3,5-trimethylbenzene, 329,470 total VOCs, 8,830 total SVOCs. MW-14 (6.5-7'), PID 2,000 ppm, 330J benzene, 1,600 toluene, 9,200 ethylbenzene, 45,000 xylenes, 56,130 BTEX, 6,100 n-propylbenzene, 43,000 1,2,4-trimethylbenzene, 13,000 1,3,5-trimethylbenzene, 129,670 total VOCs, 3,048 total SVOCs. MW-14 (13.5-14'), PID 2,000 ppm, 4,800 benzene, 170,000 toluene, 75,000 ethylbenzene, 360,000 xylenes, 609,800 BTEX, 7,000 isopropylbenzene, 31,000 n-propylbenzene, 170,000 1,2,4-trimethylbenzene, 61,000 1,3,5-trimethylbenzene, 30,000 naphthalene, 923,100 total VOCs, 4,890 total SVOCs. MW-15 (6.5-7'), VOCs ND, 0.78J SVOCs. All the wells were gauged and sampled on 9/30/2009. DTW 4.59' (MW-5) to 7.53' (MW-14). unit in ug/L. MW-13, 1,900 benzene, 12,000 toluene, 1,700 ethylbenzene, 10,800 xylenes, 39J MTBE, 110 isopropylbenzene, 340 n-propylbenzene, 3,100 1,2,4-trimethylbenzen, 850 1,3,5-trimethylbenzene, 54J n-butylbenzene, 640 naphthalene, 31,533 total VOCs, 580.955 total SVOCs. MW-14, 1,100 benzene, 4,100 toluene, 1,200 ethylbenzene, 4,300 xylenes, 71 isopropylbenzene, 220 n-propylbenzene, 1,500 1,2,4-trimethylbenzen, 350 1,3,5-trimethylbenzene, 35J n-butylbenzene, 390 naphthalene, 13,261 total VOCs, 331.4total SVOCs. MW-15, 24.7 total VOCs, 1.579 total SVOCs. (RJF)6/2/2010 - 3Q2009, 11/25/2009, by EnviroTrac. The monitoring well network was gauged and sampled on 9/30/2009. 3 monitoring wells were installed in 8,9/2009. SHARA will be submitted by Delta. 13 wells were gauged. NO LNAPL. DTW 4.59-7.53' bg. Flows to south-southwest. 10 wells were sampled. MW-2S and MW-7 sampled annually, MW-12 samples broken in transit, not sampled. Max benzene 3,900 ug/L (MW-6). Max BTEX 31,400 ug/L (MW-10). Max MTBE 1,500 ug/L (EW-2).4Q2009, 2/5/2010, by EnviroTrac. Currently a used car dealership. The monitoring well network was gauged and sampled on 11/14/2009. 13 wells were gauged. NO LNAPL. DTW 2.71-7.55' bg. Flows to south-southwest. 13 wells were sampled. Max benzene 6,300 ug/L IMW-6). Max BTEX 41,400 ug/L (MW-6). Max MTBE 1,100 ug/L (EW-2). 1Q2010, 4/15/2010, by EnviroTrac. The monitoring well network was

gauged and sampled on 2/12/2010. 13 wells were gauged. NO LNAPL. DTW 1.59-7.59' bg. Flows to south-southwest. 11 wells were sampled. MW-2S and MW-7 sampled annually. Max benzene 7,200 ug/L (MW-6). Max BTEX 39,100 ug/L (MW-6). Max MTBE 940 ug/L (EW-2). 08/06/2010: This spill was temporarily (for 6 months) transferred to A. Doronova. - AD 11/08/2010: Received an e-mail from Chris Meyer of Delta saying:"Ms. DoronovaAttached is a quarterly update report for the above-referenced site. Thanks Chris"DL the report to eDocs. To request a hard copy. AD01/05/2011: Received an Excavation Notification Work Plan. DL to eDocs. Will Review. AD01/28/2011: Reviewed the Excavation Notification / Work Plan pertaining to the above-referencedsite, prepared by Delta Consultants (Delta), on behalf of Atlantic Richfield Co. The work plan proposes a remedial excavation to be performed at the site, in the area of ongoing groundwater impacts in the vicinity of the sidewalk along Queens Boulevard. Confirmatory post-excavation soil samples will be collected. A remedial excavation summary report with further recommendations will be submitted to DEC. AD02/15/2011: Discussed the work plan with J. Kolleeny of DEC. Will send an approval letter. AD02/16/2011: Sent the approval letter to Mr. Onufrak of ARC. DL pdf copy of the letter to eDocs. AD^4/11/2011 - Spill transferred back to JFeng.6/1/2011 - received 1Q2011. eDoc. JF7/14/2011 - 1Q2011, dated 5/31/2011, by Antea Group. The groundwater samples were collected on 2/22/2011. NO LNAPL. Flows to southwest. High BTEX centration are shown mainly in the wells located at the Queens Blvd sidewalk. EW-1, 24,370 BTEX. EW-2, 17,700 BTEX. MW-4, 8,860 BTEX. MW-6, 30,000 BTEX. MW-14, 8,900 BTEX. JF10/27/2011 - 2Q2011, 9/7/2011, by Antea Group. The groundwater samples were collected on June 14, 2011. 11 wells were sampled. High BTEX in multiple wells. EW-1, 29,570 ug/L BTEX, less than 10 ug/L MTBE. EW-2, 19,500 ug/L BTEX, 41 ug/L MTBE. MW-4, 10,900 ug/L BTEX, 56 ug/L MTBE. MW-6, 25,500 ug/L BTEX, 29 ug/L MTBE. MW-10, 3,870 ug/L BTEX, less than 2.5 ug/L MTBE. MW-11, 3,240 ug/L BTEX, 9.6 ug/L MTBE. MW-13, 577 ug/L BTEX, 0.74J ug/L MTBE. MW-14, 7,080 ug/L BTEX, 10 ug/L MTBE. 1/11/2012 - 3Q2011, 12/2/2011, by Antea Group. The groundwater smaples were collected on August 5, 2011. High BTEX in multiple wells. LNAPL in EW-1, trace. EW-2, 20,100 ug/L BTEX, 42 ug/L MTBE. MW-4, 5,960 ug/L BTEX, 43 ug/L MTBE. MW-6, 22,700 ug/L BTEX, 52 ug/L MTBE. MW-10, 19,580 ug/L BTEX, less than 5.0 ug/L MTBE. MW-11, 2,560 ug/L BTEX, 16 ug/L MTBE. MW-14, 8,400 ug/L BTEX, 12 ug/L MTBE. 7/6/2012 - 1Q2012, 4/27/2012, by Antea Group. The groundwater samples were collected on February 2, 2012. The next sampling event is scheduled for May 2012. MW-4, 6,040 ug/L BTEX, 24 ug/L MTBE. MW-6, 23,700 ug/L BTEX, 50 ug/L MTBE. MW-10, 21,900 ug/L BTEX, 10 ug/L MTBE. MW-11, 257 ug/L BTEX, 4.5 ug/L MTBE. MW-13, 177 ug/L BTEX, less than 0.5 ug/L MTBE. MW-14, 9,460 ug/L BTEX, 7.9 ug/L MTBE. EW-1, 24,120 ug/L BTEX, 5.0 ug/L MTBE. EW-2, 18,700 ug/L BTEX, 32 ug/L MTBE. 9/28/2012 - 2Q2012, 7/31/2012, by Antea Group. The groundwater was sampled on May 14 and June 6, 2012. The next sampling will be in August 2012. MW-4, 7,900 BTEX, 24 MTBE. MW-6, 24,200 BTEX, 25 MTBE. MW-10, 24,680 BTEX, less than 10 MTBE. MW-11, 2,780 BTEX, 8 MTBE. MW-13, 126 BTEX, less than 0.5 MTBE. MW-14, 5,340 BTEX, 9.4 MTBE. EW-1, 29,770 BTEX, 6.2J MTBE. EW-2, 14,990 BTEX, 29 MTBE. 12/21/2012 - 3Q2012, 11/8/2012, by Antea Group. The groundwater was sampled on August 6, 2012. The next sampling will be in 11/2012. MW-4, 3,880 BTEX, 14 MTBE. MW-6, 19,800 BTEX, 38 MTBE. MW-10, 12,230 BTEX. MW-11, 6,020 BTEX, 36 MTBE. MW-13, 233 BTEX. MW-14, 8,300 BTEX, 12 MTBE. EW-1, 57,820 BTEX. EW-2, 15,200 BTEX, 26

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Tank Info:

Tank Number: 001
Tank ID: 28766
Tank Status: In Service
Material Name: In Service
Capacity Gallons: 4000
Install Date: 12/01/1986
Date Tank Closed: Not reported
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 2712
Common Name of Substance: Gasoline/Ethanol

Tightness Test Method: 21
Date Test: 09/26/2012
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MSBAPTIS
Last Modified: 12/03/2012

Equipment Records:

B02 - Tank External Protection - Original Sacrificial Anode
E04 - Piping Secondary Containment - Double-Walled (Underground)
H05 - Tank Leak Detection - In-Tank System (ATG)
A00 - Tank Internal Protection - None
D02 - Pipe Type - Galvanized Steel
G00 - Tank Secondary Containment - None
B01 - Tank External Protection - Painted/Asphalt Coating
C02 - Pipe Location - Underground/On-ground
F04 - Pipe External Protection - Fiberglass
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
J01 - Dispenser - Pressurized Dispenser
L07 - Piping Leak Detection - Pressurized Piping Leak Detector
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring

Tank Number: 002
Tank ID: 28767
Tank Status: Closed Prior to Micro Conversion, 03/91

DEC Memo:

06/28/89 Unico removed 12X550s. After excavating the USTs, a strong gasoline odor was detected in soil beneath the underlying bottom slab. At that time, excavation was halted for safety reasons. The FDNY temporarily closed the S/S until it determined that vapors were not present. An additional 3' of contaminated soil was removed from the bottom of the excavation. When excavation was halted, approx 140yds soil was removed to a depth of 16'bgs. Soil at bottom continued to show evidence of contamination.7/3/89 Existing three USTs tightness tested and passed.7/89 Benzene: 1890ppb(MW-1), 5556ppb(MW-2), 773ppb(MW-3), 2ppb(MW-4).8/26/93 MW-3 and MW-4 had a sheen. MW-1 had 2100ppb and MW-2 had 50ppb benzene.9/14-9/15/93 Installed MW-5 & 6.9/29/93 Amoco Meeting- Amoco needs to address soil and GW contamination.10/14-10/15/93 Installed MW-7 & 8.10/26/93 MW-3 had LNAPL. MW-1 had 1500ppb, MW-2 had 790ppb, MW-4 had 970ppb, MW-5 had 7000ppb, MW-6 had 7900ppb, MW-7 was ND and MW-8 had 13ppb benzene.Now free product in three MWs. Did product pumpdown recharge test. Will be getting reports. DEC told Amoco they need to do a more aggressive remediation. 8/93 A soil gas survey was conducted which indicated that the highest concentrations of VOCs in soil vapor were adjacent to the pump islands and tank cavity. 1997-2001 12 VEFR

1000174740

events were conducted on extraction well(VEW-1) and monitoring well(MW-13), which recovered an estimated 759lbs of hydrocarbon vapor and 4.5gal of LNAPL. 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT.12/4/03 Reassigned from Vought to Foley. Most recent monitoring report (2Q2003) shows LNAPL in MW-6 (0.03'), MW-9 (0.72'), MW-13 (0.53') and VEW-1 (1.38'). Max BTEX at MW-13 at 159,520ppb. Max MTBE at MW-4 at 82,400ppb. Not fully delineated. Need stip.2/3/04 Sent stip to C. Wein, BP. See spill #0010597/9830011 at 65-09 Queens Blvd.3/19/04 Received 3Q and 4Q reports. Feet of LNAPL detected in four wells in fourth quarter. High dissolved concentrations.3/24/04 Stip effective today. Delta will conduct product bail-down test and proposes to install a passive recovery bailer in the wells that contain LNAPL. Investigation summary report due 5/24/04.4/16/04 1Q 2004 monitoring report received. LNAPL in MW-6 (3.18'), in MW-9(0.59'), in MW-13(0.53') and in VEW-1(2.89').Total BTEX ND(MW-10, 11, 12, 14) to 146,610ppb(MW-13). MTBE ND(MW-12) to 103,000ppb (MW-13).5/7/04 Portfolio meeting: Will submit report for SVE pilot completed on VEW-1. Very heterogeneous soils, tight. After 12hrs, recovery drops to 0. SVE to address vadose. EFR didn't work for LNAPL recovery. Need to assess dissolved technologies. Submitting RAP sometime this quarter but unsure of proposal at this time.5/24/04 Subsurface Assessment report received. Two additional wells, MW-16 and MW-17 were drilled from 34.5 to 37.5'bgs. Soil samples collected did not identify VOCs above cleanup objectives. 17 groundwater samples collected. LNAPL was detected in four wells, MW-6(3.09'), MW-9(0.43'), MW-13(0.58'),MW-16(0.03'), and VEW-1(2.84'). Total BTEX ranged from ND(MW-12) to 122,610ppb(MW-13). MTBE ranged from ND(MW-7, MW-12) to 83,800ppb(MW-13).On 5/5/04, Delta conducted a baildown test on monitoring well MW-6 to determine the transmissivity of the formation with respect to LNAPL. Delta plans to install passive skimmers in MW-6, MW-9, and MW-13 to recover LNAPL(as per the stip).SVE pilot results to be submitted under separate cover. Delineation may not be possible across 65th PI due to interference with BQE. 7/13/04 SVE feasibility pilot testing, analysis and report submitted. The test showed that there is a sufficient quantity of hydrocarbons available for recovery, but low permeability soils limit the effectiveness of SVE as a remedial option. Delta will continue to monitor GW and further evaluate SVE to determine its applicability.8/6/04 Received 2Q04 monitoring report. LNAPL in MW-6(3.09'), VEW-1(2.89'), MW-9(.43'), MW-13(.58') and MW-16(.03'). Passive recovery bailers have been installed in wells with LNAPL.11/5/04 Requested additional delineation crossgradient of MW-5, MW-16 and MW-17. Also upgradient of MW-9. The BQE runs below 65th St. Delta assessed these options previously and determined that it was too dangerous to install on 65th St. The upgradient well would be on the other side of a four lane roadway and is probably too far to be helpful. Approved delineation and requested RAP be submitted as per stip. RAP due 12/20/04.1/20/05 Email from B. Fisher, Delta. Delta conducted the MPE pilot and are currently evaluating the results. The pilot test report will be completed by 1/21/05 and assuming the results are favorable, the RAP will be submitted by 1/28/05.2/2/05 Received pilot test results and RAP for MPE.4/5/05 4Q04- LNAPL- 0.16'(MW-16), 0.11'(MW-18) and 0.45'(VEW-1). BTEX ranged from ND(MW-10,11,12,14) to 360800ppb(MW-18). MTBE ranged from ND(MW-12) to 134000ppb(MW-4). DTW 25-34'bgs.4/26/05 3Q04- 0.04'(MW-16), 0.43'(VEW-1). BTEX from ND(MW-10,12,14) to 78420ppb(MW-4). MTBE from ND(MW-7,12) to 106000ppb(MW-4). DTW 25-34'bgs.4/27/05 Portfolio

1000174740

meeting- GW 27-30'bgs. Tight soils. Impacts at tank mat suspected to be source. In saturated and capillary fringe zone. Passive skimmers in MW-6,9,13 removed 3gal LNAPL from 6/04-8/04. Off-site wells MW-16,17. SVE had limited ROI at EW-1. MPE pilot on MW-13. 10 extraction wells. Isolating points b/c of tight soils and utilizing skimmers.MPE pilot showed 2.52ft of drawdown in VEW-1 and 0.25ft in MW-5. VEW-1 and MW-5 are located 5.5ft and 50.5ft from MW-13(pilot extraction well). Approx 170gal of water was removed from MW-13 over 8hrs. 0.35gpm was achieved. No measurable LNAPL was recovered. A 10HP LRP connected to a 1" PVC stinger, set approx 1.5' below the water table, effectively influences soil vapor within a 65ft by 25ft lateral area from MW-13. Contaminant mass is estimated with 285,450 cubic feet of soil, 1323gal of LNAPL, 7954lbs of total VOCs (16lbs in soil and 7938lbs LNAPL). 7/11/05 Approved RAP for MPE. To be implemented within 45days(8/25/05). 9/16/05 1Q05- DTW 25.5-33.7'bgs. 0.51' LNAPL in MW-18, 0.58' in VEW-1. BTEX from ND(MW-10,14,15) to 247,990ppb(MW-18). MTBE from ND(MW-12)to 110000ppb(MW-13). 9/19/05 Email from B. Fisher- MPE is currently not operational; however, since the NYSDEC's July 11, 2005 approval of Delta's MPE RAP, have been initiating the construction of the system. Building, permitting, and installing the system has taken longer than expected. The MPE system and housing for the system have been constructed off-site; however, several of the system components, including the LRP pump and some of the electronics, have had considerable lead times which have taken Delta longer than expected to acquire. In addition, an electrical upgrade is required to the service station; therefore, Delta submitted an application to New York City's electrical permitting office to get the appropriate permit to upgrade the electric service, but unfortunately the permit has a lead time of approximately 50-80 days from the time the application is submitted. They are expecting the permit by mid to late October. Delta plans to finish the construction of the MPE system and housing with the outstanding components, relocate the system to the site, hook the MPE system up with each extraction well line, and provide the appropriate fencing/protection for the system and carbon units on-site. Once the electrical upgrade permit is acquired in mid to late October, Delta expects to start up the MPE system. 9/29/05 2Q05- DTW 23.68 to 33.42 ft. 0.01' LNAPL detected in MW-6 and 0.34' in MW-18. BTEX from ND(MW-10,11,12) to 122480ppb(MW-13). MTBE from ND(MW-12) to 114000ppb(MW-13). 10/3/05 Email from D. Taylor, Delta. Will be working in coming weeks for the proposed MPE system. Sent letter for obtaining permits to install piping under sidewalk. 12/6/05 3Q05- DTW 24.61-33.80'bgs. 0.82' LNAPL in MW-18 and 0.80' in VEW-1. BTEX from ND(MW-1,3,7,8,11,12,14,VEW-1) to 226710ppb(MW-18). MTBE from ND(MW-7,8) to 120000ppb(MW-5). 3/16/06 Met with BP and Delta. Dave Taylor of Delta is project manager. DTW 27-30'bgs, transmissivity 8.96×10^{-7} ft²/min. MW-16,17,18 installed this year. Limited vadose zone contamination. Delay due to Con Ed electric drop. MPE system startup 3/06. There are 5-6 extraction wells. System generates 27"Hg(35cfm) but Delta plans to concentrate on one well at a time and then optimize by ROI readings. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF)8/3/2006 - Feng - 1Q2006, 6/5/2006, by Delta. The site is an active gasoline station. As of sampling on 1/31/2006, groundwater flows to south at depth of 23.77' to 33.45' bg. 18 monitoring wells and 1 vapor extraction well. W-1, 2,752 ppb BTEX (1,430 ppb B, 429 ppb T, 383 ppb E, 510 ppb X), 28,000 ppb MTBE. W-2, 6.6 ppb BTEX, 3,350 ppb MTBE. W-3, 23,790 ppb BTEX (5,290 ppb B,

12,600 ppb T, 1,070 ppb E, 4,830 ppb X), 32,500 ppb MTBE. W-4, 79,210 ppb BTEX (11,800 ppb B, 55,700 ppb T, 1,890 ppb E, 9,820 ppb X), 92,700 ppb MTBE. W-5, 6,389 ppb BTEX (991 ppb B, 356 ppb T, 892 ppb E, 4,150 ppb X), 5,550 ppb MTBE. W-6, 25,665 ppb BTEX (2,130 ppb B, 14,100 ppb T, 975 ppb E, 8,460 ppb X), 39,300 ppb MTBE. W-7, BTEX ND, 0.36J MTBE. W-8, 90.5 ppb BTEX, 48.1 ppb MTBE. W-9, 47,510 ppb BTEX (1,730 ppb B, 30,700 ppb T, 1,980 ppb E, 13,100 ppb X), 29,600 ppb MTBE. W-10, 25 ppb BTEX, 6,150 ppb MTBE. W-11, BTEX ND, 2.5 ppb MTBE. W-12, BTEX ND, less than 1 ppb MTBE. W-13, dried. W-14, BTEX ND, 6.2 ppb MTBE. W-15, 0.77 ppb BTEX, 2.1 ppb MTBE. W-16, 33,705 ppb BTEX (225 ppb B, 21,800 ppb T, 1,700 ppb E, 9,950 ppb X), 245 ppb MTBE. W-17, 724 ppb BTEX, 133 ppb MTBE. W-18, 37,766 ppb BTEX (2,940 ppb B, 28,000 ppb T, 966 ppb E, 5,860 ppb X), 33,700 ppb MTBE. VEW-1, 175,560 ppb BTEX, (11,000 ppb B, 150,000 T, 2,260 ppb E, 12,300 ppb X), 39,100 ppb MTBE. (RJF)9/25/2006 - Feng - Quarterly Monitoring Report, 2Q2006, 7/6/2006, by Delta. Groundwater sampling aug gauging on 4/18/2006. DTW 24.89' to 33.66' and flows to south-southwest. LNAPL present in MW-6 (0.68'), MW-18 (0.58') and VEW-1 (1.06'). Total BTEX range from ND (MW-2, MW-10, MW-11, and MW-15) to 225,880 (VEW-1). MTBE range from 2.3 (MW-11) to 119,000 (MW-4). (RJF)9/28/2006 - Feng - Portfolio Meeting with BP and Delta. MPE started operating on 3/2006. Tied clay, less opportunity to transport and also recovery. Currently system running at: 22" Hg and between 5 and 65 SCFM at various extraction wells (MW-1, 6, 13, 16, 17, and 18). Cumulative system recovery to date (after 718 hours operating): 3.9 lbs BTEX, 37.7 lbs MTBE, 327 lbs TPH, 18,836 gallons of impacted groundwater treated (primarily from MW-17), no LNAPL recovered. Will continue to optimize the system. (RJF)2/8/2007 - Feng - Quarterly Remedial System Operation and Maintenance Report, 2Q2006, 1/9/2007. MPE system started up 6/13/2006. O&M site visit on 6/15/2006, 1 of 6 extraction wells (MW-18) was operating. Influent and effluent vapor and groundwater samples taken. Total 27.45 lbs of BTEX, 3.19 lbs of MTBE and 241.85 lbs of TPH recovered after 48 hours of system operation. Delta plan to continue MPE system operation. (RJF)2/8/2007 - Feng - 3Q2006, 1/25/2007, by Delta. Groundwater sampled and gauged 7/25/2006. 17/19 monitoring wells. DTW 24.11' to 33.57' bg. Flows south-southwest. LNAPL in MW-6 (0.02'), MW-16 (0.12') and VEW-1 (0.56'). MW-1, 3,099 ppb BTEX, 18,000 ppb MTBE. MW-2, BTEX ND, 6,110 ppb MTBE. MW-3, 48,830 ppb BTEX, 39,500 ppb MTBE. MW-4, 71,710 ppb BTEX, 83,600 ppb MTBE. MW-5, 5,602 ppb BTEX, 3,250 ppb MTBE. MW-6, 36,280 ppb BTEX, 38,200 ppb MTBE. MW-7, ND. MW-8, 84 ppb BTEX, 62.8 ppb MTBE. MW-9, 31,950 ppb BTEX, 23,800 ppb MTBE. MW-10, BTEX ND, 6,340 ppb MTBE. MW-11, ND. MW-12, ND. MW-13, insufficient water. MW-14, BTEX ND, 3.6 ppb MTBE. MW-15, BTEX ND, 0.59 ppb MTBE. MW-16, 65,590 ppb BTEX, 214 ppb MTBE. MW-17, 281 ppb BTEX, 53.4 ppb MTBE. MW-18, 52,790 ppb BTEX, 76,600 ppb MTBE. (RJF)6/13/2007 - Feng - 4Q2006, 2/13/2007. Groundwater sampled 10/18/2006. 18/19 monitoring wells were sampled. DTW 25.33' to 33.62' bg. Flows to south-southwest. LNAPL in MW-6 (0.19'), MW-18 (0.01') and VEW-1 (0.01'). MW-1, 3,554 ppb BTEX, 10,400 ppb MTBE. MW-2, BTEX ND, 4,800 ppb MTBE. MW-3, 48,740 ppb BTEX, 42,800 ppb MTBE. MW-4, 102,970 ppb BTEX, 109,000 ppb MTBE. MW-5, 7,164 ppb BTEX, 2,450 ppb MTBE. MW-6, 43,080 ppb BTEX, 41,100 ppb MTBE. MW-7, ND. MW-8, 48 ppb BTEX, 75 ppb MTBE. MW-9, 29,200 ppb BTEX, 21,700 ppb MTBE. MW-10, BTEX ND, 134 ppb MTBE. MW-11, 10.2 ppb MTBE. MW-12, ND. ppb BTEX, 54,100 ppb MTBE. (RJF)7/20/2007 - Feng - 1Q2007, 6/15/2007. Groundwater sampled 1/4/2007. 17/19 monitoring wells were sampled. DTW 25.42' to 33.59' bg. Flows to south-southwest. No LNAPL. MW-1, 2,687 ppb BTEX, 11,800 ppb MTBE. MW-2, 4.3 ppb BTEX, 6,500 ppb MTBE. MW-3, 41,890 ppb BTEX, 37,400 ppb MTBE. MW-4, 95,030 ppb BTEX, 87,800 ppb MTBE. MW-5, 4,910 ppb BTEX, 3,320 ppb MTBE. MW-6, 238 ppb BTEX, 349 ppb MTBE. MW-7, 0.65 ppb BTEX, less than 1 ppb MTBE. MW-8, 9.6 ppb BTEX, 51.2 ppb MTBE. MW-9, 22,200 ppb BTEX, 21,200 ppb MTBE. MW-10, 8.6 ppb BTEX, 50.6 ppb MTBE. MW-11, BTEX ND, 31.3 ppb MTBE. MW-12, 3.0 ppb BTEX, less than 1 ppb MTBE. MW-13, not accessible. MW-14, 4.7 ppb BTEX, 2.6 ppb MTBE. MW-15, not accessible. MW-16, 68,134 ppb BTEX, less than 200 ppb MTBE. MW-17, 383 ppb BTEX, 376 ppb MTBE. MW-18, 63,530 ppb BTEX, 77,000 ppb MTBE. VEW-1, 193,730 ppb BTEX, 44,700 ppb MTBE. (RJF)12/12/2007 - Feng - 2Q2007, 8/2/2007. Active service station. Groundwater gauged and sampled 4/5/2007. The site is being remediated via the execution of Multi Phase Extraction events on a regular basis. 17/19 monitoring wells were gauged and sampled. DTW 25.41' to 33.61' bg. Flows to south-southwest. LNAPL in VEW-1 (0.01'). BTEX range ND to 193,720 ppb (VEW-1). MTBE range ND to 67,400 ppb (MW-4). (RJF)1/9/2008 - Feng - 3Q2007, 10/29/2007. Active Service Station. The monitoring well network was gauged and sampled on 7/27/2007. The site is being remediated via the execution of Multi Phase Extraction events. 18/19 monitoring wells were gauged. DTW 24.62' to 33.30' bg. Flows to south-southwest. No LNAPL. 17 wells were sampled. BTEX range ND to 43,700 ppb (VEW-1). MTBE range ND to 43,700 ppb (MW-4). (RJF)2/13/2008 - Feng - 4Q2007, 11/16/2007. Active service station. The monitoring well network was gauged and sampled on 10/9/2007. The site is being remediated via the execution of Multi Phase Extraction events. 18/19 monitoring wells were gauged. DTW 24.83' to 33.54' bg. Flows to south-southwest. LNAPL in MW-18 (0.04') and VEW-1 (0.03'). 17 monitoring wells were sampled. BTEX range ND to 142,330 ppb (VEW-1). MTBE range ND to 50,300 ppb (MW-4). 1Q2008, 2/7/2008. Active Service Station. The monitoring well network was gauged and sampled on 1/16/2008. The site is being remediated via the execution of MPE events. 18 wells were gauged. DTW 24.93' to 33.51' bg. Flows to south-southwest. LNAPL in MW-18 (0.07'). 17 wells were sampled. BTEX range ND to 123,100 ppb (VEW-1). MTBE range ND to 38,000 (MW-3). (RJF)6/18/2008 - Feng - Portfolio meeting with BP and Delta. The permanent MPE system was installed and started in 6/2006. During the past 2 years, the system was on and off due to the cooling problem. The system will be continued to run and groundwater monitoring. System optimization will be made. (RJF)10/29/2008 - 2Q2008, 9/11/2008, by Delta. Active service station. the monitoring well network was gauged and sampled on 4/30/2008. the site is being remediated via the MPE system. 19 wells were gauged. NO LNAPL. DTW 24.91' to 36.62' bg. flows to south-southwest. 18 wells were sampled. MW-13 was not sampled because it was dry. BTEX range ND to 126,600 ug/L (MW-4). MTBE range ND to 69,000 ug/L (MW-18). 3Q2008, 9/29/2008, by Delta. Active service station. The monitoring well network was gauged and sampled on 7/23, 24/2008. The site is being remediated via the MPE system. 16 wells were gauged. MW-8 and Mw-15 had no access, MW-13 was obstructed. No LNAPL. DTW 24.90' to 33.53' bg. Flows to south-southwest. 19 wells were sampled. BTEX range ND to 122,600 ug/L (MW-4). MTBE range ND to 52,000 ug/L (MW-18). (RJF)3/3/2009 - 4Q2008, 11/13/2008, by Delta. Active service station. The monitoring well network was gauged and sampled on 10/10/2008. The site is being remediated via the MPE system. 19 wells were gauged. NO LNAPL. DTW

24.93' to 33.66' bg. Flows to south-southwest. 19 wells were sampled. BTEX range ND to 103,500 ug/L (MW-4). MTBE range ND to 61,000 ug/L. (RJF)5/22/2009 - Reviewed Drilling Work Plan, dated 3/31/2009, by Delta. Delta proposes to install 2 monitoring wells, SHARA due within 90 days of the approval. Have comment on the proposed well MW-20 location. (RJF)8/5/2009 - Approve the Drilling Work Plan, according to the meeting on 7/30/2009, proposed MW-20 will be relocated to the south of MW-11. Letter to BP and Delta. SHARA is due 11/2009. (RJF)6/2/2010 - 4Q2009, 1/17/2010, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on 10/23/2009. The site is being remediated via the multiphase extraction system and monthly product recovery events. A new offsite monitoring well was installed and a report summarizing the details of the installation will be submitted by Delta under separate cover. 20 wells were gauged. LNAPL in VEW-1 (0.32'). DTW 25.31-33.78' bg. Flows to south-southwest. 19 wells were sampled. Max benzene 9,900 ug/L (MW-4). Max BTEX 95,900 ug/L (MW-13). Max MTBE 90,000 ug/L (MW-18). 1Q2010, 4/12/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 1/29/2010. This site is being remediated via the MPE system and monthly product recovery events. 1 monitoring well MW-20 was installed in 12/2009, and SHARA will be submitted. 20 wells were gauged. LNAPL in MW-18 (0.06') and VEW-1 (0.44'). DTW 24.89-33.63' bg. Flows to south-southwest. 18 wells were sampled. MW-18 and VEW-1 with LNAPL, MW-15 with immobile vehicle, not sampled. Max benzene 9,700 ug/L (MW-4). Max BTEX 56,000 ug/L (MW-4). Max MTBE 73,000 ug/L (MW-9). MW-20, low/ND.6/15/2010 - Subsurface Hydrocarbon Assessment Report Addendum, dated March 30, 2010, by Delta. On 9/16/2009 and 12/29/2009, MW-19 and MW-20 were installed respectively using a hollow stem auger drilling rig equipped with a split-spoon sampler. 3 soil samples were collected. MW-19 (20-20.5'), 57J ug/kg total VOCs. MW-19 (29-29.5'), 310 ug/kg MTBE, 874 ug/kg total VOCs. MW-20 (26-26.5'), VOCs ND. Groundwater samples were collected on 1/29/2010, unit in ug/L. MW-1, 182.4 BTEX, 530 MTBE. MW-2, 4.77 BTEX, 650 MTBE. MW-3, 7,640 BTEX, 12,000 MTBE. MW-4, 56,000 BTEX, 19,000 MTBE. MW-5, 3,033 BTEX, 200 MTBE. MW-6, 10,760 BTEX, 43,000 MTBE. MW-7, BTEX ND, less than 0.50 MTBE. MW-8, BTEX ND, 31 MTBE. MW-9, 15,800 BTEX, 73,000 MTBE. MW-10, 0.77J BTEX, 4.4 MTBE. MW-11, 3.7 BTEX, less than 0.50 MTBE. MW-12, 2.85 BTEX, less than 0.50 MTBE. MW-13, 51,200 BTEX, 28,000 MTBE. MW-14, 4.7 BTEX, less than 0.50 MTBE. MW-15, 8,115 BTEX, less than 2.5 MTBE. MW-17, 42.5 BTEX, 17 MTBE. MW-19, 440 benzene, 4,500 toluene, 380 ethylbenzene, 2,050 xylenes, 7,370 BTEX, 3,100 MTBE. 58 isopropylbenzene, 190 n-propylbenzene, 12J p-isopropylbenzene, 1,200 1,2,4-trimethylbenzene, 480 1,3,5-trimethylbenzene, 37 n-butylbenzene, 22J sec-butylbenzene, 55 naphthalene, 12,524 total VOCs. Delta recommends expanding the existing groundwater monitoring network with an additional well MW-21 to be installed along the south side of Queens Blvd and to the west MW-19. Groundwater sampling at the existing monitoring well will continue on a quarterly monitoring schedule. 6/21/2010 - email to Delta. DEC require delineation in the north of MW-18, MW-9 and MW-19, at the median/divider in Queens Blvd or across Queens Blvd in addition to the MW-21 that being proposed. work plan 7/2010. 7/26/2010 - 2Q2010, 7/14/2010, by Delta. Gauged and sampled on 4/21/2010. LNAPL in MW-18 (0.05'). Flows to south southwest. Max BTEX 94,900 ug/L (MW-4). Max MTBE 42,200 (MW-5). 08/06/2010: This spill was temporarily (for 6 months) transferred to A. Doronova. - AD12/06/2010: Received a pdf copy of the 3rd quarter

2010 groundwater monitoring report. DL the report to eDocs.
AD12/23/2010: Reviewed the report. The monitoring well network was gauged and sampled on July 28, 2010. Total 18 wells were sampled. MW-15 was not sampled due to no access. BTEX and MTBE concentrations are ND and very low in 7 wells: MW-7 (ND and 0.5ppb), MW-8 (5.7ppb and 16ppb), MW-11 (0.5ppb and 0.5ppb), MW-12 (ND and 0.5ppb), MW-14 (ND and 0.5ppb), MW-17 (7ppb and 12ppb) and MW-20 (ND and 0.5ppb). Moderate levels of BTEX and MTBE were noted in 4 wells: MW-1 (394ppb and 430ppb), MW-2 (2.4ppb and 260ppb), MW-5 (1,865ppb and 130ppb) and MW-10 (ND and 3,300ppb). Significant concentrations of BTEX and MTBE were detected in the following wells: MW-3 (16,000ppb and 8,300ppb), MW-4 (42,600ppb and 5,800ppb), MW-6 (9,500ppb and 42,000ppb), MW-9 (11,060ppb and 45,000ppb), MW-13 (40,000ppb and 58,000ppb), MW-16 (11,700ppb and 6ppb) and MW-19 (22,500ppb and 6,800ppb). Max BTEX is 42,600 ug/L (MW-4) and max MTBE is 58,000 ug/L (MW-13). LNAPL was detected in wells: VEW-1 (0.03') and MW-18 (0.05'). DTW 25.31-33.78' bg. Flows to south-southwest. Delta recommends to continue groundwater monitoring and remedial activities at the site.
AD01/05/2011: Received a groundwater monitoring report for 4th quarter of 2010. DL the pdf copy of the report to eDocs. Will review.
AD02/09/2011: Reviewed the report. The monitoring well network was gauged and sampled on October 11, 2010. Total 20 wells were sampled. MW-18 was not sampled due to a presence of free product (0.12"). BTEX and MTBE concentrations were ND or very low in 8 wells: MW-1 (17.6ppb and 150ppb), MW-2 (1.9ppb and 99ppb), MW-7 (ND and 0.5ppb), MW-8 (2ppb and 21ppb), MW-11 (1.2ppb and 0.5ppb), MW-12 (ND and 0.5ppb), MW-14 (ND and 0.5ppb), MW-17 (2.5ppb and 6ppb) and MW-20 (0.62ppb and 0.5ppb). Moderate levels of BTEX and MTBE were noted in 2 wells: MW-5 (1,404ppb and 240ppb) and MW-10 (2.4ppb and 3,000ppb). Significant concentrations of BTEX and MTBE were detected in the following wells: VEW-1 (111,400ppb and 35,000ppb), MW-3 (11,300ppb and 5,600ppb), MW-4 (20,800ppb and 3,800ppb), MW-6 (4,980ppb and 36,000ppb), MW-9 (27,300ppb and 63,000ppb), MW-13 (39,400ppb and 58,000ppb), MW-16 (12,330ppb and 0.50ppb) and MW-19 (12,690ppb and 5,600ppb). Max BTEX is 111,400 ug/L (VEW-1) and max MTBE is 56,000 ug/L (MW-13). DTW 25.31-33.78' bg. Flows to south-southwest. Delta recommends to continue groundwater monitoring and remedial activities at the site.
AD4/8/2011 - spill transferred back to JFeng. 4/22/2011 - 1Q2011, 4/5/2011, by Antreagroup. The groundwater was sampled on 1/13/2011. Product in VEW-1 (0.03'), MW-18 (0.14'). High level of BTEX and MTBE in MW-3 (7,020 ug/L BTEX, 3,300 MTBE), MW-4 (14,900 BTEX, 3,700 MTBE), MW-5 (1,588 BTEX, 140 MTBE), MW-6 (4,430 BTEX, 36,000 MTBE), MW-9 (25,100 BTEX, 62,000 MTBE), MW-13 (33,140 BTEX, 53,000 MTBE), MW-16 (16,535 BTEX, less than 5.0 MTBE), MW-19 (17,310 BTEX, 4,900 MTBE). Delta intends to continue groundwater monitoring and remediation activities at the site. email to Chris Meyer " I need some updates on this one. Is the MPE system back on operation now? And also have you submitted any work plan for the wells installation in Queens Blvd or across Queens Blvd? The 1Q2011 quarterly report did not show any new wells nor any remediation activities are going on. There are product in some wells and high level of BTEX and MTBE in multiple wells. "9/23/2011 - 2Q2011, 8/25/2011, by Antreagroup. The groundwater samples were collected on April 27, 2011. 20 wells were sampled. 20 wells were sampled. High BTEX and MTBE in multiple wells. LNAPL in MW-18 (0.01'). MW-3, 15,000 ug/L BTEX, 8,300 ug/L MTBE. MW-4, 65,800 ug/L BTEX, 7,200 ug/L MTBE. MW-6, 6,730 ug/L BTEX, 40,000 ug/L MTBE. MW-9, 27,300 ug/L BTEX, 62,000 ug/L MTBE. MW-13,

28,300 ug/L BTEX, 10,000 ug/L MTBE. MW-16, 8,710 ug/L BTEX, less than 2.5 MTBE. MW-19, 5,770 ug/L BTEX, 2,800 ug/L MTBE. MPE system is operational onsite. Vapor and water influent and effluent samples were collected. Approximately 9,650 gallons of impacted water were treated by the MPE system during 2Q2011. 9/26/2011 - email from Gordon Hinshalwood of Antea Group "I wanted to let you know that we have encountered operational issues with our two dual-phase extraction systems located at 65-10 Queens Blvd and at 3055 Westchester Ave. Both systems are currently shut down as a result of these issues. These systems have both historically recovered significant quantities of hydrocarbons from the subsurface, but we have more recently been challenged with maintenance/ageing performance issues, and are therefore actively looking at other possible solutions to complete the site remediation efforts. We will follow with additional notification as we determine the appropriate path forward." 1/10/2011 - 3Q2011, 12/2/2011, by Antea Group. The groundwater samples were collected on July 14, 2011. 20 wells were sampled. LNAPL in MW-18 (0.10'), VEW-1 (0.05'). High BTEX and MTBE in multiple wells. MW-3, 29,300 ug/L BTEX, 10,000 ug/L MTBE. MW-4, 48,200 ug/L BTEX, 3,300 ug/L MTBE. MW-6, 6,160 ug/L BTEX, 37,000 ug/L MTBE. MW-9, 20,600 ug/L BTEX, 66,000 ug/L MTBE. MW-13, 30,470 ug/L BTEX, 49,000 ug/L MTBE. MW-16, 5,567 ug/L BTEX, less than 2.5 ug/L MTBE. MW-19, 8,280 ug/L BTEX, 4,100 ug/L MTBE. LNAPL was found in the liquid separator tank and the origin of the LNAPL was found to be from the liquid ring pump. The MPE system is currently non operational. The system has demonstrated decreasing hydrocarbon recovery trends over time, and recent operational difficulties have presented significant challenges in maintaining system operation. Alternative methods of site remediation are under consideration at this time. 8/16/2012 - 1Q2012, 4/30/2012, by GES. The groundwater was sampled on 1/24/2012. LNAPL in MW-18 (0.10'), not sampled. LNAPL in MW-6 and MW-9 (Sheen), the was purged and sampled. DTW 33.70 (MW-15) to 24.41 (MW-12) below TOC. Flows to southwest. MW-19, 1,370 BTEX, 5,700 MTBE. VEW-1, 205,100 BTEX, 9,300 MTBE. MW-6, 12,700 BTEX, 57,000 MTBE. MW-9, 20,140 BTEX, 37,000 MTBE. MW-13, 25,010 BTEX, 15,000 MTBE. MW-3, 26,100 BTEX, 11,000 MTBE. MW-4, 48,800 BTEX, 5,500 MTBE. MW-1, 49 BTEX, 120 MTBE. MW-15, BTEX ND, 32 MTBE. MW-16, 5,643 BTEX, MTBE ND. MW-5, 1,298 BTEX, 86 MTBE. MW-17, BTEX ND, 2.2 MTBE. MW-2, 2 BTEX, 160 MTBE. The next sampling will be in 4/2012. 9/6/2012 - Reviewed Feasibility Study Work Plan, dated 8/23/2012, by GES. GES propose to install 2 SVE wells or monitoring wells, and 2 AS wells for the Vacuum Enhanced Groundwater Extraction (VEGE) and SVE/AS pilot test. Email to BP/GES. No comment provided on the pilot test part and let them plan ahead with the pilot test. Comments were given on the Generic Site Investigation Work Plan. 1) additional soil sample for vertical delineation; 2) drilling depth; 3) Investigation Derived Waste. see eDoc. According to GES's email, they might start the pilot 9/17/2012. 1/4/2013 - 3Q2012, 10/31/2012, by GES. The groundwater was sampled on 7/17/2012. DTW 24.27 (MW-12) to 33.62 (MW-7). LNAPL in MW-18 (0.49'). Flows to southwest. MW-19, 2,890 BTEX, 4,400 MTBE. VEW-1, 123,400 BTEX, 15,000 MTBE. MW-6, 8,090 BTEX, 52,000 MTBE. MW-9, 15,940 BTEX, 92,000 MTBE. MW-13, 12,180 BTEX, 6,800 MTBE. MW-10, 150 MTBE. MW-4, 26,200 BTEX, 7,500 MTBE. MW-3, 23,900 BTEX, 8,800 MTBE. MW-16, 6,909 BTEX. MW-5, 2,849 BTEX, 320 MTBE. MW-2, 1.82 BTEX, 190 MTBE. On 9/11-20/2012, conducted drilling activities which included the installation of 2 monitoring wells (MW-A and MW-B) and 2 sparge point wells (SP-1 and SP-2) in

AMOCO SERVICE STATION 441 (Continued)

1000174740

accordance with the August 2012 FSWP. Will conduct the SVE/AS and VEGETATION pilot testing. 1/10/2013 - email to Eddie Savarese of GES for product recovery. 1/14/2013 - response from Eddie Savarese of GES "GES conducted a Pilot Test at this site and is in the process of preparing a Summary Report to the NYSDEC. In the interim, GES proposes to install product passive skimmers and/or absorbent product recovery socks at monitoring wells MW-18, MW-A and MW-B where product is observed. In addition, GES will install a product recovery drum with an overpack, vent, and grounding rod to store recovered LPH." 5/2/2013 - Reviewed Feasibility Study Report, dated 3/18/2013, by GES. In 9/2012, two extraction wells MW-A and MW-B, and two Air Sparge wells SP-1 and SP-2 were installed. And between 11/27-28/2012, feasibility testing activities were conducted using GES's Data Acquisition and Processing Laboratory (DAPL). The results of the feasibility study indicated that SVE/AS can be feasibly implemented at the site and the VEGETATION is not an appropriate remedial alternative. GES proposed to conduct additional delineation of the location, extent, and magnitude of the trapped product and delineation at the north and west of the canopy and the southeast of monitoring well MW-B before an appropriate remedial strategy for the site could be determined because of the increase in thickness was observed during the January 2013 groundwater sampling event. Reviewed 4Q2012 and 1Q2013. In 2/2013, passive skimmers were installed in MW-A, MW-B and MW-18 and absorbent socks were installed at MW-6 and VEW-1 to recover LPH. Performed monthly LPH recovery at MW-A, MW-B, MW-6 and MW-18. NO LPH were detected at VEW-1. DTW 24.86 (MW-12) to 33.67 (MW-7). Flows to southwest. MW-9, 20,560 BTEX, 59,000 MTBE. email to BP/GES to approve the proposed delineation. A work plan or investigation report shall be expected. In the mean time, product removal shall be continue. 5/10/2013 - Reviewed Proposed Boring Location map, dated 5/2/2013. GES proposed 5 soil borings, 2 soil borings/monitoring wells, 1 step-off soil boring. Locations are fine. Reviewed the Generic Site Investigation Work Plan. Same comments as previously review. 1) "clean" sample for vertical delineation; 2) site specific drilling depth; 3) investigation derived waste issue. Email to BP/GES approving the delineation work and comments on the Generic Work Plan. 12/4/2014 - Reviewed Remedial Action Plan, dated 11/14/2014, by GES. GES proposed to install SVE/AS system. SVE wells screen 15-30 feet. AS wells screen 35-38 feet. SVE ROI 22 feet. AS ROI 15 feet. Email comments to GES "1) The RAP mentioned about upwelling which caused by AS/SVE application for about 5 feet, some up to 7 feet in the feasibility study. Is it because of the site lithology? And do you need to adjust vacuum/pressure to be applied to reduce some of the upwelling? 2) AS wells screen to 35-38 feet. Water table at 28-32 feet. The screen depth shall be fine if you are targeting the petroleum impacted water. But the RAP also mentioned the adsorbed-phase hydrocarbon contamination are at 22-38 feet. Are you also targeting the contamination at 38 feet? If so, the AS wells shall screen deeper than 38 feet as the AS bubble would not go laterally, but only vertically. 3) For air emission requirement, you have to meet the STIP and the 2003 Memo based on Central Office guidance. I have attached the 2003 Memo." 12/16/2014 - Email from GES on 12/10/2014 and 12/12/2014 responding to DEC comments. Approved RAWP calls for the installation and operation of SVE/AS system. Letter to BP/GES.

Remarks:

UNICO WAS DOING A TANK EXCAVATION OF (14) 550'S, CONTAMINATED SOIL WAS DISCOVERED UNDER TANKS. SPILL REASSIGNED FROM SIGONA TO ROMMEL.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"02/28/03 RommelSpoke to Jerry Curtain from DAAB.PBS 2-608433 - old 550s just registered prior to removal. During excavtion, DAAB encountered a waste oil tank and a 4K gallon UST. History: 1981 Chevron sold the tanks to the former owner for \$1/tank. Anthony Napolitano bought the property from former owner and is now removing all the tanks. DAAB works for Anthony. Gannet Flemming was hired by Chevron to oversee DAAB's work. Contaminated soil letter sent to Anthony.7/14/2003-Vought-Tank Closure Report review-Report received 4/28/03. Removal of five (550-gallon) gasoline USTs, one (4000-gallon) gasoline UST, one (550-gallon) fuel oil UST and one (550-gallon) waste oil UST. Five endpoints soil samples collected

from gasoline excavation. 30 tons of soil were removed from around waste oil excavation and five endpoint soil samples were taken. All endpoint samples passed TAGM 4046 Required Soil Cleanup Objectives for waste oil, fuel oil and gasoline compounds except for some minor PAH exceedances most likely due to fill nature of soil (analyticals provided). A total of 39.15 tons of soil were removed (disposal manifest provided). Report recommends no further action. Spill closed by Vought.

Remarks: while removing old tanks ground cont has been found - 40 tons soil has been stockpiled.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"1/12/2004 Reassigned from O'Dowd to Sun. Also refer to Spill #96-05081 for this site. 04/08/2004-File Update by Sun: On 04/08/04, Sun sent a letter and Stipulation Agreement to Hess requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of April 30, 2004 for signing the Stipulation Agreement by the Respondent. 05/23/2005-File Update by Sun: 10/20/2005: Project reassigned from Sun to Andersen. 10/20/2005: Reviewed results of quarterly Site Update Report dated 5/5/2005. There is a strong downward trend in most wells. Stip was never signed. The second quarterly report is overdue. 10/26/05: Stip followup letter sent. Second attempt at Stip signature due 11/15/05. 12/23/05: Reviewed quarterly monitoring report dated 11/7/05. Ten monitoring wells sampled on September 9, 2005. Max BTEX 30,030ppb (MW10), max MTBE 412ppb (MW10). There is still a downward trend in most wells. 12/30/05: Sent additional delineation required letter for one more monitoring well to be located to the NW of MW-10. Due 2/10/06. 1/10/06: Received email from Thomas Bosshard : In response to your letter to Hess dated December 30, 2005 for the referenced site, the installation of an additional monitoring well northwest and up-gradient of existing monitoring well MW-10 has been scheduled for Monday, January 23, 2006. The proposed location of the monitoring well is depicted in the attached site plan. The monitoring well will be incorporated into the site's quarterly groundwater sampling schedule, with the next sampling event to be conducted in March 2006. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. Pilot testing with SVE/AS was conducted and didn't work. An RAP utilizing a dual phase system is currently in progress. 2/13/06: Reviewed fourth quarterly 2005 report. Additional monitoring well installed. An RAP is in preparation. Max BTEX 45,480 ppb (MW-10), max

MTBE 425 (MW-9).3/1/06: Signed stipulation agreement, effective date 2/23/06. RAP due 4/24/06.4/28/06: RAP reviewed and approved. Dual phase system will be utilized with 5 extraction wells. 6/30/06: Reviewed the first quarterly 2006 update report. Samples collected January 30,2006. Max BTEX 53,000ppb (MW10) and max MTBE 1,180 ppb (MW10). The RAP has not been implemented yet.7/5/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. DEP now requires an effluent sample from the installed system prior to giving a SPDES permit, so a permit has not been obtained yet. System construction has not begun yet.7/12/06: Received second 2006 quarterly report. Sampling conducted on 4/10/06. Max BTEX 58,700 ppb (MW10) and max MTBE 1,650 ppb (MW9). System startup expected during the 4th quarter.9/1/06: Received email from Ed Russo: "The dual phase extraction system at Hess station # 32502 (Albion, Elmhurst, NY) will be constructed during September and October and isalso scheduled to be activated during the fourth quarter once CONED provides service. The CONED application has already been submitted, so we don't expect a major delay."10/3/06: Reviewed third quarterly report dated 9/27/06. Dual phase system installed, startup date expected this quarter. Groundwater sampled on 7/12/06. Max BTEX 32,510 (MW10), max MTBE 4,910 (MW13). Two new wells installed, MW12 and MW13. MW-9 will not be sampled due to close proximity to MW13. 10/25/06: Sent email to Ed Russo and Gail Helfrick to followup on system startup date. 10/26/06: Received email from Gail Helfrick:"Subsurface work has been completed. The system equipment has been ordered, and Hess is awaiting delivery. We will notify you when the equipment has been received, and when installation is scheduled."11/17/06: Spoke to Ed Russo and Gail Helfrick. Trenching was completed. The equipment was ordered, but has not been received yet. Startup expected January 2007.12/28/06: Reviewed update report 12/20/06. General downward trend in contaminants. Max BTEX 11,602 ppb (MW13), max MTBE 1,580 (MW13). 87 tons on impacted soil recovered and properly disposed of during DPE system installation. System not started yet. When will system be started?1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. System startup expected 1/07.3/23/07: Reviewed update report. Groundwater sampled on 1/22/07. Max BTEX 22,600 ppb (MW10), max MTBE 6,700 ppb (MW13). System startup anticipated in April 2007.5/1/07: Sent email to John Schenkewitz, cc: Aaron Lapine, to followup on system startup.7/12/07: Reviewed site status report. Wells sampled on 4/23/07. Max BTEX 11,830 ppb, max MTBE 1,500 ppb. Multi phase extraction system installed. Startup will take place the week of July 23rd. 9/20/07: Reviewed site status report. MPE system startup awaiting DEP discharge permit. Downgradient well MW7 inaccessible - may need to be reinstalled. Flucutating groundwater concentrations. Wells sampled on 7/20/07. Max BTEX 28,000 ppb (MW13), max MBTE 5,000 ppb (MW13). 2/11/08: Reviewed September 2007 - November 2007 Site Status Report. Wells sampled on October 12, 2007. Increase in dissolved concentrations in MW13. Max BTEX 30,600 ppb (MW13), max MTBE 9,700 ppb (MW13). MW7 is inaccessible (was paved over), and needs to be replaced. MPE system startup awaiting NYCDEP discharge permit.3/27/08: Reviewed December 2007 - February 2008 Site Status Report. Wells sampled on January 30, 3008. Maximum BTEX concentration 4,382 (MW13), maximum MTBE concentration 390 ppb (MW13). MPE system startup delayed for DEP discharge permit. 5/7/08 - Carlson: May 7th meeting with Hess and Envirotrac. They are still waiting for the DEP discharge permit.7/3/08 - Carlson: Reviewed June 2008 Update Report. Wells sampled on 4/28/08. Max BTEX 23,666 ppb in MW13. Max MTBE 2,730

ppb (MW13). MW7 will be replaced. They are still waiting for the DEP discharge permit.9/9/08 - Carlson: Witnessed system startup.10/16/08 - Carlson: Reviewed September 2008 Update Report. Wells sampled on 7/31/08. MW7 was destroyed, will be reinstalled. MW13 was not sampled. MPE system startup data was not included.10/22/08 - Carlson: Meeting with Hess/Envirotrac. System shutdown by DEP because of a zinc exceedance. MW7 will be reinstalled.10/27/08 - Carlson: MPE system was shutdown by DEP because of a zinc exceedance. Received copy of letter from DEP revoking permit.1/9/09 - Carlson: Reviewed December 2008 Update Report. They are waiting for DEP discharge permit for system startup, and for DOB sidewalk permit for well installation.1/23/09 - Carlson: Received workplan for off-site delineation. Five off-site wells proposed.1/29/09 - Carlson: Approved workplan for installation of five off-site wells. Investigation report due 4/29/09.2/27/09 - Carlson: Notified that well installation scheduled for March 3 and March 4. They are still waiting for the DEP discharge permit.3/18/09 - Carlson: Meeting with Hess and Envirotrac. RIR deadline extended to June 2009.4/10/09 - Carlson: Reviewed update report. Wells sampled on 1/8/09. Large decrease in contaminant concentrations. System not operational yet.7/3/09 - Carlson: Reviewed June 2009 Update Report. Off-site wells were installed. System operation still waiting for DEP discharge permit.8/19/09 - Carlson: Meeting with Hess. They are still waiting for DEP permit.10/21/09 - Carlson: Reviewed September 2009 Update Report. Wells sampled on 7/23/09. BTEX concentration 21,981 ppb (MW13). System startup waiting for DEP permit.11/24/09 - Carlson: Received copy of NYCDEP letter dated 8/3/09 approving discharge, but requiring approval from the DEP Division of Air, Noise, Permitting, Enforcement, and Policy. 12/15/09 - Carlson: Received notification, system startup scheduled for 12/29/09.1/8/2010 - Carlson: Reviewed December 2009 Update Report. Wells sampled on 10/21/2009. Maximum BTEX concentration 26,947 ppb (MW13). System startup was not discussed in the report.1/27/2010 - Carlson: Meeting with Hess.4/22/2010 - Carlson: Reviewed update report. MPE system in operation. General decrease in contaminant concentrations.7/20/2010 - Carlson: Reviewed update report. MPE system in operation. Wells sampled on 4/26/2010.5/10/11 - Obligado - Meeting with Hess, EnviroTrac, DEC. They will look into drainage issues at this site. They will submit system drawings and provide stack heights in OMM reports.8/30/11 - Obligado - I reviewed the 2Q11 update report. Max Benzene is 2,870 ug/L. Total BTEX is 4,822 ug/L. MTBE is 4,300 ug/L. System appears to be effective reducing BTEX. 10/21/11- Obligado - This spill assigned back to Carlson as per Brevdo.9/11/2012 - 1Q2012, 6/29/2012, by EnviroTrac. Groundwater was sampled on 4/19/2012. DTW 5.22 to 8.50. Flows to east. Dual phase extraction system is in operation. Monthly O&M and quarterly groundwater sampling. The next sampling will be in 7/2012. MW-12, 365.5 BTEX, 24 MTBE. MW-10, 5,558 BTEX, 37.2 MTBE. MW-9, 3.53J BTEX, 11.5 MTBE. MW-14, 91.3 BTEX, 2.4 MTBE. MW-4, 1,174.1 BTEX, 31.4 MTBE. MW-13, 8,216 BTEX, 738 MTBE. MW-16, 123.5 BTEX, 0.73J MTBE. 11/6/2012 - 2Q2012, 9/28/2012, by EnviroTrac. Groundwater was sampled on July 6, 2012. DTW 4.65 to 15.84. Flows to east. Dual Phase extraction system in operation. SVE stack height 25 feet. Air stripper stack height 15 feet. The next sampling will be in October 2012. MW-12, 285.9 BTEX, 8.5 MTBE. MW-10, 3,856 BTEX, 2,510 MTBE. MW-4, 1,150.7 BTEX, 12.2 MTBE. MW-13, 1,020J BTEX, 2,210 MTBE. MW-16, 28.66J BTEX, MTBE ND. MW-3, 79.71 BTEX, 0.39 MTBE. 2/1/2013 - 3Q2012, 12/31/2012, by EnviroTrac. DEC Memo: 06/14/05 File Update by Sun: On 06/14/05, Sun received the following e-mail from Mike Matri of Hess:Joe,As we discussed on June 9, 2005 Envirotrac was installing a monitoringwell behind the kiosk building when they impacted an electrical conduitand one double wall fibreglass premium gasoline line. Fail-safes/lineleak detectors stopped the flow of product through the product line.Much of the product returned to a contained UST sump (second wall). Anestimated 10 gallons of product entered soil. As a result of the spillHess notified the NYSDEC spill hotline and spill number 05-02867Hess mobilized a contractor to repair the line with the assistance ofEnvirotrac. Three (3) yards of gasoline impacted soil/gravel wasdrummed for disposal. Hess recommends the spill number 05-02867 beclosed and remaining environmental activity continue under spill number97-05539.Based on the above report, the spill #05-02867 is closed. (sun)

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"6/26/02-VOUGHT-Spill caused by small leak in AST in basment of 72-52. Some fuel had migrated into corner of garage at neighboring residence (72-50 Calamus). Remediation included demolition of 72-52 basement walls, investigative borings and excavation of both residences. Broings confirmed fuel impacted soil underlying concrete floor in both residences. Total of 10.04 tons of soil werer removed from both loactions. Stars 8270 analyses of endpoint samples show no exceedances of TAGM 4046 required cleanup objectives. Further remediation activities included installation of vapor barriers and ORC, epoxy treatment of stained concrete. Waste disposal manifests, analyticals and report supplied by American Environmental Assessment Corp 631-586-9605. Spill closed by Vought.

Remarks:

TANK FAILURE AT ABOVE LOCATION. MATERIAL SEEPED INTO RESIDENCENEXTDOOR AT #7250 CALIMUS AVE. CALLER CONTACTED HIS INSURANCECOMPANY THEY REFERED HIM TO THE H2M GROUP FOR CLEANUP. CALLERIS AT WORK AND IS REQUESTING CALL BACK @ 212-730-3366.

from Central Office to Region 2.08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo3/19/14 TJDRceived call from Danny Singh from Don Carlo Environmental - he is submitting a proposal to building owners to investigate open spill. According to Danny - he visited the site today and the tank remains in service - no spill impacts were observed. DeMeo requested historical information regarding past work and/or any passing subsequent tank tightness tests - he did not have this information available. A conceptual work plan was discussed - he plans to start with a system tightness test followed by the collection of subsurface soil samples. Once retained by building management to proceed, Don Carlo was directed to notify DEC and provide update and schedule of planned work.8/21/14 TJDSite inspection - met onsite with wife of building super who provided access to basement boiler room. Structure is currently heated with a dual fuel boiler (natural gas - primary & #2 fuel oil secondary). Boiler room appeared clean and no petroleum odors were detected at time of inspection. Valid PBS registration was posted onsite - contact information was obtained for building owners (Hye Realty Company). Fill port was not properly color coded at time of inspection and petrometer was not in working condition. A records search (EDOCS) was conducted which revealed passing tightness tests were performed and reports submitted for testing performed in 2004 & 2009. DeMeo contacted owner (Stephen Wolinetz) was contacted via telephone to obtain further information regarding open historical spill - owner states that Don Carlo Environmental had recently conducted a sub-surface investigation and report had been submitted to DEC. Report was located - a total of (4) borings were advanced around UST in basement of boiler room to a maximum terminal depth of 10 ft bgs - all sample results were non-detect for all target analytes. Included with report is a third passing sytem test which was performed in November 2013. Based upon above information no further action is required. All documentation has been uploaded to DECDOCS. Spill closed.

Site Description: Location: This Site is located at 56-15 Queens Boulevard, Woodside, New York, at the northwest corner of the intersection of Queens Boulevard and 57th Street. It is identified as Block No. 1329, Lot No. 1 on the Queens County tax map. Site features: The Site is 0.37 acres, and consists of an approximately 6,000 square foot single story building on the southern portion of the site. The rest of the lot consists of a paved parking lot and is bordered by a chain-link fence to the north and east. Current zoning/uses: The Site is currently owned by the company Black and Decker and used as a DeWalt, Delta, and Porter + Cable power tool service center and factory store. The property is zoned residential (R7X) with commercial

DEWALT SERVICE CENTER (Continued)

S109414283

overlay (C2-3). The surrounding area is commercial and residential. The site is bordered by residences to the north, a church immediately adjacent to the west (with a mosque further to the west, across 56th Street), Queens Boulevard followed by the New Calvary Cemetery to the south, and residences, an auto repair facility, and a Kentucky Fried Chicken restaurant to the east (all across 57th Street from the Site). Historical use: The property is presumed to have been undeveloped prior to 1948. A used truck sales company operated on the western portion of the Site from 1948 until at least 1951. The current on-site building was constructed in 1954, at which time it was solely occupied by DeWalt. The property is currently owned by Black and Decker as a DeWalt store and service center. Historic operations at the site by DeWalt which appear to have led to contamination include spray painting, degreasing, machining operations, and waste oil storage, all of which occurred in the western portion of the site. Trichloroethylene (TCE) was used for degreasing (two TCE degreasing units were used at the site until approximately 1980). Contamination consisting of chlorinated solvents was discovered on the property on November 3, 2008 and was reported to NYSDEC Spill Response on January 9, 2009 (Spill No. 0811202). The Site is also registered as a petroleum bulk storage (PBS) facility (PBS ID No. 2-610985) for a 2,000-gallon underground storage tank (UST) containing heating oil. This UST was used until 1972 or 1973 at which time the UST was reportedly cleaned out and filled in place. A stipulation agreement for remediation of the chlorinated solvents was signed between Black and Decker and NYSDEC dated June 17, 2009. Under the stipulation agreement, interim remedial measures (IRM) were performed at the Site in November/December 2009. IRM work included removal of a concrete dry well, associated piping, and surrounding contaminated soil, in the area of the Site where contaminants were detected at the highest concentrations (total excavation to a depth of approximately 15 feet below grade). A thermal-enhanced soil vapor extraction (SVE) system was installed in the spring and summer of 2010, utilizing an electro-thermal resistivity heating remediation system. The system was operated intermittently in the Fall of 2010 but ultimately was discontinued due to conflicts of the system with local utility (Con Edison) policy. The SVE component of the system, however, continues to run continuously. Site geology and hydrogeology: Investigations at the Site have found that the subsurface material consists of glacial till: an unconsolidated, heterogeneous mixture of clay, silt, sand, pebbles, cobbles, and boulders. The uppermost 20 feet of subsurface soil was found to contain the highest percentage of cobbles and boulders. The till is somewhat finer grained below a depth of approximately 20 feet. At a depth of approximately 60 feet below grade (fbg), a hardpan layer is present within the vadose zone. The hardpan appears to be laterally discontinuous. Groundwater is approximately 65 to 70 fbg. The site is being investigated and remediated under the Brownfield Cleanup Program ? see Site No. C241129.

Env Problem:

Nature and extent of contamination: The primary contaminants of concern at the Site are chlorinated Volatile Organic Compounds (VOCs), particularly trichloroethylene (TCE) which was used on-site, and its breakdown products. In soil, the Remedial Investigation (RI) detected TCE site-wide. In the western portion of the Site (the area of the former truck sales operation, waste oil storage and degreasers), concentrations of TCE are below the NYCRR Part 375 Residential Use Soil Cleanup Objectives (RUSCOs), but exceed the

DEWALT SERVICE CENTER (Continued)

S109414283

Unrestricted Use and Protection of Groundwater Soil Cleanup Objectives. These detections were observed in shallow soil only. In the northeastern portion of the site (in the area of expected source contamination), TCE and 1,1,1-Trichloroethane (TCA) and associated breakdown products of these two compounds were detected in higher concentrations. In this area, TCE was detected as high as 1,300 parts per million (ppm) compared to the RUSCO of 10 ppm; TCA was detected as high as 1,400 ppm compared to the RUSCO of 100 ppm; cis-1,2-dichloroethylene as high as 420 ppm compared to the RUSCO of 59 ppm; and vinyl chloride as high as 1.7 ppm compared to the RUSCO of 0.21 ppm. These high concentrations were observed in the immediate area of a former concrete drywell that is presumed to have been the location of disposal of spent solvents. Interim remedial measures (IRM) performed at the Site in November/December 2009 involved the removal of this dry well, associated piping, and surrounding contaminated soil. Total excavation was to a depth of approximately 15' below grade. End-point samples (post-IRM) collected from the base of the excavation identified 1,1,1-trichloroethane (TCA) as high as 4,180 ppm and trichloroethene (TCE) as high as 2,840 ppm. The RI also identified petroleum-related VOCs in the northeastern portion of the site to a lesser extent, including 1,2,4-trimethylbenzene at a concentration of 77 ppm, compared to the RUSCO of 47 ppm. Other petroleum-related VOCs were detected at levels below the RUSCO but exceeding the SCOs for Protection of Groundwater, including 1,3,5-trimethylbenzene, ethylbenzene, toluene, total xylenes, and sec-butylbenzene. The highest concentrations of both contaminants of concern in this area (both chlorinated and petroleum-related VOCs) were detected in samples from depths of 10'-17.5' below grade, however contamination persists at depth (detected in samples as deep as 38'-40' and exceeding Protection of Groundwater standards as deep as 30' - 32'). Semi-volatile organic compounds (SVOCs) were detected in the area of the drywell during the RI but at levels below soil cleanup objectives, with the exception of naphthalene (detected at 21 ppm compared to the Protection of Groundwater SCO of 12 ppm). Chromium and lead were also detected at elevated levels: total chromium at a concentration of 144 ppm (compared to the RUSCO of 22 ppm) and lead at a concentration of 4460 ppm (compared to the RUSCO of 400 ppm). Outside the drywell area, petroleum-related SVOCs and metals were detected at levels exceeding Protection of Groundwater standards in the one surface soil sample that was collected, from a depth of 0.5' below grade. In groundwater, chlorinated solvents were detected at levels exceeding NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 standards throughout the site. The following contaminants were detected at levels exceeding the TOGS standard of 5 parts per billion (ppb): TCA (maximum concentration of 60 ppb); 1,1-dichloroethane (maximum concentration of 36 ppb); TCE (maximum concentration of 50 ppb); and cis-1,2-dichloroethene (maximum concentration of 25 ppb). In one monitoring well in the eastern portion of the property (MW-4), two petroleum-related SVOCs were detected in groundwater as well: benzo(b)fluoranthene at a concentration of 3 ppb and benzo(k)fluoranthene at a concentration of 2.4 ppb (compared to the TOGS standard of 0.002 ppb for both of these contaminants). Soil vapor samples exhibited contaminants of concern at elevated levels. TCA was detected in soil vapor at a maximum concentration of 160,000 ug/m³ and TCE was detected at 83,000 ug/m³. These samples were collected under the asphalt parking lot area of the site, in the immediate vicinity of the drywell, from a depth of

DEWALT SERVICE CENTER (Continued)

S109414283

2.5 feet below grade. Off-site sub-slab vapor and indoor air samples were collected in five residences and one church. In all of these locations, sub-slab concentrations warrant mitigation as per the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York. The highest impacts were 11,000 ug/m3 of TCE and 3,100 ug/m3 of TCA in one of the residences. Indoor air levels were 43 ug/m3 of TCE and 94 ug/m3 of TCA. Significant threat: This site presents a significant threat to the environment and public health due to the presence of chlorinated volatile organic compounds (VOCs) in soil that remain following the IRM, and due to the presence of these contaminants in sub-slab vapor and indoor air samples from off-site properties (including adjacent residential buildings). The site is being investigated and remediated under the Brownfield Cleanup Program ? see Site No. C241129.

DEC Memo: Environmental Contact:Attn David ScottiLoureiro Engineering Assoc.
Inc.100 Northwest DrivePlainville, Ct 06062Property owner: Black &
Decker (US Corporation)Consultant has been hired to remove the
tank.CSL letter sent out by Zhune on 4/11/0808/18/08- Zhune spoke to
Dave Scotti from Loureiro Engineering (860)747-6181. Tank is been
taking out of service 20 years ago. They plan to removed the tank
sometimes this year. It appear that conamination is very limited.
They plan to remove the contaminated soil when they remove the tank.
10/28/08-Zhune spoke to David Scotti. They will remove the tank as
soon as the tenants vacate the building. At the end of this year or
begining of new year.03/24/09- This spill case is been closed because
two spill cases involved the same remediation action and same
contractor. It's activated to be remediated for clorinated solvents
spill # 0811202. Spill Closed
Remarks: found a abandoned oil tank on property; did borings around it and
found containinated soil; it is not a gross release;

DEC Memo: Sangesland spoke to ROBIN MCKINNEY of LOUREIRO ENGINEERING. She said the driller was on site doing work when a hydraulic line on the drill broke and apporx 5 gal of oil spilled to the asphalt pavement. No soil was impacted. Driller had speedie dry and the spill was immediately cleaned up. Speedie dry was drummed and removed from the site.

DEC Memo: 1/12/09 - Raphael Ketani. The site is the Dewalt Porter Cable Store. The contaminated soil was discovered on 11/3/08, but not reported until 1/9/09. Property Shark lists the site as 4332 57 Street in Woodside, Queens with alternate addresses of 56-07 to 56-15 Queens Blvd. The block and lot are 1329 and 0001. NYC Property Tax lists the ownership as Black and Decker, Inc., 626 Hanover Pike, Hampstead, MD, 21074. ACRIS list the ownership as Black and Decker, Inc., 701 E. Joppa Road, Towson, MD, 21204. I will send CSLs to both addresses. The PBS case is #2-610985. There is a 2,000 gal. UST that had #2 oil, but was closed in place on 5/7/87. I called up Robin McKinney of Loureiro (lo-re-ro) Engineering Associates, Inc. (860) 410-3000 regarding the case. She said that the contamination is chlorinated solvents, not oil. She said that the spill is in the same location as an oil tank case that is being handled by Veronica Zhune of DEC Spills Region 2. Ms. McKinney said that the company address is 100 Northwest Drive, Plainville, CT, 06062. She added that the address for Black & Decker is 701 East Joppa Road, Towson, MD, 21286, and that the CSL should go to Linda Biagioni. A little while later, Dave Scotti of Loureiro called in a conference call with Ms. McKinney. He explained the situation to me. He said that there was a release about 20 years ago. The site used to have a basin or possibly a tank in the ground for holding spent chlorinated solvents. The solvents were used to degrease steel. The site was a repair shop. The location of the contamination was delineated both vertically and horizontally. The

DEWALT SERVICE CENTER (Continued)

S109414283

area of contamination is 5 feet in radius and about 10 to 13 feet down. TCA and TCE are the contaminants. There are indications of NAPL also. The highest analyte concentration is 9700 ppm. A report exists for the analytical results. I asked Mr. Scotty to send me the report. He said that he will. 1/14/09 - Raphael Ketani. I spoke to Ms. McKinney and asked her for a report listing the chlorinated solvent data. She said that she had sent out such a report yesterday. 1/15/09 - Raphael Ketani. I received the analytical data package for soil samples that were collected 11/3/08. Sample #162: high exceedence oil analyte hits, very high chlorinated solvent hits to 9700 ppm Sample #163: chlorinated solvent hits to 1.7 ppm Sample #164: elevated oil analyte hits, chlorinated solvent hits to 160 ppm Sample #165: elevated oil analyte hits, chlorinated solvent hits to 90 ppm Sample #166: very low chlorinated solvent hits below 0.02 ppm Samples #167 and #168: completely non-detect I called up Ms. McKinney and asked her to send me a site map showing where the samples had been taken and any reports that were available. She said she will. 1/21/09 - Raphael Ketani. Ms. McKinney called me and said that they are putting together the boring location maps and the data sheets for a report to DEC. 1/27/09 - Raphael Ketani. I received the Phase I Environmental Site Assessment Report & Subsurface Investigation Report, along with fold out plans and data tables. I began my review. The Phase I indicated that there was a UST at the site that had not been used since 1972. Degreasing took place in the western part of the building into the early 1980s. Spray painting took place until 1980. Waste oil was stored in a 55 gal. drum. This part of the building is now a beautician's supply store. There was a 3 feet deep drainage pit for rain water adjacent to the northeast corner of the building with a soil bottom. The depth to groundwater is 66' to 70'. Drawing No. 2 dated 1/20/09 shows TCA vapors up to 150,000 ug/m³, and TCE vapors to 50,000 ug/m³. Drawing No. 3 dated 1/21/09 shows a visual display of specific analyte hits with site BS-013 having the worst contamination by far (the site of the former spent solvent holding tank) and sites SB-014 and SB-015 having heavy contamination. I E-doc'd all of the files from the disc successfully. 1/30/09 - Raphael Ketani. A meeting was held with Randall Austin, Chief of the Spills Unit, Jacob Krimgold, head of the PBS Unit, and myself to discuss this case. At the end it was decided that an on-site meeting should take place with the consultant to determine what the site conditions are and what needs to be done to remediate the site. The objective will be to scope out the chlorinated solvent impacts and the possible oil impacts from the UST. I called Ms. McKinney (860) 410-3000 and asked that a meeting take place on site. She said that she will get back to me with a date that's good for everyone. 2/2/09 - Raphael Ketani. I spoke to Ms. McKinney. We set up an appointment to see the site for thursday, 2/5/09, at 1:30PM. 2/5/09 - Raphael Ketani. I met David Scotti and Robin McKinney as planned. They showed me the site. Dewalt Porter turned out to be a functioning tool retail store. They had expanded back into the former beautician supply store area. This back area is serving as a storage area and parts washing tub area (see pictures in E-docs). George Newton of Crystal Clean (a parts washing apparatus salesman; (914) 788-5220) was setting up a new tub which runs with a sealed lid. Ms. McKinney and Mr. Scotti showed me the former degreasing area for the store. This small room is the western end of the store. There was nothing inside of the room today and it did not look like any equipment had been there for some time. Mr. Scotti and Ms. McKinney showed me where they had taken the soil vapor

DEWALT SERVICE CENTER (Continued)

S109414283

borings through the floor of the store. We went outside and they showed me the locations of the groundwater monitoring wells, the soil gas sampling wells, the location of the oil UST and the former location of the spent solvent UST. Mr. Scotti stated that the soil gas wells are in clusters of three. The horizons sampled are the surface, 15 feet down and 30 feet down. He also said that the area of the former solvent UST and the surrounding soil will be dug out. After this, I left as there was nothing more to see and no more information to be gained presently. 2/6/09 - Raphael Ketani. I spoke to Ms. McKinney today. She said that groundwater flow is due south or southeast. I asked her why there were no wells between MW-01 and MW-05, or downgradient from the former solvent UST location. She said that they put wells only at areas of concern (the degreaser room vent, the former location of the spent solvent UST, and the location of the oil UST). She said that they recently took another round of groundwater samples and they should arrive at Loureiro next week. I asked her to send DEC a copy of the tables for the data. She said she will. Lastly, I asked her which chemicals were used by the store for degreasing and cleaning. She said it was TCE. From Table 3 data summary table, MW-04 was sampled on 5/8/08 and had 9.4 ppb and 9.7 ppb of TCE. MW-05 was sampled on 11/14/08 and had 37 ppb and 38 ppb of TCE. Well MW-05 also had several other chlorinated species exceedences. However, MW-1 had a hit of 60 ppb. This well is about 120 feet to the west of the other wells. It suggests that there is another source of solvents. Mr. Austin talked to me about the groundwater contamination. He said that the numbers were low and that, from looking at the data, there is no need to install additional wells at this time. Therefore, a groundwater delineation should not be requested and DEC should look at the next round of data and then decide whether the groundwater investigation should be expanded. 2/11/09 - Raphael Ketani. Ms. McKinney sent me the groundwater analytical data from the 1/22/09 round of sampling. Wells MW-1 and MW-2 weren't sampled because they were dry. Well MW-3 is silted in. The VOC hits were from non-detect to the middle double digits (i.e. 49 ppb). 2/24/09 - Raphael Ketani. Mr. Scotti (860) 410-3000 called me to discuss the latest round of groundwater results. I told him that the DEC had reviewed the groundwater analyticals and had concluded that the contamination was relatively low. I told him that the remediation issue was mainly the excavation of the contaminated soil. Mr. Scotti said that he can't get a DOB permit to do the excavation without an approved plan. I told him to submit a work plan to DEC. I will review it, and if it's approvable, then DEC will send an approval letter which can be used to get the DOB permit. Mr. Scotti said that he will do this. 3/5/09 - Raphael Ketani. I spoke to Mr. Scotti (860) 410-2976 regarding the submission of a work plan. I told him that everything has to be dug out that is exceeding TAGM limits. He said that he will submit the plan. I told him to do so quickly as this case has been dragging on with no progress. 3/16/09 - Raphael Ketani. I spoke to Mr. Scotti regarding the submission of the work plan. He said that they are working on it. He added that he has been talking to Jane O'Connell, head of the brownfields and super fund program, and Jacob Krimgold, head of the PBS Unit, regarding what it would mean for his client to remediate the site under a STIP. He said that he has to talk to his client about the STIP agreement. However, he felt that his client would prefer to do without the STIP. 3/26/09 - Raphael Ketani. Mr. Scotti sent me an e-mail that his client would like to enter into a

DEWALT SERVICE CENTER (Continued)

S109414283

Stipulation Agreement for the remediation of the site. I e-mailed back that I will write a STIP and send it to him. I added that the oil spill remediation case that had been managed by Veronica Zhune (#0800371) had been closed and combined with this case. 5/5/09 - Raphael Ketani. On 4/30/09, Mr. Scotti (860) 410-2976 had called requesting the status of the case in DEC. I told him today that the head of the PBS Unit and the Spills Unit and myself have to meet on this case and decide what needs to be done. I told him to sit tight. 5/12/09 - Raphael Ketani. Mr. Scotti called again. He asked what the status was regarding where the case will be sent to, who will handle the spill case, etc. I told him that things have been a little hectic around here and so the internal meeting concerning the case has not taken place yet. He said that they are still working on the shoring and remediation plan. I told him to keep working on the plan and to submit it to DEC as soon as it's completed and approved. He said he will do this. 5/19/09 - Raphael Ketani. A meeting was held today between Randall Austin, Chief of the Spills Unit, Jacob Krimgold, Head of the PBS Unit, Jennifer Kann, EE I in the PBS Unit, and myself. The meeting took place to discuss the spill case and whether the PBS Unit will take it over. During the meeting, it was decided that the Dewalt Porter case will go to Ms. Kahn. I left a message for Mr. Scotti requesting the owner's name, title, company name, and address. This information was needed so that the STIP package could be sent to the person who is the responsible party. As per Mr. Austin, I am switching the case manager name to Jennifer Kann. 5/20/09 - Raphael Ketani. Mr. Scotti sent me an e-mail indicating who should receive the STIP package. The person is listed below: Ms. Linda H. Biagioni Vice President Environmental Affairs The Black & Decker Corporation 701 East Joppa Road Towson, MD 21286-5502 Tel. 410.716.3208 5/21/09 : J.Kann - spill transferred from R.Ketani to J.Kann. Stip, Cover Letter and CAP mailed to Ms. Biagioni today and emailed to Mr. Scotti. A site visit is tentatively scheduled for May 29th at 10 AM. J.Kann 5/29/08: J.Kann - met at the site with Mr. Scotti. Discussed the results of the investigation. 6/11/09: J.Kann spoke with Mr. Scotti about the site and requirements for closure. We discussed that groundwater impacts are minimal, soil excavation (source removal) will occur and that soil vapors will be monitored after excavation is complete. Indoor air samples should also be collected after remediation and at that time a determination will be made regarding whether or not additional work will be necessary (i.e. an SSDS for the on-site building). 6/16/09: J.Kann - Stip received for the site from Dewalt. Cover memo prepared and forwarded to Lou Oliva. 6/19/09: J.Kann - Stip executed by RD on 6/17. Edoced. 6/24/09: J.Kann - received a call from Dave Scotti. He's concerned that the excavation may cost more than initially estimated. He's looking into alternatives for treatment. He is still planning on submitting the reports in approximately two weeks. 9/30/09: J.Kann - site discussed at meeting with B. Cozzy. 10/13/09: J.Kann - A dry well was located on the site in August 2009 after investigating an anomaly present at the site. Emails were sent on 8/19, 8/31 and 9/9 and 10/6 requesting the RI be submitted. The RI was submitted on October 9 and is under review. (Edoced text only - requested that a complete file with all appendices be forwarded to the Department) 10/13/09: J.Kann - received email from J. Krimgold indicating "Since both sites (DeWalt and Brighton) are already under CO, they should stay this way (no P-site memo for now)." 10/27/09 - J.Kann - Additional reports on soil vapor sampling and test pitting investigation were submitted on October 16.

S109414283

The consultant called on October 27. The RAWP will be submitted on November 2. A few issues were discussed-they (consultant LEA) would like to remove the dry well at the site. In order to do so, they need a permit from NYCDOB, who wants a letter from DEC. I told them it is possible to consider the drywell removal as an IRM, but I need to review something in writing.-there is an existing petroleum tank under the building. It was investigated and appears to not have been properly decommissioned. They will need to decommission it as part of the work. 11/3/09: J.Kann - IRM work proposed in a letter submitted on October 30, 2009. IRM Letter reviewed, and approval letter with minor comments sent on November 3. 11/5/09: J.kann - email sent to DOH requesting some guidance. Email text is as follows: "Mr. Crua-This email is to request guidance from you on a site currently in a stipulation agreement with the DEC. The site is DeWalt Porter Cable located at 56-15 Queens Blvd. Contaminates on the site consist primarily of chlorinated solvents (TCE and TCA) in the soil and soil vapor. Degreasing and spray painting activities have historically occurred at the site, although current operations are primarily retail and tool repair. The site covers 0.37 acres and a residential property (apartments) is directly to the north. Some findings of the RI, which I am currently reviewing, include the following:--TCA concentrations in soil gas samples collected ranged from 470 ug/m3 to 150,000 ug/m3, and TCE soil gas ranged from 140 ug/m3 up to 83,000 ug/m3 across the site. Based on the contours provided in the RI, elevated soil vapor concentrations likely extend beyond the property line.--Three indoor air samples were collected in the on-site building in March 2009. No chlorinated VOCs were detected above the laboratory detection limit in these three samples. My main question at this time is whether anything needs to be done regarding the residential building adjacent to the site (which we believe to have a basement apartment) and is approximately 25 feet north of the soil "hot spot". In addition, please let me know if you may have any other concerns. I've attached the text of the RI and the March 2009 soil vapor sampling report to this email. Thanks for your help.-Jennifer Kann 11/10/09: J.Kann - DOH replied indicating that they would like subslab and ambient air sampling performed at the adjacent property. they also indicated that based on the information they have that they would like continuous monitoring or mitigation for the on-site building. This information was emailed to the consultant, Robin McKinney today. 11/18/09: J.Kann - message from Dave Scotti received on 11/11. Emailed Dave on 11/17 to let him know I received the RAWP. (RAWP received on 11/12). He responded with a question "Also, with regard to your November 10, 2009 email and NYSDOH comments, it is believed that the implementation of the IRM (within the next few weeks) and implementation of the RAWP (hope to install Thermal-Enhanced SVE components in December) will eliminate the secondary source of contamination. These activities will be followed-up with soil vapor monitoring along the perimeter of the property and indoor air sampling for the site building. Are these remediation activities adequate mitigation measures to obviate the need for sub slab and ambient air sampling at this time?" DOH was forwarded his question on 11/18. DOH's response was "The short answer to their question is no. The long answer is until we have a handle on the extent of the off-site migration of site related contaminants of concern (coc) they will have to continue to investigate, especially to characterize the potential for vapor intrusion into neighboring structures. This SVE stuff may work great for on-site and it may

Map ID
Direction
Distance
Elevation

EPA ID Number

DEWALT SERVICE CENTER (Continued)

S109414283

eventually prevent further off-site migration of site coc's but we need to know now what is happening in adjoining structures." The email response forwarded to Dave Scotti on 11/18 read as follows:"As per DOH, the need for the off-site sub-slab and indoor air sampling is to define the extent of contamination in the vapor phase and to determine if human exposures are occurring off-site. The concern is that the IRM and remedy are site specific and cannot ensure effectiveness in off-site areas. If you want to discuss this further, I can arrange a conference call." 11/19/09: J.Kann - conference call between DOH, DEC and LEA arranged for December 1. 12/1/09: J.Kann - discussed need for off site subslab and indoor air sampling with DOH and the consultant(LEA). LEA agreed to off site work if client okayed it. 12/7/09: J.Kann - off site subslab work plan submitted after COB 12/3. Forwarded work plan to DOH this morning. DOH had not comments. Reviewed plan and forwarded email to LEA indicating that the work plan was reviewed by DOH and DEC and we have no comments. 12/10/09: J.Kann - forward RAWP to J. Harrington for input. 12/14/09: J.Kann - speak with J. Harrington about the proposed RAWP for the site. Comments from our discussion include the following: 1. The detailed design will need to demonstrate that eluted vapors (from groundwater) will be captured by the mitigation system. 2. Vertical extent of contamination is not delineated at SB-13. This information/boring can be obtained/advanced during installation of system. 3. Performance criteria will need to identify unrestricted cleanup numbers. 4. The consultant should address why a depth of 35 feet was selected for the design of the thermal probes. 12/28/09 : J.Kann - Indoor Air and sub slab sampling performed at the adjacent site. 1/12/10: J.Kann - DOH requests copy of RAWP on 1/7/10. RAWP forwarded on 1/12/10. 1/13/10: J.Kann - Internally it was discussed whether or not an air permit will be necessary for this site. Based on discussions with L. Oliva, it is determined that it is not because they are under a stip/order. The air discharge limit that they will need to meet is 0.5 lbs/hour. Emails edoced contain info on this discussion. 1/19/10: J.Kann - laboratory analyticals received on 1/15/10. Forwarded to DOH. TCE detected in indoor air and in sub slab. Conference call set up with DOH for Thursday January 21. 1/21/10: J.Kann - call held with DOH and LEA. DOH wants 3 additional structures tested for sub slab and indoor air. DOH wants the adjacent structure where elevated concentrations of TCE were detected to have a mitigation system installed. The owner of that building is to be notified by LEA and data validation should be completed. 1/21/10: J.Kann - spoke with J. Krimgold regarding cleanup criteria for the site. The RAWP indicates a goal of restricted residential. Given that this site is being handled as a non-petroleum stip guidance was sought for cleanup criteria. Jacob agreed to allow the restricted residential to be used. DOH was sent an email regarding this so that they could move forward with their review of the RAWP. 1/26/10: J.Kann - draft letter prepared by consultant to be sent to property owner of 43-50 57th Street. DOH provided comments. 2/1/10: J.Kann - Revised letter sent to property owner of 43-50 57th Street notifying them of sampling results. Consultant (LEA) sent request for access letters to the additional 3 properties. 2/8/10: J.Kann - email from LEA indicates that the church owner has agreed to sampling, but has not returned the access letter yet. LEA has not heard from the other two owners yet. A pilot test for the remedial system is scheduled for March 6, 2010. The DOB permit was obtained for the excavation work and it will likely be scheduled for

DEWALT SERVICE CENTER (Continued)

S109414283

the first week of March.3/2/10: J.Kann - received DOH approval letter for the RAWP on 2/15/10. Adjacent property (church) was sampled on 2/23/10. Discussed issue of environmental easement with legal and determined that a deed restriction could be issued if necessary. DOH was notified and agreed that a deed restriction was fine. Visited the site on March 2. Clean soils were being unloaded. Plan to visit the site again on March 4. 3/5/10: J.kann - RAWP acceptance letter was sent on March 4 (edoced). Visited site on March 5.5/26/10: J.Kann - Installation of the remedial system started in late March and is on-going. Indoor air and subslab sampling was performed by LEA (the RP's consultant) at the adjacent church (56-01) and results submitted on march 28. DOH reviewed them. Additional work was proposed by LEA for the church in an email of April 29. LEA contacted the owners of 43-25 56th Street and 43-28 57th Street. Access was denied at 43-25 56th Street for vapor sampling and no response was received for 43-48 57th Street. The owner of 43-30 57th street, where DOH determined mitigation was necessary, refused installation of a system. DOH's email response is edoced (it states that it is the homeowners decision whether or not to install). In addition, a work plan for indoor air and sub-slab sampling at 43-26 57th Street and 43-21 56th Street was submitted on 5/17 and approved on 5/26. A site visit was made on May 6.7/27/10 - J.kann - Notification letter to owner of 56-01 Queens Blvd prepared by LEA was provided to the Department on June 15, 2010. After review of the data, DOH stated that vapor intrusion is occurring at 56-01 and action should be taken. LEA prepared an additional vapor investigation work plan for 56-01 and submitted it to the Department on July 26. The Department had one comment on the plan which was addressed and DOH had no comments. For on-site work, there were issues related to the delivery of some of the components of the remedial system (some were damaged in shipment). New equipment should be delivered to the site on August 2 with a start-up date one to two weeks after.8/12/10: J.Kann - visited site on 8/6/10. System was installed and waiting for cable hook up before start-up so that it could be monitored remotely. An issue came up on Monday 8/9 regarding the possible need to inject saline into the water because resistivity of soils was higher than originally tested for. Based on the following information provided by the consultant (LEA) in an email of 8/10: 1. The material to be injected is salt (NaCL) - salt tablets to be used (similar to those put in water softeners). See the attached MSDS. (this was edoced)2. The concentration during the injection period will be approximately 5,000 micrograms/liter (5 parts per million).3. The duration of injection may be for the entire project. The duration may be reduced, pending results.4. The salt tablets will be placed in a bag filter through which the potable water will flow. The salt water will be pumped through the Water Circulation System (WCS) to the electrodes installed within the ground.After consultation with Jim Harrington of Albany, a determination was made that this would be acceptable and the consultant was notified.The system was to start up on 8/12/10. As of 3:00 they were still attempting to start it up. The vacuum blowers are located in an enclosed insulated shed and the chiller is not expected to produce much noise, however the consultant will take decimeter readings next week (orginal readings showed little above background).9/15/10 : J.Kann (forgot to include info originally-information put here on 1/13/11) Following a site visit of 9/9 LEA sent the following email on 9/15/10 "Our current operations and maintenance (O&M) schedule for the Woodside treatment system is once

a week, usually on Wednesdays. During each O&M event we take total volatile organic compound (VOC) readings using a photoionization detector (PID). PID readings are taken from the following points on the treatment system: 1) influent from the multi-phase extraction well field, 2) effluent from the vapor discharge stack, located after the three vapor granular activated carbon (GAC) vessels and 3) effluent from the Stripper discharge stack. Once per month we will also be collecting vapor samples in Summa canisters of the system's influent and the effluent from the vapor discharge stack. The samples collected in the Summa canisters will be submitted to the laboratory for analysis of VOCs using Environmental Protection Agency (EPA) Modified Method TO-15. We plan to collect our first round of vapor samples using Summa canisters today. After this initial sampling event we will also collect a third vapor sample using the Summa canister from the sample port located in between the first and second vapor GAC vessels on a monthly basis. This additional sampling point will help establish when the first vapor GAC vessel in series has become saturated with VOCs."10/15/10: J.kann - the following email update was provided by LEA:"In mid-late September, for a period of about two weeks, the soil remediation system was shut down to address some electrical issues raised by ConEdison. Those issues have since been resolved and the system was restarted on October 4th. On September 29 and 30th we sampled sub-slab vapor and indoor air from the church property (56-01 Queens Boulevard) located adjacent to the west of the Site. We also collected another round of vapor samples from the two sets of nested vapor probes located on the western edge of the Dewalt property. We planned to collect vapor samples from beneath 56th Street concurrently with the samples collected from the church, but were not able to due to conflicts with multiple utilities beneath the roadway. Once we receive the data collected from the church, we will assess the need to delineate vapor at points further to the west. We will forward you this data once they are received from the laboratory. We are in the process of drafting a work plan to collect indoor air and sub-slab vapor samples from an additional five to six properties in the vicinity of the Dewalt property. This work plan should be finalized and sent to you by next week."10/21/10: J.Kann - A work plan to sample indoor air/sub slab at 5 additional locations in the vicinity of the site was submitted on 10/15 to DOH and DEC and was jointly approved on 10/19. In addition, a draft notification letter for the owner of 43-26 57th street was submitted on 10/15 to DOH and DEC. DOH feels mitigation is warranted at the site. An email was sent to LEA informing them of this on 10/19/10.10/22/10 - J.Kann - edoced response letter (to RAWP comments) dated 7/22/10.10/28/10: J.Kann - LEA (consultant) mailed out letters to additional property owners requesting access for subslab and indoor air sampling on 10/27/10.11/9/10: J.Kann - notification letters for 56-01 Queens Blvd and 43-26 57th Street were sent to the property owners (edoced).11/30/10: J.Kann - Sampling of 3 additional homes on 57th Street was performed the weeks of November 15 and November 22. Pilot tests for mitigation systems in 56-01 Queens Blvd and 43-26 57th Street is tentatively scheduled for the week of December 6th. Access agreements have not been executed yet, so this date is tentative. The VE extraction portion of the system is running and capturing volatiles. However, Con Ed says they were picking up stray voltage potential from the heating portion of the system, so the consultant had to shut it down and re-evaluate how else they could heat the soils. They are going to further discuss

DEWALT SERVICE CENTER (Continued)

S109414283

this with Con Ed in December. 12/1/10: J.Kann - received email from Dave Scotti of LEA providing the following summary " As discussed with you earlier today, Con Edison is not willing to allow us to operate the electro-thermal resistivity heating remediation system (ET-DSPTsystem) due to safety concerns regarding stray potential (energy). This has been an on-going issue for several months, and it is apparent that we are at an impasse with Con Edison (see summary of events provided below*). While we have continued to operate the Soil Vapor Extraction (SVE) component of the system on a continuous basis, the SVE system needs to be augmented with thermal enhancements to achieve the goals for the site in a timely manner. Fortunately, the relative permeability of the formation soils provides an alternative to thermal enhancement through steam injection. Our proposal to implement this modification to the thermal enhancement component of the SVE system is outlined in the attached document. We are requesting your approval to authorize us to proceed with this modification. I will look forward to hearing from you on this matter. Should you or anyone on your team have any questions regarding this request, please feel free to call me directly at 860.410.2976. Thank you. *On September 22, 2010, Con Edison recorded stray potentials in the public right-of-way adjacent to the Dewalt property during one of their routine surveys. The stray potentials were traced back to the ET-DSPT remediation system operating at the site. Con Edison shut-off power to the system and Joe Watson of Con Edison notified Loureiro Engineering Associates, Inc. (LEA) on September 23, 2010 that the system cannot operate if it produces any stray potential (anything greater than zero). We notified our remediation specialist, McMillan & McGee Corp. (MC2) so that they could resolve the issue with Con Edison. After repeated attempts to contact Con Edison to discuss this issue, MC2 was able to speak with Brendan Riley of Con Edison. MC2 explained the temporary operation of the system to Mr. Riley and their difference of opinion regarding safe operating practice. On October 4, 2010, Wayne Robella of MC2 spoke with Jose Diaz of Con Edison. Mr. Diaz authorized MC2 to turn on the ET-DSPT system to perform tests. On October 5, 2010, Mr. Robella met with Mr. Diaz at the site to discuss the operation of the system. Mr. Robella was able to explain ET-DSP T technology to Mr. Diaz and how the ET-DSP T Neutral is separated from the Utility Neutral to control stray voltages and balance the system. It was explained that by adding voltage to the formation that low level Step & Touch potentials would exist and MC2 would make sure the system operated under the National Electric Code (NEC) 15Vac levels. Mr. Diaz authorized MC2 to re-start the ET-DSP T system and stated that he would place a note in the file for the site stating that this technology will have some stray voltages associated with it, and that the project is to be in operations for six months under a temporary facility installation. On October 21, 2010, Con Edison recorded stray potentials in the public right-of-way adjacent to the Dewalt property during one of their routine surveys. The stray potentials were traced back to the ET-DSPT remediation system operating at the site. Con Edison shut-off power to the system and Mike Zummo of Con Edison notified Loureiro Engineering Associates, Inc. (LEA) on October 22, 2010 that the system cannot operate if it produces any stray potential (anything greater than zero). LEA had Mr. Zummo speak with Mr. Brent Winder of MC2. Based on this conversation, Mr. Zummo stated that he would look into this matter and that he expected that it could be resolved. MC2 did not hear back from Mr. Zummo. On October 25, 2010, Mr. Robella

S109414283

spoke with Mr. Diaz who stated that he had mistakenly given MC2 permission to operate the ET-DSP T system with the NEC guidelines and that ConEd cannot allow any potentials above the zero voltage. MC2 placed additional calls into Mr. Zummo and Con Edison to resolve this issue. MC2 has not been able to discuss this issue with anyone at Con Edison, and it is apparent that Con Edison is not willing to allow MC2 to operate the ET-DSPT system given their policy."12/20/10: J.Kann - LEA forwarded a summary letter containing proposed changes to the RAP.1/7/11: J.Kann - forwarded LEA's summary letter to Jim Harrington requesting input on the proposed modification.1/10/11: J.Kann - spoke with Brenden Reilly (District Manager (718) 425-6818) of Con Ed who verified that Con Ed has "zero tolerance" on stray voltage once there are detections on public right of ways. In this case, since detections were made outside of the property line (on the sidewalk), Con Ed's protocol is to cut power to the source of the stray voltage. He said this policy came about after a woman walking her dog was electrocuted on a manhole cover a few years back. 1/13/11: J.Kann - LEA submitted a vapor sampling workplan for nine additional sites. DOH reviewed and had one comment about possibly skipping sampling at the auto repair facility for now. Dave Scotti of LEA also called to get an update on the steam injection submittal. I returned his call and left a message indicating when I would be in the office. LEA also submitted results of vapor sampling from the current SVE system operating on site. Influent and Effluent samples were collected in September and October 2010.1/14/10: J.Kann - arranged meeting with Jane O'connell of HWR to discuss the future of this site (with Vadim Brevdo and Joe O'Connell). Also followed up with Jim Harrington to get input on the steam injection. Received an email indicating that "On Monday, January 10, 2010 we conducted our weekly operations and maintenance event. At this time we noticed that the system was down as a result of a carbon back-up issue in the vapor GAC vessels. The scavenge lines connecting the in-series GAC vessels froze, creating a pressure back-up. Basically, we need to change out the three vapor GAC vessels, then heat trace the vessels and the scavenge lines to bring the system back online. This work is planned for Monday, January 17th."2/3/11: J.Kann - met with Jane, Joe O'Connell, Vadim Brevdo and Lou Olivia to discuss possible transfer of this site to the hazardous waste section on 2/1/11. Conference call with Joe, myself and the consultant planned for today.

Remarks: CALLER STATES THAT THEY GOT RESULTS BACK SHOWING SOIL CONTAMINATION. HISTORICAL SPILL. CLEAN UP IS PENDING.

Tank Test:

BROWNFIELDS:

Program: BCP
Site Code: 446364
Acres: .370
HW Code: C241129
SWIS: 4101
Town: New York City
Update By: JHOCONNE

Site Description: The Brownfield Cleanup Agreement for this site was signed on June 20, 2011. Location: This Site is located at 56-15 Queens Boulevard, Woodside, New York, at the northwest corner of the intersection of Queens Boulevard and 57th Street. It is identified as Block No. 1329, Lot No. 1 on the Queens County tax map. Site features: The Site is 0.37 acres, and consists of an approximately 6,000 square foot single story building on the southern portion of the site. The rest of the lot consists of a paved parking lot and is bordered by a chain-link fence to the north and east. Current zoning/uses: The Site is currently owned by the company Black and Decker and used as a DeWalt, Delta, Porter Cable (DeWalt) power tool service center and factory store. The property is zoned residential (R7X) with commercial overlay (C2-3). The surrounding area is commercial and residential. The site is bordered by residences to the north, a church immediately adjacent to the west (with a mosque further to the west, across 56th Street), Queens Boulevard followed by the New Calvary Cemetery to the south, and residences, an auto repair facility, and a Kentucky Fried Chicken restaurant to the east (all across 57th Street from the Site). Previous uses of the site: The property is presumed to have been undeveloped prior to 1948. A used truck sales company operated on the western portion of the Site from 1948 until at least 1951. The current on-site building was constructed in 1954, at which time it was solely occupied by DeWalt. Historic operations at the site by DeWalt which appear to have led to contamination include spray painting, degreasing, machining operations, and waste oil storage, all of which occurred in the western portion of the site.

Trichloroethylene (TCE) was used for degreasing (two TCE degreasing units were used at the site until approximately 1980). Site geology and hydrogeology: Investigations at the Site have found that the subsurface material consists of glacial till: an unconsolidated, heterogeneous mixture of clay, silt, sand, pebbles, cobbles, and boulders. The uppermost 20 feet of subsurface soil was found to contain the highest percentage of cobbles and boulders. The till is somewhat finer grained below a depth of approximately 20 feet. At a depth of approximately 60 feet below grade (fbg), a hardpan layer is present within the vadose zone. The hardpan appears to be laterally discontinuous. Groundwater is approximately 65 to 70 fbg.

Env Problem: Nature and Extent of Contamination: Contamination with chlorinated solvents has been confirmed in on-site soil, particularly in the northeast portion of the site. The primary contaminants of concern at the Site are chlorinated Volatile Organic Compounds (cVOCs), specifically trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA). TCE is known to have been used on-site. Interim Remedial Measures (IRM) were performed in 2010, and further investigation is ongoing to determine if additional cleanup is required. Soil: In soil, sampling

DEWALT SERVICE CENTER (Continued)

S109414283

performed in 2008-2009 detected TCE site-wide. In the western portion of the Site, concentrations of TCE are below the NYCRR Part 375 Residential Use Soil Cleanup Objectives (RUSCOs), but exceed the Unrestricted Use and Protection of Groundwater Soil Cleanup Objectives. These detections were observed in shallow soil only. The northeastern portion of the site is the area of source contamination, due to the former presence of a concrete drywell that is presumed to have been the disposal location for spent chlorinated solvents. In this area, TCE, TCA and their breakdown products were detected in much higher concentrations than the rest of the site: TCE as high as 9,700 parts per million (ppm) compared to the RUSCO of 10 ppm; TCA as high as 1,400 ppm (RUSCO of 100 ppm); 1,1-dichloroethane (1,1-DCA) as high as 550 ppm (RUSCO of 19 ppm); cis-1,2-dichloroethylene (cis-1,2-DCE) as high as 420 ppm (RUSCO of 59 ppm); 1,1-dichloroethylene (1,1-DCE) as high as 170 ppm (RUSCO of 100 ppm); and vinyl chloride as high as 1.7 ppm (RUSCO of 0.21 ppm). The highest levels of contamination were found at 10 to 17 feet below grade (fbg), but were detected as deep as 40 fbg. Interim remedial measures (IRM) performed at the Site in March 2010 involved the removal of the concrete dry well, associated piping, and surrounding contaminated soil. Total excavation was to a depth of approximately 15 fbg. End-point samples collected from the base and sidewalls of the excavation identified levels of VOCs at concentrations similar to those found during the RI. Maximum concentrations of VOCs were identified at a depth of 15 fbg and included: TCA at 4,180 ppm, 1,1-DCA at 50.7 ppm, TCE at 2,840 ppm, cis-1,2-DCE at 55.8 ppm, lead at 450 ppm, and 1,2,4-trimethylbenzene at 65.9 ppm. Following the excavation, a thermally-enhanced soil vapor extraction (SVE) system was installed in the spring and summer of 2010, utilizing an electro-thermal resistivity heating remediation system. The system was operated from August 4, 2010 to October 22, 2010, when the electro-thermal resistivity heating component was discontinued due to conflicts of the system with local utility policy. However, the SVE system continued to operate (without thermal enhancement) until July 21, 2011. Post-IRM soil sampling indicates the IRM has mitigated soil contamination in the source area; however the Remedial Investigation Report has not yet been submitted. Groundwater: In groundwater, chlorinated solvents were detected at levels exceeding NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 standards throughout the site. The following contaminants were detected at levels exceeding the TOGS standard of 5 parts per billion (ppb): TCA (detected at a maximum concentration of 60 ppb); 1,1-dichloroethane (maximum concentration of 36 ppb); TCE (maximum concentration of 50 ppb); and cis-1,2-dichloroethene (maximum concentration of 25 ppb). Soil vapor: Soil vapor samples collected prior to the IRM exhibited contaminants of concern at elevated levels. TCA was detected in soil vapor at a maximum concentration of 160,000 micrograms per cubic meter (ug/m3) and TCE was detected at 83,000 ug/m3. These samples were collected under the asphalt parking lot area of the site, in the immediate vicinity of the former source of contamination. Post-IRM soil vapor sample data will be reported in the Remedial Investigation Report. An off-site soil vapor intrusion assessment is ongoing for buildings north of the site. Sub-slab depressurization systems have been installed in four buildings and installation is planned in an additional two. Significant threat: NYSDEC and NYSDOH have determined that this site presents a significant threat to the environment and to public health.

Health Problem: Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. On-site environmental sampling indicates that site related contaminants of concern are present in the soil vapor. Additionally, off-site investigation has demonstrated site related contaminants of concern intruding into nearby structures at levels that represent a health concern. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Access to the site is unrestricted. However, contact with contaminated soil or groundwater is unlikely unless they dig below the ground surface.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 02/07/2013
Event: Corrective Action Process Terminated, No Further Action

Event date: 02/07/2013
Event: Migration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 02/11/2013
Event: CA800YE

Event date: 02/18/2013
Event: CA550NR

Facility Has Received Notices of Violations:

Regulation violated: Not reported
Area of violation: Generators - General

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

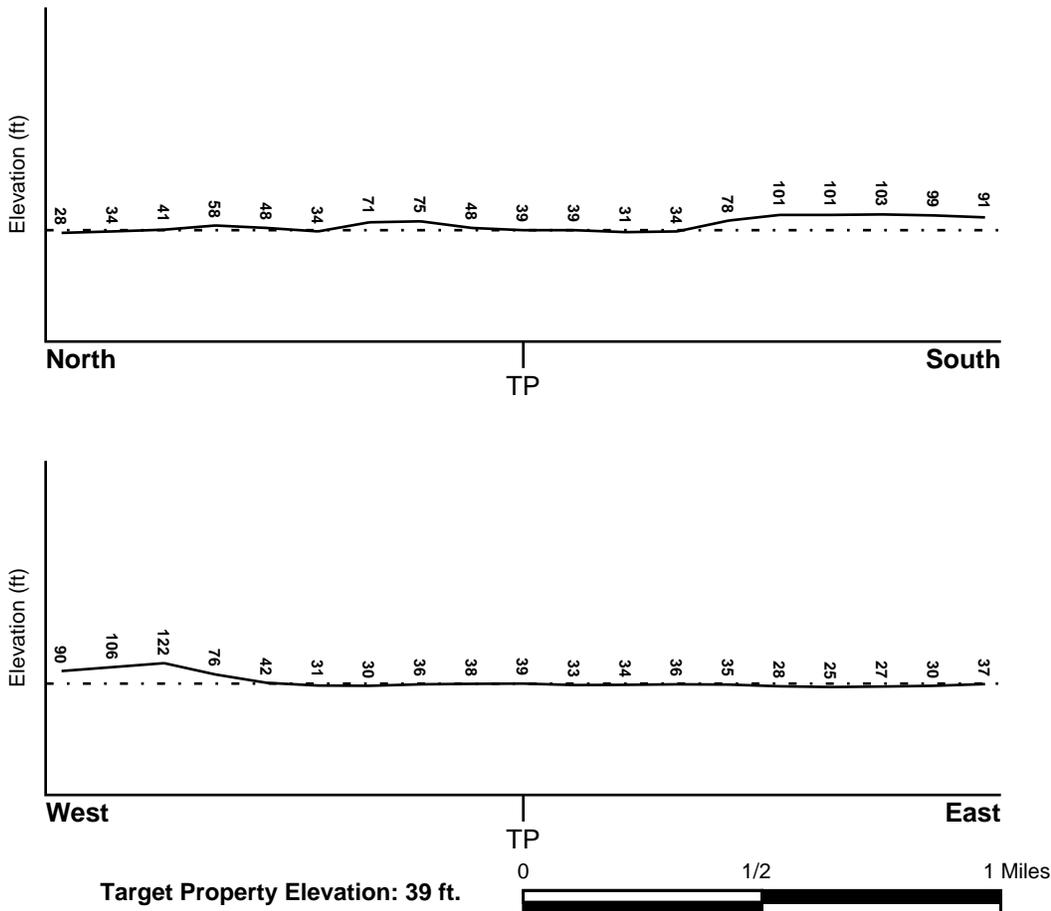

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	FEMA Flood <u>Electronic Data</u>
QUEENS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic <u>Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles East
Site Name:	Peerless Instrument Co.
Site EPA ID Number:	NYD001556885
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	39 feet.
Hydraulic Connection:	The hydraulic connection between aquifers underlying the site is complicated by the nearby termination of several major geologic units and the presence of two ancient river channels, but the surficial and underlying aquifers are hydraulically connected.
Sole Source Aquifer:	A sole source aquifer is present at or near the site
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX H FREEDOM OF INFORMATION ACT REQUESTS

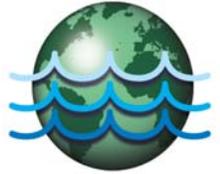

Jennifer Lewis

From: calderon.wanda@epa.gov
Sent: Monday, March 9, 2015 9:02 AM
To: JenniferL@pwgrosser.com
Subject: FOIA Request EPA-R2-2015-004950 Submitted

This message is to confirm your request submission to the FOIAonline application: [View Request](#). Request information is as follows:

- Tracking Number: EPA-R2-2015-004950
- Requester Name: Jennifer Lewis
- Date Submitted: 03/09/2015
- Request Status: Submitted
- Description: For the properties located at the following addresses: 69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street in Flushing, NY (Block 2432, lots 23, 26, 34, and 37).

We are requesting available copies of environmental files, records, and memoranda concerning the facility. This information should include: 1) past and present underground storage tank registration(s); 2) reported spills or releases of hazardous substances; 3) generation, storage, treatment, or disposal of hazardous substances; 4) past or present groundwater, surface water, and soil investigations; 5) environmental permits/violations.

March 9, 2015

Mark McIntyre, Esq.
New York City Office of Environmental Remediation
100 Gold Street, 2nd Floor
New York, New York 10038

Re: Freedom of Information Request
69-28 and 69-30 Queens Blvd and 46-02 and 46-04 70th Street
Flushing, NY

To Whom It May Concern:

P.W. Grosser Consulting, Inc. (PWGC) has been retained to prepare a Phase I Environmental Site Assessment for the above referenced properties (Block 2432, lots 23, 26, 34, and 37).

We are requesting available copies of environmental files, records, and memoranda concerning the facility. This information should include: 1) past and present underground storage tank registration(s); 2) reported spills or releases of hazardous substances; 3) generation, storage, treatment, or disposal of hazardous substances; 4) past or present groundwater, surface water, and soil investigations; 5) environmental permits/violations.

We will gladly pay copying costs.

Please advise if this request can be accommodated in an expedient manner. We would like to schedule an appointment to copy the file/records if this is not possible.

Feel free to call with any questions or if additional information is needed to respond to this request.

Very truly yours,
PWGC

Jennifer Lewis
Project Manager

GEOPHYSICAL INVESTIGATION REPORT

SITE LOCATION:

**69-28 Queens Boulevard,
Woodside, New York**

PREPARED FOR:

**PW Grosser
630 Johnson Avenue,
Bohemia, New York 11716**

PREPARED BY:

Martin Young
Delta Geophysics Inc.
738 Front Street
Catasauqua, PA 18032

March 19, 2015

Delta Geophysics, Inc. (Delta) is pleased to provide the results of the geophysical survey conducted at 69-28 Queens Boulevard, Woodside, New York.

1.0 INTRODUCTION

On March 19th, 2015 Delta Geophysics personnel performed a limited geophysical investigation at 69-28 Queens Boulevard, Woodside, New York. The areas of interest were client directed areas, including yards, sidewalk areas, interiors, and accessible basements.

2.0 SCOPE OF WORK

The survey was conducted to investigate the subsurface for anomalies consistent with utilities and any other anomalous features that could obstruct the proposed drilling activities.

3.0 METHODOLOGY

Selection of survey equipment is dependent site conditions and project objectives. For this project the technician utilized the following equipment to survey the area of concern:

- Geophysical Survey Systems Inc. SIR-3000 cart-mounted Ground Penetrating Radar (GPR) unit with a 400 Mhz antenna.
- Radiodetection RD7000 precision utility locator.
- Fisher M-Scope TW-6 pipe and cable locator.

Ground penetrating radar (commonly called GPR) is a geophysical method that has been developed over the past thirty years for shallow, high-resolution, subsurface investigations of the earth. GPR uses high frequency pulsed electromagnetic waves (generally 10 MHz to 1,000 MHz) to acquire subsurface information. Energy is propagated downward into the ground and is reflected back to the surface from boundaries at which there are electrical property contrasts. GPR is a method that is commonly used for environmental, engineering, archeological, and other shallow investigations.

The GSSI SIR-3000 GPR can accept a wide variety of antennas which provide various depths of penetration and levels of resolution. The 400 MHz antenna can achieve depths of penetration up to about 20 feet, but this depth may be greatly reduced due to site-specific conditions. Signal penetration decreases with increased soil conductivity. Conductive materials attenuate or absorb the GPR signal. As depth increases the return signal becomes weaker. Penetration is the greatest in unsaturated sands and fine gravels. Clayey, highly saline or saturated soils, areas covered by steel reinforced concrete, foundry slag, of other highly conductive materials significantly reduces GPR depth of penetration.

The GPR was configured to transmit to a depth of approximately 10 feet below the subsurface, but actual signal penetration was approximately 2-4 feet below ground surface (bgs). The limiting factor was signal attenuation from near surface soils.

The RD7000 precision utility locator uses radio emission to trace the location of metal bearing utilities. This radio emission can be active or passive. Active tracing requires the

attachment of a radio transmitter to the utility, passive tracing uses radio emissions that are present on the utility. Underground electrical utilities typically emit radio signals that this device can detect.

The TW-6 is designed to find pipes, cables and other metallic objects such as underground storage tanks. One surveyor can carry both the transmitter and receiver together, making it ideally suited for exploration type searches of ferrous metal masses. Metal detectors of this type operate by generating a magnetic field at the transmitter which causes metallic objects in the subsurface to generate a secondary magnetic field. The induced secondary field is detected by the receiver, which generates an audible tone equal to the strength of the secondary field.

4.0 SURVEY FINDINGS

All client directed areas of concern were examined with the RD7000 for potential subsurface utilities then surveyed with GPR and TW-6 for other potential anomalies. The following sections detail the findings of the geophysical investigation.

Metallic Anomaly #1

This anomaly was located with both the TW-6 for the presence of subsurface metal and with the GPR for image/reflection of the subsurface anomaly. The anomaly was imaged at 1 feet bgs, and measured approximately 2 feet in diameter. Based on the metallic presence and GPR signature, this anomaly is interpreted to be a possible buried manhole or hydraulic lift. A subsurface conduit was noted running from the tire repair office to this anomaly.

Utility Survey

Delta personnel visually inspected the proposed drilling areas for valves, clean-outs, man-ways, utility poles and other utility related objects. These objects were used to trace potentially nearby utility lines so they could be designated with proper color paint and safe drilling distances could be established. All detected utility conflicts found were discussed with the client representative.

5.0 SURVEY LIMITATIONS

GPR depth of penetration was limited to approximately 2-4 feet bgs. The limiting factor was due to conductive soils.

6.0 WARRANTIES AND DISCLAIMER

As with any geophysical method, it must be stressed that caution be used during any excavation or intrusive testing in proximity to any anomalies indicated in this report. In addition, the absence of detected signatures does not preclude the possibility that targets may exist. To the extent the client desires more definitive conclusions than are warranted by the currently available facts; it is specifically Delta's intent that the conclusions stated herein will be intended as guidance.

This report is based upon the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations. Professional judgments expressed herein are based on the facts currently available within the limit or scope of work, budget and schedule. Delta represents that the services were performed in a manner consistent with currently accepted

professional practices employed by geophysical/geological consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

This report was prepared pursuant to the contract Delta has with the Client. That contractual relationship included an exchange of information about the property that was unique and between Delta and its client and serves as the basis upon which this report was prepared. Because of the importance of the understandings between Delta and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to Delta.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Delta's contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: JJQ1501
Project Number: JJQ1501

Lab Number: L1505213
Report Date: 03/25/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Metals

L1505213-01 through -06 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

The WG769328-4 MS recoveries for aluminum (303%), calcium (0%), iron (1210%), and manganese (266%), performed on L1505213-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG769328-4 MS recoveries, performed on L1505213-01, are outside the acceptance criteria for copper (63%), magnesium (73%), potassium (73%), sodium (73%), and vanadium (131%). A post digestion spike was performed and yielded unacceptable recoveries for copper (72%), magnesium (72%), potassium (78%), and vanadium (76%); sodium was within acceptance criteria. This has been attributed to sample matrix.

The WG769328-3 Laboratory Duplicate RPDs, performed on L1505213-01, are outside the acceptance criteria for calcium (78%), chromium (26%), copper (40%), lead (71%), magnesium (33%), potassium (46%), sodium (67%), vanadium (26%), and zinc (37%). The elevated RPDs have been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: DU Report with 'J' Qualifiers

Project Name: JJQ1501
Project Number: JJQ1501

Lab Number: L1505213
Report Date: 03/25/15

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

Lab Number: L1505297
Report Date: 03/27/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: JJQ1501

Lab Number: L1505297
Report Date: 03/27/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1505297-06RE has elevated detection limits due to the dilution required by the sample matrix.

L1505297-06: The surrogate recoveries were below the acceptance criteria for 2-fluorophenol (13%) and 2,4,6-tribromophenol (9%); however, re-extraction achieved similar results: 2,4,6-tribromophenol (5%). The results of both extractions are reported.

Metals

L1505297-01 through -07 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

The WG770307-4 MS recoveries for aluminum (314%), iron (0%), and manganese (176%), performed on L1505297-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG770307-3 Laboratory Duplicate RPDs, performed on L1505297-01, are outside the acceptance criteria for barium (51%), cobalt (52%), manganese (75%), nickel (44%), and zinc (29%). The elevated RPDs have been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: DU Report with 'J' Qualifiers

Project Name: JJQ1501
Project Number: JJQ1501

Lab Number: L1505297
Report Date: 03/27/15

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: JJQ1501
Project Number: JJQ1501

Lab Number: L1505476
Report Date: 03/27/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1505476-01, -02, and -03: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

Metals

L1505476-01 though -06 have elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG770809-3 Laboratory Duplicate RPD, performed on L1505476-03, is outside the acceptance criteria for barium (29%), nickel (45%), and zinc (32%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

The WG770809-4 MS recoveries for aluminum (0%), calcium (0%), iron (0%), lead (0%), and manganese (0%) performed on L1505476-03, do not apply because the sample concentration is greater than four times the spike amount added.

The WG770809-4 MS recoveries, performed on L1505476-03, are outside the acceptance criteria for chromium (68%), copper (22%), magnesium (22%), nickel (70%), and zinc (0%). A post digestion spike was performed and yielded unacceptable recoveries for chromium (68%), copper (59%), magnesium (45%), nickel (70%), and zinc (45%); all other compounds were within acceptance criteria. This has been attributed to sample matrix.

Total Mercury

The WG770275-4 MS recovery, performed on L1505476-01, is outside the acceptance criteria for mercury (154%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Project Name: JJQ1501
Project Number: JJQ1501

Lab Number: L1505476
Report Date: 03/27/15

SAMPLE RESULTS

Lab ID: L1505476-06
 Client ID: SB009_9-11'
 Sample Location: 69-28 QUEENS BLVD, WOODSIDE, N
 Matrix: Soil
 Percent Solids: 90%

Date Collected: 03/20/15 14:55
 Date Received: 03/20/15
 Field Prep: Not Specified

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: DU Report with 'J' Qualifiers

Project Name: JJQ1501
Project Number: JJQ1501

Lab Number: L1505476
Report Date: 03/27/15

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Lab Number: L1505610
Report Date: 03/30/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 69-26 QUEENS BLVD.
Project Number: JJQ1501

Lab Number: L1505610
Report Date: 03/30/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Dissolved Metals

The WG771450-4 MS recovery for calcium (70%), performed on L1505610-02, does not apply because the sample concentration is greater than four times the spike amount added.

The WG771450-4 MS recoveries, performed on L1505610-02, are outside the acceptance criteria for potassium (69%), selenium (0%), sodium (69%), and thallium (73%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: DU Report with 'J' Qualifiers

Project Name: 69-26 QUEENS BLVD.
Project Number: JJQ1501

Lab Number: L1505610
Report Date: 03/30/15

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Project Name: 69-26 QUEENS BLVD.
Project Number: JJQ1501

Lab Number: L1505610

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

Lab Number: L1505621
Report Date: 03/30/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on March 19 and 20, 2015. The canister certification results are provided as an addendum.

Samples L1505621-04 and -05 results for Acetone should be considered estimated due to co-elution with a non-target peak.

Sample Receipt

The sample designated SV001 (1) (L1505621-01) had a RPD for the pre- and post-flow controller calibration check (43% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.9 mL/minute; the final flow rate was 11.6 mL/minute. The final pressure recorded by the laboratory of the associated canister was -6.0 inches of mercury.

The sample designated SV004 (1) (L1505621-04) had a RPD for the pre- and post-flow controller calibration check (57% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.5 mL/minute; the final flow rate was 31.4 mL/minute. The final pressure recorded by the laboratory of the associated canister was 2.0 inches of mercury.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a "Total" result is defined as the summation of results for individual isomers or Aroclors. If a "Total" result is requested, the results of its individual components will also be reported. This is applicable to "Total" results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: Data Usability Report

Project Name: 69-28 QUEENS BLVD
Project Number: JJQ1501

Lab Number: L1505621
Report Date: 03/30/15

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

CHAIN OF CUSTODY

320 Forbes Blvd, Mansfield, MA 02048
 TEL: 508-822-9300 FAX: 508-822-3288

Client Information

Client: *PAW Grosser Consulting*
 Address: *630 Johnson Ave Bohemia NY 11716*
 Phone: *631-589-6353*

Fax:
 Email: *Jemile L @ pawgrosser.com*

These samples have been previously analyzed by Alpha

Project Information

Project Name: *67-28 Queens Blvd*
 Project Location: *Queens NY*
 Project #: *5591501*
 Project Manager: *Sen Lewis*
 ALPHA Quote #:

Turn-Around Time

Standard RUSH (only confirmed if pre-approved!)

Date Due: *3/30/15* Time:

Other Project Specific Requirements/Comments:

Category A Data Deliverables

Date Rec'd in Lab: *3/24/15*

Report Information - Data Deliverables

FAX
 ADEx
 Criteria Checker:
 (Default based on Regulatory Criteria Indicated)
 Other Formats:
 EMAIL (standard pdf report)
 Additional Deliverables:
 Report to: (if different than Project Manager)

ALPHA Job #: *L1505621*

Billing Information

Same as Client info PO#:
